(Brünsted, Z. phys. Ch. 1912, 80. 208.)

$\text{PbCl}_2$  is sol in 120 pts. pure  $\text{H}_2\text{O}$ , but on adding 5% NaCl 437 pts. are required to effect solution. When  $\text{PbCl}_2$  is digested with conc. NaCl + Aq, 1 pt. dissolves in 129 pts. of the liquid.

A study of the equilibrium between lead chloride and sodium chloride in aqueous solution at  $13^\circ$ ,  $50^\circ$  and  $100^\circ$  shows that at none of these temp. do these chlorides form a double salt. (Demassieux, C. R. 1914, 158. 702.)

Solubility in salts + Aq at  $25^\circ$ .

Min. *Chloranite*

Lead tetrachloride,  $PbCl_4$ .

Sol. in  $H_2O$  with subsequent decomp.  
(Rivot, Boudant, and Daguin, Ann. Min. (5) 4, 239.)

Obtained in a pure state by Friedrich. Sol.  
in a little cold  $H_2O$ , but it decomp. by warm-  
ing or diluting. Miscible with conc.  $HCl$  +  
Aq; not attacked by conc.  $H_2SO_4$  even on  
warming. (Friedrich, W. A. B. 102, 2b, 534.)

Lead tetrachloride with  $MCl$ .

See Chloroplumbate, M.

Lead magnesium chloride,  $PbCl_2 \cdot 2MgCl_2 + 13H_2O$ .

Deliquescent. Decomp. by  $H_2O$ . (Otto  
and Drewes, Arch. Pharm. 228, 495.)

Lead potassium chloride (potassium chloro-  
plumbite),  $PbCl_2 \cdot KCl$ .

(Ramsen and Herty, Am. Ch. J. 14, 125.)  
Contains  $\frac{1}{3} H_2O$ . (Wells, Sill. Am. J. 145, 130.)

See also Demassieux,  $PbCl_2 + KCl$  under  
 $PbCl_2$ .

$2PbCl_2 \cdot KCl$ . (Wells.)

See also Demassieux as above.

Lead rhodium chloride.

See Chlororhodite, lead.

Lead rubidium chloride,  $PbCl_2 \cdot 2RbCl + \frac{1}{2}H_2O$ .

(Wells, Sill. Am. J. 146, 34.)

$2PbCl_2 \cdot RbCl$ . (Wells.)

Lead sodium chloride.

Decomp. by  $H_2O$ .

Lead sodium tetrachloride,  $2PbCl_4 \cdot 9NaCl$ .

Very sol. in  $H_2O$ . (Sobrero and Selmi, A. ch. (3) 29, 165.)

See also Chloroplumbate, lead.

Lead thalious chloride,  $PbCl_2 \cdot 3TlCl$ .

Sl. sol. in cold, more in hot  $H_2O$ . (Noyes,  
Z. phys. Ch. 9, 622.)

$PbCl_2 \cdot TlCl$  Ppt. (Ephraim, Z. anorg.  
1909, 61, 245.)

Lead chloride ammonia,  $2PbCl_2 \cdot 3NH_3$ .

(Rose, Pogg. 20, 157.)

Lead tetrachloride ammonia,  $PbCl_4 \cdot 4NH_3$ .

Pptd. from chloroform solution (Mat-  
thews, J. Am. Chem. Soc. 1898, 20, 825.)

$PbCl_4 \cdot 2NH_3$  Fumes in the air. Decomp.  
by  $H_2O$ . (Matthews.)

Lead chloride arsenate,  $3Pb_2(AsO_4)_3 \cdot PbCl_2$ .

See Arsenate chloride, lead.

Lead chloride borate,  $Pb_2(BO_3)_2 \cdot PbCl_2 + H_2O$ .

See Borate chloride, lead.

Lead chloride carbonate.

See Carbonate chloride, lead.

Lead chloride chlorite.

See Chlorite chloride, lead.

Lead chloride with fluoride and iodide.

See Lead chlorofluoride and Lead chloro-  
iodide.

Lead chloride phosphate.

See Phosphate chloride, lead.

Lead chloride phosphite,  $PbCl_2 \cdot Pb_2P_2O_5(?)$ .

Ppt. (Berzelius.)

Does not exist. (Rose.)

Lead chloride sulphate.

See Sulphate chloride, lead.

Lead chloride sulphide,  $PbCl_2 \cdot 3PbS$ .

See Lead chlorosulphide.

Lead chlorofluoride,  $PbClF$ .

Sl. sol. in  $H_2O$  without decomp. Easily  
sol. in  $HNO_3$  + Aq. (Berzelius.)

Solubility in  $H_2O$ .

100 g.  $H_2O$  dissolve 0.0211 g.  $PbClF$  at  
0°; 0.0370 g. at 25°; 0.1081 g. at 100°. (Starck,  
Z. anorg. Ch. 1911, 70, 174.)

Solubility in  $HCl$  + Aq at 25°.

Solution of  $PbClF$  in  $HCl$  + Aq containing  
0.0535 g. equiv. per l. contains 0.0758 g.  
 $PbClF$  in 100 cc. of solvent

Solution of  $PbClF$  in  $HCl$  + Aq containing

0.1069 g. equiv. per l. contains 0.1006 g. PbClF in 100 cc. of solvent. (Starek.)

Solubility in acetic acid at 25°.

Solution of PbClF in  $\text{HCl}_2\text{H}_2\text{O}_2$  containing 0.0518 g. equiv. per l. contains 0.05129 g. PbClF in 100 cc. of solvent.

Solution of PbClF in  $\text{HCl}_2\text{H}_2\text{O}_2$  containing 0.1035 g. equiv. per l. contains 0.0561 g. PbClF in 100 cc. of solvent. (Starek.)

#### Solubility in $\text{PbCl}_2 + \text{Aq.}$

"	0 0392	0 0005

(Starek.)

#### Lead chloriodide, $2\text{PbCl}_2, \text{PbI}_2$

Sol in hot  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Poggiale, J. pr 35. 320.)

$\text{PbCl}_2, \text{PbI}_2$  Sol. in hot  $\text{HCl} + \text{Aq.}$  (Engelhardt.)

Sol. in  $\text{H}_2\text{O.}$  (Thomas, C. R. 1898, 126. 1351.)

#### Lead chloroselenide.

Decomp. by boiling  $\text{H}_2\text{O}$  and by conc  $\text{KOH} + \text{Aq.}$  (Fonze-Diacon, C. R. 1900, 130. 1133.)

#### Lead chlorosulphide, $\text{PbCl}_2, 3\text{PbS.}$

Partially decomp. by hot  $\text{H}_2\text{O}$ . Not attacked by dil., but decomp. by conc.  $\text{HCl} + \text{Aq.}$  (Hunefeld, J. pr. 7. 27.)

$\text{PbS, PbCl}_2$ . Decomp. by  $\text{H}_2\text{O}$ , acids, or alkalies. (Parmentier, C. R. 114. 298.)

$\text{ClPbS}_2\text{PbS}_2\text{PbS}_2\text{PbCl.}$  Ppt. (Hofmann, B. 1904, 37. 250.)

#### Lead fluoride, $\text{PbF}_2$

Very sl. sol. in  $\text{H}_2\text{O}$ , and not more in  $\text{HF} + \text{Aq.}$  (Berzelius, Pogg. 1. 31.)

5.5 millimols are sol. in 1000 ccm.  $\text{H}_2\text{O.}$  (Jaeger, Z. anorg. 1901, 27. 38.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.40 mg at 18°. (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

641 mg. in 1 l. of sat. solution at 18°. (Kohlrausch, Z. phys. Ch. 1908, 64. 108.)

More sol. in  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq.}$  Sl. sol. in  $\text{KF} + \text{Aq.}$  (Herty, Am. Ch. J. 14. 107.)

Sl. sol. in dil.  $\text{HF} + \text{Aq.}$ , insol. in strong  $\text{HF} + \text{Aq.}$

0.0130? g. atoms Pb are sol. in 1000 cc.  $\text{HF.}$  (Jaeger, Z. anorg. 1901, 27. 37.)

Insol. in liquid  $\text{HF.}$  (Franklin, Z. anorg. 1905, 46. 2.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. J. Ch. 1898, 20. 828.)

Insol. in ethylacetate. (Naumann, B. 1910, 43. 311.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

#### Lead potassium fluoride, $3\text{KF, HF, PbF}_4$

Decomp.  $\text{H}_2\text{O}$ , stable in dry air. (Brauner, Z. anorg. 1894, 7. 7.)

#### Lead silicon fluoride.

See Fluosilicate, lead.

#### Lead tantalum fluoride.

See Fluotantalate, lead.

#### Lead titanium fluoride.

See Fluotitanate, lead.

#### Lead fluoride sulphate.

See Sulphate fluoride, lead.

#### Lead hydroxide, $\text{PbO}_2\text{H}_2$

Not appreciably sol. in  $\text{H}_2\text{O.}$  (Jaeger, Z. anorg. 1901, 27. 38.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.135 g.  $\text{PbO}_2\text{H}_2$  at 20° and 100° (Schmal, C. R. 1909, 148. 1399.)

#### Solubility in $\text{NaOH} + \text{Aq.}$

G. Na in 20 ccm	G. Pb in 20 ccm.
0 2024	0 1012
0 3196	0.1736
0 5866	0 3532
0.9476	0.4071
1 7802	0.5170

(Rübenbauer, Z. anorg. 1902, 30. 336.)

#### Solubility of $\text{PbO}_2\text{H}_2$ in $\text{NaOH} + \text{Aq}$ at 25°.

G mol per l		Solid Phase
Na	Pb	
0.274	0 0181	$\text{PbO}_2\text{H}_2$
0 431	0 287	"
0.476	0.319	"
0.745	0 459	"
1.132	0.711	"
1.519	0.101	"

(Wood, Chem Soc. 1910, 97. 884.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

$2\text{PbO, PbO}_2\text{H}_2 = 3\text{PbO, H}_2\text{O.}$  Sol. in 10,000 to 12,000 pts.  $\text{H}_2\text{O.}$  (Yorke.) Sol. in 7000 pts.  $\text{H}_2\text{O.}$  (v. Bonsdorff, Pogg. 41. 307.)

0.45 millimol. Pb are sol. in 1 liter  $\text{H}_2\text{O}$  at 18°. (Pleissner, C. C. 1907, II 1056.)

Sol. in acids. Insol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  Sol. in  $\text{NaOH}$ , or  $\text{KOH} + \text{Aq.}$  Sol. in hot  $\text{NH}_4\text{Cl} + \text{Aq.}$  and reprecip. by  $\text{NH}_4\text{OH} + \text{Aq.}$

Solubility in  $\text{KOH} + \text{Aq.}$  according to Ditté (C. R. 94. 130). When  $\text{KOH} + \text{Aq}$  is gradu-

ally added to lead hydroxide suspended in  $H_2O$ , the lead hydroxide is at last dissolved proportional to the amount of KOH, until the strength reaches 200 g. KOH to 1 litre  $H_2O$ . The solubility then diminishes and increases again until 400 g. KOH are dissolved in 1 litre  $H_2O$ . The amorphous lead hydroxide is then converted into crystalline  $2PbO(PhO_2H_2)$ . By further addition of KOH the solubility is suddenly decreased, and then increases again. (Ditte)

Sol. in triethyl toluenyl ammonium hydrate + Aq.

Sol. in sorbine + Aq. (Pelouze.)

Sol. in acetates + Aq. (Mercer.)

Sol. in Ca, Ba, Sr, K, or Na citrate + Aq.

Not pptd. in presence of Na citrate + Aq. (Spiller.)

See also under Lead, and Lead oxide.

Lead perhydroxide,  $PbO_2$ ,  $H_2O$ .

See Lead peroxide.

Lead imide,  $PbNH$

Decomp. by  $H_2O$  and dilute acids. (Franklin, Z. anorg 1905, 46. 27.)

Lead iodide,  $PbI_2$ .

Sol. in 187 pts. boiling  $H_2O$  (Berthelot.)  
Sol. in 1235 pts.  $H_2O$  at ord. temp., and 194 pts. at  $100^\circ$ . (Denot, J. pr. 1. 425.)

Sol. in 2400 pts.  $H_2O$  at  $18.75^\circ$ . (Abl.)

Sat.  $PbI_2$  + Aq at  $20^\circ$  contains 0.0017 pt.; at  $27^\circ$ , 0.002 pt.; at  $100^\circ$ , 0.0039 pt.  $PbI_2$  (Lassaigne, J. chim. med. 7. 364)

1 l.  $H_2O$  dissolves 0.6 g.  $PbI_2$  at  $10^\circ$ . (Ditte, C. R. 92. 718)

1 l.  $H_2O$  dissolves 1.58 millimols  $PbI_2$  at  $25.3^\circ$ . (Von Ende, Z. anorg 1901, 26. 150.)

$0.47 \times 10^{-1}$  gram are dissolved in 1 litre of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch 1903, 46. 603.)

Solubility in 100 g.  $H_2O$  at  $t^\circ$ .

(Lichty, J. Am. Chem. Soc. 1903, 25. 474.)

0.0013 g. mol.  $PbI_2$  are dissolved in 1 l.  $H_2O$  at  $20^\circ$  (Fedotieff, Z. anorg 1911, 73. 178)

Not more sol. in  $HC_2H_3O_2$  + Aq than in  $H_2O$ , contrary to Henry. (Denot, l. c.)

Pptd. from aqueous solution by little HI + Aq, but redissolved by the addition of more. (Ditte, C. R. 92. 718)

Insol. in cold, sol. in hot HCl + Aq with decomp.

Solubility of  $PbI_2$  in  $HNO_3$  + Aq at  $25.2^\circ$ .

S = Solubility in millimols. per litre.

$HNO_3$ normal	S
0.001	38.87
0.01	39.06
0.051	39.45
0.04 $KNO_3$ +	
0.01 $HNO_3$	39.45

(von Ende, Z. anorg. 1901, 26. 162.)

Sol. in KOH + Aq.

Sol. in conc. KI, NaI,  $BaI_2$ ,  $SrI_2$ ,  $CaI_2$ , and  $MgI_2$  + Aq, from which it is pptd. by  $H_2O$ . (Berthelot)

Very sol. in KI + Aq, 2 mols.  $PbI_2$  being dissolved for 1 mol. KI. (Boullay)

Sol. in  $NH_4I$  + Aq. Easily sol. in  $Na_2S_2O_3$  + Aq. (Werner, C. N. 53. 51.)

Not pptd. in presence of Na citrate. (Spiller)

Solubility in sat.  $I_2$  + Aq at  $20^\circ = 0.00216$  g. mol. per l. Solid phase  $PbI_2 + I_2$ . (Fedotieff, Z. anorg. 1911, 73. 178.)

Very easily sol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Sl. sol. in alcohol. (Henry.) Decomp. by boiling ether (Vogel)

100 g. formic acid dissolve 0.25 g. at  $19.8^\circ$ . (Aschan, Ch. Ztg. 1913, 37. 1117.)

Insol. in  $CS_2$ . (Aretowski, Z. anorg. 1894, 6. 257.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

0.02 pts. are sol. in 100 pts. acetone at  $59^\circ$ .

0.02 pts. are sol. in 100 pts. amyl alcohol at  $133.5^\circ$

0.50 pts. are sol. in 100 pts. aniline at  $13^\circ$ .

1.10 pts. are sol. in 100 pts. aniline at  $184^\circ$ . (Laszczynski, B. 1894, 27. 2287.)

(Heise, J. phys. Ch. 1912, 16, 273)

**Lead hydrogen iodide,  $PbH_2I_4 = PbI_2, 2HI$** Cold  $H_2O$  dissolves out  $HI$ . Sol in hot  $H_2O$ , from which crystallizes  $PbI_2$  (Guyot, J. chim. med. 12, 247.)+10 $H_2O$  Decomp. by  $H_2O$ . (Berthelot, C. R. 91. 1024)**Lead lithium iodide,  $PbI_2, LiI + 5H_2O$ .**Loses 1 mol.  $H_2O$  at  $95^\circ$  and loses another mol.  $H_2O$  at  $100^\circ$ . (Bogorodski, C. C. 1894, II. 515.) $PbI_2, 2LiI + 6H_2O$ . Sl. sol in  $H_2O$  (Mosnier, C. R. 1895, 120, 446.)**Lead magnesium iodide,  $PbI_2, 2MgI_2$** Decomp. by  $H_2O$  and by alcohol. (Mosnier, A. ch. 1897, (7) 12, 402.)+16 $H_2O$ . Very hygroscopic. Decomp. immediately by  $H_2O$ . (Otto and Drewes, Arch. Pharm. 229, 180)**Lead nickel iodide,  $PbNi_2I_4 + 3H_2O$ .**Decomp. by  $H_2O$ . (Mosnier, A. ch. 1897, (7) 12, 411.)**Lead potassium iodide (Potassium iodoplumbite),  $PbI_3, KI$** Permanent Completely decomp. by  $H_2O$ . Unacted upon by cold, but completely decomp. by hot alcohol. (Boullay, A. ch. (2) 34, 366.)+2 $H_2O$ . The only salt that could be obtained by Remsen and Herty (Am. Ch. J. 14, 110.) $PbI_2, 2KI$ . Sl. sol. in boiling chloroform; easily sol in strong  $KI + Aq$ , insol. in alcohol. (Brooks, C. N. 1898, 77, 191)+2 $H_2O$ . Decomp. by  $H_2O$ . (Berthelot, A. ch. (5) 29, 289)

Does not exist (R. and H.)

+4 $H_2O$ . (Ditte, C. R. 92, 134) Does not exist. (R. and H.) $PbI_2, 4KI$ . Decomp. by  $H_2O$ , insol. in alcohol. (Boullay.) Does not exist (R. and H.) $3PbI_2, 4KI + 6H_2O$ . (Berthelot, l. c.) Does not exist. (R. and H.)**Lead potassium periodide,  $K_3Pb_2I_8 + 4H_2O$ .**Decomp. by  $H_2O$  or alcohol (Wells, Z. anorg. 4, 346.)**Lead rubidium iodide,  $PbI_2, RbI + 2H_2O$ .**

(Wells, Sil. Am. J. 146, 34.)

**Lead silver iodide,  $PbI_2, 2AgI$ .**

(Ruff and Geisel, B. 1903, 38, 2663.)

**Lead silver iodide ammonia,  $PbI_2, 2AgI, 5NH_3$ .**

(Ruff and Geisel, B. 1905, 38, 2663.)

**Lead sodium iodide,  $PbI_2, NaI$ .**Decomp. by  $H_2O$ . (Poggale, C. R. 20, 1180.)+ $cH_2O$ . (Remsen and Herty, Am. Ch. J. 14, 124.) $PbI_2, 2NaI + 6H_2O$  Sl. sol in  $H_2O$ .

(Moussier, C. R. 1893, 120, 445.)

**Lead iodide ammonia,  $PbI_2, 2NH_3$ .**Decomp. by  $H_2O$  (Rammelsberg, Pogg. 48, 166.)**Lead iodide carbonate.**

See Carbonate iodide, lead.

**Lead iodosulphide,  $PbS, 4PbI_2$ .**

Decomp. by light, heat, acids and alkalis. (Lenher, J. Am. Chem. Soc. 1895, 17, 512.)

Sol in conc  $HI$ ; insol in dil  $HI + Aq$ . (Lenher, J. Am. Chem. Soc. 1901, 23, 681.) $IPbS_2PbS_2PbI$ . Ppt. (Hofmann, B. 1904, 37, 261)**Lead suboxide,  $Pb_2O$ .**Decomp. by  $H_2O$  into  $PbO_2H_2$ .Decomp. by dil  $H_2SO_4$ ,  $HCl$ ,  $HNO_3$ ,  $HC_2H_3O_2 + Aq$ , or alkalis, into  $PbO$ , which dissolves, and  $Pb$ , which dissolves or not, according to the reagent Sol in dil  $Pb(NO_3)_2 + Aq$ .**Lead monoxide (Litharge),  $PbO$** Sol. in 7000 pts.  $H_2O$ . (Horsford.)Pure  $PbO$  is insol. in  $H_2O$ . (Brandecke, Repert. 63, 155, Siebold, Repert, 63, 174; Herbergen, Repert. 66, 55) Sl. sol. in  $H_2O$ . (Yorke, Phil. Mag. (3) 5, 82.)0.31 millimoles  $Pb$  are dissolved in 1 liter  $H_2O$  at  $18^\circ$ . (Pleissner, C. C. 1907, II. 1056.)1.71  $\times 10^{-5}$  g. are dissolved in 1 litre of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46, 603.)

Easily sol. in acids.

Sol. in KOH, or NaOH + Aq, also in  $\text{CaO.H}_2\text{O}$  + Aq.

Sol. in boiling  $\text{Cu(NO}_3)_2$  + Aq with pptn. of Aq.

Sol. in  $\text{CaCl}_2$  and  $\text{SiCl}_4$  + Aq (Andre, C. R. 104, 359.)

Sol. in  $\text{MgCl}_2$  + Aq. (Voigt, Ch. Ztg. 13, 695.)

Sol. in boiling  $\text{Cu(NO}_3)_2$  + Aq with pptn. of  $\text{CuO}$ .

Partially sol. in  $\text{Cd(NO}_3)_2$  and  $\text{Mn(NO}_3)_2$  + Aq with pptn. of  $\text{CdO}$  and  $\text{MnO}$  respectively.

Not acted upon by Mg, Ag, Co, Ni, or Ce nitrates + Aq. (Persoz.)

Very sol. in  $\text{Pb(C}_2\text{H}_3\text{O}_2)_2$  + Aq. (Roehleder.)

Insol. in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1808, 20, 828.)

Insol. in acetone (Eidmann, C. C. 1899, II, 1014.)

When finely pulverised, sol. in cane sugar + Aq, but less than  $\text{Pb}_3\text{O}_4$ . (Peschier.)

Sl. sol. in glycerine. Readily sol. in glucose + Aq. (Persoz.)

Sol. in volatile oils (Schwitzer.)

Yellow modification

Solubility in  $\text{H}_2\text{O}$  at 22°

	Solubility in g. equiv. per litre
1. Yellow $\text{PbO}$ , obtained by boiling lead hydroxide with 10% NaOH	$1.03 \times 10^{-4}$
2. Yellow $\text{PbO}$ , obtained by heating 1 at 630°	$1.05 \times 10^{-4}$
3. Yellow $\text{PbO}$ , obtained by heating at 740° red $\text{PbO}$ , formed by boiling lead hydroxide with conc. NaOH	$1.00 \times 10^{-4}$
4. Yellow $\text{PbO}$ obtained by heating pure, commercial, yellow-brown $\text{PbO}$ at 620°.	$1.09 \times 10^{-4}$

(Ruer, Z. anorg. 1906, 50, 273.)

*Red modification.* Obtained by boiling lead hydroxide with conc. NaOH + Aq.

Solubility in  $\text{H}_2\text{O}$  at 22° =  $0.56 \times 10^{-4}$  g. equiv. per l. (Ruer, Z. anorg. 1906, 50, 273.)

*Yellow-brown modification.* Solubility in  $\text{H}_2\text{O}$  at 22° =  $1.10 \times 10^{-4}$  g. equiv. per litre (Ruer, Z. anorg. 1906, 50, 273.)

See also Lead.

Min. *Massicot*.

**Lead oxide (Red lead),  $\text{Pb}_3\text{O}_4$ .**

Insol. in  $\text{H}_2\text{O}$ .

Converted by acids into  $\text{PbO}_2$  and salts of monoxide.

Sol. in a large amt. of glacial acetic acid. (Berzelius.) Insol. in acetic acid. (Schonbein, J. pr. 74, 325.)

Solution in  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq may decompose or not according to concentration of acid. When treated with an excess of  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq of 8° B,  $\text{Pb}_3\text{O}_4$  is quickly dissolved, but the solution soon deposits  $\text{PbO}_2$ , this decomposition is facilitated by dilution. But if  $\text{Pb}_3\text{O}_4$  is treated with a large excess of glacial  $\text{HC}_2\text{H}_3\text{O}_2$ , it dissolves, and the solution is permanent if atmospheric air is excluded, and temp. does not rise above 40°.

(Jacquelin, J. pr. 53, 152.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 4329.)

Easily sol. in cane sugar + Aq. (Peschier.)

Min. *Minium*.

**Lead sesquioxide,  $\text{Pb}_2\text{O}_3$ .**

Insol. in  $\text{H}_2\text{O}$  or in KOH + Aq.

Decomp. by strong acids into  $\text{PbO}_2$  and corresponding salt of monoxide.

**Lead peroxide,  $\text{PbO}_2$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids, also in conc. alkali hydroxides + Aq. The solutions in acids are very unstable, except when concentrated and kept at a low temperature.

Decomp. by cold HCl, HCN, HBr, and HI + Aq. Not attacked by other acids when cold, but decomp. thereby when hot. Insol. in moderately conc.  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq.

There are two forms of  $\text{PbO}_2$ , the amorphous and the crystalline.

1 l. of very conc.  $\text{H}_2\text{SO}_4$  dissolves 10 millimols. crystalline  $\text{PbO}_2$ .

**Solubility of amorphous  $\text{PbO}_2$  in  $\text{H}_2\text{SO}_4$  + Aq at 22°.**

99.5 millimols  $\text{PbO}_2$  are dissolved in 1 l. of acid containing 1720 g.  $\text{H}_2\text{SO}_4$ .

4 millimols  $\text{PbO}_2$  are dissolved in 1 l. of acid containing 1087 g.  $\text{H}_2\text{SO}_4$ .

$v$  = moles  $\text{H}_2\text{SO}_4$  per mole of  $\text{H}_2\text{O}$ .

$c$  = millimols  $\text{PbO}_2$  dissolved in 1 litre

$v$	$c$	$v$	$c$
0.32	0.82	0.20	$8 \cdot 10^{-3}$
0.30	0.4	0.15	$5 \cdot 10^{-4}$
0.25	$7 \cdot 10^{-2}$	0.10	$1 \cdot 10^{-5}$

(Dolezalek and Finckel, Z. anorg. 1906, 51, 323-5.)

Decomp. by  $\text{NH}_4\text{OH}$  + Aq. Sol. in conc. KOH, or NaOH + Aq.

Sol. with decomp. in  $\text{Hg}_2(\text{NO}_3)_2$  + Aq. (Levol.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 2943.)

Min. *Plattnerite*.

**Lead manganese peroxide,  $\text{PbO}_2, 4\text{MnO}_2$ .**

Ppt. (Gibbs and Parkmann, Sil. Am. J. (2) 39, 58.)

**Lead oxybromide,  $\text{PbBr}_2$ ,  $\text{PbO}$ .**

Insol. in  $\text{H}_2\text{O}$ .  
 +1,  $1\frac{1}{2}$ , and  $3\text{H}_2\text{O}$  (André, C. R. 96. 1503.)  
 $6\text{PbO}$ ,  $\text{PbBr}_2 + 2\text{H}_2\text{O}$ . Ppt. (Stromholm, Z. anorg. 1904, 38. 436.)

**Lead oxychloride,  $2\text{PbCl}_2$ ,  $\text{PbO} + 2\text{H}_2\text{O}$ .**

(André, C. R. 96. 435.)  
 $\text{PbCl}_2$ ,  $\text{PbO}$ . Absolutely insol. in hot or cold  $\text{H}_2\text{O}$ . (André, A. ch. (6) 3. 108.)  
 Min. *Mallockite*.  
 + $\text{H}_2\text{O}$ . Sol. in hot  $\text{NaOH} + \text{Aq}$ . (André) 0.38 millimols. Pb are dissolved in 1 litre  $\text{H}_2\text{O}$  at  $18^\circ$  (Plessner, C. C. 1907, II. 1055.)  
 $\text{PbCl}_2$ ,  $2\text{PbO}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in dil  $\text{KOH} + \text{Aq}$  (about 110 g. in 1 l.) (Ditte, C. R. 94. 1180.)

Min. *Mendipite*. Easily sol. in  $\text{HNO}_3 + \text{Aq}$ .  
 + $2\text{H}_2\text{O}$ . (André, A. ch. (6) 3. 111.)

$\text{PbCl}_2$ ,  $3\text{PbO}$ . Insol. in  $\text{H}_2\text{O}$ . (Dober-einer.)

+ $\frac{1}{2}\text{H}_2\text{O}$ . Ppt. (Stromholm, Z. anorg. 1904, 38. 435.)  
 + $2\text{H}_2\text{O}$ . 0.10 millimols Pb are dissolved in 1 litre  $\text{H}_2\text{O}$  at  $18^\circ$  (Plessner, C. C. 1907, II. 1054.)

+ $3\text{H}_2\text{O}$ . Ppt. (André, C. R. 104. 359.)  
 + $4\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{NaOH} + \text{Aq}$ . (Vauquelin.)

$\text{PbCl}_2$ ,  $5\text{PbO}$ . (Dober-einer.)  
 $6\text{PbO}$ ,  $\text{PbCl}_2 + 2\text{H}_2\text{O}$ . Ppt. (Stromholm, Z. anorg. 1904, 38. 434.)  
 $\text{PbCl}_2$ ,  $7\text{PbO}$ . Cassel-yellow.

**Lead strontium oxychloride,  $2\text{PbO}$ ,  $\text{SrCl}_2 + 5\text{H}_2\text{O}$ .**

(André, C. R. 104. 359.)

**Lead oxychloride, iodide,  $\text{PbCl}_2$ ,  $\text{PbI}_2$ ,  $4\text{PbO}$ .**

Min. *Schwarzenbergite*. Sol. in dil.  $\text{HNO}_3 + \text{Aq}$ .

**Lead oxyiodide,  $\text{PbI}_2$ ,  $\text{PbO}$** 

Insol. in boiling  $\text{H}_2\text{O}$  or  $\text{KI} + \text{Aq}$ . (Braudes, A. 10. 269.)

+ $\frac{1}{2}\text{H}_2\text{O}$ . (Ditte, C. R. 92. 145.)

+ $\text{H}_2\text{O}$ .

$\text{PbI}_2$ ,  $2\text{PbO}$ . Insol. in  $\text{H}_2\text{O}$ . (Denot, J. Pharm. 20. 1.)

+ $\text{H}_2\text{O}$ .

$\text{PbI}_2$ ,  $3\text{PbO} + 2\text{H}_2\text{O}$ . Ppt. (Kuhn, C. C. 1847. 503.)

$\text{PbI}_2$ ,  $5\text{PbO}$ . Insol. in  $\text{H}_2\text{O}$ . (Denot.)

+ $7\text{H}_2\text{O}$ . (Ditte, C. R. 92. 145.)

$6\text{PbO}$ ,  $\text{PbI}_2 + 2\text{H}_2\text{O}$ . Ppt. (Stromholm, Z. anorg. 1904, 38. 437.)

$9\text{PbO}$ ,  $\text{PbI}_2 + 2\text{H}_2\text{O}$  (Stromholm, Z. anorg. 1904, 38. 437.)

**Lead oxyperiodide,  $\text{PbO}$ ,  $\text{PbI}_2$ .**

Decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl} + \text{H}_2\text{O}_2 + \text{Aq}$ . (Grogger, W. A. B. 100, 2b. 415.)

**Lead phosphide,  $\text{PbP}_2$ .**

Decomp. by  $\text{H}_2\text{O}$  and dil. acids. (Bossuet, C. R. 1913, 167. 721.)

**Lead phosphoselenide,  $\text{PbSe}$ ,  $\text{P}_2\text{Se}$ .**

Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ .

Insol. in cold, slowly decomp. by hot alkalis +  $\text{Aq}$ . (Hahn, J. pr. (2) 93. 436.)

$2\text{PbSe}$ ,  $\text{P}_2\text{Se}_3$ . Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . Slowly sol. in red fuming  $\text{HNO}_3$ . (Hahn.)

$2\text{PbSe}$ ,  $\text{P}_2\text{Se}_3$ . Decomp. by fuming  $\text{HNO}_3$ . (Hahn.)

**Lead selenide,  $\text{PbSe}$ .**

Cold  $\text{HNO}_3 + \text{Aq}$  dissolves Pb with separation of Se, which dissolves on warming.

(Little, A. 112. 212.)

Min. *Clausthalite*. Sol. in  $\text{HNO}_3 + \text{Aq}$  with separation of Se, when warmed.

**Lead mercury selenide,  $(\text{Pb}, \text{Hg})\text{Se}$ .**

Min. *Lehrbachite*.

**Lead sulphide,  $\text{PbS}$ .**

Very sl. sol. in  $\text{H}_2\text{O}$

1 l.  $\text{H}_2\text{O}$  dissolves  $3.6 \times 10^{-3}$  moles.  $\text{PbS}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 204.)

1 l.  $\text{H}_2\text{O}$  dissolves  $3 \times 10^{-4}$  g.  $\text{PbS}$  at  $25^\circ$ . (Hevesy, Z. anorg. 1913, 82. 328.)

Insol. in dilute acids, alkalis, and alkali sulphides +  $\text{Aq}$ . Decomp. with solution in moderately dil.  $\text{HNO}_3 + \text{Aq}$ . With conc.  $\text{HNO}_3$  or aqua regia,  $\text{PbSO}_4$  is formed. Sol. in hot conc.  $\text{HCl} + \text{Aq}$ .

1 l.  $\text{H}_2\text{O}$  sat. with  $\text{H}_2\text{S}$  dissolves  $1.5 \times 10^{-4}$  g.  $\text{PbS}$  at  $25^\circ$  (Hevesy, Z. anorg. 1913, 82. 328.)

Insol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Brett.)

Somewhat sol. in  $\text{H}_2\text{S} + \text{Aq}$  when heated therewith in a sealed tube. (Sarnmont, A. ch. (3) 32. 168.)

Insol. in potassium thiocarbonate +  $\text{Aq}$ . (Rosenblatt, Z. anal. 26. 15.)

Sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  (Waller, J. Anal. Ch. 5. 646.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 823.)

Min. *Galena*, *Galenite*.

**Lead polysulphide,  $\text{PbS}_x$ .**

Ppt.; insol. in alkali sulphides; decomp. by conc.  $\text{HNO}_3$ . (Bodroux, C. R. 1900, 130. 1398.)

**Lead platinum sulphide.**

See Sulphoplatinate, lead.

**Lead sulphide mercuric chloride,  $3\text{PbS}$ ,  $4\text{HgCl}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Levallois, C. R. 96. 1666.)

Lead sulphobromide, chloride, or iodide.

*See* Lead bromosulphide, etc.

Lead disulphodibromide,  $PbN_2S_2, NH_3$

Ppt

Very stable in the air or in a vacuum  
Sol in no solvent without decomp.

When rapidly heated it explodes very violently at  $140^\circ$  (Ruff, B 1901, 37. 1581)

Lead telluride,  $PbTe$

Insol in  $H_2O$ . Sol in cold  $HNO_3 + Aq$   
(Rose, Pogg 18. 68.)

Min. *Altaite*. Easily sol in  $HNO_3 + Aq$ .

"Leucone."

Wohler (A. 127. 268) gives this substance the formula  $H_{10}Si_4O_{10}$ , but it is identical with silicoformic anhydride,  $Si_2H_2O_6$ , which see

Lime.

*Quacklime*,  $CaO$ . *See* Calcium oxide.

*Slaked lime*,  $Ca(OH)_2$ . *See* Calcium hydroxide.

Lithium,  $Li$

Decomposes  $H_2O$ .

Easily sol in dil acids. Slowly attacked by conc  $H_2SO_4$ , rapidly by conc  $HNO_3 + Aq$   
Insol. in hydrocarbons. Sol in liquid  $NH_3$ , but not so easily as  $K$ .

Sol in liquid  $NH_3$ . (Franklin, Am Ch. J. 1898, 20. 820.)

1 gram atom dissolves

at	$0^\circ$	in	3.93	mol	liquid	$NH_3$
"	$-25^\circ$	"	3.93	"	"	"
"	$-50^\circ$	"	3.93	"	"	"
"	$-80^\circ$	"	3.93	"	"	"

(Ruff, B 1906, 39. 840)

Sol in ethylamine. Insol. in propylamine and in secondary and tertiary amines. (Kraus, J. Am. Chem. Soc. 1907, 29. 1561.)

Lithium amalgam,  $LiHg_8$ .

$LiHg_8$  is obtained at all temp. up to  $100^\circ$ . Can be cryst from  $Hg$  without decomp. at any temp. below  $100^\circ$ . (Kerp, Z anorg. 1900, 25. 68.)

Lithium amide,  $LiNH_2$ .

(Ruff, B. 1911, 44. 505.)

Decomp. slowly in the air.

Slowly decomp. by cold, rapidly by hot  $H_2O$ .

Slowly decomp. by  $HCl$ .

Slowly decomp by cold, rapidly by hot abs. alcohol. (Titherley, Chem. Soc. 1894, 65. 518.)

Tri-lithium amide,  $Li_3NH_2$ .

Hydroscopic; decomp. by  $H_2O$ . (Dafert, M. 1910, 31. 994.)

Lithium ammonia,  $Li, NH_3$ .

Decomp by  $H_2O$  at ordinary temp; sol. in liquid  $NH_3$ . (Moissan, C. R. 1898, 127. 689)

$Li, 3NH_3$ . (Moissan, C. R. 1901, 133. 716.)

*T*-lithium ammonium,  $Li_3NH_4$ .

Very hygroscopic, decomp. by  $H_2O$ . (Dafert, M. 1910, 31. 992.)

Lithium antimonide,  $Li_3Sb$ .

Decomp. by  $H_2O$  with evolution of  $H_2$ . Sol in liquid  $NH_3$ . (Lebeau, C. R. 1902, 134. 285)

Lithium arsenide,  $Li_3As$

Decomp. by  $H_2O$ ; decomp. violently by fuming  $HNO_3$ . (Lebeau, C. R. 1899, 129. 50.)

Lithium azoimide,  $LiN_3$ .

Deliquescent. Stable in aq solution.

36.12 pts. are sol. in 100 pts.  $H_2O$  at  $10^\circ$ .

62.07 " " " " 100 "  $H_2O$  "  $15.5^\circ$ .

66.41 " " " " 100 "  $H_2O$  "  $16^\circ$ .

20.26 " " " " 100 " abs alcohol at  $16^\circ$ .

Insol. in ether. (Curtius, J pr. 1898, (2) 58. 277.)

+ $H_2O$ . Very hygroscopic; decomp. in the air. Very sol in  $H_2O$  and alcohol. (Dennis, Z. anorg. 1898, 17. 18)

Lithium bromide,  $LiBr$ .

Deliquescent.

100 pts.  $H_2O$  dissolve at:

$0^\circ$	$34^\circ$	$59^\circ$	$82^\circ$	$103^\circ$
143	196	222	244	270

pts.  $LiBr$ .  
Sp. gr. of  $LiBr + Aq$  at  $19.5^\circ$  containing:  
0 10 15 20 25 30%  $LiBr$ ,  
1.035 1.072 1.113 1.158 1.204 1.254

Temp of maximum g-mol  $LiBr$  dissolved density of  $LiBr + Aq$ . in 1000 g.  $H_2O$ .

1.921° 0.2941

0.881° 0.4383

(de Coppet, C. R. 1900, 131. 178.)

Moderately sol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369)

Solubility in glycol at  $14.7^\circ = 37.5\%$ . (de Coninck, Belg. Acad. Bull. 1905, 359.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328; Edmann, C. C. 1899, II. 1014.)

Sol. in methyl acetate (Naumann, B. 1909, 42. 3789); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Difficultly sol. in ethyl acetate. (Nau-  
mann, B. 1910, 43, 314.)  
+11<sub>2</sub>O. 100 g. H<sub>2</sub>O dissolve 209 g. LiBr  
at 15° (Bogorodski, C. C. 1894, II 514.)  
+2H<sub>2</sub>O (Bogorodski.)  
+311<sub>2</sub>O. 100 g. H<sub>2</sub>O dissolve 80 g. LiBr  
at -30°, and 122 g. at -10° (Bogorodski.)

Lithium molybdenyl bromide, LiBr, MoOBr<sub>2</sub>  
+4H<sub>2</sub>O.

Very hygroscopic. (Weinland and Knoll,  
Z. anorg. 1905, 44, 111.)

Lithium bromide ammonia.

LiBr, NH<sub>3</sub>. Sol. in H<sub>2</sub>O with decomp.  
LiBr, 2NH<sub>3</sub>. " " " " "  
LiBr, 3NH<sub>3</sub>. " " " " "  
LiBr, 4NH<sub>3</sub>. " " " " "

(Bonnefoi, C. R. 1900, 130, 1395.)

Lithium carbide, LiC<sub>2</sub>.

Insol. in conc. acids.  
Sol. in fused oxidizing agents; decomp. H<sub>2</sub>O  
in the cold. (Moissan, C. R. 1896, 122, 363.)

Lithium subchloride, Li<sub>2</sub>Cl.

Decomp. by H<sub>2</sub>O. (Guntz, C. R. 1895,  
121, 945.)

Lithium chloride, LiCl.

Very deliquescent. Most deliquescent salt  
known to Berzelius. Very sol. in H<sub>2</sub>O. Sol.  
in 1.315 pts. H<sub>2</sub>O at 15°. (Gerlach.)

100 pts. H<sub>2</sub>O dissolve at:  
0° 20° 65° 80° 89° 140° 160°  
63.7 80.7 104.2 115 129 139 145 pts. LiCl  
(Gerlach, Z. anal. 8, 281.)

**Lithium gold chloride.**

See Chloraurate, lithium.

**Lithium manganous chloride**, LiCl, MnCl<sub>2</sub> + 3H<sub>2</sub>O.

Decomp. by H<sub>2</sub>O; stable only in excess of LiCl. (Chassevant, A. ch. (6) 30. 10.)

**Lithium mercuric chloride**, 2LiCl, HgCl<sub>2</sub>.

Very deliquescent and sol. in H<sub>2</sub>O. (Harth, Z. anorg. 1897, 14. 323.)

**Lithium nickel chloride**, LiCl, NiCl<sub>2</sub> + 3H<sub>2</sub>O.

Deliquescent. Sol. in H<sub>2</sub>O and alcohol. (Chassevant.)

**Lithium thallic chloride**, 3LiCl, TlCl<sub>3</sub> + 8H<sub>2</sub>O.

Very deliquescent. Sol. in H<sub>2</sub>O. (Pratt, Am. J. Sci. 1895, (3) 49. 404.)

**Lithium stannic chloride.**

See Chlorostannate, lithium.

**Lithium uranous chloride**, Li<sub>2</sub>UCl<sub>6</sub>.

As K salt. (Aloy, Bull. Soc. 1899, (3) 21. 264.)

**Lithium uranium chloride**, UCl<sub>6</sub>, 2LiCl.

Very hygroscopic; sol. in H<sub>2</sub>O with decomp. Sol. in acetic acid. Decomp. by alcohol. (Aloy, Bull. Soc. 1899, (3) 21. 264.)

**Lithium zinc chloride,  $\text{LiCl} \cdot \text{ZnCl}_2 \cdot 3\text{H}_2\text{O}$** 

Extremely deliquescent (Ephraim, *Z. anorg.* 1908, 59, 68.)

$3\text{LiCl} \cdot \text{ZnCl}_2 \cdot 10\text{H}_2\text{O}$  (?) Not obtained in solid state (Ephraim, *Z. anorg.* 1908, 59, 69.)

**Lithium chloride ammonia.**

$\text{LiCl} \cdot \text{NH}_3$

$\text{LiCl} \cdot 2\text{NH}_3$

$\text{LiCl} \cdot 3\text{NH}_3$

$\text{LiCl} \cdot 4\text{NH}_3$

Above salts are all decomp. by  $\text{H}_2\text{O}$ . (Bonnet, *C. R.* 1898, 127, 367-369.)

**Lithium chloriodide,  $\text{LiLiI} \cdot 4\text{H}_2\text{O}$** 

Deliquescent (Wells and Wheeler, *Sill. Am. J.* 144, 42.)

**Lithium fluoride,  $\text{LiF}$ .**

Very difficultly sol. in  $\text{H}_2\text{O}$ . (Berzelius, *Pogg.* 1, 17.)

Two crystalline forms. Only very sl. sol. in  $\text{H}_2\text{O}$ . Very sl. decomp. by  $\text{H}_2\text{O}$  at red heat. (Poulenc, *Bull. Soc.* 1894, (3) 11, 17.)

Sp. gr. of solution sat. at  $18^\circ = 1.003$  and contains 0.27%  $\text{LiF}$ . (Mylius, *B.* 1897, 30, 1718.)

Sol. in 800 pts.  $\text{H}_2\text{O}$ , and the presence of  $\text{NH}_4\text{F}$  and  $\text{NH}_3$  decreases solubility to 1/3500 (Carnot, *Bull. Soc.* 1889, (3) 1, 250.)

Two crystalline forms are very sl. sol. in  $\text{HCl}$ , easily sol. in  $\text{HNO}_3$ . (Poulenc, *Bull. Soc.* 1894, (3) 11, 17.)

Two crystalline forms are insol. in 95% alcohol. (Poulenc.)

Insol. in methyl acetate. (Naumann, *B.* 1909, 42, 3790.)

Difficultly sol. in ethyl acetate. (Naumann, *B.* 1910, 43, 314.)

Insol. in acetone (Naumann, *B.* 1904, 37, 4329; Eidmann, *C. C.* 1899, II, 1014.)

**Lithium hydrogen fluoride,  $\text{LiHF}_2$ .**

Difficultly sol. in  $\text{H}_2\text{O}$ , but more easily than  $\text{LiF}$ . (Berzelius.)

**Lithium silicon fluoride.**

See Fluosilicate, lithium.

**Lithium stannic fluoride.**

See Fluostannate, lithium.

**Lithium tantalum fluoride.**

See Fluotantalate, lithium.

**Lithium uranyl fluoride,  $\text{UO}_2\text{F}_2 \cdot 4\text{LiF}$ .**

(Ditte.)

**Lithium zirconium fluoride.**

See Fluozirconate, lithium.

**Lithium hydride,  $\text{LiH}$ .**

Not deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Guntz, *C. R.* 1896, 123, 997.)

**Lithium hydrosulphide,  $\text{LiSH}$  (?).**

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (Berzelius, *Pogg.* 6, 139.)

**Lithium hydroxide,  $\text{LiOH}$ .**

Not so deliquescent as  $\text{NaOH}$ , and apparently not more sol. in hot than cold  $\text{H}_2\text{O}$ . (Gmelin, *Gib.* 62, 399.)

Not deliquescent. (Arfvedson, *A. ch.* 10, 82.)

The solubility of  $\text{LiOH}$  in  $\text{H}_2\text{O}$  can be expressed by  $y = 6.6750 + 0.00346t + 0.0003t^2$ , where  $y$  = the percentage of  $\text{Li}_2\text{O}$  in a saturated solution (Dittmar, *Jour. Soc. Chem. Ind.* 7, 730.)

**Solubility of  $\text{LiOH}$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .**

$t^\circ$	G per 100 g. Solution		G $\text{LiOH}$ per 100 g. $\text{H}_2\text{O}$
	$\text{Li}_2\text{O}$	$\text{LiOH}$	
0	6.67	10.64	12.7
10	6.74	10.80	12.7
20	6.86	10.99	12.8
25	6.95	11.14	12.9
30	7.05	11.27	12.9
40	7.29	11.68	13.0
50	7.56	12.12	13.3
60	7.96	12.76	13.8
80	8.87	14.21	15.3
100	10.02	16.05	17.5

(Seidl's Solubilities, 1st Ed. 174.)

A sat. aq. solution contains 7.09%  $\text{LiOH}$ . (Schreinemakers, *C. C.* 1905, II, 1486.)

Sp. gr. of  $\text{LiOH} + \text{Aq}$  at  $18^\circ$  containing:

1.25 2.5 5 7.5%  $\text{LiOH}$   
1.0132 1.0276 1.0547 1.0804

(Kohlrausch, *W. Ann.* 1879, 1.)

**Solubility in  $\text{Li}_2\text{SbS}_4 + \text{Aq}$  at  $30^\circ$ .**

$\text{LiOH}$	$\text{Li}_2\text{SbS}_4$	Solid Phase
11.4	0	$\text{LiOH} \cdot \text{H}_2\text{O}$
9.1	8.3	"
2.3	29.9	"
2.1	48.3	"
2.1	52.1	$\text{LiOH} \cdot \text{H}_2\text{O} + \text{Li}_2\text{SbS}_4 \cdot 10\text{H}_2\text{O}$
1.4	51.8	$\text{Li}_2\text{SbS}_4 \cdot 10\text{H}_2\text{O}$
0	51.3	"

(Donk, *Chem. Weekbl.* 1908, 5, 529, 629, 767.)

Sl. sol. in alcohol; insol. in alcohol-ether. (Mayer.)

Insol. in methyl acetate (Naumann, *B.* 1909, 42, 3790); ethyl acetate. (Naumann, *B.* 1904, 37, 3601.)

Insol. in acetone (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II 1011.)  
Cryst. also with  $H_2O$ , and  $\frac{1}{2}H_2O$ . (Gottig, B. 20. 2912.)

### Lithium imide, $Li_2NH$

Decomp. at high temp. Insol. in toluene, benzene, ether and ethyl acetate. Decomp.  $CHCl_3$ . (Ruff, B. 1911, 44. 506.)

### Lithium iodide, $LiI$ .

Deliquescent.

Solubility in 100 pts.  $H_2O$  at:

0° 19° 40° 59° 75° 80° 90° 120°  
151 164 179 200 263 435 476 588 pts.  $LiI$ .

Sp. gr. of  $LiI + Aq$  at 19.5° containing:

5 10 15 20 25 30%  $LiI$ ,  
1.038 1.079 1.124 1.172 1.224 1.280

35 40 45 50 55 60%  $LiI$   
1.344 1.414 1.489 1.575 1.670 1.777

(Kremers, Pogg. 104. 133; 111. 60: Gerlach, Z. anal. 8. 295.)

Sp. gr. of  $LiI + Aq$  at 18° containing.

5 10 15 20 25%  $LiI$ .  
1.0361 1.0756 1.1180 1.1643 1.2138

(Kohlrausch, W. Ann. 1879. 1.)

Temp of maximum g.-mol.  $LiI$  dissolved  
density of  $LiI + Aq$ . in 1000 g.  $H_2O$ .

2.516° 0 1795  
0.039° 0 4666

(de Coppet, C. R. 1900, 131. 178.)

Very sol in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

100 g. methyl alcohol dissolve 343.4 g.  $LiI$  at 25°.

100 g. ethyl alcohol dissolve 250.8 g.  $LiI$  at 25°.

100 g. propyl alcohol dissolve 47.52 g.  $LiI$  at 25°.

100 g. isoamyl alcohol dissolve 112.50 g.  $LiI$  at 25°.

In the case of propyl alcohol the solid phase at 25° is  $LiI \cdot 4C_3H_7O$ . (Turner and Bissett, Chem. Soc. 1913, 103. 1909.)

Solubility in organic solvents at t°.

C = pts by wt. of  $LiI$  in 100 cem. of the sat. solution.

L = no. of liters which at the saturation temp. hold in solution 1 mol.  $LiI$ .

Solvent	t°	C	L
Furfural	25°	45.86	0.262
Nitromethane	25°	2.519	5.32
"	0°	1.219	10.98

(Walden, Z. phys. Ch. 1906, 55. 718.)

Solubility in glycol at 15.3° = 28%. (de Coninck, Belg. Acad. Bull. 1905, 359.)

Sol in benzoinital. (Naumann, B. 1911, 47. 1309.)

Sol. in methyl acetate (Naumann, B. 1909, 42. 3789.)

Difficultly sol in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol in acetone (Kadmann, C. C. 1899, II. 1014; Naumann, B. 1901, 37. 1328.)

+ $H_2O$  Mpt below 200°. (Bogorodsky, C. C. 1897, II. 175.)

+2 $H_2O$ . Mpt. 86-88°. (Bogorodsky.)

+3 $H_2O$  Mpt. 75°. (Bogorodsky.)

Sol in absolute alcohol without decomp. (Thiess, Chem. Soc. 1894, 66. (2) 234.)

The composition of the hydrates formed by  $LiI$  at different dilutions is calculated from determinations of the lowering of the fr-pt. produced by  $LiI$  and of the conductivity and sp. gr. of  $LiI + Aq$  (Jones, Am. Ch. J. 1905, 34. 301.)

### Lithium mercuric iodide, $2LiI, HgI_2 + 6H_2O$ .

Very deliquescent. Decomp. by  $H_2O$ . Very sol. without decomp. in alcohols, glycerine, acetone, fuming formic acid, acetic acid, ethyl acetate, ethyl oxalate, etc. Less sol in nitrobenzene. Insol. in benzene and methyl iodide. (Duboin, C. R. 1905, 141. 1017.)

+8 $H_2O$ . Decomp. by  $H_2O$ . Very sol in alcohols, glycerine, acetone, fuming formic acid, acetic acid, ethyl acetate, etc. without decomp. Sol. in nitrobenzene. Insol. in benzene and methyl iodide (Duboin, l. c.)  
+9 $H_2O$  Hygroscopic. Sol. in alcohol and acetone without decomp. (Dobroserdoff, C. C. 1901, I. 664.)

### Lithium nitride, $Li_3N$ .

Sol. in  $H_2O$  with decomp. (Ouvrard, C. R. 114. 120.)

Very hygroscopic. (Dafert, M. 1910, 31. 987.)

### Lithium oxide, $Li_2O$ .

Slowly sol. in  $H_2O$  to form  $LiOH$ .

See Lithium hydroxide.

### Lithium peroxide, $Li_2O_2$ .

(de Foreaud, C. R. 1900, 130. 1467.)

### Lithium hydrogen peroxide, $Li_2O_2, H_2O_2 + 3H_2O$ .

Sol. in  $H_2O$ . Insol. in alcohol. (de Foreaud, C. R. 1900, 130. 1466.)

### Lithium selenide, $Li_2Se$ .

Sol. in  $H_2O$ . (Fabre, C. R. 103. 269.)

+9 $H_2O$  Sol. in  $H_2O$ . (Fabre.)

### Lithium silicide, $Li_6Si_2$ .

Decomp. by  $H_2O$  and by dil. acids. Decomp. by aqueous solutions of alkalis with evolution of  $H_2$ . (Moissan, C. R. 1902, 134. 1083.)

**Lithium metasulphide,  $\text{Li}_2\text{S}$** More sol. in  $\text{H}_2\text{O}$  or alcohol than  $\text{LiOH}$ **Luteochromium bromide,  $\text{Cr}(\text{NH}_3)_6\text{Br}_3$** Less sol. in  $\text{H}_2\text{O}$  than the chloride (Jorgensen, J. pr. (2) 30. 1)— bromoplatinate,  $[\text{Cr}(\text{NH}_3)_6]_2[\text{PtBr}_6]_2 + 11\text{H}_2\text{O}$ Sl. sol. in  $\text{H}_2\text{O}$  Insol. in alcohol (Jorgensen)— chloride,  $\text{Cr}(\text{NH}_3)_6\text{Cl}_3 + \text{H}_2\text{O}$ Efflorescent, and very sol. in  $\text{H}_2\text{O}$  (Jorgensen.)

— chloroplatinate.

(a)  $[\text{Cr}(\text{NH}_3)_6]_2[\text{PtCl}_6]_2 + 6\text{H}_2\text{O}$  Nearly completely insol. in  $\text{H}_2\text{O}$  (Jorgensen.)(b)  $\text{Cr}(\text{NH}_3)_6\text{Cl}[\text{PtCl}_6] + 2\frac{1}{2}\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$  into above, insol. in alcohol. (Jorgensen.)(c)  $[\text{Cr}(\text{NH}_3)_6]_2\text{Cl}_4[\text{Pt}(\text{Cl})_6] + 2\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$  into (a) (Jorgensen)— mercuric chloride,  $\text{Cr}(\text{NH}_3)_6\text{Cl}_2, \text{HgCl}_2$ Decomp. by  $\text{H}_2\text{O}$ ; sl. sol. in dil.  $\text{HCl} + \text{Aq}$ ; insol. in alcohol. $\text{Cr}(\text{NH}_3)_6\text{Cl}_2, 3\text{HgCl}_2 + 2\text{H}_2\text{O}$  Decomp. by dil.  $\text{HCl} + \text{Aq}$  into above salt (Jorgensen)— chromicyanide,  $\text{Cr}(\text{NH}_3)_6\text{Cr}(\text{CN})_6$ 

Precipitate.

— cobaltcyanide,  $\text{Cr}(\text{NH}_3)_6\text{Co}(\text{CN})_6$ Nearly insol. in  $\text{H}_2\text{O}$  or in conc.  $\text{HCl} + \text{Aq}$  (Jorgensen)— ferrocyanide,  $\text{Cr}(\text{NH}_3)_6\text{Fe}(\text{CN})_6$ Very sl. sol. in cold  $\text{H}_2\text{O}$  or dil. acids. (Jorgensen)— iodide,  $\text{Cr}(\text{NH}_3)_6\text{I}_3$ Sl. sol. in  $\text{H}_2\text{O}$ . (Jorgensen, l. c.)— iodosulphate,  $\text{Cr}(\text{NH}_3)_6\text{SO}_4\text{I}$ Sol. in  $\text{H}_2\text{O}$ ; nearly insol. in dil.  $\text{NH}_4\text{OH} + \text{Aq}$  or alcohol. (Jorgensen)— nitrate,  $\text{Cr}(\text{NH}_3)_6(\text{NO}_3)_3$ Sol. in 35–40 pts.  $\text{H}_2\text{O}$  Insol. in cold dil.  $\text{HNO}_3 + \text{Aq}$  or alcohol. Can be crystallised out of  $\text{H}_2\text{O}$  containing a little  $\text{HNO}_3$ . (Jorgensen, J. pr. (2) 30. 1.)

— nitrate chloroplatinate,

 $\text{Cr}(\text{NH}_3)_6(\text{NO}_3)_3\text{PtCl}_6 + \text{H}_2\text{O}$ Insol. in  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Jorgensen.)— nitratosulphate,  $\text{Cr}(\text{NH}_3)_6(\text{NO}_3)\text{SO}_4$ Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Jorgensen.)**Luteochromium oxalate,  $[\text{Cr}(\text{NH}_3)_6]_2(\text{C}_2\text{O}_4)_2 + 4\text{H}_2\text{O}$** Nearly insol. in cold  $\text{H}_2\text{O}$ . (Jorgensen.)— orthophosphate,  $\text{Cr}(\text{NH}_3)_6\text{PO}_4 + 4\text{H}_2\text{O}$ Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Jorgensen.)

— sodium pyrophosphate,

 $\text{Cr}(\text{NH}_3)_6[\text{Na}_2\text{P}_2\text{O}_7] + 11\frac{1}{2}\text{H}_2\text{O}$ Nearly insol. in cold  $\text{H}_2\text{O}$ ; wholly insol. in dil.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Jorgensen.)— sulphate,  $[\text{Cr}(\text{NH}_3)_6]_2(\text{SO}_4)_2 + 5\text{H}_2\text{O}$ Quite sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Jorgensen)

— sulphate chloroplatinate,

 $[\text{Cr}(\text{NH}_3)_6(\text{SO}_4)]_2\text{PtCl}_6$ Nearly insol. in  $\text{H}_2\text{O}$ . (Jorgensen)**Luteocobalt diamine chromium sulphocyanide.**

See Diamine chromium luteocobalt sulphocyanide.

**Luteocobaltic bromide,  $\text{Co}(\text{NH}_3)_6\text{Br}_3$** Sol. in  $\text{H}_2\text{O}$  Precipitated from saturated  $\text{H}_2\text{O}$  solution by dil.  $\text{HBr} + \text{Aq}$  (Jorgensen, J. pr. (2) 35. 417.)

— bromopermanganate,

 $\text{Co}(\text{NH}_3)_6\text{Br}_3(\text{MnO}_4)$ Easily sol. in  $\text{H}_2\text{O}$  (Klobb, A. ch. (6) 12. 5.)— bromoplatinate,  $\text{Co}(\text{NH}_3)_6\text{Br}_3, \text{PtBr}_4 + \text{H}_2\text{O}$ Sl. sol. in  $\text{H}_2\text{O}$ ; can be recrystallised from hot  $\text{H}_2\text{O}$  containing  $\text{HBr}$ . (Jorgensen.)— bromosulphate,  $\text{Co}(\text{NH}_3)_6\text{Br}(\text{SO}_4)$ Nearly insol. in  $\text{H}_2\text{O}$ . Very sl. sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Jorgensen.)— carbonate,  $[\text{Co}(\text{NH}_3)_6]_3(\text{CO}_3)_2 + 7\text{H}_2\text{O}$ Efflorescent; easily sol. in  $\text{H}_2\text{O}$ . $[\text{Co}(\text{NH}_3)_6]_3(\text{CO}_3)_2, \text{H}_2\text{CO}_3 + 5\text{H}_2\text{O}$  Less sol. in  $\text{H}_2\text{O}$  than the neutral salt. (Gibbs and Genth)— chloride,  $\text{Co}(\text{NH}_3)_6\text{Cl}_3$ Sol. in 17.09 pts.  $\text{H}_2\text{O}$  at  $10.5^\circ$ ; 16.81 pts. at  $11.4^\circ$ ; 16.48 pts. at  $12^\circ$ ; and more easily in hot  $\text{H}_2\text{O}$ . (F. Rose.)100 pts.  $\text{H}_2\text{O}$  dissolve 4.26 pts. at  $0^\circ$ , and 12.74 pts. at  $46.6^\circ$ . (Kurnakoff, J. russ. Soc. 24. 629.)Not appreciably sol. in conc.  $\text{HCl} + \text{Aq}$ . (Jorgensen.)

Insol. in alcohol or solutions of the alkali chlorides (Gibbs and Genth)

Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

Aqueous solution is pptd. by alcohol, mineral acids, or alkali chlorides.

**Lutecobaltic mercuric chloride**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $\text{HgCl}_2 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Sol in hot  $\text{H}_2\text{O}$ . (Krok, 1870.)

By recrystallizing from hot  $\text{H}_2\text{O}$  containing  $\text{HCl}$  is converted into—

$\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $3\text{HgCl}_2 + \text{H}_2\text{O}$ . Very sl. sol. in cold  $\text{H}_2\text{O}$ . (Jørgensen.)

$\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $2\text{HgCl}_2 + \frac{1}{2}\text{H}_2\text{O}$ . Sol. in hot  $\text{H}_2\text{O}$ , from which it crystallizes on cooling. Insol. in cold conc.  $\text{HCl} + \text{Aq}$ , and is pptd. from  $\text{H}_2\text{O}$  solution by  $\text{HCl}$  or alcohol. (Carstensen.)

Does not exist (Jørgensen.)

$+3\text{H}_2\text{O}$ . More easily sol. in cold  $\text{H}_2\text{O}$  and other solvents than the preceding comp (Carstensen, Berlin, 1861.)

Does not exist (Jørgensen.)

— **stannous chloride**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,

$3\text{SnCl}_2 + 10\text{H}_2\text{O}$ .

$+8\text{H}_2\text{O}$ .

— **chloraurate**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $\text{AuCl}_3$ .

Very sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$  containing  $\text{HCl}$ . (Gibbs and Genth, Sill. Am. J. (2) 23. 330.)

— **chloriodate**,  $[\text{Co}(\text{NH}_3)_6\text{Cl}_2]\text{I}_2\text{O}_{11} + \text{H}_2\text{O}$

— **chloriridite**,  $\text{Co}(\text{NH}_3)_6\text{IrCl}_4$ .

Insol. in boiling  $\text{H}_2\text{O}$  or dil.  $\text{HCl} + \text{Aq}$ . (Gibbs.)

— **chloriridate**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $3\text{IrCl}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Gibbs.)

— **chlorochromate**,  $\text{Co}(\text{NH}_3)_6\text{CrO}_4\text{Cl} + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Klobb, Bull. Soc. 1901, (3) 25. 1027.)

— **chlorofluoride**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2\text{F}$ .

(Bohm, Z. anorg. 1905, 43. 339.)

— **chloropalladite**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $3\text{PdCl}_2$ .

Easily sol. in dil.  $\text{HCl} + \text{Aq}$ . (Gibbs, Sill. Am. J. (2) 37. 58.)

— **chloroperchlorate**,  $\text{Co}(\text{NH}_3)_6\text{Cl}(\text{ClO}_4)_2$ .

(Millosevich, Gazz. ch. it. 1901, 31. (2) 285.)

— **chloropermanganate**,

$\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4)$ .

Can be recrystallized from  $\text{H}_2\text{O}$ . (Klobb, C. R. 103. 354.)

— **chloropermanganate ammonium chloride**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4)$ ,  $\text{NH}_4\text{Cl}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Klobb.)

**Lutecobaltic chloropermanganate potassium chloride**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4)$ ,  $\text{KCl}$ .

Very easily sol. in  $\text{H}_2\text{O}$ , with decomp. into constituents; sol. in  $\text{KCl} + \text{Aq}$ . (Klobb.)

— **chloropermanganate sodium chloride**,  $\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{MnO}_4)$ ,  $\text{NaCl}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Klobb.)

— **chloroplatinate**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $3\text{PtCl}_4 + 6\text{H}_2\text{O}$ .

Can be recrystallized from much hot  $\text{H}_2\text{O}$ . (Gibbs and Genth.)

$+21\text{H}_2\text{O}$ . (Gibbs and Genth.)

$\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $\text{PtCl}_4 + \frac{1}{2}\text{H}_2\text{O}$ . Very sl. sol. in cold, decomp. by hot  $\text{H}_2\text{O}$  into—

$2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $\text{PtCl}_4 + 2\text{H}_2\text{O}$ . By recrystallizing from hot  $\text{H}_2\text{O}$  containing  $\text{HCl}$  this salt is converted into the above salt. (Jørgensen.)

— **chlororhodate**.

Nearly insol. in boiling  $\text{H}_2\text{O}$  or dil. acids. Sol. in conc.  $\text{HCl} + \text{Aq}$ . (Gibbs, Sill. Am. J. (2) 37. 57.)

— **chlororuthenate**,  $2\text{Co}(\text{NH}_3)_6\text{Cl}_2$ ,  $3\text{RuCl}_4$ .

Sol. in dil. acids. (Gibbs.)

— **chloroselenate**,  $\text{Co}(\text{NH}_3)_6\text{ClSeO}_4 + 3\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Klobb, Bull. Soc. 1901, (3) 25. 1029.)

— **chlorosulphate**,  $\text{Co}(\text{NH}_3)_6\text{Cl}(\text{SO}_4)$ .

Sol. in  $\text{H}_2\text{O}$ .

$+3\text{H}_2\text{O}$ . Only sl. sol. in cold  $\text{H}_2\text{O}$ . (Klobb, Bull. Soc. 1901, (3) 25. 1025.)

— **ammonium chlorosulphate**,

$[\text{Co}(\text{NH}_3)_6\text{Cl}_2(\text{SO}_4)_2]$ ,  $3(\text{NH}_4)_2\text{SO}_4 + 6\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Klobb, Bull. Soc. 1901, (3) 25. 1027.)

— **chlorosulphate chloroplatinate**,

$2\text{Co}(\text{NH}_3)_6\text{Cl}(\text{SO}_4)$ ,  $\text{PtCl}_4$ .

Very sl. sol. in cold pure  $\text{H}_2\text{O}$ . Can be recrystallized out of  $\text{H}_2\text{O}$  containing  $\text{HCl}$ . (Krok.)

— **chlorosulphate mercuric chloride**,

$\text{Co}(\text{NH}_3)_6\text{Cl}(\text{SO}_4)$ ,  $\text{HgCl}_2$ .

Scarcely sol. in pure  $\text{H}_2\text{O}$ , but can be crystallized from warm acidified  $\text{H}_2\text{O}$ . (Krok.)

— **chlorosulphite**,  $\text{Co}(\text{NH}_3)_6(\text{SO}_2)\text{Cl} + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vortmann and Magdeburg, B. 22. 2637.)

— **chromate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{CrO}_4)_2 + 5\text{H}_2\text{O}$ .

Ppt. Sol. in hot  $\text{H}_2\text{O}$ .

$[\text{Co}(\text{NH}_3)_6]_2(\text{Cr}_2\text{O}_7)_2 + 5\text{H}_2\text{O}$ . Moderately sol. in hot  $\text{H}_2\text{O}$ .

**Luteocobaltic chromicyanide,**

Ppt. (Braun.)

**— cobaltcyanide,  $\text{Co}(\text{NH}_3)_6(\text{Co}(\text{CN})_6)$ .**

Ppt

**— dithionate, basic,**Sol in  $\text{H}_2\text{O}$  and dil. alcohol**— ferricyanide,  $\text{Co}(\text{NH}_3)_6\text{Fe}(\text{CN})_4 + \frac{1}{2}\text{H}_2\text{O}$ .**Insol in  $\text{H}_2\text{O}$ . (Braun)**— fluoride,  $\text{Co}(\text{NH}_3)_6\text{F}_6$ .**Sl. sol. in cold  $\text{H}_2\text{O}$ . Nearly insol. in acids (Bohm, Z. anorg. 1905, 43. 349.)**— hydrogen fluoride,  $\text{Co}(\text{NH}_3)_6\text{H}_7\text{F}_6$ .**Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . (Miolati and Rossi, Real. Acc. Linc. 1896, (5) 5. II, 185.)**— hydrogen boron fluoride,  $\text{Co}(\text{NH}_3)_6\text{F}_3, 3\text{BF}_3, \text{H}_2\text{F}$ .**Cryst. from  $\text{H}_2\text{O}$  acidified with  $\text{HF}$ . (Miolati and Rossi)**— molybdenyl fluoride,**Cryst. from  $\text{H}_2\text{O}$  containing  $\text{H}_2\text{F}$ . (Miolati and Rossi.)**— silicon fluoride,****— titanium hydrogen fluoride,****— tungstyl fluoride,****— uranyl fluoride,**Can be cryst. from  $\text{H}_2\text{O}$  containing  $\text{HF}$ . (Miolati and Rossi.)**— vanadyl fluoride,**

Ppt. (Miolati and Rossi.)

**— fluoride nitrate,**

(Bohm, Z. anorg. 1905, 43. 336.)

**— hydroxide,  $\text{Co}(\text{NH}_3)_6(\text{OH})_2$ .**

Known only in aqueous solution.

**Luteocobaltic mercuric hydroxychloride,**

Ppt. Easily decomp. (Vortmann, and Morgulis, B. 22. 2644.)

**— iodide,  $\text{Co}(\text{NH}_3)_6\text{I}_3$ .**Insol. in cold, but moderately sol. in hot  $\text{H}_2\text{O}$ .According to Jørgensen, contains  $\text{HNO}_2$  and has the formula  $\text{Co}_2(\text{NH}_3)_{12}\text{I}_4(\text{NO}_2)_2$ .**— iodosulphate,  $\text{Co}(\text{NH}_3)_6\text{I}(\text{SO}_4)$ .**Can be recrystallized from hot  $\text{H}_2\text{O}$ . Sl. sol. in warm, nearly insol. in cold  $\text{H}_2\text{O}$ . (Krok, B. 4. 711.)**— mercuriodide,  $\text{Co}_2\text{N}_{12}\text{H}_{16}(\text{HgI})_2\text{I}_4$ .**

Ppt. (Vortmann and Borsbach.)

**— mercuriodide, basic,**Insol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Vortmann and Borsbach, B. 23. 2804.)**— nitrate,  $\text{Co}(\text{NH}_3)_6(\text{NO}_3)_4$ .**Sol in  $\text{H}_2\text{O}$ . Can be recrystallized from boiling  $\text{H}_2\text{O}$ . Sol in about 60 pts.  $\text{H}_2\text{O}$ . Insol. in conc.  $\text{HNO}_3 + \text{Aq}$ . (Jørgensen, J. pr. (2), 35. 417.)

Almost insol. in acids. (Rogojski, A. ch. (3), 41. 451.)

Insol. in  $\text{NH}_4\text{OH}$ ,  $\text{HCl}$ , and  $\text{HNO}_3 + \text{Aq}$ ; decomp. by  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Gibbs and Genih.) $\text{Co}(\text{NH}_3)_6(\text{NO}_3)_4$ ,  $\text{HNO}_2$ . Decomp. by  $\text{H}_2\text{O}$  or dil. alcohol. (Jørgensen, J. pr. (2), 44. 63.)**— nitrate chloroplatinate,**Not decomp. by  $\text{H}_2\text{O}$ . (Jørgensen.)**— nitrosulphate,  $\text{Co}(\text{NH}_3)_6(\text{NO}_2)(\text{SO}_4)$ .**Sol in  $\text{H}_2\text{O}$ . (Jørgensen.)**— nitrite cobaltic nitrite,**Nearly insol. in  $\text{H}_2\text{O}$ . (Jørgensen.)Much less sol. in  $\text{H}_2\text{O}$  than the corresponding roseo salt. (Gibbs.)**— diamine cobaltic nitrite,**

Ppt. (Gibbs.)

Nearly insol. in cold, sl. sol. in boiling  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 5. 179.)**— oxalate,  $[\text{Co}(\text{NH}_3)_6]_2(\text{C}_2\text{O}_4)_2 + 4\text{H}_2\text{O}$ .**Insol. in hot or cold  $\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ .

- Luteocobaltic oxalate chloraurate**,  
 $2\text{Co}(\text{NH}_3)_6(\text{C}_2\text{O}_4)_2\text{Cl} \cdot \text{AuCl}_3 \cdot 4\text{H}_2\text{O}$   
 Easily sol. in hot  $\text{H}_2\text{O}$ . (Gibbs.)
- **perchlorate**,  $\text{Co}(\text{NH}_3)_6(\text{ClO}_4)_2$ .  
 (Millosevich, Gazz. ch. it. 1901, 31, (2) 285.)
- **permanganate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{MnO}_4)_2$ .  
 Nearly insol. in  $\text{H}_2\text{O}$ . 100 pts  $\text{H}_2\text{O}$  at  $0^\circ$  dissolve only 0.072 pt. salt. Moderately sol. in hot  $\text{H}_2\text{O}$ . (Klobb, A. ch. (6) 12. 5.)
- **persulphate sulphate**,  
 $[\text{Co}(\text{NH}_3)_6]_2\text{S}_2\text{O}_8(\text{SO}_4)_2$ .  
 Much less sol. in  $\text{H}_2\text{O}$  than the sulphate. Sol. in 641 pts.  $\text{H}_2\text{O}$  at  $18.8^\circ$  and in 632 pts. at  $20^\circ$ . Not easily sol. even in boiling  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 1898, 17. 459.)
- **orthophosphate**,  $\text{Co}(\text{NH}_3)_6(\text{PO}_4)_4 \cdot 4\text{H}_2\text{O}$ .  
 Sl. sol. in cold  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Jørgensen.)  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{PO}_4)_2(\text{PO}_3\text{H})_2 + 5\frac{1}{2}\text{H}_2\text{O}$  (?).  
 Ppt. (Braun.)  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{PO}_4)_2\text{H}_2\text{O}$ . Ppt. Easily sol. in very dil.  $\text{HCl} + \text{Aq}$ . (Jørgensen.)
- **metaphosphate**.  
 Ppt
- **pyrophosphate**,  $[\text{Co}(\text{NH}_3)_6]_2\text{P}_2\text{O}_7 \cdot 6\text{H}_2\text{O}$ .  
 (Gibbs, Am. Acad. Proc. 11. 29); or  $\text{Co}_2(\text{NH}_3)_{12}(\text{P}_2\text{O}_7)(\text{ONa})_2$  (Vortmann, B. 11. 2181); or  $\text{Co}(\text{NH}_3)_6(\text{P}_2\text{O}_7\text{Na}) + 11\frac{1}{2}\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 36. 438.)  
 Very nearly insol. in  $\text{H}_2\text{O}$ . With  $\text{H}_2\text{O}$  at  $80^\circ$  it is decomp. into—  
 $[\text{Co}(\text{NH}_3)_6]_4(\text{P}_2\text{O}_7)_2 + 20\text{H}_2\text{O}$ . Less easily sol. than the preceding salt.
- **pyrophosphate, acid**,  $\text{Co}(\text{NH}_3)_6(\text{P}_2\text{O}_7\text{H})$ .  
 Wholly insol. in  $\text{H}_2\text{O}$ . Somewhat sol. in dil.  $\text{HCl}$ ,  $\text{H}_2\text{O}_2 + \text{Aq}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ . (Jørgensen.)
- **sodium pyrophosphate**,  
 $\text{Co}(\text{NH}_3)_6(\text{P}_2\text{O}_7\text{Na}) + 11\frac{1}{2}\text{H}_2\text{O}$ .  
 Ppt. Not wholly insol. in cold  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . Less sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  than in  $\text{H}_2\text{O}$ . (Jørgensen.)  
 $[\text{Co}(\text{NH}_3)_6]_4(\text{P}_2\text{O}_7)_2 \cdot 2\text{Co}(\text{NH}_3)_6(\text{NaP}_2\text{O}_7) + 39\text{H}_2\text{O}$ . As above. (Jørgensen.)
- **selenate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SeO}_4)_2 \cdot 5\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . (Klobb, Bull. Soc. 1901, (3) 25. 1028.)
- **hydrogen selenate**,  
 $[\text{Co}(\text{NH}_3)_6]_2\text{H}(\text{SeO}_4)_2 + 2\frac{1}{2}\text{H}_2\text{O}$ .  
 Not decomp. by  $\text{H}_2\text{O}$ . (Klobb.)
- Luteocobaltic ammonium selenate**,  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{SeO}_4)_2 \cdot (\text{NH}_4)_2\text{SeO}_4 + 4\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ .  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{SeO}_4)_2 \cdot (\text{NH}_4)_2\text{SeO}_4 + 8\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . (Klobb.)
- **sulphocyanide**,  $\text{Co}(\text{NH}_3)_6(\text{SCN})_2$ .  
 Decomp. by hot  $\text{H}_2\text{O}$ . (Miolati, Z. anorg. 1900, 23. 211.)
- **mercuric sulphocyanide**,  
 $\text{Co}(\text{NH}_3)_6(\text{SCN})_2 \cdot 2\text{Hg}(\text{SCN})_2$ .  
 Decomp. by  $\text{H}_2\text{O}$ .  
 Cryst. from dil.  $\text{NH}_4\text{SCN} + \text{Aq}$ . (Miolati.)
- **platinum sulphocyanide**,  
 $[\text{Pt}(\text{SCN})_4]_2[\text{Co}(\text{NH}_3)_6(\text{SCN})_2]$ .  
 Decomp. by hot  $\text{H}_2\text{O}$ . (Miolati.)
- **silver sulphocyanide**,  
 $\text{Co}(\text{NH}_3)_6(\text{SCN})_2 \cdot 2\text{AgSCN}$ .  
 Decomp. by hot  $\text{H}_2\text{O}$ . (Miolati.)
- **sulphate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2 \cdot 5\text{H}_2\text{O}$ .  
 Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .  
 $+ 6\text{H}_2\text{O}$  (Krol, B. 4. 711.)
- **hydrogen sulphate**,  
 $\text{Co}(\text{NH}_3)_6\text{H}(\text{SO}_4)_2$ .  
 Decomp. by alcohol to sulphate (Jørgensen, Z. anorg. 1898, 17. 458.)  
 $4[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2 \cdot 5\text{H}_2\text{SO}_4 + 10\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$  with decomp. into the normal sulphate.  
 When pulverized it seems to dissociate slowly in contact with abs. alcohol. (Klobb, Bull. Soc. 1901, (3) 25. 1025.)
- **ammonium sulphate**,  
 $[\text{Co}_2(\text{NH}_3)_{12}]_2(\text{SO}_4)_2 \cdot (\text{NH}_4)_2\text{SO}_4 + 8\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$  with decomp. (Klobb.)
- **cerium sulphate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2 \cdot \text{Ce}_2(\text{SO}_4)_2 + 1\frac{1}{2}\text{H}_2\text{O}$ .  
 Very sl. sol. in cold, and practically insol. in boiling  $\text{H}_2\text{O}$ . Sol. in acids. (Gibbs, Am. Ch. J. 16. 660.)  
 $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2 \cdot 3\text{Ce}(\text{SO}_4)_2 + \text{H}_2\text{O}$  As above. (Wing, Sil. Am. J. (2) 49. 363.)
- **lanthanum sulphate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2 \cdot \text{La}_2(\text{SO}_4)_2 + \text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . (Wing.)
- **thallic sulphate**,  $[\text{Co}(\text{NH}_3)_6]_2(\text{SO}_4)_2 \cdot \text{Tl}_2\text{O}(\text{SO}_4)_2 + 5\text{H}_2\text{O}$ .  
 Decomp. by cold  $\text{H}_2\text{O}$ . (Gibbs.)
- **sulphate bromaurate**,  
 $\text{Co}(\text{NH}_3)_6(\text{SO}_4)(\text{AuBr}_4)$ .  
 Very sl. sol. in  $\text{H}_2\text{O}$  with apparent decomp. Insol. in alcohol. (Jørgensen.)

**Luteocobaltic sulphate chloraurate,**Sl sol in  $\text{H}_2\text{O}$ . (Jørgensen.)

— cobaltic sulphite,  $[\text{Co}(\text{NH}_3)_2(\text{SO}_3)_2]_2$ ,  $\text{Co}_2(\text{SO}_3)_2 + \text{H}_2\text{O} = \text{dichrocobaltic sulphite}$ ,  $[\text{Co}(\text{NH}_3)_2(\text{SO}_3)_2 + 2\text{H}_2\text{O}]$ , which see.

$[\text{Co}(\text{NH}_3)_2(\text{SO}_3)_2]_2$ ,  $2\text{Co}_2(\text{SO}_3)_2 + 15\text{H}_2\text{O} = \text{diamine cobaltic sulphite}$ ,  $[\text{Co}(\text{NH}_3)_2(\text{SO}_3)_2 + 5\text{H}_2\text{O}]$ , which see.

**Luteorhodium bromide,  $\text{Rh}(\text{NH}_3)_6\text{Br}_2$ .**

Less sol in  $\text{H}_2\text{O}$  than the chloride. (Jørgensen, J. pr. (2) 44. 51.)

— chloride,  $\text{Rh}(\text{NH}_3)_6\text{Cl}_3$ .

Sol in 7 to 8 pts.  $\text{H}_2\text{O}$  at  $8^\circ$ . (J.)

+  $\text{H}_2\text{O}$ . Extremely efflorescent. (J.)

— rhodium chloride,  $\text{Rh}(\text{NH}_3)_6\text{Cl}_3$ ,  $\text{RhCl}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Jørgensen, Z. anorg. 5. 174.)

— chloroplatinate,  $2\text{Rh}(\text{NH}_3)_6\text{Cl}_3$ ,  $3\text{PtCl}_4 + 6\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol in warm  $\text{HCl} + \text{Aq}$ . (J.)  $\text{Rh}(\text{NH}_3)_6\text{Cl}_3$ ,  $\text{PtCl}_4 + \frac{1}{2}\text{H}_2\text{O}$ . Decomp by  $\text{H}_2\text{O}$  into chloride and above salt (J.)

— nitrate,  $\text{Rh}(\text{NH}_3)_6(\text{NO}_3)_3$ .

Sol. in 48 to 49 pts.  $\text{H}_2\text{O}$  at ord temp  $\text{HNO}_3 + \text{Aq}$  diluted with 5 vols  $\text{H}_2\text{O}$  ppts the salt completely from aqueous solution (Jørgensen, J. pr. (2) 44. 51.)

$\text{Rh}(\text{NH}_3)_6(\text{NO}_3)_3$ ,  $\text{HNO}_3$ . Decomp. by  $\text{H}_2\text{O}$  or dil alcohol. (Jørgensen, J. pr. (2), 44. 63.)

— orthophosphate,  $\text{Rh}(\text{NH}_3)_6\text{PO}_4 + 4\text{H}_2\text{O}$ .

Sl. sol in cold  $\text{H}_2\text{O}$ . (J.)

— sodium pyrophosphate,  $[\text{Rh}(\text{NH}_3)_6]_2(\text{P}_2\text{O}_7)_2 \cdot \text{Na}_2 + 23\text{H}_2\text{O}$ .

Nearly wholly insol in  $\text{H}_2\text{O}$ . Wholly insol in  $\text{NH}_4\text{OH} + \text{Aq}$ . (J.)

— sulphate,  $[\text{Rh}(\text{NH}_3)_6]_2(\text{SO}_4)_3 + 5\text{H}_2\text{O}$ .

Sol. in 43 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . (J.)

**Magnesium, Mg.**

Does not decomp.  $\text{H}_2\text{O}$  at ord temp., but decomp slowly at  $100^\circ$ .  $\text{H}_2\text{O}$  containing acids dissolves Mg easily. Sol. in cold dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Difficultly sol. in cold  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Bunsen.) Cold nitrosulphuric acid does not attack. (Bunsen.) Cold  $\text{NH}_4\text{OH} + \text{Aq}$ ,  $\text{KOH} + \text{Aq}$ , or  $\text{NaOH} + \text{Aq}$  do not attack (Maack, Phipps.) Sol. in  $\text{NH}_4\text{Cl}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Wöhler.)

Very rapidly sol. in  $\text{K}_2\text{S}_2\text{O}_8 + \text{Aq}$  and  $(\text{NH}_4)_2\text{S}_2\text{O}_8 + \text{Aq}$  with violent evolution of gas (Levi, Gazz. ch. it. 1908, 38. (1), 533.)

Attacked by aqueous solution of  $\text{KCl}$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{NaCl}$ ,  $\text{LiCl}$ ,  $\text{CuCl}_2$ ,  $\text{CdCl}_2$ ,  $\text{CoCl}_2$ ,  $\text{PbCl}_2$ ,  $\text{HgCl}_2$ ,  $\text{FeCl}_3$ ,  $\text{CrCl}_3$ ,  $\text{PtCl}_4$ ,  $\text{AuCl}_3$ ,  $\text{CuSO}_4$ ,  $\text{ZnSO}_4$ ,  $\text{FeSO}_4$ , and  $\text{MnSO}_4$ .

Sl. attacked by hot  $30\%$   $\text{CaCl}_2 + \text{Aq}$ , not by  $30\%$   $\text{MgCl}_2 + \text{Aq}$ ,  $\text{BaCl}_2 + \text{Aq}$  and  $\text{SrCl}_2 + \text{Aq}$  (Tommasi, Bull. Soc. 1899, (3), 21. 880.)

Not attacked by  $\text{NH}_4\text{F} + \text{Aq}$ , very slowly by solutions of  $\text{BaCl}_2$ ,  $\text{CaCl}_2$ ,  $\text{KCl}$ ,  $\text{K}_3\text{Fe}(\text{CN})_6$ ,  $\text{NaNO}_2$ ,  $\text{Na}_2\text{S}_2\text{O}_3$  and  $\text{Na}_2\text{HPO}_4$ . Solutions of  $\text{NaC}_2\text{H}_3\text{O}_2$ ,  $\text{Na}_2\text{B}_4\text{O}_7$ , alum and chrome alum attack vigorously. Solutions of  $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{NH}_4\text{Cl}$ ,  $(\text{NH}_4)_2\text{C}_2\text{O}_4$ ,  $(\text{NH}_4)_2\text{S}$  and  $\text{Na}_2\text{CO}_3$  attack even more vigorously. (Moumoun, C R 1900, 130. 140.)

Insol in liquid  $\text{NH}_3$  (Gore, Am. Ch. J. 1898, 20. 828.)

Insol in liquid  $\text{HF}$ . (Franklin, Z. anorg. 1905, 46. 2.)

Somewhat sol. in liquid  $\text{NH}_3$ , if a clean metallic surface is in contact with the pure solvent. (Kraus, J. Am. Chem. Soc. 1907, 29. 1561.)

$\frac{1}{2}$  gram oleic acid dissolves 0.0104 g. Mg in 6 days (Gates, J. phys. Chem. 1911, 15. 143.)

**Magnesium arsenide,  $\text{Mg}_3\text{As}_2$ .**

Decomp on air. (Parkinson, Chem. Soc. 5. 127.)

**Magnesium azoimide,  $\text{Mg}(\text{N}_3)_2$ .**

Decomp. by hot  $\text{H}_2\text{O}$ . (Curtius, J. pr. 1898, (2) 58. 292.)

**Magnesium boride,  $\text{Mg}_2\text{B}_3$ .**

Sol in  $\text{HCl} + \text{Aq}$ . (Winkler, B. 23. 774.)

**Magnesium bromide,  $\text{MgBr}_2$ .**

Deliquescent. Very sol in  $\text{H}_2\text{O}$  with evolution of heat.

Sat  $\text{MgBr}_2 + \text{Aq}$  contains at:

—18°	+17°	48°	62°	97°
53	58	60	9	62

5 85.8%  $\text{MgBr}_2$ . (Étard, A. ch. 1894, (7), 2. 541.)

See also  $\text{MgBr}_2 + 6\text{H}_2\text{O}$ .

Sp. gr. of  $\text{MgBr}_2 + \text{Aq}$  at  $19.5^\circ$  containing.

5	10	15	20	25 % $\text{MgBr}_2$
1.043	1.087	1.137	1.191	1.247

30	35	40	45	50 % $\text{MgBr}_2$
1.31	1.377	1.451	1.535	1.625

(Kremers, Pogg. 108. 118, calculated by Gerlach, Z. anal. 8. 285.)

$\text{MgBr}_2 + \text{Aq}$  is sl. decomp. by evaporation.

Solubility of  $\text{MgBr}_2$  in alcohols.

$\text{MgBr}_2$  forms with methyl alcohol a complex,  $\text{MgBr}_2 \cdot 6\text{CH}_3\text{OH}$ .

(Menschutkin, Z. anorg. 1907, 62, 153.)

Sp. gr. of solution sat. at  $18^\circ = 1.655$ , and contains 60.8%  $\text{MgBr}_2$  (Mylius and Funk, B. 1897, 30, 1718.)Sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 828.)

Sol. in alcohol. Sol. in acetone. (Naumann, B. 1904, 37, 4328; Erdmann, C. C. 1899, II, 1014.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

 $+10\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Panfiloff, Chem. Soc. 26, 234.)**Magnesium manganous bromide,  $\text{MgBr}_2 \cdot 2\text{MnBr}_2 + 12\text{H}_2\text{O}$ .**

Deliquescent. (Saunders, Am. Ch. J. 14, 150.)

**Magnesium mercuric bromide,  $\text{MgBr}_2 \cdot \text{HgBr}_2$ .**

Deliquescent.

 $\text{MgBr}_2 \cdot 2\text{HgBr}_2$ . Not deliquescent.**Magnesium molybdenyl bromide,  $\text{MgBr}_2 \cdot \text{MoOBr}_3 + 7\text{H}_2\text{O}$ .**

(Weinland and Knoll, Z. anorg. 1905, 44, 112.)

**Magnesium potassium bromide,  $\text{MgBr}_2 \cdot 2\text{KBr} + 6\text{H}_2\text{O}$ .**Easily sol. in  $\text{H}_2\text{O}$ , from which  $\text{KBr}$  crystallizes at  $75$  to  $87^\circ$ . Alcohol dissolves out  $\text{MgBr}_2$ . (Lowig, Repert. 29, 261.)

Formula is  $\text{MgBr}_2$ ,  $\text{KBr} + 6\text{H}_2\text{O}$ . Deliquescent. (Lorch, J. pr. (2) 28, 338.)

Magnesium stannic bromide.

See Bromostannate, magnesium.

Magnesium chloride,  $\text{MgCl}_2$

Deliquescent. Very sol in  $\text{H}_2\text{O}$  with evolution of heat. The solution decomposes on evaporation losing  $\text{HCl}$ , when less than 6 mols.  $\text{H}_2\text{O}$  are present to 1 mol.  $\text{MgCl}_2$  (Cassene, C. R. 37, 350.)

Anhydrous. Sol in 1.857 pts  $\text{H}_2\text{O}$  at  $15^\circ$ . (Gerlach.)

Sol in 1 pt. cold  $\text{H}_2\text{O}$ . (Fourcroy)  
Sat.  $\text{MgCl}_2 + \text{Aq}$  at  $12.5^\circ$  contains 64.8%  $\text{MgCl}_2$  (Hassenzahl)  
100 pts  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 200 pts  $\text{MgCl}_2$  (Ure's Diet)

100 pts.  $\text{H}_2\text{O}$  dissolve 52.2 pts.  $\text{MgCl}_2$  at  $0^\circ$  and sp. gr. of sat. solution = 1.3019 at  $15^\circ$ . (Engel, Bull. Soc. (2) 47, 318.)

1000 mols.  $\text{H}_2\text{O}$  dissolve 103 mols  $\text{MgCl}_2$  at  $25^\circ\text{C}$ . (Lowenherz, Z. phys. Ch. 1894, 13, 479.)

100 mols.  $\text{MgCl}_2 + \text{Aq}$  contain at  $t^\circ$ .

3.5	0 5	99.5
25.0	0 5	103.8
50.0	0.8	111.2

(Biltz and Marcus, Z. anorg. 1911, 71. 170.)

Solubility data of MgCl<sub>2</sub>+KCl+MgKCl<sub>3</sub> are given by van't Hoff and Meyerhoffer. (Z. phys. Ch. 1899, 30. 64.)

+8H<sub>2</sub>O. Pptd. from an aqueous solution which contains about 10 mols. H<sub>2</sub>O to 1 mol. MgCl<sub>2</sub>.

+12H<sub>2</sub>O. Pptd. from an aq. solution which contains 1 mol. MgCl<sub>2</sub> in about 12.06 mols. of H<sub>2</sub>O. (Bogorodsky, C. C. 1899, I. 246.)

Magnesium manganous chloride, MgCl<sub>2</sub>, 2MnCl<sub>2</sub>+12H<sub>2</sub>O.

Deliquescent. Very sol. in H<sub>2</sub>O and alcohol. (Saunders, Am. Ch. J. 14. 148.)

2MgCl<sub>2</sub>, MnCl<sub>2</sub>+12H<sub>2</sub>O Ppt. Deliquesces in the air. (Gossner, C. C. 1904, I. 707.)

Magnesium mercuric chloride, MgCl<sub>2</sub>, HgCl<sub>2</sub>+6H<sub>2</sub>O.

Very deliquescent. More sol. than the following salt. (v. Bonsdorff, Pogg. 17. 133.)

MgCl<sub>2</sub>, 3HgCl<sub>2</sub>+5H<sub>2</sub>O. Sol. in H<sub>2</sub>O with-

out decomp. Easily sol. in alcohol. (v. Bonsdorff.)

**Magnesium phosphoryl chloride,  $\text{MgCl}_2\text{POCl}_2$**

Deliquescent. Sol in  $\text{H}_2\text{O}$  with evolution of heat and decomposition. Very al. sol. in warm  $\text{POCl}_3$ . (Casselmann, A. 98. 223.)

**Magnesium potassium chloride,  $\text{MgCl}_2 \cdot 2\text{KCl} + 6\text{H}_2\text{O}$**

Deliquescent, forming a solution of  $\text{MgCl}_2$ , while  $\text{KCl}$  remains undissolved. 100 pts.  $\text{H}_2\text{O}$  dissolve 64.5 pts. at  $18^\circ$ . 20 pts. salt dissolved in 80 pts.  $\text{H}_2\text{O}$  lower the temp.  $1.75^\circ$ . (Bischof.) Alcohol dissolves out  $\text{MgCl}_2$ . Decomp. into the two salts by solution in  $\text{H}_2\text{O}$ . (Marcet.)

A sat. solution in contact with solid  $\text{KCl}$  and  $\text{KCl}$ ,  $\text{MgCl}_2$ ,  $\text{H}_2\text{O}$  at  $50^\circ$  contains 79.5 mol.  $\text{MgCl}_2$  and 14.9 mol.  $\text{KCl}$  per 1000 mol.  $\text{H}_2\text{O}$ . A sat. solution in contact with solid  $\text{MgCl}_2$ ,  $6\text{H}_2\text{O}$  and  $\text{KCl}$ ,  $\text{MgCl}_2$ ,  $\text{H}_2\text{O}$  at  $50^\circ$  contains 111.9 mol.  $\text{MgCl}_2$  and 1.2 mol.  $\text{KCl}$  per 1000 mol.  $\text{H}_2\text{O}$ . (Uhlir, Chem. Soc. 1913, 104. (2) 775; C. B. Miner. 1913, 417.)

Min. *Carnallite*.

**Magnesium rubidium chloride,  $\text{MgCl}_2 \cdot \text{RbCl} + 6\text{H}_2\text{O}$**

Not decomp. by a small quantity of  $\text{H}_2\text{O}$ . (Feit and Kubiersky, Ch. Ztg. 16. 335.)

**Magnesium sodium chloride,  $\text{MgCl}_2 \cdot \text{NaCl} + 2\text{H}_2\text{O}$**

Sol. in  $\text{H}_2\text{O}$ . (Poggiale.)

**Magnesium thallie chloride,  $2\text{TlCl}_2 \cdot \text{MgCl}_2 + 6\text{H}_2\text{O}$**

Hydroscopic. Can be cryst. from  $\text{H}_2\text{O}$ . (Gewecke, A. 1909, 366. 224.)

**Magnesium stannic chloride.**

See Chlorostannate, magnesium.

**Magnesium vanadium chloride,  $\text{MgCl}_2 \cdot \text{VCl}_3 + \text{H}_2\text{O}$**

Difficultly sol. in  $\text{H}_2\text{O}$  and alcohol. (Stahler, B. 1904, 37. 4412.)

**Magnesium zinc chloride,  $\text{MgCl}_2 \cdot \text{ZnCl}_2 + 6\text{H}_2\text{O}$**

Deliquescent; sol. in  $\text{H}_2\text{O}$ . (Warner, C. N. 27. 271.)

**Magnesium chloride ammonia,  $\text{MgCl}_2 \cdot 4\text{NH}_3$**   
Easily decomp. (Clark, A. 78. 369.)

**Magnesium chloride hydroxylamine,  $\text{MgCl}_2 \cdot 2\text{NH}_2\text{OH} + 2\text{H}_2\text{O}$**

100 g. of solution in  $\text{H}_2\text{O}$  contain 44.4% at  $20^\circ$ . (Antonow, J. Russ. Phys. Chem Soc. 1905, 37. 478.)

**Magnesium fluoride,  $\text{MgF}_2$**

1 l.  $\text{H}_2\text{O}$  dissolves 76 mg.  $\text{MgF}_2$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

87 mg. are dissolved in 1 l. of sat. solution at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Scarcely sol. in acids. (Gay-Lussac and Thénard.) Insol. in excess of  $\text{HF}$ . When precipitated, is sol. in aqueous solution of ammonium and magnesium salts. Sol. in dil.  $\text{HNO}_3 + \text{Aq}$ , from which it is precipitated by alcohol.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Min. *Sellaite*.

**Magnesium potassium fluoride,  $\text{MgF}_2 \cdot \text{KF}$**

Decomp. by  $\text{H}_2\text{SO}_4$ . (Dubon, C. R. 1895, 120. 679.)

$\text{MgF}_2$ , 2KF. Decomp. by  $\text{H}_2\text{SO}_4$ . (Dubon.)

**Magnesium sodium fluoride,  $\text{MgF}_2 \cdot \text{NaF}$**

Insol. in  $\text{H}_2\text{O}$ . (Geuther, J. B. 1865. 173.)

**Magnesium stannic fluoride.**

See Fluostannate, magnesium.

**Magnesium titanium fluoride.**

See Fluotitanate, magnesium.

**Magnesium zirconium fluoride.**

See Fluozirconate, magnesium.

**Magnesium hydrosulphide,  $\text{MgS}_2\text{H}_2$**

Known only in aqueous solution, which decomposes on warming. Solution containing 16%  $\text{MgS}_2\text{H}_2$  has sp. gr. 1.118 at  $12^\circ$ . (Divers and Shimidzu, Chem. Soc. 45. 699.)

**Magnesium hydroxide,  $\text{MgO}_2\text{H}_2$**

$\text{MgO}$  is sol. in 55,368 pts.  $\text{H}_2\text{O}$  at ordinary temp., and also at  $100^\circ$ . (Fresenius, A. 59. 117.)

$\text{MgO}$  is sol. in 5143 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$  (Fyfe), in 5300 pts. at  $15.8^\circ$  (Henry, J. Pharm. 19. 2), in 7900 pts. (Kirwan), in 16,300 pts. (Dalton), in 100,000-200,000 pts. cold  $\text{H}_2\text{O}$  (Bancroft), in 39,000 pts. boiling  $\text{H}_2\text{O}$  (Fyfe, Ed. Phil. J. 5. 305.)

Calculated from electrical conductivity of  $\text{MgO}_2\text{H}_2 + \text{Aq}$ , 1 l.  $\text{H}_2\text{O}$  dissolves 9 mg.  $\text{MgO}_2\text{H}_2$  at  $18^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

Calculated from electrical conductivity, 1 l.  $\text{H}_2\text{O}$  dissolves 0.076 g.  $\text{MgO}_2\text{H}_2$  at  $18^\circ$ . (Dupré and Brutus, Z. angew. Ch. 1903, 16. 55.)

Presence of  $\text{CaO}_2\text{H}_2$  or  $\text{CaSO}_4$  does not decrease the solubility (Henry.) Presence of the salts of the alkali metals, especially ammonium salts, increase the solubility. Insol. in conc.  $\text{Na}_2\text{SO}_4$ ,  $\text{NaNO}_3$ ,  $\text{NaCl}$ , or  $\text{KNO}_3 + \text{Aq}$ . (Karsten.) Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , but insol. in  $\text{KOH} + \text{Aq}$ . (Odling.)

Easily sol. in acids. Sol. in an aqueous solution of sugar. Boiling alcohol dissolves traces.

Solubility of  $MgO_2H_2$  in  $NH_4Cl + Aq$  at  $29^\circ$ .

Conc of $NH_4Cl + Aq$ (Normal)	Acid required for liberating $NH_3$ in 25cc. (Normal)	Normality of		G per l

140	0.045	..
160	None	None

(Maigret.)

Freshly pptd.  $Mg(OH)_2$  is sol in  $Th(NO_3)_4 + Aq$  forming a colloidal solution. (Halla, Z. anorg. 1912, 79, 262.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329; Erdmann, C. C. 1899, II, 1014.)

See also Magnesium oxide.

Min. Brucite. Sol. in cold citric acid +  $Aq$  (Bolton, C. N. 37, 14.)

$2MgO, 3H_2O$ . (Bender, B. 3, 932.)

Magnesium iodide,  $MgI_2$ .

Very deliquescent.

Solubility in  $H_2O$ . See  $MgI_2 + 6$ , and  $8H_2O$ .

Sp. gr. of  $MgI_2 + Aq$  at  $19.5^\circ$  containing:

5	10	15	20	25	30%	MgI <sub>2</sub>
1.043	1.088	1.139	1.194	1.254	1.32

80°	90.3	200°	93.4
120°	90.9	215°	94.3

(Menschutkin, Z. anorg. 1907, 52. 156.)

+8H<sub>2</sub>O Sp gr of solution of  $\text{MgI}_2 \cdot 8\text{H}_2\text{O}$  sat. at 18° containing 59.7%  $\text{MgI}_2 = 1.909$ . (Mylhus, B. 1897, 30. 1718.)

Solubility of  $\text{MgI}_2 \cdot 8\text{H}_2\text{O}$  in H<sub>2</sub>O at  $t^\circ$ .

$t^\circ$	% by weight of $\text{MgI}_2 \cdot 8\text{H}_2\text{O}$
0	76.0
20	81.0
40	88.0
43.5	90.8

(Menschutkin.)

+10H<sub>2</sub>O Sol. in H<sub>2</sub>O. (Panfiloff, C. C. 1894, II. 610.)

Magnesium mercuric iodide,  $\text{MgI}_2$ ,  $\text{HgI}_2$ .

Known only in solution.

+9H<sub>2</sub>O. Very deliquescent. (Duboin, C. R. 1906, 142. 1338.)

Very sol. in ethyl, methyl, propyl, butyl, isobutyl, amyl, isopropyl and allyl alcohols, ethyl, amyl, propyl and isobutyl acetates, ethyl cyanide and acetone. Sol. in benzyl alcohol. Decomp. by glycerine. Sl. sol. in ethyl benzoate, amyl benzoate, nitrobenzene. Decomp. by ethyl ovalate. Insol. in toluene, benzene, ethyl iodide,  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , ethylene bromide, monochloro and monobromobenzene. (Duboin, A. ch 1909, (8) 16. 276.)

$\text{MgI}_2 \cdot 2\text{HgI}_2$ . Decomp. by H<sub>2</sub>O into  $\text{HgI}_2$  and above compound, which remains in solution. (Boullay.)

+7H<sub>2</sub>O. Sat. solution in H<sub>2</sub>O at 17.8° has the composition  $\text{MgI}_2$ , 1.29  $\text{HgI}_2$ , 11.06 H<sub>2</sub>O. (Duboin, C. R. 1906, 142. 1338.)

Magnesium potassium iodide,  $\text{MgI}_2$ ,  $\text{KI} + 6\text{H}_2\text{O}$ .

Deliquescent. (Lerch, J. pr. (2) 28. 338.)

Very hygroscopic. (de Schulten, Bull. Soc 1900 (3) 23. 158.)

Magnesium iodide ammonia,  $\text{MgI}_2$ ,  $6\text{NH}_3$ .

Practically insol. in liquid  $\text{NH}_3$ . (Franklin, J. Am. Chem. Soc. 1913, 35. 1459.)

Magnesium nitride,  $\text{Mg}_3\text{N}_2$ .

Decomp. by moist air or H<sub>2</sub>O. Sol. in dil. or conc.  $\text{HCl} + \text{Ag}$ , or  $\text{HNO}_3 + \text{Ag}$ . Sol. in warm  $\text{H}_2\text{SO}_4$ . Insol. in alcohol, ethyl iodide, or phosphorus oxychloride. (Briegleb and Geuther, A. 123. 236.)

Decomp. by H<sub>2</sub>O. (Smits, R. t. c. 1894, 12. 198.)

Easily decomp. H<sub>2</sub>O when finely powdered. (Rossel, C. R. 1895, 121. 942.)

Magnesium suboxide (?).

Decomp. H<sub>2</sub>O. Sol. in dil. acids. (Beetz, Pogg. 127. 45.)

Magnesium oxide,  $\text{MgO}$ .

Sol. in 50,000-100,000 pts H<sub>2</sub>O (Bunsen, C. R. 41. 510), in 55,308 pts. cold or hot H<sub>2</sub>O (Fresenius, A. 59. 123), in 100,000-200,000 pts H<sub>2</sub>O (Bunsen), in 18,000 pts H<sub>2</sub>O at ord temp (Dalton); in 7900 pts H<sub>2</sub>O at ord temp (Kewenau), in 5760 pts H<sub>2</sub>O at 15.5°, and 36,000 pts. at 100° (Fyfe)

Calc. from electrical conductivity of MgO + Aq. 1 pt. MgO is sol. in 172,000 pts. H<sub>2</sub>O at 18°. (Dupré, *Zet. angew. Ch.* 1903, 16, 55.) "Heavy" MgO is more sol. in H<sub>2</sub>O than "light" MgO. The temp. of preparation affects the rate of solution, the rate being diminished as the temp. of preparation is increased (Anderson, *Chem. Soc.* 1905, 87, 265.)

Easily sol. in acids, even in H<sub>2</sub>SO<sub>4</sub> + Aq.

Solubility in P<sub>2</sub>O<sub>5</sub> + Aq at 25°.

Composition of the solution		Sp. gr. 25°/25°	Solid phase

34 22	0 0030

(Robinson, *J. phys. Chem.* 1909, 13, 676.)

More sol. in K<sub>2</sub>SO<sub>4</sub> and Na<sub>2</sub>SO<sub>4</sub> + Aq than in H<sub>2</sub>O (Warrington.)

Insol. in liq. NH<sub>3</sub>. (Franklin, *Am. Ch. J.* 1898, 20, 828.)

Sol. in methyl alcohol to form a colloidal solution containing 1.6% MgO. (Neuberg and Rewald (*Biochem. Z.* 1908, 9, 547.)

Insol. in methyl acetate (Naumann, *B.* 1909, 42, 3790); ethyl acetate. (Naumann, *B.* 1904, 37, 3602.)

Insol. in acetone. (Naumann, *B.* 1904, 37, 4329.)

Insol. in acetone and in methylal. (Eidmann, *C. C.* 1899, II, 1014.)

Solubility in (calcium succinate + sugar) + Aq.

1 l. solution containing 418.6 g. sugar and 34.3 g. CaO dissolves 0.30 g. MgO, containing 296.5 g. sugar and 24.2 g. CaO dissolves 0.24 g. MgO; containing 174.4 g. sugar and 14.1 g. CaO dissolves 0.22 g. MgO. (Bodenbender, *J. B.* 1865, 600)

See also Magnesium hydroxide.

*Min. Periclase.*

Magnesium peroxide, MgO<sub>2</sub>.

Sol in 14,550 pts. H<sub>2</sub>O at 20°. (Foregger and Philipp, *J. Soc. Chem. Ind.* 1906, 25, 298.)

5MgO, 2MgO<sub>2</sub> + 3H<sub>2</sub>O.

3MgO, 2MgO<sub>2</sub> + 3H<sub>2</sub>O.

2MgO, 2MgO<sub>2</sub> + 3H<sub>2</sub>O.

4MgO, 2MgO<sub>2</sub> + 3H<sub>2</sub>O.

Above salts are decomp. by H<sub>2</sub>O.

(Carrasco, *Gazz. ch. it.* 1909, 39, (1) 47.)

Magnesium oxybromide, MgBr<sub>2</sub>, 3MgO + 12H<sub>2</sub>O.

Decomp. in the air and also by H<sub>2</sub>O, alcohol and most reagents. (Taassily, *C. R.* 1897, 125, 607.)

Magnesium oxychloride, Mg<sub>2</sub>OCl<sub>2</sub> + 16H<sub>2</sub>O.

Easily decomp. by H<sub>2</sub>O and alcohol. (André, *A. ch.* (6) 3, 80.)

+ 6H<sub>2</sub>O. (André.)

2MgO, HCl, 5H<sub>2</sub>O or 3MgO, MgCl<sub>2</sub> + 10H<sub>2</sub>O. Solubility determinations show that this salt is the solid phase in equilibrium at 25° with solutions of MgCl<sub>2</sub> and MgO containing from 10–15% MgCl<sub>2</sub>. (Robinson, *J. phys. Chem.* 1909, 13, 677.)

Mg<sub>2</sub>O<sub>2</sub>Cl<sub>2</sub> + 6, 8, 14, or 17H<sub>2</sub>O. Decomp. by H<sub>2</sub>O, which dissolves out MgCl<sub>2</sub>. (Bender, *B.* 3, 932.)

Mg<sub>11</sub>O<sub>10</sub>Cl<sub>2</sub> + 14, or 18H<sub>2</sub>O. (Krause, *A.* 165, 38.)

Mg<sub>10</sub>O<sub>9</sub>Cl<sub>2</sub> + 24H<sub>2</sub>O = 9MgO, MgCl<sub>2</sub> + 24H<sub>2</sub>O. H<sub>2</sub>O removes all MgCl<sub>2</sub> by long digestion. (Bender, *A.* 159, 341.)

+ 10, and 15H<sub>2</sub>O. (Bender.)

Magnesium oxysulphide, Mg<sub>2</sub>OS.

(Reichel, *J. pr.* (2) 12, 55.)

**Magnesium phosphide,  $Mg_3P_2$ .**

Decomp. by  $H_2O$ , dil.  $HCl$ +Aq, or  $HNO_3$ +Aq. (Parkinson, Chem. Soc. 5. (2) 125 and 309.)

Insol. in moderately dil. cold  $HCl$ +Aq, or boiling dil.  $H_2SO_4$ +Aq. Difficultly and slowly sol. in aqua regia. (Blunt, Chem. Soc. 3. (2) 106.)

Decomp. by  $H_2O$ ,  $HCl$ , conc.  $H_2SO_4$ , and by  $HNO_3$ . (Gautier, C. R. 1899, 128. 1169.)

**Magnesium silicide,  $Mg_2Si$ .**

Slowly decomp. by warm  $H_2O$ . Slowly decomp. by cold, rapidly by hot  $NH_4Cl$ +Aq. Decomp. by cold dil.  $HCl$ +Aq. (Geuther, J. pr. 95. 425.)

$Mg_2Si$ . Decomp. by  $HCl$ +Aq with residue of  $Si$ . (Wöhler, A. 107. 113.)

Slowly decomp. by  $H_2O$  at ord. temp. Violently decomp. by  $HCl$ . (Lebeau and Bossuet, C. R. 1908, 146. 284.)

**Magnesium sulphide,  $MgS$ .**

Decomp. by  $H_2O$ . (Reichel, J. pr. (2) 12. 55.)

$Si$  sol. in  $H_2O$  with rapid decomp. (Fremy.)

Sol. in acids with decomp.

*Anhydrous. Crystalline.* Only very sl. sol. in cold  $H_2O$ . Sol. in  $HNO_3$  and  $H_2SO_4$  at ord. temp. Sol. in  $PCl_5$  and in chromyl chloride. (Mourlot, C. R. 1898, 127. 182.)

**Magnesium polysulphide,  $MgS_x$ .**

Known only in solution. (Reichel.)

**Magnus' green salt.**

See Platodiamine chloroplatinite.

**Manganese, Mn.**

Decomposes  $H_2O$  even in the cold, more rapidly when hot. (Regnault.)

Decomposes cold water violently. (Bunsen.)

Sol. in all dil. acids. Slowly sol. in cold  $H_2SO_4$ . (John.)

Insol. in cold, but rapidly sol. in hot  $H_2SO_4$ . Very easily sol. in dil.  $H_2SO_4$ , or  $HCl$ +Aq,  $HNO_3$ , or  $HCl$ + $H_2O_2$ +Aq. (Brunner.)

Pure manganese is unaltered in dry air, even when finely powdered. Slowly attacked by cold, quickly by hot  $H_2O$ . Very sl. attacked by cold  $H_2SO_4$ , rapidly on warming, rapidly attacked by cold dil.  $H_2SO_4$ +Aq; violently by conc.  $HNO_3$ +Aq; and rapidly by dil.  $HNO_3$ ,  $HCl$ ,  $HCl$ + $H_2O_2$ +Aq, and also  $NaOH$ +Aq. Sol. in  $NH_4Cl$ +Aq (Prelinger, W. A. B. 102, 2b. 359.)

Insol. in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 828.)

$\frac{1}{2}$  ccm. oleic acid dissolves 0.0276 g. Mn in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

**Manganese antimonide,  $MnSb$ .**

Sol. in hot aqua regia. (Wedekind, B. 1907, 40. 1266.)

**Manganese azoimide, basic,  $Mn(OH)N_3$ .**

Only sl. sol. in  $H_2O$  with decomp. (Curtius, J. pr. 1898, (2) 58. 293.)

**Manganese bismuthide,  $MnBi$ .**

Very sensitive towards acids with the exception of conc.  $HCl$ . (Wedekind, B. 1911, 44. 2665.)

**Manganese boride,  $MnB$ .**

Attacked by cold  $H_2O$  and by acids, (Jassoneix, C. R. 1904, 139. 1210.)

Easily attacked by  $HCl$ ,  $H_2SO_4$ , and  $HF$  with evolution of  $BH_3$ . (Wedekind, B. 1905, 38. 1231.)

$MnB_2$ . Sol. in acids, with evolution of  $H_2$ . (Troost and Hautefeuille, A. ch. (5) 9. 65.)

Slowly decomp. by  $H_2O$ . Sol. in dil.  $HCl$  and other dil. acids with evolution of  $BH_3$ . (Wedekind, B. 1905, 38. 1229.)

**Manganese bromide,  $MnBr_2$ .**

*Anhydrous.* Very deliquescent.

Sat.  $MnBr_2$ +Aq contains at:

—21° +7° 11° 18° 38° 52°  
52.1 56.5 57.0 59.1 62.7 64.2%  $MnBr_2$ ,

64° 76° 89° 97° 105°

68.2 70.1 69.7 69.2 70.2%  $MnBr_2$ .

(Etard, A. ch. 1894, (7) 2. 541.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

+ $H_2O$ . (Lescœur, A. ch. 1894, (7) 2. 104.)

+4 $H_2O$ . More deliquescent than  $MnCl_2$ .

Melts in crystal water when heated. (Berthelot.)

+6 $H_2O$ . (Kuznetsoff, C. C. 1897, II. 329.)

**Manganous mercuric bromide.**

Deliquescent.

**Manganous palladium bromide.**

See Bromopalladate, manganous.

**Manganous stannic bromide.**

See Bromostannate, manganous.

**Manganese carbide,  $MnC$ .**

(Brown, J. pr. 17. 492.)

$MnC_3$ .

$MnC_4$ . (Troost and Hautefeuille, A. ch. (5) 9. 60.)

Decomp. by  $H_2O$  and by dil. acids (Moissan, C. R. 1896, 122. 422.)

**Manganous chloride,  $MnCl_2$ .**

*Anhydrous.* Deliquescent.

(Suss, Z. Kryst. Min. 1912, 51. 262.)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch J. 1898, 20. 828.)

Solutions of MnCl<sub>2</sub> in 75% alcohol saturated at t° contain:

t°	% MnCl <sub>2</sub>	t°	% MnCl <sub>2</sub>
10	23 1	43 75	37 5
25	36.1	57.5 (B.-pt.)	32 2

Solutions of  $\text{MnCl}_2$  in absolute alcohol saturated at  $t^\circ$  contain:

$t^\circ$	% $\text{MnCl}_2$	$t^\circ$	% $\text{MnCl}_2$
11 25	33 3	76 25	36 2
37 5	33 3	(B.-pt.)	

(Brandes, *l. c.*)

$\text{MnCl}_2$  crystallises from above solutions on standing.

When 15–20 vols. ether are added to 1 vol. absolute alcohol sat. with  $\text{MnCl}_2$ ,  $\text{MnCl}_2$  is completely pptd. (Doberener)

Insol. in oil of turpentine.

Sol. in urethane. (Castor, *Z. anorg.* 1899, 20, 61.)

Sl. sol. in benzonitrile. (Naumann, *B.* 1914, 47, 1369.)

Difficultly sol. in methyl acetate. (Naumann, *B.* 1909, 42, 3790.)

Insol. in ethyl acetate. (Naumann, *B.* 1910, 43, 314.)

+ $\text{H}_2\text{O}$ . Solubility in  $\text{HCl} + \text{Aq}$  decreases with increasing amt. of  $\text{HCl}$ . It is greater when hot than cold, but is not inconsiderable even when  $\text{HCl}$  is conc. 1 l. conc.  $\text{HCl} + \text{Aq}$  sat. at  $12^\circ$  dissolves 190 g.  $\text{MnCl}_2$  from  $\text{MnCl}_2 + \text{H}_2\text{O}$ . (Ditte, *C. R.* 1881, 92, 243.)

+ $\frac{3}{2}\text{H}_2\text{O}$ .  $\text{MnCl}_2 + 4\text{H}_2\text{O}$  effloresces to  $\text{MnCl}_2 + \frac{3}{2}\text{H}_2\text{O}$  in a dry atmosphere and under low pressure and not to  $\text{MnCl}_2 + 2\text{H}_2\text{O}$ . (Sabatier, *Bull. Soc.* 1894, (3) 11, 547.)

+ $2\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts. $\text{MnCl}_2$ per 100 pts. $\text{H}_2\text{O}$	Sp. gr. of sat. solution
60	108 6	1 6108
70	110 6	1 6134
80	112 7	

(Dawson and Williams, *Z. phys. Ch.* 1899, 31, 63.)

Sat. aqueous solution of  $\text{MnCl}_2 + 2\text{H}_2\text{O}$ . Contains 51.86%  $\text{MnCl}_2$  at  $62.6^\circ$ . (Suss, *Z. Krist.* 1912, 51, 262.)

+ $4\text{H}_2\text{O}$ . Deliquescent.

100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$  dissolve:

$t^\circ$	Pts. $\text{MnCl}_2 + 4\text{H}_2\text{O}$	$t^\circ$	Pts. $\text{MnCl}_2 + 4\text{H}_2\text{O}$
8	151	87 5	641
31.25	265	106.25	656
62.5	641		...

(Brandes, *l. c.*)

Sol. in 0.8 pt.  $\text{H}_2\text{O}$  at  $18.75^\circ$ . (Abi.)

Pptd. from solution in 9.17 mols.  $\text{H}_2\text{O}$ . (Kuznetsoff, *C. C.* 1899, I, 246.)

Sat. aq. solution contains at

$-22^\circ$	$-5^\circ$	$+7^\circ$	$17^\circ$	$19^\circ$	
34 7	37.8	40.4	41.2	42.3%	$\text{MnCl}_2$
35°	55°	57°	80°	100°	140°
44 4	48.2	50.0	51.0	53.7	54.7% $\text{MnCl}_2$

(Étard, *A. ch.* 1894, (7) 2, 537.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts. $\text{MnCl}_2$ per 100 pts. $\text{H}_2\text{O}$	Sp. gr. of sat. solution
25	77 18	1 4991
30	80 71	1 5049
40	88 59	1 5348
50	98 15	1 5744
*57.65	105.40	1 6097

\* Temp. of transition into  $\text{MnCl}_2 + 2\text{H}_2\text{O}$ . (Dawson and Williams, *Z. phys. Ch.* 1899, 31, 63.)

Sat. aqueous solution of  $\text{MnCl}_2 + 4\text{H}_2\text{O}$  contains 40.23%  $\text{MnCl}_2$  at  $6^\circ$ , 44.6%  $\text{MnCl}_2$  at  $28.4^\circ$ . (Suss, *Z. Krist.* 1912, 51, 262.)

100 pts. 75% alcohol dissolve at  $t^\circ$ :

$t^\circ$	Pts. $\text{MnCl}_2 + 4\text{H}_2\text{O}$	$t^\circ$	Pts. $\text{MnCl}_2 + 4\text{H}_2\text{O}$
10	53	43 75	144
25	132	87 5	100 1

(Brandes, *l. c.*)

Insol. in absolute ether, which also does not abstract crystal  $\text{H}_2\text{O}$ .

Insol. in boiling oil of turpentine (Brandes).

Sol. in conc.  $\text{HNO}_3 + \text{Aq}$  + $5\text{H}_2\text{O}$ . (Müller-Erbach, *B.* 1889, 22, 3181.)

+ $6\text{H}_2\text{O}$ . Pptd. from solution in 11.7 mols.  $\text{H}_2\text{O}$  at  $-21^\circ$ . (Kuznetsoff, *C. C.* 1899, I, 246.)

**Manganese trichloride,  $\text{MnCl}_3$ .**

Immediately decomp. by  $\text{H}_2\text{O}$ ; sol. in abs. ether and in abs. alcohol. (Holmes, *J. Am. Chem. Soc.* 1907, 29, 1285.)

**Manganese tetrachloride,  $\text{MnCl}_4$ .**

Has not been isolated.

Sol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Nicklès, *J. B.* 1865, 225.)

Composition is  $\text{Mn}_2\text{Cl}_6$ . (Christensen, *J. pr.* (2) 34, 41.)

**Manganese hydrogen tetrachloride (chloromanganic acid),  $\text{MnCl}_4 \cdot 2\text{HCl}$ .**

Sol. in ether; decomp. by  $\text{H}_2\text{O}$ . (Franke, (2) 36, 31.)

**Manganese heptachloride,  $\text{MnCl}_7(?)$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Dumas, *Berz. J. B.* 7, 112.)

Has the formula  $\text{MnO}_2\text{Cl}$  (?) (Aschoff, J. pr. 81. 29.)

**Manganous mercuric chloride**,  $\text{MnCl}_2, \text{HgCl}_2 + 4\text{H}_2\text{O}$ .

Deliquescent in moist air. Easily sol. in  $\text{H}_2\text{O}$ . (v. Bunsdoff)  
 $\text{MnCl}_2, 2\text{HgCl}_2$ . (Varet, C. R. 1896, 123, 422.)

**Manganous potassium chloride**,  $\text{MnCl}_2, \text{KCl} + 2\text{H}_2\text{O}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ , but is decomp. thereby. (Rensen and Saunders, Am. Ch. J. 14. 129.)

$\text{MnCl}_2, 2\text{KCl} + 2\text{H}_2\text{O}$  (Suss, Z. Kryst. 1912, 61. 262.)

**Manganic potassium chloride**,  $\text{MnCl}_3, 2\text{KCl} + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$  apparently without decomp. (Rice, Chem. Soc. 1898, 73. 281.)

$\text{MnCl}_3, 2\text{KCl}$  Very easily decomp. (Meyer and Best, Z. anorg. 1899, 22. 186.)

$\text{MnCl}_3, \text{MnCl}_2, 5\text{KCl}$  Easily decomp. (Meyer and Best, Z. anorg. 1899, 22. 185.)

**Manganous rubidium chloride**,  $\text{MnCl}_2, 2\text{RbCl}$ .

(Godeffroy.)  
 $+3\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  Insol. in alcohol, conc.  $\text{HCl}$  + ppt. anhydrous salt from aqueous solution. (Godeffroy, Arch. Pharm. (3) 12. 40.)

Contains only  $2\text{H}_2\text{O}$ . (Saunders, Am. Ch. J. 14. 139.)

**Manganous thallic chloride**,  $\text{MnCl}_2, 2\text{TlCl}_3 + 8\text{H}_2\text{O}$ .

Can be cryst. from  $\text{H}_2\text{O}$ . (Gewecke, A. 1909, 366. 224.)

**Manganous stannic chloride.**

See Chlorostannate, manganous.

**Manganous chloride hydrazine**,  $\text{MnCl}_2, 2\text{N}_2\text{H}_4$ .

Ppt. (Fransen, Z. anorg. 1908, 60. 285.)

**Manganous chloride hydroxylamine**,  $\text{MnCl}_2, 2\text{NH}_2\text{OH}$ .

Very stable; insol. in alcohol. (Feldt, B. 1894, 27. 405.)

**Manganous fluoride**,  $\text{MnF}_2$ .

Only sol. in  $\text{H}_2\text{O}$  containing  $\text{HF}$ . (Berzelius.)

Insol. in  $\text{H}_2\text{O}$ ; decomp. by boiling with  $\text{H}_2\text{O}$ ; sl. sol. in liquid  $\text{NH}_3$ ; easily sol. in cold or hot conc.  $\text{HNO}_3$  and  $\text{HCl}$ ; slowly sol. in dil.  $\text{HCl}$ ; decomp. by fused  $\text{K}_2\text{CO}_3$ ,  $\text{KOH}$ ,  $\text{KNO}_3$ , and  $\text{KClO}_3$ ; insol. in alcohol and

ether. Slowly sol. in acetic acid. (Moissan, C. R. 1900, 130. 1160.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 828.)

Insol. in acetone (Naumann, B. 1904, 37. 4329.)

**Manganese trifluoride**,  $\text{MnF}_3$ .

Completely sol. in a little  $\text{H}_2\text{O}$ , but decomp. by dilution or boiling. (Berzelius.)

$+6\text{H}_2\text{O}$ . Efflorescent (Christensen, J. pr. (2) 35. 57.)

Sol. in  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ ,  $\text{HNO}_3$ ; decomp. by  $\text{H}_2\text{O}$ ; insol. in most organic solvents. (Moissan, C. R. 1900, 130. 626.)

**Manganomanganic fluoride**,  $\text{Mn}_2\text{F}_7 + 10\text{H}_2\text{O}$ .

Sol. in a little  $\text{H}_2\text{O}$ , but decomp. by dilution. (Nickles, C. R. 67. 448.)

**Manganese tetrafluoride**,  $\text{MnF}_4$ .

Not isolated. Sol. in absolute alcohol or ether; decomp. by  $\text{H}_2\text{O}$ . (Nickles, C. R. 65. 107.)

Probably does not exist. (Christensen, J. pr. (2) 35. 161.)

**Manganese heptafluoride**,  $\text{MnF}_7$  (?)

Sol. in  $\text{H}_2\text{O}$  with decomp. (Wöhler.)

**Manganese sesquifluoride with MF.**

See also Fluomanganate, M.

**Manganic nickel fluoride**,  $2\text{NiF}_2, \text{Mn}_2\text{F}_6 + 8\text{H}_2\text{O}$ .

(Christensen, J. pr. (2) 34. 41.)

**Manganic potassium fluoride**,  $\text{Mn}_2\text{F}_6, 4\text{KF} + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{HCl}$  + Aq, dil.  $\text{HNO}_3$  + Aq, conc.  $\text{H}_2\text{SO}_4$  + Aq,  $\text{H}_3\text{PO}_4$  + Aq,  $\text{H}_2\text{C}_2\text{O}_4$  + Aq,  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$  + Aq, and dil.  $\text{HF}$  + Aq. (Christensen, J. pr. (2) 35. 72.)

$\text{MnF}_3, 2\text{KF}$ . Difficultly sol. in  $\text{H}_2\text{O}$ . Decomp. by much  $\text{H}_2\text{O}$ . (Nickles, C. R. 65. 107.)

True composition is  $\text{Mn}_2\text{F}_6, 4\text{KF}$ , also with  $2\text{H}_2\text{O}$ . (Christensen, J. pr. (2) 34. 41.)

$\text{MnF}_3, 4\text{KF}$ . (Nickles.)

See also Fluomanganate, potassium.

**Manganic rubidium fluoride.**

See Fluomanganate, rubidium.

**Manganic silver fluoride**,  $2\text{AgF}, \text{Mn}_2\text{F}_6 + 14\text{H}_2\text{O}$ .

Sol. in  $\text{HF}$  + Aq. (Christensen, J. pr. (2) 34. 41.)

**Manganic sodium fluoride**,  $\text{Mn}_2\text{F}_6, 4\text{NaF}$ .

Decomp. by much  $\text{H}_2\text{O}$ . Not as sol. in  $\text{HF}$  + Aq as the K salt. (Christensen, J. pr. (2) 35. 161.)

**Manganomanganic thallos fluoride,  $5\text{TlF}$ ,  $2\text{MnF}_2$ ,  $\text{MnF}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ .  
 Sl. sol. in dil., easily sol. in conc.  $\text{HF}$ .  
 Sol. in conc.  $\text{HCl}$ , dil.  $\text{HNO}_3$ , and cold or hot conc.  $\text{H}_2\text{SO}_4$ .  
 Sol. in warm  $\text{H}_2\text{O}_2$  containing  $\text{H}_2\text{SO}_4$ .  
 Sol. in dil. tartaric and oxalic acids.  
 (Ephraïm, B. 1909, 42, 4458.)

**Manganous stannic fluoride.**

See Fluostannate, manganous.

**Manganic zinc fluoride,  $2\text{ZnF}_2$ ,  $\text{Mn}_2\text{F}_4 + 8\text{H}_2\text{O}$** 

See Fluomanganate, zinc.

**Manganous zirconium fluoride.**

See Fluozirconate, manganous.

**Manganous fluoride ammonia,  $3\text{MnF}_2$ ,  $2\text{NH}_3$ .**

(Moissan, C. R. 1900, 130, 1161.)

**Manganous hydroxide,  $\text{MnO}_2\text{H}_2$ .**

$2.15 \times 10^{-3}$  g.-mol. are sol. in 1 l.  $\text{H}_2\text{O}$  at  $18^\circ$  (Sackun, Z. Elektrochem., 1909, 15, 846).  
 Solubility in  $\text{H}_2\text{O} = 0.6 \times 10^{-4}$  g. mol. (Herz, Z. anorg. 1899, 22, 284.)  
 1 l.  $\text{H}_2\text{O}$  dissolves  $2 \times 10^{-4}$  mol.  $\text{MnO}_2\text{H}_2$  (Tamm, Z. phys. Ch. 1910, 74, 500).

Very sl. sol. in  $\text{H}_2\text{O}$  or alkalies. (Fresenius.) Easily sol. in acids. Insol. in  $\text{NaOH}$ , or  $\text{KOH} + \text{Aq}$ . Sol. in  $\text{NH}_4$  salts +  $\text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol. in  $\text{NaOH} + \text{Aq}$  in presence of glycerine. (Donath, Dmg. 229, 542.)

Not pptd. by  $\text{NH}_4\text{OH} + \text{Aq}$  in presence of  $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ ; by  $\text{KOH} + \text{Aq}$  in presence of cane sugar; by  $\text{KOH} + \text{Aq}$  in presence of Na citrate.  
 Solubility of  $\text{MnO}_2\text{H}_2$  in organic Na salts +  $\text{Aq}$ . (0.5 normal.)

Na tartrate, 0.0083 mol. per l.  
 Na malate, 0.0042 " " "  
 Na citrate, 0.0126 " " "  
 (Tamm, Z. phys. Ch. 1910, 74, 496.)  
 Min. *Pyrochroite*.

**Manganomanganic hydroxide,  $\text{Mn}_2\text{O}_4$ ,  $\tau\text{H}_2\text{O}$ .**

Not attacked by boiling  $\text{NH}_4\text{Cl} + \text{Aq}$ . Behaves towards acids as  $\text{Mn}_2\text{O}_3$ .

**Manganic hydroxide,  $\text{Mn}_2\text{O}_3$ ,  $\text{H}_2\text{O}$ .**

Insol. in hot or cold dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ .  
 Sol. in conc.  $\text{H}_2\text{SO}_4$  at somewhat over  $100^\circ$ . (Carlus.)

Sol. in tartaric, oxalic, and malic acids, with subsequent decomp. Insol. in formic, acetic, benzoic, or hippuric acids. (Hermann, Pogg. 74, 303.)

Insol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . Insol. in cane sugar +  $\text{Aq}$ . (Peschier.)

Min. *Manganite*. Sol. in conc.  $\text{HCl} + \text{Aq}$ . Sl. sol. in conc.  $\text{H}_2\text{SO}_4$ .

**Manganese dihydroxide,  $\text{MnO}_2$ ,  $\text{H}_2\text{O}$** 

See Manganous acid.

**Manganous iodide,  $\text{MnI}_2$ .**

*Anhydrous*. Nearly insol. in  $\text{AsB}_{13}$ . (Walden, Z. anorg. 1902, 29, 374.)

Sol. in  $\text{POCl}_3$ . (Walden, Z. anorg. 1900, 25, 212.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 828.)

+  $4\text{H}_2\text{O}$ . Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Kuznetsoff, C. C. 1900, II, 525.)

+  $9\text{H}_2\text{O}$  (Kuznetsoff.)

**Manganous mercuric iodide,  $\text{MnI}_2$ ,  $2\text{HgI}_2 + 6\text{H}_2\text{O}$** 

Decomp. by  $\text{H}_2\text{O}$ . Sol. without decomp. in alcohol and acetone. (Dobroserdoff, C. C. 1901, I, 363.)

$3\text{MnI}_2$ ,  $5\text{HgI}_2 + 20\text{H}_2\text{O}$

A sat. solution in  $\text{H}_2\text{O}$  at  $17^\circ$  has composition 1.4  $\text{MnI}_2$ ,  $\text{HgI}_2 + 10.22 \text{H}_2\text{O}$  and sp. gr. = 2.98. (Duboin, C. R. 1906, 142, 1338.)

Very sol. without decomp. in methyl, propyl, isopropyl, isobutyl, and allyl alcohols, ethyl acetate and ethyl cyanide. Somewhat less sol. in amyl, propyl and isobutyl acetates, acetone, acetic acid, formic acid (with ppt of  $\text{HgI}_2$ ), ethyl benzoate, ethyl oxalate, butyl alcohol, amyl alcohol and nitrobenzene. Sl. decomp. by glycerine. Insol. in ethyl nitrate, ethylene bromide, toluene, benzene,  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , ethyl iodide, monobrom- and monochlorobenzene. (Duboin, A. ch. 1909, (8), 16, 273.)

**Manganese nitride,  $\text{Mn}_3\text{N}_2$ .**

Sol. in  $\text{HNO}_3$  only on heating.  $\text{HCl} + \text{Aq}$  dissolves only in presence of Pt. Aqua regia dissolves slowly.  $\text{H}_2\text{SO}_4$  acts only when hot and conc. Insol. in acetic acid. (Prelinger, M. 1894, 15, 398.)

$\text{Mn}_3\text{N}_2$ . Sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ ; insol. in  $\text{HCl}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ . with decomp. (Prelinger, M. 1894, 15, 398.)

$\text{Mn}_2\text{N}_3$ . Easily attacked by acids and alkalies (Wedekind, B. 1908, 41, 3772.)

**Manganous oxide,  $\text{MnO}$ .**

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids. Readily sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ .

**Manganic oxide (Manganese sesquioxide),  $\text{Mn}_2\text{O}_3$ .**

Decomp. by boiling with  $\text{HNO}_3 + \text{Aq}$  into  $\text{MnO}$ , which dissolves, and  $\text{MnO}_2$ , which is insol. (Berthier); also by boiling with dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Turner.) Sol. in hot conc.  $\text{H}_2\text{SO}_4$  or  $\text{HCl} + \text{Aq}$ . Sol. in cold  $\text{HCl} + \text{Aq}$  without decomp. If perfectly pure, is insol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , but if it contains any  $\text{MnO}$ , it dissolves. (Rose.) Insol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$ .

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

Solubility in (calcium sucrate + sugar) + Aq  
 1 l solution containing 418.6 g sugar and 34.3 g. CaO dissolves 0.50 g.  $Mn_2O_3$ ; containing 206.5 g. sugar and 24.2 g. CaO dissolves 0.37 g.  $Mn_2O_3$ ; containing 174.4 g. sugar and 14.1 g. CaO dissolves 0.32 g.  $Mn_2O_3$ . (Bodenbender, J. B. 1865. 600.)

Min. *Braunite*.

Colloidal. Solution in  $H_2O$  containing 0.21 g. to a litre is precipitated by  $KNO_3$  + Aq (1 : 1000);  $K_2SO_4$  + Aq (1 : 1100);  $(NH_4)_2SO_4$  + Aq (1 : 1500);  $NaCl$  + Aq (1 : 1580);  $MgSO_4$  + Aq (1 : 40,983);  $BaCl_2$  + Aq (1 : 58,823);  $MnSO_4$  + Aq (1 : 147,929);  $(NH_4)_3Al(SO_4)_3$  + Aq (1 : 382,318);  $K_2Cr_2(SO_4)_4$  + Aq (1 : 416,668);  $HCl$  + Aq (1 : 61,350);  $HC_2H_3O_2$  (1 : 17,202);  $H_2SO_4$  (1 : 62,500). (Spring and de Boeck, Bull. Soc. (2) 48. 170.)

#### Manganomanganic oxide, $Mn_2O_4$ .

Insol in  $H_2O$ . Boiling dil. or conc.  $HNO_3$  + Aq dissolves out  $MnO$  (Berthier); also boiling dil.  $H_2SO_4$  + Aq (Turner.) Sol in hot  $HCl$  + Aq. (Otto.)  $NH_4Cl$  + Aq dissolves out  $MnO$ . (Rose.) Sol. without decomp. in hot very conc.  $H_3PO_4$  + Aq, and cold conc.  $H_2SO_4$ ,  $HCl$ , oxalic, and tartaric acids + Aq

Min. *Hausmannite*

#### Manganese dioxide, $MnO_2$ .

Min. *Pyrolusite*. Insol in  $H_2O$ . Very slowly sol. in conc.  $H_2SO_4$  with evolution of  $O_2$ . Sol in cold  $HCl$  + Aq; decomp. by hot  $HCl$  + Aq. Sol in aqua regia. Sol. in  $SO_2$  + Aq or  $N_2O_5$  + Aq. (Karsten.)

Insol. in  $HNO_3$ , or dil.  $H_2SO_4$  + Aq, except in presence of organic reducing substances. Decomp. by citric acid, and more easily by oxalic acid. (Bolton.)

Sl sol in hot conc. but insol. in dil.  $HNO_3$  + Aq. (Deville.) When pure it is insol. in cold dil.  $H_2SO_4$  + Aq, but if a small quantity of  $MnO$  is added much  $MnO_2$  dissolves. (Carius.)

Not decomp. by boiling  $NH_4Cl$  + Aq.

Easily sol. in a mixture of nitrososulphuric acid and conc.  $HCl$  + Aq. (Borntrager, Rep. anal. Ch. 1887. 741.)

Insol. in acetone (Naumann, B. 1904, 37. 4329, Eidmann, C. C. 1899, II 1014.)

#### Manganese oxides, $Mn_2O_3$ , $Mn_2O_{11}$ , etc.

See Manganite, manganous.

#### Manganese trioxide, $Mn_2O_3$ .

Deliquescent. Sol. in  $H_2O$ , with subsequent decomp. Decomp. by ether. Sol. in conc.  $H_2SO_4$ . (Franke, J. pr. (2) 36. 31.)

#### Manganese tetroxide, $MnO_4$ (?).

Sl. sol. in  $H_2O$  with decomp. Decomp. by  $H_2SO_4$ , or ether (Franke, J. pr. (2) 36. 166.)

#### Manganese heptoxide, $Mn_2O_7$ .

Very unstable, takes up  $H_2O$  from air. Sol. in  $H_2O$  with evolution of heat and rapid decomposition. Sol. in conc.  $H_2SO_4$  without decomp. (Aschoff.)

#### Manganese oxychloride, $3Mn_2O_3, MnCl_2$ .

Insol. in  $H_2O$ . (Saint-Gilles, C. R. 55. 329.)  $MnCl_2, MnO$  (?). (Gorgeu, A. ch (6) 4. 515.)

$MnO_2Cl$ . See Manganyl chloride.

#### Manganic oxyfluoride, $MnOF_2$ .

Sol. in absolute ether.  
 $MnOF_2, 2HF$  = fluoxymanganic acid.  
 (Nicklès, C. R. 659. 107.)

#### Manganic oxyfluoride potassium fluoride.

See Fluoxymanganate, potassium.

#### Manganic sesquioxifluoride potassium fluoride.

See Sesquifluoxymanganate, potassium.

#### Manganous oxyiodide, $MnI_2, MnO + 6H_2O$

Sol. in  $H_2O$  with decomp. (Kuznetsoff, C. C. 1913, I. 1659.)

#### Manganous oxysulphide, $MnO, MnS$ .

Sol. in acids. (Arfvedson, Pogg. 1. 50.)

#### Manganese phosphide, $Mn_2P_3$

Insol. in dil. acids; sol. in hot conc.  $HNO_3$ . (Wedekind, B. 1907, 40. 1268.)

Sol. in aqua regia; insol. in  $HNO_3$ . (Granger, C. R. 1897, 124. 191.)

$Mn_2P_3, HCl$  + Aq. dissolves out  $Mn_2P_3$  and leaves  $Mn_2P_3$ , which is sol. in  $HNO_3$  + Aq. (Wöhler and Merkel, A. 86. 371.)

Not attacked by boiling  $H_2O$  or by  $HCl$ . Easily sol. in warm  $HNO_3$ , or aqua regia. (Wedekind and Veit, B. 1907, 40. 1268.)

$\alpha Mn_2P_3, \gamma Mn_2P_3$ . Easily sol. in aqua regia; partly sol. in  $H_2SO_4$ , or  $HCl$  + Aq. (Struve, J. pr. 79. 321.)

$Mn_2P_3$ . Insol. in  $HCl$  + Aq. Sol. in  $HNO_3$  + Aq. (Schrotter, W. A. B. 1849, 1. 305.)

#### Manganous phosphoselenide, $MnS, P_2Se$ .

Insol. in  $H_2O$ . Sol. in  $HCl$  + Aq or  $HNO_3$  + Aq. Insol. in cold, sl. decomp. by hot alkalis + Aq. (Hahn, J. pr. 93. 436.)

$2MnSe, P_2Se_2$ . Insol. in cold, slowly sol. in hot  $HCl$  + Aq. Not decomp. by alkalis.  
 $2MnS, P_2Se_2$ . Easily decomp. by acids. (Hahn.)

**Manganese selenide,  $MnSe$ .**

Decomp. by  $H_2O$  and min. acids. (Wedekind, B. 1911, 44. 2067.)

(*type*) Sl decomp by  $H_2O$  at  $100^\circ$ ; easily sol. in dil acids (Fonze-Diacon, C. R. 1900, 130. 1025.)

**Manganese silicide.**

Sol. in HF; only very sl sol. in other acids. (Warren, C. N. 1898, 78. 319.)

$Mg_2Si_2$  Sol in  $HCl + Aq$  with evolution of  $SiH_4$ . (Wöhler, A. 106. 54.)

$Mn_2Si$  Insol in  $H_2O$ . (Vigououx, C. R. 1895, 121. 772.)

Easily sol in HF (Wedekind, B. 1911, 44. 2068.)

Easily sol in dil acids, HF and  $HNO_3$  Insol. in  $KOH + Aq$ . (Vigououx, A. ch 1897, (7) 12. 179.)

Easily sol. in HF when heated; in  $HCl$  when red hot. Sol in dil min. acids with decomp. (Vigououx, C. R. 1895, 121. 772.)

Insol. in  $HNO_3$ , sol in dil. or conc.  $HCl$  Slowly decomp. by alkali hydroxides. (Lebeau, C. R. 1903, 136. 91.)

$Mn_2Si$  Easily sol in molten alkali. (Vigououx, C. R. 1895, 121. 772.)

$MnSi$  Slowly attacked by hot conc.  $HCl$  Not acted upon by dil. or conc.  $HNO_3$  or  $H_2SO_4$ . (Lebeau, C. R. 1903, 136. 91.)

$MnSi_2$  Not attacked by  $HNO_3$  or  $H_2SO_4$  Easily sol. in cold HF; decomp. by conc alkalis +  $Aq$ . (Lebeau, C. R. 1903, 136. 233.)

**Manganous sulphide,  $MnS$** 

*Anhydrous*. Insol. in  $H_2O$ . Sol in weak acids, even in acetic acid.

1 l.  $H_2O$  dissolves  $71.60 \times 10^{-6}$  moles  $MnS$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Min. *Alabundite*. Sol. in  $HCl + Aq$ . +  $\frac{1}{2}H_2O$ . *Green*. Decomp. by boiling with  $H_2O$ . Sol in weak acids, as acetic or sulphurous acid. Very sl. sol. in  $(NH_4)_2S + Aq$ . (Wackenroder.)

Sol. in  $NH_4$  salts +  $Aq$ . 100 ccm. of sat.  $NH_4Cl + Aq$  at  $12^\circ$  dissolve 0.43 g.  $MnS$  (Clermont and Guyot, C. R. 85. 37.)

+  $\frac{1}{2}H_2O$ . *Flesh-colored*. Less sol. in  $NH_4$  salts, or acetic acid +  $Aq$  than the preceding salt 100 ccm. of sat.  $NH_4Cl + Aq$  at  $12^\circ$  dissolve 0.088 g. (Clermont and Guyot.)

Neither green nor flesh-coloured  $MnS$  contains  $H_2O$ . (Antony and Donnini, Gazz. ch. it. 23. 560.)

$MnS$  is not pptd. in presence of alkali citrates, tartrates, or grape sugar; cane or milk sugar do not prevent precipitation. (Spiller.) Not pptd. in presence of  $Na_2P_2O_7$ . (Rose.)

**Manganese sulphide,  $Mn_2S_3$** 

Decomp. by  $H_2O$  Sol. in cold dil acids. (Gautier and Hallopeau, C. R. 1889, 108. 809.)

**Manganese disulphide,  $MnS_2$** 

(Senarmont, J. pr. 51. 385.)

Min. *Hauerite* Decomp. by hot  $HCl + Aq$  with separation of S

**Manganous phosphorus sulphide,  $MnS, P_2S_5$** 

Sol in  $HCl + Aq$  with decomp. (Bezelus, A. 46. 147.)

**Manganous potassium sulphide,  $3MnS, K_2S$** 

Nearly insol in water, alcohol, or ether. Easily sol in acids (Völcker, A. 59. 35.)

**Manganous sodium sulphide,  $3MnS, Na_2S$** 

Insol in  $H_2O$ , alcohol, or ether Sol. in dil acids, and  $SO_2 + Aq$ . (Völcker.)

$2MnS, Na_2S$  Decomp by  $H_2O$ . (Schneider, Pogg. 151. 446.)

**Manganese telluride,  $MnTe$** 

Decomp. by  $H_2O$  and min. acids. (Wedekind, B. 1911, 44. 2067.)

**Manganic acid,  $H_2MnO_4$** 

Known only in solution, which decomposes rapidly. (Franke, J. pr. (2) 36. 31.)

**Barium manganate,  $BaMnO_4$** 

Insol. in  $H_2O$ ; decomp. by acids (Mitschlich.)

**Didymium manganate,  $Dy_2(MnO_4)_3$** 

Insol. in  $H_2O$ . Sol in  $H_2SO_4 + Aq$ . (Frerichs and Smith, A. 191. 331.)

Does not exist. (Cleve, B. 11. 912.)

**Lanthanum manganate,  $La_2(MnO_4)_3$** 

Ppt. (Frerichs and Smith, A. 191. 331.)

Does not exist (Cleve, B. 11. 912.)

**Manganese manganate,  $Mn_2O_3, MnO_2 = 3MnO_2$** 

See Manganese dioxide.

**Lead manganate,  $PbMnO_4 + 2H_2O$** 

Ppt. (Jolles, C. C. 1888. 58.)

**Potassium manganate,  $K_2MnO_4$** 

Sol. in water containing alkalis without decomp., but decomp. by pure  $H_2O$ . Can be recrystallised from dil.  $KOH + Aq$ .

## Solubility in KOH + Aq at t°

Solvent	t°	Mol. $K_2MnO_4$ in 1 l of sat. solution

(Sackur, Z. Elektrochem. 1912, 18. 724.)

Sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Potassium manganate permanganate,  $K_2MnO_4$ ,  $KMnO_4$ .

Sol. without decomp. in 20% KOH + Aq (Gorgeu, A. ch. (3) 61. 355.)

Sodium manganate,  $Na_2MnO_4 + 10H_2O$ .Sol. in  $H_2O$ , with partial decomp. (Genete, J. pr. 82. 58)Strontium manganate,  $SrMnO_4$ .Insol. in  $H_2O$ . (Fromherz.)

## Permanganic acid.

See Permanganic acid.

Manganicyanhydric acid,  $H_3Mn(CN)_3$ .

Not known in the free state

Barium manganicyanide,  $Ba_3[Mn(CN)_6]_2$ Sol in  $H_2O$ . (Fittig and Eaton)Barium potassium manganicyanide barium cyanide,  $2KBaMn(CN)_6$ ,  $3Ba(CN)_2 + 8H_2O$ Decomp. by  $H_2O$ . (Lehmann, Dissert. 1898.)Calcium manganicyanide,  $Ca_3[Mn(CN)_6]_2$ .Sol in  $H_2O$ . (Fittig and Eaton)Potassium manganicyanide,  $K_3Mn(CN)_6$ .Sol. in  $H_2O$ . (Christensen, J. pr. (2) 31. 163.)Sodium manganicyanide,  $Na_3Mn(CN)_6 + 2H_2O$ .Sol in  $H_2O$ . (Fittig and Eaton)

## Manganimanganic acid.

Barium manganimanganate,  $Ba_3Mn_2O_8 + H_2O$ Insol. in  $H_2O$ . Identical with Rosenstich's "basic barium manganate," (J Pharm 1864, 46. 344). (Auger and Billy, C. R. 1904, 138. 501)Lithium manganumanganate,  $Li_4Mn_2O_8 + H_2O$ .Insol in  $H_2O$ . (Auger and Billy.)Manganiperiodic acid,  $H_2O$ ,  $Mn_2O_3$ ,  $I_2O_7$ .Wholly insol. in  $H_2O$ , in hot dil. or conc.  $HNO_3$ , and in hot dil.  $H_2SO_4$ . (Price, Am. Ch. J. 1903, 30. 182.)Potassium manganiperiodate,  $K_2O$ ,  $Mn_2O_3$ ,  $I_2O_7$ .Apparently entirely insol. and unchanged when boiled with  $H_2O$ , dil. or conc.  $HNO_3$ , or dil.  $H_2SO_4$ . (Price.)Sodium manganiperiodate,  $Na_2O$ ,  $Mn_2O_3$ ,  $I_2O_7$ .Apparently insol. and unchanged when treated with boiling  $H_2O$ , boiling dil. or conc.  $HNO_3$ , and boiling dil.  $H_2SO_4$ . (Price.)Manganocyanhydric acid,  $H_4Mn(CN)_6$ 

Most easily decomp. Sl. sol. in alcohol. Insol. in ether. (Descamps, A. ch. (5) 24. 185.)

**Ammonium cuprous manganocyanide,**

Sol. in  $\text{H}_2\text{O}$ ; decomp. by acids and alkalis; very unstable. (Straus, Z. anorg. 1895, 9. 14.)

**Ammonium manganous manganocyanide,**

Sol. in  $\text{NH}_4\text{CN} + \text{Aq.}$  (Fittig and Eaton, A. 145. 157.)

**Barium manganocyanide,  $\text{Ba}_2\text{Mn}(\text{CN})_6$** 

Sol. in cold  $\text{H}_2\text{O}$ . (Fittig and Eaton.)

**Calcium manganocyanide,  $\text{Ca}_2\text{Mn}(\text{CN})_6$** 

Very deliquescent. Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol (Fittig and Eaton.)

**Cuprous potassium manganocyanide,**

Sol. in  $\text{H}_2\text{O}$  with sl. decomp. Easily decomp. by acids and alkalis. (Straus, Z. anorg. 1895, 9. 12.)

**Cuprous sodium manganocyanide,**

Sol. in  $\text{H}_2\text{O}$  with only sl. decomp. Partially decomp. by acids. (Straus.)

**Manganous potassium manganocyanide,**

Ppt. Sol. in  $\text{KCN} + \text{Aq}$

**Potassium manganocyanide,  $\text{K}_2\text{Mn}(\text{CN})_6 + 3\text{H}_2\text{O}$** 

Very efflorescent. Sol. in  $\text{H}_2\text{O}$ ; decomp. by boiling.

**Potassium manganocyanide chloride,**

Easily sol. in  $\text{H}_2\text{O}$ . (Descamps.)

**Sodium manganocyanide,  $\text{Na}_2\text{Mn}(\text{CN})_6 + 8\text{H}_2\text{O}$** 

Very efflorescent. Easily sol. in  $\text{H}_2\text{O}$  (Fittig and Eaton.)

**Strontium manganocyanide,  $\text{Sr}_2\text{Mn}(\text{CN})_6$** 

As the Ba comp. (Descamps.)

**Permanganomolybdic acid.**

See Permanganomolybdic acid.

**Permanganotungstic acid.**

See Permanganotungstic acid.

**Manganosulphuric acid.**

See Sulphate, manganic.

**Manganous acid,  $\text{H}_2\text{MnO}_3 = \text{MnO}_2, \text{H}_2\text{O}$** 

Insol. in  $\text{H}_2\text{O}$ . (Franko, J. pr. (2) 36. 451.)  $2\text{MnO}_2, \text{H}_2\text{O}$  (?). Min. *Wad*.

**Barium manganite,  $\text{BaO}, 5\text{MnO}_2$** 

Sl. sol. in  $\text{HCl} + \text{Aq.}$ , less sol. in  $\text{HNO}_3 + \text{Aq.}$  (Rissler, Bull. Soc. (2) 30. 111.)  
 $\text{BaO}, 7\text{MnO}_2$ . (Rousseau, C. R. 104. 786.)  
 $\text{BaO}, 2\text{MnO}_2$  Insol. in  $\text{H}_2\text{O}$ .  
 $\text{BaO}, \text{MnO}_2$  Insol. in  $\text{H}_2\text{O}$ . (Rousseau, C. R. 102. 425.)  
 $\text{Ba}(\text{H}_2\text{MnO}_4)_2$ . (Morawski and Stingl, J. pr. (2) 18. 92.)

**Calcium manganite,  $\text{CaO}, 5\text{MnO}_2$** 

Easily sol. in  $\text{HCl} + \text{Aq.}$ , less in  $\text{HNO}_3 + \text{Aq.}$  (Rissler.)  
 $3\text{CaO}, \text{MnO}_2$  (?). Decomp. by  $\text{H}_2\text{O}$  Sol. in  $\text{HCl} + \text{Aq}$  with evolution of Cl. Scarcely sol. in cold  $\text{HNO}_3$ , but sol. on heating. (Dufau, A. ch. 1897, (7) 12. 275.)  
 $2\text{CaO}, \text{MnO}_2$  Sol. in dil. min. acids. (Rousseau, C. R. 116. 1060.)  
 $\text{CaO}, 2\text{MnO}_2$  (Rousseau, C. R. 102. 425.)  
 $\text{CaO}, 3\text{MnO}_2$ .  
 $\text{CaO}, \text{MnO}_2$  Sol. in fuming  $\text{HCl} + \text{Aq.}$ , but not in dil.  $\text{HNO}_3 + \text{Aq}$  (Rousseau, C. R. 116. 1060.)

**Chromium manganite,  $\text{Cr}_2\text{O}_3, 3\text{MnO}_2 = \text{Cr}_2(\text{MnO}_3)_3$** 

Slowly decomp. by acids. (Gröger, Z. anorg. 1905, 44. 458.)

**Cobaltous manganite,  $\text{CoO}, \text{MnO}_2 + 2\text{H}_2\text{O}$** 

Ppt. (Salinger, Z. anorg. 1903, 33. 352.)  
 $+ 4\text{H}_2\text{O}$ . Ppt. (Salinger.)

**Cobalt copper manganite,  $\text{CoO}, \text{CuO}, 2\text{MnO}_2 + 4\text{H}_2\text{O}$** 

Min. *Asbolite*. Sol. in  $\text{HCl} + \text{Aq.}$  with evolution of Cl.

**Cupric manganite,  $\text{CuO}, 4\text{MnO}_2$** 

(Gorgeu, Bull. Soc. 1903, (3) 29. 1187.)  
 $\text{CuO}, 8\text{MnO}_2 + 3\text{H}_2\text{O}$  (Baubigny, C. R. 1897, 124. 955.)

**Cupric manganous manganite,  $4\text{CuO}, \text{MnO}, 7\text{MnO}_2 + 8\text{H}_2\text{O}$** 

Ppt. (Salinger, Dissert. 1902.)  
 $\text{Mn}_2\text{O}_3, 3\text{CuO}$  Sol. in  $\text{HCl} + \text{Aq.}$  (Schneider, Ann. Ch. J. 9. 269.)

**Lead manganite,  $\text{PbO}, 5\text{MnO}_2$** 

Not attacked by conc. acids; sol. in aqua regia (Rissler.)

**Magnesium manganite,  $2\text{MgO}, \text{MnO}_2$** 

(Lemoine, Ann. Min. (7) 3. 5.)  
 $+ 2\text{H}_2\text{O}$ . (Vollard.)

**Manganous manganite,  $\text{Mn}_2\text{O}_3 = \text{MnO}, 2\text{MnO}_2$** 

(Reissig, A. 103. 27.)  
 $\text{Mn}_2\text{O}_3 = \text{MnO}, 5\text{MnO}_2$ . (Veley, Chem. Soc. 38. 581.)

$3\text{MnO}_2, 2\text{MnO}$ . Decomp. by dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Franké, J. pr. (2) 36. 166)  
 $3\text{MnO}_2, \text{MnO} + \text{H}_2\text{O}$ . Min. *Vermiculite*

**Manganous zinc manganite**,  $\text{MnO}, \text{ZnO}, \text{MnO}_2$ .  
 (Gorgeu, Bull. Soc. 1903, (3) 29. 1168.)  
 $2\text{MnO}, \text{ZnO}, 2\text{MnO}_2$ . (Gorgeu.)

**Potassium manganite**,  $\text{K}_2\text{O}, 2\text{MnO}_2$   
 Insol. in  $\text{H}_2\text{O}$ .  
 $\text{K}_2\text{O}, 5\text{MnO}_2$   
 $\text{K}_2\text{O}, 7\text{MnO}_2 + 3\text{H}_2\text{O}$   
 $\text{K}_2\text{O}, 8\text{MnO}_2 + 3\text{H}_2\text{O} = \text{KH}_3\text{Mn}_4\text{O}_{10}$ . (Morawski and Stungl, J. pr. (2) 18. 91.)  
 Does not exist. (Wright and Menke, Chem. Soc. 37. 22)  
 $\text{K}_2\text{O}, 10\text{MnO}_2$   
 $\text{K}_2\text{O}, 16\text{MnO}_2 + 6\text{H}_2\text{O}$  Sol. in conc.  $\text{HCl} + \text{Aq}$ . (Rousseau, C. R. 114. 72)

**Silver manganite**,  $\text{AgH}_3\text{Mn}_4\text{O}_{10}$   
 (Morawski and Stungl, J. pr. (2) 18. 92)  
 $\text{Ag}_2\text{MnO}_2$  Ppt. (Gorgeu, C. R. 110. 958.)

**Silver (argentous) manganite**,  $\text{Ag}_4\text{O}, \text{Mn}_2\text{O}_3$  (?)  
 Insol. in cold dil.  $\text{HNO}_3 + \text{Aq}$ , and separates  $\text{Mn}_2\text{O}_3$  on warming. Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Rose, Pogg. 101. 229.)

**Silver (argentoargentite) manganite**,  $\text{Ag}_4\text{O}, 2\text{Ag}_2\text{O}, \text{Mn}_2\text{O}_3$  (?)  
 (Rose.)

**Sodium manganite**,  $\text{Na}_2\text{O}, 5\text{MnO}_2$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Rousseau, C. R. 103. 261.)  
 $\text{Na}_2\text{O}, 12\text{MnO}_2$  Insol. in  $\text{H}_2\text{O}$ . (Rousseau.)  
 $+ 4\text{H}_2\text{O}$ . (Rousseau, C. R. 112. 525)  
 $\text{Na}_2\text{O}, 8\text{MnO}_2 + 5\text{H}_2\text{O}$ . (Rousseau.)  
 $\text{Na}_4\text{O}, 16\text{MnO}_2 + 8\text{H}_2\text{O}$ . (Rousseau.)

**Strontium manganite**,  $\text{MnO}_2, \text{SrO}$ .  
 Insol. in  $\text{H}_2\text{O}$ .  
 $2\text{MnO}_2, \text{SrO}$ , Insol. in  $\text{H}_2\text{O}$  (Rousseau, C. R. 101. 167)  
 $\text{MnO}_2, 5\text{SrO}$  Sol. in  $\text{HCl}$ , or  $\text{HNO}_2 + \text{Aq}$ . (Rassler, Bull. Soc. (2) 30. 110.)

**Zinc manganite**,  $\text{ZnO}, 5\text{MnO}_2$ .  
 Insol. in  $\text{H}_2\text{O}$  (Rassler)  
 $\text{ZnO}, 4\text{MnO}_2$ . (Gorgeu, Bull. Soc. 1903, (3) 29. 1168.)  
 $3\text{ZnO}, \text{MnO}_2 + 7\frac{1}{2}\text{H}_2\text{O}$ . (Salinger, Dissert. 1902.)  
 $27\text{ZnO}, 2\text{MnO}_2 + 25\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Salinger.)

**Manganyl chloride**,  $\text{MnO}_2\text{Cl}$ .  
 Decomp. by  $\text{H}_2\text{O}$ . (Aschoff, J. pr. 81. 29.)

**Melanocobaltic chloride**,  
 $\text{Co}_2(\text{NH}_3)_9\text{Cl}_2\text{NH}_4\text{Cl}$ , or  
 $\text{Co}_2(\text{NH}_3)_9\text{Cl}_2\text{NH}_3$ .  
 Very sl. sol. in cold  $\text{H}_2\text{O}$  or very dil.  $\text{HCl} + \text{Aq}$ . Decomp. by long standing or warming. Cold conc.  $\text{HCl}$  or dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  does not attack, but decomp. on warming.  $\text{HNO}_3 + \text{Aq}$  decomp. on warming. Sol. in cold  $\text{H}_2\text{SO}_4$  or  $\text{NH}_4\text{OH} + \text{Aq}$ ; from both solutions it can be precipitated by  $\text{HCl} + \text{Aq}$ . (Vortmann, B. 10. 1455.)

— chloroplatinate,  $[\text{Co}_2(\text{NH}_3)_9\text{NH}_2\text{Cl}_2]_2\text{PtCl}_4$ .  
 Ppt. (Vortmann, B. 15. 1902.)  
 $\text{Co}_2(\text{NH}_3)_9\text{NH}_2\text{Cl}_2(\text{OH})_3$ ,  $\text{PtCl}_4$  Ppt. (Vortmann.)

— mercuric chloride,  
 $\text{Co}_2(\text{NH}_3)_9(\text{NH}_2)\text{Cl}_2(\text{OH})_3, 3\text{HgCl}_2 + \text{H}_2\text{O}$ .  
 Ppt. Difficultly sol. in cold  $\text{H}_2\text{O}$ , quite easily in warm  $\text{H}_2\text{O}$  acidified with  $\text{HCl}$ . (Vortmann.)

— chloride chromate,  
 $\text{Co}_2(\text{NH}_3)_9\text{NH}_2\text{Cl}_2\text{Cr}_2\text{O}_7 + \text{H}_2\text{O}$ .  
 Sol. in hot  $\text{H}_2\text{O}$ . (Vortmann.)

**Mercuriammonium comps.**  
 See Mercury ammonium comps.

**Mercuriammonium bromide**,  $\text{Hg}(\text{NH}_2)\text{Br}$ .  
 See Dimercuriammonium ammonium bromide.

**Mercuriammonium chloride**,  $\text{Hg}(\text{NH}_2)\text{Cl}$ .  
 See Dimercuriammonium ammonium chloride.

**Mercuriammonium oxydimercuriammonium chloride**,  $4\text{Hg}(\text{NH}_2)\text{Cl}, \text{NH}_2(\text{HgOHg})\text{Cl}$ . (Millon.)  
 Correct composition is Dimercuriammonium ammonium chloride,  $\text{NHg}_2\text{Cl}, \text{NH}_4\text{Cl}$ , which see. (Balestra, Gazz. ch. it. 21, 2. 294.)

$\text{Hg}(\text{NH}_2)\text{Cl}, 2\text{NH}_2(\text{HgOHg})\text{Cl}$  (Millon.)  
 Correct composition is Dimercuriammonium mercuric chloride,  $2\text{NHg}_2\text{Cl}, \text{HgCl}_2 + \text{H}_2\text{O}$ , or Dimercuriammonium hydrogen chloride,  $\text{NHg}_2\text{Cl}, \text{HCl}$ . (Balestra.)

**Mercuriammonium nitrate**,  $2\text{NH}_3, 2\text{HgO}, \text{N}_2\text{O}_5 = \text{NH}_2\text{HgNO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Easily decomp. by  $\text{HCl}$ , or alkali sulphides +  $\text{Aq}$ . Sl. sol. in  $\text{HNO} + \text{Aq}$ . Insol. in  $\text{H}_2\text{SO}_4, \text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Mitscherlich.)

Is dimercuriammonium ammonium nitrate,  $\text{NHg}_2\text{NO}_3, \text{NH}_4\text{NO}_3 + \text{H}_2\text{O}$ . (Pesci, Gazz. ch. it. 20. 485.)

**Mercuriammonium oxydimercuriammonium nitrate**,  $3\text{HgO}, 2\text{NH}_3, \text{N}_2\text{O}_5 = \text{NH}_4\text{HgNO}_3, (\text{NH}_4\text{OH})_2\text{NO}_3 + \text{H}_2\text{O}$ .

Decomp. by boiling with  $\text{H}_2\text{O}$ , which dissolves out  $\text{NH}_4\text{NO}_3$ . Sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  containing  $\text{NH}_4\text{OH}$  (Mitscherlich.)

Is dimercuriammonium ammonium nitrate,  $3\text{NH}_4\text{NO}_3, \text{NH}_4\text{NO}_3 + 2\text{H}_2\text{O}$  (Pesci, Gazz. ch. it. 20. 485.)

**Mercuriammonium oxydimercuriammonium sulphate**,  $(\text{NH}_4\text{Hg})_2\text{SO}_4, 3(\text{NH}_4\text{OH})_2\text{SO}_4$ .

Boiling  $\text{H}_2\text{O}$  dissolves out  $\text{H}_2\text{SO}_4$ . Gradually decomp. by boiling  $\text{KOH} + \text{Aq}$ . Completely sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ . Sol. in conc. or dil.  $\text{HCl}$ , or very dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Insol in conc. or dil.  $\text{HNO}_3 + \text{Aq}$  or conc.  $\text{H}_2\text{SO}_4$  (Schneider.)

Correct formula is  $7(\text{NH}_4)_2\text{SO}_4, (\text{NH}_4)_2\text{SO}_4 + 12\text{H}_2\text{O}$ , dimercuriammonium ammonium sulphate. (Pesci, Gazz. ch. it. 20. 485.)

**Mercuridiammonium chloride (fusible white precipitate)**,  $\text{Hg}(\text{NH}_4)_2\text{Cl}_2$ .

Is dimercuriammonium ammonium chloride,  $\text{Hg}_2\text{NCl}, 3\text{NH}_4\text{Cl}$ , which see. (Rammelsberg J. pr. 38. 558.)

**Mercuridiammonium mercuric chloride**,  $\text{Hg}(\text{NH}_4)_2\text{Cl}_2, \text{HgCl}_2$ .

Insol. in  $\text{H}_2\text{O}$ , but gradually decomp. by boiling therewith. (Rose, Pogg. 20. 158.) Partly sol. in  $\text{H}_2\text{O}$ . (Kane)

**Mercuridiammonium iodide**,  $\text{Hg}(\text{NH}_4)_2\text{I}_2$ .

$\text{H}_2\text{O}$  extracts all the  $\text{NH}_3$ . Partly sol. in little alcohol. Partly sol. in ether without decomp. (Nessler.)

Correct composition is dimercuriammonium ammonium iodide,  $\text{NH}_4\text{HgI}, 3\text{NH}_4\text{I}$ . (Pesci, Gazz. ch. it. 20. 485.)

**Mercuridiammonium cupric iodide**,  $4\text{NH}_3, \text{CuI}_2, \text{HgI}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol +  $\text{HC}_2\text{H}_3\text{O}_2$ . (Jørgensen, J. pr. (2) 2. 347.)  $2\text{Hg}(\text{NH}_4)_2\text{I}_2, \text{CuI}_2$  (Decomp. by  $\text{H}_2\text{O}$ . (Jørgensen))

**Mercuridiammonium iodide**,  $\text{Hg}(\text{NH}_4)_2\text{I}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Partly sol. in a little alcohol. Partly sol. in ether. (Nessler.)

Correct composition is dimercuriammonium ammonium iodide,  $\text{NH}_4\text{HgI}, 3\text{NH}_4\text{I}$ . (Pesci.)

**Mercuridiammonium mercuric iodide**,

$\text{Hg}(\text{NH}_4)_2, \text{HgI}_2$ , or  $\text{NH}_3, \text{HgI}_2$ .

Decomp. by  $\text{H}_2\text{O}$  or dil. acids. (Caillot and Corriol, J. Pharm. 9. 381.)

Correct composition is dimercuriammonium ammonium mercuric iodide,  $3\text{NH}_4\text{HgI}, 8\text{NH}_4\text{I}, 4\text{HgI}_2$ . (Pesci, Gazz. ch. it. 20. 485.)

**Mercuridiammonium sulphate**,  $\text{Hg}(\text{NH}_4)_2\text{SO}_4$ .

Decomp. with  $\text{H}_2\text{O}$ .

Does not exist. (Pesci, Gazz. ch. it. 20. 485.)

+  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl}$ , very dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , or  $\text{HNO}_3 + \text{Aq}$ . Insol in conc.  $\text{HNO}_3 + \text{Aq}$ . Sol in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  or  $\text{NH}_4\text{Cl} + \text{Aq}$ . Decomp. by  $\text{KOH} + \text{Aq}$ . (Schneider, J. pr. 75. 136.)

Correct composition is  $(\text{NH}_4)_2\text{SO}_4, 3(\text{NH}_4)_2\text{SO}_4 + 12\text{H}_2\text{O}$ , dimercuriammonium ammonium sulphate (Pesci.)

**Dimercuriammonium acetate**,

$\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ .

Insol in  $\text{H}_2\text{O}$  or alcohol. Sol. in  $\text{HCl}$  or  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Balestra, Gazz. ch. it. 22, 2. 563.)

**Dimercuriammonium ammonium acetate**,

$\text{NH}_4\text{C}_2\text{H}_3\text{O}_2, 3\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{H}_2\text{O}$ .

Dehuescent; sol. in a little  $\text{H}_2\text{O}$  without decomp., but decomp. into  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$  and  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$  by excess of  $\text{H}_2\text{O}$  (Balestra.)

— **arsenate**,  $\text{NH}_4\text{H}_2\text{AsO}_4$ .

(Hirzel, Zeit. Pharm. 1853. 3.)

— **bromate**,  $\text{NH}_4\text{BrO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Ppt. (Rammelsberg, Pogg. 55. 82.)

Is oxydimercuriammonium bromate,  $(\text{NH}_4\text{Hg}_2\text{O})\text{BrO}_3$ .

— **bromide**,  $\text{NH}_4\text{Br}$ .

Insol in  $\text{H}_2\text{O}$  or  $\text{HNO}_3$ . Sol in  $\text{HCl} + \text{Aq}$  (Pesci, Gazz. ch. it. 19. 509.)

Sol in  $\text{KI}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  with evolution of  $\text{NH}_3$  (Balestra, Gazz. ch. it. 22, 2. 558.)

Sol in ammoniacal solutions of ammonium salts and in aq. acids. (Franklin, J. Am. Chem. Soc. 1905, 27. 839.)

— **ammonium bromide**,  $\text{NH}_4\text{Br}, \text{NH}_4\text{Br}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Pesci, Gazz. ch. it. 19. 511.)

$4\text{NH}_4\text{Br}, 5\text{NH}_4\text{Br}$ . Decomp. by  $\text{H}_2\text{O}$ . Insol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Sol. in conc. or dil.  $\text{HCl} + \text{Aq}$ . Insol in  $\text{HNO}_3 + \text{Aq}$ . (Pesci.)

$\text{NH}_4\text{Br}, 3\text{NH}_4\text{Br}$ . Decomp. by  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ . Insol in alcohol. (Pesci.)

Sol. in  $\text{NH}_4\text{Br}, \text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{I} + \text{Aq}$ ; sol. in  $\text{KI}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ .

— **mercuric bromide**,  $2\text{NH}_4\text{Br}, \text{HgBr}_2$ .

Ppt. Sol. in  $\text{HBr}$  and in  $\text{HCl}$ . (Ray, Chem. Soc. 1902, 81. 649.)

— **carbonate**,  $(\text{NH}_4)_2\text{CO}_3 + 2\text{H}_2\text{O}$ .

Ppt. Not decomp. by  $\text{KOH} + \text{Aq}$ , but easily by  $\text{K}_2\text{S}$ , or  $\text{KI} + \text{Aq}$ . (Rammelsberg, J. pr. (2) 38. 567.)

**Dimercuriammonium chloride,  $\text{NH}_4\text{Hg}_2\text{Cl}_2$ .**

Not attacked by boiling  $\text{H}_2\text{O}$ . Sol. attacked by cold dil.  $\text{HCl} + \text{Aq.}$  but is gradually dissolved thereby. Decomp. by hot  $\text{KOH} + \text{Aq.}$  (Weyl.)

Sol. in  $\text{KI}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$  with evolution of  $\text{NH}_3$ .

$+ \text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HNO}_3$ , and  $\text{HCl} + \text{Aq.}$  Not decomp. by  $\text{KOH} + \text{Aq.}$  Decomp. by  $\text{KCl}$ ,  $\text{NaCl}$ , or  $\text{KI} + \text{Aq.}$  (Rammelsberg, Pogg. 48. 181.)

— hydrogen chloride,  $\text{NH}_4\text{Hg}_2\text{Cl}_2$ ,  $2\text{HCl}$ .

Correct composition of mercuric chloramide chloride. (Balestra, Gazz. ch. it. 21, 2. 299.)

Decomp. by  $\text{H}_2\text{O}$ .  
 $\text{NH}_4\text{Hg}_2\text{Cl}_2$ ,  $\text{HCl}$ . Decomp. by  $\text{H}_2\text{O}$ . (Balestra, l. c.)

$\text{NH}_4\text{Hg}_2\text{Cl}_2$ ,  $4\text{HCl}$ . Sol. in  $\text{H}_2\text{O}$  (Ray, Proc. Chem. Soc. 1901, 17. 96.)

— ammonium chloride,  $\text{NH}_4\text{Hg}_2\text{Cl}_2$ ,  $\text{NH}_4\text{Cl}$ . (Insoluble white precipitate.)

Correct composition of what has been called mercuric chloramide,  $\text{Hg}(\text{NH}_4)\text{Cl}$ . (Rammelsberg, J. pr. 38. 558.)

Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . (Miklon, A. ch. (3) 18. 413.) Sol. in 600 pts.  $\text{H}_2\text{O}$ . (Wittstein.) Sol. in 719.98 pts.  $\text{H}_2\text{O}$  at  $18.75^\circ$ . (Abt.) Insol. in alcohol

Sol. in acids, even in  $\text{HCl} + \text{H}_2\text{O}_2 + \text{Aq.}$ , also in  $\text{NH}_4\text{NO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ , and  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq.}$  (Pelouse and Fremy.)

Sol. in warm  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Brett.)

Sol. sol. in alkali chlorides  $+ \text{Aq.}$  which partially decomp. (Miehle, A. ch. (3) 6. 180.)

Decomp. by  $\text{KOH} + \text{Aq.}$  Sol. in  $\text{KI}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$  with evolution of  $\text{NH}_3$ . (Balestra.)

When freshly prepared is sol. in conc.  $\text{NH}_4\text{OH} + \text{Aq.}$  (Saha and Choudhury, Z. anorg. 1910, 67. 359.)

Sol. in excess of  $(\text{NH}_4)_2\text{HPO}_4 + \text{Aq.}$  Insol. in excess of  $\text{Na}_2\text{HPO}_4 + \text{Aq.}$  (Carnegie and Burt, C. N. 1897, 76. 175.)

Insol. in excess of  $\text{NH}_4\text{OH} + \text{Aq.}$  (Carnegie and Burt.)

$\text{NH}_4\text{Hg}_2\text{Cl}_2$ ,  $3\text{NH}_4\text{Cl}$  (Fusible white precipitate.)

Correct composition of what has been called mercuriammonium chloride,  $\text{Hg}(\text{NH}_4)_2\text{Cl}_2$ . (Rammelsberg, J. pr. (2) 38. 558.)

Decomp. by hot  $\text{H}_2\text{O}$ . Sol. in acids, even  $\text{HCl} + \text{H}_2\text{O}_2 + \text{Aq.}$  Not decomp. by cold, but by boiling  $\text{KOH} + \text{Aq.}$  (Weyl.)

Sol. in warm, less in cold  $\text{NH}_4\text{OH} + \text{Aq.}$  (Mitscherlich.)

Sol. in  $\text{KI}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$  with evolution of  $\text{NH}_3$ . (Balestra.)

Sol. in 10%  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , and acetic acid. (Hofmann and Marburg, A. 1899, 305. 198.)

**Dimercuriammonium mercuric chloride,  $2\text{NH}_4\text{Hg}_2\text{Cl}_2$ ,  $\text{Hg}_2\text{Cl}_2$ .**

Insol. in, and not decomp. by boiling  $\text{H}_2\text{O}$ , alkalis, conc.  $\text{HNO}_3$ , or dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  Sol. in boiling  $\text{HCl} + \text{Aq.}$  (Mitscherlich, J. pr. 19. 453.)

Sol. decomp. by  $\text{H}_2\text{O}$ , readily by  $\text{KOH} + \text{Aq.}$  (Gaudechon, A. ch. 1911, (8) 22. 212.)

Ppt. Sol. in  $\text{HBr}$ . (Ray, Proc. Chem. Soc. 1902, 18. 86.)

— chloride ammonia,  $\text{NH}_4\text{Hg}_2\text{Cl}_2$ ,  $\frac{1}{2}\text{NH}_3$ .

Decomp. by water and by  $\text{NH}_4\text{OH} + \text{Aq.}$  (Gaudechon, A. ch. 1911, (8) 22. 212.)

— chromate.

See Oxymercuriammonium chromate.

— hydroxide,  $\text{NH}_4\text{Hg}_2\text{OH}$ .

Takes up  $\text{H}_2\text{O}$  to form  $\text{NH}_4\text{Hg}_2\text{OH} + \text{H}_2\text{O}$  or  $(\text{NH}_4\text{Hg}_2\text{OH})_2\text{OH}$ , oxymercuriammonium hydroxide, which also see.

Sol. in warm  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq.}$

— iodate,  $\text{NH}_4\text{Hg}_2\text{IO}_3$ ,  $2\text{NH}_4\text{IO}_3$ .

Insol. in  $\text{HNO}_3$ . (Rammelsberg, J. pr. (2) 38. 568.)

— iodide,  $\text{NH}_4\text{Hg}_2\text{I}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq.}$  Decomp. by boiling with  $\text{KOH} + \text{Aq.}$  or  $\text{KCl} + \text{Aq.}$  (Weyl, Pogg. 121. 601.) Decomp. by hot  $\text{KI}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$  (Balestra.)

Decomp. by dilute  $\text{HCl}$ . Sol. in ammonium salts  $+ \text{Aq.}$  (Franklin, Z. anorg. 1905, 46. 21.)

$+ \text{H}_2\text{O}$ . See Oxymercuriammonium iodide.

— ammonium iodide,  $\text{NH}_4\text{Hg}_2\text{I}$ ,  $3\text{NH}_4\text{I}$ .

Correct composition of mercuriammonium iodide,  $\text{Hg}(\text{NH}_4)_2\text{I}_2$ . (Pesci, Gazz. ch. it. 20. 485.)

$3\text{NH}_4\text{Hg}_2\text{I}$ ,  $8\text{NH}_4\text{I}$ ,  $4\text{HgI}_2$ . Correct formula for mercuriammonium mercuric iodide,  $\text{Hg}(\text{NH}_4)_2\text{I}_2$ ,  $\text{HgI}_2$ . (Pesci.)

— nitrate,  $\text{NH}_4\text{Hg}_2\text{NO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (Rammelsberg, J. pr. (2) 38. 566.)

Sol. in  $\text{KI}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$  with evolution of  $\text{NH}_3$ . (Balestra, Gazz. ch. it. 22, 2. 560.)

$+ \text{H}_2\text{O}$ . (Hofmann and Marburg, A. 1899, 305. 212.)

Sol. in  $\text{HNO}_3$ . (Ray, Z. anorg. 1902, 33. 209.)

— ammonium nitrate,  $\text{NH}_4\text{Hg}_2\text{NO}_3$ ,  $\text{NH}_4\text{NO}_3$ ,  $+ \text{H}_2\text{O}$ .

Correct formula for mercuriammonium nitrate,  $\text{NH}_4\text{Hg}_2\text{NO}_3 + \frac{1}{2}\text{H}_2\text{O}$ . (Pesci, Gazz. ch. it. 20. 485.)

$\text{NH}_4\text{Hg}_2\text{NO}_3$ ,  $2\text{NH}_4\text{NO}_3 + 2\text{H}_2\text{O}$ . Correct for-

mula for oxydmercuriammonium ammonium nitrate,  $(\text{NH}_4\text{OH})_2\text{NO}_3$ ,  $2\text{NH}_4\text{NO}_3 + \text{H}_2\text{O}$ . (Pesci.)

$\text{NH}_4\text{NO}_3$ ,  $3\text{NH}_4\text{NO}_3$  Decomp by cold  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Pesci.)

$3\text{NH}_4\text{NO}_3$ ,  $\text{NH}_4\text{NO}_3 + 2\text{H}_2\text{O}$ . Correct formula for mercuriammonium oxydmercuriammonium nitrate,  $\text{NH}_4\text{HgNO}_3$ ,  $(\text{NH}_4\text{OH})_2\text{NO}_3 + \text{H}_2\text{O}$ . (Pesci.)

*Dimercuriammonium nitrite*,  $\text{NH}_4\text{Hg}_2\text{NO}_2$ .

Readily sol. in warm  $\text{HCl}$  or  $\text{HBr}$ . (Ray, Chem. Soc. 1902, 81. 648.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . Ppt. Sol in  $\text{HCl}$ . (Ray, Proc Chem. Soc. 1902, 18. 85.)

+  $\text{H}_2\text{O}$ . (Hofmann and Marburg, A. 1899, 306. 214.)

— oxide,  $(\text{NH}_4)_2\text{O}$ .

Slowly decomp. by  $\text{H}_2\text{O}$ . Sol in  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . Decomp. by hot  $\text{KOH}$ , or  $\text{KCl} + \text{Aq}$ . (Weyl, Pogg. 121. 601.)

Sol. in  $\text{KCN} + \text{Aq}$  by heating 4–5 hours at  $130^\circ$ . Not completely sol in  $\text{HCl}$  owing to formation of  $\text{Hg}_2\text{Cl}_2$ . (Gaudechon, C. R. 1907, 144. 1419.)

— phosphate,  $(\text{NH}_4)_2\text{PO}_4$ ,  $2\text{NH}_4\text{OH} + 10\text{H}_2\text{O}$

(Rammelsberg, J. pr. (2) 38. 567.)

See Oxydmercuriammonium phosphate.

— ammonium salicylate,  $2\text{NH}_4\text{C}_6\text{H}_4\text{OHCO}_2$ ,  $5\text{NH}_4\text{C}_6\text{H}_4\text{OHCO}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ ,  $\text{HCl}$ , or  $\text{KI} + \text{Aq}$ . (Balestra.)

— selenate,  $(\text{NH}_4)_2\text{SeO}_4 + 2\text{H}_2\text{O}$

Ppt. Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Cameron and Davy, C. N. 44. 63.)

— sulphate,  $(\text{NH}_4)_2\text{SO}_4 + 2\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ . Easily sol in  $\text{HCl} + \text{Aq}$ . (Rammelsberg, J. pr. (2) 38. 565.) Sol. (Kane), insol (Hirzel) in  $\text{HNO}_3 + \text{Aq}$ .

Sol. in  $\text{KI}$ , or  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  with evolution of  $\text{NH}_3$ . (Balestra.)

+  $\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , sol in  $\text{HCl}$ . (Ray, Chem. Soc. 1905, 87. 9.)

— ammonium sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,  $3(\text{NH}_4)_2\text{SO}_4 + 4\text{H}_2\text{O}$ .

Correct formula for mercuriammonium sulphate,  $2\text{NH}_3$ ,  $\text{HgO}$ ,  $\text{SO}_3 + \text{H}_2\text{O}$ . (Pesci, Gazz. ch. it. 20. 485.)

$5(\text{NH}_4)_2\text{SO}_4$ ,  $14(\text{NH}_4)_2\text{SO}_4 + 16\text{H}_2\text{O}$ . (Pesci.)

$7(\text{NH}_4)_2\text{SO}_4$ ,  $(\text{NH}_4)_2\text{SO}_4 + 12\text{H}_2\text{O}$ . Correct formula for mercuriammonium oxydmercuriammonium sulphate,  $(\text{NH}_4\text{Hg}_2)_2\text{SO}_4$ ,  $3(\text{NH}_4\text{OH})_2\text{SO}_4$ . (Pesci.)

*Dimercuriammonium tartrate*,  $(\text{NH}_4)_2\text{C}_4\text{H}_4\text{O}_6 + 2\frac{1}{2}\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ ,  $\text{KI}$ ,  $\text{Na}_2\text{S}_2\text{O}_3$ ,  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ , or  $(\text{NH}_4)_2\text{C}_4\text{H}_4\text{O}_6 + \text{Aq}$ . (Balestra, Gazz. ch. it. 22, 2. 563.)

— ammonium tartrate,  $2(\text{NH}_4)_2\text{C}_4\text{H}_4\text{O}_6$ ,  $(\text{NH}_4)_2\text{C}_4\text{H}_4\text{O}_6 + \text{H}_2\text{O}$

As above. (B.)

*Trimercuriammonium sulphate*,  $(\text{NH}_4)_3(\text{NH}_4\text{Hg}_2)_2\text{SO}_4 + 2\text{H}_2\text{O}$ .

Decomp by  $\text{H}_2\text{O}$ . (Millon.)

Does not exist (Pesci, Gazz. ch. it. 20. 485.)

*Dimercuriarsonium mercuric chloride*,  $\text{AsHg}_2\text{Cl}_2 = \text{AsHg}_2\text{Cl}$ ,  $\text{HgCl}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Decomp. by warm  $\text{HNO}_3 + \text{Aq}$ . (Rose, Pogg. 51. 423.)

*Mercurimidosulphonic acid*,  $(\text{HO}_2\text{S})_2\text{N}_2\text{Hg}$ .

Very unstable (Berglund, B. 9. 256.)

*Barium mercurimidosulphonate*,  $\text{Ba}_2(\text{SO}_3)_2\text{N}_2\text{Hg} + 5\text{H}_2\text{O}$

(Berglund, B. 9. 256.)

*Cadmium* —,  $\text{Cd}_2\text{HgN}_2(\text{SO}_3)_4 + 12\text{H}_2\text{O}$ .

Unstable; al sol. in  $\text{H}_2\text{O}$ . (Berglund, Bull. Soc. (2) 25. 452.)

*Cobalt* —,  $\text{Co}_3\text{HgN}_2(\text{SO}_3)_4 + 15\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (B.)

*Copper* —,  $\text{Cu}_2\text{HgN}_2(\text{SO}_3)_4 + 15\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ . (B.)

*Magnesium* —,  $\text{Mg}_2\text{HgN}_2(\text{SO}_3)_4 + 15\text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$ . (B.)

*Manganous* —,  $\text{Mn}_2\text{HgN}_2(\text{SO}_3)_4 + 10\text{H}_2\text{O}$ .

Unstable. (B.)

*Mercuric* —,  $(\text{Hg}_2\text{O})_2\text{HgN}_2(\text{SO}_3)_4$ .

Nearly insol in  $\text{H}_2\text{O}$ . (B.)

*Nickel* —,  $\text{Ni}_2\text{HgN}_2(\text{SO}_3)_4 + 15\text{H}_2\text{O}$

(B.)

*Potassium* —,  $(\text{KO}_2\text{S})_2\text{N}_2\text{Hg} + 4\text{H}_2\text{O}$

Precipitate. (Raschig, A. 241. 161.)

*Potassium silver* —,  $(\text{AgSO}_3)_2(\text{KSO}_3)_2\text{HgN}_2 + 3\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Berglund.)

*Sodium* —,  $(\text{NaSO}_3)_2\text{HgN}_2 + 5\text{H}_2\text{O}$ .

More sol. in  $\text{H}_2\text{O}$  than  $\text{K}$  salt. (Berglund.)

*Strontium* —,  $\text{Sr}_2(\text{SO}_3)_2\text{HgN}_2 + 15\text{H}_2\text{O}$ .

More sol. than  $\text{Ba}$  salt. (B.)

Zinc mercuridosulphonate,  
 $Zn_2(SO_4)_4HgN_2 + 15H_2O$ .  
 Very sol. in  $H_2O$ . (B)

Dimercuriphosphonium mercuric bromide,  $2PHg_2Br$ ,  $HgBr_2$ .  
 (Lemoult, C. R. 1907, 145. 1176)

Dimercuriphosphonium mercuric chloride,  $HgCl_2$ ,  $PHg_2Cl$ .  
 (Lemoult, C. R. 1907, 145. 1176.)  
 $+1\frac{1}{2}H_2O$ . Decomp. by hot, slowly by cold  $H_2O$  into  $Hg$ ,  $HCl$  and  $H_3PO_3$ . Decomp. by acids or alkalis. (Rose, Pogg. 40. 75.)

Dimercuriphosphonium mercuric iodide,  $HgI_2$ ,  $PHg_2I$ .  
 Slowly decomp. by cold or warm  $H_2O$ , quickly by  $MOH + Aq$ . Not attacked by  $HCl$  or  $H_2SO_4 + Aq$ . Rapidly attacked by  $HNO_3$  and aqua regia. (Lemoult, C. R. 1904, 139. 479.)

Dimercuriphosphonium mercuric nitrate,  $P_2Hg_3$ ,  $8HgO$ ,  $3N_2O_5 = 2[PHg_2NO_3]$ ,  $Hg(NO_3)_2$ ,  $3HgO$ .  
 (Rose, Pogg. 40. 75)

Dimercuriphosphonium mercuric sulphate,  $P_2Hg_3$ ,  $6HgO$ ,  $4SO_3 + 4H_2O = (PHg_2)_2SO_4$ ,  $3HgSO_4$ ,  $2HgO + 4H_2O$ .  
 Sol. in aqua regia. (Rose, Pogg. 40. 75)

### Mercuric acid.

Calcium mercurate (?).  
 (Berthollet, A. ch. 1. 61.)

Potassium mercurate,  $K_2O$ ,  $2HgO$ .  
 Gradually decomp. by  $H_2O$ ; less rapidly by absolute alcohol. (St. Meunier, C. R. 60. 557.)

Sodium mercurate,  $Na_2O$ ,  $HgO$ .  
 (Bettendorf, Bull. Soc. (2) 34. 328)

Mercurioammonium chloride,  
 $Hg(NH_2)Cl$   
 (Rose, Pogg. 20. 158)  
 Mixture of  $Hg$ ,  $HgNH_2Cl$ , and  $NH_4Cl$ .  
 (Barfoed, J. pr. (2) 39. 201.)

— nitrate,  $(NH_4)_2Hg(NO_3)_2$ , "Hahnemann's soluble mercury."  
 Sol. in hot  $HCl$  and  $HC_2H_3O_2 + Aq$ . Decomp. by  $NH_4OH + Aq$ , or  $NH_4$  salts +  $Aq$ . Probably mixture of mercurous salts and  $Hg$ .

Mercurodiammonium chloride,  
 $Hg_2(NH_2)_2Cl_2$ .  
 Easily decomp. (Rose, Pogg. 20. 158.)  
 Mixture of  $Hg$ ,  $NH_4HgCl$ , and  $NH_4Cl$ .  
 (Barfoed, J. pr. (2) 39. 201)

Mercurodiammonium fluoride,  
 $Hg_2(NH_2)_2F_2$  (?)  
 Decomp. by  $H_2O$ . (Finkener, Pogg. 110. 147.)

### Mercurosulphonic acid.

Mercurosulphonates,  $Hg(SO_3M)_2$ .  
 Correct composition for the double sulphites,  $HgSO_3$ ,  $M_2SO_3$ . (Divers and Shumidzu, Chem. Soc. 49. 583; Baith, Z. phys. Ch. 9. 195.)

### Mercuroxy-comps.

See Oxymercur- comps.

### Mercury, Hg.

Not attacked by  $H_2O$ . Not attacked by boiling conc  $HCl$  or dil  $H_2SO_4 + Aq$ . Easily sol. in dil or conc  $HNO_3 + Aq$ ; also in  $HBr$  or  $HI + Aq$ .

Not attacked by pure  $HNO_3$  unless heated, but readily attacked by cold dil.  $HNO_3 + Aq$  containing  $NO$ . (Millon.)

Anhydrous  $H_2SO_4$  attacks  $Hg$  gradually at ord. temp. (Berthelot, C. R. 1897, 126. 749.)

$H_2SO_4$  attacks only when hot and conc. (Ditte, A. ch. 1890, (6) 19. 68.)

Conc.  $H_2SO_4$  does not attack dry or moist  $Hg$  either with or without au. (Pitman, J. Am. Chem. Soc. 1898, 20. 100.)

$H_2SO_4$  attacks  $Hg$  at  $20^\circ$  if it contains 99.7%; does not attack if it contains only 95.6%. (Baskerville, J. Am. Chem. Soc. 1898, 20. 515.)

Insol. in  $H_2SO_4 + Aq$  alone or in presence of  $HCl$  or dil.  $H_2SO_4$ . (Berthelot, A. ch. 1898, (7) 14. 198)

Not attacked by  $HF + Aq$  at any temp. (Gay-Lussac.)

$HI$  dissolves  $Hg$  rapidly at ord temp (Norris and Cottrell, Am. Ch. J. 1896, 18. 99)

More rapidly attacked by  $HBr + Aq$  than by  $HCl + Aq$ . Rapidly acted upon by  $HI$  in absence of  $O$ . (Bailey, Chem. Soc. 1888, 53. 760)

Not attacked by pure  $HCl + Aq$ , but in presence of  $O$ ,  $Hg_2OCl_2 + H_2O$  is formed. Action is apparently less in sunlight than in the dark. (Bailey, Chem. Soc. 1888, 53. 759.)

Small amts. of ferric salts hinder action of  $HNO_3$  on  $Hg$ , but it is hastened by presence of  $Mn(NO_3)_2$  or  $NaNO_2$ . (Ray, Chem. Soc. 1911, 99. 1015.)

$HNO_3$  under 33% does not attack  $Hg$  if metal and acid are kept in motion and  $HNO_2$  is absent (Veley, B. 1895, 28. 928.)

Rapidly sol. in  $HClO$ . (Balard, Dissert. 1834.)

Alkali chlorides +  $Aq$  in presence of air decomp.  $Hg$ ; action is not increased by heat. (Mabie.)

Insol. in alkali chlorides +  $Aq$  in neutral or

alkaline solution. (Bhaduri, Z. anorg. 1897, 13, 407.)

Very sol. in conc. solution of I in KI + Aq. (Varet, Bull. Soc. 1897, (3) 17, 451.)

Slowly sol. in KCl or KI + Aq in presence of air. (Palmaer, Z. phys. Ch. 1907, 59, 136.)

Slowly sol. in Na<sub>2</sub>S + Aq in presence of air. (Palmaer, Z. phys. Ch. 1907, 59, 137.)

Hg is appreciably sol. in the sulpho salts of Mo, W, V, As, Sb and Sn. (Storch, B. 1883, 16, 2015.)

Persulphates in alkali or neutral solution attack Hg. (NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub> in NH<sub>4</sub>OH solution has strongest action. This dissolves Hg by repeated shaking at high temp. (Tarugi, Gazz. ch. it. 1903, 33, (1) 127.)

Insol in KCN + Aq. (Elmer, J. pr. 1888, (2) 37, 442.)

Slowly sol. in KCN + Aq in presence of air. (Palmaer, Z. phys. Ch. 1907, 59, 136.)

Sol in considerable quantity in 6% KCN + Aq. (Goyder, C. N. 1894, 69, 268.)

Most sol. in K<sub>4</sub>Fe(CN)<sub>6</sub> + Aq when KOH is present. (Smith, J. Am. Chem. Soc. 1905, 27, 541.)

Hg dissolves in Br<sub>2</sub> in the presence of KBr sl. faster than in I<sub>2</sub> but in CuBr<sub>2</sub> much more slowly. (Van Name and Edgar, Am. J. Sci. 1910, (4) 29, 255.)

Not attacked by PCl<sub>5</sub> even at 350°. (Morgan, A. ch. 1885 (6) 8, 457.)

Insol in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20, 829.)

½ ccm. oleic acid dissolves 0.0075 g. Hg in 6 days. (Gates, J. phys. Chem. 1911, 15, 143.)

**Mercurous acetylide, Hg<sub>2</sub>C<sub>2</sub> + H<sub>2</sub>O.**

(Burkard and Travers, Chem. Soc. 1902, 81, 1271.)

**Mercuric acetylide, basic, 2HgO, 3HgC<sub>2</sub> + 2H<sub>2</sub>O.**

(Burkard and Travers, Chem. Soc. 1902, 81, 1272.)

**Mercuric acetylide, HgC<sub>2</sub>.**

Very sol. in HCl with evolution of H<sub>2</sub>C<sub>2</sub>. (Keiser, Am. Ch. J. 1893, 15, 535.)

+ ½ H<sub>2</sub>O. Insol. in H<sub>2</sub>O, alcohol and ether. Sol. in NH<sub>4</sub> acetate + Aq. and in KCN + Aq. Sl. attacked by cold HCl, easily by hot. Easily sol. in HNO<sub>3</sub>. Dil. H<sub>2</sub>SO<sub>4</sub> attacks slowly; conc. causes explosion. (Plimpton and Travers, Chem. Soc. 1894, 65, 267.)

**Mercuric acetylide chloride, HgC<sub>2</sub>, HgCl<sub>2</sub> + ½ H<sub>2</sub>O**

Not acted upon by dil. HCl. Decomp. by fuming HNO<sub>3</sub> or aqua regia. Insol. in alcohol and ether. (Keiser, Am. Ch. J. 1893, 15, 538.)

**Mercuric acetylide mercuriomercuric chloride, HgC<sub>2</sub>, HgCl, HgCl<sub>2</sub> + H<sub>2</sub>O.**

Insol. in all ordinary solvents. (Biltz and Mumm, B. 1904, 37, 4420.)

**Mercurous amido fluoride, HgNH<sub>2</sub>F.**

Insol. in H<sub>2</sub>O, HNO<sub>3</sub> and H<sub>2</sub>SO<sub>4</sub>. Sol. in dil. HCl.

Probably *dimercuri ammonium ammonium fluoride*, NH<sub>4</sub>F, NH<sub>4</sub>P. (Böhm, Z. anorg. 1901, 43, 327.)

**Mercury ammonium comps.**

See—

**Mercurioammonium comps., NH<sub>2</sub>HgR.**

**Dimercuroammonium comps., NH<sub>2</sub>Hg<sub>2</sub>R.**

**Mercurous chloramide, Hg(NH<sub>2</sub>)Cl.**

**Dimercuri ammonium comps., NH<sub>2</sub>HgR.**

**Mercuric chlor-, brom-, etc., amide, Hg(NH<sub>2</sub>)<sub>2</sub>R.**

**Mercurihammonium comps., Hg(NH<sub>2</sub>)<sub>2</sub>R.**

**Mercuriammonium comps., HgNH<sub>2</sub>R.**

**Dimercurihammonium comps., Hg<sub>2</sub>N<sub>2</sub>H<sub>2</sub>R.**

**Trimercuri ammonium comps., N<sub>2</sub>H<sub>2</sub>Hg<sub>3</sub>R.**

**Oxydimercuri ammonium comps., (NH<sub>2</sub>Hg<sub>2</sub>O)R.**

**Mercurous arsinchloride, AsHgCl.**

Decomp. by H<sub>2</sub>O. (Capitaine, J. Pharm. 25, 559.)

**Mercurous arsinchloride chloride, AsHg<sub>2</sub>Cl<sub>2</sub> = 2AsHgCl, Hg<sub>2</sub>Cl<sub>2</sub> (?)**

Decomp. by H<sub>2</sub>O. (Capitaine.)

**Mercurous azoumide, HgN<sub>2</sub>.**

Wholly insol. in H<sub>2</sub>O. (Curtius, B. 24, 3321.)

1 l. H<sub>2</sub>O dissolves 0.25 g. (Wöhler and Krupko, B. 1913, 46, 2050.)

**Mercuric azoumide, HgN<sub>4</sub>.**

Sol. in H<sub>2</sub>O especially when hot. (Berthelot and Vieille, Bull. Soc. 1894, (3) 11, 747.)

Moderately sol. in H<sub>2</sub>O. (Wöhler and Krupko, B. 1913, 46, 2050.)

**Mercuric bromamide, Hg(NH<sub>2</sub>)Br.**

Insol. in H<sub>2</sub>O and alcohol. Sl. sol. in NH<sub>4</sub>OH + Aq. (Mitscherlich, J. pr. 19, 455.)

Correct composition is *dimercuri ammonium ammonium bromide*, Hg<sub>2</sub>NBr, NH<sub>4</sub>Br, which see. (Pesci, Gazz. ch. it. 19, 511.)

**Mercurous bromide, Hg<sub>2</sub>Br<sub>2</sub>.**

Solubility in H<sub>2</sub>O = 9.1 × 10<sup>-7</sup> g. equiv. per l. (Bodländer, Z. phys. Ch. 1898, 27, 61.)

Solubility in H<sub>2</sub>O = 7 × 10<sup>-4</sup> mols. per liter at 25°. (Sherrill, Z. phys. Ch. 193, 430, 735.)

Solubility in  $H_2O$  at  $25^\circ = 1.4 \times 10^{-7}$  equivalents per l (Thompson, J. Am. Chem Soc 1906, 28, 782.)

Insol in  $H_2O$  and dil acids. Decomp. by  $HCl + Aq$ . Sol in hot conc.  $H_2SO_4$  with evolution of  $SO_2$ . Sl. sol. in hot  $HNO_3 + Aq$  of 1.42 sp. gr. (Stromann, B 20, 2818.)

Decomp into Hg and  $HgBr_2$  by boiling with  $NH_4Br$ , or  $NH_4Cl + Aq$ , also by ammonium carbonate or succinate, but not by ammonium sulphate or nitrate. (Wittstein.)

Sol in  $Hg(NO_3)_2 + Aq$ . (Wackenroder, A 41, 317.)

Partially decomp by alkali chlorides +  $Aq$ ; when out of contact of air this decomp is slight and  $HgBr_2$  is formed, while in the air  $HgCl_2$  is the resulting product. Much more rapidly decomp. in hot than cold solutions. (Mishle, A. ch. (3) 5, 177.)

A solution of  $HgBr$  in 0.1-N  $KBr$  contains about 1 mg. Hg ions in 1300 l

Insol. in alcohol  
Insol. in benzonitrile (Naumann, B 1914, 47, 1370.)

Insol. in methyl acetate (Naumann, B, 1909, 42, 3790), ethyl acetate. (Naumann, B, 1910, 43, 314.)

Insol. in acetone. (Naumann, B 1904, 37, 4329); (Eidmann, C. C. 1899, II 1014.)

#### Mercuric bromide, $HgBr_2$ .

Sol in 250 pts.  $H_2O$  at ordinary temp., and 25 pts. boiling  $H_2O$  (Wittstein) Sol in 240 pts.  $H_2O$  at  $18.75^\circ$  (Abt.)

Sol in 94 pts.  $H_2O$  at  $9^\circ$ , and in 4-5 pts at  $100^\circ$ . (Lassaigne, J. chim. méd 12, 177.)

Solubility in g-equivalents per litre =  $2 \times 10^{-3}$ . (Bodlander, Z. phys. Ch. 1898, 27, 61.)

1 l.  $H_2O$  dissolves about 4 g. at ord temp. (Morse, Z. phys. Ch. 1902, 41, 731.)

1 l.  $H_2O$  dissolves 0.017 mol. at  $25^\circ$ . (Jander, Dissert. 1902.)

Solubility in  $H_2O$  at  $25^\circ = 0.017$  mol. liter (Sherrill, Z. phys. Ch. 1903, 43, 735.)

Solubility at ord. temp. = 0.8%; at bpt. = 8-9%. (Lanne, J. Pharm. 1904, (6) 20, 450.)

Solubility in cold  $H_2O = 4\%$ , but solution prepared by heating contains more Hg on account of decomp. into  $HBr$  and oxybromide. (Vicario, C. C. 1907, II, 1224.)

1 l.  $H_2O$  dissolves about 5-6 g. at ord temp. (Gaudechon, A. ch. 1911, (8) 22, 212.)

1 l. aqueous solution at  $25^\circ$  contains 0.017 mol. (Herz and Paul, Z. anorg. 1913, 83, 431.)

Decomp. by warm  $HNO_3$ , or  $H_2SO_4 + Aq$ . Sol. in warm  $H_2SO_4$ . (Ditte, A. ch. (5) 17, 124.)

1 mol. is sol in 1 mol. warm  $HI + Aq$ . in 1 mol. cold conc.  $HCl$  and in  $\frac{1}{2}$  mol. hot conc.  $HCl$  (Léwig.)

#### Solubility of $HgBr_2$ in $KBr + Aq$ at $25^\circ$ .

(Arcetowski, Z. anorg. 1894, 6. 267.)

100 g. boiling methyl acetate (bpt. 56.2-56.7°) dissolves 24 g.  $\text{HgBr}_2$ . (Schroeder and Steiner, J. pr. 1909, (2) 79. 49.)

1 g.  $\text{HgBr}_2$  is sol. in 4.56 g. methyl acetate at 18°. Sp. gr. 18°/4° of sat. solution = 1.09 (Naumann, B. 1909, 42. 3795.)

100 g. anhydrous ethyl acetate or sat. with  $\text{H}_2\text{O}$  at 18° dissolve 130.5-135 g.  $\text{HgBr}_2$ . (Hamers, Dissert. 1906.)

Solubility of  $\text{HgBr}_2$  in ethyl acetate + Aq at 25°.

P = g. ethyl acetate in 100 g. ethyl acetate + Aq.

$\text{HgBr}_2$  = millimols  $\text{HgBr}_2$  in 10 cc of the solution.

P	$\text{HgBr}_2$	Sp. gr.
0	0.167	1.0022
4.39	0.159	1.0018
96.76	7.42	1.1159
100	3.93	1.0113

(Herz and Anders, Z. anorg. 1907, 52. 172.)

1 pt.  $\text{HgBr}_2$  sol. in 7.66 pts ethyl acetate at 18°. (Naumann, B. 1910, 43. 315.)

Easily sol. in acetone (Oppenheim, B. 2. 572.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Acetone dissolves much more  $\text{HgBr}_2$  than  $\text{HgI}_2$ . 100 g. sat. solution at 25° contain 34.58 g.  $\text{HgBr}_2$ . (Reinders, Z. phys. Ch. 1900, 32. 514.)

Solubility in diethyl oxalate is much greater than that of  $\text{HgI}_2$  and is equal to 12% at 100°. (Remders, Z. phys. Ch. 1900, 32. 507.)

Solubility in benzene = 0.0194 mol per l. at 25°. (Sherrill, Z. phys. Ch. 1903, 43. 735.)

Sol. in allyl mustard oil. (Mathews, J. phys. Chem. 1905, 9. 647.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

#### Solubility in aniline.

S = temp. of solidification.

Mols $\text{HgBr}_2$ per 100	S	Mols $\text{HgBr}_2$ per 100	S	Mols $\text{HgBr}_2$ per 100	S
4.9	9°	25.4	115.5°	49.6	123

23.4	106	46.2	121		

(Staronka, Anz. Ak. Wiss. Krakau, 1910, 372.)

#### Solubility of $\text{HgBr}_2$ in quinoline.

S = temp. of solidification

Mols $\text{HgBr}_2$ per 100	S	Mols $\text{HgBr}_2$ per 100	S	Mols $\text{HgBr}_2$ per 100	S
4.4	8.9	14.3	17.6		
88°	111°	127°	134°		

(Staronka, Anz. Wiss. Krakau, 1910. 372.)

Mol. weight determined in ethyl sulphide. (Werner, Z. anorg. 1897, 15. 30.)

+4 $\text{H}_2\text{O}$ . (Thomsen.)

#### Mercuric perbromide, $\text{HgBr}_4$ .

(Herz and Paul, Z. anorg. 1914, 85. 216.)

#### Mercuric hydrogen bromide (Bromomeric acid), $\text{HgBr}_3$ , $\text{HBr} = \text{HHgBr}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Neumann, M. 10. 236.)

#### Mercuric nickel bromide, basic, $\text{HgBr}_2 \cdot \text{NiBr}_2 \cdot 6\text{NiO} + 20\text{H}_2\text{O}$ .

(Mallhe, A. ch. 1902, (7) 27. 369.)

#### Mercuric platinum bromide.

See Bromoplatinate, mercuric.

#### Mercuric potassium bromide, $\text{HgBr}_2 \cdot \text{KBr}$ .

Sol. in  $\text{H}_2\text{O}$ , but decomp. by a large amount, with separation of one half of the  $\text{HgBr}_2$ . (v. Bonsdorff, Pogg. 19. 339.)

2 $\text{HgBr}_2 \cdot \text{KBr} + 2\text{H}_2\text{O}$ . Permanent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (v. Bonsdorff.)

#### Mercuric sodium bromide, $\text{HgBr}_2 \cdot \text{NaBr}$ .

Deliquescent. (v. Bonsdorff.)

(Varet, C. R. 1890, 111, 527.)

$\text{HgBr}_2, 2\text{NaBr}$   
Very sol. in  $\text{H}_2\text{O}$  (Vicario, J. Pharm. 1907, (5) 26, 115.)  
 $2\text{HgBr}_2, \text{NaBr} + 3\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$  and alcohol. (Berthelot.)

**Mercuric strontium bromide,  $\text{HgBr}_2, \text{SrBr}_2$ .**  
Sol in all proportions of  $\text{H}_2\text{O}$  (Löwig, Mag. Pharm. 33, 7.)  
 $2\text{HgBr}_2, \text{SrBr}_2$ . Decomp. by  $\text{H}_2\text{O}$  into  $\text{HgBr}_2$  and  $\text{HgBr}_2, \text{SrBr}_2$ . (Löwig)

**Mercuric zinc bromide.**  
Deliquescent in moist air (v. Bonsdorff.)

**Mercuric zinc bromide cyanide ammonia.**  
See Cyanide zinc bromide ammonia, mercuric.

**Mercuric bromide ammonia,  $\text{HgBr}_2, 2\text{NH}_3$**   
Decomp. by boiling  $\text{H}_2\text{O}$ . Sol. in min acids and acetic acid. (Naumann, B. 1910, 43, 316.)

**Mercuric bromide cadmium oxide,**  
 $\text{HgBr}_2, \text{CdO} + \text{H}_2\text{O}$   
(Mailhe, A. ch. 1902, (7) 27, 371.)

**Mercuric bromide cupric oxide,**  
 $\text{HgBr}_2, \text{CuO} + 3\text{H}_2\text{O}$   
(Mailhe, Bull. Soc. 1901, (3) 26, 791.)

**Mercuric bromide hydrazine,  $\text{HgBr}_2, \text{N}_2\text{H}_4$ .**  
(Hofmann and Marburg, A. 1899, 305, 215.)

**Mercuric bromide potassium chloride,**  
 $\text{HgBr}_2, 2\text{KCl}$   
Decomp. by  $\text{H}_2\text{O}$ . (Harth, Z. anorg. 1907, 14, 345.)

**Mercuric bromide zinc oxide,  $\text{HgBr}_2, \text{ZnO} + 3\text{H}_2\text{O}$ .**  
(Mailhe, C. R. 1901, 132, 1274.)

**Mercuric bromoiodide,  $\text{HgBrI}$ .**  
Sol in alcohol and ether. Can be recrystallised from ether without decomp. (Oppenheim, B. 2, 571.)

**Mercurous chloramide,  $\text{Hg}_2(\text{NH}_2)\text{Cl}$ .**  
Insol. in boiling  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Kane, A. ch. (2) 72, 215.)  
Mixture of  $\text{Hg}$  and  $\text{HgNH}_2\text{Cl}$ . (Barfoed, J. pr. (2), 39, 201.)

**Mercuric chloramide,  $\text{Hg}(\text{NH}_2)\text{Cl}$ .**  
Composition is *dimercuriammonium ammonium chloride*,  $\text{Hg}_2\text{NCl}, \text{NH}_4\text{Cl}$ , which see.

**Mercuric chloramide oxymercuriammonium chloride,  $4\text{Hg}(\text{NH}_2)\text{Cl}, (\text{NH}_4\text{OH})_2\text{Cl}$ .**  
(Millon.)

Correct composition is *dimercuriammonium ammonium chloride*,  $\text{NH}_4\text{Cl}, \text{NH}_4\text{Cl}$ , which see. (Balestra, Gazz. ch. it. 21, (2) 294.)  
 $\text{Hg}(\text{NH}_2)\text{Cl}, (\text{NH}_4\text{OH})_2\text{Cl}$ . (Millon.)  
True composition is *dimercuriammonium mercuric chloride*,  $2\text{Hg}_2\text{NCl}, \text{HgCl}_2 + \text{H}_2\text{O}$ ; or *dimercuriammonium hydrogen chloride*,  $\text{NH}_4\text{Cl}, \text{HCl}$  (Balestra.)

**Mercuric chloramide chloride,  $\text{Hg}(\text{NH}_2)\text{Cl}, \text{HgCl}_2$ .**

Properties as mercuric chloramide. Decomp. by cold  $\text{HCl} + \text{Aq}$ . (Millon.)  
True composition is *dimercuriammonium hydrogen chloride*,  $\text{NH}_4\text{Cl}, 2\text{HCl}$ . (Balestra, Gazz. ch. it. 21, (2) 294.)

**Mercuric chloramide chromate,**  
 $2\text{Hg}(\text{NH}_2)\text{Cl}, \text{HgCrO}_4$   
Decomp. by hot  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq}$ . (Jager and Kruss, B. 22, 2048.)

**Mercurous chloride,  $\text{Hg}_2\text{Cl}_2$ .**  
Almost absolutely insol. in cold, but gradually sol. decomp. by boiling  $\text{H}_2\text{O}$ .  
Calculated from electrical conductivity of  $\text{Hg}_2\text{Cl}_2 + \text{Aq}$ , 1 l.  $\text{H}_2\text{O}$  dissolves 3.1 mg.  $\text{Hg}_2\text{Cl}_2$  at  $18^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12, 241.)  
1 l.  $\text{H}_2\text{O}$  dissolves 2 mg.  $\text{Hg}_2\text{Cl}_2$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50, 350.)  
1 l.  $\text{H}_2\text{O}$  dissolves 1.4 mg. at  $0.5^\circ$ ; 21 mg. at  $18^\circ$ , 2.8 mg. at  $24.6^\circ$ , 7 mg. at  $43^\circ$ . (Kohlrausch, Z. phys. Ch. 1908, 64, 150.)

When finely divided, is 10% more sol. than when coarsely crystalline. (Sauer, Z. phys. Ch. 1904, 47, 184.)

Solubility in  $\text{H}_2\text{O} = 0.8 \times 10^{-6}$  g. mol (Ley, Z. Elektrochem. 1904, 10, 301.)

Sl. sol. with decomp. in boiling  $\text{H}_2\text{O}$  free from air, 20 ccm.  $\text{H}_2\text{O}$  affording 0.002 g.  $\text{Hg}_2\text{Cl}_2$  after boiling 1 hour with  $\text{Hg}_2\text{Cl}_2$ . (Mialhe, A. ch. (3) 5, 176.)  $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$  containing 1 pt.  $\text{Hg}_2(\text{NO}_3)_2$  to 250,000 pts.  $\text{H}_2\text{O}$  give ppt of  $\text{Hg}_2\text{Cl}_2$  with  $\text{HCl} + \text{Aq}$ . Sol. with decomp. in conc.  $\text{HCl} + \text{Aq}$ , hot  $\text{HNO}_3 + \text{Aq}$ , aqua regia, or  $\text{Cl}_2 + \text{Aq}$  (Frobenius.) Insol. in cold dil. acids, but slowly sol. on heating.

The solubility of  $\text{Hg}_2\text{Cl}_2$  in  $\text{HCl} + \text{Aq}$  increases slowly with time, and finally reaches a point where it increases very rapidly, which takes place sooner the more dil. the acid. Presence of  $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$  helps the solubility. (Why not oxidation to  $\text{HgCl}_2$ ?) (Varenne, C. R. 92, 1161.)

Solubility of  $\text{Hg}_2\text{Cl}_2$  in  $\text{HCl} + \text{Aq}$  at  $25^\circ$ .  
Solid phase =  $\text{Hg}_2\text{Cl}_2 + 0.1 \text{ g. Hg.}$

G per l		Sp gr of solutions
$\text{HCl}$	$\text{Hg}_2\text{Cl}_2$	
31 69	0 034	
36 46	0 048	
95 43	0.207	1 042
158 4	0.399	1 069

	499 5	0.510	1 358

(Richards and Archibald, Z. phys. Ch. 1902, 40, 385.)

Sol. in cold  $\text{HCN} + \text{Aq}$  with separation of  $\text{Hg}$ .

Sol. in alkali chlorides +  $\text{Aq}$ .  $\text{NH}_4\text{Cl} + \text{Aq}$  dissolves out  $\text{Hg}_2\text{Cl}_2$  at ord. temp., much more at  $40-50^\circ$ . Dil.  $\text{NH}_4\text{Cl} + \text{Aq}$  decomposes more slowly than conc. Access of air hastens reaction. (Mihle.)

When heated several hours to  $40-50^\circ$ , 100 pts.  $\text{NH}_4\text{Cl} + 833$  pts.  $\text{H}_2\text{O}$  form 0.75 pt.  $\text{Hg}_2\text{Cl}_2$  from 25 pts.  $\text{Hg}_2\text{Cl}_2$ ; 100 pts.  $\text{NaCl} + 833$  pts.  $\text{H}_2\text{O}$  form 0.33 pt.  $\text{Hg}_2\text{Cl}_2$  from 25 pts.  $\text{Hg}_2\text{Cl}_2$ ; 100 pts.  $\text{KCl} + 833$  pts.  $\text{H}_2\text{O}$  form

0.25 pt.  $\text{Hg}_2\text{Cl}_2$  from 25 pts.  $\text{Hg}_2\text{Cl}_2$ ; 100 pts.  $\text{BaCl}_2 + 833$  pts.  $\text{H}_2\text{O}$  form 0.33 pt.  $\text{Hg}_2\text{Cl}_2$  from 25 pts.  $\text{Hg}_2\text{Cl}_2$ . (Mihle, J. Pharm. 26, 108.)

Other chlorides act as  $\text{NH}_4\text{Cl}$ , only less vigorously. (Pettenkofer.)

By boiling 1 pt.  $\text{Hg}_2\text{Cl}_2$  10 times with a solution of 1 pt.  $\text{NaCl}$  each time, the  $\text{Hg}_2\text{Cl}_2$  is finally completely decomp. (Henna.)

Boiling  $\text{BaCl}_2 + \text{Aq}$  or  $\text{CaCl}_2 + \text{Aq}$  dissolve traces.  $\text{K}_2\text{SO}_4 + \text{Aq}$ ,  $\text{KNO}_3 + \text{Aq}$ , or  $\text{KHC}_2\text{H}_3\text{O}_2 + \text{Aq}$  do not dissolve. (Pettenkofer.)

Sol. in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ . Insol. in  $\text{NH}_4$  nitrate, or succinate +  $\text{Aq}$ . (Wittstein.)

Sol. in hot  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$ , and still more in hot  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$ ; on cooling it crystallizes out completely. 25 g.  $\text{Hg}_2\text{Cl}_2$  dissolve in 1.5 l.  $\text{H}_2\text{O}$  containing 60 g.  $\text{Hg}(\text{NO}_3)_2$ . (Debray, C. R. 70, 995.)

Sol. in  $\text{PtCl}_2 + \text{Aq}$ .

Decomp. by  $\text{NH}_4\text{OH} + \text{Aq}$ .

Decomp. by  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ .

Sol. in  $\text{Na}_2\text{S}_2\text{O}_5 + \text{Aq}$ . (Faktor, C. C. 1905, I, 1524.)

Very sl. sol. in  $\text{NH}_4$  succinate. (Wittstein.)

Insol. in  $\text{SbCl}_3$  (Klemensiewicz, C. C. 1908, II, 1850.)

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 829.)

Insol. in alcohol or ether. More sol. in  $\text{H}_2\text{O}$  containing pepsin and an acid than in  $\text{H}_2\text{O}$ , and is not converted thereby into  $\text{HgCl}_2$ . (Torsellini, Ann. Chim. Ch. farm. (4) 4, 105.)

Small amts. are sol. with decomp. in alcohol, ether and  $\text{CHCl}_3$ . 1 g.  $\text{CHCl}_3$  dissolves 0.0946 g.  $\text{Hg}_2\text{Cl}_2$ . (Madagan, Arch. Pharm. 1884, 222, 788.)

Formic acid (95%) dissolves at  $16.5^\circ$ , 0.02%; at  $18^\circ$ , 0.0003% (Aschan, Ch. Z. 1913, 37, 1117.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790); ethyl acetate (Hamers, Dissert. 1906; Naumann, B. 1904, 37, 3602.)

Somewhat sol. in hydroxylamine hydrochloride. (Adams, Am. Ch. J. 1902, 28, 1216.)

Insol. in benzonitrile. (Naumann, B. 1914, 47, 1370.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II, 1014.)

Solubility in organic solvents at  $18-20^\circ$ .

100 g. chloroform dissolve traces of  $\text{HgCl}_2$ .

100 g. bromoform dissolve 0.055 g.  $\text{HgCl}_2$ .

100 g. ethyl bromide dissolve traces of  $\text{HgCl}_2$ .

100 g. ethylene dibromide dissolve traces of  $\text{HgCl}_2$ . (Sulo, Z. anorg. 1900, 25, 401.)

**Mercuric chloride,  $\text{HgCl}_2$ .**

Permanent.

Sol. in 18.5 pts.  $\text{H}_2\text{O}$  at  $13.8^\circ$ , and 2-3 pts. at  $100^\circ$ . (J. Davy, 1822.) Sol. in 3 pts. boiling  $\text{H}_2\text{O}$ . (Wenzel.) Sol. in 18.23 pts.  $\text{H}_2\text{O}$  at  $10^\circ$ , and 3 pts. at  $100^\circ$ . (M. R. and P.) Sol. in 18.46 pts. at  $18.75^\circ$ . (Abl.) Sol. in 16 pts. cold, and 3 pts. warm  $\text{H}_2\text{O}$ . (Dumas.)

100 pts.  $H_2O$  dissolve pts.  $HgCl_2$  at  $t^\circ$ :

$t^\circ$	Pts $HgCl_2$	$t^\circ$	Pts $HgCl_2$	$t^\circ$	Pts $HgCl_2$
0	5.73	40	9.62	80	24.30
10	6.57	50	11.34	90	37.05

(Herz and Paul, Z. anorg. 1913, 82. 433.)

Solubility in  $\text{H}_2\text{O}$  is increased by presence of  $\text{I}_2$ . (Herz and Paul, Z. anorg. 1914, 86. 214.)

Solubility in  $\text{H}_2\text{O}$  is increased by presence of hydroxylamine hydrochloride. (Adams, Am. Ch. J. 1902, 28. 213.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in liquid  $\text{CO}_2$ . (Büchner, Z. phys. Ch. 1906, 54. 674.)

Abundantly sol. in  $\text{H}_2\text{PtCl}_4 + \text{Aq}$ . (Nilson, B. 1876, 9. 1146.)

Sol. in 2.5 pts. solid alcohol (Richter), 3 pts. (Karl), 2.5 pts. alcohol of 0.833 sp. gr. at ordinary temp., and 1.167 pts. on boiling (Berzelius); 2 pts. alcohol of 0.810 sp. gr. at  $15.5^\circ$  (sp. gr. of solution = 1.08) (J. Davy, Phil. Trans. 1822 353).

At  $10^\circ$ , sol. in 2.37 pts. alcohol of  $39^\circ$  (Cartier), in 2.9 pts. alcohol of  $35^\circ$ , in 3.5 pts. alcohol of  $35^\circ$ , in 4.2 pts. alcohol of  $30^\circ$ , in 6.3 pts. alcohol of  $22^\circ$ , in 14.6 pts. alcohol of  $14^\circ$  (N. E. Henry)

Sol. in 25 mols. methyl, 13.1 mols. ethyl, and 20.3 mols. propyl alcohol at  $8.5^\circ$ ; in

16.2 mols. methyl, 12.4 mols. ethyl, and 18 mols. propyl alcohol at  $20^\circ$ , in 6.8 mols. methyl, 10.6 mols. ethyl, and 14.6 mols. propyl alcohol at  $38.2^\circ$ . (Timofejew, C. R., 112. 1224.)

100 pts. absolute methyl alcohol dissolve 66.9 pts.  $\text{HgCl}_2$  at  $25^\circ$ ; 100 pts. absolute ethyl alcohol dissolve 49.5 pts.  $\text{HgCl}_2$  at  $25^\circ$ . (de Buyen, Z. phys. Ch. 10. 783)

At  $15^\circ$ , 1 pt. by weight is sol. in.—

13.53 pts.  $\text{H}_2\text{O}$ .

1.5 " methyl alcohol of sp. gr. 0.7990

2.5 " ethyl " " " 0.8100

6.3 " propyl " " " 0.8180

(Rohland, Z. anorg. 1899, 18. 323.)

100 g.  $\text{HgCl}_2 + \text{CH}_3\text{OH}$  contain 1.2 g.  $\text{HgCl}_2$  at the critical temp. (Centnerszwer, Z. phys. Ch. 1910, 72. 437.)

Solubility of  $\text{HgCl}_2$  in methyl alcohol +  $\text{Aq}$  at  $25^\circ$ .

P = g. alcohol in 100 g. alcohol +  $\text{Aq}$ .

$\text{HgCl}_2$  = millimols  $\text{HgCl}_2$  in 10 cc. of the solution.

(Schroder, B. 19, 161 R.)

Sp. gr. at 16°/4° of  $\text{HgCl}_2$  + ethyl alcohol containing 23.5489%  $\text{HgCl}_2$  = 0.90885, containing 11.8801% = 0.88572. (Schoenrock, Z. phys. Ch. 1893, **11**, 768.)

Sp. gr. at 16°/4° of  $\text{HgCl}_2$  + amyl alcohol containing 10.9948%  $\text{HgCl}_2$  = 0.89550 (Schoenrock, Z. phys. Ch. 1893, **11**, 769.)

Sol in 4 pts. ether (Karl); in 4.1 pts. (Henry), in 2.86 pts. ether of 0.745 sp. gr. (sp. gr. of solution = 1.08); the solvent power is not increased by elevating the temp. and b.-pt. of ether is not raised. (J. Davy.) Ether extracts  $\text{HgCl}_2$  from  $\text{HgCl}_2$  + Aq (Orfila); very slightly if  $\text{HgCl}_2$  + Aq is dil. (Lassaigne.)

Very sl. sol. in pure ether. (Polis, B. 20, 717.)

6.35 pts. are sol. in 100 pts. ether at 0°.

6.44 " " " " 100 " " " 18.

6.38 " " " " 100 " " " 35.5.

(Laszczyński, B. 1894, **27**, 2286.)

Sol. in  $7\frac{1}{2}$ -8 pts. ether. (Madsen, Ch. Z. Repert. 1897, 21. 169.)

Solubility in 100 cc. ether at  $17^\circ = 4.1-4.12$  g. (Strömholm, J. pr. 1902, (2), 66. 450.)

The solubility of  $\text{HgCl}_2$  in  $\text{H}_2\text{O}$  is only sl. affected by the presence of ether. An aqueous solution sat. with ether and  $\text{HgCl}_2$  contains about 10% less  $\text{HgCl}_2$  than a pure sat. aqueous solution. Partition coefficient for

$\frac{\text{ether}}{\text{H}_2\text{O}} = 4.9$  at  $0^\circ$ , 3.02 at  $14.6^\circ$ ; 2.80 at  $16.8^\circ$  (Strömholm, Z. phys. Ch. 1903, 44. 70.)

#### Solubility of $\text{HgCl}_2$ in ether+Aq at $25^\circ$ .

% Ether	% $\text{H}_2\text{O}$	% $\text{HgCl}_2$

21.4	74.5	33.1	108	47.5	159
25.0	83	35.1	115.5	52.8	173

(Staronka, Anz. Ak. Wiss. Krakau, 1910, 372.)

Sp. gr. at  $16^\circ/4^\circ$  of  $\text{HgCl}_2$  + pyridine containing 17.53%  $\text{HgCl}_2 = 1.1523$ , containing 6.57%  $\text{HgCl}_2 = 1.0388$ . (Schönrock, Z. phys. Ch. 1893, 11, 768.)

Mol. weight determined in benzonitrile, methyl- and ethyl-sulphide (Werner, Z. anorg. 1897, 15, 31, 26 and 30.)

Sol. in benzonitrile. (Naumann, B. 1914, 47, 1369.)

Easily sol in oil of turpentine and other essential oils; sl. sol in cold benzene, but much more on heating, crystallising on cooling. (Franchimont, B. 16, 387.)

Easily sol. in boiling cresote.

Insol. in olive oil.

Insol. in oils and fats but sol when first dissolved in alcohol, free ether or anhydrous ketones (Glock, Ch. Z. Repert. 36, 315.)

Extracted from  $\text{HgCl}_2$  + Aq by volatile oils

Mercuric hydrogen chloride (Chloromercuric acid),  $\text{HgCl}_2$ ,  $\text{HCl} = \text{HHgCl}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Boullay, A. ch. 34, 243.)

Easily decomposed (Neumann, M. 10, 236.)

HgCl<sub>2</sub>, 2HCl+7H<sub>2</sub>O. Decomp. by H<sub>2</sub>O.  
(Ditte, A. ch. (5) 22. 551.)  
3HgCl<sub>2</sub>, 4HCl+14H<sub>2</sub>O. As above.  
2HgCl<sub>2</sub>, HCl+6H<sub>2</sub>O. As above.  
4HgCl<sub>2</sub>, 2HCl+9H<sub>2</sub>O. As above.  
3HgCl<sub>2</sub>, HCl+5H<sub>2</sub>O. As above.

**Mercuric hydrazine chloride**, HgCl<sub>2</sub>,  
2(N<sub>2</sub>H<sub>4</sub>, HCl).

Very sol in H<sub>2</sub>O. More sol. in hot alcohol  
than in cold; decomp. by HNO<sub>3</sub>. (Curtius,  
J. pr. 1894, (2) 50. 332.)

**Mercuric nickel chloride**, basic, HgCl<sub>2</sub>,  
6NiO, NiCl<sub>2</sub>+20H<sub>2</sub>O, and HgCl<sub>2</sub>, 7NiO,  
NiCl<sub>2</sub>.

(Mailhe, A. ch. 1902, (7) 27. 369.)

**Mercuric nickel chloride.**

Deliquescent. (v. Bonsdorff.)

**Mercuric nitrosyl chloride**, HgCl<sub>2</sub>, NOCl.

Sol. in H<sub>2</sub>O without effervescence. (Sud-  
borough, Chem. Soc. 59. 659.)

**Mercuric phosphoric chloride**, 3HgCl<sub>2</sub>, 2PCl<sub>3</sub>.

Decomp. and dissolved by H<sub>2</sub>O. (Baudri-  
mont, A. ch. (4) 2. 45.)

**Mercuric potassium chloride**, 2HgCl<sub>2</sub>, KCl+  
2H<sub>2</sub>O.

Very easily sol. in warm H<sub>2</sub>O. A clear  
solution at 18° is filled with crystals at 15°.  
Sl. sol. in alcohol. (v. Bonsdorff, Pogg 17.  
122.)

HgCl<sub>2</sub>, KCl+H<sub>2</sub>O. Easily sol in H<sub>2</sub>O; sl  
sol. in alcohol. (v. Bonsdorff, Pogg. 19. 336.)

HgCl<sub>2</sub>, 2KCl+H<sub>2</sub>O. As above.

Solubility determinations show that the  
double salts formed by mercuric and potas-  
sium chlorides at 25° are:

2KCl, HgCl<sub>2</sub>+H<sub>2</sub>O.

KCl, HgCl<sub>2</sub>+H<sub>2</sub>O. Can be recryst. with-  
out decomp.

KCl, 2HgCl<sub>2</sub>+2H<sub>2</sub>O. Gives HgCl<sub>2</sub> on  
recryst. from H<sub>2</sub>O. (Foote and Levy, Am.  
Ch. J. 1906, 35. 237.)

**Mercurous rhodium chloride.**

See Chlororhodite, mercurous.

**Mercuric rubidium chloride**, HgCl<sub>2</sub>, RbCl.

Sol in H<sub>2</sub>O.

HgCl<sub>2</sub>, 2RbCl. Sol. in H<sub>2</sub>O and HCl+Ag.  
(Godeffroy, Arch. Pharm. (3) 12. 47.)

+2H<sub>2</sub>O. Sol in H<sub>2</sub>O. (Godeffroy.)

2HgCl<sub>2</sub>, RbCl. Sol in H<sub>2</sub>O. (Godeffroy.)

Solubility determinations show that at 25°  
there exist five double mercuric rubidium  
chlorides with the following formulas:

RbCl, 5HgCl<sub>2</sub>. Gives HgCl<sub>2</sub> on recryst  
from H<sub>2</sub>O.

3RbCl, 4HgCl<sub>2</sub>+H<sub>2</sub>O. Gives RbCl,

5HgCl<sub>2</sub> on recryst from H<sub>2</sub>O.

RbCl, HgCl<sub>2</sub>+H<sub>2</sub>O. Gives 3RbCl, 4HgCl<sub>2</sub>  
on recryst. from H<sub>2</sub>O.

3RbCl, 2HgCl<sub>2</sub>+2H<sub>2</sub>O. Gives 3RbCl,  
4HgCl<sub>2</sub> on recryst from H<sub>2</sub>O.

2RbCl, HgCl<sub>2</sub>+H<sub>2</sub>O. Gives 3RbCl,

4HgCl<sub>2</sub> on recryst from H<sub>2</sub>O.

(Foote and Levy, Am. Ch. J. 1906, 35. 241.)

**Mercurous silver chloride**, HgCl, AgCl.

(Jones, J. Soc. Chem. Ind. 1893, 12. 983.)

2HgCl, AgCl. Min. *Bardosie*. (Jones,

J. Soc. Chem. Ind. 1893, 12. 983.)

3HgCl, AgCl. (Jones, Chem. Soc. 1910,  
97. 338.)

**Mercuric sodium chloride**, HgCl<sub>2</sub>, NaCl.

Sp. gr. at 16°/4° of aqueous solution con-  
taining 14.937% salt=1.13310; containing  
11.0736%=1.09528. (Schönrock, Z. phys.  
Ch. 1893, 11. 782.)

+H<sub>2</sub>O. (Linebarger, Am. Ch. J. 1893, 15.  
344.)

+1½H<sub>2</sub>O. Sol. in 0.33 pt H<sub>2</sub>O at 15°.  
(Schindler, Repert. 38. 240.)

Extremely easily sol. in alcohol. (Voit.)

Sol. in 275 pts. ether. Ether dissolves the  
undecomposed salt out of H<sub>2</sub>O solution.

(Lassaigne, A. ch. 64. 104.)

HgCl<sub>2</sub>, 2NaCl. Deliquescent. Very sol.  
in H<sub>2</sub>O. (Voit, A. 104. 354.)

2HgCl<sub>2</sub>, NaCl. Decomp. by H<sub>2</sub>O in dil  
solution. Sol. in acetone and acetic ether.  
(Linebarger, Am. Ch. J. 1893, 15. 344.)

Solubility determinations show that the  
only double salt formed by mercuric and  
sodium chlorides between 10.3° and 25° is  
NaCl, HgCl<sub>2</sub>+2H<sub>2</sub>O. Can be recryst from  
H<sub>2</sub>O. (Foote and Levy, Am. Ch. J. 1906, 35.  
237.)

**Mercuric strontium chloride**, basic, SrCl<sub>2</sub>,  
HgO+6H<sub>2</sub>O.

Decomp. by H<sub>2</sub>O. (André, C. R. 104. 431.)

**Mercuric strontium chloride**, 2HgCl<sub>2</sub>, SrCl<sub>2</sub>+  
2H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O. (v. Bonsdorff.)

3HgCl<sub>2</sub>, SrCl<sub>2</sub>+5-6H<sub>2</sub>O. Very sol. in  
H<sub>2</sub>O. (Swan, Am. Ch. J. 1898, 20. 632.)

**Mercurous sulphur chloride.**

See Mercurous sulphochloride.

**Mercuric thallous chloride**, HgCl<sub>2</sub>, TlCl.

Easily sol. in H<sub>2</sub>O. (Jorgensen, J. pr. (2)  
6. 83.)

**Mercurous stannous chloride**, Hg<sub>2</sub>Cl<sub>2</sub>, SnCl<sub>2</sub>.

Decomp. by H<sub>2</sub>O. (Capitaine, J. Pharm.  
25. 549.)

**Mercuric yttrium chloride**, 3HgCl<sub>2</sub>, YCl<sub>3</sub>+  
9H<sub>2</sub>O.

Deliquescent. Very sol in H<sub>2</sub>O. (Popp,  
A. 131. 179.)

**Mercuric zinc chloride,  $\text{HgCl}_2, \text{ZnCl}_2$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Earth, Z anorg 1897, 14. 323.)  
 $2\text{HgCl}_2, \text{ZnCl}_2$  (Varet, C R 1896, 123. 422.)

**Mercuric zinc chloride ammonia,  $\text{HgCl}_2, 4\text{ZnCl}_2, 10\text{NH}_3 + 2\text{H}_2\text{O}$** 

Insol. in boiling  $\text{H}_2\text{O}$ , but decomp thereby (André, C. R. 112. 995.)  
 $\text{HgCl}_2, 2\text{ZnCl}_2, 6\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$ . As above. (André.)

**Mercuric chloride ammonia,  $\text{HgCl}_2, 12\text{NH}_3$** 

Sl. sol. in ammonia. (Franklin, Am Ch. J 1900, 23. 300.)

**Mercuric chloride cadmium oxide,  $\text{HgCl}_2, \text{CdO} + \text{H}_2\text{O}$ .**

(Mailhe, A. ch 1902, (7) 27. 371.)

**Mercuric chloride cobaltous oxide,  $\text{HgCl}_2, 3\text{CoO} + \frac{1}{2}\text{H}_2\text{O}$ .**

(Mailhe, C R. 1901, 132. 1274.)

**Mercuric chloride cupric oxide,  $\text{HgCl}_2, 3\text{CuO} + \text{H}_2\text{O}$ .**

(Mailhe, Bull. Soc 1901, (3) 25. 791.)

**Mercuric chloride hydrazine,  $\text{HgCl}_2, \text{N}_2\text{H}_4$ .**

Very unstable. Decomp. by  $\text{H}_2\text{O}$ . Pptd. from alcohol solution by  $\text{H}_2\text{O}$ ; very sol. in  $\text{H}_2\text{O}$ , decomp. by  $\text{H}_2\text{O}$ .

Easily sol. in  $\text{HCl}$  or  $\text{HNO}_3$ . Decomp. by alkalis. Somewhat sol. in acetic acid. (Hofmann, B. 1897, 30. 2020.)

**Mercuric chloride hydroxylamine,  $\text{HgCl}_2, 2\text{NH}_2\text{OH}$ .**

Completely sol. in methyl and ethyl alcohol; insol. in ether; decomp. by  $\text{H}_2\text{O}$  and  $\text{NaOH} + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH}, \text{HCl} + \text{Aq}$ . (Adams, Am. Ch. J 1902, 28. 210.)

**Mercuric chloride lead oxide,  $\text{HgCl}_2, 2\text{PbO} + 2\text{H}_2\text{O}$ .**

(Mailhe, A. ch. 1902, (7) 27. 372.)

**Mercuric chloride strontium chromate,  $2\text{HgCl}_2, \text{HCl}, \text{SrCrO}_4$ .**

Sol. in  $\text{H}_2\text{O}$  without decomp. (Imbert, Bull. Soc. 1897, (3) 17. 471.)

**Mercuric chloroiodide,  $2\text{HgCl}_2, \text{HgI}_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Liebig.)  
 $\text{HgCl}_2, \text{HgI}_2$ . Sl. sol. in hot  $\text{H}_2\text{O}$  with partial decomp. More easily sol. in alcohol. (Köhler, B. 12. 1187.)

**Mercurous fluoride,  $\text{Hg}_2\text{F}_2$ .**

Decomp. by  $\text{H}_2\text{O}$  with separation of  $\text{Hg}_2\text{O}$ .

**Mercuric fluoride,  $\text{HgF}_2 + 2\text{H}_2\text{O}$ .**

Decomp. by cold  $\text{H}_2\text{O}$ , with separation of  $\text{HgO}$ . Sol. in dil  $\text{HNO}_3 + \text{Aq}$ , and  $\text{HF} + \text{Aq}$  (Finkener, Pogg. 110. 628.)

**Mercurous hydrogen fluoride,  $\text{Hg}_2\text{F}_2, 4\text{HF} + 4\text{H}_2\text{O}$ .**

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . Sol. in dil. acids and dil.  $\text{HF}$ . (Bohm, Z. anorg. 1905, 43. 327.)

**Mercurous silicon fluoride.**

See Fluosilicate, mercurous.

**Mercurous fluoride ammonia,  $\text{Hg}_2\text{F}_2, 2\text{NH}_3$ .**

Stable on air (Finkener, Pogg. 110. 142.)

**Mercurous hydroxide,  $\text{HgOH}$** 

Nearly insol. in cold, sol. in hot  $\text{H}_2\text{O}$ . Sol. in  $\text{NaOH} + \text{Aq}$ . (Bhaduri, Z. anorg 1897, 13. 410.)

**Mercurous iodamide,  $\text{Hg}_2(\text{NH}_2)\text{I}$ .**

(Rammelsberg, Pogg. 43. 184.)

Is a mixture of  $\text{Hg}$  and  $\text{Hg}(\text{NH}_2)\text{I}$ . (Barfoed.)

**Mercurous iodide,  $\text{Hg}_2\text{I}_2$ .**

Sol. in over 2375 pts.  $\text{H}_2\text{O}$ . (Saladin, J. chim. méd. 7. 530.)

Solubility in  $\text{H}_2\text{O} = 2.6 \times 10^{-8}$  g.-equiv. per liter (calculated) (Bodlander, Z. phys. Ch. 1898, 27. 58.)

Solubility in  $\text{H}_2\text{O} = 3 \times 10^{-10}$  mols. per litre at  $25^\circ$ . (Sherrill, Z. phys. Ch. 1903, 43. 735.)

Sol. in  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$ . (Stromann, B. 20. 2815.)

Sol. in  $\text{KI} + \text{Aq}$ . Easily sol. in  $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$ . Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol. in hot  $\text{NH}_4\text{Cl} + \text{Aq}$ , but less than  $\text{HgI}_2$ . Less sol. in  $\text{NH}_4\text{NO}_3$  than in  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Brett.)

Partially sol. with separation of  $\text{Hg}$  and formation of  $\text{HgI}_2$ , in cold  $\text{KI} + \text{Aq}$ , hot  $\text{NaI}$ ,  $\text{CaI}_2$ ,  $\text{SrI}_2$ ,  $\text{BaI}_2$ ,  $\text{MgI}_2$ ,  $\text{ZnI}_2$ , and  $\text{NH}_4\text{I} + \text{Aq}$ ; in warm  $\text{NaCl}$ ,  $\text{KCl}$  and  $\text{NH}_4\text{Cl} + \text{Aq}$ , and slowly in hot  $\text{HCl} + \text{Aq}$  (Boullay, A. ch (2) 34. 358.)

Decomp. by alkali chlorides  $+ \text{Aq}$ . (Miahle, A. ch. (3) 5. 177.)

Very easily sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1893, 20. 839.)

Not wholly insol. in alcohol, ether, or chloroform. (MacLagan, Rep. anal. Ch. 1884. 378.)

Decomp. by boiling alcohol; 1000 g. boiling alcohol decomp. about 3.15 g.  $\text{Hg}_2\text{I}_2$ . (François, C. R. 1896, 121. 890.)

Boiling alcohol decomp.  $\text{Hg}_2\text{I}_2$  to  $\text{Hg}$  and  $\text{HgI}_2$ , which dissolves until 0.220 g.  $\text{HgI}_2$  are contained in 100 g. alcohol. (François, C. R. 1896, 121. 889.)

Insol. in cold ether. (François, J. Pharm. 1897, (6), 6. 445.)

Insol. in methylene iodide. (Retgers, Z. anorg. 3. 345.)

Difficultly sol. in methyl acetate. (Nau-mann, B. 1900, 42. 3790.)

Phenol at  $180^\circ$  decomp. it into  $\text{Hg}$  and  $\text{HgI}_2$ , until a state of equilibrium is reached with

2.75 g.  $\text{HgI}_2$  to 100 g. phenol, above which point  $\text{HgI}_2$  is sol. (0.05 g in 100 g.) in phenol- $\text{HgI}_2$  mixture. Decomp. by cold aniline more rapidly than by hot. Equilibrium is reached when 26.35 g.  $\text{HgI}_2$  are present to 100 g. aniline at bpt of aniline. Aniline containing more than 26 g.  $\text{HgI}_2$  to 100 g. dissolves  $\text{HgI}_2$  in considerable quantity. (François, C. C. 1896, 1, 470.)

Sl. sol. in benzonitrile (Naumann, B. 1914, 47, 1309.)

Sl. sol. in allyl mustard oil (Mathews, J. phys. Chem. 1905, 9, 647.)

### Mercuric iodide, $\text{HgI}_2$

Sol in 150 (?) pts  $\text{H}_2\text{O}$  (Wärz.)

1 l  $\text{H}_2\text{O}$  at 17.5° dissolves 0.0103 g  $\text{HgI}_2$  (Bourgon, A. ch. (6) 3, 429.)

Sol in about 6500 pts.  $\text{H}_2\text{O}$  (Hagen.)

According to calculation from electrical conductivity of  $\text{HgI}_2 + \text{Aq}$ ,  $\text{HgI}_2$  is much less sol., 1 l  $\text{H}_2\text{O}$  dissolving only 0.5 mg  $\text{HgI}_2$  at 18°. (Kohlrausch and Rose, Z. phys. Ch. 12, 241.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.054 g.  $\text{HgI}_2$  at 22°. (Rohland, Z. anorg. 1898, 15, 412.)

1 l.  $\text{H}_2\text{O}$  at 25° dissolves about 0.06 g (Moise, Z. phys. Ch. 1902, 41, 731.)

1 l.  $\text{H}_2\text{O}$  at 18° dissolves  $4 \times 10^{-4}$  mol (Abegg, Z. Elektrochem. 1903, 9, 553.)

Solubility in  $\text{H}_2\text{O}$  at 25° = 0.00013 mol liter (Sherill, Z. phys. Ch. 1903, 43, 735.)

1 l  $\text{H}_2\text{O}$  dissolves 0.4 mg.  $\text{HgI}_2$  at 18° (Kohlrausch, Z. phys. Ch. 1904, 50, 350.)

1 l  $\text{H}_2\text{O}$  at 18° dissolves 0.2 to 0.4 mg (Kohlrausch, Z. phys. Ch. 1908, 64, 168.)

The yellow modification is always deposited from solution even in the presence of an excess of the red form. (Gerncz, C. R. 1903, 136, 1323.)

Sol. in many acids, especially in  $\text{HCl}$ , and  $\text{HI} + \text{Aq}$ . Insol in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$  (Berthelot.) Scarcely sol in dil  $\text{HNO}_3 + \text{Aq}$ .

Not attacked by cold  $\text{H}_2\text{SO}_4$ , decump by hot (Ditte, A. ch. 1879, (5) 17, 124.)

Sat. solution in  $\text{H}_2\text{SO}_4 + \text{Aq}$  contains at critical temp. (158.2°), 0.7%  $\text{HgI}_2$  (Niggh, Z. anorg. 1912, 75, 182.)

Sol. in hot  $(\text{NH}_4)_2\text{CO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ , cold  $\text{NH}_4\text{Cl}$ ,  $\text{NH}_4\text{NO}_3$ , or ammonium succinate +  $\text{Aq}$ . (Wittstein.)

Sol. in  $\text{HgCl}_2$ ,  $\text{Hg}(\text{NO}_3)_2$ , or  $\text{Hg}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ . Easily sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ . Easily sol in soluble iodides +  $\text{Aq}$ . More sol. in hot than in cold  $\text{NaI}$  or  $\text{KI} + \text{Aq}$ . When conc., 1 mol  $\text{KI}$  in hot solution dissolves 3 mols.  $\text{HgI}_2$ , but a portion separates on cooling.  $\text{BaI}_2$ ,  $\text{SrI}_2$ ,  $\text{MgI}_2$ , and  $\text{CaI}_2$  act in the same way. Easily sol. in cold, more sol. in hot  $\text{ZnI}_2 + \text{Aq}$ , 2 mols  $\text{HgI}_2$  being dissolved to 1 mol  $\text{ZnI}_2$ . In  $\text{NH}_4\text{I} + \text{Aq}$ , 3 mols.  $\text{HgI}_2$  are dissolved to 2 mols  $\text{NH}_4\text{I}$ . Abundantly sol in hot  $\text{KCl}$ ,  $\text{NaCl}$ ,  $\text{NH}_4\text{Cl} + \text{Aq}$ , but separates out on cooling, and the trace remaining may be pptd. by  $\text{H}_2\text{O}$ , 2 g.  $\text{KCl}$  in solution dissolves 166 g.  $\text{HgI}_2$ . Sol. in  $\text{HgCl}_2 + \text{Aq}$ , and very easily sol in

alcoholic solution of  $\text{HgCl}_2$ . (Boullay, A. ch. (2) 34, 346.)

### Solubility in $\text{MI} + \text{Aq}$ at 25°.

Salt	In 10 ccm of the solution	
	Millimols $\text{HgI}_2$	Millimols salt
$\text{NaI}$	4.12	7.04
	6.22	13.85
	9.45	22.25

29.1	52.2	"

(Dunningham, Chem. Soc. 1914, 105, 368.)

Very sol. in KSCN + Aq. (Philipp, Pogg. 1867, 131. 93.)

Sol. in 109 pts. cryst  $\text{Na}_2\text{S}_2\text{O}_3$  + Aq (Eder and Ulm, M. 1882, 3. 197.)

Very sol. in hot  $\text{CaCl}_2$  + Aq, less sol in  $\text{BaCl}_2$ ,  $\text{KCl}$  and  $\text{NaCl}$  + Aq. (Lea, Z. anorg. 1896, 12. 341.)

Solubility in normal  $\text{Hg}(\text{NO}_3)_2$  + Aq = 48.0 g. per litre. (Morse, Z. phys. Ch. 1902, 41. 731.)

Extremely sol. in cold conc  $\text{NH}_4\text{Br}$  + Aq. (Grossmann, B. 1903, 36. 1602.)

Sol in alkali sulphates + Aq. (Barth, Z. phys. Ch. 1892, 9. 215.)

Sol in  $\text{Ca}(\text{OCl})_2$  + Aq; sol. in  $\text{KOH}$  + Aq (Melsens, A. ch. (3) 26, 222.)

Sol. in liquid  $\text{SO}_2$ . (Walden and Centnerszwer, C. C. 1902, I. 344.)

Very easily sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Sol. in  $\text{SOCl}_2$ ,  $\text{S}_2\text{Cl}_2$ ,  $\text{SO}_2\text{Cl}_2$ , warm  $\text{AsCl}_3$ ,  $\text{PBr}_3$ , warm  $\text{POCl}_3$  (Walden, Z. anorg. 1900, 26. 212.)

Easily sol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 374.)

Insol. in liquid  $\text{CO}_2$ . (Büchner, Z. phys. Ch. 1906, 54. 374.)

More sol. in alcohol than in  $\text{H}_2\text{O}$ . 1 l  $\text{H}_2\text{O}$  containing 10% of 90% alcohol dissolves 0.08 g  $\text{HgI}_2$ . 1 l. of alcohol of 80° B. dissolves 2.851 g.  $\text{HgI}_2$ . 1 l absolute alcohol dissolves 11.86 g  $\text{HgI}_2$  (Bourgoon, A. ch. (6) 3. 429.)

Sol. in 130 pts. cold, and 15 pts. hot 90% alcohol. (Hager.)

100 pts. absolute methyl alcohol dissolve 3.16 pts. at 19.5°; 100 pts. absolute ethyl alcohol dissolve 2.09 pts. at 19.5° (de Bruyn, Z. phys. Ch. 10. 783.)

0.00842 pt is sol in 1 pt. alcohol at 15° (Gautier and Charpy, C. R. 1890, 111. 847.)

100 g methyl alcohol dissolve 3.7 g.  $\text{HgI}_2$  at 19°; ethyl alcohol, 1.86 g., propyl alcohol, 1.25 g.; isobutyl alcohol, at 22.5°, 0.51 g. (Timofeev, Dissert. 1894.)

At 15-20°, 100 g methyl alcohol dissolve 3.24 g.  $\text{HgI}_2$ , ethyl alcohol, 1.42 g.; propyl alcohol, 0.826 g. (Rohland, Z. anorg. 1898, 15. 412.)

Solubility of  $\text{HgI}_2$  in ethyl alcohol + Aq at 25°

A = g. alcohol in 100 g. alcohol + Aq.

$\text{HgI}_2$  = millimols  $\text{HgI}_2$  in 100 cc. of the solution.

A	$\text{HgI}_2$	Sp. gr.
100	3.86	0.80325
95.82	2.56	0.80950
92.44	1.92	0.81536
86.74	1.38	0.82996
78.75	0.935	0.84654
67.63	0.45	0.87214

(Herz and Knoch, Z. anorg. 1905, 45. 266.)

Solubility of  $\text{HgI}_2$  in methyl alcohol + Aq at 25°

P = g. alcohol in 100 g. alcohol + Aq

$\text{HgI}_2$  = millimols.  $\text{HgI}_2$  in 10 cc. of the solution.

P	$\text{HgI}_2$	Sp. gr.
0	0.0013	
47.06	0.0098	0.9187
64.00	0.0347	0.8834
78.05	0.0981	0.8519
100	0.571	0.8155

(Herz and Anders, Z. anorg. 1907, 52. 165.)

Solubility of  $\text{HgI}_2$  in ethyl alcohol + Aq at 25°.

P = g. alcohol in 100 g. alcohol + Aq.

$\text{HgI}_2$  = millimols.  $\text{HgI}_2$  in 10 cc. of the solution.

P	$\text{HgI}_2$	Sp. gr.
70.01	0.061	0.8636
100	0.386	0.8032

(Herz and Anders, Z. anorg. 1907, 52. 170.)

At 15°, 1 pt. by weight is sol. in:—

24813 pts.  $\text{H}_2\text{O}$

30.8 pts. methyl alcohol of sp. gr. at 0.7990.

70.3 " ethyl " " " " " 0.8100.

121.0 " propyl " " " " " 0.8160.

(Rohland, Z. anorg. 1899, 18. 328.)

Solubility of  $\text{HgI}_2$  in mixtures of methyl and ethyl alcohol at 25°.

P = % methyl alcohol in the mixtures.

$\text{HgI}_2$  = g.  $\text{HgI}_2$  in 10 ccm. of the solution.

S 25°/4° = Sp. gr. of the sat. solution.

P	$\text{HgI}_2$	S 25°/4°
0	0.180	0.8038
4.37	0.193	0.8039
10.4	0.208	0.8046

91.25	0.298	0.8146
100	0.316	0.8156

(Herz and Kuhn, Z. anorg. 1908, 58. 164.)

## Solubility in mixtures of methyl and propyl alcohol at 25°.

P = % propyl alcohol in the solvent.  
G = g.  $\text{HgI}_2$  in 10 ccm. of the solution.  
S = Sp. gr. of the sat. solution.

P	G	S 25°/1°
0	0.316	0.8156
23.8	0.301	0.8155
91.8	0.169	0.8101
93.75	0.167	0.8110
96.6	0.153	0.8108
100	0.142	0.8116

(Herz and Kuhn, Z. anorg. 1908, 60. 158.)

## Solubility in mixtures of propyl and ethyl alcohol at 25°.

P = % propyl alcohol in the solvent.  
G = g.  $\text{HgI}_2$  in 10 ccm. of the solution.  
S = Sp. gr. of the sat. solution.

P	G	S 25°/1°
0	0.180	0.8038
8.1	0.173	0.8036(?)
17.85	0.165	0.8043
56.6	0.155	0.8075
91.2	0.152	0.8099
95.2	0.144	0.8108
100	0.142	0.8116

(Herz and Kuhn, Z. anorg. 1908, 60. 161.)

## Solubility in 100 pts. amyl alcohol equals:

0.66 pts at 13°.
3.66 " " 71°.
5.30 " " 100°.
9.57 " " 133.5°.

(Laszcynski, B. 1894, 27. 2287.)

Sp. gr. at 16°/4° of  $\text{HgI}_2$  + alcohol containing 1.8358%  $\text{HgI}_2$  = 0.80718; containing 1.7119% = 0.80597. (Schönrock, Z. phys. Ch. 1893, 11. 770.)

Somewhat sol in ether. Sol in 77 pts ether (Saladin) Sol in 60 pts. ether (Hager)

Sol. in cold ether. (François, J. Pharm. 1897, (6) 6. 445.)

Very al sol. in anhydrous ether. (Hampe)

0.62 pt. is sol. in 100 pts. ether at 0°.

0.97 pt. is sol. in 100 pts. ether at 36°.

(Laszcynski, B. 1894, 27. 2286.)

Solubility in ether = 0.3% at ord. temp (Marsh, Chem. Soc. 1910, 97. 2299.)

Nearly insol in ether. (Dunningham, Chem. Soc. 1914, 105. 368.)

Data are given on the system  $\text{HgI}_2 + \text{KI} + \text{ether}$ . (Dunningham.)

Solubility at 23° in chloroform = 0.071%; in ether = 0.551%; in acetone = 2.005%; in ethyl alcohol = 2%, in methyl alcohol = 3.975%; in benzene = 0.247%. (Beckmann and Stock, Z. phys. Ch. 1895, 17. 130.)

## Solubility in organic solvents at t°.

Solvent	t°	100 g. of the solvent dissolve g. $\text{HgI}_2$
Chloroform	61	0.163
Tetrachloromethane	75	0.094
Ethylene dichloride	85.5	1.200
Isobutyl chloride	69	0.328
Ethyl bromide	38	0.773
Methyl alcohol	66	6.512
Ethyl alcohol	78	4.325
Isopropyl alcohol	81	2.266
Isobutyl alcohol	ca. 100	2.433
Methyl formate	36-38	1.166
Ethyl formate	52-55	2.150
Methyl acetate	56-59	2.500
Ether	35	0.470
Acetone	56	3.249
Acetal	ca. 100	2.000
Chloral	96	
Epichlorohydrin	ca. 100	6.113
Hexane	67	0.072
Benzene	80	0.825
Ethyl acetate	74-78	4.200

(Sulc, Z. anorg. 1900, 25. 402.)

## Solubility in organic solvents at 18-20°.

100 g. chloroform dissolve 0.040 g.  $\text{HgI}_2$ .  
100 g. tetrachloromethane dissolve 0.006 g.  $\text{HgI}_2$ .

100 g. bromoform dissolve 0.486 g.  $\text{HgI}_2$ .  
100 g. ethyl bromide dissolve 0.643 g.  $\text{HgI}_2$ .

100 g. ethyl iodide dissolve 2.041 g.  $\text{HgI}_2$ .  
100 g. ethylene dibromide dissolve 0.748 g.  $\text{HgI}_2$ .

(Sulc, Z. anorg. 1900, 25. 401.)

1 pt. ethylene bromide dissolves 0.00553 pts  $\text{HgI}_2$  at 15°. (Gautier and Charpy, C. R. 1890, 111. 647.)

100 pts. methylene iodide  $\text{CH}_2\text{I}_2$  dissolve 2.5 pts  $\text{HgI}_2$  at 15°, 16.6 pts at 100°, and 58 pts. at 180°. (Retgers, Z. anorg. 3. 252.)

1 l. sat. solution in  $\text{CCl}_4$  at 15° contains 0.170 g.  $\text{HgI}_2$ . (Dawson, Chem. Soc. 1909, 96. 874.)

Sol in 340 pts. glycerine (Fairley, Monit. Scient. (3) 9. 685.)

100 pts. acetone dissolve 2.09 pts  $\text{HgI}_2$  at 25° (Krug and M'Elroy, J. Anal. Ch. 6. 84.)

Sol in acetone and in methylal. (Eidmann, C. C. 1899, II, 1014.)

Solubility in 100 pts. acetone equals:

2.83 pts. $\text{HgI}_2$ at — 1°.
3.36 " " " 18°.
4.73 " " " 40°.
6.07 " " " 58°.

(Laszcynski, B. 1894, 27. 2287.)

100 g. methyl acetate solution, sat. at 18°, contain 1.10 g.  $\text{HgI}_2$ . (Bezold, Dissert. 1906.)

100 g boiling methyl acetate slowly dissolve 2.3 g  $\text{HgI}_2$  (Schroeder and Steiner, J. pr. 1909, (2) 79. 49.)

### Solubility in ethyl acetate at t°.

Pts sol in 100 pts ethyl acetate	t°
1 49	- 2
1 56	+17 5
1 64	21
2 53	40
3 19	55
4 31	76

(Laszczyński, B. 1894, 27. 2286)

100 g. ethyl acetate anhydrous, or sat. with  $\text{H}_2\text{O}$  at 18°, dissolve at 18°, 14.70 g  $\text{HgI}_2$ . Solubility increases somewhat with temp. (Hammers, Dissert. 1906.)

### Solubility of $\text{HgI}_2$ in ethyl acetate + Aq at 25°

P = g. ethyl acetate in 100 g. ethyl acetate + Aq  
 $\text{HgI}_2$  = millimols.  $\text{HgI}_2$  in 10 cc. of the solution.

P	$\text{HgI}_2$	Sp gr
4 39	0.0028	0 9973
96 76	0.412	0 9063
100	0 241	0 9011

(Hers and Anders, Z. anorg. 1907, 52. 172.)

1 pt. is sol in 68.03 pts. ethyl acetate at 18°. (Naumann, B. 1910, 43. 316.)

Solubility in diethyl oxalate is 12.5% at bpt. and 2.5% at 100°. (Reinders, Z. phys. Ch. 1900, 32. 507.)

### Solubility in $\text{CS}_2$ at t°.

t°	100 pts sat solution contain pts $\text{HgI}_2$
-10	0.107
- 5	0 141
0	0.173
+ 5	0 207
10	0 239
15	0.271
20	0 320
25	0 382
30	0.445

(Arcowski, Z. anorg. 1894, 6. 267.)

### Solubility in $\text{CS}_2$ .

100 g. of the sat. solution contain at

-86.5°	-93°	-116°
0.024	0.023	0.017 g. $\text{HgI}_2$

(Arcowski, Z. anorg. 1896, 11. 274.)

0.0028 pt. is sol. in 1 pt.  $\text{CS}_2$  at 15°. (Gautier and Charpy, C. R. 1890, 111. 647.)

1 l. sat solution in  $\text{CS}_2$  at 15° contains 3.127 g.  $\text{HgI}_2$ . (Dawson, Chem. Soc. 1909, 96. 874.)

Very sol. in liquid methylamine (Gibbs, J. Am. Chem. Soc. 1906, 28. 1419.)

Abundantly sol. in methylamine. (Fitzgerald, J. phys. Chem. 1912, 16. 633.)

Somewhat sol. in allyl mustard oil. (Mathews, J. phys. Chem. 1905, 9. 647.)

Sol. in  $\text{Sb}(\text{CH}_3)_3 + \text{Aq}$ .

Very sl. sol. in Na citrate + Aq. (Spiller.)

1 pt.  $\text{C}_6\text{H}_6$  dissolves 0.00217 pts.  $\text{HgI}_2$  at 15°. (Gautier and Charpy, C. R. 1890, 111. 647.)

### Solubility in 100 pts. benzene equals:

0.22 pts at 15°
0 88 " " 60°
0 95 " " 65°
1.24 " " 84°

(Laszczyński, B. 1894, 27. 2284.)

1 l.  $\text{C}_6\text{H}_6$  dissolves 0.00493 mol.  $\text{HgI}_2$  at 25°. (Sherrill, Z. phys. Ch. 1903, 43. 735.)

100 g. boiling phenol dissolve 10 g.  $\text{HgI}_2$ . (François, C. R. 1895, 121. 769.)

Sl. sol. in phenol with 20%  $\text{H}_2\text{O}$ . Not very sol. in acetic acid at 119°, in amyl acetate at 133°, in amyl bromide at 119°. Rather sol. in diethyl oxalate at 180°, in ethylene bromide at 131°, in amyl alcohol at 137°, in amyl iodide at 150°, in  $\text{CHBr}_3$  at 151°, in iodo-benzol at 190°, in oil of turpentine at 160°. Very sol. in benzaldehyde at 179°, in methylene iodide at 182°. (Reinders, Z. phys. Ch. 1900, 32. 506.)

1000 pts. oil of bitter almonds dissolve 4 pts.  $\text{HgI}_2$  at ord. temp.; 1000 pts. olive oil, 4 pts; 1000 pts. poppy oil, 10 pts; 1000 pts. nut oil, 15 pts; 1000 pts. castor oil, 20 pts; 1000 pts. lard oil, 4. 5 pts; 1000 pts. vaseline, 2.5 pts; 1000 pts. benzene, 4 pts. Sol. in phenol. (Mehn, Pharm J. 3. 327; B. 19. 8 R.)

### Solubility in aniline.

S = Temp of solidification.

Mols per 100	S	Mols per 100	S	Mols per 100	S

199.1	863.2	"

\* Transition point.

(Pearce and Fry, J. phys. Ch. 1914, 18. 667)

Very sol. in boiling alcoholic solution of aniline. (Vohl, Dissert 1871.)

Abundantly sol. in hot benzonitrile and other aromatic nitriles. (Werner, Z. anorg. 1897, 15. 7.)

Sol. in benzonitrile (0.98 g. in 100 g. at  $18^\circ$ ). 20 times more sol. by addition of 5 g. KI to 100 cc. benzonitrile. (Naumann, B. 1914, 47. 1375.)

Sol. in pyridine (Naumann, B. 1904, 37. 4609.)

Solubility of  $\text{HgI}_2$  in pyridine.

S = temp. of solidification.

Mols. per 100	S	Mols. per 100	S	Mols. per 100	S
5	$10^\circ$	34.6	$107^\circ$	51.3	$93.5^\circ$
9.8	42.5	38.0	103	51.6	96
15.14	66.5	43.0	97	52.7	108
19.3	83	46.7	88.5	53.2	109
25.3	102.5	48.5	89	55.4	122
29.6	107	50.6	89	57.9	135

(Staronka, Anz. Ak. Wiss. Krakau, 1910. 372.)

Sp. gr. at  $16\frac{1}{4}^\circ$  of  $\text{HgI}_2$  + pyridine containing 10.43%  $\text{HgI}_2 = 1.1482$ ; containing 7.99% = 1.1053. (Schdnrock, Z. phys. Ch. 1893, 11. 770.)

Solubility of  $\text{HgI}_2$  in quinoline.

S = temp. of solidification.

Mols. per 100	S	Mols. per 100	S	Mols. per 100	S
4.7	$100^\circ$	29.8	$151^\circ$	43.0	$165^\circ$
9.1	115.5	31.4	153	46.1	167
13.2	133.5	35.4	156	48.8	170
23.1	138	37.7	160	49.5	169.5
26.7	145	41.6	165	54.4	166.5

(Staronka, Anz. Ak. Wiss. Krakau, 1910. 372)

Mol. weight determined in pyridine, methyl- and ethyl-sulphide (Werner, Z. anorg. 1897, 15. 20)

More or less sol. at high temp in petroleum (bpt.  $160-230^\circ$ ), bromnaphthalene, pyridine, toluene and amyl alcohol. (Reinders, Z. phys. Ch. 1900, 32. 503.)

Yellow modification.

100 g. of sat. solution in acetone at  $25^\circ$  contain 3.0 g.  $\text{HgI}_2$ . (Reinders, Z. phys. Ch. 1900, 32. 514)

Red modification

Solubility in alcohol equals:

0.717-0.724 g. in 100 g. solution at  $0^\circ$ 1.044-1.084 g. " " "  $25^\circ$ 2.10-2.20 g. " " "  $50^\circ$ .

(Reinders, Z. phys. Ch. 1900, 32. 522.)

100 g. of sat. solution in acetone at  $25^\circ$  contain 1.95 g.  $\text{HgI}_2$ . (Reinders, Z. phys. Ch. 1900, 32. 514.)

$\text{HgI}_2$  is moderately sol. in abs. alcohol at its h.-pt. The solution has a deced yellow color. On cooling, yellow crystals separate out. They soon change to the red modification.

Readily sol. in hot amyl alcohol. Yellow crystals separate from the solution when cooled.

Readily sol. in allyl alcohol, forming a yellow solution, from which yellow crystals separate on cooling.

Sl. sol. in acetone, giving a yellow solution. On cooling yellow plates separate from the solution and rapidly turn red.

Sol. in phenol at  $150^\circ \text{C}$ . Solution has yellow color and yellow crystals separate out on cooling.

Readily sol. in boiling benzene. Saturated solution is yellow. The yellow iodide separates out on cooling, and changes rapidly to the red.

Sol. in toluene giving yellow solution, from which yellow crystals separate on cooling. They rapidly change to red.

Readily sol. in naphthalene at temperatures above its transition point. Solution is yellow and on cooling yellow crystals separate out.

Readily sol. in hot pseudo-cumene giving a yellow solution. On cooling gives yellow crystals.

Readily sol. in ethyl iodide giving very

yellow solution, from which yellow crystals separate on cooling, which change to red rapidly.

Only sl sol in ethyl bromide, giving yellow solution from which yellow crystals separate on cooling, which change rather slowly to the red.

Sparingly sol. in isopropyl bromide.

Moderately sol in isobutyl bromide, giving a pink solution from which yellow crystals separate on cooling, which change slowly to red.

Sl. sol in ethyldene chloride. On sudden cooling at 18° the iodide crystallizes out in yellow plates, which quickly change to red.

Sparingly sol in propyl chloride, giving a pink solution, from which yellow crystals separate on cooling.

Readily sol in ethyl cyanide, giving a yellow solution. On cooling yellow crystals separate and rapidly change to red.

Moderately sol in benzene cyanide, giving a deep yellow solution. On sudden cooling the solution deposits yellow crystals, which rapidly turn red.

Rapidly sol in benzoic acid at high temperatures.

Sparingly sol. in ethyl acetate, giving yellow solution.

Sol. in ethyl propionate.

Very sol in ethyl butyrate, giving a yellow solution. On cooling the iodide crystallized from the solution.

Sl. sol. in ethyl isobutyrate.

Readily sol. in methyl salicylate, giving a yellow solution.

Sparingly sol. in phenyl salicylate, giving yellow solution. On cooling yellow crystals separate out, which gradually change to red. (Kastle, *Am. Ch. J.* 1899, 22, 474.)

**Mercuriomercuric iodide,  $Hg_2I_4 = Hg_2I_2 \cdot 2HgI_2$ .**

Insol. in  $H_2O$  or alcohol. Partially sol. in  $KI + Ag$ , in hot  $NaCl$  and  $NH_4Cl + Ag$ , and in hot  $HCl + Ag$ , though very slowly (Boullay, *A. ch.* (2) 34, 346).

**Mercury periodide,  $HgI_4$ .**

Sol in  $KI + Ag$ . Decomp. by cold  $H_2O$  or alcohol. (Jørgensen, *J. pr.* (2) 2, 347.)

**Mercuric hydrogen iodide (Iodomeric acid),  $HI$ ,  $HgI_2 = HHgI_2$ .**

Crystallizes from  $HI + Ag$ . (Boullay.)

Easily decomp. (Neumann, *M.* 10, 236.)

$3HgI_2 \cdot 2HI + H_2O$ . (François, *Dissert.* 1901.)

**Mercuric nickel iodide,  $HgI_2 \cdot NiI_2 + 6H_2O$ .**

Sol. in alcohol, ether, and acetone; not decomp. by  $H_2O$ . (Dobroserdoff, *C. C.* 1901, II, 332.)

$2HgI_2 \cdot NiI_2 + 6H_2O$ . Hygroscopic; decomp. by  $H_2O$ ; sol. in acetone and ether. (Dobroserdoff, *C. C.* 1901, II, 332.)

**Mercuric potassium iodide,  $HgI_2 \cdot KI + 1\frac{1}{2}H_2O$ .**

Deliquescent (v. Bonsdorff). Permanent, decomp. by  $H_2O$  into  $2KI$ ,  $HgI_2$ , and  $HgI$ ; (Boullay); sol. in alcohol, ether, and conc.  $HC_2H_3O_2$ , but decomp. by other acids (Berthelot, *J. Pharm.* 14, 186). Sp. gr. of sat. solution in  $H_2O = 2.4$  to 3.1.

+  $H_2O$ . Sol. in  $H_2O$  with decomp. Can be cryst. from alcohol. Very sl sol. in dry ether. Very sol. in wet ether. (Marsh, *Chem. Soc.* 1910, 97, 2297.)

$HgI_2 \cdot 2KI$ . Sol. in  $H_2O$ . (Thomson and Bloxam, *Chem. Soc.* 41, 379.)

Sat. solution of  $KI + HgI_2$  in  $H_2O$  at 22.9° contains 8.66%  $K$ , 22.49%  $Hg$  and 52.48%  $I$ , corresponding to 0.23 mol  $K$ , 0.11 mol  $Hg$  and 0.45 mol  $I$ . (Duboin, *C. R.* 1905, 141, 385.)

Sp. gr. at 16°/4° of aqueous solution containing 12.2875% salt = 1.10148; containing 12.2371% = 1.1038, containing 7.9843% = 1.06481 (Schönrock, *Z. phys. Ch.* 1893, 11, 782.)

Sol. in methyl acetate. (Bezold, *Dissert.* 1906.)

Sol. in ethyl acetate. (Alexander, *Dissert.* 1899; Hamers, *Dussert.* 1906.)

Sol. in acetone. (Eidmann, *C. C.* 1899, II, 1014; Naumann, *B.* 1904, 37, 4328.)

Sol. in methyl acetate (Naumann, *B.* 1909, 42, 3790), ethyl acetate (Naumann, *B.* 1904, 37, 3601.)

+  $2H_2O$ . Sol. in alcohol, ether and acetone; decomp. by  $H_2O$ . (Pawlow, *C. C.* 1901, I, 363.)

Solubility determinations show that  $KHgI_2$  and  $KHgI_2 + H_2O$  are the only double salts formed at 20°-30°. See  $HgI_2 + KI$  under  $HgI_2$ . (Dunningham, *Chem. Soc.* 1914, 106, 368.)

**Mercuric rubidium iodide,  $HgI_2 \cdot RbI$ .**

Sol. in alcohol; decomp. by  $H_2O$ .

$HgI_2 \cdot 2RbI$ . Very easily sol. in  $H_2O$ . (Grossmann, *B.* 1904, 37, 1258.)

Very sol. in acetic acid and alcohol; decomp. by  $H_2O$ . Stable in aq. solution in the presence of an excess of  $RbI$ . (Erdmann, *Arch. Pharm.* 1894, 232, 30.)

**Mercuric silver iodide,  $HgI_2 \cdot 2AgI$ .**

(Wegelin and Kilpi, *Z. anorg.* 1909, 61, 416.)

**Mercuric sodium iodide,  $HgI_2 \cdot NaI$ .**

Deliquescent, and decomp. by much  $H_2O$ . (v. Bonsdorff, *Pogg.* 17, 266.)

Sol. in alcohol; decomp. by  $H_2O$ .

$HgI_2 \cdot 2NaI$ . Deliquescent; sol. in  $H_2O$  and alcohol. (Boullay.)

Sat. solution of  $NaI + HgI_2$  in  $H_2O$  at 24.75° contains 4.59%  $Na$ , 25%  $Hg$ , and 58.25%  $I$ , corresponding to 0.20 mol.  $Na$ ,

0.12 mol.  $\text{Hg}_2$  and 0.45 mol. I. (Duboin, C. R. 1905, **141**, 385.)  
 +4H<sub>2</sub>O Extremely deliquescent. (Duboin, C. R. 1906, **143**, 314.)

**Mercuric strontium iodide**,  $\text{HgI}_2$ ,  $\text{SrI}_2$  (?).

Sol. in H<sub>2</sub>O without decomp. (Boullay.)  
 +N<sub>2</sub>O As Ca salt (Duboin, C. R. 1906, **142**, 573.)  
 2 $\text{HgI}_2$ ,  $\text{SrI}_2$  (?). Decomp. by much H<sub>2</sub>O into sol.  $\text{HgI}_2$ ,  $\text{SrI}_2$  and insol.  $\text{HgI}_2$ . (Boullay.)

**Mercuric thorium iodide**,  $5\text{HgI}_2$ ,  $\text{ThI}_4 + 18\text{H}_2\text{O}$

Very deliquescent. Easily decomp. by H<sub>2</sub>O. (Duboin, A. ch. 1909, (8) **18**, 282.)  
 $5\text{HgI}_2$ ,  $2\text{ThI}_4 + 21\text{H}_2\text{O}$ . (Duboin)  
 $2\text{HgI}_2$ ,  $\text{ThI}_4 + 12\text{H}_2\text{O}$  (Duboin)

**Mercuric zinc iodide**.

Deliquescent. Decomp. by H<sub>2</sub>O. (v. Bunsen.)

**Mercuric iodide ammonia**,  $\text{HgI}_2$ ,  $2\text{NH}_3$ .

Decomp. by  $\text{NH}_3$  giving  $\text{NH}_4\text{I}$  and  $\text{NH}_4\text{I}$  (François, C. R. 1900, **130**, 333.)  
 Stable only in the presence of excess of ammonia. Gives off  $\text{NH}_3$  in the air. (François, J. Pharm. 1897, (6) **5**, 388; C. C. 1897, I. 1088.)

**Mercuric iodide hydrazine**,  $\text{HgI}_2$ ,  $\text{N}_2\text{H}_4$

Decomp. by H<sub>2</sub>O (Hofmann and Marburg, A. 1899, **305**, 215.)

**Mercuric iodide rubidium bromide**,  
 $\text{HgI}_2$ ,  $2\text{RbBr}$ .

Decomp. by H<sub>2</sub>O.  
 Sol. in alcohol without decomp. (Grosman, B. 1903, **36**, 1603.)

**Mercuric iodide silver chloride**,  $\text{HgI}_2$ ,  $2\text{AgCl}$ .

Insol. in H<sub>2</sub>O. (Lea, Sill. Am. J. (3) **7**, 31.)

**Mercury iodoantimonide**,  $\text{Hg}_2\text{Sb}_2\text{HgI}_2$ .

Sol. in  $\text{HNO}_3$ , aqua regia and hot  $\text{H}_2\text{SO}_4$ ; insol. in HCl. (Granger, C. R. 1901, **132**, 1116.)

**Mercury nitride**,  $\text{Hg}_2\text{N}_2$ .

Gradually decomp. by H<sub>2</sub>O. Decomp. by conc.  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$  (Hirzel, J. B. 1852, 419.)

Not attacked by cold, but decomp. by hot dil.  $\text{H}_2\text{SO}_4$ .

Sol. in acids + Aq.  
 Sol. in ammoniacal solutions of ammonium salts

Insol. in excess of  $\text{KNH}_4$ . (Franklin, Z. anorg. 1905, **46**, 18.)

Sol. in ammonia solutions of ammonium salts and in aq. acid solutions.

Very explosive. (Franklin, J. Am. Chem. Soc. 1905, **27**, 835.)

$\text{HgN}_2$

See Mercurous azoimide.

$\text{HgN}_2$

See Mercuric azoimide.

**Mercurous oxide**,  $\text{Hg}_2\text{O}$ .

Insol. in H<sub>2</sub>O. Insol. in dil. HCl or  $\text{HNO}_3$ , +Aq. Sol. in warm conc.  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$  + Aq.  
 Sol. in 150,000 pts. H<sub>2</sub>O (Bhaduri, Z. anorg. 1897, **13**, 410.)

Decomp. by H<sub>2</sub>O or weak bases (Rose),  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Wittstein),  $\text{KNO}_3 + \text{Aq}$  (Rose),  $\text{KI} + \text{Aq}$  (Berthelot), or conc.  $\text{NH}_4\text{Cl} + \text{Aq}$  (Pagenstecher) into HgO and Hg, or  $\text{HgCl}_2$ , etc.

Sl. decomp. by alkali chlorides + Aq with formation of  $\text{HgCl}_2$ , which dissolves. (Mihale.)

Sl. sol. in alkali cyanides + Aq. (Jahn.)

Insol. in KOH, and NaOH + Aq.

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, **20**, 829.)

Insol. in alcohol and ether.

**Mercuric oxide**, HgO.

Sol. in 20,000 to 30,000 pts. H<sub>2</sub>O (Bineau, C. R. **41**, 509.)

Sol. in 200,000 pts. H<sub>2</sub>O. (Wallace, Ch. Gaz. 1858, 345.)

Ordinary coarse HgO is sol. in H<sub>2</sub>O to the extent of 50 mg. per l. at 25°, but when finely powdered the solubility increases to 150 mg. per l. (Hulett, Z. phys. Ch. 1901, **37**, 406.)

Red modification is—

Sol. in 19,500 pts. H<sub>2</sub>O at 25°, in 2,600 pts. H<sub>2</sub>O at 100°. (Schick, Z. phys. Ch. 1903, **42**, 172.)

1 l. H<sub>2</sub>O dissolves 50 mg. red modification of HgO at 25°. (Hulett, Z. phys. Ch. 1901, **37**, 406.)

Yellow modification is—

Sol. in 19,300 pts. H<sub>2</sub>O at 25°, in 2400 pts. at 100° (Schick, Z. phys. Ch. 1903, **42**, 172.)

Sol. in acids. Insol. in  $\text{H}_3\text{PO}_4$  or  $\text{H}_3\text{AsO}_4$  + Aq. (Haack, A. 262, 190.)

Scarcely attacked by  $\text{H}_2\text{C}_2\text{O}_4$  + Aq (Mihale, A. ch. (3) **18**, 352.)

Solubility of HgO in HF at 25°.

Hg = g.-atoms Hg in 1 l. of the solution.

HF normal	Hg
0.12	0.01258
0.24	0.0247
0.57	0.0629
1.11	0.1168
2.17	0.2586

(Jaeger, Z. anorg. 1901, **27**, 26.)

Solubility of  $\text{HgO}$  in  $\text{HF}$  is decreased by the addition of  $\text{KF}$ , which proves the non-existence of complex fluorides. (Jaeger.)

Insol. in  $\text{H}_3\text{AsO}_4$ ,  $\text{H}_3\text{PO}_4$ , and in primary and secondary alkali salts of these acids. (Haack, A. 1891, 262, 190.)

Sol. in hot  $\text{NH}_4\text{Cl} + \text{Aq.}$ , less in  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Brett.)

Insol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq.}$

Decomp. by alkali chlorides +  $\text{Aq}$  into  $\text{HgCl}_2$ , which dissolves (Miahle, A. ch. (3) 5, 177.)

Sol. in  $\text{Fe}(\text{NO}_3)_3$ , and  $\text{Bi}(\text{NO}_3)_3 + \text{Aq}$  with pptn of oxides Sol. in  $\text{KI} + \text{Aq}$  (Persoz.)

Very sol in acid sulphates +  $\text{Aq}$  (Barth, Z. phys. Ch. 1892, 9, 192.)

Completely sol in conc.  $\text{CaCl}_2$ ,  $\text{BaCl}_2$ ,  $\text{MgCl}_2$ , and  $\text{SrCl}_2 + \text{Aq.}$  (André, C. R. 1887, 104, 431.)

Solubility in  $\text{Ag}$  salts +  $\text{Aq.}$  100 g.  $\text{Ag}_2\text{SO}_4$  in aqueous solution dissolve 13 g.  $\text{HgO}$ . Solubility in  $\text{AgNO}_3 + \text{Aq}$  is 15.6. 100; in  $\text{Ag}$  acetate +  $\text{Aq}$  is 1.137. 100. (Finci, Gazz. ch. it 1911, 41, (2) 545.)

Much less sol. in  $\text{KCl}$  and  $\text{NaCl} + \text{Aq}$  than in  $\text{H}_2\text{O}$  (Schoch.)

Sol. in  $\text{U}(\text{NO}_3)_6$ ,  $\text{Al}(\text{NO}_3)_3$  and  $\text{Fe}(\text{NO}_3)_3 + \text{Aq.}$  (Mailhe, A. ch. 1902, (7) 27, 373.)

Very sl. sol in cold  $\text{Hg}(\text{CN})_2 + \text{Aq}$ , abundantly sol at  $75^\circ$  with evolution of  $\text{HCN}$  (Barthe, J. Pharm. 1896, (6) 3, 183.)

Sol. in cold or hot alcoholic  $\text{NH}_4\text{SCN}$  in large amounts (Flousser, A. 1875, 179, 225.)

Completely sol in  $\text{KI} + \text{Aq.}$  (Jehn, Arch. Pharm. 1873, 201, 97.)

Solubility of red or yellow modification in  $\text{N}/50$   $\text{KCl} + \text{Aq}$  is about 25% greater than in pure  $\text{H}_2\text{O}$ . (Schick, Z. phys. Ch. 1903, 42, 168.)

Insol. in liquid  $\text{HF}$ . (Franklin, Z. anorg. 1905, 48, 2.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 829.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 829.)

Sol. in alcoholic solution of hydroxylamine hydrobromide below  $0^\circ$  (Adams, Am. Ch. J. 1902, 28, 216.)

Insol. in alcohol.

Sol. in trichloroacetic acid +  $\text{Aq}$  (Brand, J. pr. 1913, (2) 88, 342.)

Insol. in acetone and in methylal. (Eidmann, C. C. 1899, II, 1014.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

When freshly pptd., is insol. in acetone +  $\text{Aq.}$  even on warming, but easily sol. if liquid is made alkaline by  $\text{NaOH}$ . Insol. in acetophenone even after long warming at  $100^\circ$ . Sol. in acetaldehyde and much  $\text{H}_2\text{O}$  and a little  $\text{NaOH}$ . (Auld and Hantzsch, B. 1905, 38, 2680.)

Sol. in formamide. (Fischer, Arch. Pharm. 1894, 232, 329.)

Very sol. in ethylene diamine. For 1 mol.

$\text{HgO}$ , 7-10 mols. ethylene diamine are necessary. (Traube and Lowe, B. 1914, 47, 1910.)

Easily sol in benzamide. (Dessaigues, A. ch. 1852, (3) 34, 146.)

When freshly pptd., is sol in picric acid +  $\text{Aq.}$  (Varet, C. R. 1894, 119, 560.)

Sol. in alkaline solution of phenol disulphonic acid. (Lumière and Chevroliet, C. R. 1901, 132, 145.)

Sol. in nucleic acid +  $\text{Aq}$  when freshly pptd. (Schweckerath, Pat. 1899.)

Sol. in gum arabic +  $\text{Aq.}$  (Peschier, J. Pharm. 1896, (6) 3, 509.)

**Mercuric oxybromide,  $\text{HgBr}_2$ ,  $\text{HgO}$ .**

(André, A. ch. (6) 3, 123.)

$\text{HgBr}_2$ ,  $2\text{HgO}$  (André.)

$\text{HgBr}_2$ ,  $3\text{HgO}$ . (a) Yellow Insol in cold, sl. sol in hot  $\text{H}_2\text{O}$ . Easily sol in alcohol (Löwig.)

(b) Brown. Insol in alcohol (Rammelsberg, Pogg. 55, 248.)

$\text{HgBr}_2$ ,  $4\text{HgO}$ . (André.)

Insol in ord. solvents. Decomp. by alkalis and acids. (Fischer and von Wartenburg, Ch. Z. 1902, 26, 894.)

$2\text{HgBr}_2$ ,  $7\text{HgO}$ . Readily decomp. by acids and alkalis. (Fischer and von Wartenburg.)

**Mercurous oxychloride,  $\text{Hg}_2\text{O}$ ,  $2\text{HgCl}$ .**

Min. *Eglestonite*.

Decomp. by hot  $\text{HCl}$  and by  $\text{HNO}_3$ . (Moses, Am. J. Sci. 1903, (4) 16, 253.)

**Mercuric oxychloride,**

$\text{HgO}$ ,  $\text{HgCl}_2$ . Less sol. than  $\text{HgCl}_2$ , but not isolated. (Thümmel.) Decomp. by cold  $\text{H}_2\text{O}$ . (André, A. ch. (6) 3, 118.)

$\text{HgO}$ ,  $2\text{HgCl}_2$ . Decomp. by warm  $\text{H}_2\text{O}$  or cold alcohol into  $2\text{HgO}$ ,  $\text{HgCl}_2$ . (Thümmel, Arch. Pharm. (3) 27, 589.)

Decomp. by  $\text{H}_2\text{O}$ . Not decomp. by alcohol. (Arctowski, Z. anorg. 1895, 9, 178.)

$2\text{HgO}$ ,  $\text{HgCl}_2$ . Two modifications.

A. Red. Insol in  $\text{H}_2\text{O}$ ; decomp. by alkali carbonates, or chlorides +  $\text{Aq}$  into  $4\text{HgO}$ ,  $\text{HgCl}_2$ .

Acted upon by cold alkali carbonates and alkali chlorides +  $\text{Aq.}$  (Schoch, Am. Ch. J. 1903, 29, 335.)

Not decomp. by  $\text{H}_2\text{O}$  at ord. temp. (Thümmel.)

Very sl. sol. in cold, completely sol in hot  $\text{H}_2\text{O}$ . (Haack, A. 1891, 262, 189.)

A small amt. of  $\text{HNO}_3$  converts it into a white powder; more  $\text{HNO}_3$  dissolves it. (Haack, A. 1891, 262, 189.)

B. Black. Not decomp. by alkali chlorides, or carbonates +  $\text{Aq.}$  (Thümmel.)

Not affected by boiling alkali carbonates or alkali chlorides +  $\text{Aq.}$  (Schoch, Am. Ch. J. 1901, 29, 335.)

Insol. in cold and hot  $\text{H}_2\text{O}$  and alcohol.

Sol. in acid. (Van Nest, Dissert. 1909.)

Not changed by  $\text{H}_2\text{O}$ . (Blaas, Miner. Mitt. (2) 2, 177.)

Sol. in  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq.}$  (Blaas.)  
 Not changed by alcohol. (Blaas.)  
 $+1\frac{1}{2}\text{H}_2\text{O}$ . (Räy, A. 1901, 316. 255.)  
 $3\text{HgO}$ ,  $\text{HgCl}_2$  Decomp. by warm  $\text{H}_2\text{O}$  (Thümmel.)

Not attacked by cold  $\text{H}_2\text{O}$ . (André.)  
 Ppt. (Tarugi, Gazz. ch. it. 1901, 31. 313.)  
 Decomp. by  $\text{H}_2\text{O}$  Not decomp. by alcohol. (Aretowski, Z. anorg. 1895, 9. 178.)

Three modifications.

a. Prisms Decomp. by boiling  $\text{H}_2\text{O}$ .

b. Brick-red, amorphous

c. Yellow plates

(Schoch, Am. Ch. J. 1903, 29. 337.)

Yellow plates.

Decomp. by hot  $\text{H}_2\text{O}$ ,  $\text{Na}_2\text{CO}_3$  or  $\text{NaOH} + \text{Aq.}$  Sol. in  $\text{KHCO}_3 + \text{Aq.}$  Insol. in cold dil.  $\text{HNO}_3$  (Tarugi)

$4\text{HgO}$ ,  $\text{HgCl}_2$  Decomp. by  $\text{H}_2\text{O}$ . Not decomp. by alcohol (Aretowski, Z. anorg. 1895, 9. 178.)

Two modifications

A. Yellow plates.

Easily sol. in acids. Insol. in alcohol and ether. Decomp. by  $\text{KOH}$ . (Dukelski, Z. anorg. 1900, 49. 336.)

B. Brown, amorphous.

Easily sol. in acids Decomp. by  $\text{KOH}$ . Insol. in alcohol and ether. (Dukelski, Z. anorg. 1900, 49. 336.)

$5\text{HgO}$ ,  $\text{HgCl}_2$ . (Milon.)

Does not exist (Thümmel)

$6\text{HgO}$ ,  $\text{HgCl}_2$ . Does not exist. (T.)

$+ \text{H}_2\text{O}$  Insol. in cold  $\text{H}_2\text{O}$ . (Roucher, A. ch. (3) 27. 353.)

Does not exist (T.)

$7\text{HgO}$ ,  $4\text{HgCl}_2$  (Roucher.)

Does not exist. (T.)

**Mercuriomercuric oxychloride,  $\text{Hg}_2\text{OCl}$**

Min. *Tertinguite*.

Decomp. by  $\text{HCl}$  and  $\text{HNO}_3$ .

Slowly decomp. by cold acetic acid when powdered. (Hillebrand and Schaller, J. Am. Chem. Soc. 1907, 29. 1190.)

**Mercuric strontium oxychloride,  $\text{HgO}$ ,  $\text{SrCl}_2$   $+ 6\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (André, C. R. 104. 431.)

**Mercuric oxyfluoride,  $\text{HgO}$ ,  $\text{HgF}_2 + \text{H}_2\text{O}$**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil  $\text{HNO}_3 + \text{Aq.}$  (Finkener)

**Mercuric oxyiodide,  $3\text{HgO}$ ,  $\text{HgI}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HI} + \text{Aq.}$  (Weyl, Pogg. 131. 524.)

**Mercuric oxyphosphide,  $\text{Hg}_2\text{P}_2\text{O}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Patheil and van Haaren, Arch. Pharm. 1900, 238. 35.)

**Mercuric oxytelluride,  $2\text{HgSe}$ ,  $\text{HgO}$ .**

Easily sol. in aqua regia. (Uelsmann, A. 116. 122.)

**Mercury phosphide,  $\text{Hg}_3\text{P}_2$ .**

Insol. in  $\text{H}_2\text{O}$ ,  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq.}$  Easily sol. in aqua regia. (Granger, C. R. 115. 229.)  
 $\text{Hg}_3\text{P}_4$ . (Granger, C. N. 1898, 77. 229.)

**Mercury phosphochloride,  $\text{P}_2\text{Hg}_3$ ,  $3\text{HgCl}_2 + 3\text{H}_2\text{O}$ .**

See Dimercuriphosphonium mercuric chloride.

**Mercury phosphosulphide,  $2\text{HgS}$ ,  $\text{P}_2\text{S}_5$ .**

$\text{HgS}$ ,  $\text{P}_2\text{S}_5$ .

$2\text{HgS}$ ,  $\text{P}_2\text{S}_5$ . (Berzelius)

$3\text{HgS}$ ,  $\text{P}_2\text{S}_5$ . (Baudrimont, C. R. 55. 323.)

$2\text{HgS}$ ,  $\text{P}_2\text{S}_5$ . (Berzelius, A. 47. 256.)

**Mercuric selenide,  $\text{HgSe}$ .**

Sol. in cold aqua regia when crystalline When precipitated shows the same properties towards solvents as mercuric sulphide (Reeb J. Pharm. (4) 9. 173.)

Min. *Tilmannite*. Sol. only in aqua regia.

**Mercuric selenochloride,  $2\text{HgSe}$ ,  $\text{HgCl}_2$**

Insol. in boiling  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq.}$  Easily sol. in aqua regia and a mixture of  $\text{H}_2\text{SO}_4$  and conc.  $\text{HNO}_3 + \text{Aq.}$  (Uelsmann, J. B. 1860. 92.)

**Mercurous sulphide,  $\text{Hg}_2\text{S}$ .**

Insol. in  $\text{H}_2\text{O}$ , dil.  $\text{HNO}_3$ , hot  $\text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{S} + \text{Aq.}$  Sol. in  $\text{KOH} + \text{Aq.}$  with separation of  $\text{Hg}$ . (Rose.)

Does not exist; only mixtures of  $\text{Hg}$  and  $\text{HgS}$  are formed. (Barfoed, J. pr. 93. 230.)

See also Baskerville, J. Am. Chem. Soc. 1903, 25. 799.)

Not attacked by  $\text{HNO}_3$  below  $0^\circ$ , but attacked by dil  $\text{HNO}_3$  and  $\text{HCl} + \text{Aq.}$  when temp. is increased Sol. in  $\text{Na}_2\text{S}$  or  $\text{K}_2\text{S}$  but  $\text{Hg}$  soon ppts (Antony and Sestini, Gazz. ch. it. 1894, 24. (1) 194.)

**Mercuric sulphide,  $\text{HgS}$ .**

Insol. in  $\text{H}_2\text{O}$ .

Pptd. as a brown coloration in presence of 20,000 pts  $\text{H}_2\text{O}$ , and as a green coloration in presence of 40,000 pts  $\text{H}_2\text{O}$  (Lassaigne.)

Much less sol. in  $\text{H}_2\text{O}$  than  $\text{Ag}_2\text{S}$  or  $\text{Cu}_2\text{S}$ . (Bodlander, Z. phys. Ch. 1898, 27. 84.)

1 l.  $\text{H}_2\text{O}$  dissolves  $0.05 \times 10^{-4}$  mols  $\text{HgS}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 53. 294.)

Sol. in cold conc., and in hot dil  $\text{HI} + \text{Aq.}$  or  $\text{HBr} + \text{Aq.}$  (Kekulé, A. Suppl. 2. 101.) Very sl. decomp. by hot conc  $\text{HCl} + \text{Aq.}$  Not attacked by hot  $\text{HNO}_3 + \text{Aq.}$  Sol. in cold aqua regia.

Not attacked by 4-N  $\text{HNO}_3$  or 4-N  $\text{HNO}_3 + 4\text{-N H}_2\text{SO}_4$  at ord. temp. even after many days. By action of a mixture of equal volumes of 4-N  $\text{HNO}_3$  and conc.  $\text{H}_2\text{SO}_4$ , there was slight action on pptd.  $\text{HgS}$  after 14, more action after 62 days. If  $\text{HgS}$  is boiled with the 4-N acids, oxidation takes place most rapidly with 4-N  $\text{HNO}_3$ , then the mixture 66.7% 4-N  $\text{H}_2\text{SO}_4 + 33.3\%$  4-N  $\text{HNO}_3$ , then

33.3% 4-N  $\text{H}_2\text{SO}_4$  + 66.7% 4-N  $\text{HNO}_3$ , and lastly 4-N  $\text{H}_2\text{SO}_4$  alone. (Moore, J. Am. Chem. Soc. 1911, 33, 1094.)

Cold conc.  $\text{H}_2\text{SO}_4$  does not attack red or black  $\text{HgS}$ , but they are attacked by hot acid. (Berthelot, A. ch. 1898, (7) 14, 198.)

Freshly pptd  $\text{HgS}$  is insol. in dil  $\text{KCN}$  +  $\text{Aq}$ . (Berthelot.)

Sol. in  $\text{K}_2\text{S}$  +  $\text{Aq}$ , but readily only in presence of free alkali. (Brunner, Pogg. 15, 596.) Insol. in boiling  $\text{KOH}$  +  $\text{Aq}$ .

Sol. in  $\text{KSH}$  or  $\text{NaSH}$  +  $\text{Aq}$ . Very sl. sol. in cold yellow  $(\text{NH}_4)_2\text{S}$  +  $\text{Aq}$ . Insol. in  $\text{KCN}$  or  $\text{Na}_2\text{S}_2\text{O}_3$  +  $\text{Aq}$ . (Fresenius.)

Easily sol. in conc.  $\text{Na}_2\text{S}$  or  $\text{K}_2\text{S}$  +  $\text{Aq}$ , even in absence of  $\text{KOH}$  or  $\text{NaOH}$ . Insol. in  $(\text{NH}_4)_2\text{S}$  +  $\text{Aq}$ . Sol. in  $\text{CaS}$ ,  $\text{BaS}$ , or  $\text{SrS}$  +  $\text{Aq}$ . Insol. in  $\text{NaSH}$  or  $\text{KSH}$  +  $\text{Aq}$ . (de Koninck, Z. angew. Ch. 1891, 51.)

Solubility in  $\text{NaSH}$  is very small in comparison with that in  $\text{Na}_2\text{S}$  +  $\text{Aq}$ . (Knox, Trans. Faraday. Soc. 1908, 4, 30.)

Solubility in  $\text{BaS}$  is practically equal to that in  $\text{Na}_2\text{S}$ . (Knox.)

All cryst. modifications are sol. in conc.  $\text{K}_2\text{S}$  and in conc.  $\text{Na}_2\text{S}$  +  $\text{Aq}$ . (Allen and Crenshaw, Am. J. Sci. 1912, (4) 34, 368.)

Sol. in potassium thiocarbonate +  $\text{Aq}$ . (Rosenblatt, Z. anal. 26, 15.)

Sol. in alkali sulpho-molybdates, -tungstates, -vanadates, -arsenates, -antimonates, and -stannates. (Storch, B. 18, 2015.)

1 l.  $\text{BaS}_2\text{H}_2$  +  $\text{Aq}$  containing 50 g.  $\text{Ba}$  dissolves no  $\text{HgS}$  in the cold, but 50-60 g. at 40-50°.

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 829.)

Insol. in acetone. (Eidmann, C. C. 1899, II, 1014.)

Insol. in pyridine. (Schroeder, Dissert. 1901.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

Exists in a colloidal state, sol. in  $\text{H}_2\text{O}$ . (Winninger, Bull. Soc. (2) 49, 452.)

Min. *Cinnabar*. Insol. in  $\text{H}_2\text{O}$ , alcohol, dil. acids, or alkaline solutions.

Decomp. by hot dil.  $\text{HNO}_3$  +  $\text{Aq}$ . Not decomp. by  $\text{HCl}$  +  $\text{Aq}$ , but easily by hot  $\text{H}_2\text{SO}_4$  or aqua regia. Easily sol. in  $\text{CuCl}_2$  +  $\text{Aq}$ . (Karsten.)

Sol. in a mixture of  $\text{Na}_2\text{S}$  and  $\text{NaOH}$  when present in the proportion of  $\text{HgS} : 2\text{Na}_2\text{S}$ .

Sol. in pure  $\text{Na}_2\text{S}$  +  $\text{Aq}$  or in mixtures of  $\text{Na}_2\text{S}$  and  $\text{NaSH}$  +  $\text{Aq}$ . Insol. in cold  $\text{NaSH}$  +  $\text{Aq}$ , but sol. on warming with evolution of  $\text{H}_2\text{S}$ . (Becker, Sill. Am. J. (3) 33, 199.)

Insol. in acetone. (Krug and M'Elroy.)

*Cinnabar* is easily sol. in 20%  $\text{HBr}$  +  $\text{Aq}$ . (Rising and Lenher, J. Am. Chem. Soc. 1896, 18, 96.)

Sol. in  $\text{S}_2\text{Cl}_2$ . (Smith, J. Am. Chem. Soc. 1898, 20, 291.)

**Mercuric platinum sulphide.**

See Sulphoplatinate, mercuric.

**Mercuric potassium sulphide,  $\text{K}_2\text{S}$ ,  $2\text{HgS}$ .**

Decomp. into its constituents by  $\text{H}_2\text{O}$ ; decomp. by  $\text{HCl}$ , and  $\text{HNO}_3$  +  $\text{Aq}$ , and by hot  $\text{KOH}$ , and  $\text{NH}_4\text{OH}$  +  $\text{Aq}$ . (Schneider, Pogg. 127, 488.)

$\text{K}_2\text{S}$ ,  $\text{HgS}$  +  $5\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  or alkalis. (Weber, Pogg. 87, 76.)

+  $\text{H}_2\text{O}$ . (Ditte.)

+  $7\text{H}_2\text{O}$ . Sol. in  $\text{K}_2\text{S}$  +  $\text{Aq}$ . (Ditte, C. R. 98, 1271.)

$\text{K}_2\text{S}$ ,  $5\text{HgS}$  +  $6\text{H}_2\text{O}$ . Easily decomp. by  $\text{H}_2\text{O}$ . (Ditte.)

**Mercuric sodium sulphide,  $\text{HgS}$ ,  $\text{Na}_2\text{S}$  +  $8\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  or alkalis.

$5\text{HgS}$ ,  $2\text{Na}_2\text{S}$  +  $3\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Knox, Trans. Faraday. Soc. 1908, 4, 38.)

**Mercuric sulphobromide,  $2\text{HgS}$ ,  $\text{HgBr}_2$ .**

Insol. in  $\text{H}_2\text{O}$ . Not attacked by boiling  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ . (Rose.)

**Mercuric sulphochloride,  $2\text{HgS}$ ,  $\text{HgCl}_2$ .**

Insol. in  $\text{H}_2\text{O}$ , cold or hot, dil. or conc.  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HCl}$  +  $\text{Aq}$ . (Rose, Pogg. 13, 59.)

Decomp. by hot aqua regia.

By boiling with dil.  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , and  $\text{HCl}$ ,  $\text{Hg}$  and  $\text{Cl}$  go into solution. (Hamers, Dissert. 1906.)

Insol. in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$ . Partly sol. in  $\text{HCl}$  and  $\text{HNO}_3$ ; easily sol. in aqua regia. (Alexander, Dissert. 1899.)

Sol. in aqua regia. (Denigès, Bull. Soc. 1915, (4) 17, 356.)

$3\text{HgS}$ ,  $\text{HgCl}_2$ . Properties as the above comp. (Poleck and Goerckl, B. 21, 2415.)

$4\text{HgS}$ ,  $\text{HgCl}_2$ . As above. (P. and G.)

$5\text{HgS}$ ,  $\text{HgCl}_2$ . As above. (P. and G.)

Insol. in alkali sulphides and in fuming  $\text{HNO}_3$ ; decomp. by  $\text{NaOBr}$  +  $\text{Aq}$  and by  $\text{KOH}$ . (Bodroux, C. R. 1900, 130, 1399.)

Sl. sol. in solutions of alkali sulphides unless heated. (Berzelius.)

Easily sol. in alkali sulphides +  $\text{Aq}$ ; slowly sol. in alkalis or alkali hydrosulphides +  $\text{Aq}$ . (Atterberg, J. B. 1873, 253.)

**Mercurous sulphotetrachloride,  $\text{Hg}_2\text{SCl}_4$ .**

Decomp. by  $\text{H}_2\text{O}$  with separation of  $\text{S}$ ,  $\text{HgCl}_2$  going into solution. (Capitaine, J. Pharm. 25, 525.)

**Mercuric sulphofluoride,  $2\text{HgS}$ ,  $\text{HgF}_2$ .**

Decomp. by boiling  $\text{H}_2\text{O}$ . Not decomp. by hot  $\text{HCl}$  or  $\text{HNO}_3$  +  $\text{Aq}$ , but gives  $\text{HF}$  with hot  $\text{H}_2\text{SO}_4$  +  $\text{Aq}$ . (Rose, Pogg. 13, 66.)

**Mercury sulphodimide,  $\text{Hg}_2\text{N}_2\text{S}$ ,  $\text{NH}_3$ .**

Ppt. (Ruff, B. 1904, 37, 1585.)

**Mercuric sulphiodide,  $\text{HgS}$ ,  $\text{HgI}_2$ .**

Ppt. (Rammelsberg, Pogg. 48, 175.)

$2\text{HgS}$ ,  $\text{HgI}_2$ . (Palm, C. C. 1863, 121.)

Insol. in min. acids with exception of aqua regia. (Hamets, Dissert. 1906.)

**Mercuric sulphiodide ammonia**,  $2\text{HgS}$ ,  $\text{HgI}_2$ ,  $\text{NH}_3$ .  
(Poerster, Ch. Z. 1895, 19. 1895.)

**Mercuric telluride**,  $\text{HgTe}$ .

Min. *Coloradoite*. Sol in boiling  $\text{HNO}_3$  + Aq with separation of  $\text{H}_2\text{TeO}_3$ .

**Metastannic acid**.

See Stannic acid.

**Molybdatoiodic acid**.

See Molybdoiodic acid.

**Molybdenum**, Mo

Not attacked by HCl, HF, or dil.  $\text{H}_2\text{SO}_4$  + Aq. Sol. in conc.  $\text{H}_2\text{SO}_4$ . Very easily sol. in aqua regia. Oxidised by  $\text{HNO}_3$  + Aq either to molybdenum oxide, which dissolves in  $\text{HNO}_3$ , or, if  $\text{HNO}_3$  is in excess, to molybdic acid, which remains undissolved.

Attacked by  $\text{HNO}_3$  + Aq containing 3-70%  $\text{HNO}_3$ , but only slowly by 70% acid, with formation of insol. white powder; much more vigorously by 50% acid, in which case a clear solution is formed. (Montemartini, Gazz. ch. it. 22. 384.)

Not attacked by alkalis + Aq. (Bucholz, Scheer, J. 9. 485.)

With a sp. gr. 9.01, the metal is malleable and sol. in a mixture of HF and  $\text{HNO}_3$ , sol. in fused  $\text{KClO}_3$ . (Moissan, Bull. Soc. 1895, (3) 13. 966.)

Ductile Mo is moderately quickly attacked by  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , and HCl (Fink, Met. Chem. Eng. 1910, 8. 341.)

Not immediately attacked by cold dil.  $\text{HNO}_3$ . Not attacked by dil and conc.  $\text{H}_2\text{SO}_4$ . Boiling dil. HCl + Aq does not attack; conc. dissolves traces by long heating. Sol. in aqua regia. (Lederer, Dissert. 1911.)

Dil. HCl dissolves 20.3% Mo at  $110^\circ$  in 18 hrs. More slowly sol. in HCl (sp. gr. 1.15).

Insol. in dil.  $\text{H}_2\text{SO}_4$  at  $110^\circ$ . Slowly sol. in conc.  $\text{H}_2\text{SO}_4$  (sp. gr. 1.82) at  $110^\circ$ , rapidly sol. at  $200^\circ$ - $250^\circ$ .

Slowly sol. in conc.  $\text{HNO}_3$  (sp. gr. 1.40), rapidly sol. in dil.  $\text{HNO}_3$  (sp. gr. 1.15).

Rapidly sol. in hot aqua regia. Insol. in hot or cold HF. (Ruder, J. Am. Chem. Soc. 1912, 34. 388.)

Insol. in KOH + Aq. Sol. in fused KOH. (Ruder, J. Am. Chem. Soc. 1912, 34. 389.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

**Molybdenum acichloride**.

See Molybdenyl chloride.

**Molybdenum amide**,  $\text{OH} \cdot \text{MoO}_2 \cdot \text{NH}_3$ .

Very unstable. Insol. in abs. alcohol. (Fleck, Z. anorg. 1894, 7. 353.)

**Molybdenum amide nitride**,  $\text{Mo}_2\text{N}_3\text{H}_4 = 4\text{MoN}_2, \text{Mo}(\text{NH}_2)_2$ .

Not attacked by HCl, or dil.  $\text{HNO}_3$  + Aq (Uhrlaub.)

**Molybdenum amidochloride**,  $\text{Mo}_2(\text{NH}_2)_2\text{Cl}_2$ .

Insol. in  $\text{H}_2\text{O}$  and dil. acids. (Rosenheim, Z. anorg. 1905, 46. 317.)

**Molybdenum amidochloride ammonia**,  $\text{Mo}_2(\text{NH}_2)_2\text{Cl}_2, 10\text{NH}_3$ .

Unstable in the air. (Rosenheim, Z. anorg. 1905, 46. 319.)

**Molybdenum boride**,  $\text{Mo}_3\text{B}_4$ .

Moderately attacked by hot conc. acids and vigorously by hot aqua regia. (Tucker and Moody, Chem. Soc. 1902, 81. 17.)

**Molybdenum dibromide**,  $\text{MoBr}_2 = \text{Mo}_2\text{Br}_4\text{Br}_2$ .

See Bromomolybdenum bromide.

**Molybdenum tribromide**,  $\text{MoBr}_3$ .

Not decomp. by  $\text{H}_2\text{O}$ . Boiling conc. HCl, and cold dil.  $\text{HNO}_3$  + Aq do not attack appreciably. Dil. alkalis act slowly, but decomp. with separation of  $\text{Mo}_2\text{O}_3$  on boiling. (Blomstrand, J. pr. 82. 435.)

**Molybdenum tetrabromide**,  $\text{MoBr}_4$ .

Rapidly deliquescent, and easily sol. in  $\text{H}_2\text{O}$ . (Blomstrand, J. pr. 82. 433.)

**Molybdenum bromochloride**, etc.

See Bromomolybdenum chloride, etc.

**Molybdenum bronze**.

See Molybdate molybdenum oxide, sodium.

**Molybdenum carbide**,  $\text{Mo}_2\text{C}$ .

Insol. in  $\text{HNO}_3$ . (Moissan, Bull. Soc. 1895, (3) 13. 967.)

MoC. Does not decomp.  $\text{H}_2\text{O}$  even at  $500$ - $600^\circ$ . Slowly attacked by hot HCl, HF and hot conc.  $\text{H}_2\text{SO}_4$ . Easily decomp. by  $\text{HNO}_3$ . Not attacked by NaOH + Aq or KOH + Aq. (Moissan and Hoffmann, C. R. 1904, 138. 1559.)

**Molybdenum carbonyl**,  $\text{Mo}(\text{CO})_6$ .

Quickly attacked by bromine. Sol. in ether or benzene. (Mond, Hirtz and Cowap, Chem. Soc. 1910, 97. 808.)

**Molybdenum dichloride**,  $\text{MoCl}_2 = \text{Mo}_2\text{Cl}_4\text{Cl}_2$ .

See Chloromolybdenum chloride.

**Molybdenum trichloride,  $\text{MoCl}_3$ .**

Insol. in  $\text{H}_2\text{O}$  or boiling conc.  $\text{HCl} + \text{Aq}$ . Easily sol., especially when heated, in  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{H}_2\text{SO}_4$ . Decomp. by  $\text{NH}_4\text{OH}$ ,  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ .

Sl. sol. in alcohol. (Leicht and Kempe.)  
Practically insol. in alcohol and ether (Hampe, Ch. Z. 1888, 12. 5)

**Molybdenum tetrachloride,  $\text{MoCl}_4$ .**

Deliquescent. Sol. with little  $\text{H}_2\text{O}$ , but only partly sol. in more  $\text{H}_2\text{O}$ . Only sl. sol. in conc.  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3 + \text{Aq}$ . Partly sol. in alcohol and ether. (Liechti and Kempe.)

**Molybdenum pentachloride,  $\text{MoCl}_5$ .**

Very deliquescent. Sol. in  $\text{H}_2\text{O}$  with extreme evolution of heat. Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

When freshly prepared, is incompletely sol. in  $\text{H}_2\text{O}$ , but after standing is easily sol. with hissing (Kalscher, Dissert 1902.)

Sol. in a small amt. of conc.  $\text{HCl}$ . (Hampe, Ch. Z. 1888, 12. 5)

Sol. in absolute alcohol or ether (Liechti and Kempe.)

Sol. in  $\text{CHCl}_3$  and in  $\text{CCl}_4$ . Sol. with hissing in many organic solvents (ethers, alcohols, ketones, aldehydes, acids, acid esters, acid anhydrides, amines). Sol. in cinnamic aldehyde (Kalscher, Dissert 1902.)

**Molybdenum hydroxyl chloride,  $\text{Mo}(\text{OH})_2\text{Cl}_2$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Debray, C. R. 46. 1101.)

**Molybdenum tetrachloride phosphorus pentachloride,  $\text{MoCl}_4 \cdot \text{PCl}_5$ .**

Sol. in  $\text{H}_2\text{O}$ .  
 $\text{MoCl}_4 \cdot 2\text{PCl}_5$ . Sol. in  $\text{H}_2\text{O}$ . (Cronander, Bull. Soc. (2) 19. 500.)

**Molybdenum phosphorus pentachloride,  $\text{MoCl}_5 \cdot \text{PCl}_5$ .**

Easily decomp. (Smith and Sargent, Z. anorg. 1894, 6. 385.)

**Molybdenum phosphoryl chloride,  $\text{MoCl}_5 \cdot \text{POCl}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ ; insol. in  $\text{CS}_2$ ; sol. in  $\text{C}_2\text{H}_6$  and  $\text{CHCl}_3$ .

**Molybdenum trichloride potassium chloride.**

Efflorescent. Decomp. with  $\text{H}_2\text{O}$ . (Berzelius.)

$\text{MoCl}_3 \cdot 3\text{KCl}$ . Very sol. in  $\text{H}_2\text{O}$ . Nearly insol. in alcohol and ether. (Chilesotti, C. C. 1903, II. 652.)

$+2\text{H}_2\text{O}$ . Fairly easily sol. in cold  $\text{H}_2\text{O}$  without any apparent decomp. Decomp. in aqueous solution, slowly in the cold but rapidly on boiling. This decomp. is prevented by the presence of  $\text{HCl}$ .

Sl. sol. in conc.  $\text{HCl}$ . (Henderson, Proc. Chem. Soc. 1903, 19. 245.)

**Molybdenum rubidium chloride,  $\text{Rb}_2\text{MoCl}_6 + \text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . Nearly insol. in alcohol and ether. (Chilesotti, C. C. 1903, II. 652.)

**Molybdenum pentachloride nitrogen sulphide,  $\text{MoCl}_5 \cdot \text{N}_2\text{S}_4$ .**

Decomp. in moist air (Davis, Chem. Soc. 1906, 89, (2) 1575.)

**Molybdenum heptafluoride,  $\text{MoF}_7$ .**

Decomp. by a little  $\text{H}_2\text{O}$  with separation of blue oxide. Sol. in large amount of  $\text{H}_2\text{O}$  forming a colorless solution.

Absorbed by alkalis and  $\text{NH}_4\text{OH} + \text{Aq}$ . (Ruff, B. 1907, 40. 2930.)

**Molybdenum fluoride with  $\text{MF}$ .**

See Fluomolybdate, M.

**Molybdenum potassium trifluoride (?).**

Precipitate. Sol. in  $\text{HCl} + \text{Aq}$ .

**Molybdenum potassium tetrafluoride (?).**

Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Molybdenum sesquihydroxide,  $\text{Mo}_2\text{O}_5\text{H}_5$ .**

Difficultly sol. in acids. Insol. in  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{NH}_4\text{OH}$ , or  $\text{K}_2\text{CO}_3 + \text{Aq}$ . Somewhat sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , but pptd. on boiling. (Berzelius.)

**Molybdenum hydroxide,  $\text{Mo}_2\text{O}_5 \cdot 5\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{CaCl}_2$ ,  $\text{NH}_4\text{Cl}$ , or  $\text{NaCl} + \text{Aq}$ . Sl. sol. in alcohol. (Berzelius.)

**Molybdenum dihydroxide,  $\text{MoO}_3 \cdot x\text{H}_2\text{O}$ .**

Slowly and not abundantly sol. in  $\text{H}_2\text{O}$ , from which it is precipitated by  $\text{NH}_4\text{Cl}$  and other salts. Gelatinizes by standing in closed vessels or by evaporating on the air. Sol. in the ordinary acids. Insol. in  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$ . Sol. in alkali carbonates  $+ \text{Aq}$ .

**Molybdenum dioxide,  $\text{MoO}_3$ .**

Insol. in  $\text{H}_2\text{O}$  and alcohol. Sl. attacked by cold  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$ . (Guichard, A. ch. 1901, (7) 23. 567.)

Sl. decomp.  $\text{H}_2\text{O}$  at ordinary temp. Slowly sol. in  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$ . (Guichard, C. R. 1896, 123. 822.)

**Molybdenum tetraiodide (?).**

Completely sol. in water. (Berzelius.)

**Molybdenum nitride,  $\text{Mo}_2\text{N}_3$ , and  $\text{Mo}_2\text{N}_4$ .**

(Uhrlaub.)

See Molybdenum amide.

$\text{Mo}_2\text{N}_2$ . (Rosenheim, Z. anorg. 1905, 46. 317.)

**Molybdenum monoxide, MoO.**

Known only as hydroxide (Blomstrand, J. pr. 77. 90.)

**Molybdenum sesquioxide, Mo<sub>2</sub>O<sub>3</sub>**

Insol. in acids or alkalis

See **Molybdenum sesquihydroxide.**

**Molybdenum dioxide, MoO<sub>2</sub>**

Insol. in HCl or HF + Aq. Sl sol in conc. H<sub>2</sub>SO<sub>4</sub>. HNO<sub>3</sub> oxidises to MoO<sub>3</sub>. Not attacked by KOH + Aq. (Ullik, A. 144. 227.)

Sl sol in KHC<sub>4</sub>H<sub>4</sub>O<sub>6</sub> + Aq.

**Molybdenum trioxide, MoO<sub>3</sub>**

Sol in 500 pts. cold, and much less hot H<sub>2</sub>O. (Bucholz)

Sol. in 960 pts. hot H<sub>2</sub>O (Hatchett)

Sol. in 570 pts. cold, and much less hot H<sub>2</sub>O. (Dumas.)

Sol. in acids before ignition. Insol. in acids, but sl. sol. in acid potassium tartarate + Aq after ignition. Sol. in alkalis or alkali carbonates + Aq

Sol. in NH<sub>4</sub>OH + Aq

See also **Molybdic acid.**

Min. *Molybde*. Sol. in HCl + Aq

**Molybdenum oxide, Mo<sub>2</sub>O<sub>3</sub>.**

Sol. in H<sub>2</sub>SO<sub>4</sub> and HCl, only sl. sol. in H<sub>2</sub>SO<sub>4</sub>. (Klasen, B. 1901, 34. 151.)

+ 3H<sub>2</sub>O. Sl sol. in H<sub>2</sub>O (2 g in 1 l.). Insol. in NH<sub>4</sub>Cl + Aq. Insol. in caustic alkalis, somewhat sol. in NH<sub>4</sub>OH. Much more sol. in M<sub>2</sub>CO<sub>3</sub> + Aq and in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> + Aq. (Klasen, B. 1901, 34. 150.)

Mo<sub>2</sub>O<sub>3</sub> + 3H<sub>2</sub>O. (Smith and Oberholtzer, Z. anorg. 1893, 4. 243.)

Mo<sub>2</sub>O<sub>3</sub> + 6H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Bailhache, C. R. 1901, 133. 1212.)

Mo<sub>2</sub>O<sub>3</sub> + 6H<sub>2</sub>O. Very sol. in H<sub>2</sub>O (Guichard, C. R. 1900, 131. 419.)

Mo<sub>2</sub>O<sub>3</sub>. Sol. in H<sub>2</sub>O. (Junius, Z. anorg. 1905, 46. 447.)

Mo<sub>2</sub>O<sub>3</sub> + 21H<sub>2</sub>O = Mo<sub>2</sub>O<sub>3</sub>, 18MoO<sub>3</sub> + 21H<sub>2</sub>O. Easily sol. in H<sub>2</sub>O. Insol. in NH<sub>4</sub>Cl + Aq. (Klasen, B. 1901, 34. 160.)

Mo<sub>2</sub>O<sub>3</sub> + 24H<sub>2</sub>O = Mo<sub>2</sub>O<sub>3</sub>, 24MoO<sub>3</sub> + 24H<sub>2</sub>O. (Klasen, B. 1901, 34. 159.)

3Mo<sub>2</sub>O<sub>3</sub>, 2Mo<sub>2</sub>O<sub>3</sub> + 18H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (B.)

It is probable that the five blue oxides of molybdenum described by Klasen (B. 34, 148, 158) and Bailhache are either the blue oxide Mo<sub>2</sub>O<sub>3</sub>, prepared by the author or mixtures of this compd. with molybdenum trioxide. (Guichard, C. R. 1902, 134. 173.)

Mo<sub>2</sub>O<sub>3</sub>. Not attacked by ammonia, easily oxidised by HNO<sub>3</sub> + Aq. Not attacked by HCl or H<sub>2</sub>SO<sub>4</sub> + Aq. (Wöhler, A. 110. 275.)

Formula is Mo<sub>2</sub>O<sub>3</sub>, according to Wöhler, but Muthmann (A. 238. 108) has shown that correct formula is Mo<sub>2</sub>O<sub>3</sub>.

Not attacked by boiling alkalis, HCl, or dil. H<sub>2</sub>SO<sub>4</sub> + Aq. Sol. in conc. H<sub>2</sub>SO<sub>4</sub> with

subsequent decomp. Sol. in aqua regia, and Cl<sub>2</sub> + Aq. (Muthmann)

Mo<sub>2</sub>O<sub>3</sub>. Sol. in H<sub>2</sub>O. (Muthmann, A. 238. 108.)

Min. *Isaemannite* (?).

+ 5H<sub>2</sub>O. Moderately sol. in H<sub>2</sub>O. (Marchetti, Z. anorg. 1899, 19. 303.)

Mo<sub>2</sub>O<sub>3</sub>. (v. d. Pfordten, B. 15. 1925.)

**Molybdenum trioxide ammonia, MoO<sub>3</sub>, 3NH<sub>3</sub>.**

Unstable in air. Very sol. in H<sub>2</sub>O with evolution of ammonia. (Rosenheim, Z. anorg. 1906, 50. 303.)

3MoO<sub>3</sub>, NH<sub>3</sub> + 1/2 H<sub>2</sub>O. True composition of commercial molybdic acid. (Klasen, B. 1901, 34. 156.)

NH<sub>4</sub>H<sub>2</sub>MoO<sub>4</sub>. Very sl. sol. in cold, easily sol. in hot H<sub>2</sub>O with partial decomp. (Klasen, B. 1901, 34. 156.)

3MoO<sub>3</sub>, 3NH<sub>3</sub> + 7H<sub>2</sub>O = (NH<sub>4</sub>)<sub>3</sub>Mo<sub>3</sub>O<sub>12</sub> + 4H<sub>2</sub>O. True composition of Rammelsberg's 3(NH<sub>4</sub>)<sub>2</sub>MoO<sub>4</sub>, 7MoO<sub>3</sub> + 12H<sub>2</sub>O. (Klasen, B. 1901, 34. 155.)

4MoO<sub>3</sub>, NH<sub>3</sub> + 6H<sub>2</sub>O. Very sl. sol. in cold, very easily sol. in hot H<sub>2</sub>O. An insol. modification with less H<sub>2</sub>O gradually cryst. out. (Mylius, B. 1903, 36. 639.)

4MoO<sub>3</sub>, 2NH<sub>3</sub> + 3H<sub>2</sub>O. (Klasen, B. 1901, 34. 156.)

6MoO<sub>3</sub>, 3NH<sub>3</sub> + 5H<sub>2</sub>O. Very sl. sol. in cold, more easily sol. in hot H<sub>2</sub>O, with partial decomp. (Klasen, B. 1901, 34. 156.)

12MoO<sub>3</sub>, 3NH<sub>3</sub> + 12H<sub>2</sub>O. (Klasen, B. 1901, 34. 158.)

12MoO<sub>3</sub>, 3NH<sub>3</sub>, 12H<sub>2</sub>O + 3MoO<sub>3</sub>, 8H<sub>2</sub>O. Moderately sol. in boiling H<sub>2</sub>O. (Klasen)

15MoO<sub>3</sub>, 3NH<sub>3</sub> + 6H<sub>2</sub>O. Insol. in H<sub>2</sub>O (Klasen)

4MoO<sub>3</sub>, MoO<sub>3</sub>, 2NH<sub>3</sub> + 7H<sub>2</sub>O. Slowly sol. in H<sub>2</sub>O; fairly stable, gradually decomp. by dil. acids (Hofmann, Z. anorg. 1896, 12. 280.)

**Molybdenum trioxide ammonia hydrogen peroxide, 18MoO<sub>3</sub>, 14NH<sub>3</sub>, 3H<sub>2</sub>O<sub>2</sub> + 18H<sub>2</sub>O.**

Sol. in H<sub>2</sub>O. Sp. gr. of sat. solution = 1.486 at 17°. (Baerwald, B. 1884, 17. 1206.)

**Molybdenum oxybromide.**

See **Molybdenyl bromide.**

**Molybdenum oxychloride.**

See **Molybdenyl chloride.**

**Molybdenum oxyfluoride.**

See **Molybdenyl fluoride.**

**Molybdenum oxyfluoride with MF.**

See **Fluoxymolybdate, M, and Fluoxyhypomolybdate, M.**

**Molybdenum phosphide, Mo<sub>2</sub>P<sub>2</sub>.**

Gradually sol. in hot HNO<sub>3</sub> + Aq. (Wöhler and Rautenberz, A. 109. 374.)

**Molybdenum selenide, MoSe<sub>3</sub>.**

Not obtained pure. (Uelsmann, A. 116. 125)

**Molybdenum silicide.**

Sol in HF; only very sl sol in other acids (Warren, C. N. 1898, 78. 319)

MoSi<sub>2</sub> Insol in all min acids; sol. in a warm mixture of HF+HNO<sub>3</sub>. (Defacqz, C. R. 1907, 144. 1425)

Insol in min. acids, sol. in HF+HNO<sub>3</sub>. Unattacked by 10-20% KOH+Aq. Decomp. by fused NaOH. (Honigschmid, M 1907, 28. 1020.)

Not attacked by boiling HNO<sub>3</sub>, aqua regia or HF. (Watts, Trans. Am. Electrochem. Soc. 1906, 9. 106)

Mo<sub>2</sub>Si<sub>3</sub>. (Vigouroux, C. R. 129. 1238.)

**Molybdenum disulphide, MoS<sub>2</sub>.**

Insol in H<sub>2</sub>O. Easily sol in aqua regia Easily oxidised by HNO<sub>3</sub>. Sol in boiling H<sub>2</sub>SO<sub>4</sub>. Sl. attacked by KOH+Aq (Berzelius.)

Min. *Molybdenite*. Sol. in HNO<sub>3</sub>+Aq, with separation of MoO<sub>3</sub>; sol. in aqua regia, very sl sol. in H<sub>2</sub>SO<sub>4</sub>.

**Molybdenum trisulphide, MoS<sub>3</sub>.**

Somewhat sol in H<sub>2</sub>O, especially if hot, but pptd by an acid. Difficultly sol except when boiled with KOH+Aq. Sl. sol. in solutions of alkali sulphides unless heated. (Berzelius.)

Easily sol. in alkali sulphides+Aq; slowly sol. in alkalis or alkali hydrosulphides+Aq (Atterberg, J. B. 1873. 258)

**Molybdenum tetrasulphide, MoS<sub>4</sub>.**

Not decomp. by hot H<sub>2</sub>O or acids

Sl. sol. in cold alkali sulphides+Aq, but easily by boiling. (Berzelius.)

Insol in liquid NH<sub>3</sub>. (Gore, Am Ch J 1898, 20. 828.)

**Molybdenum sesquisulphide, Mo<sub>2</sub>S<sub>3</sub>.**

Insol. in HCl and H<sub>2</sub>SO<sub>4</sub>; sol. in hot conc. HNO<sub>3</sub> and aqua regia (Guschard, C. R. 1900, 130. 138.)

**Molybdenum sulphide with MS.**

See Sulphomolybdate, M.

**Molybdenum sulphochloride, Mo<sub>2</sub>S<sub>2</sub>Cl<sub>2</sub>.**

Insol. in H<sub>2</sub>O and alkalis. Slowly sol. in conc. HNO<sub>3</sub>. (Smith and Oberholtzer, Z anorg. 1894, 5. 67.)

**Molybdenyl monamide, NH<sub>4</sub>MoO<sub>4</sub> or**

(Rosenheim, Z anorg. 1905, 46. 318.)

**Molybdenyl bromide, MoO<sub>2</sub>Br<sub>2</sub>.**

Deliquescent, and sol. in H<sub>2</sub>O with slight evolution of heat.

Mo<sub>2</sub>O<sub>4</sub>Br<sub>2</sub>. Unstable in air (Smith and Oberholtzer, Z anorg. 4. 236)

**Molybdenyl potassium bromide, MoOBr<sub>3</sub>, 2KBr.**

(Weinland, Z anorg 1905, 44. 109.)

MoOBr<sub>3</sub>, KBr+2H<sub>2</sub>O; (Weinland, Z anorg 1905, 44. 110)

**Molybdenyl rubidium bromide, MoOBr<sub>3</sub>, 2RbBr.**

(Weinland, Z. anorg 1905, 44. 108.)

**Molybdenyl chloride, MoO<sub>2</sub>Cl<sub>2</sub>.**

Sol. in H<sub>2</sub>O and alcohol

Abundantly sol. in abs. alcohol. Not very sol. in abs ether (Hampe, Ch. Z. 1888, 12. 23.)

+H<sub>2</sub>O Composition settled by mol. wt. determinations. Dissociates in alcohol and in H<sub>2</sub>O. (Vaudenberghe, Z. anorg. 1895, 10. 52)

Very hygroscopic. Sol. in acetone, ether and alcohol. (Vaudenberghe, l c.)

MoOCl<sub>4</sub>. Deliquescent. Sol in little H<sub>2</sub>O with violent action. More H<sub>2</sub>O decomposes (Puttbach, A. 201. 123.)

Formula is Mo<sub>2</sub>O<sub>3</sub>Cl<sub>3</sub>, according to Blomstrand (J pr. 71. 460)

Mo<sub>2</sub>O<sub>3</sub>Cl<sub>3</sub>. (Puttbach, l c.)

Mo<sub>2</sub>O<sub>3</sub>Cl<sub>3</sub>. Deliquescent. Sol. in H<sub>2</sub>O with very slight evolution of heat and subsequent formation of precipitate. (Blomstrand)

Sol. in acids (Puttbach, A. 201. 129.)

Mo<sub>2</sub>O<sub>3</sub>Cl<sub>3</sub>. Deliquescent, and sol. in H<sub>2</sub>O. (Blomstrand.)

Mo<sub>2</sub>O<sub>3</sub>Cl<sub>3</sub>. Insol. in HCl and cold H<sub>2</sub>SO<sub>4</sub>.

Sol. in hot H<sub>2</sub>SO<sub>4</sub> and HNO<sub>3</sub>. (Puttbach, A. 201. 123.)

Mo<sub>2</sub>O<sub>3</sub>Cl<sub>3</sub>. Difficultly sol. in HCl. Easily sol. in HNO<sub>3</sub> and alkalis+Aq. (Puttbach)

**Molybdenyl potassium chloride, MoO<sub>2</sub>Cl<sub>2</sub>, KCl+H<sub>2</sub>O.**

(Weinland, Z. anorg 1905, 44. 97)

+2H<sub>2</sub>O. (Weinland, Z anorg 1905, 44. 96)

6MoO<sub>2</sub>Cl<sub>2</sub>, 2KCl+6H<sub>2</sub>O. (Weinland, Z. anorg. 1905, 44. 97.)

MoOCl<sub>3</sub>, 2KCl+2H<sub>2</sub>O. Sol. in H<sub>2</sub>O (Nordenskjöld, B. 1901, 34. 1573)

Ppt (Henderson, Proc. Chem Soc. 1908, 19. 245.)

**Molybdenyl rubidium chloride, MoO<sub>2</sub>Cl<sub>2</sub>, RbCl+H<sub>2</sub>O.**

MoO<sub>2</sub>Cl<sub>2</sub>, 2RbCl. (Weinland, Z. anorg. 1905, 44. 95.)

MoOCl<sub>3</sub>, 2RbCl. Sl. sol. in H<sub>2</sub>O. Less sol. than K salt (Nordenskjöld, B. 1901, 34. 1573.)

**Molybdenyl fluoride,  $\text{MoO}_2\text{F}_2$ .**

Decomp. rapidly in moist air. (Schulze, J. pr. (2) 21. 442.)

Very hygroscopic. Sol. in a little  $\text{H}_2\text{O}$  giving a blue solution, in more  $\text{H}_2\text{O}$  giving a colorless solution.

Sol. in  $\text{AsCl}_3$ ,  $\text{SiCl}_4$ ,  $\text{SO}_2\text{Cl}_2$  and  $\text{PCl}_3$ . On warming these solutions, gas is evolved.

Insol. in toluene. Nearly insol. in ether,  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , and  $\text{CS}_2$ . Sol. in warm pyridine and in ethyl and methyl alcohol (Ruff, B 1907, 40. 2934.)

$\text{MoOF}_4$ . Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$  and conc.  $\text{H}_2\text{SO}_4$ . Decomp. by alcohol. Sol. in ether and  $\text{CHCl}_3$  with evolution of gas. Insol. in toluene. Very sl. sol. in benzene and  $\text{CS}_2$  (Ruff, B 1907, 40. 2932.)

$\text{Mo}_2\text{O}_3\text{F}_4$ . Deliquescent. Easily sol. in  $\text{HF}$  + Aq, not in  $\text{H}_2\text{O}$ . (Smith and Oberholtzer)

**Molybdenyl fluoride with MF.**

See Fluoxymolybdate, M, and Fluoxyhypomolybdate, M.

**Molybdenyl hydroxide,  $\text{MoO}(\text{OH})_2$** 

2 g. are sol. in 1000 cc.  $\text{H}_2\text{O}$ ; insol. in  $\text{H}_2\text{O}$  +  $\text{NH}_4\text{Cl}$ ; only sl. sol. in  $\text{NH}_4\text{OH}$  and alkali carbonates + Aq. (Klason, B 1901, 34. 151.)

**Molybdic acid,  $\text{H}_2\text{MoO}_4$ .**

(Ullik, A. 144. 217.)

Nearly insol. in  $\text{H}_2\text{O}$ . (Vivier, C. R. 106. 601.)

Very sparingly sol. in cold  $\text{H}_2\text{O}$ , more sol. in hot  $\text{H}_2\text{O}$ . (Rosenheim and Berthelm, Z anorg. 1903, 34. 435.)

 **$\alpha$ -modification**

Solubility of  $\text{MoO}_3$ ,  $\text{H}_2\text{O}$  ( $\alpha$ -modification) in  $\text{H}_2\text{O}$  at  $t^\circ$ .

1000 g.  $\text{H}_2\text{O}$  dissolve g.  $\text{MoO}_3$ .

$t^\circ$	G. $\text{MoO}_3$	$t^\circ$	G. $\text{MoO}_3$
14.8	2.117	42.0	3.446
15.2	2.131	45.0	3.661
24.6	2.619	52.0	4.184
25.6	2.689	60.0	4.685
30.3	2.973	70.0	4.231
36.0	3.085	80.0	5.212
36.8	3.295		..

(Rosenheim and Davidsohn, Z anorg. 1903, 37. 318.)

( $\beta$  modification),  $\text{MoO}_3$ ,  $\text{H}_2\text{O}$ . From  $\text{MoO}_3$ ,  $2\text{H}_2\text{O}$  at  $60^\circ$ – $70^\circ$ . (Rosenheim and Davidsohn.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Easily sol. in  $\text{H}_2\text{SO}_4$ . (Ruegenberg and Smith, J. Am. Chem. Soc. 1900, 22. 772.)

$\text{H}_2\text{MoO}_4$ . Sol. in  $\text{H}_2\text{O}$  and acids. (Millingk.)

Very sol. in  $\text{H}_2\text{O}$ . (Mylus, B 1903, 36. 638.)

Solubility of  $\text{MoO}_3$ ,  $2\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$ .

1000 g.  $\text{H}_2\text{O}$  dissolve g.  $\text{MoO}_3$  at  $t^\circ$ .

$t^\circ$	G. $\text{MoO}_3$	$t^\circ$	G. $\text{MoO}_3$
18	1.066	59	11.258
23	1.856	60	12.057
30	2.638	66	17.274
40	4.761	70	20.550
48	6.360	74.4	20.904
50.2	6.873	75	20.920
54	7.855	79	21.064

(Rosenheim and Berthelm, Z. anorg. 1903, 34. 430.)

Solubility of  $\text{MoO}_3$ ,  $2\text{H}_2\text{O}$  in ammonium salts + Aq at  $t^\circ$ .

1000 g. of the solvent dissolve g.  $\text{MoO}_3$ .

Solvent	$t^\circ$	G. $\text{MoO}_3$
10% $(\text{NH}_4)_2\text{SO}_4$	29.6	19.27
10% $\text{NH}_4\text{HSO}_4$	31.5	27.53
"	41.8	34.36
"	49.7	37.69

(Rosenheim and Davidsohn, Z. anorg. 1903, 37. 315.)

$\text{H}_2\text{MoO}_4$  (?). Known only in solution.

$\text{H}_2\text{MoO}_7$ . Easily sol. in  $\text{H}_2\text{O}$ . (Ullik.)

$\text{H}_2\text{MoO}_{13}$ . Easily sol. in  $\text{H}_2\text{O}$ . (U)

$\text{H}_2\text{MoO}_{16}$ . Easily sol. in  $\text{H}_2\text{O}$ . (U)

Molybdic acid also exists in a colloidal modification, sol. in  $\text{H}_2\text{O}$ . (Graham, C. R. 59. 174.)

**Molybdates.**

The normal molybdates of the alkali metals are easily sol. in  $\text{H}_2\text{O}$ , while the others are sl. sol or insol. therein.

The trimolybdates are sl. sol. in cold, but very easily sol. in hot  $\text{H}_2\text{O}$ .

The tetramolybdates are easily sol. in  $\text{H}_2\text{O}$ .

**Aluminum molybdate,  $\text{Al}_3(\text{MoO}_4)_3$ .**

Precipitate. (Gentile, J. pr. 81. 414.)

Contains aluminum hydroxide and sulphate. (Struve, J. pr. 61. 441.)

**Aluminum ammonium molybdate.**

See Aluminicomolybdate, ammonium.

**Aluminum barium molybdate.**

See Aluminicomolybdate, barium.

**Ammonium molybdate,  $(\text{NH}_4)_2\text{MoO}_4$ .**

Efflorescent through loss of  $\text{NH}_3$ ; decomp. by  $\text{H}_2\text{O}$  into acid salt. (Svanberg and Struve.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 826.)

$(\text{NH}_4)_2\text{Mo}_2\text{O}_7$ . Sol. in  $\text{H}_2\text{O}$   
 $+\text{H}_2\text{O}=\text{NH}_4\text{HMoO}_4$ . Sol. in  $\text{H}_2\text{O}$ . Sol.  
 in 2-3 pts  $\text{H}_2\text{O}$  (Brandes, Mauro, Gazz  
 ch. it. 18. 120)

$(\text{NH}_4)_3\text{Mo}_2\text{O}_7+4\text{H}_2\text{O}$ . (Commercial ammonium molybdate)  
 Not efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Delafontaine, N. Arch. Sc. ph. nat. 23. 17.)

According to Struve and Berlin=  
 $(\text{NH}_4)_4\text{Mo}_2\text{O}_{17}+3\text{H}_2\text{O}$   
 According to Margnac and Delfs=  
 $(\text{NH}_4)_4\text{HMoO}_4$ . The true composition of  
 commercial ammonium molybdate is  
 $(\text{NH}_4)_{10}\text{Mo}_{12}\text{O}_{41}$ . (Junius, Z. anorg 1905,  
 46. 428)

$+12\text{H}_2\text{O}$ . More sol. than the above.  
 (Rammelsberg, Pogg. 127. 298)  
 Insol in acetone. (Krug and M'Elroy, J  
 Anal. Appl. Ch. 6. 184)

$(\text{NH}_4)_{10}\text{Mo}_{12}\text{O}_{41}$ . True formula for commercial ammonium molybdate (Sand and  
 Eisenlohr, Z. anorg 1907, 52. 68)

$+7\text{H}_2\text{O}$  (Junius, Z. anorg. 1905, 46. 428.)  
 $(\text{NH}_4)_3\text{Mo}_2\text{O}_{11}+\text{H}_2\text{O}$  (Jean, C. R. 78.  
 436.)

$(\text{NH}_4)_3\text{Mo}_2\text{O}_{11}+\text{H}_2\text{O}$  Very difficultly sol.  
 in cold, easily sol in hot  $\text{H}_2\text{O}$  (Berlin, J. pr.  
 49. 445.)

Easily sol in  $\text{NH}_4\text{OH}+\text{Aq.}$  (Kammerer,  
 J. pr. (2) 8. 358.)

$(\text{NH}_4)_2\text{O}$ ,  $4\text{MoO}_3$ . Practically insol. in  
 cold, sl sol in hot  $\text{H}_2\text{O}$ . (Westphal, Dissert.  
 1895.)

$+2\text{H}_2\text{O}$ . Very difficultly sol in cold,  
 rather easily sol. in hot  $\text{H}_2\text{O}$ . (Berlin)  
 100 cc.  $\text{H}_2\text{O}$  dissolve 3.5200 g. at  $15^\circ$ ; sp  
 gr.=1.03, 3.6711 g. at  $18^\circ$ , sp gr=1.04;  
 4.5961 g at  $32^\circ$ ; sp gr.=1.05 (Wempe, Z.  
 anorg. 1912, 78. 258.)

$+2\frac{1}{2}\text{H}_2\text{O}$ . (Junius, Z. anorg. 1905, 46.  
 440.)

$(\text{NH}_4)_2\text{O}$ ,  $8\text{MoO}_3+13\text{H}_2\text{O}$ . (Rosenheim,  
 Z. anorg. 1897, 15. 188.)

$(\text{NH}_4)_2\text{O}$ ,  $9\text{MoO}_3+17\text{H}_2\text{O}$ . (Westphal,  
 Dissert. 1895.)

See also Molybdenum trioxide ammonia.

**Ammonium barium molybdate,**  
 $3(\text{NH}_4)_2\text{O}$ ,  $3\text{BaO}$ ,  $14\text{MoO}_3+12\text{H}_2\text{O}$ .  
 (Westphal, Dissert. 1895.)

**Ammonium bismuth molybdate,**  
 $\text{NH}_4\text{Bi}(\text{MoO}_4)_3$ .  
 (Riederer, J. Am. Chem. Soc. 1903, 25.  
 914.)

**Ammonium cadmium molybdate ammonia,**  
 $(\text{NH}_4)_2\text{Cd}(\text{MoO}_4)_2$ ,  $2\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ .  
 Sol. in dil  $\text{NH}_4\text{OH}+\text{Aq.}$  (Briggs, Chem.  
 Soc. 1904, 85. 674)

**Ammonium cerium molybdate,**  
 $(\text{NH}_4)_4\text{CeMo}_{14}\text{O}_{46}+24\text{H}_2\text{O}$   
 Sol. in  $\text{H}_2\text{O}$ . (Barbieri, C. A. 1909. 293)

**Ammonium chromic molybdate.**

See Chromomolybdate, ammonium.

**Ammonium cobaltous molybdate,**  
 $3(\text{NH}_4)_2\text{O}$ ,  $7\text{MoO}_3$ ,  $3\text{CoO}$ ,  $7\text{MoO}_3+1\text{H}_2\text{O}$   
 $5[3(\text{NH}_4)_2\text{O}$ ,  $7\text{MoO}_3]$ ,  $7[3\text{CoO}$ ,  $7\text{MoO}_3]+$   
 $x\text{H}_2\text{O}$   
 $2[3(\text{NH}_4)_2\text{O}$ ,  $7\text{MoO}_3]$ ,  $3[3\text{CoO}$ ,  $7\text{MoO}_3]+$   
 $x\text{H}_2\text{O}$   
 $3[3(\text{NH}_4)_2\text{O}$ ,  $7\text{MoO}_3]$ ,  $5[3\text{CoO}$ ,  $7\text{MoO}_3]+$   
 $x\text{H}_2\text{O}$ .  
 $3(\text{NH}_4)_2\text{O}$ ,  $7\text{MoO}_3$ ,  $5[3\text{CoO}$ ,  $7\text{MoO}_3]+$   
 $x\text{H}_2\text{O}$ .  
 $9[2(\text{NH}_4)_2\text{O}$ ,  $5\text{MoO}_3]$ ,  $5[2\text{CoO}$ ,  $5\text{MoO}_3]+$   
 $118\text{H}_2\text{O}$   
 $4(\text{NH}_4)_2\text{O}$ ,  $2\text{CoO}$ ,  $15\text{MoO}_3+20\text{H}_2\text{O}$ .  
 (Marckwald, Dissert 1895.)

**Ammonium cobaltous molybdate ammonia,**  
 $(\text{NH}_4)_2\text{Co}(\text{MoO}_4)_2$ ,  $2\text{NH}_3$

Decomp by  $\text{H}_2\text{O}$   
 Sol. in dil  $\text{NH}_4\text{OH}+\text{Aq.}$  (Briggs, Chem.  
 Soc. 1904, 85. 674.)

**Ammonium cobaltic molybdate.**

See Cobaltimolybdate, ammonium.

**Ammonium cupric molybdate,**  $(\text{NH}_4)_2\text{O}$ ,  $\text{CuO}$ ,  
 $5\text{MoO}_3+9\text{H}_2\text{O}$

Sl. sol. in cold, sol. in boiling  $\text{H}_2\text{O}$  without  
 decomp (Struve.)

**Ammonium cupric molybdate ammonia,**

$(\text{NH}_4)_2\text{Cu}(\text{MoO}_4)_2$ ,  $2\text{NH}_3$   
 Sol in dil  $\text{NH}_4\text{OH}+\text{Aq.}$   
 Decomp. by  $\text{H}_2\text{O}$ . (Briggs, Chem. Soc.  
 1904, 85. 673.)

**Ammonium ferric molybdate,**  $3(\text{NH}_4)_2\text{Mo}_2\text{O}_7$ ,  
 $\text{Fe}_2(\text{MoO}_4)_3+20\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Struve.)  
 See also Ferricomolybdate, ammonium.

**Ammonium lanthanum molybdate,**  
 $(\text{NH}_4)_2\text{La}_2\text{Mo}_{14}\text{O}_{48}+24\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Barbieri, C. A. 1909. 293.)

**Ammonium lithium molybdate,**  $\text{NH}_4\text{LiMoO}_4$ ,  
 $+\text{H}_2\text{O}$ .  
 (Traube, N. Jahrb Miner 1894, I. 194.)

**Ammonium magnesium molybdate,**  $(\text{NH}_4)_2\text{O}$ ,  
 $\text{MgO}$ ,  $2\text{MoO}_3+2\text{H}_2\text{O}=(\text{NH}_4)_2\text{MgO}_4$ ,  
 $\text{MgMoO}_4+2\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$  (Ullik, A. 144. 344.)

**Ammonium manganous molybdate,**  
 $2(\text{NH}_4)_2\text{O}$ ,  $\text{MnO}$ ,  $3\text{MoO}_3+5\text{H}_2\text{O}$ .  
 Decomp. by boiling  $\text{H}_2\text{O}$ . (Marckwald,  
 Dissert. 1895.)

$(\text{NH}_4)_2\text{O}$ ,  $2\text{MnO}$ ,  $6\text{MoO}_3+16\text{H}_2\text{O}$ .  
 Decomp by boiling  $\text{H}_2\text{O}$ . (Marckwald, Dissert.  
 1895.)

$(\text{NH}_4)_2\text{O}$ ,  $3\text{MnO}$ ,  $6\text{MoO}_3 + 16\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . (Marckwald, Dissert. 1896.)

$3(\text{NH}_4)_2\text{O}$ ,  $2\text{MnO}$ ,  $12\text{MoO}_3 + 22\text{H}_2\text{O}$ . (Marckwald, Dissert. 1896.)

**Ammonium manganic molybdate.**

See Permanganomolybdate ammonium.

**Ammonium mercuric molybdate.**

Sol. in  $\text{HCl} + \text{Aq}$ . Sol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$ , separating out on cooling. Sol. in hot  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ . (Hürzel.)

**Ammonium molybdenum molybdate,**

$(\text{NH}_4)_2\text{O}$ ,  $2\text{MoO}_3$ ,  $4\text{MoO}_3 + 9\text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$ , but the solution soon becomes cloudy (Rammelsberg, Pogg. 127. 291.)

**Ammonium neodymium molybdate,**

$(\text{NH}_4)_2\text{NdMoO}_4 + 12\text{H}_2\text{O}$ .

Ppt. (Barbieri, C. C. 1911, I. 1043.)

**Ammonium nickel molybdate,**

$(\text{NH}_4)_2\text{O}$ ,  $3\text{NiO}$ ,  $9\text{MoO}_3 + 25\text{H}_2\text{O}$ .

Very sl. sol. in cold, sol. in hot  $\text{H}_2\text{O}$  without decomp. (Marckwald, Dissert. 1895.)

$3(\text{NH}_4)_2\text{O}$ ,  $2\text{NiO}$ ,  $10\text{MoO}_3 + 14\text{H}_2\text{O}$ . Very

sl. sol. in cold, sol. in hot  $\text{H}_2\text{O}$  without decomp. (Marckwald, Dissert. 1895.)

$5(\text{NH}_4)_2\text{O}$ ,  $3\text{NiO}$ ,  $16\text{MoO}_3 + 16\text{H}_2\text{O}$ . (Hall,

J. Am. Chem. Soc. 1907, 29, 702.)

$6(\text{NH}_4)_2\text{O}$ ,  $3\text{NiO}$ ,  $16\text{MoO}_3 + 29\text{H}_2\text{O}$ . Very

sl. sol. in cold, sol. in hot  $\text{H}_2\text{O}$  without decomp. (Marckwald, Dissert. 1895.)

$8(\text{NH}_4)_2\text{O}$ ,  $6\text{NiO}$ ,  $31\text{MoO}_3 + 63\text{H}_2\text{O}$ . Very

sl. sol. in cold, sol. in hot  $\text{H}_2\text{O}$  without decomp. (Marckwald, Dissert. 1895.)

$3(\text{NH}_4)_2\text{O}$ ,  $9\text{NiO}$ ,  $34\text{MoO}_3 + 120\text{H}_2\text{O}$ . Very

sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$  without decomp. (Marckwald, Dissert. 1895.)

**Ammonium nickelic molybdate.**

See Nickelmolybdate, ammonium.

**Ammonium nickel hydrogen molybdate,**

$(\text{NH}_4)_4\text{H}_2(\text{Ni}(\text{MoO}_4)_2) + 5\text{H}_2\text{O}$

See Nickelmolybdate, ammonium hydrogen.

**Ammonium praseodymium molybdate,**

$(\text{NH}_4)_2\text{PrMoO}_4 + 12\text{H}_2\text{O}$

Ppt. (Barbieri, C. A. 1911. 1884.)

**Ammonium samarium molybdate,**

$(\text{NH}_4)_2\text{SmMoO}_4 + 12\text{H}_2\text{O}$ .

Ppt. (Barbieri, C. A. 1911. 1884.)

**Ammonium sodium molybdate,**  $7(\text{NH}_4)_2\text{O}$ ,

$2\text{Na}_2\text{O}$ ,  $21\text{MoO}_3 + 15\text{H}_2\text{O}$  (?).

Easily sol. in  $\text{H}_2\text{O}$ . (Delafontaine, J. pr. 95. 136.)

$7(\text{NH}_4)_2\text{O}$ ,  $3\text{Na}_2\text{O}$ ,  $25\text{MoO}_3 + 30\text{H}_2\text{O}$  (?).

(Delafontaine.)

$(\text{NH}_4, \text{Na})_2\text{O}$ ,  $3\text{MoO}_3 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Mauno, Gazz. ch. it. 11. 214.)

**Ammonium thorium molybdate.**

See Thoromolybdate, ammonium.

**Ammonium titanium molybdate.**

See Titanomolybdate, ammonium.

**Ammonium vanadium molybdate.**

See Vanadiomolybdate, ammonium.

**Ammonium zinc molybdate.**

Sol. in  $\text{H}_2\text{O}$ . (Bezelius.)

**Ammonium zirconium molybdate.**

See Zirconomolybdate, ammonium.

**Ammonium molybdate hydrogen dioxide,**

$18\text{MoO}_3$ ,  $7(\text{NH}_4)_2\text{O}$ ,  $3\text{H}_2\text{O}_2 + 11\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Barwald, B. 17. 1206.)

**Barium molybdate, basic,**  $2\text{BaO}$ ,  $\text{MoO}_3 + \text{H}_2\text{O}$  (?).

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl} + \text{Aq}$  or  $\text{HNO}_3 + \text{Aq}$ . (Heine, J. pr. 9. 204.)

**Barium molybdate,  $\text{BaMoO}_4$ .**

Difficultly sol. in  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HCl}$ , and  $\text{HNO}_3 + \text{Aq}$ . (Svanberg and Struve.)

Sol. in 17,200 pts  $\text{H}_2\text{O}$  at  $23^\circ$ . More sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq}$  than in  $\text{H}_2\text{O}$ . (Smith and Bradbury, B. 24. 2930.)

$+ 3\text{H}_2\text{O}$  (Westphal, Dissert. 1895.)

$\text{BaMo}_2\text{O}_{10} + 3\text{H}_2\text{O}$ . Sl sol. in  $\text{H}_2\text{O}$ .

$\text{Ba}_2\text{MoO}_4 + 9\text{H}_2\text{O}$ . Appreciably sol. in  $\text{H}_2\text{O}$ . (Jorgensen.)

According to Svanberg and Struve =  $\text{Ba}_2\text{Mo}_2\text{O}_7 + 6\text{H}_2\text{O}$ .

$+ 12\text{H}_2\text{O}$  or  $5\text{BaO}$ ,  $12\text{MoO}_3 + 20\text{H}_2\text{O}$ .

(Junius, Z. anorg. 1905, 46. 433.)

$+ 22\text{H}_2\text{O}$  Ppt. (Westphal, Dissert.

1895.)

$\text{BaO}$ ,  $4\text{MoO}_3 + 3\frac{1}{2}\text{H}_2\text{O}$ . Ppt. (Wempe, Z. anorg. 1912, 78. 320.)

$+ 12\text{H}_2\text{O}$ . Ppt. (Rosenheim, Z. anorg. 1913, 79. 299.)

$\text{BaMo}_2\text{O}_{10} + 4\text{H}_2\text{O}$ . Insol. in cold or hot  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$ . Extremely slightly decomp. by  $\text{H}_2\text{SO}_4$  or  $\text{H}_2\text{SO}_4 + \text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ . (Svanberg and Struve.)

**Barium paramolybdate,**  $5\text{BaO}$ ,  $12\text{MoO}_3 + 10\text{H}_2\text{O}$

Ppt. Sol. in excess of  $\text{BaCl}_2 + \text{Aq}$ . (Junius, Z. anorg. 1905, 46. 433.)

**Barium tetramolybdate,**  $\text{BaH}_2(\text{Mo}_4\text{O}_{12})_2 + 17\text{H}_2\text{O}$ .

Insol. in cold, apparently decomp. by hot  $\text{H}_2\text{O}$ , a small part dissolving, and the rest forming an insol. residuc. (Ullik, A. 144. 336.)

+14H<sub>2</sub>O. Insol. in cold and hot H<sub>2</sub>O. (Wempe, Z. anorg. 1912, 78. 320.)  
BaO, 8MoO<sub>3</sub>+17H<sub>2</sub>O. (Felix, Dissert 1912.)

Barium chromic molybdate.

See Chromicomolybdate, barium.

Barium cobaltic molybdate.

See Cobaltimolybdate, barium.

Barium manganic molybdate.

See Permanganomolybdate, barium.

Barium nickelic molybdate.

See Nickelimolybdate, barium.

Barium nickel hydrogen molybdate,

Ba<sub>2</sub>H<sub>4</sub>Ni(MoO<sub>4</sub>)<sub>3</sub>+10H<sub>2</sub>O.

See Nickelomolybdate, barium hydrogen.

Barium vanadium molybdate.

See Vanadiomolybdate, barium.

Barium molybdate hydrogen dioxide, 8BaO,  
19MoO<sub>3</sub>, 2H<sub>2</sub>O<sub>2</sub>+13H<sub>2</sub>O.

Precipitate. (Barwald.)

Bismuth molybdate, Bi<sub>2</sub>O<sub>3</sub>, 3MoO<sub>3</sub>.

Somewhat sol. in H<sub>2</sub>O. Sol in 500 pts. H<sub>2</sub>O and in the stronger acids (Richter.)

Bromomolybdenum molybdate.

See under Bromomolybdenum comps.

Cadmium molybdate, CdMoO<sub>4</sub>.

Insol. in H<sub>2</sub>O; sol. in NH<sub>4</sub>OH+Aq, KCN+Aq, or acids (Smith and Bradbury, B. 24. 2380.)

CdO, H<sub>2</sub>O, 8MoO<sub>3</sub>+6H<sub>2</sub>O. Decomp. by boiling with H<sub>2</sub>O. (Wempe, Z. anorg. 1912, 78. 323.)

Cæsium molybdate, Cs<sub>2</sub>O, 3MoO<sub>3</sub>+H<sub>2</sub>O.

(Ephraim and Herschfinkel, Z. anorg 1909, 64. 270.)

Cs<sub>2</sub>O, 5MoO<sub>3</sub>+3H<sub>2</sub>O. (Ephraim and Herschfinkel, Z. anorg. 1909, 64. 270.)

+3½H<sub>2</sub>O. Very sl. sol. in cold, easily sol. in hot H<sub>2</sub>O. (Wempe, Dissert 1911.)

2Cs<sub>2</sub>O, 5MoO<sub>3</sub>+5H<sub>2</sub>O. (Ephraim and Herschfinkel, Z. anorg. 1909, 64. 271.)

3Cs<sub>2</sub>O, 10MoO<sub>3</sub>+3H<sub>2</sub>O. (Ephraim and Herschfinkel, Z. anorg 1909, 64. 271.)

Cs<sub>2</sub>O, 16MoO<sub>3</sub>+8H<sub>2</sub>O. (Ephraim and Herschfinkel, Z. anorg. 1909, 64. 271.)

3Cs<sub>2</sub>O, 10MoO<sub>3</sub>+3H<sub>2</sub>O. (Ephraim and Herschfinkel, Z. anorg. 1909, 64. 271.)

Cæsium tetramolybdate, Cs<sub>2</sub>O, 4MoO<sub>3</sub>.

Only sl. sol. in H<sub>2</sub>O. (Muthmann, B. 1898, 31. 1841.)

+2H<sub>2</sub>O. Sl. sol. in H<sub>2</sub>O. (Muthmann, B. 1898, 31. 1841.)

+3H<sub>2</sub>O. Easily sol. in cold or hot H<sub>2</sub>O. (Wempe, Z. anorg. 1912, 78. 317.)

+5H<sub>2</sub>O. Very sol. in cold and hot H<sub>2</sub>O. (Wempe, Dissert 1911.)

Cs<sub>2</sub>O, MoO<sub>3</sub>, Cs<sub>2</sub>O, 3MoO<sub>3</sub>+4.5H<sub>2</sub>O. Sol in H<sub>2</sub>O. (Wempe, Z. anorg. 1912, 78. 317.)

Cæsium paramolybdate, 5Cs<sub>2</sub>O, 12MoO<sub>3</sub>+11H<sub>2</sub>O.

Efflorescent. Easily sol. in H<sub>2</sub>O (Wempe, Z. anorg. 1912, 78. 317.)

Calcium molybdate, CaMoO<sub>4</sub>.

Insol precipitate (Ullik.)

Sl. sol. in H<sub>2</sub>O; insol in alcohol. (Smith and Bradbury, B. 24. 2930.)

+H<sub>2</sub>O. (Westphal, Dissert. 1895.)

+2H<sub>2</sub>O. (Westphal, Dissert. 1895.)

+6H<sub>2</sub>O. Difficultly sol. in cold, easily in hot H<sub>2</sub>O. (Ullik, A. 144. 231.)

CaMo<sub>4</sub>O<sub>12</sub>+9H<sub>2</sub>O. Easily sol. in cold H<sub>2</sub>O.

CaO, 2H<sub>2</sub>O, 12MoO<sub>3</sub>+21H<sub>2</sub>O. Efflorescent. Sl. sol. in cold, easily sol. in hot H<sub>2</sub>O. (Wempe.)

Calcium hydrogen tetramolybdate,

CaH<sub>2</sub>(Mo<sub>4</sub>O<sub>12</sub>)<sub>2</sub>+17H<sub>2</sub>O.

Sl. sol. in cold, easily sol. in hot H<sub>2</sub>O with decomp (Ullik.)

+16H<sub>2</sub>O. Insol. in cold, difficultly sol. in hot H<sub>2</sub>O (Wempe, Z. anorg. 1912, 78. 318.)

Cerium molybdate, Ce<sub>2</sub>(MoO<sub>4</sub>)<sub>3</sub>.

Precipitate. Insol. in H<sub>2</sub>O, sol. in acids. (Cossa, B. 19. 536 R.)

Chromic molybdate.

Insol. in H<sub>2</sub>O, but sol. in acids. Sol in NH<sub>4</sub> molybdate+Aq (Berzelius.)

See also Chromicomolybdic acid.

Chromic molybdate, with M. molybdate.

See Chromicomolybdate. M.

Cobaltous molybdate, CoMoO<sub>4</sub>.

Decomp by alkalis and strong acids. (Berzelius.)

+H<sub>2</sub>O. Sl. sol. in pure, easily sol. in acidified H<sub>2</sub>O. (Coloriano, Bull. Soc. (2) 50. 451.)

CoO, 2MoO<sub>3</sub>+2H<sub>2</sub>O. (Marekwald, Dissert. 1895.)

6½H<sub>2</sub>O. Sl. sol. in H<sub>2</sub>O. (Marekwald.)

CoMo<sub>2</sub>O<sub>10</sub>+10H<sub>2</sub>O. Very sl. sol. in cold, but very easily sol. in hot H<sub>2</sub>O. (Ullik, W. A. B. 56, 2. 767.)

Cobaltic potassium molybdate.

See Cobaltimolybdate, potassium.

Cobaltous sodium molybdate,

Na<sub>2</sub>O, 2CoO, 6MoO<sub>3</sub>+18H<sub>2</sub>O.

(Marekwald, Dissert. 1895.)

2Na<sub>2</sub>O, CoO, 7MoO<sub>3</sub>+20H<sub>2</sub>O. Sol. in cold H<sub>2</sub>O without decomp. Decomp. on heating. (Marekwald.)

$3\text{Na}_2\text{O}$ ,  $2\text{CuO}$ ,  $12\text{MoO}_3 + 27\text{H}_2\text{O}$ . (Marek-wald.)

$3\text{Na}_2\text{O}$ ,  $3\text{CuO}$ ,  $14\text{MoO}_3 + 50\text{H}_2\text{O}$ . Sol in much cold  $\text{H}_2\text{O}$ . (Marek-wald.)

$4\text{Na}_2\text{O}$ ,  $6\text{CuO}$ ,  $25\text{MoO}_3 + 68\text{H}_2\text{O}$ . (Marek-wald.)

**Cobaltous molybdate ammonia**,  $\text{CoMoO}_4 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Sonnenschein, J. pr. 53. 340.)

**Cupric molybdate, basic**,  $4\text{CuO}$ ,  $3\text{MoO}_3 + 5\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Struve, J. B. 1854. 350.)

**Cupric molybdate**,  $\text{CuMoO}_4$

Sl. sol. in  $\text{H}_2\text{O}$ ; decomp. by acids and alkaline solutions.

$\text{CuMoO}_3 \cdot 6\frac{1}{2}\text{H}_2\text{O}$ . Easily sol. in cold  $\text{H}_2\text{O}$ . (Ullik, A. 144. 233.)

$+5\text{H}_2\text{O}$ . Very sl. sol. in cold, and extraordinarily easily sol. in hot  $\text{H}_2\text{O}$  (Ullik)

**Cupric molybdate ammonia**,

$\text{CuMoO}_4 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$ .

Gives off  $\text{NH}_3$  at ord temp. Decomp. by  $\text{H}_2\text{O}$ .

Sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq}$  from which it can be cryst. (Briggs, Chem. Soc. 1904, 85. 674.)

$\text{CuMoO}_4 \cdot 4\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{NH}_4\text{OH} + \text{Aq}$  (Jorgensen, Ch. Z. Repeat. 1890, 20. 225.)

**Didymium molybdate**,  $\text{Dy}_2(\text{MoO}_4)_3$ .

Ppt. Insol. in  $\text{H}_2\text{O}$ . (Cossa, B. 19. 536R.)

$\text{Dy}_2\text{O}_3$ ,  $6\text{MoO}_3 + 3\text{H}_2\text{O}$  (?) Precipitate. (Smith)

**Glucinum molybdate, basic**,  $2\text{GfO}$ ,  $\text{MoO}_3 + 3\text{H}_2\text{O}$

Nearly insol. in  $\text{H}_2\text{O}$ . (Atterberg, J. B. 1873. 258.)

**Glucinum molybdate**,  $\text{GfO}$ ,  $\text{MoO}_3 + 2\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  with decomp. (Rosenheim, Z. anorg. 1897, 15. 307.)

$\text{GfMoO}_4$ ,  $\text{MoO}_3 + \frac{1}{2}\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Atterberg.)

**Gold (auric) molybdate** (?).

Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ , and  $\text{HNO}_3 + \text{Aq}$ . (Richter.)

**Hydroxylamine potassium molybdate**.

$\text{MoO}_3 \cdot \text{H}_2(\text{NH}_2\text{O})_2(\text{NH}_2\text{OK})$ .

Easily sol. in  $\text{H}_2\text{O}$ ; pptd. by alcohol. (Hofmann, A. 1899, 309. 324.)

**Indium molybdate**,  $\text{In}_2(\text{MoO}_4)_3 + 2\text{H}_2\text{O}$ .

Ppt. Insol. in  $\text{H}_2\text{O}$ .

Easily sol. in  $\text{HCl}$ . (Renz, B. 1901, 34. 2765.)

**Iron (ferrous) molybdate**,  $\text{FeMoO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Schulze, A. 126. 55.)

**Iron (ferric) molybdate**,  $\text{Fe}_2\text{O}_3$ ,  $4\text{MoO}_3 + 7\text{H}_2\text{O}$ .

Nearly insol. in  $\text{H}_2\text{O}$ . Slowly sol. in cold, easily in hot  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . Dil. acids gradually dissolve out  $\text{Fe}_2\text{O}_3$  in the cold. When ignited, difficultly sol. in all solvents. (Stenacker.)

$\text{Fe}_2\text{O}_3$ ,  $5\text{MoO}_3 + 16\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$ . (Struve, J. B. 1854. 346.)

$2\text{Fe}_2\text{O}_3$ ,  $7\text{MoO}_3 + 34\text{H}_2\text{O}$ . Ppt. (Hall, J. Am. Chem. Soc. 1907, 29. 704.)

**Ferric potassium molybdate**,  $\text{Fe}_2\text{O}_3$ ,  $3\text{K}_2\text{O}$ ,  $12\text{MoO}_3 + 20\text{H}_2\text{O} = 3\text{K}_2\text{Mo}_2\text{O}_7$ ,

$\text{Fe}_2(\text{Mo}_2\text{O}_7)_3 + 20\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Struve)

**Lanthanum molybdate**,  $\text{La}_2\text{H}_3(\text{MoO}_4)_3 = \text{La}_2\text{O}_3$ ,  $\text{MoO}_3 + 3\text{H}_2\text{O}$ . (?)

Precipitate. (Smith)

**Lead molybdate**,  $\text{PbMoO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in warm  $\text{HNO}_3 + \text{Aq}$ ; decomp. by  $\text{H}_2\text{SO}_4$ ; sol. in conc.  $\text{HCl} + \text{Aq}$ , or  $\text{KOH} + \text{Aq}$ .

Min. *Wulfenite*. As above.

**Lithium molybdate**,  $\text{Li}_2\text{MoO}_4$ .

Moderately sol. in cold, and only sl. more sol. in hot  $\text{H}_2\text{O}$  (Ephraim, Z. anorg. 1909, 64. 250.)

$+ \frac{1}{2}\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ .

$5\text{Li}_2\text{O}$ ,  $5\text{MoO}_3 + 2\text{H}_2\text{O}$ . 46.13 g. are present in 100 ccm. of the aqueous solution at  $20^\circ$ , and sp. gr. of the solution = 1.44. (Wempe, Z. anorg. 1912, 78. 309.)

$\text{Li}_2\text{O}$ ,  $2\text{MoO}_3 + 5\text{H}_2\text{O}$ . Sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1909, 64. 258.)

$\text{Li}_2\text{O}$ ,  $3\text{MoO}_3 + \text{H}_2\text{O}$ . Easily sol. in warm  $\text{H}_2\text{O}$ . (Wempe, Dissert. 1911.)

$+4\text{H}_2\text{O}$ . (Wempe.)

$+4\frac{1}{2}\text{H}_2\text{O}$ . (Wempe.)

$+7\text{H}_2\text{O}$ . Nearly insol. in cold, sol. in hot  $\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1909, 64. 258.)

$3\text{Li}_2\text{O}$ ,  $3\text{MoO}_3$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1909, 64. 258.)

**Lithium paramolybdate**,  $3\text{Li}_2\text{O}$ ,  $7\text{MoO}_3 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1897, 15. 181.)

$+28\text{H}_2\text{O}$ . Easily sol. in cold and hot  $\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1909, 64. 258.)

**Lithium tetramolybdate**,  $\text{Li}_2\text{O}$ ,  $4\text{MoO}_3 + 7\text{H}_2\text{O}$ .

Sol. in cold  $\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1909, 64. 258.)

$\text{Li}_2\text{O}$ ,  $\text{H}_2\text{O}$ ,  $8\text{MoO}_3 + 10\text{H}_2\text{O}$ . Easily sol.

in hot  $H_2O$ . (Wempe, Z. anorg. 1912, 78. 308.)

$Li_2O$ ,  $3H_2O$ ,  $16MoO_3 + 6\frac{1}{2}H_2O$ . Easily sol. in warm  $H_2O$ . (Wempe, Z. anorg. 1912, 78. 308.)

Lithium potassium molybdate,  $KLiMoO_4 + H_2O$ .

(Traube, N. Jahrb. Miner, 1894, I. 194.)

Magnesium molybdate,  $MgMoO_4$ .

Min. *Belonesia*.

Insol. in  $HCl + Aq$ . (Scacchi, Zert. Kryst. 1888, 14. 523.)

+  $5H_2O$ . Easily sol. in cold, but still more sol. in hot  $H_2O$ . (Delafontaine.)

Sol. in 12-15 pts. cold  $H_2O$ . (Brandes.)

+  $7H_2O$ . Easily sol. in hot or cold  $H_2O$  (Ullik.)

$MgMo_2O_7 + 10H_2O$ . Difficultly sol. in cold, very easily in hot  $H_2O$ . (Ullik.)

Magnesium paramolybdate,  $Mg_3Mo_2O_{14} + 20H_2O$ .

Quite sol. in cold, more easily in hot  $H_2O$  (Ullik.)

Magnesium tetramolybdate,  $MgO$ ,  $H_2O$ ,  $8MoO_3 + 19H_2O$ .

Magnesium hydrogen tetramolybdate,  $MgH_2(Mo_4O_{13})_2 + 19H_2O$

Easily sol. in cold  $H_2O$ . (Ullik, A. 144. 335.)

Sl. sol. in cold, easily sol. in hot  $H_2O$ . (Wempe, Dissert. 1911.)

+  $20H_2O$ . Ppt. (Wempe, Z. anorg. 1912, 78. 323.)

Magnesium hydrogen octamolybdate,  $MgH_2(Mo_8O_{21})_2 + 29H_2O$ .

Very difficultly sol. in cold, very easily sol. in hot  $H_2O$  (Ullik, W. A. B. 60, 2. 314.)

Magnesium potassium molybdate,  $MgMoO_4$ ,  $K_2MoO_4 + 2H_2O$ .

Slowly sol. in cold, easily in hot  $H_2O$ . (Ullik, A. 144. 343.)

Manganous molybdate,  $MnMoO_4 + H_2O$ .

Insol. in  $H_2O$ . Sl. sol. in pure, easily sol. in acidified  $H_2O$ . Decomp. by alkalis or alkali carbonates +  $Aq$ . (Coloriano, Bull. Soc. (2) 50. 451.)

+  $\frac{1}{2}H_2O$ . (Marckwald, Dissert. 1895.)

+  $10H_2O$ . (Marckwald.)

Manganic potassium molybdate.

See Permanganomolybdate, potassium.

Manganic silver molybdate.

See Permanganomolybdate, silver.

Mercurous molybdate,  $Hg_2Mo_2O_7$ .

Decomp. by  $H_2O$ . (Struve, J. B. 1754. 350.)

Sol in 500-600 pts.  $H_2O$ ; decomp. by  $HNO_3 + Aq$  (Hatchett.)

Molybdenum molybdate.

See Molybdenum oxides,  $Mo_2O_7$ ,  $Mo_4O_6$ , etc.

Neodymium molybdate,  $Nd_2(MoO_4)_3$ .

Very sl. sol. in  $H_2O$

1 pt. is sol. in 53790 pts.  $H_2O$  at  $28^\circ$ .

1 " " " " 32466 "  $H_2O$ . "  $75^\circ$ .

(Hitchcock, J. Am. Chem. Soc. 1895, 17. 532.)

Nickel molybdate,  $NiMoO_4 + \frac{1}{2}H_2O$ , +  $\frac{1}{2}H_2O$  and +  $5H_2O$ .

(Marckwald, Dissert. 1895.)

$NiO$ ,  $3MoO_3 + 18H_2O$ . Sl. sol. in cold; easily sol. in hot  $H_2O$ . (Marckwald.)

$5NiO$ ,  $14MoO_3 + 57H_2O$ , and +  $70H_2O$ . Sl. sol. in cold; easily sol. in hot  $H_2O$ . (Marckwald.)

Nickel potassium molybdate,  $3NiO$ ,  $5K_2O$ ,  $16MoO_3 + 21H_2O$

Can be cryst. from  $H_2O$  (Hall, J. Am. Chem. Soc. 1907, 29. 701.)

Nickelic potassium molybdate.

See Nickelomolybdate, potassium.

Nickel potassium hydrogen molybdate,

$K_2H_4[Ni(MoO_4)_4] + 5H_2O$ .

See Nickelomolybdate, potassium hydrogen.

Nickel sodium molybdate,  $2NiO$ ,  $Na_2O$ ,  $6MoO_3 + 17H_2O$ .

Sol in cold  $H_2O$  without decomp. but decomp. on warming. (Marckwald, Dissert. 1895.)

Nickel molybdate ammonia,  $NiMoO_4$ ,  $2NH_3$ , +  $H_2O$

Decomp. by  $H_2O$ . (Sonnenschein, J. pr. 53. 341.)

Potassium molybdate,  $K_2MoO_4$ .

Deliquescent in moist air. Very sol. in  $H_2O$ . Insol. in alcohol. (Svanberg and Struve, J. pr. 44. 265.)

184.6 grams are sol. in 100 grams  $H_2O$  at  $25^\circ$  (Amadori, C. A. 1912. 2878.)

Solubility of  $K_2MoO_4 + K_2SO_4$  at  $25^\circ$ .

G. per 100 g. $H_2O$		G. per 100 g. $H_2O$	
$K_2SO_4$	$K_2MoO_4$	$K_2SO_4$	$K_2MoO_4$
0	184.6	1.50	99.49
0.46	180.7	2.13	45.89
0.72	177.	3.95	17.48
0.98	127.2	8.55	4.73
1.27	107.5	12.10	0

(Amadori, Att. acc. Linc. 1912, 21, I. 467, 667.)

+ $\frac{1}{2}$ H<sub>2</sub>O Easily sol. in H<sub>2</sub>O (Wempe, Dissert. 1911.)  
 K<sub>2</sub>O, 8MoO<sub>3</sub>+13H<sub>2</sub>O Easily sol in warm H<sub>2</sub>O (Wempe, Dissert. 1911.)  
 K<sub>2</sub>O, 10MoO<sub>3</sub>+9H<sub>2</sub>O Nearly insol in hot and cold H<sub>2</sub>O. 100 g. H<sub>2</sub>O dissolve 0.682 g. at 100° (Felix, Dissert. 1912.)  
 +15H<sub>2</sub>O Sol in H<sub>2</sub>O. (Felix)  
 5K<sub>2</sub>O, 12MoO<sub>3</sub>+8H<sub>2</sub>O Sl sol in cold H<sub>2</sub>O (Junius, Z anorg 1905, 46. 439)

**Potassium trimolybdate, K<sub>3</sub>Mo<sub>3</sub>O<sub>10</sub>**

Difficultly sol in cold, but much more easily in hot H<sub>2</sub>O. When ignited is absolutely insol in H<sub>2</sub>O. (Svanberg and Struve)  
 +2H<sub>2</sub>O. (Junius, Z anorg 1905, 46. 439.)  
 Sl. sol. in cold, easily sol in hot H<sub>2</sub>O (Wempe, Dissert. 1911.)  
 +2 $\frac{1}{2}$ H<sub>2</sub>O. Easily sol in H<sub>2</sub>O (Wempe, Dissert. 1911.)  
 +3H<sub>2</sub>O. Very sl. sol. in cold, more easily sol. in hot H<sub>2</sub>O. (Wempe, Dissert. 1911.)  
 +11H<sub>2</sub>O. Practically insol. in H<sub>2</sub>O. (Westphal, Dissert. 1895.)

**Potassium hydrogen tetramolybdate,**

Sl. sol. in cold H<sub>2</sub>O Decomp by boiling H<sub>2</sub>O (Rosenheim, Z anorg. 1913, 79. 298)  
 KHM<sub>4</sub>O<sub>19</sub>+6H<sub>2</sub>O. Decomp by H<sub>2</sub>O (Ullik.)

**Potassium paramolybdate, K<sub>4</sub>Mo<sub>7</sub>O<sub>24</sub>+4H<sub>2</sub>O.**

Decomp even by cold H<sub>2</sub>O (Delafontaine)  
 Formula is K<sub>4</sub>Mo<sub>7</sub>O<sub>24</sub>+6H<sub>2</sub>O, according to Svanberg and Struve (?)

**Potassium selenium molybdate.**

See Selenomolybdate, potassium.

**Potassium sodium molybdate, K<sub>2</sub>MoO<sub>4</sub>, 2Na<sub>2</sub>MoO<sub>4</sub>+14H<sub>2</sub>O**

Very easily sol. in cold, still more easily in hot H<sub>2</sub>O (Delafontaine.)

**Potassium vanadium molybdate.**

See Vanadiomolybdate, potassium.

**Potassium zinc molybdate.**

Sol. in H<sub>2</sub>O. (Beizelius.)

**Potassium molybdate hydrogen dioxide,**

Sol in H<sub>2</sub>O. (Bärwald, C. C. 1885. 424)

**Potassium molybdate sulphocyanide, KSCN, K<sub>2</sub>Mo<sub>2</sub>O<sub>12</sub>+4H<sub>2</sub>O.**

Decomp. by H<sub>2</sub>O. Sol. in dil HCl+Aq (Péchar, C. R. 1894, 118. 806.)

**Praseodymium molybdate, Pr<sub>2</sub>(MoO<sub>4</sub>)<sub>3</sub>**

Very sl sol in H<sub>2</sub>O.

1 pt is sol in 65820 pts H<sub>2</sub>O at 23°

1 " " " 69800 " " 75°.

(Hitchcock, J. Am. Chem. Soc. 1895, 17. 530.)

**Rubidium molybdate, Rb<sub>2</sub>O, MoO<sub>3</sub>.**

Ilygrosopic (Ephraim, Z anorg 1909, 64. 263)

Rb<sub>2</sub>O, 2MoO<sub>3</sub>+2H<sub>2</sub>O Easily sol in H<sub>2</sub>O. (Ephraim, Z anorg 1909, 64. 263.)

Rb<sub>2</sub>Mo<sub>7</sub>O<sub>21</sub>+4H<sub>2</sub>O Very sl. sol. in cold, much more easily sol in hot H<sub>2</sub>O (Delafontaine, N Arch Sc phys. nat. 30. 233)

(Ephraim, Z anorg 1909, 64. 263)

+4 $\frac{1}{2}$ H<sub>2</sub>O (Wempe, Dissert. 1911.)

2Rb<sub>2</sub>O, 7MoO<sub>3</sub>+5H<sub>2</sub>O. Very sl. sol. in cold, very easily sol. in hot H<sub>2</sub>O. (Wempe.)

5Rb<sub>2</sub>O, 7MoO<sub>3</sub>+14H<sub>2</sub>O. (Ephraim and

Herschfinkel, Z. anorg. 1909, 64. 268.)

3Rb<sub>2</sub>O, 8MoO<sub>3</sub>+6H<sub>2</sub>O (Ephraim and

Herschfinkel, Z. anorg 1909, 64. 269)

5Rb<sub>2</sub>O, 12MoO<sub>3</sub>+H<sub>2</sub>O, 100 cc H<sub>2</sub>O dissolve 1.941 g. at 21°. (Wempe, Z anorg. 1912, 78. 258)

Rb<sub>2</sub>O, 3MoO<sub>3</sub>. Insol. in H<sub>2</sub>O (Muthmann, B. 1898, 31. 1839.)

+H<sub>2</sub>O (Muthmann, B. 1898, 31. 1839)

+3H<sub>2</sub>O Sl sol in cold, easily sol. in hot H<sub>2</sub>O (Wempe, Dissert. 1911.)

6 $\frac{1}{2}$ H<sub>2</sub>O (Ephraim and Henschfinkel, Z. anorg 1909, 64. 269.)

2Rb<sub>2</sub>O, 3MoO<sub>3</sub>+4H<sub>2</sub>O. Sl. sol in cold, easily in hot H<sub>2</sub>O. (Wempe, Dissert. 1911.)

Rb<sub>2</sub>O, 4MoO<sub>3</sub>. Difficultly sol in cold, easily in hot H<sub>2</sub>O. (Wempe, Z. anorg. 1912, 78. 312)

+ $\frac{1}{2}$ H<sub>2</sub>O Practically insol in H<sub>2</sub>O. Very sol by addition of NH<sub>3</sub>. (Ephraim and Henschfinkel, Z anorg 1909, 64. 266)

+2.5H<sub>2</sub>O Insol. in H<sub>2</sub>O (Ephraim, Z anorg. 1909, 64. 263)

+4H<sub>2</sub>O Sol in cold, more easily sol in hot H<sub>2</sub>O. (Wempe, Z anorg 1912, 78. 312.)

Rb<sub>2</sub>O, MoO<sub>3</sub>, Rb<sub>2</sub>O, 3MoO<sub>3</sub>+5H<sub>2</sub>O Sol in cold or hot H<sub>2</sub>O (Wempe, Z anorg 1912, 78. 312.)

Rb<sub>2</sub>O, H<sub>2</sub>O, 8MoO<sub>3</sub>+3H<sub>2</sub>O. Difficultly sol in cold, easily in hot H<sub>2</sub>O (Wempe, Z anorg 1912, 78. 312.)

Rb<sub>2</sub>O, 11MoO<sub>3</sub>+5.5H<sub>2</sub>O. Ppt. (Ephraim, Z anorg. 1909, 64. 263)

Rb<sub>2</sub>O, 13MoO<sub>3</sub>+4H<sub>2</sub>O. Ppt (Ephraim.)

Rb<sub>2</sub>O, 18MoO<sub>3</sub>. Ppt. (Ephraim)

**Samarium molybdate, Sm<sub>2</sub>(MoO<sub>4</sub>)<sub>3</sub>.**

Insol in H<sub>2</sub>O. (Cleve.)

**Samarium sodium molybdate,**

Insol. in H<sub>2</sub>O. Easily sol. in warm dil. HNO<sub>3</sub>+Aq. (Cleve.)

Silver (argentous) molybdate,  $\text{Ag}_2\text{O}$ ,  $2\text{MoO}_3$   
Sol. in  $\text{HNO}_3 + \text{Aq. KOH} + \text{Aq.}$  dissolves  
 $\text{MoO}_3$  and  $\text{Ag}_2\text{O}$  separates out. Not decomp.  
by dil.  $\text{NH}_4\text{OH} + \text{Aq.}$  (Wohler and Rauten-  
berg, A. 114. 119)  
Does not exist. (Muthmann, B. 20. 933)

Silver (argentic) molybdate,  $\text{Ag}_2\text{MoO}_4$ .  
Somewhat sol. in  $\text{H}_2\text{O}$ , less when  $\text{HNO}_3$  is  
present (Richter)

Very sl. sol. in pure  $\text{H}_2\text{O}$ ; easily sol. in  
 $\text{H}_2\text{O}$  acidulated with  $\text{HNO}_3$ . (Struve and  
Svanberg.)

Sol. in  $\text{KCN}$  or  $\text{NaOH} + \text{Aq.}$  (Smith and  
Bradbury.)

$\text{Ag}_2\text{O}$ ,  $2\text{MoO}_3$ . Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  
 $\text{KCN} + \text{Aq.}$  (Junius, Dissert 1905.)

$2\text{Ag}_2\text{O}$ ,  $5\text{MoO}_3$ . Somewhat sol. in  $\text{H}_2\text{O}$   
(Svanberg and Struve, J. B. 1847-48. 412)

$\text{Ag}_2\text{O}$ ,  $4\text{MoO}_3 + 6\text{H}_2\text{O}$  Sl. sol. in  $\text{H}_2\text{O}$  with  
decomp (Wempe, Z. anorg. 1912, 78. 322.)

Silver thorium molybdate.

See Thoromolybdate, silver.

Silver molybdate ammonia,  $\text{Ag}_2\text{MoO}_4$ ,  $4\text{NH}_3$ .

Sol. in  $\text{H}_2\text{O}$  with rapid decomposition  
(Widmann, Bull. Soc. (2) 20. 64)

Silver molybdate hydrogen dioxide,  $13\text{Ag}_2\text{O}$ ,  
 $2\text{H}_2\text{O}_2$ ,  $32\text{MoO}_3$ .

Ppt. (Barwald, B. 17. 1206)

Sodium molybdate,  $\text{Na}_2\text{MoO}_4$ .

Anhydrous. Easily and completely sol. in  
 $\text{H}_2\text{O}$ .

+  $2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .

+  $10\text{H}_2\text{O}$ . Efflorescent.

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$

Solid phase	$t^\circ$	Per cent of anhydrous salt	Mols. $\text{H}_2\text{O}$ to 1 mol of anhydrous salt	Mols of anhydrous salt to 100 mols $\text{H}_2\text{O}$
$\text{Na}_2\text{MoO}_4$ , $10\text{H}_2\text{O}$	0	30.63	25.92	3.88
"	4	33.83	23.38	4.47
"	6	35.58	20.72	4.83
"	90	38.16	18.54	5.39
$\text{Na}_2\text{MoO}_4$ , $2\text{H}_2\text{O}$	10	39.28	17.70	5.65
"	15	39.27	17.70	5.65
"	32	39.82	17.30	5.78
"	51	41.27	16.28	6.14
"	100	45.57	13.67	7.32

(Funk, B. 1900, 33. 3699)

Insol. in methyl acetate (Naumann, B.  
1909, 42. 3790.)

$\text{Na}_2\text{Mo}_2\text{O}_7$ . After ignition, very difficultly  
sol. in cold, and very slowly sol. in hot  $\text{H}_2\text{O}$   
(Svanberg and Struve)

+  $\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ .

+  $3\frac{1}{2}\text{H}_2\text{O}$ . Easily sol. in cold or hot  $\text{H}_2\text{O}$   
(Wempe, Dissert 1911.)

+  $4\text{H}_2\text{O}$ . Easily and completely sol. in  
cold  $\text{H}_2\text{O}$  (Ullik)

+  $6\frac{1}{2}\text{H}_2\text{O}$ . Sl. sol. in cold, very easily sol.  
in hot  $\text{H}_2\text{O}$ . (Wempe, Dissert 1911.)

+  $7\text{H}_2\text{O}$ . Difficultly sol. in cold  $\text{H}_2\text{O}$ , but  
more easily than the corresponding K salt.  
100 pts.  $\text{H}_2\text{O}$  dissolve 3.878 pts at  $20^\circ$  and  
13.7 pts at  $100^\circ$  (Ullik, A. 144. 244.)

+  $9\text{H}_2\text{O}$ . Easily sol. in cold, very easily  
sol. in hot  $\text{H}_2\text{O}$  (Wempe.)

+  $11\text{H}_2\text{O}$ . (Junius, Z. anorg. 1905, 46.  
437.)

$3\text{Na}_2\text{O}$ ,  $7\text{MoO}_3$ . Easily sol. in cold, very  
easily sol. in hot  $\text{H}_2\text{O}$  (Ott, Dissert 1911.)

+  $20\text{H}_2\text{O}$ . (Westphal, Dissert 1895.)

+  $22\text{H}_2\text{O}$ . Efflorescent. Easily sol. in  
 $\text{H}_2\text{O}$  (Ullik, A. 144. 219)

$\text{Na}_2\text{O}$ ,  $8\text{MoO}_3 + \frac{1}{2}\text{H}_2\text{O}$ . Very sol. in cold  
or hot  $\text{H}_2\text{O}$ . (Wempe, Dissert 1911.)

+  $4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  (Ullik, W. A. B.  
60, 2. 312.)

+  $15\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1897, 15.  
188)

$\text{Na}_2\text{O}$ ,  $10\text{MoO}_3 + 6\text{H}_2\text{O}$ . Very sl. sol. in  
 $\text{H}_2\text{O}$ . 100 g  $\text{H}_2\text{O}$  dissolve 0.842 g. at  $100^\circ$ .  
(Felix, Dissert 1912.)

+  $7\text{H}_2\text{O}$ . (Felix.) Nearly insol. in hot and  
cold  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1903, 37.  
323)

+  $12\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$

+  $21\text{H}_2\text{O}$ . Abundantly but slowly sol. in  
cold  $\text{H}_2\text{O}$ . =  $\text{NaHN}_2\text{O}_{11} + 10\text{H}_2\text{O}$  (Ullik)

$5\text{Na}_2\text{O}$ ,  $12\text{MoO}_3 + 8\text{H}_2\text{O}$ . Sl. sol. in cold,  
easily sol. in hot  $\text{H}_2\text{O}$  (Wempe, Dissert.  
1911.)

+  $20\text{H}_2\text{O}$ . Sl. sol. in cold, easily sol. in  
hot  $\text{H}_2\text{O}$  (Wempe, Dissert. 1911.)

+  $36\text{H}_2\text{O}$ . (Junius, Z. anorg. 1905, 46. 436.)

+  $44\text{H}_2\text{O}$ . Sl. sol. in cold, easily sol. in hot  
 $\text{H}_2\text{O}$  (Wempe, Dissert. 1911.)

Sodium tetramolybdate,  $\text{Na}_2\text{Mo}_4\text{O}_{18} + 6\text{H}_2\text{O}$

Difficultly sol. in cold, easily in hot  $\text{H}_2\text{O}$ .  
(Ullik)

100 cc  $\text{H}_2\text{O}$  dissolve at  $21^\circ$ , 28.39 g  
of the salt. Sp. gr. of the solution = 1.47.

(Wempe, Z. anorg. 1912, 78. 306)

+  $17\text{H}_2\text{O}$ . (Felix, Dissert. 1912.)

$\text{Na}_4\text{H}_4(\text{H}_2(\text{Mo}_2\text{O}_7)_2) + 21\text{H}_2\text{O}$ . Slowly sol  
in cold, easily sol. in hot  $\text{H}_2\text{O}$  (Rosenheim,  
Z. anorg. 1913, 78. 298.)

$\text{NaHM}_2\text{O}_4\text{O}_{18} + 8\text{H}_2\text{O}$ . Very sol. in hot or  
cold  $\text{H}_2\text{O}$  (Ullik, A. 144. 333)

$\text{NaHM}_2\text{O}_4\text{O}_{18} + 4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ .  
(Ullik.)

Sodium manganous molybdate,  $2\text{Na}_2\text{O}$ ,  $\text{MnO}$ ,

$6\text{MoO}_3 + 19\text{H}_2\text{O}$ .

(Marekwald, Dissert. 1895.)

Sodium molybdate molybdenum oxide,

$\text{Na}_2\text{Mo}_2\text{O}_7$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  and aqua  
regia. Insol. in  $\text{HCl}$  and in  $\text{H}_2\text{SO}_4$ . Sol. in

alkalies. (Stavenhagen and Engels, B. 1895, 28. 2280.)

### Strontium molybdate, $\text{SrMoO}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Schultze.)  
Sol. in 9600 pts  $\text{H}_2\text{O}$  at  $17^\circ$ . (Smith and Bradbury, B. 24. 2930.)

$\text{SrO}$ ,  $3\text{MoO}_3 + \frac{1}{2}\text{H}_2\text{O}$ . Scarcely sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Wempe, Dissert. 1911.)  
 $\text{SiO}_2$ ,  $\text{H}_2\text{O}$ ,  $8\text{MoO}_3 + 6\text{H}_2\text{O}$ . Scarcely sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Wempe, Dissert. 1911.)

$2\text{SrO}$ ,  $3\text{H}_2\text{O}$ ,  $20\text{MoO}_3 + 21\text{H}_2\text{O}$ . Ppt. (Wempe, Z. anorg. 1912, 78. 321.)

### Thallous molybdate, $\text{Tl}_2\text{MoO}_4$

Insol. in  $\text{H}_2\text{O}$ . Sol. in alkalies. Insol. in alcohol. (Oettinger, J. B. 1864, 254.)

Sl. sol. in hot or cold  $\text{H}_2\text{O}$ . (Ullik, J. B. 1867, 234.)

$8\text{Tl}_2\text{O}$ ,  $11\text{MoO}_3$ . Sol. in hot  $\text{H}_2\text{O}$ . (Fleming, J. B. 1868, 250.)

$3\text{Tl}_2\text{O}$ ,  $8\text{MoO}_3$ . (Fleming.)

### Thallous tetramolybdate, $\text{Tl}_2\text{O}$ , $4\text{MoO}_3 + \text{H}_2\text{O}$

Sl. sol. in  $\text{H}_2\text{O}$  with decomp. (Wempe, Z. anorg. 1912, 78. 323.)

### Thallous paramolybdate, $5\text{Tl}_2\text{O}$ , $12\text{MoO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in mineral acids and in alkali hydroxides and carbonates. (Junius, Z. anorg. 1905, 46. 432.)

### Tin (stannic) molybdate.

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. or conc.  $\text{HCl} + \text{Aq.}$  or in  $\text{KOH} + \text{Aq.}$  Not decomp. by  $\text{HNO}_3 + \text{Aq.}$  (Berzelius.)

### Uranous molybdate.

Precipitate. Sol. in  $\text{HCl} + \text{Aq.}$  Decomp. by  $\text{KOH} + \text{Aq.}$

$\text{U}(\text{MoO}_4)_2$ . (Lancien, C. C. 1908, I. 1763.)

### Uranyl molybdate, $(\text{UO}_2)\text{MoO}_4$ .

Insol. in  $\text{H}_2\text{O}$ , methyl and ethyl alcohol, ether, acetic acid,  $\text{CHCl}_3$ ,  $\text{C}_6\text{H}_6$  and  $\text{C}_7\text{H}_8$ . Sol. in mineral acids. (Lancien, C. C. 1907, I. 784.)

$2\text{UO}_3$ ,  $3\text{MoO}_3$  (?). Insol. in  $\text{H}_2\text{O}$ . Sol. in strong acids and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  (Berzelius.)

$3\text{UO}_3$ ,  $7\text{MoO}_3$ . Insol. in hot and cold  $\text{H}_2\text{O}$ . Insol. in  $\text{NaOH}$ ,  $\text{KOH}$ , and  $\text{NH}_4\text{OH} + \text{Aq.}$  Sol. in all min. acids and decomp. by an excess of  $\text{H}_2\text{O}$ . Insol. in acetic acid. (Lancien, C. C. 1908, I. 1763.)

$\text{UO}_3$ ,  $8\text{MoO}_3$ . (Lancien.)  
 $+13\text{H}_2\text{O}$ . Insol. in  $\text{HNO}_3$ . (Lancien.)

### Ytterbium molybdate, $\text{Yb}_2\text{O}_3$ , $7\text{MoO}_3 + 6\text{H}_2\text{O}$ .

Insol. in hot  $\text{H}_2\text{O}$ . (Cleve, Z. anorg. 1902, 32. 152.)

$2\text{Yb}_2\text{O}_3$ ,  $\text{MoO}_3$ . Ppt. (Cleve.)

### Yttrium molybdate.

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3 + \text{Aq.}$  (Berlin.)

### Zinc molybdate, $\text{ZnMoO}_4$

Difficultly sol. in  $\text{H}_2\text{O}$ ; easily in acids. (Schultze, A. 126. 40.)

$+ \text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Colornato, Bull. Soc. (2) 50. 451.)

$\text{ZnMo}_2\text{O}_7 + 10\text{H}_2\text{O}$ . Very difficultly sol. in cold, but extraordinarily easily sol. in hot  $\text{H}_2\text{O}$ . (Ullik, W. A. B. 55, 2. 767.)

### Zinc tetramolybdate, $\text{ZnMo}_4\text{O}_{12} + 8\text{H}_2\text{O}$ .

Easily sol. in cold  $\text{H}_2\text{O}$ . (Ullik.)

$\text{ZnO}$ ,  $\text{H}_2\text{O}$ ,  $8\text{MoO}_3 + 14\text{H}_2\text{O}$ . Ppt. (Wempe, Z. anorg. 1912, 78. 324.)

### Zinc molybdate ammonia, $\text{ZnMoO}_4$ , $2\text{NH}_3 + \text{H}_2\text{O}$

(Sonnenschein, J. pr. 53. 339.)

### Permolybdic acid.

See Permolybdic acid.

### Molybdic sulphuric acid, $\text{MoO}_3$ , $\text{SO}_3$ .

Deliquescent. (Schultz-Sellack, B. 4. 14.)  
Very deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (Muthmann, A. 1886, 238. 126.)

$\text{MoO}_3$ ,  $3\text{SO}_3 + 2\text{H}_2\text{O}$  (?).

### Molybdocyanhydric acid, $\text{H}_4\text{Mo}(\text{CN})_8 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  and abs. alcohol. Solutions are stable at ord. temp. (Rosenheim and Garfunkel, Z. anorg. 1910, 65. 168.)

### Cadmium molybdocyanide, $\text{Cd}_2\text{Mo}(\text{CN})_8 + \text{SH}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Rosenheim.)

### Cadmium molybdocyanide ammonia,

$\text{Cd}_2\text{Mo}(\text{CN})_8$ ,  $4\text{NH}_3 + 2\text{H}_2\text{O}$ .

(Rosenheim.)

### Cupric molybdocyanide ammonia,

$\text{Cu}_2\text{Mo}(\text{CN})_8$ ,  $4\text{NH}_3 + 7\text{H}_2\text{O}$

(Rosenheim.)

### Potassium molybdocyanide, $\text{K}_4\text{Mo}(\text{CN})_8 + 2\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ . (Rosenheim.)

### Thallous molybdocyanide, $\text{Tl}_4\text{Mo}(\text{CN})_8$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . (Rosenheim.)

### Molybdoiodic acid, $\text{HIO}_3$ , $\text{H}_2\text{MoO}_4 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Blomstrand, J. pr. (2) 40. 320.)

$\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3 + 2\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . Insol. in cold, sol. in hot  $\text{HNO}_3$ . Sol. in alcohol. (Chrétien, A. ch. 1898, (7) 15. 402.)

**Ammonium molybdoiodate,  $\text{NH}_4\text{IO}_6$ ,  $\text{H}_2\text{MoO}_4$**

Somewhat more sol. than K salt. (Blomstrand.)

$(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$ . Very sl sol in cold  $\text{H}_2\text{O}$ . More sol. in hot  $\text{H}_2\text{O}$ . (Rosenheim and Liebitnecht, A. 1899, 308. 50)

+ $\text{H}_2\text{O}$ . 1 l.  $\text{H}_2\text{O}$  dissolves 5.39 g. salt at  $15^\circ$ ; 30.94 g. at  $100^\circ$ . More sol. in dil.  $\text{HNO}_3$  + Aq. (Chrétien, A. ch. 1898, (7) 15. 409.)

$3(\text{NH}_4)_2\text{O}$ ,  $(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$  +  $6\text{H}_2\text{O}$ . (Chrétien.)

**Barium molybdoiodate,  $\text{BaO}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $2\text{H}_2\text{O}$ .**

4.23 g. are sol. in 1 l.  $\text{H}_2\text{O}$  at ord. temp. (Chrétien.)

**Cadmium molybdoiodate, acid,  $3\text{CdO}$ ,  $(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$  +  $16\text{H}_2\text{O}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . (Chrétien.)

**Calcium molybdoiodate,  $\text{CaO}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $6\text{H}_2\text{O}$ .**

1 l.  $\text{H}_2\text{O}$  dissolves 7.8 g. of the salt at  $15^\circ$ ; 20.89 g. at  $90^\circ$ . (Chrétien.)

**Cobaltous molybdoiodate,  $\text{CoO}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $6\text{H}_2\text{O}$ .**

5.11 g. are sol. in 1 l.  $\text{H}_2\text{O}$  at  $15^\circ$ ; 22.27 g. at  $100^\circ$ . (Chrétien.)

**Cobaltous molybdoiodate acid,  $\text{CoO}$ ,  $(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$  +  $18\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Chrétien.)

**Cupric molybdoiodate,  $\text{CuO}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $3\text{H}_2\text{O}$ .**

1 l.  $\text{H}_2\text{O}$  dissolves 10.63 g. of the salt at  $15^\circ$ ; 25.55 g. at  $100^\circ$ . (Chrétien.)

**Lithium molybdoiodate,  $\text{Li}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $2\frac{1}{2}\text{H}_2\text{O}$ .**

197.83 g. are sol. in 1 l.  $\text{H}_2\text{O}$  at  $15^\circ$ . Sol. in dil.  $\text{HNO}_3$  + Aq. (Chrétien.)

**Magnesium molybdoiodate,  $\text{MgO}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $6\text{H}_2\text{O}$ .**

1 l.  $\text{H}_2\text{O}$  dissolves 3.85 g. of the salt at  $15^\circ$ ; 18.2 g. at  $100^\circ$ . (Chrétien.)

**Manganous molybdoiodate,  $3\text{MnO}$ ,  $(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$  +  $9\text{H}_2\text{O}$ .**

1 l.  $\text{H}_2\text{O}$  dissolves 17.05 g. of the salt at  $15^\circ$ ; 55.05 g. at  $100^\circ$ . (Chrétien.)

**Nickel molybdoiodate,  $\text{NiO}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $6\text{H}_2\text{O}$ .**

5.43 g. are sol. in 1 l.  $\text{H}_2\text{O}$  at  $15^\circ$ ; 21.8 g. at  $100^\circ$ . (Chrétien.)

$2\text{NiO}$ ,  $2\text{I}_2\text{O}_5$ ,  $3\text{MoO}_3$  +  $23\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . Not decomp. by acids. (Maass, Dissert. 1901.)

**Nickel molybdoiodate, acid,  $2\text{NiO}$ ,  $(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$  +  $15\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Chrétien.)

**Potassium molybdoiodate,  $\text{KHO}_2\text{IO}_5\text{MoO}_3\text{OH}$ , or  $\text{KIO}_5$ ,  $\text{MoO}_3$  +  $2\text{H}_2\text{O}$ .**

Ppt. Sl. sol. in  $\text{H}_2\text{O}$ . (Blomstrand, J. pr (2) 40. 320.)

$\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$ . Only sl. sol. in cold  $\text{H}_2\text{O}$ ; sol. on long boiling. 4.48 grs are sol. in 1 l.  $\text{H}_2\text{O}$  at  $12^\circ$ . (Compare Blomstrand: not identical.) (Rosenheim, A. 1899, 308. 50)

+ $\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . 3.45 g. are sol. in 1 l.  $\text{H}_2\text{O}$  at  $15^\circ$ ; 23.38 g. at  $100^\circ$ . More sol. in dil.  $\text{HNO}_3$  + Aq. (Chrétien, A. ch. 1898, (7) 15. 404.)

**Potassium molybdoiodate, acid.**

$(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$ ,  $4\text{K}_2\text{O}$  +  $7\text{H}_2\text{O}$ .

$(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$ ,  $2\text{K}_2\text{O}$  +  $13\text{H}_2\text{O}$ .

$(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$ ,  $\text{K}_2\text{O}$  +  $4\text{H}_2\text{O}$ .

$(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$ ,  $\text{K}_2\text{O}$  +  $7\text{H}_2\text{O}$ .

$(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$ ,  $\text{K}_2\text{O}$  +  $5\text{H}_2\text{O}$ .

(Chrétien.)

**Silver molybdoiodate,  $\text{Ag}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $1\frac{1}{2}\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ .

$4\text{Ag}_2\text{O}$ ,  $4\text{I}_2\text{O}_5$ ,  $3\text{MoO}_3$ . Sol. in  $\text{H}_2\text{O}$  containing  $\text{HNO}_3$ . (Chrétien.)

**Sodium molybdoiodate,  $\text{Na}_2\text{O}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $\text{H}_2\text{O}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  with decomp. (Chrétien, C. R. 1896, 123. 178.)

1 l.  $\text{H}_2\text{O}$  dissolves 6.97 g. of the salt at  $15^\circ$ ; 22.75 g. at  $90^\circ$ .

1 l.  $\text{HNO}_3$  + Aq (1.10) dissolves 23.78 g. of the salt at ord. temp. (Chrétien, A. ch. 1898, (7) 15. 410.)

+ $2\text{H}_2\text{O}$ . Only sl. sol. in cold  $\text{H}_2\text{O}$ ; sol. on long boiling. 3.35 grams are sol. in 1 l.  $\text{H}_2\text{O}$  at  $12^\circ$ . (Rosenheim, A. 1899, 308. 50.)

**Strontium molybdoiodate,  $\text{SrO}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $3\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Chrétien, A. ch. 1898, (7) 15. 415.)

**Strontium molybdoiodate, acid,  $3\text{SrO}$ ,  $(\text{I}_2\text{O}_5)_2$ ,  $2\text{MoO}_3$  +  $15\text{H}_2\text{O}$ .**

1 l.  $\text{H}_2\text{O}$  dissolves 2.94 g. of the salt at  $15^\circ$ ; 13.64 g. at  $100^\circ$ . (Chrétien.)

**Uranyl molybdoiodate,  $2\text{UO}_3$ ,  $4\text{I}_2\text{O}_5$ ,  $3\text{MoO}_3$  +  $3\text{H}_2\text{O}$ . (Chrétien.)**

**Zinc molybdoiodate,  $\text{ZnO}$ ,  $\text{I}_2\text{O}_5$ ,  $2\text{MoO}_3$  +  $5\text{H}_2\text{O}$ .**

1 l.  $\text{H}_2\text{O}$  dissolves 4.08 g. of the salt at  $15^\circ$ ; 16.26 g. at  $100^\circ$ . (Chrétien.)

**Zinc molybdoiodate acid**,  $\text{ZnO}$ ,  $(\text{I}_2\text{O}_5, 2\text{MoO}_3)_2$   
 $+16\text{HI}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$  (Chrétien)

### Molybdoperiodic acid.

**Ammonium molybdoperiodate**,  $5(\text{NH}_4)_2\text{O}$ ,  
 $\text{I}_2\text{O}_7$ ,  $12\text{MoO}_3+12\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Blomstrand, Sv. V. A. II. Bih. 1892, No. 6.)

$4(\text{NH}_4)_2\text{O}$ ,  $\text{I}_2\text{O}_7$ ,  $8\text{MoO}_3+7\text{H}_2\text{O}$  Very sl. sol. in cold  $\text{H}_2\text{O}$  (Blomstrand)

**Ammonium sodium** —,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{Na}_2\text{O}$ ,  
 $\text{I}_2\text{O}_7$ ,  $2\text{MoO}_3+10\text{H}_2\text{O}$

Very sl. sol in  $\text{H}_2\text{O}$ . (B.)

**Barium sodium** —,  $9\text{BaO}$ ,  $\text{Na}_2\text{O}$ ,  $2\text{I}_2\text{O}_7$ ,  
 $24\text{MoO}_3+28\text{H}_2\text{O}$ .

Very sl. sol in  $\text{H}_2\text{O}$ . (B.)

**Calcium** —,  $5\text{CaO}$ ,  $\text{I}_2\text{O}_7$ ,  $12\text{MoO}_3+26\text{H}_2\text{O}$   
 Extremely sol in  $\text{H}_2\text{O}$ . (Blomstrand.)

$\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_7$ ,  $12\text{MoO}_3+21\text{H}_2\text{O}$  Less sol. in  
 $\text{H}_2\text{O}$  than above salt

**Lithium** —,  $5\text{Li}_2\text{O}$ ,  $\text{I}_2\text{O}_7$ ,  $12\text{MoO}_3+30\text{H}_2\text{O}$   
 Not so efflorescent as Na salt Sol in  $\text{H}_2\text{O}$ .

(B.)

$+18\text{H}_2\text{O}$  (B.)

**Manganous sodium** —,  $2\text{MnO}$ ,  $3\text{Na}_2\text{O}$ ,  
 $\text{I}_2\text{O}_7$ ,  $12\text{MoO}_3+32\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (B.)

**Potassium** —,  $5\text{K}_2\text{O}$ ,  $\text{I}_2\text{O}_7$ ,  $12\text{MoO}_3+12\text{H}_2\text{O}$ .

Not efflorescent. (Blomstrand)

**Sodium** —,  $5\text{Na}_2\text{O}$ ,  $\text{I}_2\text{O}_7$ ,  $12\text{MoO}_3+34\text{H}_2\text{O}$ .

Efflorescent Very sol in  $\text{H}_2\text{O}$ . (Blomstrand, Sv. V. A. II. Bih. 1892, No. 6, 21)

$+26\text{H}_2\text{O}$ . Not efflorescent. Very sol. in  
 $\text{H}_2\text{O}$  (Blomstrand)

**Sodium strontium** —,  $\text{Na}_2\text{O}$ ,  $4\text{SrO}$ ,  $\text{I}_2\text{O}_7$ ,  
 $12\text{MoO}_3+20\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (B.)

### Molybdophosphoric acid.

See Phosphomolybdic acid.

### Molybdosulphosphoric acid.

**Sodium molybdosulphosphate**,

$\text{Na}_2[\text{HP}(\text{MoO}_3)_2]_2+8\text{H}_2\text{O}$ .

Ppt (Rosenheim, Z. anorg. 1913, 84, 222)

### Molybdophosphorous acid.

**Potassium molybdophosphate**,  
 $\text{K}_2[\text{HP}(\text{MoO}_3)_2]_2+11\text{H}_2\text{O}$ .

Difficultly sol in cold  $\text{H}_2\text{O}$ . (Rosenheim,  
 Z. anorg. 1913, 84, 219.)

**Sodium molybdophosphate**,

$\text{Na}_2[\text{HP}(\text{MoO}_3)_2]_2+11\text{H}_2\text{O}$

Sl sol. in  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg  
 1913, 84, 218.)

### Molybdophosphovanadic acid.

See Phosphovanadiomolybdic acid.

### Molybdoselenious acid.

**Ammonium molybdoselenite**,  $4(\text{NH}_4)_2\text{O}$ ,  
 $3\text{SeO}_2$ ,  $10\text{MoO}_3+4\text{H}_2\text{O}$

More sol. in hot than cold  $\text{H}_2\text{O}$ , insol in  
 alcohol. (Péchar, A. ch. (6) 30, 403.)

**Ammonium potassium molybdoselenite**,  
 $2(\text{NH}_4)_2\text{O}$ ,  $2\text{K}_2\text{O}$ ,  $3\text{SeO}_2$ ,  $10\text{MoO}_3+5\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ , insol in alcohol (Péchar  
 and)

**Barium molybdoselenite**,  $4\text{BaO}$ ,  $3\text{SeO}_2$ ,  
 $10\text{MoO}_3+3\text{H}_2\text{O}$

Sl sol in cold, easily in warm  $\text{H}_2\text{O}$   
 (Péchar)

**Potassium molybdoselenite**,  $4\text{K}_2\text{O}$ ,  $3\text{SeO}_2$ ,  
 $10\text{MoO}_3+5\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ , insol. in alcohol (Péchar  
 and)

**Sodium molybdoselenite**,  $4\text{Na}_2\text{O}$ ,  $3\text{SeO}_2$ ,  
 $10\text{MoO}_3+15\text{H}_2\text{O}$ .

Very efflorescent, and sol in  $\text{H}_2\text{O}$ , insol. in  
 alcohol (Péchar)

### Molybdosilicic acid.

See Silicomolybdic acid.

### Molybdosilicovanadic acid.

See Silicovanadiomolybdic acid.

### Molybdosulphuric acid.

Appreciably sol in  $\text{H}_2\text{O}$  (Hoffmann,  
 Dissert. 1903.)

**Ammonium molybdosulphate**,  $(\text{NH}_4)_2\text{O}$ ,  
 $2\text{MoO}_3$ ,  $8\text{O}_2+4\text{H}_2\text{O}$ , and  $+6\text{H}_2\text{O}$ .

Decomp by  $\text{H}_2\text{O}$  (Weinland, Z. anorg.  
 1907, 54, 261)

$(\text{NH}_4)_2\text{O}$ ,  $2\text{MoO}_3$ ,  $3\text{SO}_3+10\text{H}_2\text{O}$  (Wein-  
 land)

**Ammonium molybdenyl molybdosulphate**,  
 $(\text{NH}_4)_2\text{O}$ ,  $\text{MoO}_3$ ,  $7\text{MoO}_3$ ,  $8\text{O}_2+1\text{H}_2\text{O}$ .

$1\frac{1}{2}(\text{NH}_4)_2\text{O}$ ,  $\text{MoO}_3$ ,  $7\text{MoO}_3$ ,  $8\text{O}_2+5\text{H}_2\text{O}$ .

$2(\text{NH}_4)_2\text{O}$ ,  $\text{MoO}_3$ ,  $7\text{MoO}_3$ ,  $8\text{O}_2+14\text{H}_2\text{O}$   
 (Hoffmann, Dissert. 1903.)

$3\text{NH}_3$ ,  $\text{MoO}_3$ ,  $7\text{MoO}_3$ ,  $8\text{O}_2+10\text{H}_2\text{O}$ . Very  
 sol in  $\text{H}_2\text{O}$  Very sl. sol in  $\text{NH}_4$  salts + Aq.

Very stable toward alkali + Aq (Péchar,  
 C. R. 1893, 116, 1411)

$5\text{NH}_3$ ,  $\text{MoO}_3$ ,  $7\text{MoO}_3$ ,  $\text{SO}_3+8\text{H}_2\text{O}$  (Pé-  
chard, C R. 1893, 116. 1441.)

Potassium molybdosulphate,  $\text{K}_2\text{O}$ ,  $2\text{MoO}_3$ ,  
 $\text{SO}_3+2\text{H}_2\text{O}$

$\text{K}_2\text{O}$ ,  $2\text{MoO}_3$ ,  $\text{SO}_3+6\text{H}_2\text{O}$   
 $\text{K}_2\text{O}$ ,  $2\text{MoO}_3$ ,  $3\text{SO}_3+6\text{H}_2\text{O}$ . (Weinland, Z  
anorg. 1907, 54. 260.)

Potassium molybdenyl molybdosulphate,  
 $\text{K}_2\text{O}$ ,  $\text{MoO}_3$ ,  $7\text{MoO}_3$ ,  $\text{SO}_3+8\text{H}_2\text{O}$   
(Hoffmann, Dissert. 1903.)

### Molybdosulphurous acid.

Ammonium molybdosulphite,  $4(\text{NH}_4)_2\text{O}$ ,  
 $3\text{SO}_3$ ,  $10\text{MoO}_3+6\text{H}_2\text{O}$ .

Sl sol in cold, more easily in hot  $\text{H}_2\text{O}$   
Insol in alcohol (Péchard, A. ch. (6) 30.  
396.)

$3(\text{NH}_4)_2\text{O}$ ,  $8\text{MoO}_3$ ,  $2\text{SO}_3+5\text{H}_2\text{O}$ . Sl. sol  
in cold, easily sol in warm  $\text{H}_2\text{O}$ . Easily de-  
comp by  $\text{H}_2\text{O}$ , and can be recryst. only in  
presence of an excess of sulphurous acid.  
(Rosenheim, Z. anorg 1894, 7. 177.)

Ammonium potassium molybdosulphite,  
 $2(\text{NH}_4)_2\text{O}$ ,  $2\text{K}_2\text{O}$ ,  $3\text{SO}_3$ ,  $10\text{MoO}_3+6\text{H}_2\text{O}$   
Sl sol in cold  $\text{H}_2\text{O}$  Decomp on warming  
(Péchard.)

Barium molybdosulphite,  $2\text{BaO}$ ,  $5\text{MoO}_3$ ,  
 $2\text{SO}_3+10\text{H}_2\text{O}$   
(Rosenheim, Z. anorg. 1897, 15. 185.)

Cæsium molybdosulphite,  $2\text{Cs}_2\text{O}$ ,  $5\text{MoO}_3$ ,  
 $2\text{SO}_3+6\text{H}_2\text{O}$   
Unstable As K salt (Rosenheim.)

Potassium molybdosulphite,  $4\text{K}_2\text{O}$ ,  $3\text{SO}_3$ ,  
 $10\text{MoO}_3+10\text{H}_2\text{O}$

Very sl. sol in  $\text{H}_2\text{O}$ , but decomp. on warm-  
ing (Péchard.)

$2\text{K}_2\text{O}$ ,  $5\text{MoO}_3$ ,  $2\text{SO}_3+\text{H}_2\text{O}$  (Rosenheim.)

Rubidium molybdosulphite,  $2\text{Rb}_2\text{O}$ ,  $5\text{MoO}_3$ ,  
 $2\text{SO}_3+12\text{H}_2\text{O}$ .

As K salt. (Rosenheim.)

Sodium molybdosulphite,  $4\text{Na}_2\text{O}$ ,  $3\text{SO}_3$ ,  
 $10\text{MoO}_3+12\text{H}_2\text{O}$ .

Very sol in cold  $\text{H}_2\text{O}$ ; insol in alcohol.  
(Péchard.)

$+10\text{H}_2\text{O}$  Very efflorescent (Péchard.)  
 $2\text{Na}_2\text{O}$ ,  $5\text{MoO}_3$ ,  $2\text{SO}_3+8\text{H}_2\text{O}$  In dry state  
it gradually gives off  $\text{SO}_2$  and soon effloresces.  
(Rosenheim.)

Strontium molybdosulphite,  $2\text{SrO}$ ,  $5\text{MoO}_3$ ,  
 $2\text{SO}_3+12\text{H}_2\text{O}$   
(Rosenheim.)

### Molybdotitanic acid.

See Titanomolybdic acid.

### Molybdous acid.

Magnesium molybdate,  $\text{Mg}_2\text{Mo}_2\text{O}_8=2\text{MgO}$ ,  
 $3\text{MoO}_3$

Not attacked by  $\text{KOH}$ , and  $\text{HCl}+\text{Ag}$   
(Muthmann, A. 238. 108.)

Zinc molybdate,  $\text{Zn}_2\text{Mo}_2\text{O}_8=2\text{ZnO}$ ,  $3\text{MoO}_3$ .

Easily sol in aqua regia. (Muthmann, A.  
238. 108.)

### Molybdovanadates.

See Vanadiomolybdates.

### Neodymicotungstic acid.

Ammonium neodymicotungstate,  $3(\text{NH}_4)_2\text{O}$ ,  
 $\text{Nd}_2\text{O}_3$ ,  $16\text{WO}_3+20\text{H}_2\text{O}$ .

Difficultly sol in  $\text{H}_2\text{O}$  (E F Smith, J.  
Am Chem Soc 1904, 26. 1480.)

Barium neodymicotungstate,  $6\text{BaO}$ ,  $\text{Nd}_2\text{O}_3$ ,  
 $16\text{WO}_3+17\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  (E F. Smith.)

### Neodymium.

See also under Didymium.

Neodymium bromide,  $\text{NdBr}_3$

(Matignon, C R 1903, 140. 1638.)

Neodymium carbide,  $\text{NdC}_2$ .

Decomp by  $\text{H}_2\text{O}$ ; insol in conc  $\text{HNO}_3$ ;  
decomp by chl  $\text{HNO}_3$ . (Moissan, C. R.  
1900, 131. 597.)

Neodymium chloride,  $\text{NdCl}_3$

100 g  $\text{H}_2\text{O}$  dissolve 98.68 g.  $\text{NdCl}_3$  at  $13^\circ$ ;  
140.4 g at  $100^\circ$

Sp gr. at  $15^\circ/4^\circ$  of the solution sat at  $13^\circ$  =  
1.74. (Matignon, A. ch 1906, (8) 8. 249.)

44.5 g are sol in 100 g abs alcohol at  $20^\circ$ .  
1.8 g. " " " " pyridine at  $15^\circ$ .

Insol in ether,  $\text{CHCl}_3$ , quinoline, toluene,  
etc Sl. sol. in aniline and in phenylhydraz-  
ine (Matignon, A. ch 1906, (8) 8. 266.)

$+6\text{H}_2\text{O}$ . Deliquescent

At  $13^\circ$ , 100 pts  $\text{H}_2\text{O}$  dissolve 246.2 pts of  
the hydrated salt

At  $100^\circ$ , 100 pts.  $\text{H}_2\text{O}$  dissolve 511 pts. of  
hydrated salt

Sat. solution at  $13^\circ$  has a sp. gr.  $15^\circ/4^\circ$  =  
1.741. (Matignon, C. R. 1901, 133. 289.)

Neodymium chloride ammonia,  $\text{NdCl}_3$ ,  
 $12\text{NH}_3$ .

Decomposes on heating into  $\text{NdCl}_3+\text{NH}_3$ ;  
 $+2\text{NH}_3$ ;  $+4\text{NH}_3$ ;  $+5\text{NH}_3$ ;  $+8\text{NH}_3$ , and  
 $+11\text{NH}_3$ . (Matignon, C. R. 1906, 142. 1043.)

### Neodymium hydroxide.

Sol in citric acid. (Baskerville, J. Am.  
Chem. Soc. 1904, 26. 49.)

Solubility in glycerine+Aq containing about 60% by vol. of glycerine. 100 cm. of the solution contain 4.5 g. neodymium oxide. (Müller, Z. anorg. 1905, 43. 322.)

### Neodymium hydride, NdH<sub>3</sub> (?)

Slowly attacked by boiling H<sub>2</sub>O Sol. in acids with violent evolution of H<sub>2</sub>. (Muthmann, A. 1904, 331. 58.)

### Neodymium iodide, NdI<sub>3</sub>

(Matignon, C. R. 1905, 140. 1638.)

### Neodymium nitride, NdN.

Decomp. in moist air with evolution of NH<sub>3</sub>. (Muthmann, A. 1904, 331. 59.)

### Neodymium oxide, Nd<sub>2</sub>O<sub>3</sub>.

Easily sol. in acids. (v. Welsbach, M. 6. 477.)

### Neodymium oxychloride, NdOCl.

(Matignon, C. R. 1905, 140. 1638.)

### Neon, Ne

Less sol. than argon in H<sub>2</sub>O, sol. in liquid oxygen. (Ramsay, B. 1898, 31. 3118.)

#### Absorption by H<sub>2</sub>O at t°.

t°	Coefficient of absorption
0	0.0114
10	0.0118
20	0.0147
30	0.0158
40	0.0203
50	0.0317

(Antropoff, Roy. Soc. Proc. 1910, 83. A, 480.)

### Nickel, Ni

Not attacked by H<sub>2</sub>O. Very slowly sol. in dilute H<sub>3</sub>PO<sub>4</sub>, H<sub>2</sub>SO<sub>4</sub>, or HCl+Aq. (Tupputi, A. ch. 78. 133.)

Very easily attacked by HNO<sub>3</sub>+Aq, and difficultly by hot H<sub>2</sub>SO<sub>4</sub>. When pure, is converted into passive condition by conc. HNO<sub>3</sub>. (Nicklès, C. R. 38. 284.)

Very sl. attacked by cold acids, except HNO<sub>3</sub>+Aq. (Tissier, C. R. 50. 106.)

Not attacked by NaOH+Aq (Venator, Dingl. 261. 133.)

Insol. in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20. 828.)

### Nickel amide, Ni(NH<sub>2</sub>)<sub>2</sub>.

Decomp. by H<sub>2</sub>O; slowly sol. in min. acids. Insol. in liquid NH<sub>3</sub>. (Bohart, J. phys. Chem. 1915, 19. 590.)

### Nickel antimonide, NiSb.

Insol. in HCl+Aq; easily sol. in HNO<sub>3</sub>+Aq. (Christoffe, 1863.)

Min. *Breithauptite*. Insol. in acids; easily sol. in aqua regia.

Ni<sub>2</sub>Sb<sub>2</sub>. (Christoffe.)

### Nickel antimonide sulphide, NiSb<sub>2</sub>, NiS<sub>2</sub> = NiSbS

Min. *Nickel glance*, *Ullmannite*.

Decomp. by HNO<sub>3</sub>+Aq; completely sol. in aqua regia with separation of S.

### Nickel arsenide, NiAs

Min. *Niccolite*. Sol. in conc. HNO<sub>3</sub>+Aq with separation of As<sub>2</sub>O<sub>3</sub>; more easily sol. in aqua regia.

NiAs<sub>2</sub>. Min. *Chloanthite*, *Rammelsbergite*. Sol. in HNO<sub>3</sub>+Aq.

Ni<sub>2</sub>As<sub>3</sub>. Sol. in HNO<sub>3</sub> and in aqua regia. Readily attacked by fused alkali (Granger, C. R. 1900, 130. 915.)

### Nickel arsenide sulphide, NiAs<sub>2</sub>, NiS<sub>2</sub>

Min. *Gersdorffite*. Partly sol. in HNO<sub>3</sub>+Aq with separation of S and As<sub>2</sub>O<sub>3</sub>; not attacked by KOH+Aq.

### Nickel azoimide, basic, Ni(OH)N<sub>3</sub>

Insol. in H<sub>2</sub>O. (Curtius, J. pr. 1898, (2) 58. 300.)

### Nickel azoimide, NiN<sub>2</sub>+H<sub>2</sub>O.

Sol. in H<sub>2</sub>O, insol. in alcohol and ether. (Curtius, J. pr. 1900, (2) 61. 418.)

### Nickel potassium azoimide, Ni(N<sub>3</sub>)<sub>2</sub>, KN<sub>3</sub> (?)

Sol. in H<sub>2</sub>O. (Curtius, J. pr. 1898, (2) 58. 302.)

### Nickel boride, Ni<sub>2</sub>B.

Attacked by HNO<sub>3</sub>. Slowly sol. in hot HCl. (Jassoneix, C. R. 1907, 145. 240.)

NiB. Decomp. by moist air and by alkali nitrates, chlorates, hydroxides and carbonates; decomp. by steam at red heat. Not attacked by HCl. Easily attacked by HNO<sub>3</sub> and aqua regia; by H<sub>2</sub>SO<sub>4</sub> only on heating. (Moissan, C. R. 1896, 122. 425.)

NiB<sub>2</sub>. (Jassoneix, C. R. 1907, 145. 241.)

### Nickel bromide, NiBr<sub>2</sub>.

Deliquescent. Slowly sol. in H<sub>2</sub>O.

Sat. NiBr<sub>2</sub>+Aq contains at.

-21°	-6°	+19°	38°
47.1	51.7	56.6	58.9% NiBr <sub>2</sub>
58°	77°	98°	100°
60.5	60.3	61.0	61.0
			60.7% NiBr <sub>2</sub>

(Étard, A. ch. 1894, (7) 2. 542.)

Somewhat hygroscopic. Nearly insol. in cold H<sub>2</sub>O but begins to dissolve appreciably at 50°, and somewhat more rapidly at 90°, but even at that temp. 1 g. requires 1-2 hours for solution. HNO<sub>3</sub> does not appreciably hasten solution. (Richards and Cushman, Z. anorg. 1898, 16. 169.)

Sl. sol. in benzonitrile (Naumann, B. 1914, 47, 1369.)  
 Sol. in gumoline. (Beckmann and Gabel, Z. anorg. 1906, 51, 236.)  
 +3H<sub>2</sub>O. Deliquescent. Very sol. in H<sub>2</sub>O, HCl+aq, NH<sub>4</sub>OH+aq, alcohol, and ether (Berthelot, A. ch. 44, 389.)  
 +6H<sub>2</sub>O. (Bolschakoff, C. C. 1897, II, 331 and 726.)  
 +9H<sub>2</sub>O. (Bolschakoff, C. C. 1897, II, 726 and 331.)

Nickel stannic bromide.

See Bromostannate, nickel.

Nickel bromide ammonia, NiBr<sub>3</sub>·6NH<sub>3</sub>.

Sol. in little H<sub>2</sub>O, but decomp. by more (Rammelsberg, Pogg. 55, 243.)

Sol. in warm conc. NH<sub>4</sub>OH+aq, insol in cold (Richards and Cushman, Z. anorg. 1898, 16, 175.)

Nickel bromide cupric oxide, NiBr<sub>3</sub>·3CuO+4H<sub>2</sub>O.

Not decomp. by H<sub>2</sub>O. (Mailhe, A. ch. 1902, (7) 27, 377.)

Nickel bromide hydrazine, NiBr<sub>3</sub>·2N<sub>2</sub>H<sub>4</sub>.

Easily sol. in dil acids and NH<sub>4</sub>OH+aq. NiBr<sub>3</sub>·3N<sub>2</sub>H<sub>4</sub>. Sol. in dil acids (Franzen, Z. anorg. 1908, 60, 263-4.)

Nickel carbonyl, Ni(CO)<sub>4</sub>.

Insol. in H<sub>2</sub>O; not attacked by dil acids or alkalis or conc. HCl+aq. Easily sol. in conc. HNO<sub>3</sub>+aq and in aqua regia. Sol. in alcohol, benzene, and chloroform. (Mond, Langer, and Quincke, Chem. Soc. 57, 749.)

Sol. in hydrocarbons, especially oil of turpentine. (Berthelot, C. R. 1891, 112, 1346.)

Sol. in acetone, toluene, methyl and ethyl alcohol, etc (Lenher and Loos, J. Am. Chem. Soc. 1900, 22, 114.)

Nickel chloride, NiCl<sub>2</sub>.

Anhydrous. Not immediately sol. in H<sub>2</sub>O, but gradually dissolves on boiling or by addition of HCl+aq. Deliquesces on air, and is then easily sol. in H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH+aq. Sol. in alcohol. Sol. in hot HCl+aq only slowly.

Sp. gr. of NiCl<sub>2</sub>+aq containing:

	5	10	15	20	25% NiCl <sub>2</sub>
1.0493	1.0995	1.1578	1.2245	1.3000	

(B. Franz, J. pr. (2) 6, 285.)

Sp. gr. of NiCl<sub>2</sub>+aq containing, in 1000 grms. H<sub>2</sub>O, g. NiCl<sub>2</sub>+7H<sub>2</sub>O at 23.1°:

	128 g. (= 1/2 mol.)	256	384	512
1.057		1.107	1.149	1.187
	640	768	896	1024
	1.220	1.249	1.276	1.301

Containing g. NiCl<sub>2</sub> (anhydrous):

65 g. (= 1/2 mol.)	130	195	260	325	390
1.061	1.119	1.176	1.230	1.284	1.335

(Gerlach, Z. anal. 28, 468.)

Sp. gr. of NiCl<sub>2</sub>+aq at room temp. containing.

	11.440	22.69	30.40%	NiCl <sub>2</sub>
	1.1093	1.2264	1.3371	

(Wagner, W. Ann. 1883, 18, 269.)

Sp. gr. of NiCl<sub>2</sub>+aq at 25°.

Concentration of NiCl <sub>2</sub> +aq	Sp. gr.
1-normal	1.0591
1/5-	1.0308
1/10-	1.0144
1/15-	1.0087

(Wagner, Z. phys. Ch. 1890, 5, 39.)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20, 828.)

100 pts. absolute alcohol dissolve at room temperature 10.05 pts. NiCl<sub>2</sub> (Bödtker, Z. phys. Ch. 1897, 22, 511.)

Sol. in gumoline. (Beckmann and Gabel, Z. anorg. 1906, 51, 236.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

Solubility in glycol=16.1-16.3%. (de Connick, C. C. 1905, II, 1234.)

Sl. sol. in benzonitrile (Naumann, B. 1914, 47, 1369.)

Anhydrous NiCl<sub>2</sub> is insol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6, 184.)

Insol. in acetone and in methylal. (Edmann, C. C. 1899, II, 1014.)

+H<sub>2</sub>O. (Baubigny.)

11. sat. HCl+aq at 12° contains 40 g. NiCl<sub>2</sub> dissolved from NiCl<sub>2</sub>, H<sub>2</sub>O (Ditte.)

+2H<sub>2</sub>O. (Sabatier, Bull. Soc. (3) 1, 88.)

+6H<sub>2</sub>O. Deliquescent in moist, efflorescent in dry air; sol. in H<sub>2</sub>O with evolution of heat. Sol. in 1.5 to 2 pts. H<sub>2</sub>O. Easily sol. in alcohol. (Tupputi.)

1 l. H<sub>2</sub>O dissolves 600 g. NiCl<sub>2</sub>+6H<sub>2</sub>O. (Ditte, A. ch. 1879, (5) 22, 551.)

Sat. aq. solution contains at.

-17°	-16°	+10°	18°
29.7	31.0	37.3	38.5% NiCl <sub>2</sub>

38°	59°	78°	96°
41.9	45.0	46.6	46.7% NiCl <sub>2</sub>

(Étard, A. ch. 1894, (7) 2, 539.)

Solubility of NiCl<sub>2</sub>+6H<sub>2</sub>O=37.53% NiCl<sub>2</sub> at 25°. (Foote, J. Am. Chem. Soc. 1912, 34, 882.)

100 pts. absolute alcohol dissolve at room temperature 53.71 pts. NiCl<sub>2</sub>+6H<sub>2</sub>O. (Bödtker, Z. phys. Ch. 1897, 22, 511.)

+7H<sub>2</sub>O. 100 g absolute alcohol dissolve 2.16 g NiCl<sub>2</sub>·7H<sub>2</sub>O at 17° and 1.4 g. at 3°. (de Bruyn, R. C. a. 1892, 11, 156)

**Nickel hydrogen chloride**, 3NiCl<sub>2</sub>·2HCl+11H<sub>2</sub>O  
(Rietzenstein, Z. anorg. 1898, 18, 270)

**Nickel rubidium chloride**, NiCl<sub>2</sub>·2RbCl  
Easily sol. in H<sub>2</sub>O and HCl+Ag (Godefroy, B. 8, 9)

**Nickel thallic chloride**, NiCl<sub>2</sub>·2TlCl<sub>3</sub>+8H<sub>2</sub>O  
Deliquescent. Can be cryst. from H<sub>2</sub>O (Gewecke, A. 1909, 366, 221)

**Nickel tin (stannous) chloride**, NiCl<sub>2</sub>·SnCl<sub>2</sub>+6H<sub>2</sub>O  
Sol. in H<sub>2</sub>O (Jorgensen)

**Nickel tin (stannic) chloride.**  
See Chlorostannate, nickel.

**Nickel chloride ammonia**, NiCl<sub>2</sub>·2NH<sub>3</sub>  
Sol. in H<sub>2</sub>O, decomp. on boiling, insol. in alcohol

NiCl<sub>2</sub>·3NH<sub>3</sub>+3H<sub>2</sub>O (André, C. R. 1888, 106, 937)

NiCl<sub>2</sub>·6NH<sub>3</sub>. Sol. in cold H<sub>2</sub>O without decomp. Insol. in alcohol. Very sl. sol. in conc. NH<sub>4</sub>OH+Ag

Neu. insol. in a sat. solution of NH<sub>4</sub>Cl in NH<sub>4</sub>OH+Ag (Sorensen, Z. anorg. 1894, 5, 363)

**Nickel chloride cupric oxide**, NiCl<sub>2</sub>·3CuO+H<sub>2</sub>O

Not decomp. by H<sub>2</sub>O (Muller, A. ch. 1902, (7) 27, 377)

**Nickel chloride hydrazine**, NiCl<sub>2</sub>·2N<sub>2</sub>H<sub>4</sub>

Sol. in dil. acids and NH<sub>3</sub>+Ag. (Frumzen, Z. anorg. 1908, 60, 262)

NiCl<sub>2</sub>·3N<sub>2</sub>H<sub>4</sub>. Sol. in dil. acids (F)

**Nickel fluoride**, NiF<sub>2</sub>.

Sol. in about 5000 pts. H<sub>2</sub>O; insol. in alcohol and ether. Not attacked by HCl, HNO<sub>3</sub>, or H<sub>2</sub>SO<sub>4</sub> even when hot (Poulenc, C. R. 114, 1426)

Insol. in liquid NH<sub>3</sub> (Gore, Am. Ch. J. 1898, 20, 828)

+2H<sub>2</sub>O. Decomp. by pure H<sub>2</sub>O. Sol. in H<sub>2</sub>O acidulated with HF. (Berzelius)

+3H<sub>2</sub>O (Clarke, Sil. Am. J. (3) 13, 291)

**Nickel hydrogen fluoride**, NiF<sub>2</sub>·5HF+6H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O and dil. acids. Sol. in NH<sub>4</sub>OH+Ag with decomp. (Bohm, Z. anorg. 1905, 43, 340)

**Nickel potassium fluoride**, NiF<sub>2</sub>·KF.

+H<sub>2</sub>O. Sol. in H<sub>2</sub>O (Wagner, B. 19, 896)

NiF<sub>2</sub>·2KF. Sl. sol. in H<sub>2</sub>O. Scarcely sol. in methyl or ethyl alcohol or benzene. (Poulenc, C. R. 114, 747)

**Nickel potassium zirconium fluoride.**

See Fluozirconate, nickel potassium.

**Nickel manganic fluoride.**

See Fluomanganate, nickel.

**Nickel sodium fluoride**, NiF<sub>2</sub>·NaF+H<sub>2</sub>O.

Sol. in H<sub>2</sub>O (Wagner, B. 19, 896)

**Nickel stannic fluoride.**

See Fluostannate, nickel.

**Nickel titanium fluoride.**

See Fluotitanate, nickel.

**Nickel tungstic fluoride.**

See Fluoxytungstate, nickel.

**Nickel vanadium fluoride.**

See Fluovanadate, nickel.

**Nickel zirconium fluoride.**

See Fluozirconate, nickel.

**Nickel fluoride ammonia**, 5NiF<sub>2</sub>·6NH<sub>3</sub>+8H<sub>2</sub>O

Insol. in cold H<sub>2</sub>O. Decomp. by hot H<sub>2</sub>O. Easily sol. in dil. acids. (Bohm, Z. anorg. 1905, 43, 341)

**Nickelous hydroxide**, 4NiO<sub>2</sub>·H<sub>2</sub>O.

Very sl. sol. in H<sub>2</sub>O. Sol. in acids. Insol. in KOH or NaOH+Ag. Somewhat difficultly sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub> or NH<sub>4</sub>OH+Ag, but easily sol. in presence of NH<sub>4</sub> salts. Sol. in NH<sub>3</sub> salts+Ag. Sol. in KCN+Ag (Rodgers, 1834.)

Sol. in boiling NH<sub>4</sub>Cl+Ag

NiO<sub>2</sub>·H<sub>2</sub>O

Solubility in NH<sub>4</sub>OH+Ag at 25°

NH <sub>3</sub> norm.	G. Ni ps. l.	G. NiO <sub>2</sub> ·H <sub>2</sub> O per l.
1	0.081	0.00287
2	0.170	0.00579
3	0.257	0.00875
4	0.360	0.01227
4.911	2.580	0.0879
3.900	1.780	0.0607
2.101	0.835	0.0284
0.602	0.158	0.0054

The non-agreement of the results is due to the formation of different modifications of NiO<sub>2</sub>·H<sub>2</sub>O.

(Bonsdorff, Z. anorg. 1904, 41, 185)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$   
 Conc. of  $\text{Ni} = 0.014\text{N}$  in  $1\text{N } \text{NH}_4\text{OH} + \text{Aq}$   
 " " " "  $= 0.036\text{N}$  "  $2\text{N } \text{NH}_4\text{OH} + \text{Aq}$   
 (Starek, B 1903, 38, 3840.)  
 Sol in hot  $\text{NH}_4\text{F} + \text{Aq}$ . (von Helmholt, Z anorg 1893, 3, 133.)  
 Insol in methyl or amyl amine. (Wurtz.)  
 Not pptd in presence of Na citrate (Spiller.)

Not pptd in presence of a large number of non-volatile organic substances, particularly  $\text{H}_2\text{C}_4\text{H}_6\text{O}_6$  (Rose.)

#### Nickelomelic hydroxide, $\text{Ni}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$ .

Sol. in acids, insol in  $\text{H}_2\text{O}$  and alkalies (Dudley, J Am Chem. Soc. 1896, 18, 901)

#### Nickelic hydroxide, $\text{Ni}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$ (?).

(Wernicke, Pogg 141, 122)  
 $\text{Ni}_2\text{O}_3 \cdot 3\text{H}_2\text{O}$  (?). Sol in acids as nickelous salts. Not attacked by boiling  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ . Slowly sol in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$   
 Sol in  $\text{NH}_4\text{OH}$ , and  $\text{NH}_4$  salts +  $\text{Aq}$  (Odling)

#### Nickel iodide, $\text{NiI}_2$

Deliquescent and sol. in  $\text{H}_2\text{O}$ . (Eidmann, J pr 7 254)

Sat.  $\text{NiI}_2 + \text{Aq}$  contains at

$-23^\circ$	$-6^\circ$	$+11^\circ$	$16^\circ$
51.8	54.3	57.8	59.0% $\text{NiI}_2$

$43^\circ$	$80^\circ$	$85^\circ$	$90^\circ$
64.1	65.0	65.2	65.7% $\text{NiI}_2$

(Etard, A. ch 1894, (7) 2, 546)

+  $6\text{H}_2\text{O}$  Deliquescent Easily sol. in  $\text{H}_2\text{O}$  (Eidmann)

#### Nickel iodide ammonia, $\text{NiI}_2 \cdot 4\text{NH}_3$

(Rummeisberg, Pogg 48, 119.)  
 $\text{NiI}_2 \cdot 6\text{NH}_3$  Decomp by  $\text{H}_2\text{O}$  Sol in warm dil  $\text{NH}_4\text{OH} + \text{Aq}$ . Very sl sol in conc  $\text{NH}_4\text{OH} + \text{Aq}$ . (Eidmann)

#### Nickel iodide hydrazine, $\text{NiI}_2(\text{N}_2\text{H}_4)_2$

Insol in  $\text{H}_2\text{O}$  Sol in acids (Franzen, Z anorg 1911, 70, 150)

#### Nickel sulfoxide, $\text{Ni}_2\text{O}_3 + \text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ , sol in  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$ , also in  $\text{KCN} + \text{Aq}$  (Moore, C. N 1895, 71, 81.)

#### Nickelous oxide, $\text{NiO}$

Insol in  $\text{H}_2\text{O}$  Sol. in conc. acids, except when crystalline, when it is scarcely attacked by acids (Ebelmen, C R 33 256.)

Very sl sol in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$  (De-marcay)

Very slowly sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol in  $\text{KOH}$ , and  $\text{NaOH} + \text{Aq}$ .

Sol in min acids, especially  $\text{HCl} + \text{Aq}$ , when warmed; insol in  $\text{HC}_2\text{H}_3\text{O}_2$ ,  $\text{NH}_4\text{Cl}$ ,

and  $\text{NH}_4\text{SCN} + \text{Aq}$ . Insol in conc  $\text{NaOH} + \text{Aq}$  (Zimmerman, A 232, 324)

1 l solution containing 418.6 g. sugar and 34.3 g.  $\text{CaO}$  dissolves 0.29 g.  $\text{NiO}$ . (Boden-bender, J B 1865, 600.)

Min Bunsenite

#### Nickelomelic oxide, $\text{Ni}_2\text{O}_4$

Sol in acids (Bauhigny, C. R 87, 1082.) +  $2\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ , and in alkalies +  $\text{Aq}$ . Sol in acids. (Dudley, J. Am Chem Soc 1896, 18, 901.)

$6\text{NiO}$ ,  $\text{Ni}_2\text{O}_3 + \text{H}_2\text{O}$ . (Schonbein, J. pr 93, 35)

#### Nickelic oxide, $\text{Ni}_2\text{O}_3$

Sol in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HCl} + \text{Aq}$  with decomp., also in  $\text{NH}_4\text{OH}$  and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Winkelblech, A. 13, 259)

#### Nickel peroxide, $\text{Ni}_2\text{O}_4$ (?)

(Bayley, C N 39, 81)  
 Correct composition is  $\text{Ni}_2\text{O}_4$ . (Carnot, C R. 108 610)

$\text{Ni}_2\text{O}_7$  (?). (Wicke, Zeit Ch. 1865, 303)

$\text{NiO}_4$ . (Holland, C. R. 1903, 136, 230)

#### Nickel oxychloride.

Sl sol. in  $\text{H}_2\text{O}$ . (Berzelius)

$\text{NiCl}_2$ ,  $8\text{NiO} + 13\text{H}_2\text{O}$ . (Raoult, C. R. 69, 826)

#### Nickel oxyiodide, $\text{NiI}_2 \cdot 9\text{NiO} + 15\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  Sol in  $\text{HNO}_3 + \text{Aq}$  or acetic acid Insol in  $\text{NH}_4\text{OH} + \text{Aq}$ . Alcohol dissolves out  $\text{NiI}_2$ . (Eidmann.)

#### Nickel oxyselenide.

Almost insol in boiling  $\text{HCl}$ ; decomp by  $\text{HNO}_3$ . (Fonzen-Diacon, C. R. 1900, 131, 557.)

#### Nickel phosphide, $\text{Ni}_3\text{P}$

Sol in  $\text{HNO}_3 + \text{Aq}$  and aqua regia, insol. in  $\text{HCl} + \text{Aq}$ . (Struve, J. pr 79, 321)

Sol in aqua regia and in  $\text{HNO}_3$ , sol. in fused alkali (Granger, Bull Soc. 1896, (3) 15, 1089)

Easily sol in  $\text{HNO}_3$ . (Granger, C N 1898, 77, 229.)

When prepared by heating phosphorus, copper and nickel in electric furnace, is insol in all acids except a mixture of  $\text{HNO}_3$  and  $\text{HCl}$  (Maronneau, C R 1900, 130, 657)

$\text{NiP}_2$  Sol in  $\text{HNO}_3$ ; decomp. by fused  $\text{NaOH}$  (Johbus, C R 1910, 150, 107.)

$\text{NiP}_3$  Sol in  $\text{HNO}_3$ , decomp by fused  $\text{NaOH}$  (J.)

$\text{Ni}_2\text{P}_2$  Insol in  $\text{HNO}_3$ ,  $\text{HCl}$  and aqua regia. stable in the air even when heated (Granger, Bull. Soc. 1896, (3) 15, 1086)

$\text{Ni}_3\text{P}_2$  Not attacked by  $\text{HCl}$ . Easily attacked by  $\text{HNO}_3$ . (Rose, Pogg. 1832, 24, 232)

$\text{Ni}_3\text{P}_2$ . Sol. in  $\text{HNO}_3$ , aqua regia and in fused alkali. (Granger, C. R. 1896, 123. 177.)

#### Nickel phosphosulphide, $\text{Ni}_3\text{P}_2\text{S}_2$

Decomp. by hot  $\text{H}_2\text{O}$  or by aqua regia. Sl. attacked by  $\text{HNO}_3$ . (Ferrand, A. ch. 1899, (7) 17. 417.)

#### Nickel semiselenide, $\text{Ni}_3\text{Se}$ .

Almost insol. in boiling  $\text{HCl}$ , decomp. by  $\text{HNO}_3$ . (Fonze-Ducon, C. R. 1900, 131. 557.)

#### Nickel selenide, $\text{NiSe}$

Insol. in  $\text{H}_2\text{O}$ , dil. or cone.  $\text{HCl} + \text{Aq}$ ; slowly sol. in  $\text{HNO}_3 + \text{Aq}$ ; easily in aqua regia (Little, A. 112. 211.)

Almost insol. in boiling  $\text{HCl}$ , decomp. by  $\text{HNO}_3$ . (Fonze-Ducon, C. R. 1900, 131. 557.)

$\text{NiSe}_2$ . (Fonze-Ducon.)

$\text{Ni}_2\text{Se}_3$  } Almost insol. in boiling  $\text{HCl}$ ;  
 $\text{Ni}_3\text{Se}_4$  } decomp. by  $\text{HNO}_3$  (Fonze-Ducon.)

#### Nickel silicide, $\text{Ni}_3\text{Si}$ .

Sol. in  $\text{HF}$  and aqua regia, insol. in cold  $\text{H}_2\text{O}$ , decomp. by steam at red heat, sol. in fused alkali carbonates. (Vigouroux, C. R. 1895, 121. 687.)

#### Nickel semisulphide, $\text{Ni}_3\text{S}$ .

Sol. in  $\text{HNO}_3 + \text{Aq}$ , with residue of  $\text{S}$ . Difficultly sol. in cone.  $\text{HCl} + \text{Aq}$ ; insol. in dil.  $\text{HCl} + \text{Aq}$ . (Arfvedson, Pogg. 1. 65; Gautier, C. R. 108. 1111.)

Does not exist. (Bornemann, C. A. 1908. 1680.)

#### Nickel monosulphide, $\text{NiS}$ .

Anhydrous. Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$  or aqua regia.

Min. *Mellerite*.

$+x\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ , but decomp. by  $\text{H}_2\text{O}$  in contact with the air (Clermont and Guilot, C. R. 84. 714), or by boiling with  $\text{H}_2\text{O}$  (Geitner, A. 139. 354.)

When pptd. with  $(\text{NH}_4)_2\text{S}$ , is somewhat sol. in  $\text{H}_2\text{O}$ . 1 l.  $\text{H}_2\text{O}$  dissolves  $39.87 \times 10^{-6}$  moles  $\text{NiS}$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 68. 294.)

Very sl. sol. in dil.  $\text{HCl} + \text{Aq}$ , and still less in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Fresenius.)

More sol. in  $\text{HNO}_3 + \text{Aq}$ , and easily in aqua regia.

Somewhat sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  or solutions of alkali sulphides. Insol. in  $\text{NH}_4\text{SH} + \text{Aq}$  (Fresenius.)

Sol. at moment of formation in  $\text{Na}_2\text{S}$  but not in  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . (Vilhers, C. R. 1894, 119. 1264.)

Sol. while yet moist in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Berthier.)

When recently pptd., sol. in  $\text{KCN} + \text{Aq}$  (Haudlen.)

Pptd. in presence of non-volatile organic substances as tartaric acid, etc. (Rose.)

Sol. in potassium thiocarbonate +  $\text{Aq}$  (Rosenbladt, Z. anal. 26. 15.)

Exists in a colloidal form in a very dil. solution (Winnings, Bull. Soc. (2) 49. 452.)

$\alpha$  modification.

Very sol. in  $2\text{N-HCl} + \text{Aq}$  sat. with  $\text{H}_2\text{S}$ .

$\beta$  modification.

0.033 g. is sol. in 1 l.  $2\text{N-HCl} + \text{Aq}$  sat.

with  $\text{H}_2\text{S}$ ; very sol. in  $2\text{N-HCl} + \text{Aq}$ .

$\gamma$  modification.

Insol. in  $2\text{N-HCl} + \text{Aq}$  sat. with  $\text{H}_2\text{S}$ . 0.013 g. is sol. in  $2\text{N-HCl} + \text{Aq}$ . (Thuel, C. C. 1914, I 19.)

#### Nickel sulphide, $\text{Ni}_3\text{S}_2$

(Bornemann, C. A. 1908. 1686.)

$\text{Ni}_2\text{S}_4$ . (Bornemann.)

$\text{Ni}_3\text{S}_4$ . (Bornemann.)

$\text{Ni}_4\text{S}_5$  Min. *Polydymite*. Insol. in  $\text{HCl} + \text{Aq}$ .

Sol. in  $\text{HNO}_3 + \text{Aq}$  with separation of  $\text{S}$ .  $\text{Ni}_3\text{S}_7$  Min. *Beyrichite* Sol. in  $\text{HCl} + \text{Aq}$

#### Nickel disulphide, $\text{NiS}_2$ .

(Fellenberg, Pogg. 50. 75.)

Does not exist. (Bellucci, C. A. 1909. 293.)

#### Nickel potassium sulphide, $3\text{NiS}$ , $\text{K}_2\text{S}$

Insol. in  $\text{H}_2\text{O}$  (Schneider, J. pr. (2) 9. 209.)

$\text{K}_2\text{Ni}_3\text{S}_{10}$  Not attacked by hot  $(\text{NH}_4)_2\text{S}$ ; slowly attacked by  $\text{HCl}$  or cold aqua regia; quickly by hot aqua regia.  $\text{HF}$  and  $\text{H}_2\text{SO}_4$  dissolve only on heating. Insol. in organic acids, alkalis and 12%  $\text{HCl}$ , also in  $\text{KCN}$ ,  $\text{AgNO}_3$  or  $\text{CuSO}_4 + \text{Aq}$ . (Milbauer, Z. anorg. 1904, 42. 447.)

#### Nickel telluride, $\text{Ni}_3\text{Te}_2$

Min. *Melonite*. Sol. in  $\text{HNO}_3 + \text{Aq}$

$\text{NiTe}$  (Fabre, C. R. 105. 277.)

#### Nickelicotungstic acid.

Ammonium nickelicotungstate,  $2(\text{NH}_4)_2\text{O}$ ,  $2\text{Ni}_2\text{O}_3$ ,  $8\text{WO}_3 + 14\text{H}_2\text{O}$ .

(Rogers and Smith, J. Am. Chem. Soc. 1904, 26. 1476.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{Ni}_2\text{O}_3$ ,  $16\text{WO}_3 + 22\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$  (Rogers and Smith.)

Barium nickelicotungstate,  $10\text{BaO}$ ,  $\text{Ni}_2\text{O}_3$ ,  $16\text{WO}_3$ .

Ppt. Very insol. in  $\text{H}_2\text{O}$ . (E. F. Smith.)

#### Nickelimolybdic acid.

Barium nickelimolybdate,  $3\text{BaO}$ ,  $\text{NiO}_3$ ,  $9\text{MoO}_3 + 12\text{H}_2\text{O}$ .

Ppt. (Hall, J. Am. Chem. Soc. 1907, 29. 702.)

Potassium nickelomolybdate,  $3K_2O, NiO_3, 9MoO_3 + 6\frac{1}{2}H_2O$

Very insol. even in hot  $H_2O$ . (Hall.)

### Nickelomolybdic acid.

Ammonium hydrogen nickelomolybdate,  $(NH_4)_4H_4[Ni(MoO_4)_4] + 5H_2O$

Sl. sol. in  $H_2O$ , easily in dil. acids (Barbieri, C. A. 1916. 897)

Barium hydrogen nickelomolybdate,  $Ba_4H_4[Ni(MoO_4)_4] + 10H_2O$ .

Ppt. (Barbieri)

Potassium hydrogen nickelomolybdate,  $K_4H_4[Ni(MoO_4)_4] + 5H_2O$ .

Sl. sol. in  $H_2O$ , easily in acids (Barbieri.)

Silver hydrogen nickelomolybdate,  $Ag_4H_4[Ni(MoO_4)_4] + 3H_2O$ .

Insol. in  $H_2O$ ; sol. in  $NH_4OH$ , or  $HNO_3 + Aq$ . (Barbieri)

### Nickelonickelous acid.

Potassium nickelonickelite,  $K_2Ni_2O_4$  or  $K_2O, NiO, NiO_2$ .

(Hofmann and Hiendlmaier. B. 1906, 39. 3188.)

Sodium nickelonickelite,  $Na_2Ni_2O_4 = Na_2O, NiO, 2NiO_2$ .

(Bellucci and Rubegni, C. C. 1907, I. 794)

### Nickelous acid.

Barium *nickelite*,  $BaO, 2NiO_2$ .

Unstable; decomp. by cold  $H_2O$ ; slowly and very rapidly by hot  $H_2O$  (Dufau, C. R. 1896, 123. 498.)

### Niobium, Nb.

For niobium and its compounds, see columbium, Cb, and the corresponding compounds

### Nitramide, $NH_2NO_2$ .

Decomp. by conc.  $H_2SO_4$ . Easily sol. in  $H_2O$ , alcohol, ether and acetone. Less sol. in benzol. Almost insol. in ligroin. (Thiele and Lachman, A. 1895, 288. 297.)

Sol. in ether, insol. in petroleum ether. Very unstable; decomp. by hot  $H_2O$ . (Thiele and Lachman, B. 1894, 27. 1909.)

### Nitratochloroplatinamine comps.

See Chloronitratoptatinamine comps.

### Nitrato cobalt octamine comps.

See Nitratooctamine cobaltic comps.

### Nitratooctamine cobaltic carbonate,

$(NO_2)_2Co_2(NH_3)_8(CO_3)_2 + H_2O$ .

Less sol. than other octamine carbonates. (Vortmann and Blasberg, B. 22. 2650.)

— chloride,  $(NO_2)_2Co_2(NH_3)_8Cl_4 + 4H_2O$ . (Vortmann and Blasberg, B. 22. 2652)

— iodide,  $(NO_2)_2Co_2(NH_3)_8I_4 + 2H_2O$ . (Vortmann and Blasberg.)

— nitrate.

See Octamine cobaltic nitrate.

— sulphate,  $(NO_2)_2Co_2(NH_3)_8(SO_4)_2 + 2H_2O + 4H_2O$ . (Vortmann and Blasberg, B. 22. 2652)

### Nitratoptatinamine nitrate,

$(NO_2)_2Pt(NH_3NO_2)_2$

Sl. sol. in cold, more easily in hot  $H_2O$ ; easily sol. in dil.  $HNO_3 + Aq$  (Cleve.)

— nitrite,  $(NO_2)_2Pt(NH_3NO_2)_2$ .

Easily sol. in  $H_2O$ . (Cleve)

### Nitratoptatindiamine chloride,

$(NO_2)_2Pt(N_2H_5Cl)_2 + H_2O$

Moderately sol. in cold, very easily in hot  $H_2O$ .

— chloroplatinate,  $(NO_2)_2Pt(N_2H_5Cl)_2, PtCl_4 + 2H_2O$ .

Ppt.

— chromate,  $(NO_2)_2Pt(N_2H_5)_2CrO_4$ .

Nearly insol. in  $H_2O$  (Cleve.)

— dichromate,  $(NO_2)_2Pt(N_2H_5)_2Cr_2O_7$

Sl. sol. in  $H_2O$ .

— nitrate,  $(NO_2)_2Pt(N_2H_5NO_2)_2$ .

Sol. in  $H_2O$ . Insol. in  $HNO_3 + Aq$ .

— phosphate,  $NO_2Pt(N_2H_5)_2 + H_2O$ .

Very sl. sol. in  $H_2O$  (Cleve.)

### Nitratoptatindiamine nitrate,

$(NO_2)_2Pt_2(N_2H_5)_4(NO_2)_4$ .

Sol. in  $H_2O$  with decomp.

### Nitratopurpureocobaltic bromide,

$Co(NO_2)(NH_3)_5Br_2$ .

Resembles the chloride in its properties. (Jorgensen, J. pr (2) 23. 227.)

**Nitratopurpureocobaltic carbonate,**  
 $\text{Co}(\text{NO}_3)(\text{NH}_3)_4(\text{CO}_3) + \text{H}_2\text{O}.$ 

Less sol. in  $\text{H}_2\text{O}$  than other purpureocarbonates. (Vortmann and Blasberg, B 22, 2648.)

— chloride,  $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{Cl}_2$ 

Sl sol in cold  $\text{H}_2\text{O}$ , but more than nitrate, more easily sol. in hot  $\text{H}_2\text{O}$ , but is converted into roseo salt. Insol in  $\text{HCl} + \text{Aq}$  or alcohol. (Jørgensen, J. pr. (2) 23, 227.)

— mercuric chloride,  
 $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{Cl}_2, \text{HgCl}_2$ 

Not wholly insol. in  $\text{H}_2\text{O}$ . (Jørgensen.)

— chloroplatinate,  $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{Cl}_2,$   
 $\text{PtCl}_4$ 

Ppt. Nearly insol. in cold  $\text{H}_2\text{O}$  (Jørgensen.)

— chromate,  $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{CrO}_4$ 

Nearly insol. in  $\text{H}_2\text{O}$  (Jørgensen.)

## — dichromate.

Sl. sol. in  $\text{H}_2\text{O}$ , but more easily than the neutral salt. (Jørgensen.)

— dithionate,  $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{S}_2\text{O}_6$ 

Very sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$  (Jørgensen.)

— nitrate,  $\text{Co}(\text{NO}_3)(\text{NH}_3)_5(\text{NO}_3)_2$ 

Sol. in 273 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ . Much more sol. in hot  $\text{H}_2\text{O}$  containing  $\text{HNO}_3$  (Jørgensen, J. pr. (2) 23, 227.)

— cobaltic nitrite,  $3\text{Co}(\text{NO}_3)(\text{NH}_3)_5,$   
 $2\text{Co}(\text{NO}_2)_6 + 2\text{H}_2\text{O}.$ 

Very sl. sol. in  $\text{H}_2\text{O}$  (Jørgensen, Z anorg 5, 176.)

— diamine cobaltic nitrite,  $\text{Co}(\text{NO}_3)(\text{NH}_3)_4,$   
 $(\text{NO}_2)_2, \text{Co}(\text{NH}_3)_2$ 

Ppt. (Jørgensen.)

— oxalate,  $\text{Co}(\text{NO}_3)(\text{NH}_3)_4\text{C}_2\text{O}_4.$ 

Ppt.

— sulphate,  $\text{Co}(\text{NO}_3)(\text{NH}_3)_5\text{SO}_4 + \text{H}_2\text{O}$ 

Rather difficultly sol. in cold  $\text{H}_2\text{O}$  (Jørgensen.)

**Nitratopurpureorhodium chloride,**  
 $(\text{NO}_3)\text{Rh}(\text{NH}_3)_5\text{Cl}_2.$ 

Sl sol. in cold  $\text{H}_2\text{O}$ , but more easily than the nitrate. (Jørgensen, J. pr. (2) 34, 394.)

— dithionate,  $(\text{NO}_3)\text{Rh}(\text{NH}_3)_5\text{S}_2\text{O}_6 + \text{H}_2\text{O}.$ 

Nearly insol. in cold  $\text{H}_2\text{O}$ . (Jørgensen.)

**Nitratopurpureorhodium nitrate,**  
 $(\text{NO}_3)\text{Rh}(\text{NH}_3)_5(\text{NO}_3)_2.$ 

Very sl sol in cold  $\text{H}_2\text{O}$ . Insol. in alcohol. (Jørgensen.)

**Nitric acid,  $\text{HNO}_3$** 

Miscible with  $\text{H}_2\text{O}$ . When  $\text{HNO}_3 + \text{Aq}$  is distilled at 760 mm. pressure, an acid containing 68%  $\text{HNO}_3$  is formed, which boils at  $120.5^\circ$  under 735 mm. pressure. By distilling at 150 mm. pressure the acid contains 67.6%  $\text{HNO}_3$ ; at 70 mm. (b.-pt.  $65-70^\circ$ ) the acid contains 66.7%  $\text{HNO}_3$ . The percentage of  $\text{HNO}_3$  in the liquid obtained by passing dry air into  $\text{HNO}_3 + \text{Aq}$  containing 64-68%  $\text{HNO}_3$  varies with the temp., the higher the temp. the greater the percentage of  $\text{HNO}_3$ . (Roscoe, Chem Soc. 13, 150.)

$\text{HNO}_3 + \text{Aq}$ of 1	51	sp. gr.	contains	07%	$\text{N}_2\text{O}_5$

M 2.0  
Sp. gr. 1.0670

(Jones and Pearce, Am. Ch. J. 1907, 38, 732.)

For sp. gr. of  $\text{HNO}_3$ + $\text{H}_2\text{SO}_4$ , see under  $\text{H}_2\text{SO}_4$ .

Partition coefficient for  $\text{HNO}_3$  between ether and  $\text{H}_2\text{O}$  is increased by the addition of nitrates. (Tanret, C R 1897, 124, 464.)

The hydrates described by Erdmann do not exist. There are only two authentic hydrates, the mono- and the tri-hydrate. (Kuster, Ch. Z. 1904, 28, 132)

The composition of the hydrates formed by  $\text{HNO}_3$  at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by  $\text{HNO}_3$  and of the conductivity and sp. gr. of  $\text{HNO}_3$ +Aq (Jones, Am. Ch. J. 1905, 34, 328)

Dinitric acid,  $\text{H}_2\text{N}_2\text{O}_{11}=2\text{N}_2\text{O}_5$ ,  $\text{H}_2\text{O}$ .

Fumes on air. Miscible with  $\text{H}_2\text{O}$ , with evolution of much heat. (Weber, J. pr. (2) 6, 342.)

## Nitrates.

All nitrates are sol. in  $\text{H}_2\text{O}$  except a few basic compounds. Most nitrates are insol. in

conc.  $\text{HNO}_3 + \text{Aq}$ ; many are sol. in alcohol; some are sol. in glycerine

Aluminum nitrate, basic,  $2\text{Al}_2\text{O}_3, 3\text{N}_2\text{O}_5 + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Ordway, *Sill. Am. J.* (2) 26. 203.)

Basic aluminum nitrates containing 2 mols or less of  $\text{Al}_2\text{O}_3$  to one of  $\text{N}_2\text{O}_5$  may be obtained sol. in  $\text{H}_2\text{O}$ , but the compounds containing more than 2 mols.  $\text{Al}_2\text{O}_3$  are insol. in  $\text{H}_2\text{O}$ . (Ordway, *l. c.*)

$2\text{Al}_2\text{O}_3, \text{N}_2\text{O}_5 + 10\text{H}_2\text{O}$ . (Ditte, *C. R.* 110. 782.)

$\text{Al}_2\text{O}_3 \cdot \text{H}_2\text{O}, \text{HNO}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Schlumberger, *Bull. Soc.* 1895, (3) 13. 59.)

Aluminum nitrate,  $\text{Al}(\text{NO}_3)_3 + 9\text{H}_2\text{O}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}, \text{HNO}_3 + \text{Aq}$ , or alcohol. (Berzelius.)

Melts in its crystal  $\text{H}_2\text{O}$  at  $72^\circ$ . (Ordway.)

Sol. in 1 pt. strong alcohol. (Wenzel.)

Difficultly sol. in acetone. (Naumann, *B.* 1904, 37. 4328.)

Insol. in ethyl acetate. (Naumann, *B.* 1910, 43. 314.)

Ammonium nitrate,  $\text{NH}_4\text{NO}_3$ .

Deliquescent.

Sol. in 0.502 pt.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Karsten.)

Sol. in 0.54 pt.  $\text{H}_2\text{O}$  at  $10^\circ$ . (Harris, *C. R.* 24. 816.)

Much more sol. in hot than cold  $\text{H}_2\text{O}$ . (Harris.)

Sol. in 2 pts.  $\text{H}_2\text{O}$  at  $15.3^\circ$  and 0.5 pt. boiling  $\text{H}_2\text{O}$  (Fourcroy.)

Sol. in 1 pt. cold, and 0.5 pt. boiling  $\text{H}_2\text{O}$  (Fourcroy.)

Sol. in 0.6 pt.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Berzelius.)

Sol. in 2 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Abl.)

Decomp. by boiling  $\text{H}_2\text{O}$ .

Solubility in 100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	$\text{Pt}_{100}$ $\text{NH}_4\text{NO}_3$	$t^\circ$	$\text{Pt}_{100}$ $\text{NH}_4\text{NO}_3$	$t^\circ$	$\text{Pt}_{100}$ $\text{NH}_4\text{NO}_3$

(Kuriloff, Z. phys. Ch. 1898, 25. 109.)

$\text{NH}_4\text{NO}_3 + \text{NH}_4\text{Cl}$

100 pts.  $\text{H}_2\text{O}$  dissolve 20.1 pts.  $\text{NH}_4\text{Cl}$  and 173.8 pts.  $\text{NH}_4\text{NO}_3$ . (Rudorff, B. 6. 484.)

Sol. in sat.  $\text{NH}_4\text{Cl} + \text{Aq}$  with pptn. of  $\text{NH}_4\text{Cl}$  until a state of equilibrium is reached. (Karsten.)

Addition of  $\text{KClO}_3$  to  $\text{NH}_4\text{Cl} + \text{Aq}$  prevents pptn. of  $\text{NH}_4\text{Cl}$ , and dissolves any  $\text{NH}_4\text{Cl}$  that may have been pptd. (Margueritte, C. R. 38. 306.)

See also under Ammonium chloride.

$\text{NH}_4\text{NO}_3 + \text{KNO}_3$

100 pts.  $\text{H}_2\text{O}$  dissolve:

	At 0° (1)	At 11° (2)	At 11° (3)	At 15° (4)	At 15° (5)	At 15° (6)
$\text{KNO}_3$	20.2	40.6		26.0	46.2	
$\text{NH}_4\text{NO}_3$		88.8	143		130.4	161

2, Sat. at 11° with  $\text{NH}_4\text{NO}_3$  and then at 0° with  $\text{KNO}_3$ ; 5, sat. at 11° with  $\text{NH}_4\text{NO}_3$  and then at 15° with  $\text{KNO}_3$ . (Mulder.)

Sol. in sat.  $\text{HNO}_3 + \text{Aq}$  without causing ppt. (Karsten), with separation of  $\text{KNO}_3$  (Rudorff).

Composition of solution is dependent on the relative excess of the salts present. (Rudorff.) 100 pts.  $\text{H}_2\text{O}$  dissolve 77.1 pts.  $\text{NaNO}_3$  and 162.9 pts.  $\text{NH}_4\text{NO}_3$  at 16°. (Rudorff, B. 6. 484.)

If a sat. solution of  $\text{NH}_4\text{NO}_3 + \text{Aq}$  at 11° is sat. with  $\text{Ba}(\text{NO}_3)_2$  at 0°, 100 pts.  $\text{H}_2\text{O}$  dissolve.

(de Waal Dissert. Leiden. 1910.)

Very easily sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 826.)

1 pt.  $\text{NH}_4\text{NO}_3$  dissolves in 2.29 pts. alcohol of 66.8% at 25° (Pohl, W. A. B. 6, 599)  
1 pt.  $\text{NH}_4\text{NO}_3$  dissolves in 1.1 pt. bushing alcohol (Wenzel)

100 pts. absolute methyl alcohol dissolve 17.1 pts. at 20.5°. (de Bruyn, Z. phys. Ch. 10, 783.)

100 g. absolute methyl alcohol dissolve 14.6 g.  $\text{NH}_4\text{NO}_3$  at 14° and 16.3 g. at 18.5°. (Schiff and Monsacchi, Z. phys. Ch. 1896, 21, 277.)

100 pts. absolute ethyl alcohol dissolve 3.8 pts. at 20.5°. (de Bruyn, Z. phys. Ch. 10, 783.)

100 g. absolute ethyl alcohol dissolve 4.6 g. at 14°. (Schiff and Monsacchi, Z. phys. Ch. 1896, 21, 277.)

Solubility of  $\text{NH}_4\text{NO}_3$  in  $\text{H}_2\text{O}$  is decreased by presence of ethyl alcohol but increased by presence of methyl alcohol.  $\text{NH}_4\text{NO}_3$  is only very sl. sol. in abs. ethyl alcohol and the solubility increases slowly with rise in temp.; it is more sol. in abs. methyl alcohol and the solubility increases rapidly with rise in temp (Fleckenstein, Phys. Zeit. 1905, 6, 419.)

#### Solubility in methyl alcohol + Aq. at 30°.

(Groschuff, Z. anorg. 1904, 40, 7.)

**Ammonium cerous nitrate**,  $3\text{NH}_4\text{NO}_3$ ,  
 $2\text{Ce}(\text{NO}_3)_3 + 12\text{H}_2\text{O}$ .

Very deliquescent. Very sol. in  $\text{H}_2\text{O}$  and alcohol. (Holzmann, J. pr. 84. 78.)  
+  $10\text{H}_2\text{O}$ . Hygroscopic. Sol. in  $\text{H}_2\text{O}$ .  
(Drossbach, B. 1900, 33. 3507.)  
 $2\text{NH}_4\text{NO}_3$ ,  $\text{Ce}(\text{NO}_3)_3 + 4\text{H}_2\text{O}$ . As above.  
(Marignac, A. ch. (4) 30. 64.)

Solubility in  $\text{H}_2\text{O}$   
100 g.  $\text{H}_2\text{O}$  dissolve at:  
8.75° 25° 45°  
235.5 296.8 410.2 g. anhydrous salt,

60° 65.06°  
681.2 817.4 g. anhydrous salt.  
(Wolff, Z. anorg. 1905, 45. 98.)

**Ammonium ceric nitrate**,  $2\text{NH}_4\text{NO}_3$ ,  
 $\text{Ce}(\text{NO}_3)_4$ .

Very sol. in  $\text{H}_2\text{O}$  without decomp. Sol. in  $\text{HNO}_3$ . (Meyer, B. 1900, 33. 2137.)  
Sol. in alcohol. (Meyer, Z. anorg. 1901, 27. 369.)

Solubility in  $\text{H}_2\text{O}$ .  
100 g.  $\text{H}_2\text{O}$  dissolve at t°:  
25° 35.2° 45.3°  
140.9 161.7 174.9 g. anhydrous salt,  
64.5° 85.60° 122°  
201.6 226.8 735.4 g. anhydrous salt.  
(Wolff, Z. anorg. 1905, 45. 94.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . Very deliquescent. (Holzmann, J. pr. 84. 78.)

**Ammonium cobalt nitrate**.  
Permanent. Sol. in  $\text{H}_2\text{O}$ . (Thenard.)

**Ammonium copper nitrate**,  $2\text{NH}_4\text{NO}_3$ ,  
 $\text{Cu}(\text{NO}_3)_2$ .  
Very sol. in  $\text{H}_2\text{O}$ .

**Ammonium didymium nitrate**,  $2\text{NH}_4\text{NO}_3$ ,  
 $\text{Dy}(\text{NO}_3)_3 + 4\text{H}_2\text{O}$ .  
Somewhat deliquescent.

**Ammonium gadolinium nitrate**,  $2\text{NH}_4\text{NO}_3$ ,  
 $\text{Gd}(\text{NO}_3)_3$ .  
Deliquesces in the air. (Benedicks, Z. anorg. 1900, 22. 407.)

**Ammonium gold (auric) nitrate** (Ammonium auronitrate),  $\text{NH}_4\text{Au}(\text{NO}_3)_4$ .  
Extremely deliquescent.  
 $\text{H}(\text{NH}_4)_2\text{Au}(\text{NO}_3)_4$ . (Schottlander, A. 217. 312.)

**Ammonium lanthanum nitrate**,  $2\text{NH}_4\text{NO}_3$ ,  
 $\text{La}(\text{NO}_3)_3 + 4\text{H}_2\text{O}$ .  
Not deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Marignac.)

**Ammonium magnesium nitrate**,  $2\text{NH}_4\text{NO}_3$ ,  
 $\text{Mg}(\text{NO}_3)_2$ .

Slowly deliquescent. Sol. in 10 pts.  $\text{H}_2\text{O}$  at 12.5°, and much less hot  $\text{H}_2\text{O}$ . (Fourcroy.)

**Ammonium mercurous nitrate**,  $4\text{NH}_4\text{NO}_3$ ,  
 $\text{Hg}_2(\text{NO}_3)_2 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Pagenstecher, Repert. 14. 188.)

**Ammonium nickel nitrate**.

Sol. in 3 pts. cold  $\text{H}_2\text{O}$ . (Thénard, Scher. J. 10. 428.)

**Ammonium praseodymium nitrate**,  $2\text{NH}_4\text{NO}_3$ ,  
 $\text{Pr}(\text{NO}_3)_3 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (von Scheele, Z. anorg. 1898, 18. 356.)

**Ammonium silver nitrate**,  $\text{NH}_4\text{NO}_3$ ,  $\text{AgNO}_3$ .  
Very sol. in  $\text{H}_2\text{O}$ . (Russell and Maskelyne, Roy. Soc. Proc. 26. 357.)

Sol. in  $\text{H}_2\text{O}$  without decomp. (Schreinemakers and de Baat, Chem. Weekbl. 1910, 7. 6.)

See also solubility of  $\text{NH}_4\text{NO}_3 + \text{AgNO}_3$  under  $\text{NH}_4\text{NO}_3$ .

**Ammonium thorium nitrate**,  $(\text{NH}_4)_2\text{Th}(\text{NO}_3)_6$ .  
Sol. in strong  $\text{HNO}_3$ . (Meyer, Z. anorg. 1901, 27. 383.)

$\text{NH}_4\text{Th}(\text{NO}_3)_5 + 5\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  of sp gr. 1.25. (Meyer, Z. anorg. 1901, 27. 382.)

**Ammonium uranyl nitrate**,  $\text{NH}_4\text{NO}_3$ ,  
 $\text{UO}_2(\text{NO}_3)_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{HNO}_3$ . (Meyer, B. 1903, 36. 4057.)

Solubility in  $\text{H}_2\text{O}$  at t°.

t°	In 100 pts by wt of the solution			Solid phase
	by wt $\text{UO}_2$	by wt $\text{NH}_4$	by wt total salt	
0 5	29 71	2 92		Double salt + $\text{UO}_2(\text{NO}_3)_2$
13 5	32 35	3 42		"
24 9 a	36 40	3 54	68 72	"
b	36 63	3 54	68 97	"

59 0	44 37	2 90		"
80 7 a	44 80	2 98	78 78	Double salt
b	45 01	2 98	78 79	"

Ammonium uranyl nitrate is decomp. by  $\text{H}_2\text{O}$  at temp. below 60°: above 60° it is sol. in  $\text{H}_2\text{O}$  without decomp. (Rumbach, B. 1904, 37. 475.)

**Ammonium nitrate ammonia**,  $2\text{NH}_4\text{NO}_3$ ,  
 $3\text{NH}_3$ .

Known only as a solution of  $\text{NH}_3$  in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Troost, C. R. 94. 789.)  
 $\text{NH}_4\text{NO}_3$ ,  $3\text{NH}_3$ . As above.

**Ammonium nitrate mercuric chloride,**

Insol. in  $\text{H}_2\text{O}$ . Ether dissolves out  $\text{HgCl}_2$ .  
(Kosmann, A. ch. (3) 27. 210.)

$2\text{NH}_4\text{NO}_3, \text{HgCl}_2$ . Sol. in  $\text{H}_2\text{O}$ . (Hofmann and Marburg, A. 1899, 305. 199.)

**Ammonium nitrate sulphate,  $2(\text{NH}_4)_2\text{O}, \text{N}_2\text{O}_5, 2\text{SO}_3, \text{H}_2\text{O}$** 

Very hygroscopic and sol. in  $\text{H}_2\text{O}$ . (Friedheim, Z. anorg. 1894, 6. 297.)

$2\text{NH}_4\text{NO}_3, (\text{NH}_4)_2\text{SO}_4$ . (de Waal, Dissert. 1910.)

$3\text{NH}_4\text{NO}_3, (\text{NH}_4)_2\text{SO}_4$ . (de Waal.)  
See also solubility of  $\text{NH}_4\text{NO}_3 + (\text{NH}_4)_2\text{SO}_4$  under  $\text{NH}_4\text{NO}_3$ .

**Ammonium nitrate metatungstate,  $\text{Ni}_4\text{NO}_3, 2(\text{NH}_4)_2\text{W}_6\text{O}_{19} + 4\text{H}_2\text{O}$** 

Decomposes by recrystallising out of  $\text{H}_2\text{O}$ .  
(Marignac, A. ch. (3) 69. 61.)

**Antimony nitrate,  $\text{Sb}_2\text{O}_5, \text{N}_2\text{O}_5$** 

Decomp. by cold  $\text{H}_2\text{O}$ . (Bueholz.)

Aqueous solution sat. at  $10^\circ$  contains 30.4% salt. (Eller)

Sol. in strong, less sol. in dil.  $\text{HNO}_3 + \text{Aq}$ .  
(Peligot, A. ch. (3) 20. 288.)

Insol. in acetone (Naumann, B. 1904, 37. 4329.)

**Barium nitrate,  $\text{Ba}(\text{NO}_3)_2$** 

Sol. in  $\text{H}_2\text{O}$  with absorption of heat.

100 pts.  $\text{H}_2\text{O}$  at  $0^\circ$  dissolve 5.0 parts  
 $\text{Ba}(\text{NO}_3)_2$ . (Gay-Lussac, A. ch. 11. 313.)

100 pts.  $\text{H}_2\text{O}$  at  $0^\circ$  dissolve 5.2 parts  
 $\text{Ba}(\text{NO}_3)_2$  (Mulder.)

$\text{Ba}(\text{NO}_3)_2 + \text{Aq}$  sat. at  $20^\circ$  contains 8.57 pts  
 $\text{Ba}(\text{NO}_3)_2$  to 100 pts.  $\text{H}_2\text{O}$ , and has 1.0679 sp. gr. (Karsten); sat. at  $20^\circ$  has 1.064 sp. gr., and contains 7.94 pts.  $\text{Ba}(\text{NO}_3)_2$  to 100 pts.  $\text{H}_2\text{O}$ . (Michel and Krafft.)

(Rothmund and Wilmore, Z. phys. Ch. 1902, 40, 620.)

Insol. in benzonitrile. (Naumann, B. 1914, 47, 1370.)

Insol. in methyl acetate (Naumann, B. 1900, 42, 3790); ethyl acetate. (Naumann, B. 1904, 37, 3002.)

Insol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6, 184.)

Difficultly sol. in acetone (Naumann, B. 1904, 37, 4328.)

Sol. in acetone. (Eidmann, C. C. 1899, II, 1014.)

**Barium mercurous nitrate**,  $2\text{BaO}$ ,  $2\text{Hg}_2\text{O}$ ,  $8\text{N}_2\text{O}_5$ .

Decomp. by  $\text{H}_2\text{O}$  Sol in hot dil.  $\text{HNO}_3$  + Aq. and hot  $\text{Hg}_2(\text{NO}_3)_2$  + Aq. from which it crystallises on cooling (Stadeler, A. 87. 129.)

**Barium potassium nitrate**,  $\text{Ba}(\text{NO}_3)_2$ ,  $2\text{KNO}_3$ . Ppt. (Wallbridge, Am. Ch. J. 1903, 30. 154.)

Solubility determinations show that the only double salt formed by barium and potassium nitrates at  $25^\circ$  is  $\text{Ba}(\text{NO}_3)_2$ ,  $2\text{KNO}_3$ . See  $\text{Ba}(\text{NO}_3)_2$  +  $\text{KNO}_3$  under  $\text{Ba}(\text{NO}_3)_2$  (Foote, Am. Ch. J. 1904, 32. 252.)

**Barium nitrate melatungstate**,  $2\text{Ba}(\text{NO}_3)_2$ ,  $\text{Ba}_2\text{WO}_{12}$  +  $6\text{H}_2\text{O}$ .

Efflorescent. Sol. in warm  $\text{H}_2\text{O}$ . (Péchar, A. ch. (6) 22. 198.)

**Bismuth nitrate, basic**,  $\text{Bi}_2\text{O}_3$ ,  $\text{N}_2\text{O}_5$  +  $2\text{H}_2\text{O}$ .

Sol. in a large amount of  $\text{H}_2\text{O}$ . Sol in  $\text{HNO}_3$  + Aq. (Reintz.)

Sol. in 135 pts.  $\text{H}_2\text{O}$  at  $90$ – $93^\circ$ . (Ruge, J. B. 1882. 163.)

+  $\frac{1}{2}\text{H}_2\text{O}$  Sol. in much  $\text{H}_2\text{O}$ . (Yvon, C. R. 84. 1161.)

+  $\text{H}_2\text{O}$ . (Ruge.)

$2\text{Bi}_2\text{O}_3$ ,  $\text{N}_2\text{O}_5$ . Not acted upon by  $\text{H}_2\text{O}$  (Ditte, C. R. 84. 1317.)

+  $\text{H}_2\text{O}$ . (Yvon.)

$\text{Bi}_2\text{O}_3$ ,  $2\text{N}_2\text{O}_5$  +  $\text{H}_2\text{O}$ . (Ruge.)

$11\text{Bi}_2\text{O}_3$ ,  $5\text{N}_2\text{O}_5$  +  $16\text{H}_2\text{O}$ . Not decomp. by  $\text{H}_2\text{O}$  (Yvon.)

$5\text{Bi}_2\text{O}_3$ ,  $4\text{N}_2\text{O}_5$  +  $8\text{H}_2\text{O}$  Ppt. Not attacked by  $\text{H}_2\text{O}$ . (Schulten, Bull. Soc. 1903, (3) 29. 722.)

$5\text{Bi}_2\text{O}_3$ ,  $5\text{N}_2\text{O}_5$  +  $9\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp. (Schulten.)

$6\text{Bi}_2\text{O}_3$ ,  $5\text{N}_2\text{O}_5$  +  $8\text{H}_2\text{O}$ , and +  $9\text{H}_2\text{O}$ . (Rutten, Z. anorg. 1902, 30. 368.)

At  $25^\circ$  the salt  $\text{Bi}_2\text{O}_3(\text{NO}_3)_3$ ,  $9\text{H}_2\text{O}$  is in equilibrium with  $\text{HNO}_3$  + Aq. from 0.03–0.32-N; the salt  $\text{BiO}(\text{NO}_3)_2$ ,  $\text{H}_2\text{O}$  is in equilibrium with  $\text{HNO}_3$  + Aq. from 0.425–0.72-N.

At  $50^\circ$  the salt  $\text{Bi}_2\text{O}_3(\text{NO}_3)_3$ ,  $\text{H}_2\text{O}$  is in equilibrium with  $\text{HNO}_3$  + Aq. from 0.057–0.285-N; the salt  $\text{Bi}_2\text{O}_3(\text{NO}_3)_3$ ,  $9\text{H}_2\text{O}$  is in equilibrium with  $\text{HNO}_3$  + Aq. from 0.285–0.446-N.

At  $75^\circ$  the salt  $\text{Bi}_2\text{O}_3(\text{NO}_3)_3$ ,  $\text{H}_2\text{O}$  is in equilibrium with  $\text{HNO}_3$  + Aq. from 0.109–0.314-N (Allan, Am. Ch. J. 1901, 25. 314.)

**Bismuth nitrate**,  $\text{Bi}(\text{NO}_3)_3$ .

Permanent. Decomp. by little  $\text{H}_2\text{O}$  with separation of a basic salt. This decomposition is prevented by slight excess of  $\text{HNO}_3$ , and then the salt is completely sol. in a large amount of  $\text{H}_2\text{O}$ . (Rose.)

Sol in dil.  $\text{HNO}_3$  + Aq. Not decomp. by  $\text{H}_2\text{O}$  in presence of  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$  or  $\frac{1}{10}$  pt.  $\text{NH}_4\text{NO}_3$ . (Löwe, J. pr. 74. 341.)

Completely sol. in  $\text{HNO}_3$  + Aq. containing 83 g.  $\text{HNO}_3$  per liter. (Ditte.)

Solubility of  $\text{Bi}(\text{NO}_3)_3$  in  $2.3\text{N}$ – $\text{HNO}_3$  + Aq. = 2.04 g. at Bi per l.; in  $0.922\text{N}$ – $\text{HNO}_3$  + Aq. = 2.23 g. at Bi per l. (Dubrisay, C. R. 1911, 153. 1077.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Krug and M'Elroy.)

Solubility of  $\text{Bi}(\text{NO}_3)_3$  in 6.67% acetone +  $2.3\text{N}$ – $\text{HNO}_3$  + Aq. = 1.89 g. at Bi per l.; in 6.67% acetone +  $0.922\text{N}$ – $\text{HNO}_3$  + Aq. = 2.17 g. at Bi per l.; in 13.33% acetone +  $0.922\text{N}$ – $\text{HNO}_3$  + Aq. = 2.08 g. at Bi per l. (Dubrisay, C. R. 1911, 153. 1077.)

When  $\text{Bi}(\text{NO}_3)_3$  is mixed with mannite (dulcitol, sorbite) in proportion to the mol. wts. and  $\text{H}_2\text{O}$  is added, a clear solution is obtained which is not pptd. by addition of much  $\text{H}_2\text{O}$ . These solutions are more stable the greater the proportion of mannitol. (Yanno and Hunser, Z. anorg. 1901, 28. 211.)

+  $11\frac{1}{2}\text{H}_2\text{O}$ . (Ditte.)

+  $5\text{H}_2\text{O}$ . If treated with increasing amts. of  $\text{H}_2\text{O}$ , the amt. of Bi which dissolves decreases, and when 1 pt. is treated with 50,000 pts.  $\text{H}_2\text{O}$ , no Bi goes into solution. (Antony and Gigli, Gazz. ch. it. 1893, 23. 245.)

48.66 pts. are sol. in 100 pts. acetone at  $0^\circ$ .  
41.70 " " " " 100 " " "  $10^\circ$ .

(Laszczyński, B. 1894, 27. 2287.)

+  $51\frac{1}{2}\text{H}_2\text{O}$ . (Yvon, C. R. 84. 1161.)

+  $10\text{H}_2\text{O}$ . Melts in crystal  $\text{H}_2\text{O}$  with decomp. at  $74^\circ$ . (Ordway.)

**Bismuth cesium nitrate**,  $\text{Bi}(\text{NO}_3)_3$ ,  $2\text{CsNO}_3$ .

Ppt. (Wells, Am. Ch. J. 1901, 26. 277.)

**Bismuth cobalt nitrate**,  $2\text{Bi}(\text{NO}_3)_3$ ,  $3\text{Co}(\text{NO}_3)_2$  +  $24\text{H}_2\text{O}$ .

100 cc. sat. solution in  $\text{HNO}_3$  + Aq. (sp. gr. 1.325) contain 54.67 g. hydrated salt. (Jantsch, Z. anorg. 1912, 76. 321.)

**Bismuth magnesium nitrate**,  $2\text{Bi}(\text{NO}_3)_3$ ,  $3\text{Mg}(\text{NO}_3)_2$  +  $24\text{H}_2\text{O}$ .

Deliquescent. Effloresces in dry air. Decomp. by  $\text{H}_2\text{O}$ . (Urban and Lacombe, C. R. 1903, 137. 569.)

100 cc. sat. solution in  $\text{HNO}_3$  + Aq. (sp. gr. 1.325) contain 41.69 g. hydrated salt. (Jantsch, Z. anorg. 1912, 76. 321.)

**Bismuth manganous nitrate**,  $2\text{Bi}(\text{NO}_3)_3$ ,  $3\text{Mn}(\text{NO}_3)_2$  +  $24\text{H}_2\text{O}$ .

Deliquescent. Effloresces in dry air. Decomp. by  $\text{H}_2\text{O}$ . (Urban and Lacombe, C. R. 1903, 137. 569.)

100 cc. sat. solution in  $\text{HNO}_3$  + Aq. (sp. gr. 1.325) contain 65.77 g. hydrated salt. (Jantsch, Z. anorg. 1912, 76. 321.)

**Bismuth nickel nitrate,  $2\text{Bi}(\text{NO}_3)_3, 3\text{Ni}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$ .**

Deliquescent. Effloresces in dry air. Decomp. by  $\text{H}_2\text{O}$ . (Urban and Lacombe, C. R. 1903, 37, 569.)

100 cc. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contain 46.20 g. hydrated salt at  $16^\circ$ . (Jantsch.)

**Bismuth zinc nitrate,  $2\text{Bi}(\text{NO}_3)_3, 3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$ .**

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Urban and Lacombe, C. R. 1903, 137, 569.)

100 cc. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contain 57.51 g. hydrated salt at  $16^\circ$ . (Jantsch.)

**Cadmium nitrate, basic,  $\text{Cd}(\text{OH})\text{NO}_3 + \text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ , or ordinary alcohol. (Klinger, B. 18, 997.)

$12\text{CdO}, \text{N}_2\text{O}_5 + 11\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; more sol. in  $\text{H}_2\text{O}$  than basic sulphate. (Habermann, 5, 432.)

5  $\text{CdO}, 2\text{N}_2\text{O}_5 + 8\text{H}_2\text{O}$ . Decomp. by cold  $\text{H}_2\text{O}$ . (Rousseau and Tite, C. R. 114, 1184.)

**Cadmium nitrate,  $\text{Cd}(\text{NO}_3)_2$ .**

Deliquescent, and very sol. in  $\text{H}_2\text{O}$ , see +4, and  $9\text{H}_2\text{O}$ .

(de Muynck, W. Ann. 1894, 53, 561.)

$\text{Cd}(\text{NO}_3)_2 + \text{Aq}$  containing 7.89%  $\text{Cd}(\text{NO}_3)_2$  has sp. gr.  $20^\circ/20^\circ = 1.0673$ .

$\text{Cd}(\text{NO}_3)_2 + \text{Aq}$  containing 12.14%  $\text{Cd}(\text{NO}_3)_2$  has sp. gr.  $20^\circ/20^\circ = 1.1070$ .

(J. e. Blanc and Rohland, Z. phys. Ch. 1896, 19, 282.)

Sat.  $\text{Cd}(\text{NO}_3)_2 + \text{Aq}$  boils at  $132^\circ$ .

Almost entirely insol. in conc.  $\text{HNO}_3 + \text{Aq}$ . (Wurtz.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 827.)

Sol. in alcohol

Sol. in ethyl acetate. (Naumann, B. 1904, 37, 3601.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II, 1014.)

$+4\text{H}_2\text{O}$ . M.-pt. of  $\text{Cd}(\text{NO}_3)_2 + 4\text{H}_2\text{O} = 59.5^\circ$ . (Ordway; Tilden, Chem. Soc. 45, 409.)

Solubility in  $\text{H}_2\text{O}$

Solubility in  $\text{H}_2\text{O}$  at t°.

(Funk, B. 1899, 32, 105.)

Sat. solution of  $\text{Cd}(\text{NO}_3)_2 + 4\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $0^\circ$  contains 52.3%  $\text{Cd}(\text{NO}_3)_2$ ; at  $18^\circ$ , 55.9%  $\text{Cd}(\text{NO}_3)_2$ . (Mylus, Z. anorg. 1912, 74, 411.)

Sol. in liquid  $\text{NH}_3$ . (Johnson and Wilsmore, Elektroch. Z. 1908, 14, 227.)

Sol. in acetone. (Naumann, B. 1904, 37, 4328.)

Sol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

$+9\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at:

$-13^\circ$   $-1^\circ$   $+1^\circ$

37.37 47.33 52.73%  $\text{Cd}(\text{NO}_3)_2$ .

Cryohydrate is formed at  $-16^{\circ}$ . (Funk, Z. anorg. 1899, 20, 416.)

The composition of the hydrates formed by  $\text{Cd}(\text{NO}_3)_2$  at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by  $\text{Cd}(\text{NO}_3)_2$  and of the conductivity and sp. gr. of  $\text{Cd}(\text{NO}_3)_2 + \text{Aq.}$  (Jones, Am. Ch. J. 1905, 34, 308.)

Cadmium uranyl nitrate,  $\text{Cd}(\text{NO}_3)_2$ ,  
( $\text{UO}_2$ )( $\text{NO}_3$ ) $_2 + 30\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  and acids. Insol. in alcohol and alkalies + Aq. (Lancien, C. C. 1912, 1 208.)

Cadmium nitrate ammoniac,  $\text{Cd}(\text{NO}_3)_2 \cdot 6\text{NH}_3 + \text{H}_2\text{O}$ .

(André, C. R. 104, 987.)

Cadmium nitrate cupric oxide,  $\text{Cd}(\text{NO}_3)_2$ ,  
 $\text{CuO} + 5\text{H}_2\text{O}$ .

Ppt. (Mailhe, C. R. 1902, 134, 235.)

Cadmium nitrate cupric oxide,  $\text{Cd}(\text{NO}_3)_2$ ,  
 $3\text{CuO} + 5\text{H}_2\text{O}$

(Mailhe, A. ch 1902, (7) 27, 383.)

Cadmium nitrate hydrazine,  $\text{Cd}(\text{NO}_3)_2$ ,  
 $3\text{N}_2\text{H}_4$ .

Decomp. by hot  $\text{H}_2\text{O}$ . Sol. in warm  $\text{NH}_4\text{OH}$ . (Franzen, Z. anorg. 1908, 60, 282.)

Cæsium nitrate,  $\text{CsNO}_3$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 10.58 pts.  $\text{CsNO}_3$  at  $3.2^{\circ}$  S. Sol. in absolute alcohol. (Bunsen.)

Solubility of  $\text{CsNO}_3$  in  $\text{H}_2\text{O}$  at  $t^{\circ}$ .

(Berkeley, Trans. Roy. Soc 1904, 203 A, 213.)

100 g.  $\text{H}_2\text{O}$  dissolve 26.945 g.  $\text{CsNO}_3$  at  $26^{\circ}$ . (Haigh, J. Am. Chem. Soc. 1912, 34, 1148.)

Sp. gr.  $20^{\circ}/4^{\circ}$  of a normal solution of  $\text{CsNO}_3 = 1.140905$ ; of a 0.5 normal solution = 1.07001. (Haigh.)

Sol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 4328.)

Solubility in glycol = 8% at ord. temp. (de Coninck, Belg. Acad. Bull. 1905, 359.)

Cæsium hydrogen nitrate.

$\text{CaNO}_3 \cdot \text{HNO}_3$ . Sol in  $\text{H}_2\text{O}$  (Wells, Am. Ch. J. 1901, 26, 273.)

$\text{CaNO}_3 \cdot 2\text{HNO}_3$  (W.)

Cæsium cerium nitrate,  $\text{Cs}_2\text{Ce}(\text{NO}_3)_6$ .

Sol. in  $\text{H}_2\text{O}$ ; very al. sol. in  $\text{HNO}_3$ . (Meyer, Z. anorg. 1901, 27, 371.)

Sol. in  $\text{HNO}_3$ . (Meyer, B. 1900, 33, 2137.)

Cæsium ferric nitrate,  $\text{CsNO}_3$ ,  $\text{Fe}(\text{NO}_3)_3 + 7\text{H}_2\text{O}$ .

Deliquescent. (Wells, Am. Ch. J. 1901, 26, 276.)

Cæsium silver nitrate,  $\text{CsNO}_3$ ,  $\text{AgNO}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Russell and Maskelyne, Roy. Soc. Proc. 26, 357.)

Cæsium thorium nitrate,  $\text{Cs}_2\text{Th}(\text{NO}_3)_4$ .

Decomp. by  $\text{H}_2\text{O}$ ; al. sol. in  $\text{HNO}_3$  (Meyer, Z. anorg. 1901, 27, 384.)

Cæsium uranyl nitrate,  $\text{Cs}(\text{UO}_2)(\text{NO}_3)_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{HNO}_3$ . (Meyer, B. 1903, 36, 4057.)

Decomp. by  $\text{H}_2\text{O}$  at low temp., so that the solid phase in contact with the solution consists of the double salt and  $\text{CsNO}_3$ . At  $16^{\circ}$  100 pts. by wt. of the solution in  $\text{H}_2\text{O}$  contain 31.39 pts.  $\text{UO}_2$  and 6.59 pts.  $\text{Cs}$ . (Rumbach, B. 1904, 37, 477.)

Calcium nitrate, basic,  $\text{Ca}(\text{NO}_3)_2$ ,  $\text{CaO} \cdot \text{H}_2\text{O} + 2\frac{1}{2}\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Werner, A. ch. (6) 27, 570.)

+  $\text{H}_2\text{O}$ . As above. (Rousseau and Tite, C. R. 114, 1184.)

Calcium nitrate,  $\text{Ca}(\text{NO}_3)_2$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$  with evolution of much heat.

100 pts.  $\text{H}_2\text{O}$  at  $0^{\circ}$  dissolve 84.2 pts.  $\text{Ca}(\text{NO}_3)_2$  (Poggiale.)

100 pts.  $\text{H}_2\text{O}$  at  $0^{\circ}$  dissolve 93.1 pts.  $\text{Ca}(\text{NO}_3)_2$ . (Mulder.)

Sol. in 0.25 pt. cold  $\text{H}_2\text{O}$  with reduction of temp. Sol. in all proportions in boiling  $\text{H}_2\text{O}$  (Berzelius).

Sol. in 2 pts. cold, and 0.6667 pt. boiling  $\text{H}_2\text{O}$  (Fourcroy).

Sat.  $\text{Ca}(\text{NO}_3)_2 + \text{Aq.}$  at  $12^{\circ}$  contains 33.8% (Hansenfruts, A. ch. 23, 23.)

Solubility in  $\text{H}_2\text{O}$ .

100 g. of the solution contain at:

55° 80° 90° 100°  
78.16 78.20 78.37 78.43 g.  $\text{Ca}(\text{NO}_3)_2$ ,

125° 147.5° 151° (bpt. of sat. solution at 760 mm.)

78.57 78.80 79.00 g.  $\text{Ca}(\text{NO}_3)_2$ .

The anhydrous salt is the stable solid phase above  $51.3^{\circ}$ . (Bassett and Taylor, Chem. Soc. 1912, 101, 580.)

100 g. sat.  $\text{Ca}(\text{NO}_3)_2 + \text{Aq}$  contain 77.3 g.  $\text{Ca}(\text{NO}_3)_2$  at 25°. (Taylor and Henderson, *J. Am. Chem. Soc.* 1915, **37**, 1692.)

#### Solubility in organic solvents

Solvent	$\% \text{ Ca}(\text{NO}_3)_2$ in the solution at $25^\circ$
Methyl alcohol	65.5
Ethyl alcohol	52.0
Propyl alcohol	36.5
Isobutyl alcohol	25.0
Amyl alcohol	13.3
Acetone	58.5

(D'Ans and Siegler, *l. c.*)

Sol. in 187 pts ether-alcohol (1.1) (Fresenius, *Z. anal.* 32. 191.)

Ether ppts.  $\text{Ca}(\text{NO}_3)_2$  from its alcoholic solution. Easily sol. in boiling amyl alcohol (Browning, *Sill. Am. J.* 143. 53.)

Sol. in acetone (Naumann, *B.* 1904, 37. 4328.)

Insol. in benzonitrile (Naumann, *B.* 1914, 47. 1370.)

Insol. in methylal. (Eidmann, *C. C.* 1899, II. 1014.)

1 g.  $\text{Ca}(\text{NO}_3)_2$  is sol. in 1.44 g. methyl acetate at  $18^\circ$ . Sp. gr.  $18^\circ/4^\circ$  of sat. solution = 1.313. (Naumann, *B.* 1909, 42. 3795.)

Sol. in ethyl acetate. (Naumann, *B.* 1910, 43. 314.)

$+2\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$

100 g. of the solution contain at

$40^\circ$   $51^\circ$

77.49 78.05 g.  $\text{Ca}(\text{NO}_3)_2$ .

Solutions in stable equilibrium with the dihydrate can only exist between the limits of temp.  $48.1^\circ$  and  $51.3^\circ$ . (Bassett and Taylor, *Chem. Soc.* 1912, 101. 580.)

$+3\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

100 g. of the solution contain at:

$40^\circ$   $45^\circ$   $50^\circ$   $51^\circ$

70.37 71.45 73.79 74.73 g.  $\text{Ca}(\text{NO}_3)_2$ .

Mpt. of  $\text{Ca}(\text{NO}_3)_2 \cdot 3\text{H}_2\text{O} = 51.1^\circ$ .

(Bassett and Taylor, *l. c.*)

$+4\text{H}_2\text{O}$ .  $\text{Ca}(\text{NO}_3)_2 \cdot 4\text{H}_2\text{O}$  melts in its crystal  $\text{H}_2\text{O}$  at  $44^\circ$ . (Tilden, *Chem. Soc.* 45. 409.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

100 g. of the solution contain g.  $\text{Ca}(\text{NO}_3)_2$  at  $t^\circ$ .

(D'Ans and Siegler, Z. phys. Ch. 1913, 82, 42.)

Calcium nitrate hydrazine, Ca(NO<sub>3</sub>)<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>, +H<sub>2</sub>O.

Ppt. (Franzen, Z. anorg. 1908, 60, 288.)

Calcium nitrate tungstosilicate, Ca<sub>2</sub>W<sub>12</sub>SiO<sub>46</sub>, Ca(NO<sub>3</sub>)<sub>2</sub>.+13H<sub>2</sub>O and +15H<sub>2</sub>O. Decomp. by H<sub>2</sub>O. (Wyruboff, Chem. Soc. 1897, 72, (2) 176.)Ceric nitrate, Ce(NO<sub>3</sub>)<sub>3</sub> + 6H<sub>2</sub>O.

Not very deliquescent. (Jolin.)

Very sol. in H<sub>2</sub>O; sol. in 2 pts. alcohol. (Vanquelin.)

Sol. in acetone. (Eidmann, C. C. 1899, II 1014; Neumann, B. 1904, 37, 4328.)

Ceric nitrate, Ce(NO<sub>3</sub>)<sub>3</sub>.Deliquescent. Decomp. by hot H<sub>2</sub>O (Berzelius.)

Sol. in alcohol. (Dumas)

Basic compounds containing 12 mols. or less CeO<sub>2</sub> to 1 mol. N<sub>2</sub>O<sub>5</sub> may be obtained, which are sol. in H<sub>2</sub>O (Ordway)Cerous cobaltous nitrate, 2Ce(NO<sub>3</sub>)<sub>3</sub>, 3Co(NO<sub>3</sub>)<sub>2</sub> + 24H<sub>2</sub>O.

Deliquescent. Easily forms supersaturated solutions. (Lange, J. pr. 82, 129.)

1 l. sat. solution in HNO<sub>3</sub> + Aq (sp. gr. 1.325) contains 103.3 g. hydrous salt at 16°. (Jantsch, Z. anorg. 1912, 76, 321.)Ceric cobaltous nitrate, CeCo(NO<sub>3</sub>)<sub>6</sub> + 8H<sub>2</sub>O.Decomp. by H<sub>2</sub>O when heated; sol. in cold H<sub>2</sub>O; sl. sol. in HNO<sub>3</sub>. (Meyer, Z. anorg. 1901, 27, 376.)Cerous magnesium nitrate, 2Ce(NO<sub>3</sub>)<sub>3</sub>, 3Mg(NO<sub>3</sub>)<sub>2</sub> + 24H<sub>2</sub>O.Slightly deliquescent. Easily sol. in H<sub>2</sub>O or alcohol, and easily forms supersaturated solutions. (Holzmann, J. pr. 75, 330.)1 l. sat. solution in HNO<sub>3</sub> + Aq (sp. gr. 1.325) contains 63.8 g. hydrous salt at 16°. (Jantsch, Z. anorg. 1912, 76, 321.)Ceric magnesium nitrate, CeMg(NO<sub>3</sub>)<sub>6</sub> + 8H<sub>2</sub>O.Decomp. by H<sub>2</sub>O; sol. in HNO<sub>3</sub> + Aq without decomp. (Meyer, Z. anorg. 1901, 27, 373.)Cerous manganous nitrate, 2Ce(NO<sub>3</sub>)<sub>3</sub>, 3Mn(NO<sub>3</sub>)<sub>2</sub> + 24H<sub>2</sub>O.Sol. in H<sub>2</sub>O. (Lange, J. pr. 82, 129.)1 l. sat. solution in HNO<sub>3</sub> + Aq (sp. gr. 1.325) contains 193.1 g. hydrous salt at 16°. (Jantsch.)Ceric manganous nitrate, CeMn(NO<sub>3</sub>)<sub>6</sub> + 8H<sub>2</sub>O.Decomp. by H<sub>2</sub>O and dil. HNO<sub>3</sub>; sol. in conc. HNO<sub>3</sub> without decomp. (Meyer, Z. anorg. 1901, 27, 377.)Cerous nickel nitrate, 2Ce(NO<sub>3</sub>)<sub>3</sub>, 3Ni(NO<sub>3</sub>)<sub>2</sub> + 24H<sub>2</sub>O.Easily sol. in H<sub>2</sub>O. (Holzmann, J. pr. 75, 321.)1 l. sat. solution in HNO<sub>3</sub> + Aq (sp. gr. 1.325) contains 80.3 g. hydrous salt at 16°. (Jantsch.)Ceric nickel nitrate, CeNi(NO<sub>3</sub>)<sub>6</sub> + 8H<sub>2</sub>O.Decomp. by H<sub>2</sub>O when heated, sol. in H<sub>2</sub>O in the cold; sl. sol. in HNO<sub>3</sub>. (Meyer, Z. anorg. 1901, 27, 375.)Cerous potassium nitrate, Ce(NO<sub>3</sub>)<sub>3</sub>, 2KNO<sub>3</sub> + 2H<sub>2</sub>O.Sol. in H<sub>2</sub>O. (Lange, J. pr. 82, 136.)Ceric potassium nitrate, CeK<sub>2</sub>(NO<sub>3</sub>)<sub>6</sub>.Sol. in H<sub>2</sub>O with decomp. (Meyer, Z. anorg. 1901, 27, 370.)+1½H<sub>2</sub>O Efflorescent. (Holzmann, J. pr. 75, 324.)Ceric rubidium nitrate, CeRu<sub>2</sub>(NO<sub>3</sub>)<sub>6</sub>.Very sol. in H<sub>2</sub>O; sl. sol. in HNO<sub>3</sub>. (Meyer.)

Ceric sodium nitrate.

Deliquescent. Decomp. by recrystallization (Holzmann.)

Cerous thallous nitrate, [Ce(NO<sub>3</sub>)<sub>3</sub>]<sub>2</sub>Tl<sub>2</sub> + 4H<sub>2</sub>O.Very hygroscopic. Decomp. by H<sub>2</sub>O. (Jantsch, Z. anorg. 1911, 69, 229.)Cerous zinc nitrate, 2Ce(NO<sub>3</sub>)<sub>3</sub>, 3Zn(NO<sub>3</sub>)<sub>2</sub> + 24H<sub>2</sub>O.Sol. in H<sub>2</sub>O. Easily forms supersat. solutions (Lange, J. pr. 82, 129.)1 l. sat. solution in HNO<sub>3</sub> + Aq (sp. gr. 1.325) contains 124.1 g. hydrous salt at 16°. (Jantsch, Z. anorg. 1912, 76, 321.)Ceric zinc nitrate, ZnCe(NO<sub>3</sub>)<sub>6</sub> + 8H<sub>2</sub>O.Decomp. by H<sub>2</sub>O; sol. in HNO<sub>3</sub> + Aq. (Meyer, Z. anorg. 1901, 27, 374.)

Ceroceric zinc nitrate (?),  $\text{Ce}_2\text{O}_3 \cdot 2\text{ZnO}$ ,  $6\text{N}_2\text{O}_5 + 18\text{H}_2\text{O}$  (?)  
Easily sol. in  $\text{H}_2\text{O}$ . (Holzmann, J. pr. 75. 321)

Chromic nitrate, basic,  $\text{Cr}_2\text{O}(\text{NO}_3)_4$ .  
Sol. in  $\text{H}_2\text{O}$ . (Löw.)  
+  $12\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Ordway.)

Chromic nitrate,  $\text{Cr}(\text{NO}_3)_3 + 9\text{H}_2\text{O}$ .  
Very sol. in  $\text{H}_2\text{O}$  and alcohol. (Löw.)  
Melts in its crystal  $\text{H}_2\text{O}$  at  $36.5^\circ$ . Sat  
 $\text{Cr}(\text{NO}_3)_3 + \text{Aq}$  boils at  $125.6^\circ$ . (Ordway)  
Sp. gr. of  $\text{Cr}(\text{NO}_3)_3 + \text{Aq}$ .  
M = concentration of solution in gram. mols.

W = wt. of 25 cc. of solution.  
M 0.0934 0.1868 0.3736 0.5604 0.9340  
W 25.4300 25.8828 26.7302 27.5524 29.3072

W 30.0608 30.8404 31.6327 33.3379  
(Jones and Getman, Z. phys. Ch. 1904, 49. 426.)

Sol in acetone (Naumann, B. 1904, 37. 4328; Eidmann, C. C. 1899, II. 1014.)

Chromic nitrate chloride,  $\text{CrCl}_2(\text{NO}_3)$ .  
Sol. in  $\text{H}_2\text{O}$  and alcohol. (Schiff, A. 124. 177.)  
 $\text{Cr}(\text{NO}_3)_2\text{Cl}$  (Schiff.)

Chromic nitrate sulphate,  $\text{Cr}_2(\text{SO}_4)(\text{NO}_3)_4$ .  
Hygroscopic. Completely sol. in  $\text{H}_2\text{O}$ .  
 $\text{Cr}_2(\text{SO}_4)_2(\text{NO}_3)_2$ . Sol in  $\text{H}_2\text{O}$ . (Schiff, A. 124. 174.)

Cobaltous nitrate, basic,  $6\text{CoO} \cdot \text{N}_2\text{O}_5 + 5\text{H}_2\text{O}$ .  
Ppt. Gradually sol. in  $\text{H}_2\text{O}$  with deposition of  $\text{CoO}$ . (Winkelblech, A. 13. 155)  
Sol. in cold  $\text{HCl}$  and  $\text{HNO}_3 + \text{Aq}$ . Decomp. by hot  $\text{KOH} + \text{Aq}$ .  
 $4\text{CoO} \cdot \text{N}_2\text{O}_5 + 6\text{H}_2\text{O}$ . Ppt. (Habermann, M. 5. 432.)

Cobaltous nitrate,  $\text{Co}(\text{NO}_3)_2$ .  
Deliquescent in moist air. Very sol. in  $\text{H}_2\text{O}$ .  
See +3, 6, and  $9\text{H}_2\text{O}$ .

Sp. gr. of aqueous solution at  $17.5^\circ$  containing:

49.73 55.96 62.88%  $\text{Co}(\text{NO}_3)_2$ .  
(Funk, Z. anorg. 1899, 20. 408.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Easily sol. in alcohol. Sol. in 1 pt. strong alcohol at  $12.5^\circ$ . (Wenzel.)

Easily sol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

Sol. in methyl acetate. (Naumann, B. 1900, 42. 3790.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

+  $9\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .  
Sat. solution contains at:

$-26^\circ$   $-23.5^\circ$   $-20.5^\circ$   
39.45 40.40 42.77%  $\text{Co}(\text{NO}_3)_2$ .

Cryohydrate is formed at  $-29^\circ$ . (Funk, Z. anorg. 1899, 20. 409.)

Cobaltous didymium nitrate,  $3\text{Co}(\text{NO}_3)_2$ ,  $2\text{D}_1(\text{NO}_3)_2 + 48\text{H}_2\text{O}$

Very deliquescent. (Frerichs and Smith, A 191. 331.)

Cobaltous gadolinium nitrate,  $3\text{Co}(\text{NO}_3)_2$ ,  $2\text{Gd}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$

1 l. sat. solution in  $\text{HNO}_3$  (sp gr 1.325) contains 451.4 g. hydrous salt at  $16^\circ$ . (Jantsch, Z. anorg. 1912, 76. 303.)

Cobaltous lanthanum nitrate,  $3\text{Co}(\text{NO}_3)_2$ ,  $2\text{La}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp gr 1.325) contains 109.2 g. hydrous salt at  $16^\circ$ . (Jantsch, Z. anorg. 1912, 76. 303.)

Cobaltous neodymium nitrate,  $3\text{Co}(\text{NO}_3)_2$ ,  $2\text{Nd}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp gr 1.325) contains 151.6 hydrous salt at  $16^\circ$ . (Jantsch.)

Cobaltous praseodymium nitrate,  $3\text{Co}(\text{NO}_3)_2$ ,  $2\text{Pr}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp gr 1.325) contains 12.99 g. hydrous salt at  $16^\circ$ . (Jantsch.)

Cobaltous samarium nitrate,  $3\text{Co}(\text{NO}_3)_2$ ,  $2\text{Sm}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp gr 1.325) contains 34.27 g. hydrous salt at  $16^\circ$ . (Jantsch.)

Cobaltous thorium nitrate,  $\text{CoTh}(\text{NO}_3)_6 + 8\text{H}_2\text{O}$

Hydrosopic; sol. in  $\text{HNO}_3 + \text{Aq}$ . (Meyer, Z. anorg. 1901, 27. 387.)

Cobaltous nitrate ammonia,  $\text{Co}(\text{NO}_3)_2$ ,  $6\text{NH}_3 + 2\text{H}_2\text{O}$

Decomp. by  $\text{H}_2\text{O}$  with separation of basic nitrate. (Fremy.)

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Hess.)

Cobaltous nitrate cupric oxide,  $\text{Co}(\text{NO}_3)_2$ ,  $3\text{CuO} + 3\text{H}_2\text{O}$

Ppt. (Maulhe, C. R. 1902, 134. 234.)

Cobaltous nitrate hydrazine,  $\text{Co}(\text{NO}_3)_2$ ,  $3\text{N}_2\text{H}_4$

Decomp. by hot  $\text{H}_2\text{O}$ . (Franzen, Z. anorg. 1908, 60. 274.)

Cupric nitrate, basic,  $2\text{CuO}$ ,  $\text{N}_2\text{O}_5$

(Ditto, A. ch. 1879, (5) 18. 339.)

$4\text{CuO}$ ,  $\text{N}_2\text{O}_5 + 3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids. (Graham, A. 29. 13.)

Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids (Athanasesco, Bull. Soc. 1895, (3) 11. 1113.)

$+3\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , and decomp. by heat. (Casselmann, Z. anal. 4. 24.)

Cupric nitrate,  $\text{Cu}(\text{NO}_3)_2$

Deliquescent. Very easily sol. in  $\text{H}_2\text{O}$  or alcohol, also in moderately conc  $\text{HNO}_3 + \text{Aq}$ , but is precipitated from conc. aqueous solution by  $\text{HNO}_3 + \text{Aq}$  of 1.522 sp. gr (Mitscherlich, Pogg. 18. 150.)

Sat.  $\text{Cu}(\text{NO}_3)_2 + \text{Aq}$  contains at

(Funk, *Z. anorg.* 1899, **20**, 413.)

Sat. solution of  $\text{Cu}(\text{NO}_3)_2 + 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$   
at 20° contains 5.04 g. mol. per 1 Sp gr. of  
sat. solution = 1.688. (Fedotief, *Z. anorg.*  
1911, **73**, 78.)

Sat. solution of  $\text{Cu}(\text{NO}_3)_2 + 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$   
contains 45.0 g.  $\text{Cu}(\text{NO}_3)_2$  in 100 g. solution  
at 0°, 53.9 g. at 18°. (Mylus, *Z. anorg.* 1912,  
**74**, 411)

+9 $\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$

Sat. solution contains at.

-23° -21° -20°  
36.08 37.38 40.92%  $\text{Cu}(\text{NO}_3)_2$ .

Cryohydrate is formed at -24° (Funk,  
*Z. anorg.* 1899, **20**, 414.)

Cupric nitrate ammonia (Cuprammonium  
nitrate),  $\text{Cu}(\text{NO}_3)_2 \cdot 4\text{NH}_3$

Easily sol. in  $\text{H}_2\text{O}$ , from which it can be  
recrystallized. Sol. in alcohol (Berzelius.)

Sol. in 1 pt liqnd  $\text{NH}_3$  (Horn, *Am. Ch.*  
*J.* 1908, **39**, 216.)

$\text{Cu}(\text{NO}_3)_2 \cdot 5\text{NH}_3$ . (Horn, *Am. Ch. J.*  
1907, **37**, 620.)

4 $\text{Cu}(\text{NO}_3)_2 \cdot 23\text{NH}_3$  (Horn)

Cupric nitrate hydrazine,  $\text{Cu}(\text{NO}_3)_2 \cdot \text{N}_2\text{H}_4$ .

Decomp by  $\text{H}_2\text{O}$ . (Hofmann and Marburg,  
*A.* 1899, **305**, 221.)

Cupric nitrate mercuric oxide,  $\text{Cu}(\text{NO}_3)_2$ ,  
 $\text{HgO} + 3\text{H}_2\text{O}$ .

Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . (Finzi,  
*Gazz. ch. it.* 1913, **43**, (2) 709.)

Didymium nitrate, basic,  $4\text{D}_2\text{O}_3 \cdot 3\text{N}_2\text{O}_5 +$   
 $15\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  (Marignac.)

$2\text{D}_2\text{O}_3 \cdot 3\text{N}_2\text{O}_5$ . (Becquerel, *A. ch.* (6) **14**,  
257.)

Didymium nitrate,  $\text{Di}(\text{NO}_3)_2$

Anhydrous. Very sol in  $\text{H}_2\text{O}$ . As sol. in  
96% alcohol as in  $\text{H}_2\text{O}$ , and the solution is not  
precipitated by much ether. Insol. in pure  
ether (Marignac, *A. ch.* (3) **36**, 161.)

Moderately sol. in liqnd  $\text{NH}_3$ . (Franklin,  
*Am. Ch. J.* 1898, **20**, 827.)

Sol. in acetone. (Naumann, *B.* 1904, **37**,  
4328; Edmann, *C. C.* 1899, **11**, 1014.)

+6 $\text{H}_2\text{O}$ . Very deliquescent. (Cleve, *Bull.*  
*Soc.* (2) **43**, 361.)

- Didymium nickel nitrate**,  $2\text{Dy}(\text{NO}_3)_3 \cdot 3\text{Ni}(\text{NO}_3)_2 + 36\text{H}_2\text{O}$ .  
Very deliquescent. (Frerichs and Smith, A. 191. 355.)  
See Neodymium and praseodymium.
- Didymium zinc nitrate**,  $2\text{Dy}(\text{NO}_3)_3 \cdot 3\text{Zn}(\text{NO}_3)_2 + 69\text{H}_2\text{O}$ .  
Very deliquescent (F. and S.)  
See Neodymium and praseodymium.
- Dysprosium nitrate**,  $\text{Dy}(\text{NO}_3)_3 \cdot 5\text{H}_2\text{O}$ .  
Very sol. in  $\text{H}_2\text{O}$ ; less sol. in  $\text{H}_2\text{O} + \text{HNO}_3$ .  
Sol. in alcohol (Urban, C. R. 1908, 146. 129.)
- Erbium nitrate, basic**,  $2\text{Er}_2\text{O}_3 \cdot 3\text{N}_2\text{O}_5 + 9\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{HNO}_3$ . (Bahr and Bunsen.)  
 $3\text{Er}_2\text{O}_3 \cdot 4\text{N}_2\text{O}_5 + 20\text{H}_2\text{O}$  (Cleve, Bull. Soc. (2) 21. 344.)
- Erbium nitrate**,  $\text{Er}(\text{NO}_3)_3 \cdot 6\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$ , alcohol, and ether. (Häglund.)  
Sol. in acetone. (Naumann, B. 1904, 37. 4328.)
- Gadolinium nitrate**,  $\text{Gd}(\text{NO}_3)_3 \cdot 6\frac{1}{2}\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Benedicks, Z. anorg. 1900, 22. 406.)  
 $+5\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ . (B.)
- Gadolinium magnesium nitrate**,  $2\text{Gd}(\text{NO}_3)_3 \cdot 3\text{Mg}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$ .  
1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 352 g. hydrous salt at  $16^\circ$ . (Jantsch, Z. anorg. 1912, 76. 303.)
- Gadolinium nickel nitrate**,  $2\text{Gd}(\text{NO}_3)_3 \cdot 3\text{Ni}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$ .  
1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 400 g. hydrous salt at  $16^\circ$ . (Jantsch.)
- Gadolinium zinc nitrate**,  $2\text{Gd}(\text{NO}_3)_3 \cdot 3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$ .  
1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 472.7 g. hydrous salt at  $16^\circ$ . (Jantsch.)
- Gallium nitrate**,  $\text{Ga}(\text{NO}_3)_3$ .  
Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Dupré.)
- Glucinum nitrate, basic**,  $2\text{GlnO} \cdot \text{N}_2\text{O}_5 + 3\text{H}_2\text{O}$  (?).  
Sol. in  $\text{H}_2\text{O}$ .  
 $3\text{GlnO} \cdot \text{N}_2\text{O}_5$ . Sol. in  $\text{H}_2\text{O}$  (Ordway, Sill. Am. J. (2) 26. 205.)  
Compounds more basic than this are insol. in  $\text{H}_2\text{O}$ . (Ordway.)
- Glucinum nitrate**,  $\text{Gl}(\text{NO}_3)_2 + 3\text{H}_2\text{O}$ .  
Very deliquescent. (Joy, Sill. Am. J. (2) 36. 90.)  
Easily sol. in  $\text{H}_2\text{O}$  and alcohol. (Vauquelin.)  
Melts in its crystal  $\text{H}_2\text{O}$  at  $29.4^\circ$ . (Ordway.)  
Sat.  $\text{Gl}(\text{NO}_3)_2 + \text{Aq}$  boils at  $140.5^\circ$ . (Ordway.)
- Gold (auric) nitrate, basic**,  $\text{Au}_2\text{O}_3 \cdot \text{N}_2\text{O}_5 + \frac{2}{3}\text{H}_2\text{O}$ , or Auryl nitrate,  $(\text{AuO})\text{NO}_3 + \frac{1}{3}\text{H}_2\text{O}$ .  
(Schottländer, A. 217. 364.)  
 $2\text{Au}_2\text{O}_3 \cdot \text{N}_2\text{O}_5 + 2\text{H}_2\text{O} = \text{Au}_4\text{O}_6(\text{NO}_3)_2 + 2\text{H}_2\text{O}$ . Slowly sol. in  $\text{HNO}_3 + \text{Aq}$  at  $100^\circ$ . (Schottländer, A. 217. 356.)
- Gold (auric) nitrate**,  $\text{Au}(\text{NO}_3)_3 + x\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sol. in acetone. (Hanriot and Raoult, C. R. 1912, 155. 1086.)
- Gold (auric) hydrogen nitrate**,  $\text{Au}(\text{NO}_3)_3 \cdot \text{HNO}_3 + 3\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Schottländer, A. 217. 356.)
- Gold (auric) potassium nitrate**,  $\text{KAu}(\text{NO}_3)_4$ .  
Easily sol. in  $\text{H}_2\text{O}$ .  
 $\text{HK}_2\text{Au}(\text{NO}_3)_6$ . Decomp. immediately by  $\text{H}_2\text{O}$ .  
 $2\text{KAu}(\text{NO}_3)_4 \cdot \text{K}_2\text{HAu}(\text{NO}_3)_6$  (Schottländer, J. B. 1884. 453.)
- Gold (auric) rubidium nitrate**,  $\text{RbAu}(\text{NO}_3)_4$ .  
Easily sol. in  $\text{H}_2\text{O}$ .  
 $\text{HRb}_2\text{Au}(\text{NO}_3)_6$ . As above. (Schottländer.)
- Gold (auric) thallium nitrate**,  $\text{TlAu}(\text{NO}_3)_4$ .  
Easily sol. in  $\text{H}_2\text{O}$ .  
 $6\text{Au}_2\text{O}_3 \cdot 2\text{Tl}_2\text{O}_3 \cdot 3\text{N}_2\text{O}_5 + 15\text{H}_2\text{O}$ . Ppt (Schottländer.)
- Indium nitrate**,  $\text{In}(\text{NO}_3)_3 + 4\frac{1}{2}\text{H}_2\text{O}$ .  
Very deliquescent. Easily sol. in  $\text{H}_2\text{O}$  and absolute alcohol. (Winkler.)  
 $+1\frac{1}{2}\text{H}_2\text{O}$
- Iron (ferrous) nitrate**,  $\text{Fe}(\text{NO}_3)_2 + 6\text{H}_2\text{O}$ .  
100 pts. of crystals dissolve in 50 pts.  $\text{H}_2\text{O}$  at  $0^\circ$ , sp. gr. of solution = 1.44, 40.8 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , sp. gr. of solution = 1.48, 33.3 pts.  $\text{H}_2\text{O}$  at  $25^\circ$ , sp. gr. of solution = 1.50. (Ordway, Sill. Am. J. (2) 40. 325.)  
Sat. solution contains at:  

$-0^\circ$	$0^\circ$	$+18^\circ$	$24^\circ$	$60.5^\circ$	Mpt.
39.68	41.53	45.14	46.51	62.50%	$\text{Fe}(\text{NO}_3)_2$ .

(Funk, Z. anorg. 1899, 20. 406.)  
 Sat. solution of  $\text{Fe}(\text{NO}_3)_2 + 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  contains 41.5%  $\text{Fe}(\text{NO}_3)_2$  at  $0^\circ$ ; 45.1% at  $18^\circ$ . (Mylus, Z. anorg. 1912, 74. 411.)

+9H<sub>2</sub>O. Solubility in H<sub>2</sub>O.  
Sat. solution contains at:  
-27° -21.5° -19° -15.5°  
35.66 30.10 36.54 37.17% Fe(NO<sub>3</sub>)<sub>2</sub>

Cryohydrate is formed at -28° (Funk, Z. anorg. 1899, 20, 497.)

Fe(NO<sub>3</sub>)<sub>2</sub>+Aq decomposes on heating, less rapidly when dil., more readily in presence of excess of acid. (Ordway)

**Iron (ferric) nitrate, basic, 36Fe<sub>2</sub>O<sub>3</sub>, N<sub>2</sub>O<sub>5</sub>+48H<sub>2</sub>O (?).**

Easily sol. in H<sub>2</sub>O. Sl. sol. in dil. HNO<sub>3</sub>+Aq; very sl. sol. in alcohol. (Haussmann, A 89, 111.)

8Fe<sub>2</sub>O<sub>3</sub>, N<sub>2</sub>O<sub>5</sub>+12H<sub>2</sub>O. Sl. sol in H<sub>2</sub>O; very sl. sol. in cold or warm dil. HNO<sub>3</sub>+Aq; more easily sol. in hot HCl+Aq. (Haussmann.)

+xH<sub>2</sub>O. Sol. in H<sub>2</sub>O; completely pptd from aqueous solution by NaCl, NH<sub>4</sub>Cl, KI, KClO<sub>4</sub>, Na<sub>2</sub>SO<sub>4</sub>, CaSO<sub>4</sub>, ZnSO<sub>4</sub>, CuSO<sub>4</sub>, KNO<sub>3</sub>, NaNO<sub>3</sub>, Ba(C<sub>2</sub>H<sub>3</sub>O<sub>2</sub>)<sub>2</sub>, or Zn(C<sub>2</sub>H<sub>3</sub>O<sub>2</sub>)<sub>2</sub>+Aq. More slowly pptd. by NH<sub>4</sub>NO<sub>3</sub>, Mg(NO<sub>3</sub>)<sub>2</sub>, Ba(NO<sub>3</sub>)<sub>2</sub>, or Pb(NO<sub>3</sub>)<sub>2</sub>+Aq. Not pptd. by alcohol, Pb(C<sub>2</sub>H<sub>3</sub>O<sub>2</sub>)<sub>2</sub>, Cu(C<sub>2</sub>H<sub>3</sub>O<sub>2</sub>)<sub>2</sub>, Hg(CN)<sub>2</sub>, AgNO<sub>3</sub>, or As<sub>2</sub>O<sub>3</sub>+Aq. (Ordway, Silf. Am. J. (2) 9, 30.)

4Fe<sub>2</sub>O<sub>3</sub>, N<sub>2</sub>O<sub>5</sub>+1½H<sub>2</sub>O. Easily sol in H<sub>2</sub>O, sl. sol. in dil. HNO<sub>3</sub>+Aq, and in alcohol. (Haussmann.)

+3H<sub>2</sub>O Insol. in H<sub>2</sub>O or HNO<sub>3</sub>+Aq; sol. in HCl+Aq. (Scheurer-Kestner, C. R. 87, 927.)

+9H<sub>2</sub>O. Not deliquescent, easily sol in H<sub>2</sub>O. (Ordway.)

3Fe<sub>2</sub>O<sub>3</sub>, N<sub>2</sub>O<sub>5</sub>+2H<sub>2</sub>O. Insol in H<sub>2</sub>O (Scheurer-Kestner.)

2Fe<sub>2</sub>O<sub>3</sub>, N<sub>2</sub>O<sub>5</sub>+H<sub>2</sub>O Decomp. by H<sub>2</sub>O. (Scheurer-Kestner.)

+8H<sub>2</sub>O. (S.-K.)

Fe<sub>2</sub>O<sub>3</sub>, N<sub>2</sub>O<sub>5</sub> Decomp. by H<sub>2</sub>O. (S.-K.)

Fe<sub>2</sub>O<sub>3</sub>, 2N<sub>2</sub>O<sub>5</sub>. Sol. in H<sub>2</sub>O or alcohol in all proportions. Insol. in HNO<sub>3</sub>+Aq.

N<sub>2</sub>O<sub>5</sub> with 1, 2, 3, 4, 5, 6, and 8Fe<sub>2</sub>O<sub>3</sub> forms compounds, sol. in H<sub>2</sub>O. (Ordway.)

Solubility determinations show that there are no definite basic nitrates of iron formed from solutions at 25°, and that the solid phase under these conditions is a solid solution of Fe<sub>2</sub>O<sub>3</sub>, HNO<sub>3</sub>, and H<sub>2</sub>O. The normal salt, Fe<sub>2</sub>O<sub>3</sub>, 3N<sub>2</sub>O<sub>5</sub>, 18H<sub>2</sub>O is stable in solutions containing about 30-45% N<sub>2</sub>O<sub>5</sub>. In higher concentrations of nitric acid it appears to be metastable and a new salt, Fe<sub>2</sub>O<sub>3</sub>, 4N<sub>2</sub>O<sub>5</sub>, 18(?)H<sub>2</sub>O is the stable form. (Cameron, J. phys. Chem. 1909, 13, 262.)

**Iron (ferric) nitrate, Fe(NO<sub>3</sub>)<sub>3</sub>.**

+H<sub>2</sub>O. (Scheurer-Kestner, A. ch. (3) 65, 113.)

+6H<sub>2</sub>O Deliquescent, and sol. in any amount of H<sub>2</sub>O. (Schonben, Pogg. 39, 141.)

Sol. in acetone. (Naumann, B. 1904, 37, 4328.)

+9H<sub>2</sub>O. Deliquescent. Sol. in H<sub>2</sub>O and alcohol. Sl. sol. in HNO<sub>3</sub>+Aq. 2 pts. salt with 1 pt. H<sub>2</sub>O lower the temperature 18.5°. (Scheurer-Kestner.)

Sp. gr. of solution at 17.5° containing:  
5 10 15 20 25% Fe(NO<sub>3</sub>)<sub>3</sub>,  
1.0398 1.0770 1.1182 1.1612 1.2110

30 35 40 45 50% Fe(NO<sub>3</sub>)<sub>3</sub>,  
1.2622 1.3164 1.3746 1.4338 1.4972

55 60 65% Fe(NO<sub>3</sub>)<sub>3</sub>,  
1.5723 1.6572 1.7532

(Franz, J. pr. (2) 5, 274.)

Nearly insol. in conc. HNO<sub>3</sub>+Aq at temp. below 15.5°.

Easily sol in alcohol.

Melts in crystal H<sub>2</sub>O at 47.2°. (Ordway.)

Sat. Fe(NO<sub>3</sub>)<sub>3</sub>+Aq boils at 125°. (Ordway)

**Lanthanum nitrate, La(NO<sub>3</sub>)<sub>3</sub>+6H<sub>2</sub>O.**

Very deliquescent; easily sol. in H<sub>2</sub>O and alcohol. (Mosander.) Melts in its crystal H<sub>2</sub>O at 40°; boils at 124.5°. (Ordway.)

La(NO<sub>3</sub>)<sub>3</sub>+Aq sat at 25% contains 60.17% La(NO<sub>3</sub>)<sub>3</sub>, or 100 g H<sub>2</sub>O dissolve 151.1 g. La(NO<sub>3</sub>)<sub>3</sub> at 25°. (James and Whittemore, J. Am. Chem. Soc 1912, 34, 1169.)

Sol. in acetone. (Naumann, B 1904, 37, 4328; Eidmann, C. C. 1899, II, 1014.)

**Lanthanum magnesium nitrate, 2La(NO<sub>3</sub>)<sub>3</sub>, 3Mg(NO<sub>3</sub>)<sub>2</sub>+24H<sub>2</sub>O.**

Deliquescent in moist air. (Holzmann, J. pr. 75, 350.)

1 l. sat. solution in HNO<sub>3</sub>+Aq (sp. gr. 1.325) contains 63.8 g. hydrous salt at 16°. (Jantsch, Z. anorg. 1912, 76, 321.)

**Lanthanum manganous nitrate, 2La(NO<sub>3</sub>)<sub>3</sub>, 3Mn(NO<sub>3</sub>)<sub>2</sub>+24H<sub>2</sub>O.**

Sol in H<sub>2</sub>O. (Dumour and Deville.)

1 l. sat. solution in HNO<sub>3</sub>+Aq (sp. gr. 1.325) contains 193.1 g. hydrous salt at 16°. (Jantsch.)

**Lanthanum nickel nitrate, 2La(NO<sub>3</sub>)<sub>3</sub>, 3Ni(NO<sub>3</sub>)<sub>2</sub>+36H<sub>2</sub>O.**

Very sol. in H<sub>2</sub>O. (Frerichs and Smith, A. 191, 355.)

+24H<sub>2</sub>O 1 l. sat. solution in HNO<sub>3</sub>+Aq (sp. gr. 1.325) contains 80.3 g. hydrous salt at 16°. (Jantsch)

**Lanthanum rubidium hydrogen nitrate, [La(NO<sub>3</sub>)<sub>2</sub>]Rb, HNO<sub>3</sub>+6H<sub>2</sub>O.**

Sol in H<sub>2</sub>O and HNO<sub>3</sub>. (Jantsch, Z. anorg. 1911, 69, 225.)

**Lanthanum thallous nitrate, [La(NO<sub>3</sub>)<sub>2</sub>]Tl<sub>2</sub>+4H<sub>2</sub>O**

Hydroscopic. (Jantsch, Z. anorg. 1911, 69, 228.)

Lanthanum zinc nitrate,  $2\text{La}(\text{NO}_3)_3$ ,  
 $3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ . (Damour and Deville, J. B. 1858. 135.)

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 124.1 g. hydrous salt at  $16^\circ$ . (Jantech, Z. anorg. 1912, 76. 321.)  
 $+69\text{H}_2\text{O}$ . (Frerichs and Smith, A. 191. 355.)

Lead nitrate, basic,  $2\text{PbO}$ ,  $\text{N}_2\text{O}_5 + \text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3$ .

Sol. in 5.15 pts.  $\text{H}_2\text{O}$  at  $19.2^\circ$ . (Pohl, W. A. B. 6. 597.) Very al. sol. in cold, much more in hot  $\text{H}_2\text{O}$ . (Berzelius.) Sol. in  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ . (Guignot, C. R. 56. 358.)

Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Athanasesco, Bull. Soc. 1895, (3) 13. 178.)

$+2\text{H}_2\text{O}$ . (André, C. R. 100. 639.)

$3\text{PbO}$ ,  $\text{N}_2\text{O}_5 + 1\frac{1}{2}\text{H}_2\text{O}$ . Sl. sol. in pure  $\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  containing  $\text{HCl}$ . (Berzelius.)

$+3\text{H}_2\text{O}$  Sol. in 119.2 pts. cold, and 10.5 pts. boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ , but al. sol. in  $\text{KNO}_3 + \text{Aq}$  (Vogel, jr. A. 94. 97.)

$= 10\text{PbO}$ ,  $3\text{N}_2\text{O}_5 + 5\text{H}_2\text{O}$ . (Wakemann and Wells, Am. Ch. J. 9. 299.)

$+4\text{H}_2\text{O}$ . (André, C. R. 100. 639.)

$6\text{PbO}$ ,  $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . (Löwe, J. pr. 98. 885.)

$10\text{PbO}$ ,  $3\text{N}_2\text{O}_5 + 4\text{H}_2\text{O}$ . Less sol. in  $\text{H}_2\text{O}$  than  $\text{Pb}(\text{NO}_3)_2\text{OH}$ , and not decomp. by boiling  $\text{H}_2\text{O}$  (Wakemann and Wells, Am. Ch. J. 9. 299.)

Lead nitrate,  $\text{Pb}(\text{NO}_3)_2$ .

Sol. in  $\text{H}_2\text{O}$  with absorption of much heat (Roe.)

1 pt.  $\text{Pb}(\text{NO}_3)_2$  dissolves in  $7\frac{1}{2}$  pts. cold  $\text{H}_2\text{O}$  (Mitscherlich.)

1 pt.  $\text{Pb}(\text{NO}_3)_2$  dissolves in 1.989 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$  and forms a liquid of 1.3078 sp. gr. (Kureston.)

1 pt.  $\text{Pb}(\text{NO}_3)_2$  dissolves in 1.707 pts.  $\text{H}_2\text{O}$  at  $22.3^\circ$ , in 1.885 pts.  $\text{H}_2\text{O}$  at  $24.7^\circ$ . (Kopp.)

Sol. in 1.87 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$ . (Schiff, A. 109. 326.)

100 pts.  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$  sat. at  $102.2^\circ$  contain 62.5 pts.  $\text{Pb}(\text{NO}_3)_2$  or 100 pt.  $\text{H}_2\text{O}$  dissolve 110.620 pts.  $\text{Pb}(\text{NO}_3)_2$  at  $102.2^\circ$ . (Griffiths.)

Sol. in 7.5 pts. cold  $\text{H}_2\text{O}$  and much less hot  $\text{H}_2\text{O}$  (Wittmann.)

100 pts. boiling  $\text{H}_2\text{O}$  dissolve 13 pts.  $\text{Pb}(\text{NO}_3)_2$  (Ure's Dict.)

100 pts.  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$  sat. at  $19-20^\circ$  contain 35.80 pts. salt. (v. Hauer, W. A. B. 53. 2. 221.)

1 pt. dissolves:  
 at  $0^\circ$   $10^\circ$   $25^\circ$   $45^\circ$   $65^\circ$   $85^\circ$   $100^\circ$   
 in 2.58 2.07 1.65 1.25 0.99 0.83 0.72 pts.  $\text{H}_2\text{O}$ .

(Kremers, Pogg. 92. 497.)

1 l.  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$  sat. at  $15^\circ$  contains 461.49 g.  $\text{Pb}(\text{NO}_3)_2$  and 928.58 g.  $\text{H}_2\text{O}$ , and has sp. gr. 1.39. (Michel and Krafft, A. ch. (3) 41. 471.)

Solubility in 100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts $\text{Pb}(\text{NO}_3)_2$	$t^\circ$	Pts $\text{Pb}(\text{NO}_3)_2$	$t^\circ$	Pts $\text{Pb}(\text{NO}_3)_2$

(Toek, Z. Kryst. Min. 1897, 28, 365.)

Very easily sol in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 828.)

100 pts alcohol of 0.9282 sp gr dissolve.

at 4° 8° 22° 40° 50°  
 4.96 5.82 8.77 12.8 14.9 pts  $\text{Pb}(\text{NO}_3)_2$ .  
 (Gerardin, A. ch. (4), 5, 129.)

100 pts. absolute methyl alcohol dissolve 1.37 pts at 20.5°.

100 pts absolute ethyl alcohol dissolve 0.04 pt. at 20.5°. (de Bruyn, Z. phys. Ch. 10, 783.)

Very sl sol in acetone. (Krug and M'Elroy, J. Anal. Ch. 6, 184.)

Insol in cold, sl sol in hot  $\text{CS}_2$  (Arcetowski, Z. anorg. 1894, 6, 257.)

Insol. in benzonitrile. (Naumann, B. 1914, 47, 1370.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790); ethyl acetate (Naumann, B. 1910, 43, 314.)

Mol. weight determined in pyridine. (Werner, Z. anorg. 1897, 15, 21.)

Solubility of  $\text{Pb}(\text{NO}_3)_2$  in pyridine at 1°.

(Walton and Judd, J. Am. Chem. Soc. 1911, 33, 1036.)

Lead mercurous nitrate,  $2\text{PbO}, 2\text{Hg}_2\text{O}, 3\text{N}_2\text{O}_5$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in warm dil.  $\text{HNO}_3$ , or  $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$  without decomp. (Stadeler, A. 87, 129.)

Lead silver nitrate,  $\text{Pb}(\text{NO}_3)_2, 2\text{AgNO}_3$ .

Sol. in  $\text{H}_2\text{O}$  (Sturenberg, Pogg. 74, 115.)

Lead silver nitrate iodide,  $\text{Pb}(\text{NO}_3)_2, 8\text{AgNO}_3, 4\text{AgI}$ 

Decomp. by  $\text{H}_2\text{O}$  (Sturenberg.)

$\text{Pb}(\text{NO}_3)_2, 2\text{AgNO}_3, 2\text{AgI}$ . Decomp by  $\text{H}_2\text{O}$  (Sturenberg.)

Lead nitrate nitrite, basic,  $4\text{PbO}, \text{N}_2\text{O}_5, \text{N}_2\text{O}_2 + 2\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_2, \text{Pb}(\text{OH})\text{NO}_3$ .

Sl sol in cold, easily in hot  $\text{H}_2\text{O}$ . Sol in 80 pts.  $\text{H}_2\text{O}$  at 23° (Chevreul), 85 pts. at ord. temp. (Bromeis, A. 72, 38), 106 pts. at 100° (Chevreul).

+  $2\text{H}_2\text{O}$ .

## Solubility in acetic acid.

Normality of acid	g $\text{PbO}$ per 100 cc sat. solution	Normality of acid	g $\text{PbO}$ per 100 cc sat. solution

0.05	1.323	0.50	9.690
0.10	2.185	0.75	15.874

(Chilesotti, Att. Acad. Linc. 1908, (5) 17, II, 475.)

Formula is  $3\text{Pb}(\text{OH})\text{NO}_3$ ,  $5\text{Pb}(\text{OH})\text{NO}_2 + \text{H}_2\text{O}$ . (v. Lorenz, W. A. B. 84, 2, 1133.)

+  $3\text{H}_2\text{O}$ . (v. Lorenz.)

$4\text{PbO}$ ,  $\text{N}_2\text{O}_5$ ,  $3\text{N}_2\text{O}_3 + 4\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Bromeis.)

$6\text{PbO}$ ,  $\text{N}_2\text{O}_5$ ,  $2\text{N}_2\text{O}_3 + 3\frac{1}{2}\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3$ ,  $2\text{Pb}(\text{OH})\text{NO}_2 + \frac{1}{2}\text{H}_2\text{O}$ . (v. Lorenz.)

$6\text{PbO}$ ,  $2\text{N}_2\text{O}_5$ ,  $\text{N}_2\text{O}_3 + 3\frac{1}{2}\text{H}_2\text{O} = 2\text{Pb}(\text{OH})\text{NO}_3$ ,  $\text{Pb}(\text{OH})\text{NO}_2 + \frac{1}{2}\text{H}_2\text{O}$ . (v. Lorenz.)

$7\text{PbO}$ ,  $\text{N}_2\text{O}_5$ ,  $\text{N}_2\text{O}_3 + 3\text{H}_2\text{O}$ . Less sol. in  $\text{H}_2\text{O}$  than  $4\text{PbO}$ ,  $\text{N}_2\text{O}_5$ ,  $\text{N}_2\text{O}_3 + 2\text{H}_2\text{O}$ ; sol. in cold conc.  $\text{HNO}_3 + \text{Aq}$  (Pelzgot, A. 39, 338.)

$8\text{PbO}$ ,  $\text{N}_2\text{O}_5$ ,  $3\text{N}_2\text{O}_3 + 4\frac{1}{2}\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3$ ,  $3\text{Pb}(\text{OH})\text{NO}_2 + \frac{1}{2}\text{H}_2\text{O}$ . (v. Lorenz.)

$10\text{PbO}$ ,  $\text{N}_2\text{O}_5$ ,  $4\text{N}_2\text{O}_3 + 5\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3$ ,  $4\text{Pb}(\text{OH})\text{NO}_2$ . (v. Lorenz.)

$12\text{PbO}$ ,  $\text{N}_2\text{O}_5$ ,  $5\text{N}_2\text{O}_3 + 6\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3$ ,  $5\text{Pb}(\text{OH})\text{NO}_2$ . (v. Lorenz.)

$10\text{PbO}$ ,  $\text{N}_2\text{O}_5$ ,  $2\text{N}_2\text{O}_3 + 4\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3$ ,  $2\text{Pb}(\text{OH})\text{NO}_2$ ,  $2\text{PbO} + \frac{1}{2}\text{H}_2\text{O}$ . (v. Lorenz.)

$14\text{PbO}$ ,  $\text{N}_2\text{O}_5$ ,  $3\text{N}_2\text{O}_3 + 6\text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_3$ ,  $3\text{Pb}(\text{OH})\text{NO}_2$ ,  $3\text{PbO} + \text{H}_2\text{O}$ . (Bromeis.)

$14\text{PbO}$ ,  $3\text{N}_2\text{O}_5$ ,  $\text{N}_2\text{O}_3 + 6\text{H}_2\text{O} = 3\text{Pb}(\text{OH})\text{NO}_3$ ,  $\text{Pb}(\text{OH})\text{NO}_2$ ,  $3\text{PbO} + \text{H}_2\text{O}$ . (Bromeis.)

$16\text{PbO}$ ,  $2\text{N}_2\text{O}_5$ ,  $3\text{N}_2\text{O}_3 + 6\text{H}_2\text{O} = 4\text{Pb}(\text{OH})\text{NO}_3$ ,  $6\text{Pb}(\text{OH})\text{NO}_2$ ,  $5\text{PbO}$ ,  $\text{Pb}(\text{OH})_2$ . (v. Lorenz.)

$16\text{PbO}$ ,  $3\text{N}_2\text{O}_5$ ,  $5\text{N}_2\text{O}_3 + 10\text{H}_2\text{O} = 3\text{Pb}(\text{OH})\text{NO}_3$ ,  $5\text{Pb}(\text{OH})\text{NO}_2 + \text{H}_2\text{O}$ . (v. Lorenz.)

$26\text{PbO}$ ,  $6\text{N}_2\text{O}_5$ ,  $7\text{N}_2\text{O}_3 + 21\text{H}_2\text{O} = 6\text{Pb}(\text{OH})\text{NO}_3$ ,  $7\text{Pb}(\text{OH})\text{NO}_2 + 4\text{H}_2\text{O}$ . (v. Lorenz.)

**Lead nitrate phosphate**,  $\text{Pb}(\text{NO}_3)_2$ ,  $\text{Pb}_3(\text{PO}_4)_2 + 2\text{H}_2\text{O}$ .

Completely insol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$  into its constituents. Sol. in a little conc.  $\text{HNO}_3 + \text{Aq}$  without decomp. (Gerhardt, A. 72, 83.)

**Lead nitrate phosphite**,  $\text{Pb}(\text{NO}_3)_2$ ,  $\text{PbHPO}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ .  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$  (33.3 g. per litre) dissolves 1 g. salt at  $15^\circ$ . If less than 31 g. per litre of  $\text{Pb}(\text{NO}_3)_2$  are present the salt is decomp. (Amat, A. ch. (6) 24, 317.)

**Lead nitrate potassium nitrite**,  $\text{Pb}(\text{NO}_3)_2$ ,  $2\text{KNO}_2 + \text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$ . (Lang, J. B. 1862, 102.)

$3\text{PbO}$ ,  $3\text{K}_2\text{O}$ ,  $4\text{N}_2\text{O}_3$ ,  $2\text{N}_2\text{O}_5 + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Hayes, Sill. Am. J. (2) 31, 226.)

**Lithium nitrate**,  $\text{LiNO}_3$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve:

at  $0^\circ$   $20^\circ$   $40^\circ$   $70^\circ$   $100^\circ$   $110^\circ$

48.3 75.7 169.4 190.1 227.3 256.4 pts.  $\text{LiNO}_3$ . (Kremers, Pogg. 99, 47.)

Forms supersaturated solutions with ease, which crystallize when temp. is lowered to  $+1^\circ$ . (Kremers, Pogg. 92, 520.)

Sat. solution boils at over  $200^\circ$ . (Kremers, Pogg. 99, 43.)

1 pt.  $\text{LiNO}_3$  dissolves in 200 pts.  $\text{HNO}_3$ . (Schultz, Zeit. Ch. (2) 5, 531.)

100 pts. of the sat. solution contain at:

$64.2^\circ$  70.9°

64.9 66.1 pts. anhydrous salt.

(Donnan and Burt, Chem. Soc. 1903, 83, 339.)

See  $+ \frac{1}{2}\text{H}_2\text{O}$ , and  $3\text{H}_2\text{O}$ .

Sp. gr. of  $\text{LiNO}_3 + \text{Aq}$  at  $19.5^\circ$  containing pts.  $\text{LiNO}_3$  in 100 pts.  $\text{H}_2\text{O}$ .

12.7	14.2	26.4	41.8 pts. $\text{LiNO}_3$
1.069	1.077	1.134	1.197

54.8	57.5	77.4	79.4 pts. $\text{LiNO}_3$
1.245	1.255	1.315	1.319

(Kremers, Pogg. 114, 45.)

Sp. gr. of  $\text{LiNO}_3 + \text{Aq}$ .

g. $\text{LiNO}_3$ in 1000 g. of solution	Sp. gr. $18/18^\circ$
0	1.000000
4.8526	1.002469
10.9128	1.0055495
17.9016	1.009113

(Dijken, Z. phys. Ch. 1897, 24, 109.)

Sp. gr.  $20^\circ/4^\circ$  of a normal solution of  $\text{LiNO}_3 = 1.03303$ ; of a 0.5-normal solution = 1.01830. (Haigh, J. Am. Chem. Soc. 1912, 34, 1151.)

Very easily sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1893, 20, 328.)

Sol. in strong alcohol.

Sol. in acetone. (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 4328.)

Solubility in acetone = 0.343 g. mol. per l. at  $18^\circ$ . (Roshdestwensky and McBride, Chem. Soc. 1911, 99, 2140.)

Insol. in benzonitrile. (Naumann, B. 1914, 47, 1370.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

100 pts. of the sat. solution contain at:

43.6°	50.5°	55.0°	60.0°
60.8	61.3	63.0	63.6 pts. anhydrous salt.

$61.1^\circ$  is the temp. at which  $\text{LiNO}_3 + \frac{1}{2}\text{H}_2\text{O}$  goes over into  $\text{LiNO}_2$ . (Donnan and Burt, Chem. Soc. 1903, 83, 339.)

+3H<sub>2</sub>O.Solubility in H<sub>2</sub>O

100 pts. of the sat solution contain pts. anhydrous salt at t°

45.87 53.69 57.81%  $\text{Mg}(\text{NO}_3)_2$

(Funk, Z. anorg. 1899, 20. 395.)

+9 $\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at:

-23°	-20.5°	-18°
35.44	36.19	38.03%

Cryohydrate is formed at -29°. (Funk, Z. anorg. 1899, 20. 398.)

**Magnesium neodymium nitrate,  $3\text{Mg}(\text{NO}_3)_2 \cdot 2\text{Nd}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$ .**

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 97.7 g. hydrous salt at 16°. (Jantsch, Z. anorg. 1912, 76. 303.)

**Magnesium praseodymium nitrate,  $3\text{Mg}(\text{NO}_3)_2 \cdot 2\text{Pr}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$**

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 7.70 g. hydrous salt at 16°. (Jantsch)

**Magnesium samarium nitrate,  $3\text{Mg}(\text{NO}_3)_2 \cdot \text{Sm}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$ .**

(Dermaçay, C. R. 1900, 130. 1187.)

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 24.55 g. hydrous salt at 16°. (Jantsch)

**Magnesium thorium nitrate,  $\text{MgTh}(\text{NO}_3)_4 + \text{H}_2\text{O}$ .**

Hydroscopic, sol. in  $\text{HNO}_3$ . (Meyer, Z. anorg. 1901, 27. 385.)

**Magnesium nitrate ammonia,  $\text{Mg}(\text{NO}_3)_2 \cdot 6\text{NH}_3$ .**

Sl. sol. in liquid  $\text{NH}_3$  (Franklin, J. Am. Chem. Soc. 1913, 35. 1459.)

**Manganous nitrate, basic,  $2\text{MnO} \cdot \text{N}_2\text{O}_5 + 3\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Gorgeu.)

**Manganous nitrate,  $\text{Mn}(\text{NO}_3)_2$ .**

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$  and alcohol

See +3, and 6 $\text{H}_2\text{O}$

Cryohydrate is formed at -36° (Funk, Z. anorg. 1899, 20. 403.)

Manganous neodymium nitrate,  $3\text{Mn}(\text{NO}_3)_2$ ,  $2\text{Nd}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$ .1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 296 g. hydrous salt at 16° (Jantsch, Z. anorg. 1912, 76. 303.)Manganous praseodymium nitrate,  $3\text{Mn}(\text{NO}_3)_2$ ,  $2\text{Pr}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$ .1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 234 g. hydrous salt at 16° (Jantsch.)Manganous samarium nitrate,  $3\text{Mn}(\text{NO}_3)_2$ ,  $2\text{Sm}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$ .1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 50.04 g. hydrous salt at 16° (Jantsch.)Manganous thorium nitrate,  $\text{MnTh}(\text{NO}_3)_6 + 8\text{H}_2\text{O}$ .

Ppt. (Meyer, Z. anorg. 1901, 27. 388.)

Manganous nitrate cupric oxide,  $\text{Mn}(\text{NO}_3)_2$ ,  $3\text{CuO} + 3\text{H}_2\text{O}$ .

Ppt. (Mailhe, C. R. 1902, 134. 234.)

Manganous nitrate hydrazine,  $\text{Mn}(\text{NO}_3)_2$ ,  $2\text{N}_2\text{H}_4$ .Not decomp. by  $\text{H}_2\text{O}$  (Franzen, Z. anorg. 1908, 60. 286.)Mercurous nitrate, basic,  $2\text{Hg}_2\text{O}$ ,  $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$ .Ppt. Decomp. by boiling with  $\text{H}_2\text{O}$ . (Marignac, A. ch. (3) 27. 332.)Slowly sol. in cold, rapidly in hot  $\text{HCl} + \text{Aq}$ ; insol. in  $\text{NH}_4\text{Cl}$  and  $\text{NH}_4\text{NO}_3 + \text{Aq}$ .+ $10\text{H}_2\text{O}$  Slowly sol. in normal  $\text{HNO}_3$ . (Reuss, Dissert. 1886.)+ $4\text{H}_2\text{O}$ ,  $3\text{N}_2\text{O}_5 + \text{H}_2\text{O}$ . Sol. in a small quantity of  $\text{H}_2\text{O}$ ; decomp. by a large amt. of  $\text{H}_2\text{O}$  or by warm  $\text{H}_2\text{O}$  (Rose, Pogg. 83. 154.)Is  $3\text{Hg}_2\text{O}$ ,  $2\text{N}_2\text{O}_5 + \text{H}_2\text{O}$  according to Gerhardt+ $5\text{H}_2\text{O}$ . (Reuss, Dissert. 1886.)+ $5\text{Hg}_2\text{O}$ ,  $3\text{N}_2\text{O}_5 + 2\text{H}_2\text{O}$ . (Marignac.) Is  $2\text{Hg}_2\text{O}$ ,  $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$ . (Lefort, A. 56. 247.)Sol. in boiling, less sol. in cold  $\text{H}_2\text{O}$ . (Marignac, l. c.)+ $4\text{H}_2\text{O}$ , and + $6\text{H}_2\text{O}$ . (Reuss, Dissert. 1886.)+ $8\text{Hg}_2\text{O}$ ,  $5\text{N}_2\text{O}_5 + 5\text{H}_2\text{O}$ , and + $11\text{H}_2\text{O}$ . (Reuss.)+ $11\text{Hg}_2\text{O}$ ,  $6\text{N}_2\text{O}_5 + 25\text{H}_2\text{O}$  (Reuss.)+ $16\text{Hg}_2\text{O}$ ,  $9\text{N}_2\text{O}_5 + 19\text{H}_2\text{O}$ , + $23\text{H}_2\text{O}$ , and + $31\text{H}_2\text{O}$ . (Reuss.)+ $3\text{Hg}_2\text{O}$ ,  $\text{N}_2\text{O}_5 + 2\text{H}_2\text{O}$ . (Cox, Z. anorg. 1904, 40. 177.)Mercurous nitrate,  $\text{HgNO}_2$ .Very sol. in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20. 829.)Fairly sol. in boiling  $\text{CS}_2$ . (Aretowski, Z. anorg. 1894, 6. 257.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in methylamine (Franklin, J. Am. Chem. Soc. 1906, 28. 1419.)

+ $\text{H}_2\text{O}$ . Completely sol. in a little warm  $\text{H}_2\text{O}$ , but decomp. by more  $\text{H}_2\text{O}$ . Completely sol. as acid salt in  $\text{H}_2\text{O}$  containing  $\text{HNO}_3$ .

(Marignac, A. ch. (3) 27. 332.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+ $1\frac{1}{2}\text{H}_2\text{O}$ , + $1\frac{1}{3}\text{H}_2\text{O}$ , + $1\frac{1}{2}\text{H}_2\text{O}$ , etc. (Reuss, Dissert. 1896.)Mercuric nitrate, basic,  $6\text{HgO}$ ,  $\text{N}_2\text{O}_5$  (?).Insol. in hot  $\text{H}_2\text{O}$  (Kane.)+ $3\text{HgO}$ ,  $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$  Decomp. to oxide by washing with cold  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Mullon, A. ch. (3) 18. 361.)+ $2\text{HgO}$ ,  $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$ . Sl. deliquescent. Decomp. by  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Mullon.)+ $2\text{H}_2\text{O}$ . Decomp. by cold  $\text{H}_2\text{O}$ . Deliquescent. Sol. in  $\text{H}_2\text{O}$  containing  $\text{HNO}_3$ . (Marignac.)+ $3\text{H}_2\text{O}$ . (Ditte, J. B. 1854. 366.)Mercuric nitrate,  $\text{Hg}(\text{NO}_3)_2$ .Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Neither dissolved nor attacked by liquid  $\text{NO}_2$  (Frankland, Chem. Soc. 1901, 79. 1361.)

Sol in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Difficultly sol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sol in methylal. (Eidmann, C. C. 1899. II, 1014.)

+ $\frac{1}{2}\text{H}_2\text{O}$ . Deliquescent Very sol. in a little  $\text{H}_2\text{O}$ .  $\text{Hg}_2\text{O}$  precipitates basic salt from conc.  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$  Insol. in alcohol. Decomp. by ether. (Millon.)

+ $\text{H}_2\text{O}$ . Extraordinarily sol. in  $\text{H}_2\text{O}$  (Cov. Z. anorg. 1904, 40. 159.)

+ $8\text{H}_2\text{O}$ . Melts at  $6^\circ$  in crystal  $\text{H}_2\text{O}$ . (Ditte.)

**Mercuriomercuric nitrate**,  $\text{Hg}_2\text{O}$ ,  $2\text{HgO}$ ,  $\text{N}_2\text{O}_5$ .

Boiling  $\text{H}_2\text{O}$  gradually dissolves out  $\text{Hg}_2(\text{NO}_3)_2$ , and leaves residue of  $\text{HgO}$  and  $\text{Hg}$ . (Brooks, Pogg. 66. 63.)

$2\text{Hg}_2\text{O}$ ,  $\text{Hg}_2\text{O}$ ,  $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$ . (Ráy, Chem Soc. 1905, 87. 175.)

$\text{Hg}_2\text{O}$ ,  $2\text{HgO}$ ,  $\text{N}_2\text{O}_5 + \text{H}_2\text{O}$ . (Ráy.)

**Mercurous hydrogen nitrate**,  $4\text{HgNO}_3$ ,  $\text{HNO}_3$ , + $8\text{H}_2\text{O}$ .

(Reuss, Dissert 1886.)

$5\text{HgNO}_3$ ,  $3\text{HNO}_3 + 26\text{H}_2\text{O}$ . (Reuss.)

**Mercuric silver nitrate**,  $\text{Hg}(\text{NO}_3)_2$ ,  $2\text{AgNO}_3$ .

Easily sol. in  $\text{H}_2\text{O}$  without decomp. (Berzelius.)

**Mercurous strontium nitrate**,  $2\text{SrO}$ ,  $2\text{Hg}_2\text{O}$ ,  $3\text{N}_2\text{O}_5$ .

Decomp. by  $\text{H}_2\text{O}$ . Much more sol. in  $\text{H}_2\text{O}$  than the corresponding Ba compound.

Readily sol. in warm dil.  $\text{HNO}_3 + \text{Aq}$  or  $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$  without decomposition. (Städeler, A. 87. 131.)

**Mercurous thalious nitrate**,  $\text{HgNO}_3$ ,  $\text{TiNO}_3$ .

Miscible with  $\text{H}_2\text{O}$ . (Retgers, N. Jahrb Miner, 1896. II, 183.)

**Mercuric nitrate bromide**,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{HgBr}_2$ . (Morse, Z. phys. Ch. 1902, 41. 733.)

**Mercuric nitrate cadmium oxide**,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{CdO} + 2\text{H}_2\text{O}$ .

Ppt. (Mailhe, Bull. Soc. 1901, (3) 25. 788.)

+ $3\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Mailhe.)

**Mercuric nitrate cobaltous oxide**,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{CoO} + 3\text{H}_2\text{O}$ .

Ppt. (Mailhe, C. R. 1901, 132. 1275.)

+ $4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Mailhe, A. ch. 1902, (7) 27. 369.)

**Mercuric nitrate cupric oxide**,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{CuO} + 2\text{H}_2\text{O}$ , and + $4\text{H}_2\text{O}$ .

(Mailhe, Bull. Soc. 1901, (3) 25. 791.)

+ $5\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Mailhe, A. ch. 1902, (7) 27. 365.)

**Mercuric nitrate cyanide**,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{Hg}(\text{CN})_2$ .

Very sol. in  $\text{H}_2\text{O}$  Very sol. in methyl alcohol and solution is not decomp. at bpt. Ethyl alcohol apparently decomp. it (Prussa, Gazz. ch. it 1898, 28. (2) 115.)

**Mercurous nitrate hydrazine**,  $2\text{HgNO}_3$ ,  $\text{N}_2\text{H}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . Stable in dil.  $\text{HNO}_3 + \text{Aq}$  solution (Hofmann and Marburg, A. 1899, 305. 215.)

Ppt.; very unstable. (Hofmann, B. 1897, 30. 2021.)

$\text{Hg}(\text{NO}_3)_2$ ,  $\text{N}_2\text{H}_4$  Sol in dil.  $\text{HCl}$  and  $\text{HNO}_3$ . (Hofmann and Marburg, A. 1899, 305. 215.)

Ppt.; sol in acids; decomp. by alkali. (Hofmann, B. 1897, 30. 2021.)

**Mercuric nitrate iodide**,  $\text{Hg}(\text{NO}_3)_2$ ,  $2\text{HgI}_2$ .

Decomp. by long boiling with  $\text{H}_2\text{O}$ . (Riegel, Jahrb Pharm. 11. 396.)

$2\text{Hg}(\text{NO}_3)_2$ ,  $3\text{HgI}_2$ . Easily decomp. by  $\text{H}_2\text{O}$ ; less easily by alcohol or ether. (Riegel.)

$\text{Hg}(\text{NO}_3)_2$ ,  $\text{HgI}_2$ . Decomp. very quickly by  $\text{HNO}_3 + \text{Aq}$  or alcohol of 0.814 sp gr. (Souville, J Pharm. 26. 474.)

**Mercuric nitrate manganous oxide**,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{MnO} + 2\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Mailhe, Bull. Soc. 1901, (3) 25. 790.)

+ $3\text{H}_2\text{O}$  (Mailhe.)

+ $4\text{H}_2\text{O}$  (Mailhe, A. ch. 1902, (7) 27. 370.)

**Mercuric nitrate nickel oxide**,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{NiO} + 2\text{H}_2\text{O}$

(Mailhe, Bull. Soc. 1901, (3) 25. 788.)

+ $4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Mailhe, A. ch. 1902, (7) 27. 369.)

**Mercurous nitrate phosphate**,  $\text{HgNO}_3$ ,  $\text{Hg}_3\text{PO}_4 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. by boiling therewith. Insol. in  $\text{H}_3\text{PO}_4 + \text{Aq}$  or alcohol. Completely sol. in hot  $\text{NH}_4\text{Cl} + \text{Aq}$ . Decomp. by cold  $\text{KOH} + \text{Aq}$ , and warm  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Wittstein.)

$2\text{HgNO}_3$ ,  $\text{Hg}_3\text{O}$ ,  $5\text{Hg}_3\text{PO}_4 + \text{H}_2\text{O}$ . (Haack, A. 262. 192.)

**Mercuric nitrate silver bromide**,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{AgBr}$ .

(Morse, Z. phys. Ch. 1902, 41. 733.)

Mercuric nitrate silver cyanide, basic,  
 $\text{Hg}(\text{OH})\text{NO}_3$ ,  $\text{AgCN} + 2\text{H}_2\text{O}$ .  
 (Schmidt, Z. anorg. 1895, 9, 431)  
 $\text{Hg}(\text{OH})\text{NO}_3$ ,  $5\text{Ag}_2\text{O}$ ,  $20\text{AgCN} + 7\text{H}_2\text{O}$ .  
 (Schmidt.)

Mercuric nitrate silver iodide,  $\text{Hg}(\text{NO}_3)_2$ ,  
 $2\text{AgI} + \frac{1}{2}\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Preuss, A. 29, 328.)

Mercuric nitrate sulphide,  $\text{Hg}(\text{NO}_3)_2$ ,  $2\text{HgS}$ .  
 Very sl. sol in hot  $\text{H}_2\text{O}$ . Insol. in  $\text{HNO}_3$  +  
 Aq. Decomp. by hot  $\text{H}_2\text{SO}_4$  or aqua regia,  
 also by hot  $\text{HCl}$  + Aq. (Barfoed, J. pr. 93,  
 230.)

Sol. in aqua regia. (Denigès, Bull. Soc.  
 1915, (4) 17, 355.)  
 $2\text{Hg}(\text{NO}_3)_2$ ,  $\text{HgO}$ ,  $6\text{HgS} + 12\text{H}_2\text{O}$ . Insol.  
 in  $\text{H}_2\text{O}$  and  $\text{HNO}_3$  + Aq of 1.2 sp. gr. (Gramp,  
 J. pr. (2) 14, 299.)

Mercuric nitrate zinc oxide,  $\text{Hg}(\text{NO}_3)_2$ ,  $\text{ZnO} +$   
 $\text{H}_2\text{O}$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Mailhe, C. R.  
 1901, 132, 1274.)

Molybdenum nitrate,  $\text{Mo}_2\text{O}_5$ ,  $\text{N}_2\text{O}_5$  (?).

Sol. in dil.  $\text{HNO}_3$  + Aq. (Berzelius.)  
 $\text{MoO}_3$ ,  $2\text{N}_2\text{O}_5$  (?). Sol. in dil.  $\text{HNO}_3$  + Aq  
 (Berzelius)

Neodymium nickel nitrate,  $2\text{Nd}(\text{NO}_3)_3$ ,  
 $3\text{Ni}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$ .

1 l. sat. solution in  $\text{HNO}_3$  + Aq (sp. gr.  
 1.325) contains 116.6 g. hydrous salt at  $16^\circ$ .  
 (Jantsch, Z. anorg. 1912, 76, 303.)

Neodymium rubidium nitrate,  $[\text{Nd}(\text{NO}_3)_3\text{Rb}_2]$   
 $+ 4\text{H}_2\text{O}$ .

Hydrosopic. (Jantsch, Z. anorg. 1911,  
 69, 230.)

Neodymium zinc nitrate,  $2\text{Nd}(\text{NO}_3)_3$ ,  
 $3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$ .

1 l. sat. solution in  $\text{HNO}_3$  + Aq (sp. gr.  
 1.325) contains 177 g. hydrous salt at  $16^\circ$ .  
 (Jantsch.)

Nickel nitrate, basic.

Insol. in  $\text{H}_2\text{O}$ . (Proust.)  
 $8\text{NiO}$ ,  $2\text{N}_2\text{O}_5$ ,  $+ 5\text{H}_2\text{O}$ . Insol. in cold or hot  
 $\text{H}_2\text{O}$ . (Habermann, M. 5, 432.)  
 $5\text{NiO}$ ,  $\text{N}_2\text{O}_5$ ,  $+ 4\text{H}_2\text{O}$ . Not decomp. by boil-  
 ing  $\text{H}_2\text{O}$ . (Rousseau and Tite, C. R. 114,  
 1184.)

Nickel nitrate,  $\text{Ni}(\text{NO}_3)_2$ .

Solubility in  $\text{H}_2\text{O}$ . See + 3, 6, and  $9\text{H}_2\text{O}$ .  
 Sp. gr. of aqueous solution at  $17.5^\circ$  contain-  
 ing:

5	10	15	20	% $\text{Ni}(\text{NO}_3)_2$
1.0463	1.0903	1.1375	1.1935	
25	30	35	40	% $\text{Ni}(\text{NO}_3)_2$
1.2534	1.3193	1.3896	1.4667	

(Franz, J. pr. (2) 5, 295.)

Sp. gr. of  $\text{Ni}(\text{NO}_3)_2$  + Aq containing g.  
 $\text{Ni}(\text{NO}_3)_2$  (anhydrous) in 1000 g.  $\text{H}_2\text{O}$  at  
 $24.4^\circ$ :

91.5 g. (= $\frac{1}{2}$ mol.)	183.274.5	369.460.5	549.1073
	1.141	1.205	1.266

(Gerlach, Z. anal. 28, 468.)

Sp. gr. of  $\text{Ni}(\text{NO}_3)_2$  + Aq at room temp.  
 containing:

16.493	30.006	40.953%	$\text{Ni}(\text{NO}_3)_2$ .
1.1363	1.2776	1.3879	

(Wagner, W. Ann. 1883, 18, 269.)

Sp. gr. of  $\text{Ni}(\text{NO}_3)_2$  + Aq at  $25^\circ$ .

Concentration of $\text{Ni}(\text{NO}_3)_2$ + Aq	Sp. gr.
1-normal	1.0755
$\frac{1}{2}$ " "	1.0381
$\frac{1}{3}$ " "	1.0192
$\frac{1}{4}$ " "	1.0096

(Wagner, Z. phys. Ch. 1890, 5, 39.)

Sp. gr. at  $20^\circ$  of  $\text{Ni}(\text{NO}_3)_2$  + Aq containing  
 M g. mols. of salt per liter.

M	0.01	0.025	0.05	0.075

Sp. gr.	1.14562	1.22134	1.29459	

(Jones and Pearce, Am. Ch. J. 1907, 38, 720.)

Sol in liquid  $\text{NH}_3$ . (Guntz, Bull. Soc.  
 1909, (4) 5, 1008.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin,  
 Am. Ch. J. 1898, 20, 828.)

Solubility in glycol = 7.5%. (de Coninck,  
 C. C. 1905, II 1234.)

Insol. in benzonitrile. (Naumann, B. 1914,  
 47, 1370.)

+  $3\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at:

58°	60°	64°	70°
61.61	61.99	62.76	63.95%
			$\text{Ni}(\text{NO}_3)_2$
90°	95°	mpt.	
70.16	77.12%	$\text{Ni}(\text{NO}_3)_2$	

(Funk, Z. anorg. 1899, 20, 411.)

+  $6\text{H}_2\text{O}$ . Not deliquescent in dry air. Sol.  
 in 2 pts cold  $\text{H}_2\text{O}$  and in alcohol. (Tupputi.)

Mpt. of  $\text{Ni}(\text{NO}_3)_2 + 6\text{H}_2\text{O} = 56.7^\circ$ . (Ord-  
 way; Tilden, Chem. Soc. 45, 409.)

Sat. solution boils at  $136.7^\circ$ . (Ordway.)

Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at:

-21°	-12.5°	-10°	-6°
39.94	41.59	42.11	43.00%
			$\text{Ni}(\text{NO}_3)_2$

1.069 1.128 1.179 1.224

727.5 873 1018.5 1164

1.264 1.299 1.329 1.357

(Gerlach, Z. anal. 28. 468.)

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

Insol. in absolute alcohol.

Sl. sol. in acetone. (Krug and M'Elroy.)

Difficultly sol. in methyl acetate (Naumann, B. 1909, 42. 3790)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

+  $9\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at.

$-23^\circ$   $-21^\circ$   $-10.5^\circ$   
39.02 39.48 44.13%  $\text{Ni}(\text{NO}_3)_2$ .

Cryohydrate is formed at  $-27^\circ$ . (Funk, Z. anorg. 1899, 20. 411.)

Nickel praseodymium nitrate,  $3\text{Ni}(\text{NO}_3)_2 \cdot 2\text{Pr}(\text{NO}_3)_3 + 2\text{H}_2\text{O}$ .

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.825) contains 9.28 g. hydrous salt at  $16^\circ$ . (Jantsch, Z. anorg. 1912, 76. 303)

Nickel samarium nitrate,  $3\text{Ni}(\text{NO}_3)_2 \cdot 2\text{Sm}(\text{NO}_3)_3 + 24\text{H}_2\text{O}$ .

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.825) contains 29.11 g. hydrous salt at  $16^\circ$ . (Jantsch.)

Nickel thorium nitrate,  $\text{NiTh}(\text{NO}_3)_6 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Meyer, Z. anorg. 1901, 27. 387.)

Nickel uranyl nitrate,  $10\text{Ni}(\text{NO}_3)_2 \cdot 3(\text{UO}_2)_3(\text{NO}_3)_3$ .

Sol. in  $\text{H}_2\text{O}$  and acids; insol. in aq. alkali. (Lancien, C. C. 1912, I. 208.)

Nickel nitrate ammonia,  $\text{Ni}(\text{NO}_3)_2 \cdot 4\text{NH}_3 + 2\text{H}_2\text{O}$ .

Efflorescent. Easily sol. in cold  $\text{H}_2\text{O}$ ; decomp. by boiling. Insol. in alcohol. (Erdmann, J. pr. 97. 395; Ephraïm, B. 1913, 48. 3106.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . (André, C. R. 106. 936.)

Nickel nitrate chloride ammonia,  $6\text{Ni}(\text{NO}_3)_2 \cdot \text{NiCl}_2 \cdot 30\text{NH}_3 + 16\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Schwarz, W. A. B. 1860. 272.)

Nickel nitrate cupric oxide,  $\text{Ni}(\text{NO}_3)_2 \cdot 3\text{CuO} + 3\text{H}_2\text{O}$ .

Ppt. (Maihle, C. R. 1902, 134. 234.)

Nickel nitrate hydrazine,  $\text{Ni}(\text{NO}_3)_2 \cdot 3\text{N}_2\text{H}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Franzen, Z. anorg. 1908, 60. 267.)

Palladium nitrate, basic,  $\text{Pd}(\text{NO}_3)_2 \cdot 3\text{PdO} + 4\text{H}_2\text{O}$ .

Ppt. Insol. in  $\text{H}_2\text{O}$  (Kane.)

Palladium nitrate,  $\text{Pd}(\text{NO}_3)_2 + x\text{H}_2\text{O}$

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . Decomp. by much  $\text{H}_2\text{O}$  or alcohol (Kane.)

Decomp. by cold or hot  $\text{H}_2\text{O}$  (Rose, A. 83. 143)

Platinic nitrate,  $\text{Pt}(\text{NO}_3)_4$  (?)

Known only in solution, which is decomp. on evaporating (Berzelius.)

$\text{Pt}(\text{NO}_3)_2 \cdot 3\text{PtO}_2 + 5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Preuss, Bull. Soc. (2) 46. 156)

Platinum nitrate sulphocarbamide,  $\text{Pt}(\text{NO}_3)_2 \cdot 4\text{CS}(\text{NH}_2)_2$ .

Very sol. in  $\text{H}_2\text{O}$ . Unstable (Kunokow, J. pr. 1894, (2) 50. 490.)

Potassium nitrate,  $\text{KNO}_3$ .

Not deliquescent, but, according to Mulder, 100 pts.  $\text{KNO}_3$  under a bell jar with  $\text{H}_2\text{O}$  take up 339 pts.  $\text{H}_2\text{O}$  in 22 days, and small amounts finally deliquesce completely

Sol. in  $\text{H}_2\text{O}$  with absorption of heat.

16 pts.  $\text{KNO}_3 + 100$  pts.  $\text{H}_2\text{O}$  at  $13.2^\circ$  lower the temperature  $10.2^\circ$ . If the initial temp. is  $23^\circ$  it falls to  $12.8^\circ$ , if  $0^\circ$  it does not fall below  $-2.7^\circ$ , which is the freezing-point of the mixture. (Rudorff, Pogg. 136. 276)

$\text{KNO}_3 + \text{Aq}$  sat. at  $18.1^\circ$  has 1.601 sp. gr. and contains 22.72%  $\text{KNO}_3$ , or 100 pts.  $\text{H}_2\text{O}$  at  $18.1^\circ$  dissolve 29.45 pts.  $\text{KNO}_3$ . (Kerston, 1840)

Sol. in 3.743 pts.  $\text{H}_2\text{O}$  at  $18^\circ$  (Gerlach.)

Sol. in 3 pts.  $\text{H}_2\text{O}$  at  $21^\circ$  (Schiff, A. 109. 326), and solution has 1.683 sp. gr.

Sol. in 3 pts. cold, and 0.6 pt. boiling  $\text{H}_2\text{O}$ . (Fourcroy)

$\text{KNO}_3 + \text{Aq}$  sat. at  $18^\circ$  has sp. gr. 1.151, and contains 21.03%  $\text{KNO}_3$ , or 100 pts.  $\text{H}_2\text{O}$  dissolve 27.60 pts.  $\text{KNO}_3$  at  $18^\circ$  (Longchamp)

Sol. in 1 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , and 0.25 pt. at b.-pt. (Rafault)

100 pts.  $\text{H}_2\text{O}$  at  $114.5^\circ$  dissolve 281.01 pts. (Griffiths)

Sol. in 7 pts. cold, and 1 pt. boiling  $\text{H}_2\text{O}$  (Bergmann)

Sol. in 6.15 pts. cold  $\text{H}_2\text{O}$  at  $18.75^\circ$  (Abl)

100 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 26.6 pts. at  $100^\circ$ , 100 pts. (Tre's Dictionary)

$\text{KNO}_3 + \text{Aq}$  sat. at  $10^\circ$  contains 33.3% (Eller)

$\text{KNO}_3 + \text{Aq}$  sat. in the cold contains 26% (Fourcroy)

$\text{KNO}_3 + \text{Aq}$  sat. at  $12.6^\circ$  contains 24.8% (Hansson)

Solubility of  $\text{KNO}_3$  in 100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts. $\text{KNO}_3$	$t^\circ$	Pts. $\text{KNO}_3$

"	1/4	365.00	4.90
"	1/2	361.65	4.86
"	1	358.80	4.81
"	1 1/2	355.20	4.77

(Armstrong and Eyre, Proc. R. Soc. (A) 1910, 84, 127.)

Solubility in KCl+Aq at 20°, 30°, 40° and 91°. Data, given in the original, show that each salt diminishes the solubility in H<sub>2</sub>O of the other. (Leather, Mem. Dept. Agric. India, 1914, 3, 177, Chem. Soc. 1915, 108, (2) 13.)

KNO<sub>3</sub>+NaCl

NaCl is sol in sat. KNO<sub>3</sub>+Aq, and the mixed solution is capable of dissolving more KNO<sub>3</sub>. An amount of H<sub>2</sub>O, which, when pure, could only dissolve 100 pts KNO<sub>3</sub>, can in this way be made to take up 152.64 pts. (Longchamp, A. ch. (2) 9, 8.)

Sol. in sat NaCl+Aq.

100 pts. H<sub>2</sub>O dissolve:

	Longchamp 4° (1)	Rüdorff		Page and Keightley 15.6° (4)
		14° (2)	18° (3)	
NaCl	35.96	38.5	38.0	39.57
KNO <sub>3</sub>	26.01	28.7	36.1	32.32
	61.97	67.2	75.0	71.89

	Karsten 18.75°			Muker At b-pt. (8)
	(5)	(6)	(7)	
NaCl	36.53	38.25	39.19	37.9
KNO <sub>3</sub>	33.12	29.45	38.53	306.7
	69.65	67.70	77.72	344.6

1, 2, 3, 4, and 8. Both salts in excess.

5. Sat. NaCl+Aq treated with KNO<sub>3</sub>.6. Sat. KNO<sub>3</sub>+Aq treated with NaCl7. The two salts simultaneously treated with H<sub>2</sub>O.

100 pts. H<sub>2</sub>O dissolve 31.44 pts KNO<sub>3</sub>, 139 pts. KCl, and 38.58 pts. NaCl at 15.6°, and solution has sp. gr.=1.33. (Page and Keightley.)

## Solubility in NaCl + Aq at t°.

107	71.3	8.4	79.7
115	72.2	9.0	81.2
122	73.8	8.0	81.8
127	73.6	7.9	81.5
127	72.9	8.8	81.7
127	73.0	7.6	80.6
128	74.2	7.9	82.1
132	75.7	7.6	83.3
145	77.7	7.6	85.3
170	80.7	5.8	86.5
171	79.1	5.9	85.0

(Étard, A. ch. 1894, (7) 3. 283.)

100 g. H<sub>2</sub>O dissolve 41.14 g. KNO<sub>3</sub> and 38.25 g. NaCl at 25°; 168.8 g. KNO<sub>3</sub> and 39.31 g. NaCl at 80°. (Soch, J. phys. Ch. 1898, 2. 46.)

See also under NaCl.

\* Sol. in sat. CuSO<sub>4</sub> + Aq, forming a double salt, which soon separates out.

Very slowly and slightly sol. in MgSO<sub>4</sub> + Aq with pptn. of MgSO<sub>4</sub>. (Karsten.)

KNO<sub>3</sub> + K<sub>2</sub>SO<sub>4</sub>.

Sat. KNO<sub>3</sub> + Aq dissolves some K<sub>2</sub>SO<sub>4</sub>, and sat. K<sub>2</sub>SO<sub>4</sub> + Aq slowly dissolves some KNO<sub>3</sub>.

without pptn., but K<sub>2</sub>SO<sub>4</sub> is afterwards pptd. (Karsten.)

100 pts. H<sub>2</sub>O dissolve:

	Mulder 18 76° (1)	Karsten 18 76° (2)	Kopp		Mulder 18.75° (5)
			20° (3)	40° (4)	
KNO <sub>3</sub>	29.90	29.42	26.9	59.35	...
K <sub>2</sub> SO <sub>4</sub>	.	4.0	6.6	5.75	10.8

2 H<sub>2</sub>O sat. with KNO<sub>3</sub> and K<sub>2</sub>SO<sub>4</sub> simultaneously, or to a sat. solution of one salt the other was added.

3 and 4. H<sub>2</sub>O sat. with both salts simultaneously.

Mulder doubts the results of 3 and 4.

Solubility in K<sub>2</sub>SO<sub>4</sub> + Aq at t°.

t°	In 100 ccm of the solution		Sp. gr. of solution
	G KNO <sub>3</sub>	G K <sub>2</sub> SO <sub>4</sub>	
15	216.5	50.7	1.165
25	308.5	47.66	1.210

(Euler, Z. phys. Ch. 1914, 40. 313.)

Slowly sol. in sat. Na<sub>2</sub>SO<sub>4</sub> at first without pptn., but afterwards K<sub>2</sub>SO<sub>4</sub> or NaSO<sub>4</sub> separates out.

Sol. in sat. ZnSO<sub>4</sub> + Aq with pptn. of double salt (Karsten.)

Sol. in sat. KClO<sub>4</sub> + Aq, from which solution it is not pptd. by salts which would ppt. it from aqueous solution. (Karsten.)

Hydrazine dissolves 21.7 pts. KNO<sub>3</sub> at 12.5-13°. (de Bruyn, R. t. c. 1899, 18. 297.)

Neither dissolved nor attacked by liquid NO<sub>2</sub>. (Frankland, Chem. Soc. 1901, 79. 1361.)

Very sol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1893, 20. 829.)

Insol. in absolute alcohol; in dilute alcohol it dissolves proportional to the amount of H<sub>2</sub>O present, but always less is dissolved than the H<sub>2</sub>O would dissolve by itself. (Gerardin.)

100 pts. alcohol containing % by weight of alcohol dissolve pts. KNO<sub>3</sub> at 15°.

10	20	30	40	50	60	80%	alcohol
13.2	8.5	5.6	4.3	2.8	1.7	0.4	pts. KNO <sub>3</sub> .

(Schiff, A. 118. 365.)

(Groschuff, Z. anorg. 1904, 40, 11.)

Potassium silver nitrate,  $\text{KNO}_3, \text{AgNO}_3$ .

Sol in  $\text{H}_2\text{O}$ . (Russell and Maskelyne, Roy. Soc. Proc. 26, 357)

$3\text{KNO}_3, \text{AgNO}_3$ . Sol in  $\text{H}_2\text{O}$ . (Rose, Pogg. 106, 320.)

Potassium thallic nitrate,  $2\text{KNO}_3, \text{Ti}(\text{NO}_3)_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Meyer, Z. anorg. 1900, 24, 361.)

Potassium thorium nitrate,  $4\text{KNO}_3, \text{Th}(\text{NO}_3)_4$ .

Very sol in  $\text{H}_2\text{O}$  and alcohol. (Berzelius.)  
Hygroscopic, very unstable. (Meyer, Z. anorg. 1901, 27, 379)

Hydroscopic; sol in dil.  $\text{HNO}_3 + \text{Aq}$ . (Meyer, Z. anorg. 1901, 27, 378)

Potassium thorium hydrogen nitrate,  $3\text{KNO}_3, \text{Th}(\text{NO}_3)_4, 3\text{HNO}_3$ .

Decomp. in the air. (Meyer, B. 1900, 33, 2140.)

$+4\text{H}_2\text{O}$ . Sol in  $\text{HNO}_3$  of 1.2 sp. gr. Effloresces in the air. (Meyer, Z. anorg. 1901, 27, 380)

Potassium uranyl nitrate,  $\text{K}(\text{UO}_2)(\text{NO}_3)_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{HNO}_3$ . (Meyer, B. 1903, 36, 4057.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	In 100 pts. of the solution			Solid phase
	Pts by wt $\text{UO}_2$	Pts by wt K	Pts by wt $\text{NO}_3$	
0.5	31 98	1 72	..	Double salt + $\text{KNO}_3$
13 0	33 40	2 74		"
25 0 a)	37 08	4.05	23 49	"
b)	37 06	3.98	23 46	"
45 0	42 18	5 16		"
59 0	41 65	6 03		"
80.6 a)	43 72	6 42		Double salt
b)	43.70	6 34	.	"

Potassium uranyl nitrate is decomp by  $\text{H}_2\text{O}$  at temp. below  $60^\circ$ ; above  $60^\circ$  it is sol. in  $\text{H}_2\text{O}$  without decomp.

(Rumbach, B. 1904, 37, 473.)

Potassium nitrate barium sulphate,  $\text{KNO}_3$ ,  $2\text{BaSO}_4$ .

Easily decomp. Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Silberberger, M. 1904, 25. 251.)

Potassium nitrate phosphomolybdate.

See Phosphomolybdate nitrate, potassium.

Potassium nitrate sulphate,  $\text{KNO}_3$ ,  $\text{KHSO}_4$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol. (Jacquelin.)

Potassium nitrate sulphotungstate,  $2\text{KNO}_3$ ,  $\text{K}_2\text{WS}_4$  (?).

Very sol. in hot or cold  $\text{H}_2\text{O}$ . Insol. in alcohol. (Berzelius.)

Potassium nitrate tungstate (?).

100 pts. boiling  $\text{H}_2\text{O}$  dissolve 5 pts salt. (Storer's Diet., p. 393.)

Potassium nitrate zinc iodide.

Permanent. Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Anthon.)

Praseodymium nitrate,  $\text{Pr}(\text{NO}_3)_3 \cdot 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (von Schule, Z. anorg. 1898, 18. 355.)

Praseodymium rubidium nitrate,

$[\text{Pr}(\text{NO}_3)_3]_2\text{Rb}_2 \cdot 4\text{H}_2\text{O}$

Hydroscopic (Jantsch, Z. anorg. 1911, 69. 230.)

Praseodymium sodium nitrate,  $\text{Pr}(\text{NO}_3)_3$ ,  $2\text{NaNO}_3 \cdot \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (von Schule, Z. anorg. 1898, 18. 356.)

Praseodymium zinc nitrate,  $2\text{Pr}(\text{NO}_3)_3$ ,  $3\text{Zn}(\text{NO}_3)_2 \cdot 24\text{H}_2\text{O}$ .

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 14.69 g. hydrous salt at  $16^\circ$ . (Jantsch, Z. anorg. 1912, 76. 321.)

Radium nitrate.

Has apparently the same solubility in  $\text{H}_2\text{O}$  as the corresponding Ba comp. (Curie, Dissert. 1903.)

Rhodium nitrate,  $\text{Rh}(\text{NO}_3)_3 \cdot 2\text{H}_2\text{O}$  (?).

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Claus.)

Rhodium uranyl nitrate,

$2(\text{UO}_2)(\text{NO}_3)_2 \cdot \text{Rh}_2(\text{NO}_3)_4 \cdot 10\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  and acids; insol. in aq. alkalis. (Lancien, C. C. 1912, I. 208.)

Rubidium nitrate,  $\text{RbNO}_3$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 20.1 pts. at  $0^\circ$ ; 43.5 pts. at  $10^\circ$ . (Bunsen.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	G. $\text{PbNO}_3$ per 100 g.		$t^\circ$	G. $\text{RbNO}_3$ per 100 g.	
	$\text{H}_2\text{O}$	Solu- tion		$\text{H}_2\text{O}$	Solu- tion
0	19.5	16.3	60	200	66 7

40	116.7	53 0	100	452	81 9
50	155.6	60.9	118 3	617	86 1

(Berkeley, Trans. Roy. Soc. 1904, 203. A. 207.)

100 g.  $\text{H}_2\text{O}$  dissolve 66.855 g.  $\text{RbNO}_3$  at  $25^\circ$ . (Haigh, J. Am. Chem. Soc. 1912, 34. 1148.)

Sp. gr.  $20^\circ/4^\circ$  of a normal solution of  $\text{RbNO}_3 = 1.100835$ ; of a 0.5 normal solution = 1.04989. (Haigh, J. Am. Chem. Soc. 1912, 34. 1151.)

Sp. gr. of  $\text{RbNO}_3 + \text{Aq}$

G.-equiv.  $\text{RbNO}_3$  per l.

at $18^\circ =$	0.5035	1.008
Sp. gr. at $0^\circ/6^\circ$	1.05342	1.10566
Sp. gr. at $18^\circ/18^\circ$	1.05226	1.10361
Sp. gr. at $30^\circ/30^\circ$	1.05156	1.10222

G.-equiv.  $\text{RbNO}_3$  per l.

at $18^\circ =$	2.000	2.685
Sp. gr. at $0^\circ/6^\circ$	1.20655	
Sp. gr. at $18^\circ/18^\circ$	1.20302	1.27066
Sp. gr. at $30^\circ/30^\circ$	1.20036	1.26717

(Clausen, W. Ann. 1914, (4) 44. 1069.)

Easily sol. in  $\text{HNO}_3$  (Schultz, Zeit. Ch. (2) 5. 531.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Rubidium hydrogen nitrate,  $\text{RbNO}_3$ ,  $\text{HNO}_3$ .

Fairly stable in air. (Wells, Am. Ch. J. 1901, 26. 273.)

Rubidium dihydrogen nitrate,  $\text{RbNO}_3$ ,  $2\text{HNO}_3$ .

Decomp. rapidly in air. (Wells, Am. Ch. J. 1901, 26. 273.)

$2\text{RbNO}_3$ ,  $5\text{HNO}_3$ . Decomp. by  $\text{H}_2\text{O}$ . Known only in solution in  $\text{HNO}_3 + \text{Aq}$ . (Ditte, A. ch. (5) 18. 320.)

Rubidium silver nitrate,  $\text{RbNO}_3$ ,  $\text{AgNO}_3$ .

Sol. in  $\text{H}_2\text{O}$  (Russell and Maskelyne, Roy. Soc. Proc. 26. 357.)

Rubidium thorium nitrate,  $\text{Rb}_2\text{Th}(\text{NO}_3)_4$ .

Sl. sol. in  $\text{HNO}_3$ ; decomp. by  $\text{H}_2\text{O}$ . (Meyer, Z. anorg. 1901, 27. 384.)

Rubidium uranyl nitrate,  $\text{Rb}(\text{UO}_2)(\text{NO}_3)_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{HNO}_3$ .  
(Meyer, B. 1903, 36. 4057.)

Solubility of  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	In 100 pts. of the solution				Solid phase
	Pts. by wt. $\text{UO}_2$	Pts. by wt. $\text{NO}_3$	Pts. by wt. $\text{Rb}$	Pts. by wt. total salt	
25	a) 35.42	19.72	4.63	59.67	Double salt + $\text{RbNO}_3$
"	b) 35.40	19.76	4.67	59.64	"
80	a) 34.84	11.01	69.46	Double salt	
"	b) 34.68	11.01	69.62	"	

Rubidium uranyl nitrate is decomp. by  $\text{H}_2\text{O}$  at low temp.; at  $80^\circ$  it is sol. in  $\text{H}_2\text{O}$  without decomp.

(Rumbach, B. 1904, 37. 476.)

Samarium nitrate,  $8\text{Sm}(\text{NO}_3)_3 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve, C. N. 48. 74.)

Very hygroscopic. (Demarçay, C. R. 1900, 130. 1187.)

Samarium zinc nitrate,  $2\text{Sm}(\text{NO}_3)_3$ ,

$3\text{Zn}(\text{NO}_3)_2 + 24\text{H}_2\text{O}$

1 l. sat. solution in  $\text{HNO}_3 + \text{Aq}$  (sp. gr. 1.325) contains 36.47 g. hydrous salt at  $16^\circ$ .  
(Jantsch, Z. anorg. 1912, 76. 321.)

Scandium nitrate, basic.

Sol. in  $\text{H}_2\text{O}$ . (Nilson, B. 13. 1444.)

$\text{ScOH}(\text{NO}_3)_2 + \text{H}_2\text{O}$  (Crookes, Roy. Soc. Proc. 1908, 80. A. 518.)

$\text{Sc}_2\text{O}(\text{NO}_3)_4$ . (Crookes.)

Scandium nitrate,  $\text{Sc}(\text{NO}_3)_3$

(Crookes, Roy. Soc. Proc. 1908, 80. A. 518.)  
 $+4\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Crookes.)

Silver nitrate,  $\text{AgNO}_3$ .

100 pts.  $\text{H}_2\text{O}$  at  $11^\circ$  dissolve 127.7 pts  
(Schnauss, Arch. Pharm. (2) 82. 260.)

100 pts.  $\text{H}_2\text{O}$  dissolve at:

$0^\circ$  19.5° 54° 85° 110°  
121.9 227.3 500 714 1111 pts.  $\text{AgNO}_3$ .

(Kremers, Pogg. 92. 497.)

100 pts.  $\text{H}_2\text{O}$  dissolve 1622.5 pts at  $125^\circ$ ,  
and 1941.4 pts. at  $133^\circ$ . (Tilden and Shennstone, Phil. Trans. 1884. 23.)

Sat. solution boils at  $125^\circ$ . (Kremers.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$   
Sat.  $\text{AgNO}_3 + \text{Aq}$  contains %  $\text{AgNO}_3$  at  $t^\circ$ .

$t^\circ$	% $\text{AgNO}_3$	$t^\circ$	% $\text{AgNO}_3$

\* M. pt.

(Kahlenberg and Brewer, J. phys. Ch. 1908, 12. 283.)

Silver nitrate acetylde,  $\text{AgNO}_3, \text{AgHC}_2$ .

(Willgerodt, B. 1895, 28. 2108.)

 $\text{AgNO}_3, \text{Ag}_2\text{C}_2$ . Ppt. (Chavastelon, C. R. 1897, 124. 1365.) $2\text{AgNO}_3, \text{Ag}_2\text{C}_2$  (Chavastelon.)Silver nitrate ammonia,  $\text{AgNO}_3, \text{NH}_3$ .Partly sol. in  $\text{H}_2\text{O}$ , rather sol. in alcohol. Sl. sol. in ether. (Reychler, B. 16. 990.)Very sol. in liquid ammonia below  $-10^\circ$ . (Joannis, C. R. 1894, 118. 1151.) $\text{AgNO}_3, 2\text{NH}_3$ . Easily sol. in  $\text{H}_2\text{O}$ . (Mitscherlich.)

11. alcohol dissolves 0.0383 g. mols. (Kurilow, C. C. 1903. II, 97.)

 $\text{AgNO}_3, 3\text{NH}_3$ . Completely sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 20. 153.)Silver nitrate antimonide,  $\text{AgNO}_3, \text{Ag}_3\text{Sb}$ .Decomp. at once by  $\text{H}_2\text{O}$ . (Poleck and Thummel, B. 16. 2435.)Silver nitrate arsenide,  $\text{AgNO}_3, \text{Ag}_3\text{As}$ Decomp. at once by  $\text{H}_2\text{O}$ . (Poleck and Thummel.)Silver nitrate bromide,  $\text{AgNO}_3, \text{AgBr}$ .Decomp. immediately by  $\text{H}_2\text{O}$  or alcohol, with separation of  $\text{AgBr}$ . (Risse, A. 111. 39.)Silver nitrate chloride,  $\text{AgNO}_3, \text{AgCl}$ .Quickly decomp. with  $\text{H}_2\text{O}$ ; more slowly with absolute alcohol; not decomp. by ether-alcohol. (Reichert, J. pr. 92. 237.)Silver nitrate cyanide,  $2\text{AgNO}_3, \text{AgCN}$ .Decomp. by  $\text{H}_2\text{O}$ , not by alcohol. (Hellwig, Z. anorg. 1900, 25. 177.)Silver nitrate iodide,  $\text{AgNO}_3, \text{AgI}$ .Cold  $\text{H}_2\text{O}$  separates  $\text{AgI}$ , which redissolves on heating (Stilrenberg, Arch. Pharm. (2) 143. 12.) Sol. in little  $\text{H}_2\text{O}$  without decomp.; more  $\text{H}_2\text{O}$  separates  $\text{AgI}$ . (Kremers, J. pr. 71. 54.) Insol in absolute alcohol. Sol. in conc.  $\text{AgNO}_3 + \text{Aq}$ . $2\text{AgNO}_3, \text{AgI}$ . Sol. in little but decomp. by more boiling  $\text{H}_2\text{O}$ . (Risse, A. 111. 39.)Silver nitrate mercuric oxide,  $\text{AgNO}_3, 2\text{HgO}$ .Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . (Finca, Gazz. ch. it. 1910, 41. (2) 548.)Silver nitrate phosphide,  $3\text{AgNO}_3, \text{Ag}_3\text{P}$ 

(Warren, C. N. 56. 113.)

Silver nitrate silicide,  $4\text{AgNO}_3, \text{Ag}_4\text{Si}$ 

(Büchner, Ch. Ztg. 9. 484.)

Silver nitrate silicate,  $2\text{AgNO}_3, 3\text{Ag}_2\text{SiO}_4$ .Sol. in dil.  $\text{HNO}_3 + \text{Aq}$ , but  $\text{SiO}_2$  separates out after heating. (Rousseau and Tite, C. R. 114. 294.)Silver nitrate sulphide,  $\text{AgNO}_3, \text{Ag}_2\text{S}$ .Decomp. by  $\text{H}_2\text{O}$  (Poleck and Thummel, B. 16. 2435.)Silver nitrate sulphocyanide,  $2\text{AgNO}_3,$  $\text{AgSCN}$ .Decomp. by  $\text{H}_2\text{O}$ , not by alcohol (Hellwig, Z. anorg. 1900, 25. 178.)Sodium nitrate,  $\text{NaNO}_3$ .Deliquescent in moist air. Sol. in  $\text{H}_2\text{O}$  with absorption of heat. 75 pts  $\text{NaNO}_3$  mixed with 100 pts.  $\text{H}_2\text{O}$  at  $13.2^\circ$  lower the temperature  $18.5^\circ$ . (Rüdorff, B. 2. 68.)

Sol in 1	58 pts	$\text{H}_2\text{O}$ at $-0^\circ$ .

10 97	44.76	1.291

(Engel, C. R. 1887, 104, 911.)

Solubility of  $\text{NaNO}_2$  in  $\text{NH}_4\text{OH} + \text{Aq}$  at 15 $^{\circ}$ .

G. per 100 g. $\text{H}_2\text{O}$		Sp. gr.
$\text{NH}_4$	$\text{NaNO}_2$	
13 87	75 03	1.253
17.28	73 99	1.233
20 38	73 18	1.212

(Fedotieff and Koltunoff, Z. anorg. 1914, 85, 251.)

$\text{NaNO}_2 + \text{Na}_2\text{CO}_3$ . (See  $\text{Na}_2\text{CO}_3$ .)

Sol in sat.  $\text{NH}_4\text{Cl} + \text{Aq}$ .

Very rapidly sol in sat.  $\text{BaCl}_2 + \text{Aq}$  with pptn. of  $\text{Ba}(\text{NO}_3)_2$ .

Sol in sat.  $\text{KCl} + \text{Aq}$ , with formation of  $\text{KNO}_3$ .

Sol. in sat.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (See  $\text{NH}_4\text{NO}_3$ .)

Sol. in sat.  $\text{Ba}(\text{NO}_3)_2 + \text{Aq}$ , with partial pptn. of  $\text{Ba}(\text{NO}_3)_2$ . (See  $\text{Ba}(\text{NO}_3)_2$ .)

Sol. in sat.  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ , with subsequent pptn. of  $\text{Pb}(\text{NO}_3)_2$ . (See  $\text{Pb}(\text{NO}_3)_2$ .)

$\text{NaNO}_2 + \text{KNO}_3$ .

Sol. in sat.  $\text{KNO}_3 + \text{Aq}$ ; solution thus made at 18 $^{\circ}$  contains 54.43% mixed salt, or 100 pts  $\text{H}_2\text{O}$  dissolve 118.98 pts. mixed salt, viz 89.53 pts.  $\text{NaNO}_2$  and 29.45 pts.  $\text{KNO}_3$ . (See  $\text{KNO}_3$ .)

$\text{NaNO}_2 + \text{Sr}(\text{NO}_3)_2$ .

If  $\text{Sr}(\text{NO}_3)_2 + \text{Aq}$  sat. at 14.5 $^{\circ}$  is sat. with  $\text{NaNO}_2$ , 100 pts.  $\text{H}_2\text{O}$  dissolve:

$\text{NaNO}_2$	83.7	66.4	62.0
$\text{Sr}(\text{NO}_3)_2$	.	51.0	
		117.4	

(Mulder.)

$\text{NaNO}_2 + \text{NaNO}_3$ . See under  $\text{NaNO}_3$ .

$\text{NaNO}_2 + \text{NaCl}$ .

100 pts  $\text{H}_2\text{O}$  dissolve 24.91 pts.  $\text{NaCl} + 54.55$  pts.  $\text{NaNO}_2$  = 79.46 pts. of the two salts at 20 $^{\circ}$ . (Nicol, Phil. Mag. (5) 31, 386.)

100 pts  $\text{H}_2\text{O}$  dissolve at 18.75 $^{\circ}$ .

	1	2	3	4	5	6
$\text{NaCl}$	36	25 22	24 96	24 98	..	24 6
$\text{NaNO}_2$	.	52.89	52 84	52 82	86 6	53.8

2. Sat.  $\text{NaCl} + \text{Aq}$  treated with  $\text{NaNO}_2$ .

3. Sat.  $\text{NaNO}_2 + \text{Aq}$  treated with  $\text{NaCl}$ .

4. Simultaneous treatment of the two salts by  $\text{H}_2\text{O}$  (Karsten.)

5. Excess of both salts +  $\text{Aq}$  warmed and cooled to 20 $^{\circ}$ . (Rudorff, B 6, 484.)

Solubility of NaCl with addition of  $\text{NaNO}_3$  at  $15.5^\circ$ .

$\frac{1}{5}$ " "	1.0283

(Wagner, Z. phys. Ch. 1890, 5. 40.)

Solubility of  $TlNO_3 + KNO_3$ . (See  $KNO_3$ .)

Insol. in alcohol. (Lamy.)

Sol. in acetone. (Eidmann, Dissert. 1899; Naumann, B. 1904, 37. 4328.)

**Thallous hydrogen nitrate,  $TlNO_3, 2HNO_3$ .**

(Wells, Am. Ch. J. 1901, 26. 273.)

$TlNO_3, 3HNO_3$ . (Ditte.)

**Thallic nitrate,  $Tl(NO_3)_3 \cdot 3H_2O$ .**

Effloresces in the air. (Meyer, Z. anorg. 1900, 24. 361.)

+6 $H_2O$ , or 3 $H_2O$ . Deliquescent. Sol. in  $H_2O$ .

**Thallic thallic nitrate,  $2TlNO_3, Tl(NO_3)_3$ .**

Decomp. by  $H_2O$ . (Wells, Am. Ch. J. 1901, 26. 278.)

**Thallic uranyl nitrate,  $Tl(UO_2)(NO_3)_3$ .**

Decomp. in moist air. Decomp. by  $H_2O$ . (Meyer, B. 1903, 36. 4058.)

**Thorium nitrate,  $ThQ_2, 2N_2O_5 + 6H_2O$ .**

Crystallized. Sl. hygroscopic. (Fukae, Zeit. angew. Ch. 1897, 10. 116.)

+12 $H_2O$ . Very deliquescent, and sol. in  $H_2O$  and alcohol.

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

**Thorium zinc nitrate,  $ZnTh(NO_3)_6 \cdot 8H_2O$ .**

Sol. in  $HNO_3$ ; very hygroscopic. (Meyer, Z. anorg. 1901, 27. 386.)

**Thulium nitrate,  $Tm_2(NO_3)_6 \cdot 8H_2O$ .**

Deliquescent. Can readily be cryst. from  $HNO_3$ . (James, J. Am. Chem. Soc. 1911, 33. 1344.)

**Tin (stannous) nitrate, basic,  $2SnO, N_2O_5$ .**

Difficultly sol. with partial decomp. in  $H_2O$ . (Weber, J. pr. (2), 26. 121.)

**Tin (stannous) nitrate,  $Sn(NO_3)_2 \cdot 20H_2O$ .**

Deliquescent, and easily decomp. (Weber, J. pr. (2) 26. 121.)

**Tin (stannic) nitrate, basic,  $4SnO_2, N_2O_5 + 4H_2O$ .**

(Thomas, Bull. Soc. 1896 (3) 15. 312.)

**Tin (stannic) nitrate,  $Sn(NO_3)_4$ .**

Sol. in  $H_2O$ , but decomp. very soon on standing. Stable in presence of conc.  $HNO_3 + Aq$  at 90°, but decomp. at 100° (Montemartini, Gazz. ch. it. 22. 384.)

Insol. in moderately conc.  $HNO_3$ ; readily decomp. by  $H_2O$ . (Engel, C R. 1897, 125. 710.)

**Titanium nitrate,  $5TiO_2, N_2O_5 + 6H_2O$ .**

Sol. to a slight milkiness in cold  $H_2O$ . Decomp. on boiling. (Merz, J. pr. 99. 157.)

**Uranyl nitrate, basic.**

Sol. in  $H_2O$ . (Ordway, Sil. Am. J. (2) 26. 209.)

**Uranyl nitrate,  $UO_2(NO_3)_2$ .**

+ $H_2O$ . (de Forcrand, C. R. 1913, 156. 1046.)

Sol. in fuming  $HNO_3$  from which it can be cryst.

+2 $H_2O$ . 52.39% is sol. in dry ether at 7°.

54.25% " " " " " " 10°.

(Lebeau, Bull. Soc. 1911, (4) 9. 300.)

+2H<sub>2</sub>O. (Vasheff, C. C. 1910, II. 1527.)

(de Coninck, Belg. Acad. Bull. 1901. 222.)

Insol. in KOH+Aq, NaOH+Aq or NH<sub>4</sub>OH+Aq. Sol. in lime water. (de Coninck, C. R. 1900, 131. 1220.)

Sl. attacked by liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20. 830.)

At 15°, uranyl nitrate is sol. in comm. methyl alcohol, dil. and conc. ethyl alcohol, propyl and isobutyl alcohol, comm. amyl alcohol, acetone, ether, ethyl acetate, dil. and conc. formic acid and dil. acetic acid; sl. sol. in comm. essence of terebenthine; insol. in benzene (cryst.), comm. toluene and xylene, ligroin, CHCl<sub>3</sub>, glycerine and CS<sub>2</sub>. (de Coninck, C. R. 1900, 131. 1220.)

1 pt. is sol. in 55 pts. methyl alcohol at ca. 11.8°.

1 pt. is sol. in 30 pts. ethyl alcohol (85°) at ca. 12.9°.

1 pt. is sol. in 65 pts. acetone at ca. 12.0°.

1 pt. is sol. in 5.6 pts. acetic acid (d=1.035) at ca. 14.25°.

(de Coninck, C. R. 1900, 131. 1304.)

1 pt. sol. in 23.5 pts. methyl alcohol at 11.2°.

1 " " " 16.0 " ether " 11.9°.

1 " " " 18.4 " ethyl acetate " 10.3°.

1 " " " 5.3 " conc. formic acid at 15.1°.

(de Coninck, C. R. 1901, 132. 91.)

Sp. gr. of solution in comm. methyl alcohol at t°.

t°	% salt	Sp. gr. referred to H <sub>2</sub> O
11	1	0.8902

11.7	7	1.0662	1.0300

(de Coninek, C. R. 1900, 131. 1301)

When excess of UO<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub> is shaken with ether at 7°, two layers are formed, the ether layer containing 59 g. salt per 100 g. solution and the aqueous layer 62.5 g. salt per 100 g. solution (Lebeau, C. R. 1911, 152. 440.)

Sol. in nearly all proportions in glycerine (Postans, Pharm. J. 1883, (3) 13. 752.)

Sol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601)

Sol. in acetone. (Eckmann, C. C. 1899, II, 1014, Naumann, B. 1904, 37. 6328)

+18H<sub>2</sub>O. Sat. aq. solution has D<sub>17</sub><sup>17</sup>/17°=1.7536 (Vasilieff, J. Russ. phys. Chem. Soc. 1911, 43. 1183)

Uranyl nitrate ammonia, (UO<sub>2</sub>)<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub>·2NH<sub>4</sub>.

(v. Unruh, Dissert. 1909.)

(UO<sub>2</sub>)<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub>·3NH<sub>4</sub>. (v. Unruh.)

(UO<sub>2</sub>)<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub>·4NH<sub>4</sub>. (v. Unruh.)

Uranyl nitrate phosphate, UO<sub>2</sub>H<sub>4</sub>(PO<sub>4</sub>)<sub>2</sub>·UO<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub>+14H<sub>2</sub>O.

Easily sol. in warm H<sub>2</sub>O, with gradual decomp. Easily sol. in HNO<sub>3</sub>, HCl, or H<sub>2</sub>SO<sub>4</sub>+Aq. Sol. in acetic acid with decomp. (Heintz, A. 151. 216.)

Divanadyl nitrate (?).

Known only in solution. Decomp. on evaporation.

Ytterbium nitrate, basic.

Easily sol. in H<sub>2</sub>O.

Ytterbium nitrate.

Very sol. in H<sub>2</sub>O.

+3H<sub>2</sub>O. Ppt. (Cleve, Z. anorg. 1902, 32. 140.)

+4H<sub>2</sub>O. (Cleve.)

Yttrium nitrate, basic, 2Y<sub>2</sub>O<sub>3</sub>, 3N<sub>2</sub>O<sub>5</sub>+9H<sub>2</sub>O.

Deliquescent in moist air. Decomp. by cold or boiling H<sub>2</sub>O. Sol. in a solution of yttrium nitrate without decomp. (Bahr and Bunsen, A. 137. 1.)

Yttrium nitrate, Y(NO<sub>3</sub>)<sub>3</sub>+6H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O, alcohol, or ether (Cleve.)

141.6 grams are sol. in 100 grams H<sub>2</sub>O at 25° (James, J. Am. Chem. Soc. 1910, 32. 876)

Zinc nitrate, basic, 8ZnO, N<sub>2</sub>O<sub>5</sub>+2H<sub>2</sub>O.

Insol. in H<sub>2</sub>O (Grouvelle, A. ch. 19. 137.)

6ZnO, N<sub>2</sub>O<sub>5</sub>+8H<sub>2</sub>O=Zn(NO<sub>3</sub>)<sub>2</sub>, 5Zn(OH)<sub>2</sub>

+3H<sub>2</sub>O (Bertels, J. B. 1784. 274)

5ZnO, N<sub>2</sub>O<sub>5</sub>+5½H<sub>2</sub>O. Insol. in cold,

somewhat sol. in hot H<sub>2</sub>O. (Havermann.)

+6H<sub>2</sub>O. Slowly decomp. by cold H<sub>2</sub>O.

(Roussseau and Tite)

9ZnO, 2N<sub>2</sub>O<sub>5</sub>. Decomp. by H<sub>2</sub>O. (Vogel

and Reischauer, N. Jahrb. Pharm. 11. 137)

4ZnO, N<sub>2</sub>O<sub>5</sub>+2H<sub>2</sub>O. (Selandier)

+3H<sub>2</sub>O (Ordway, Sil. Am. J. (2) 32. 14,

Gerhardt, J. Pharm. (3) 12. 61.)

Insol. in H<sub>2</sub>O, sol. in dil. acids (Athanasio, Bull. Soc. 1896, 15. 1080)

2ZnO, N<sub>2</sub>O<sub>5</sub>+3H<sub>2</sub>O. Decomp. by H<sub>2</sub>O, and

slowly by alcohol (Wells, Am. Ch. J. 9. 304.)

7ZnO, 4N<sub>2</sub>O<sub>5</sub>+14H<sub>2</sub>O=4Zn(NO<sub>3</sub>)<sub>2</sub>,

3Zn(OH)<sub>2</sub>+11H<sub>2</sub>O (Bertels.)

Zinc nitrate, Zn(NO<sub>3</sub>)<sub>2</sub>

Very deliquescent. Easily sol. in H<sub>2</sub>O or alcohol.

Sp. gr. of Zn(NO<sub>3</sub>)<sub>2</sub>+Aq. F.=according to

Frauz (J. pr. (2) 5. 274) at 17.5°; O.=according to

Oudemans (Z. anal. 7. 410) at 14°:

	5	10	15% Zn(NO <sub>3</sub> ) <sub>2</sub>
F.	1.0496	1.0968	1.1476
O.	1.0425	1.067	1.1355

	20	25	30% Zn(NO <sub>3</sub> ) <sub>2</sub>
F.	1.2024	1.2640	1.3268
O.	1.1875	1.245	1.305

	35	40	45	50% Zn(NO <sub>3</sub> ) <sub>2</sub>
F.	1.906	1.4572	1.5258	1.5984
O.				

Calculated for Zn(NO<sub>3</sub>)<sub>2</sub>+6H<sub>2</sub>O:

	10	20	30	40	50% salt.
	1.05361	1.1131	1.1782	1.2496	1.3292

(Oudemans.)

Zn(NO<sub>3</sub>)<sub>2</sub>+Aq when heated soon decomposes, with formation of an insol. basic salt (Ordway.)

Sp. gr. of  $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$  at room temp containing:

15 955	30 626	44 5%	$\text{Zn}(\text{NO}_3)_2$
1.1155	1 2291	1 4367	

(Wagner, W. Ann 1883, 18. 270)

Sp. gr. of  $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$  at 25°

Concentration of $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$	Sp gr
1-normal	1.0758
$\frac{1}{2}$ "	1.0404
$\frac{1}{4}$ "	1.0191
$\frac{1}{8}$ "	1.0096

(Wagner, Z. phys. Ch. 1890, 6. 40.)

Sp. gr. of  $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$  at 16°

$\frac{1}{2}$ $\text{Zn}(\text{NO}_3)_2$ g per 1000 g of solution	Sp gr. 16°/16°

63.63	64.73	65.83%
$\text{Zn}(\text{NO}_3)_2$		

(Funk, Z. anorg. 1899, 20. 400.)

100 g.  $\text{Zn}(\text{NO}_3)_2 + \text{Aq}$  sat. at 0° contain 48.7 g.  $\text{Zn}(\text{NO}_3)_2$ ; at 18°, 53.5 g.  $\text{Zn}(\text{NO}_3)_2$ . (Mylius, Z. anorg. 1910, 74. 411.)

Melts in its crystal  $\text{H}_2\text{O}$  at 36.4° (Ordway), 50° (Pierre); boils at 131° (Ordway).

Sp. gr. of solution sat. at 18° = 1.664, and contains 53.9%  $\text{Zn}(\text{NO}_3)_2$ . (Mylius, B. 1897, 30. 1718)

Sol in methyl acetate (Naumann, B. 1909, 42. 3790), ethyl acetate. (Naumann, B. 1910, 43. 314)

$+ 9\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$ .

Sat. solution contains at.

-25°	-22 5°	-20°	-18°
40.12	40.75	42.03	43.59%
$\text{Zn}(\text{NO}_3)_2$			

Cryohydrate is formed at -20°.

(Funk, Z. anorg. 1899, 20. 401.)

Zinc nitrate ammonia,  $\text{Zn}(\text{NO}_3)_2 \cdot 4\text{NH}_3$ .

Ppt. (Ephraim, B. 1915, 43. 638.)

$+ \frac{2}{3}\text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (André, C. R. 100. 639.)

$13\text{ZnO}$ ,  $3\text{N}_2\text{O}_5$ ,  $2\text{NH}_3 + 18\text{H}_2\text{O}$ .

Insol. in cold, decomp. by warm  $\text{H}_2\text{O}$ . (André, C. R. 1885, 100. 640.)

Zinc nitrate cupric oxide,

$\text{Zn}(\text{NO}_3)_2 \cdot 3\text{CuO} + 3\text{H}_2\text{O}$ .

(Mailhe, A. ch. 1902, (7) 27. 169.)

Zinc nitrate hydrazine,  $\text{Zn}(\text{NO}_3)_2 \cdot 3\text{N}_2\text{H}_4$ .

Decomp. by hot  $\text{H}_2\text{O}$ .

Sol. in  $\text{NH}_4\text{OH}$ . (Franzen, Z. anorg 1908, 60. 279.)

Zirconium nitrate, basic,  $3\text{ZrO}_2 \cdot 2\text{N}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$ .

$\text{ZrO}_2 \cdot \text{N}_2\text{O}_5$ . Easily sol in  $\text{H}_2\text{O}$  and alcohol.

$+ \text{H}_2\text{O}$  As above.

Zirconium nitrate,  $\text{Zr}(\text{NO}_3)_4 \cdot 5\text{H}_2\text{O}$  (?).

Deliquescent, and sol. in  $\text{H}_2\text{O}$ .

Nitric oxide,  $\text{NO}$

See Nitrogen dioxide.

**Nitrilobromosmic acid.**

**Ammonium nitrilopentabromosmate,**  
 $(\text{OsNBr}_5)_2(\text{NH}_4)_2 + \text{H}_2\text{O}.$

Very sol. in  $\text{H}_2\text{O}$  Decomp. in dil. aq. solution.

Stable in  $\text{HBr} + \text{Aq}$

Insol. in organic solvents (Werner, B. 1906, 39, 501.)

**Cæsium hydrogen nitrilopentabromosmate,**  
 $(\text{OsNBr}_5)_2\text{Cs}_2\text{H}.$

Sl sol. in  $\text{H}_2\text{O}$ . (Werner.)

**Potassium nitrilotetrabromosmate,**  
 $(\text{OsNBr}_4)_2\text{K} + 2\text{H}_2\text{O}.$

Very sol. in  $\text{H}_2\text{O}$  Decomp. in aq. solution. Stable in  $\text{HBr} + \text{Aq}$ . Insol. in organic solvents. (Werner.)

**Rubidium nitrilopentabromosmate,**  
 $(\text{OsNBr}_5)_2\text{Rb}_2.$

Sol. in  $\text{H}_2\text{O}$ . Decomp. in dil. aq. solution after a short time. (Werner.)

**Nitrilochlorosmic acid.**

**Ammonium nitrilopentachlorosmate,**  
 $(\text{OsNCl}_5)_2(\text{NH}_4)_2.$

Sol. in  $\text{H}_2\text{O}$ ; insol. in conc.  $\text{HCl} + \text{Aq}$ . (Werner, B. 1901, 34, 2702.)

**Cæsium nitrilopentachlorosmate,**  
 $(\text{OsNCl}_5)_2\text{Cs}_2.$

Sol. in  $\text{H}_2\text{O}$ . (Werner.)

**Potassium nitrilopentachlorosmate,**  
 $(\text{OsNCl}_5)_2\text{K}_2.$

Sol. in  $\text{H}_2\text{O}$ ; pptd. by  $\text{HCl}$ ; insol. in organic solvents. (Werner.)

**Rubidium nitrilopentachlorosmate,**  
 $(\text{OsNCl}_5)_2\text{Rb}_2.$

Sol. in  $\text{H}_2\text{O}$ ; decomp. in dil. neutral solution. (Werner.)

**Nitrilotrimetaphosphoric acid,  $\text{H}_2\text{NP}_2\text{O}_7 =$**

Known only in solution. (Mente, A. 248, 260.)

**Aluminum nitrilotrimetaphosphate.**

Insol. in  $\text{H}_2\text{O}$ , conc.  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . Slowly sol. in boiling conc.  $\text{H}_2\text{SO}_4$ . Sol. in warm  $\text{NaOH} + \text{Aq}$  or  $\text{Na}_2\text{CO}_3 + \text{Aq}$  without decomp. Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Mente.)

**Barium —,  $\text{BaNP}_2\text{O}_7.$**

Insol. in dil. or conc. acids. Decomp. by boiling  $\text{NaOH}$  or  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Mente.)

**Cadmium nitrilotrimetaphosphate.**

Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , or boiling  $(\text{NH}_4)_2\text{CO}_3$ , or  $\text{NaOH} + \text{Aq}$ . (Mente.)

**Calcium —,  $\text{CaNP}_2\text{O}_7 + \text{H}_2\text{O}.$**

Sol. in conc.  $\text{HCl} + \text{Aq}$  by long boiling, and more easily in fuming  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{OH}$  or  $\text{NaOH} + \text{Aq}$ . (Mente.)

**Chromium —.**

Slowly sol. in dil. acids. Easily sol. in ammonia. Sol. in cold  $\text{NaOH} + \text{Aq}$ . (Mente.)

**Cobalt —,  $\text{CoNP}_2\text{O}_7 + \text{H}_2\text{O}.$**

Insol. in  $\text{H}_2\text{O}$ . Sl sol. in dil. acids. Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by  $\text{NaOH}$  or  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . (Mente.)

**Copper —.**

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by  $\text{NaOH} + \text{Aq}$ . (Mente.)

**Ferric —,  $\text{Fe}_2(\text{NP}_2\text{O}_7)_3.$**

Insol. in conc. acids. Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Decomp. by  $\text{NaOH}$  or  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . (Mente.)

**Lead —.**

Insol. in dil. acids. Sol. in fuming  $\text{HNO}_3$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol. in  $\text{NaOH} + \text{Aq}$ . (Mente.)

**Magnesium —,  $\text{MgNP}_2\text{O}_7 + \text{H}_2\text{O}.$**

Slowly sol. in  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{H}_2\text{SO}_4$ , or fuming  $\text{HNO}_3$  with addition of  $\text{Br}_2$ . Insol. in  $\text{NH}_4\text{OH}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Mente.)

**Manganous —,  $\text{MnNP}_2\text{O}_7 + \text{H}_2\text{O}.$**

Insol. in dil. acids. Very sl sol. in  $\text{NaOH} + \text{Aq}$ . Insol. in  $\text{Na}_2\text{CO}_3$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Mente.)

**Mercurous —,  $\text{Hg}_2\text{NP}_2\text{O}_7.$**

Insol. in dil. acids,  $\text{NH}_4\text{OH}$ ,  $\text{NaOH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Easily sol. in fuming  $\text{HNO}_3$ . (Mente.)

**Nickel —,  $\text{NiNP}_2\text{O}_7 + \text{H}_2\text{O}.$**

Insol. in dil. acids,  $\text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Mente.)

**Zinc —,  $\text{ZnNP}_2\text{O}_7 + 2\text{H}_2\text{O}.$**

Easily sol. in  $\text{NH}_4\text{OH}$ ,  $\text{NaOH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (Mente.)

**Nitrilosulphonic acid,  $\text{N}(\text{SO}_2\text{H})_3.$**

Not known in free state. (Raschig, A. 241, 161.)

**Potassium nitrilosulphonate,  $\text{N}(\text{SO}_2\text{K})_3 + 2\text{H}_2\text{O}.$**

Soluble in  $\text{H}_2\text{O}$ . (Raschig, A. 241, 161.) Is identical with "potassium ammontrisulphonate" of Claus.

Insol. in cold  $H_2O$  (Claus); sol. in 50 pts  $H_2O$  at  $23^\circ$  (Fremy); in  $H_2O$  at scarcely  $40^\circ$  without change. Decomp. by boiling (Claus.)

Potassium sodium nitrosulphonate,  
 $N(SO_3K)_2(SO_3Na)$ .

Nearly insol. in cold  $H_2O$ . (Raschig, A. 241. 161.)

Sodium nitrosulphonate,  $N(SO_3Na)_2$ .

Not isolated on account of its extreme solubility in  $H_2O$ . (Raschig, A. 241. 161.)

Nitrosulphophosphoric acid,  
 $NP(SH)_2$ .

Decomp. by  $H_2O$ . (Stock, B. 1906, 39. 2001.)

Ammonium nitrosulphophosphate,  
 $NP(SNH_2)_2$ .

Easily sol. in  $H_2O$ . Not decomp. by boiling with alkali. Decomp. by acid. (Stock.)

Easily sol. in liquid  $NH_3$ . (Stock, B. 1903, 36. 315.)

Ammonium hydrogen nitrosulphophosphate,  $SHP(SNH_2)_2N$ .

Not decomp. by boiling with alkali. Decomp. by acids. (Stock, B. 1906, 39. 1999.)

Barium nitrosulphophosphate,  $BaNP(SH)_2 + H_2O$ .

Sol. in  $H_2O$  with decomp. Decomp. by hot  $H_2O$ . Not decomp. by warming with alkali. Decomp. by acid. (Stock.)

Lead nitrosulphophosphate,  $NPS_2Pb$ .

Sol. in liquid  $NH_3$ . Solution decomp. rapidly with separation of  $PbS$ . (Stock.)

Sodium nitrosulphophosphate,  $NPSNa_2$ .

Not decomp. by boiling with alkali. Decomp. by acid. (Stock.)

Nitrosulphuric acid.

Ammonium nitrosulphate,  $N(SO_3NH_2)_2 + 2H_2O$ .

Rather sl. sol. in  $H_2O$ , but much more sol. than K salt. (Divers and Haga, Chem. Soc. 1901, 79. 1094.)

Sodium nitrosulphate,  $N(SO_3Na)_2 + 5H_2O$ .

Very sol. in  $H_2O$ . (Divers and Haga, Chem. Soc. 1901, 79. 1097.)

Nitrosulphurous acid.

Ammonium nitrosulphite,  $NH(SO_2NH_2)_2$ .

Somewhat deliquescent. Very sol. in  $H_2O$ . Slowly decomp. in solution. Decomp. by boiling with  $HCl$ . (Divers, Proc. Chem. Soc. 1901, 17. 163.)

Nitrocobaltic chloride.

Sol. in 200 pts cold  $H_2O$ . (Jørgensen, Z. anorg. 6. 172.)

Nitroplatin diamine nitrate,

$(NO_2)_2Pt(N_2H_4NO_2)_2$ .

Sol. in cold  $H_2O$  with decomp.; violently decomp. on warming. (Hadow, Chem. Soc. (2) 4. 345.)

Nitropurpureocobaltic comps.

See Xanthocobaltic comps.

Nitropurpureorhodium comps.

See Xanthorhodium comps.

Nitrocarbamic acid.

Potassium nitrocarbamate,  $NO_2.NK$ . COOK.

Decomp. by  $H_2O$ . (Thiele, B. 1894, 27. 1909.)

Nitro cobalt,  $Co_2NO_2$ .

Decomp. by  $H_2O$ . (Sabatier and Senderens, C. R. 115. 236.)

Nitro copper,  $CuNO_2$ .

Violently decomp. by  $H_2O$ . (Sabatier and Senderens, C. R. 116. 756.)

Nitroferri cyanhydric acid.

See Nitroprussic acid.

Nitrogen,  $N_2$ .

Nearly insol. in all known solvents.

1 vol. recently boiled  $H_2O$  absorbs 0.0147 vol  $N$  at  $15^\circ$  (Henry, 1803.)

1 vol. recently boiled  $H_2O$  absorbs 0.025 vol  $N$ . (Dalton.)

1 vol. recently boiled  $H_2O$  absorbs 0.0156 vol  $N$  at ord temp. (Dalton.)

1 vol.  $H_2O$  at  $t^\circ$  and 760 mm. absorbs  $V$  vols.  $N$  gas reduced to  $0^\circ$  and 760 mm.

(Hufner, Z. phys. Ch. 1907, 57, 618-621.)

Nitrogen bromide,  $NBr_3$ .

Decomp. under  $H_2O$ .

Nitrogen bromophosphide,  $PBr_2N$ .

Insol in  $H_2O$ . Sol. in ether, less sol. in  $CS_2$  or  $CHCl_3$  (Besson, C. R. 114, 1479.)

Nitrogen bromosulphide.

See Nitrogen sulphobromide.

Nitrogen chloride,  $NCl_3$ .

Very unstable. Explodes when heated to  $93^\circ$  or by contact with other substances. Insol. in  $H_2O$ , but is decomp. thereby (in 24 hours by cold  $H_2O$ ). Sol. in  $CS_2$ ,  $PCl_3$ , and  $S_2Cl_2$ . (H. Davy, Phil Trans 1813, 1, 242.) Sol. in  $C_6H_6$ ,  $CS_2$ ,  $CHCl_3$ ,  $CCl_4$ . (Hentschel B. 1897, 30, 1434.)

Nitrogen chlorophosphide,  $N_2P_2Cl_4$ .

Insol. in  $H_2O$ , but slowly decomp. thereby. Insol. in hot  $H_2SO_4$ ,  $HCl$ , or  $HNO_3$  + Aq. Decomp. by hot fuming  $HNO_3$ . Sol. in alcohol, very sol. in ether, but these solutions gradually decompose. Sol. in  $CS_2$ ,  $CHCl_3$ ,  $C_6H_6$ , and oil of turpentine.

Sol. in  $POCl_3$ . (Gladstone, Chem. Soc. 3, 138.)

Nitrogen chlorosulphide.

See Nitrogen sulphochloride.

Nitrogen fluoride.

Very explosive (Warren, C. N. 55, 289.)

Nitrogen moniodamine,  $NH_2I$ .

Very rapidly decomp. by  $H_2O$  into  $N_2H_4I_2$ . (Raschig, A. 230, 212.)

Nitrogen diiodamine,  $NH_2I_2$ .

Properties as triiodamine

Nitrogen triiodamine,  $NH_3I_3$ .

Decomp. by  $H_2O$ . (Raschig, A. 230, 212.) Insol. in absolute alcohol. Sol. with decomp. in  $HCl$  + Aq. (Bunsen.)

Nitrogen iodide,  $N_2I_2$ .

See Triazoidide.

Nitrogen iodide,  $NI_3$ .

Insol. in  $H_2O$ , but slowly decomp. thereby. Sol. in  $HCl$  + Aq. Sol. in  $KCN$  + Aq. (Millon, J. pr. 17, 1.)

Sol. in  $Na_2S_2O_3$  + Aq. (Guyard, C. R. 97, 526.)

Sol. in  $KSCN$  + Aq. (Raschig, A. 230, 212.)

Nitrogen iodide ammonia,  $NI_3 \cdot 3NH_3$ ;  $NI_3 \cdot 2NH_3$ ; and  $NI_3 \cdot NH_3$ .

(Hugot, C. R. 1900, 130, 507.)

$NI_3 \cdot 12NH_3$ . Ppt.; insol. in ether. (Ruff, B. 1900, 33, 3028.)

Nitrogen monoxide,  $N_2O$ .

- (a) *Liquid*. Miscible with alcohol or ether.  
 (b) *Gas*.

1 vol  $H_2O$  absorbs 0.78–0.86 vol  $N_2O$  at ordinary temp (Henry), 0.80 vol. at ordinary temp (Dalton), 0.70 vol at ordinary temp (de Saussure), 0.708 vol at  $18^\circ$  (Plesch), 0.81 vol (Davy).

1 vol.  $H_2O$  at  $t^\circ$  and 760 mm. absorbs V vols.  $N_2O$ , reduced to  $0^\circ$  and 760 mm

(Winkler, B. 1901, 34, 1414.)

205.69 cc.  $H_2O$  absorb 9.6798 cc.  $NO$  at  $20^\circ$  and 760 mm. (Hufner, Z. phys. Ch. 1907, 59, 420.)Sol. in conc.  $HNO_3$  + Aq.  
100 vols.  $HNO_3$  + Aq. of 1.3 sp. gr. agitated with  $NO$  gas take up 20 vols.  $NO$ . If acid is twice as strong or one-half as strong, the quantity  $NO$  is proportional to the amount of  $HNO_3$ . Very dil.  $HNO_3$  + Aq. absorbs scarcely more  $NO$  than pure  $H_2O$ . (Dalton.)100 pts.  $HNO_3$  + Aq. of 1.4 sp. gr. absorb 60 pts.  $NO$  (Dalton), sol. in  $Br_2$  and very dil. sol. in conc.  $H_2SO_4$  (Berthelot.)1 cem. conc.  $H_2SO_4$  of 1.84 sp. gr. absorbs 0.035 cem.  $NO$ ; of 1.50 sp. gr., 0.017 cem.  $NO$  (Lunge, B. 18, 1391.)

Absorption of NO by  $\text{H}_2\text{SO}_4 + \text{Aq}$  at  $18^\circ$  and 760 mm.

$\alpha$  = Coefficient of solubility

$\text{H}_2\text{SO}_4$	$\alpha$	$\text{H}_2\text{SO}_4$	$\alpha$
98%	not constant	70%	0.0113
90%	0.0193	60%	0.0118
80%	0.0117	50%	0.0120

(Tower, Z. anorg. 1906, 50. 387.)

Very sol. in aqueous solutions of ferrous salts, especially the sulphate (Priestley.)

1 vol.  $\text{FeSO}_4 + \text{Aq}$  of 1.081 sp. gr., containing 1 grain  $\text{FeSO}_4$  to 6 grains  $\text{H}_2\text{O}$ , absorbs 6 vols. NO (Dalton.)

Absorption by ferrous salts + Aq is proportional to the amount of Fe present, irrespective of the acid or concentration of the solution. Between  $0^\circ$  and  $10^\circ$ , about 2 mols. NO are absorbed for each atom of Fe; between  $10^\circ$  and  $15^\circ$ , 1 mol. NO for 2 atoms of Fe; and at  $25^\circ$ , only 1 mol. NO for  $2\frac{1}{2}$  to 3 atoms of Fe. The amount of NO absorbed also varies with the pressure. The sp. gr. of the ferrous salt solution is greater after the absorption of NO than before. The solutions are decomp. by heat, and at  $100^\circ$  all NO is given off. (Gay, A. ch. (6) 5. 145)

Absorption of NO by  $\text{FeSO}_4 + \text{Aq}$  at  $25^\circ$ .

A = vol.  $\text{H}_2\text{O}$  (in litres) containing 1 mol.  $\text{FeSO}_4$ .

(Bunsen's Gasometry.)

Abundantly absorbed by  $\text{CS}_2$ . (Friedburg, C N 48. 97.)

Nitrogen trioxide,  $\text{N}_2\text{O}_3$

Sol. in  $\text{H}_2\text{O}$  at 0°. If large amt. of  $\text{H}_2\text{O}$  is present, the solution is quite stable at ordinary temp. (Fremy, C. R. 79. 61.)

Sol. in  $\text{HNO}_3$  + Aq.

Sol. in conc.  $\text{H}_2\text{SO}_4$  to form  $\text{HNOSO}_4$ .

Sol. in ether.

**Nitrogen dioxide stannic chloride,  $N_2O_3$ ,  $SnCl_4$ .**

Decomp. by  $H_2O$  (Weber, Pogg 118. 471)

**Nitrogen tetroxide,  $NO_2$  or  $N_2O_4$**

Sol. in  $H_2O$  at  $0^\circ$  with decomp. Miscible with very conc.  $HNO_3$ . Insol. in  $CHCl_3$  and  $C_2H_5Cl$ . (C. N. 47. 52)

Sol. in  $C_6H_6$ ,  $NO_2$

Sl. sol. in  $H_2S$  + Aq.

Sol. in  $H_2SO_4$  or conc.  $HNO_3$  + Aq.

$H_2PO_4$  absorbs some liquid  $NO_2$ . (Frankland, Chem. Soc. 1901, 79. 1362.)

**Nitrogen pentoxide,  $N_2O_5$ .**

Very deliquescent. Combines with  $H_2O$  to form  $HNO_3$  with evolution of heat

**Nitrogen hexoxide,  $NO_3$**

Decomposes upon air or with  $H_2O$ . (Hautefeuille and Chappin, C. R. 92. 80, 134; 94. 1111, 1306)

**Nitrogen oxybromide.**

See Nitrosyl and Nitroxyl bromide.

**Nitrogen oxychloride.**

See Nitrosyl and Nitroxyl chloride.

**Nitrogen oxyfluoride.**

See Nitrosyl fluoride and Nitroxyl fluoride.

**Nitrogen phosphochloride,  $P_3N_3Cl_6$**

See Nitrogen chlorophosphide.

**Nitrogen selenide,  $N_2Se$**

Very explosive. Insol. in  $H_2O$ . Sol. in  $HNO_3$  + Aq. and  $NaClO$  + Aq. (Espenschied, A. 113. 101.)

Insol. in  $H_2O$ , ether, absolute alcohol, very al. sol. in  $CS_2$ ,  $C_6H_6$ , and glacial acetic acid. Decomp. by  $HCl$  or  $KOH$  + Aq. (Vernehl, Bull. Soc. (2) 38. 518)

**Nitrogen sulphide,  $N_2S_4$**

Insol. in  $H_2O$ . Decomp. by hot  $H_2O$ . Sl. sol. in alcohol, ether, wood alcohol, oil of turpentine. Easily sol. in  $CS_2$ . Slowly decomp. by  $HCl$  + Aq. or  $KOH$  + Aq. rapidly by  $HNO_3$  + Aq. 15 g. dissolve in 1 kilo. of  $CS_2$ . (Fordos and Gélis, C. R. 31. 702)

Sol. in  $CHCl_3$ . (Demarçay, C. R. 91. 854)

Sol. in warm glacial acetic acid with decomp. on boiling. (Ruff and Geisel, B. 1904, 37. 1501.)

**Nitrogen pentasulphide,  $N_2S_5$**

Sol. in ether and most organic solvents, insol. in  $H_2O$ ; fairly stable in ethereal solution, but decomp. by light. (Muthmann, Z. anorg. 1897, 13. 206.)

**Nitrogen sulphobromide,  $N_2S_3Br$ .**

Decomp. by boiling  $H_2O$  and by dil. alkalis, also by boiling with alcohol. (Muthmann, B. 1897, 30. 630.)

$N_2S_4Br_2$ . Decomp. by moist air. (Clever, B. 1896, 29. 340-341.)

$N_2S_4Br_2$ . Decomp. by moist air. Very unstable (Clever)

$N_2S_5Br_2$ . Insol. most solvents; unstable. (Clever.)

**Nitrogen sulphochloride,  $N_2S_4Cl_4$ .**

Unstable on air. Sol. in warm  $CHCl_3$ , crystallizes out on cooling (Demarçay, C. R. 91. 854, 1066)

Demarçay calls this comp. thiazyl chloride. Sol. in hot dry benzene, and in  $CCl_4$ ; decomp. by moist air (Andreocci, Z. anorg. 1897, 14. 249.)

$N_2S_4Cl_2$ . Partly sol. in  $H_2O$ . (Demarçay, C. R. 92. 726.)

Demarçay calls this compound dithiotetra-thiazyl dichloride.

$N_2S_4Cl_2 = N_2S_3$ ,  $SCl_2$ . Decomp. on air. (Fordos and Gélis.)

Demarçay (C. R. 92. 726) calls this comp. thiothiazyl dichloride.

$N_2S_4Cl_2$ . Sol. in  $H_2O$  with subsequent decomp. More sol. than S in  $CS_2$  (Soubeiran, A. ch. 67. 71)

Is a mixture of  $S_2Cl_2$  and  $N_2S_4$  (Fordos and Gélis, C. R. 31. 702.)

$N_2S_4Cl_2$ . Sl. sol. in warm, insol. in cold  $CHCl_3$  (Demarçay, C. R. 92. 726.)

"Thiothiazyl chloride." (Demarçay.)

$N_2S_4Cl_2$ . Sol. in  $H_2O$ . Insol. in most solvents. Sl. sol. in  $CHCl_3$ . Easily sol. in thionyl chloride (Demarçay, C. R. 91. 854, 1066)

Demarçay calls the compound thiotri-thiazyl chloride  $= (NS)_3 \equiv S-Cl$ .

$N_2S_4Cl_2 = 2N_2S_3$ ,  $SCl_2$ . Decomp. on air. (Michaëlis.)

$N_2S_4Cl_2 = 3N_2S_2$ ,  $SCl_2$ . Not decomp. on air. Decomp. by  $H_2O$  containing ammonia.

**Nitrogen sulphoiodide,  $N_2S_4I_4$ .**

Readily decomp. by  $H_2O$ . (Muthmann and Setter, B. 1897, 30. 627.)

**Nitrohydroxylaminic acid,  $H_2N_2O_3$ .**

Known only in solution. (Angeli, Gazz. ch. it. 1897, 27 (2) 357.)

**Barium nitrohydroxylamine,  $BaN_2O_3 + H_2O$ .**

Ppt. More stable in the air than the sodium salt. Not decomp. by prolonged boiling with  $H_2O$ . (Angeli, Gazz. ch. it. 1896, 26. 17-25)

**Cadmium nitrohydroxylamine,  $CdN_2O_3 + H_2O$**

As Ba salt. (Angelico and Fanara, Gazz. ch. it. 1901, 31. (2) 21.)

Calcium nitrohydroxylamine,  $\text{CaN}_2\text{O}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

(Angeli, Gazz. ch. it. 1900, 30. (1) 593)

Calcium nitrohydroxylamine,  $\text{CaN}_2\text{O}_3 + 3\frac{1}{2}\text{H}_2\text{O}$ .

(Angelico and Fanara, Gazz. ch. it. 1901, 31. (2) 15.)

Lead nitrohydroxylamine,  $\text{PbN}_2\text{O}_3$ .

(Angeli, Gazz. ch. it. 1900, 30. (1) 593)

Potassium nitrohydroxylamine,  $\text{K}_2\text{N}_2\text{O}_3$ .

Like Na salt. More hygroscopic. (Angeli, Gazz. ch. it. 1897, 27. (2) 357)

Sol. in  $\text{H}_2\text{O}$ . (Angeli, Gazz. ch. it. 1900, 30. (1) 593.)

Silver nitrohydroxylamine,  $\text{Ag}_2\text{N}_2\text{O}_3$ .

Ppt. (Angeli, C. C. 1901, I 1192.)

Sodium nitrohydroxylamine,  $\text{Na}_2\text{N}_2\text{O}_3$ .

Very sol. in  $\text{H}_2\text{O}$ . Pptd. by alcohol. Aqueous solution is readily decomp. by boiling. (Angeli, Gazz. ch. it. 1896, 26. (2) 17.)

Strontium nitrohydroxylamine,  $\text{SrN}_2\text{O}_3 + \text{H}_2\text{O}$ .

(Angeli, Gazz. ch. it. 1900, 30. (1) 593.)  
 $+1\frac{1}{2}\text{H}_2\text{O}$  (Angelico and Fanara, Gazz. ch. it. 1901, 31. (2) 15)

Nitroiodic acid,  $\text{I}_2\text{O}_4(\text{NO})_2$

See Nitrosiodic acid.

Nitronitrous acid.

Platinum potassium nitronitrite,  $\text{K}_2\text{Pt}(\text{NO}_2)_4 \cdot \text{N}_2\text{O}_4$ .

Decomp. by heat. (Miofati, C. C. 1896, II. 1088.)

Nitroplatinous acid.

See Platonitrous acid.

Nitroprussic acid,  $\text{H}_2\text{FeC}_5\text{N}_6\text{O} + \text{H}_2\text{O} = \text{H}_2\text{Fe}(\text{CN})_5\text{NO} + \text{H}_2\text{O}$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Playfair, A. 74. 317.)

Nitroprussides.

The alkali and alkali-earth nitroprussides are sol. in  $\text{H}_2\text{O}$ , and the solutions are not pptd. by alcohol. The others are mostly insol. in  $\text{H}_2\text{O}$ .

Ammonium nitroprusside,  $(\text{NH}_4)_2\text{Fe}(\text{CN})_5(\text{NO})$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ ; not pptd. therefrom by alcohol. (Playfair)

Barium nitroprusside,  $\text{BaFe}(\text{CN})_5\text{NO} + 4\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$   
 $+6\text{H}_2\text{O}$ .

Cadmium nitroprusside,  $\text{CdFe}(\text{CN})_5\text{NO}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . Insol. in dil. or conc.  $\text{HNO}_3 + \text{Aq}$  even when boiling. Not attacked by  $\text{NH}_4\text{OH}$  or  $\text{KOH} + \text{Aq}$ . (Norton, Am. Ch. J. 10. 222)

Calcium nitroprusside,  $\text{CaFe}(\text{CN})_5\text{NO} + 4\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  (Playfair.)

Cobalt nitroprusside,  $\text{CoFe}(\text{CN})_5\text{NO}$ .

Ppt. (Norton, Am. Ch. J. 10. 222.)  
 $+4\text{H}_2\text{O}$

Copper nitroprusside,  $\text{CuFe}(\text{CN})_5\text{NO} + 2\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$  or alcohol.

Ferrous nitroprusside,  $\text{FeFe}(\text{CN})_5\text{NO} + x\text{H}_2\text{O} (?)$

Insol. in  $\text{H}_2\text{O}$

Mercurous nitroprusside,  $\text{Hg}_2\text{Fe}(\text{CN})_5\text{NO}$ .

Insol. in  $\text{H}_2\text{O}$ . Unstable. (Norton, Am. Ch. J. 10. 222.)

Nickel nitroprusside,  $\text{NiFe}(\text{CN})_5\text{NO}$ .

As the Co salt (Norton.)

Potassium nitroprusside,  $\text{K}_2\text{Fe}(\text{CN})_5\text{NO} + 2\text{H}_2\text{O}$ .

Sl. deliquescent. Sol. in 1 pt.  $\text{H}_2\text{O}$  at  $16^\circ$ .  
 $\text{K}_2\text{Fe}(\text{CN})_5\text{NO}$ ,  $2\text{KOH}$ . Very sol. in  $\text{H}_2\text{O}$ .

Silver nitroprusside,  $\text{Ag}_2\text{Fe}(\text{CN})_5\text{NO}$ .

Insol. in  $\text{H}_2\text{O}$ , alcohol, or  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

Sodium nitroprusside,  $\text{Na}_2\text{Fe}(\text{CN})_5\text{NO} + 2\text{H}_2\text{O}$ .

Sol. in  $2\frac{1}{2}$  pts.  $\text{H}_2\text{O}$  at  $16^\circ$ , and in less hot  $\text{H}_2\text{O}$ .

Zinc nitroprusside,  $\text{ZnFe}(\text{CN})_5\text{NO}$ .

Very sl. sol. in cold, more in hot  $\text{H}_2\text{O}$ .

Nitrosulphonic acid.

Cupric nitrosulphonate,  $\text{NO} \left\langle \begin{smallmatrix} \text{O} \\ \text{SO}_2 \end{smallmatrix} \right\rangle \text{Cu}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Raschig, B. 1907, 40. 4583.)

Nitrosobromoruthenic acid.

Silver nitrosobromoruthenate ammonia,  $\text{Ag}_2\text{Ru}(\text{NO})\text{Br}_2 \cdot \text{NH}_3$

Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Very sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ . (Brizard, Bull. Soc. 1895, (3) 13. 1093.)

**Nitrosobromosmic acid.**

Potassium nitrosobromosmate,  $K_2Os(NO)Br_2$ .  
Stable in aqueous solution (Wintrebert, A. ch. 1904, (7) 28. 132.)

**Nitroschloroplatinic acid.**

Potassium nitroschloroplatinate,  
 $K_2PtCl_3(NO)$ .  
Sol. in  $H_2O$ . (Vèzes, C. R. 110. 757.)

**Nitroschlororuthenic acid.**

Ammonium nitroschlororuthenate,  
 $(NH_4)_2Ru(NO)Cl_6$ .  
Sol. in  $H_2O$ . (Joly, C. R. 107. 991.)  
5 pts. are sol. in 100 pts.  $H_2O$  at  $25^\circ$ .  
22 " " " " " " " " " " " " " " 60".  
(Howe, J. Am. Chem. Soc. 1894, 16. 390.)

Cæsium nitroschlororuthenate,  
 $Cs_2Ru(NO)Cl_6$ .  
0.20 pt. is sol. in 100 pts.  $H_2O$  at  $25^\circ$ .  
0.56 " " " " " " " " " " " " " " 100".  
(Howe.)  
+2 $H_2O$  Very sol. in  $H_2O$ . 105.8 pts. are  
sol. in 100 pts.  $H_2O$ . (Howe.)

Potassium nitroschlororuthenate,  
 $K_2Ru(NO)Cl_6$ .  
Sol. in  $H_2O$  (Joly.)  
12 pts. are sol. in 100 pts.  $H_2O$  at  $25^\circ$ .  
80 " " " " " " " " " " " " " " 60".  
(Howe.)

Rubidium nitroschlororuthenate,  
 $Rb_2Ru(NO)Cl_6$ .  
Sol. in boiling  $H_2O$  without decomp.  
0.57 pt. is sol. in 100 pts.  $H_2O$  at  $25^\circ$ .  
2.13 " " " " " " " " " " " " " " 60".  
(Howe.)

Silver nitroschlororuthenate ammonia,  
 $Ag_2Ru(NO)Cl_6, NH_3$ .  
Decomp. by  $H_2O$ . Sl. sol. in  $NH_4OH + Ag$ .  
Very sol. in  $Na_2S_2O_4 + Ag$  (Bizard, Bull.  
Soc. 1895, (3) 13. 1092.)

**Nitrosiodic acid,  $I_2O_4(NO)_2$  (?)**

Decomp. with  $H_2O$ , alcohol, ether, or acetic  
ether. Slowly sol. in  $H_2SO_4$  (Kammerer, J.  
pr. 83. 65)

**Nitrososulphonic acid.**

Potassium dinitrososulphonate,  $N_2O.OK$   
 $SO_3K$ .  
Sol. in  $H_2O$ . Very unstable. (Hantzsch,  
B. 1894, 27. 3268.)

Potassium nitrosodisulphonate,  $ON(SO_3K)_2$ .  
Sol. in  $H_2O$ . Very explosive. (Hantzsch,  
B. 1895, 28. 996 and 2744.)

Potassium nitrosodisulphonate,  $ON(SO_3K)_2$   
+  $H_2O$   
Sol. in  $H_2O$ . (Hantzsch, B. 1895, 28. 2750.)

Sodium nitrosodisulphonate,  $NO_2(SO_3)_2Na$ .  
Decomp. by  $H_2O$ . (Traube, B. 1913, 46.  
2521.)

Nitrososulphuric acid,  
 $H_2N_2SO_3 = H_2SO_3(NO)_2$ .  
Not known in free state.

Ammonium dinitrososulphate,  
 $(NH_4)_2(NO)_2SO_3$ .  
Sol. in  $H_2O$ . Insol. in hot alcohol. (Pe-  
louze, A. 15. 240.)

Barium —,  $Ba(NO)_2SO_3$ .  
Sol. in  $H_2O$ . (Divers and Haga, Chem. Soc.  
47. 364.)

Barium potassium —,  $BaK_2(SN_2O_4)_2$ .  
Sol. in much  $H_2O$  to form a clear liquid,  
but the solution gradually deposits  $BaSO_4$ .  
(Hantzsch, B. 1891, 27. 3271.)

Cupric nitrosodisulphate,  $Cu(NO)(SO_3)_2$ .  
(Sabatier, Bull. Soc. 1897, (3) 17. 787.)

Lead dinitrososulphate.  
Insol. in  $H_2O$ . (Divers and Haga, Chem.  
Soc. 47. 364.)

Potassium —,  $K_2(NO)_2SO_3$ .  
Decomp. by  $H_2O$  at ordinary temp. Insol.  
in alcohol. (Pelouze, A. ch. 60. 160.)  
Sol. in about 8 pts.  $H_2O$  at  $14.5^\circ$ . Less sol.  
in presence of  $KOH$ . (Divers and Haga,  
Chem. Soc. 1895, 67. 455.)

Sodium —,  $Na_2(NO)_2SO_3$ .  
More sol. than K salt. (Pelouze.)  
Sl. sol. in  $H_2O$ ; very unstable moist or dry;  
decomp. by  $H_2O$ . (Divers, C. N. 1895, 72.  
266.)

**Nitrososulphurous acid.**

Ruthenium sodium nitrososulphate,  
 $O[Ru(SO_3)_2(NO)Na_2] + 2H_2O$ .  
Sl. sol. in cold  $H_2O$ . (Miolati, Gazz. ch.  
it. 1900, 30. 511.)

Nitrosulphide of iron.  
See Ferrotetranitrososulphonic acid.

Binitrosulphide of iron.  
Roussin's comp. is ammonium ferrohepta-  
nitrososulphonate, which see.

**Nitrosulphonic acid**,  $\text{HNSO}_3 = \text{HO} \cdot \text{NO}_2 \cdot \text{SO}_2$

(*Lead chamber crystals.*) Rapidly sol. in  $\text{H}_2\text{O}$  with decomp. When brought into large amount of  $\text{H}_2\text{O}$ , no gas is evolved. (Fremy, C. R. 70. 61.)

Sol. in  $\text{H}_2\text{SO}_4$  without decomp. Sol. in cold  $\text{H}_2\text{SO}_4 + \text{Aq}$  of sp. gr. 1.7–1.55. (Weber, J. pr. 100. 37.)

Sl. sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$  of 1.6 sp. gr. (Dana.) More difficultly sol. in dil. than conc.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Müller.)

**Potassium nitrosulphonate**,  $\text{KOSO}_2\text{NO}_2(?)$ .

Decomp. by  $\text{H}_2\text{O}$ . (Schultz-Sellack, B. 4. 113.)

**Nitrosulphonic anhydride** (?),  $\text{N}_2\text{O}_3 \cdot 2\text{SO}_3 = \text{S}_2\text{O}_5(\text{NO}_2)_2$ .

Rapidly sol. in  $\text{H}_2\text{O}$  with decomp. Abundantly sol. in cold  $\text{H}_2\text{SO}_4$ . (Rose, Pogg. 47. 605.)

Insol. in cold, slowly sol. in warm  $\text{H}_2\text{SO}_4$ . (Prevostaye, A. ch. 73. 362.)

**Nitrosulphonic chloride**,  $\text{NO}_2\text{SO}_2\text{Cl} = \text{NO}_2\text{SO}_2\text{Cl}(?)$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in fuming  $\text{H}_2\text{SO}_4$  without decomp. Decomp. by conc.  $\text{H}_2\text{SO}_4$ . (Weber, Pogg. 123. 333.)

**Dinitrosulphuric acid.**

See Dinitrosulphuric acid.

**Nitrosyl bromide**,  $\text{NOBr}$ .

Decomp. with cold  $\text{H}_2\text{O}$ . (Landolt, A. 116. 177.)

**Nitrosyl tribromide**,  $\text{NOBr}_3$ .

Decomp. by  $\text{H}_2\text{O}$  or cold alcohol.

Miscible with ether. (Landolt, A. 116. 177.) Mixture of  $\text{NOBr}$  and  $\text{Br}_2$ . (Froehlich, A. 224. 270.)

**Nitrosyl platonic bromide**,  $2\text{NOBr} \cdot \text{PtBr}_4$ .

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Topsee, J. B. 1868. 274.)

**Nitrosyl chloride**,  $\text{NOCl}$ .

Decomp. by  $\text{H}_2\text{O}$ . Absorbed by fuming  $\text{H}_2\text{SO}_4$  without decomp.

**Nitrosyl boron chloride**,  $\text{NOCl} \cdot \text{BCl}_3$ .

See Boron nitrosyl chloride.

**Nitrosyl platonic chloride**,  $2\text{NOCl} \cdot \text{PtCl}_4$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$  with evolution of  $\text{NO}$ . (Rogers and Boye, Phil. Mag. J. 17. 397.)

**Nitrosyl thallium chloride**,  $2\text{NOCl} \cdot \text{TlCl}_3 \cdot \text{TlCl}_3$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$  with decomp. (Sudborough, Chem. Soc. 69. 657.)

**Nitrosyl stannic chloride**,  $2\text{NOCl} \cdot \text{SnCl}_4$ .

Decomp. by  $\text{H}_2\text{O}$ , chloroform, or benzene, not by carbon disulphide. (Jorgensen.)

**Nitrosyl titanium chloride**,  $2\text{NOCl} \cdot \text{TiCl}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . (Weber, Pogg. 118. 476.)

**Nitrosyl zinc chloride**,  $\text{NOCl} \cdot \text{ZnCl}_2$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$  with evolution of  $\text{NO}$ . (Sudborough, Chem. Soc. 69. 656.)

**Nitrosyl chloride sulphur trioxide**,  $\text{NOCl} \cdot \text{SO}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{H}_2\text{SO}_4$  with evolution of  $\text{HCl}$ . (Weber, Pogg. 123. 233.)

**Nitrosyl fluoride**,  $\text{NOF}$ .

Sol. in  $\text{H}_2\text{O}$ . Solution decomp. on standing with formation of  $\text{NO}$  and  $\text{HNO}_3$ . (Ruff and Stauber, Z. anorg. 1905. 47. 190.)

**Nitrosyl sulphate, acid**,  $\text{H}(\text{NO})\text{SO}_4$ .

See Nitrosulphonic acid.

**Nitrosyl sulphate, anhydro**,  $(\text{NO})_2\text{S}_2\text{O}_7$ .

See Nitrosulphonic anhydride.

**Nitrosyl selenic acid**,  $\text{SeO}_2(\text{ONO})_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Lenher and Mathews, J. Am. Chem. Soc. 1906. 28. 516.)

**Nitrosyl sulphuric acid**,  $\text{H}(\text{NO})\text{SO}_4$ .

See Nitrosulphonic acid.

**Nitrous acid**,  $\text{HNO}_2$ .

Known only in aqueous solution.

See Nitrogen trioxide.

**Nitrites.**

Normal nitrites, except  $\text{AgNO}_2$ , are sol. in  $\text{H}_2\text{O}$  and alcohol; but, as a rule, they are less sol. than the corresponding nitrates.

**Ammonium nitrite**,  $\text{NH}_4\text{NO}_2$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ .

$\text{H}_2\text{O}$  solution decomp. at  $50^\circ$ . (Berzelius.) Very dil. solution can be evaporated on water bath without decomp. (Bohlig, A. 126. 25.) Solution containing  $\frac{1}{100,000}$  pt.  $\text{NH}_4\text{NO}_2$  can be evaporated to  $\frac{1}{2}$  its vol. without decomp. Solution containing  $\frac{1}{100}$  pt. gives a distillate containing 8.6% of  $\text{NH}_4\text{NO}_3$ , while residue contains 82% of original quantity, 9.4% being lost. (Schoyen.)

Very deliquescent, sol. in  $\text{H}_2\text{O}$ ; slowly but easily sol. in alcohol, insol. in ether. (Sørensen, Z. anorg. 1894. 7. 38.)

**Ammonium barium cupric nitrite,**

Ppt.; decomp. readily. (Przibylla, Z. anorg. 1897, 15, 421.)

**Ammonium bismuth silver nitrite,**

Moderately sol. in  $\text{H}_2\text{O}$ . Rapidly hydrolyzed by  $\text{H}_2\text{O}$ . (Ball and Abreu, Chem. Soc. 1913, 103, 2120.)

**Ammonium bismuth sodium nitrite,**

Easily decomp. (Ball, Chem. Soc. 1905, 87, 761.)

**Ammonium cadmium nitrite ammonia, basic,**

Decomp. by  $\text{H}_2\text{O}$ . (Monn, C. R. 100, 1497.)

**Ammonium calcium cupric nitrite,**

Ppt.; decomp. easily. Sol. in  $\text{H}_2\text{O}$ . Sl. sol. in alcohol. (Przibylla, Z. anorg. 1897, 15, 423.)

**Ammonium cobaltic nitrite,  $3(\text{NH}_4)_2\text{O}, \text{Co}_2\text{O}_3,$** 

Sl. sol. in  $\text{H}_2\text{O}$ , decomp. in aq. solution on heating. (Rosenheim, Z. anorg. 1898, 17, 45.)

Somewhat sol. in cold  $\text{H}_2\text{O}$ , decomp. by boiling. Decomp. by conc.  $\text{H}_2\text{SO}_4$ , not by acetic or dil. mineral acids. (Fadmann, J. pr. 97, 405.)

**Ammonium cupric lead nitrite,**

Stable at ordinary temp.; sol. in  $\text{HNO}_3$  with decomp.

2.575 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ , or 2.51% salt in sat. solution at  $20^\circ$ . (Przibylla, Z. anorg. 1897, 15, 420.)

**Ammonium cupric strontium nitrite,**

Ppt.; sol. in  $\text{H}_2\text{O}$  with decomp. (Przibylla, l. c.)

**Ammonium iridium nitrite.**

See Iridonitrite, ammonium.

**Ammonium lead nickel nitrite,**

Ppt. (Przibylla, Z. anorg. 1897, 15, 433.)

**Ammonium osmium nitrite.**

See Osminitrite, ammonium.

**Ammonium osmyl oxynitrite.**

See Osmyloxynitrite, ammonium.

**Ammonium platinum nitrite.**

See Platonitrite, ammonium.

**Ammonium rhodium nitrite.**

See Rhodonitrite, ammonium.

**Ammonium ruthenium hydrogen nitrite,**

See Ruthenininitrite, ammonium hydrogen.

**Barium nitrite,  $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$ .**

Permanent. Very sol. in  $\text{H}_2\text{O}$ .

**Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .**

$t^\circ$	G. in 100 cc $\text{Ba}(\text{NO}_2)_2$	Sp. gr.
0	58	1.40
20	63	1.45
25	71	1.50
30	82	1.52
35	97	1.61

(Vogel, Z. anorg. 1903, 35, 389.)

100 pts.  $\text{H}_2\text{O}$  dissolve at.

$0^\circ$	$10^\circ$	$20^\circ$	$30^\circ$
63.5	69.5	79.5	93 pts. $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$
$40^\circ$	$50^\circ$	$60^\circ$	$70^\circ$
113	136	170	202 pts. $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$
$80^\circ$	$90^\circ$	$100^\circ$	$110^\circ$
254	331	461	765 pts. $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$

The sat. solution at  $17^\circ$  contains 40%  $\text{Ba}(\text{NO}_2)_2$ , and has sp. gr.  $17^\circ/0^\circ = 1.4897$  (Oswald, A. ch. 1914, (9) 1, 62.)

100 g.  $\text{H}_2\text{O}$  at  $13.5^\circ$  dissolve 64 g.  $\text{Ba}(\text{NO}_2)_2 + 10.2$  g.  $\text{AgNO}_3$  with excess of  $\text{AgNO}_3$ , and 75.6 g.  $\text{Ba}(\text{NO}_2)_2 + 9.5$  g.  $\text{AgNO}_3$  with excess of  $\text{AgNO}_3$ . (Oswald.)

Sol. in 64 pts. 94% alcohol; nearly insol. in absolute alcohol. (Lang, Pogg. 118, 285.)

**Solubility in alcohol + Aq at  $t^\circ$ .**

$t^\circ$	Solvent	100 cum. of the sat. solution contain g. $\text{Ba}(\text{NO}_2)_2 + \text{H}_2\text{O}$
19.5	10% alcohol	49.30
21.0	20% "	29.30
20.5	30% "	18.41
20.5	40% "	13.33
20.5	50% "	9.11
20.0	60% "	4.84
19.0	70% "	2.66
19.5	80% "	0.98
20.0	90% "	0.00
20.0	absolute alcohol	0.00

(Vogel, Z. anorg. 1903, 35, 390.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

**Barium caesium nitrite,  $\text{CsBa}_4(\text{NO}_2)_4$ .**

Sol. in  $\text{H}_2\text{O}$  (Jamieson, Am. Ch. J. 1907, 38. 616.)

$\text{Cs}_2\text{Ba}(\text{NO}_2)_4 + \text{H}_2\text{O}$ . Very sol in  $\text{H}_2\text{O}$  (Jamieson, Am. Ch. J. 1907, 38. 616.)

**Barium caesium silver nitrite,  $\text{Cs}_2\text{AgBa}(\text{NO}_2)_6 + 2\text{H}_2\text{O}$ .**

Decomp. by cold  $\text{H}_2\text{O}$ . (Jamieson, Am. Ch. J. 1907, 38. 616.)

**Barium cobaltic nitrite,  $2\text{BaO}$ ,  $\text{Co}_2\text{O}_3$ ,  $4\text{N}_2\text{O}_5 + 10\text{H}_2\text{O}$ .**

Sol in moderately warm  $\text{H}_2\text{O}$  without decomp but not recryst therefrom. (Rosenheim, Z. anorg. 1898, 17. 51-54.)

$3\text{BaO}$ ,  $\text{Co}_2\text{O}_3$ ,  $6\text{N}_2\text{O}_5 + \text{H}_2\text{O}$  Ppt; very unstable. Nearly insol. in  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1898, 17. 47.)

**Barium cobaltous potassium nitrite,  $\text{Ba}(\text{NO}_2)_2$ ,  $\text{Co}(\text{NO}_2)_2$ ,  $2\text{KNO}_2$ .**

Decomp. by  $\text{H}_2\text{O}$  (Erdmann, J. pr. 97. 385.)

**Barium cupric nitrite,  $\text{Ba}[\text{Cu}(\text{OH})(\text{NO}_2)_2]_2$ .**

Ppt. Insol in  $\text{H}_2\text{O}$ . Decomp by  $\text{H}_2\text{O}$  Insol. in alcohol, but slowly decomp. by it. (Kurtenacker, Z. anorg. 1913, 82. 208.)

**Barium cupric potassium nitrite,  $\text{BaCuK}_4(\text{NO}_2)_8$ .**

Stable when dry, easily decomp. when moist; sol. in  $\text{H}_2\text{O}$  with decomp.

45.86 pts are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ , or 31.45% salt is contained in sat. solution at  $20^\circ$ . (Przibylla, Z. anorg. 1897, 15. 424.)

**Barium cupric thallium nitrite,  $\text{BaCuTl}_2(\text{NO}_2)_6$ .**

Sl. sol. in  $\text{H}_2\text{O}$  (Przibylla, Z. anorg. 1898, 18. 461.)

**Barium iridium nitrite.**

See Iridonitrite, barium.

**Barium mercuric nitrite,  $2\text{Ba}(\text{NO}_2)_2$ ,  $3\text{Hg}(\text{NO}_2)_2 + 5\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$  and easily decomp. (Rây, Chem. Soc. 1910, 97. 327.)

**Barium nickel nitrite,  $2\text{Ba}(\text{NO}_2)_2$ ,  $\text{Ni}(\text{NO}_2)_2$ .**

Somewhat more easily sol. in  $\text{H}_2\text{O}$  than nickel potassium nitrite. (Lang.)

**Barium nickel potassium nitrite,  $\text{Ba}(\text{NO}_2)_2$ ,  $\text{Ni}(\text{NO}_2)_2$ ,  $2\text{KNO}_2$ .**

Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$  without apparent decomp. (Lang.)

**Barium nickel thallium nitrite,  $\text{NiBaTl}_2(\text{NO}_2)_6$ .**

Ppt. (Przibylla, Z. anorg. 1898, 18. 462.)

**Barium osmium nitrite.**

See Osminitrite, barium.

**Barium osmyl oxynitrite.**

See Osmyloxynitrite, barium.

**Barium potassium nitrite,  $\text{Ba}(\text{NO}_2)_2$ ,  $2\text{KNO}_2 + \text{H}_2\text{O}$ .**

Easily sol in  $\text{H}_2\text{O}$ ; insol in alcohol. (Lang, Pogg, 118. 293.)

**Barium rhodium nitrite,  $3\text{Ba}(\text{NO}_2)_2$ ,  $\text{Rh}_4(\text{NO}_2)_6$ .**

See Rhodonitrite, barium.

**Barium silver nitrite,  $\text{Ba}(\text{NO}_2)_2$ ,  $2\text{AgNO}_2 + \text{H}_2\text{O}$ .**

Resembles the potassium salt. (Fischer.) Less stable than the Na salt. (Oswald.)

**Bismuth nitrite, basic,  $(\text{BiO})\text{NO}_2 + \frac{1}{2}\text{H}_2\text{O}$ .**

Sol. in  $\text{HCl}$  (Vanino, J. pr. 1906, (2) 74. 150)

**Bismuth caesium silver nitrite,  $\text{Cs}_2\text{BiAg}(\text{NO}_2)_6$ .**

Very sl sol in  $\text{H}_2\text{O}$ . Slowly decomp by  $\text{H}_2\text{O}$ . (Ball and Abram, Chem. Soc. 1913, 103. 2122.)

**Bismuth potassium nitrite,  $\text{Bi}(\text{NO}_2)_3$ ,  $3\text{KNO}_2 + \text{H}_2\text{O}$ .**

Decomp by  $\text{H}_2\text{O}$  (Ball, Chem. Soc. 1905, 87. 762.)

**Bismuth potassium silver nitrite,  $\text{K}_2\text{BiAg}(\text{NO}_2)_6$ .**

Less sol in  $\text{H}_2\text{O}$  than  $\text{NH}_4$  salt. (Ball and Abram, Chem. Soc. 1913, 103. 2121.)

**Bismuth rubidium silver nitrite,  $\text{Rb}_2\text{BiAg}(\text{NO}_2)_6$ .**

Sl sol in  $\text{H}_2\text{O}$  with slow hydrolysis. (Ball and Abram.)

**Bismuth silver thallic nitrite,  $\text{BiAgTl}_2(\text{NO}_2)_6$ .**

Insol. in  $\text{H}_2\text{O}$ , but decomp. thereby. (Ball and Abram.)

**Cadmium nitrite, basic,  $2\text{CdO}$ ,  $\text{N}_2\text{O}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . (Hampe, A. 125. 335)

**Cadmium nitrite,  $\text{Cd}(\text{NO}_2)_2 + \text{H}_2\text{O}$ .**

Deliquescent. Sol in  $\text{H}_2\text{O}$ . (Lang, J. B. 1862. 99)

**Cadmium potassium nitrite,  $\text{Cd}(\text{NO}_2)_2$ ,  $\text{KNO}_2$ .**

Easily sol in  $\text{H}_2\text{O}$ . Very difficultly sol. in absolute alcohol, and only sl. sol. in 90% alcohol. (Hampe, A. 125. 334.)

$\text{Cd}(\text{NO}_2)_2$ ,  $2\text{KNO}_2$  Easily sol. in  $\text{H}_2\text{O}$ . Insol in alcohol (Lang, J. B. 1862. 99.)

$\text{Cd}(\text{NO}_2)_2$ ,  $4\text{KNO}_2$ . More sol. in  $\text{H}_2\text{O}$  than the above salt. (Lang)

**Cæsium nitrite, CsNO<sub>2</sub>.**

Very hygroscopic. Very sol. in H<sub>2</sub>O. (Ball, Chem. Soc. 1913, 103, 2130.)

**Cæsium calcium nitrite, Cs<sub>2</sub>Ca(NO<sub>2</sub>)<sub>4</sub>·H<sub>2</sub>O.**  
Ppt. (Jamieson, Am. Ch. J. 1907, 38, 617.)**Cæsium cobaltic nitrite, Cs<sub>3</sub>Co(NO<sub>2</sub>)<sub>6</sub>·H<sub>2</sub>O**  
Sol. in 20,100 pts. H<sub>2</sub>O at 17°. (Rosenblatt, B. 19, 2531)**Cæsium lead nitrite, Cs<sub>2</sub>Pb(NO<sub>2</sub>)<sub>2</sub>·H<sub>2</sub>O.**  
Sol. in cold H<sub>2</sub>O without decomp. When solution is heated, some basic lead salt separates. (Jamieson, Am. Ch. J. 1907, 38, 618.)**Cæsium lead silver nitrite, Cs<sub>2</sub>AgPb(NO<sub>2</sub>)<sub>2</sub>·2H<sub>2</sub>O.**  
Ppt (Jamieson.)**Cæsium silver nitrite, CsAgNO<sub>2</sub>.**  
Decomp. by H<sub>2</sub>O (Jamieson)**Cæsium silver strontium nitrite, Cs<sub>2</sub>AgSr(NO<sub>2</sub>)<sub>6</sub>·2H<sub>2</sub>O.**  
Partially decomp. by H<sub>2</sub>O. (Jamieson.)**Cæsium strontium nitrite, CsSr(NO<sub>2</sub>)<sub>2</sub>·H<sub>2</sub>O.**  
Ppt. Sol. in H<sub>2</sub>O. (Jamieson.)**Calcium nitrite, Ca(NO<sub>2</sub>)<sub>2</sub>·H<sub>2</sub>O.**  
Very deliquescent. Insol. in dil. alcohol. (Fischer, Pogg. 74, 115)  
100 cem. of the sat. solution contain 111 g. Ca(NO<sub>2</sub>)<sub>2</sub>·H<sub>2</sub>O at 20.5°. (Vogel, Z. anorg. 1903, 35, 395)Solubility in H<sub>2</sub>O at t°.

t°	g. Ca(NO <sub>2</sub> ) <sub>2</sub>	Solid phase
0	38.3	Ca(NO <sub>2</sub> ) <sub>2</sub> , 4H <sub>2</sub> O
18 5	43	"
42	51.8	"
44	53.5	" + Ca(NO <sub>2</sub> ) <sub>2</sub> , H <sub>2</sub> O
54	55.2	Ca(NO <sub>2</sub> ) <sub>2</sub> , H <sub>2</sub> O
64	58.4	"
70	60.3	"
73	61.5	"
91	71.2	"

(Oswald, A. ch. 1914, (9) 1. 32.)

Sat. solution of Ca(NO<sub>2</sub>)<sub>2</sub>·AgNO<sub>2</sub> contains 92.4 g. Ca(NO<sub>2</sub>)<sub>2</sub> and 11.2 g. AgNO<sub>2</sub> per 100 g. H<sub>2</sub>O at 14°. (Oswald.)

Solubility in alcohol  
100 cem. of sat. solution in 90% alcohol contain 39.0 g. Ca(NO<sub>2</sub>)<sub>2</sub>·H<sub>2</sub>O at 20°.

100 cem. of sat. solution in absolute alcohol contain 1.1 g. Ca(NO<sub>2</sub>)<sub>2</sub>·H<sub>2</sub>O at 20°. (Vogel.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43, 314.)

+4H<sub>2</sub>O. The sat. solution at 16° contains 42.3% Ca(NO<sub>2</sub>)<sub>2</sub> and has sp. gr. at 16°/0° = 1.1205. (Oswald, A. ch. 1914, (9) 1. 66.)

**Calcium cobaltous potassium nitrite, Ca(NO<sub>2</sub>)<sub>2</sub>, Co(NO<sub>2</sub>)<sub>2</sub>, 2KNO<sub>2</sub>**  
Decomp. by H<sub>2</sub>O. (Erdmann.)**Calcium cupric potassium nitrite, CaCuK<sub>2</sub>(NO<sub>2</sub>)<sub>6</sub>.**

Ppt., insol. in alcohol; sol. in H<sub>2</sub>O with decomp.

14.97 pts. are sol. in 100 pts. H<sub>2</sub>O at 20°, or 13.02 per cent of salt is contained in sat. solution. (Prabylla, Z. anorg. 1897, 15, 422.)

**Calcium mercuric nitrite, Ca(NO<sub>2</sub>)<sub>2</sub>, Hg(NO<sub>2</sub>)<sub>2</sub>·5H<sub>2</sub>O**  
Very sol. in H<sub>2</sub>O. (Ray, Chem. Soc. 1910, 97, 327.)**Calcium nickel potassium nitrite, Ca(NO<sub>2</sub>)<sub>2</sub>, Ni(NO<sub>2</sub>)<sub>2</sub>, 2KNO<sub>2</sub>.**

Very sl. sol. in cold, easily in hot H<sub>2</sub>O. Insol. in alcohol. Sl. sol. in dil. HClO<sub>4</sub> + Aq. (Erdmann.)

**Calcium osmium nitrite.**  
See Osminitrite, calcium.**Calcium potassium nitrite, CaK(NO<sub>2</sub>)<sub>2</sub>·3H<sub>2</sub>O.**  
Sol. in H<sub>2</sub>O. (Topsøe, W. A. B 73, 2, 112.)  
Deliquescent. (Lang)**Cobaltous nitrite.**  
Known only in solution.**Cobaltic lead nitrite, 3PbO, Co<sub>2</sub>O<sub>3</sub>, 6N<sub>2</sub>O<sub>5</sub> + 12H<sub>2</sub>O.**  
Insol. in H<sub>2</sub>O. (Rosenheim, Z. anorg. 1898, 17, 48.)**Cobaltic lead potassium nitrite, 3K<sub>2</sub>O, 3PbO, 2Co<sub>2</sub>O<sub>3</sub>, 10N<sub>2</sub>O<sub>5</sub> + 4H<sub>2</sub>O.**  
Sol. by boiling in much H<sub>2</sub>O. Sol. in hot acids with evolution of N<sub>2</sub>O<sub>5</sub>. (Stromeyer, A. 96, 228.)**Cobaltous potassium nitrite, 2Co(NO<sub>2</sub>)<sub>2</sub>, 2KNO<sub>2</sub> + H<sub>2</sub>O.**  
Ppt. (Sadtler.)

Co(NO<sub>2</sub>)<sub>2</sub>, 2KNO<sub>2</sub>·H<sub>2</sub>O. Ppt. (Sadtler.)  
3Co(NO<sub>2</sub>)<sub>2</sub>, 6KNO<sub>2</sub>·H<sub>2</sub>O. Insol. in cold, sol. in hot H<sub>2</sub>O. Sl. sol. in KC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq. (Erdmann, J. pr 97, 397.)  
Insol. in ethyl acetate. (Naumann, B. 1904, 37, 3602.)

**Cobaltic potassium nitrite (cobalt yellow), Co<sub>2</sub>(NO<sub>2</sub>)<sub>6</sub>, 6KNO<sub>2</sub> + 3H<sub>2</sub>O.**  
Very sl. sol. in cold H<sub>2</sub>O. Insol. in alcohol and ether. Sol. in traces in CS<sub>2</sub>. (St. Evre,

C. R. 35. 552.) Insol. in boiling conc.  $K_2SO_4$ ,  $KCl$ ,  $KNO_3$ , or  $KC_2H_3O_2 + Aq$ .  
Sol. in 1120 pts  $H_2O$  at  $17^\circ$ . (Rosenbladt, B. 1886, 19. 2535.)

Decomp. when heated in aq. solution. (Rosenheim, Z. anorg. 1898, 17. 42.)

More sol. in  $NH_4Cl$  or  $NaCl + Aq$  than in  $H_2O$ . (Stromeyer.)

Sl. decomp. by  $KOH + Aq$ , except when very conc.; easily decomp. by  $NaOH$  or  $Ba(OH)_2 + Aq$ .

Very sl. sol. in  $KC_2H_3O_2 + Aq$ , or  $KNO_3 + Aq$ . (Fresenius.) Sol. in  $HCl + Aq$ .

Sol. in  $HC_2H_3O_2$ , or  $H_2C_2O_4 + Aq$ . (Stromeyer.)

Small quantity of  $HC_2H_3O_2 + Aq$  does not dissolve. (Fresenius.)

Cobaltic potassium silver nitrite,  
 $KCoAg_2(NO_2)_4$  and  $K_2CoAg(NO_2)_4$ .

Very sl. sol. in  $H_2O$ . Less sol. than Na comp. (Burgess and Karum, J. Am. Chem. Soc. 1912, 34. 653.)

Cobaltous potassium strontium nitrite,  
 $Co(NO_2)_2 \cdot 2KNO_3 \cdot Sr(NO_2)_2$ .

Decomp. by  $H_2O$ . (Erdmann, J. pr. 97. 385.)

Cobaltic rubidium nitrite,  $Rb_2Co(NO_2)_4 + H_2O$ .

Sol. in 19,800 pts  $H_2O$ . (Rosenbladt, B. 19. 2531.)

Cobaltic silver nitrite,  $CoAg_2(NO_2)_4$ .

Fairly sol. in  $H_2O$ . (Cunningham and Perkin, Chem. Soc. 1909, 95. 1568.)

$2Ag_2O$ ,  $Co_2O_3$ ,  $3N_2O_5 + 3H_2O$ . Sl. sol. in  $H_2O$ , decomp. by boiling  $H_2O$ . (Rosenheim, Z. anorg. 1898, 17. 56.)

Cobaltic silver hydroxynitrite,  
 $Co_2Ag_2(OH)_2(NO_2)_4$ .

Sl. sol. in  $H_2O$ . (Suzuki, Chem. Soc. 1910, 97. 729.)

Cobaltic silver nitrite ammonia,  $Co_2O_3$ ,  $Ag_2O$ ,  $4N_2O_5$ ,  $4NH_3$ .

See Cobalt ammonium comps.

Cobaltic sodium nitrite,  $2Na_2O$ ,  $Co_2O_3$ ,  $4N_2O_5$ .

Sol. in  $H_2O$  and alcohol. (Rosenheim, Z. anorg. 1898, 17. 50.)

$+ H_2O$ . Ppt. (Sadtler, Sill. Am. J. (2) 49. 193.)

$3Na_2O$ ,  $Co_2O_3$ ,  $6N_2O_5 + xH_2O$ . Sol. in  $H_2O$ ; decomp. on heating; insol. in alcohol. (Rosenheim, Z. anorg. 1898, 17. 43.)

Cobaltic strontium nitrite,  $2SrO$ ,  $Co_2O_3$ ,  $4N_2O_5 + 11H_2O$ .

Ppt. (Rosenheim, Z. anorg. 1898, 17. 54.)

Cobaltic thallium nitrite,  $Co_2(NO_2)_6$ , 6TINO<sub>2</sub>.  
Sol. in 23,810 pts.  $H_2O$  at  $17^\circ$ . (Rosenbladt, B. 19. 2531.)

Cobaltic zinc nitrite,  $2ZnO$ ,  $Co_2O_3$ ,  $3N_2O_5 + 11H_2O$ .

Sol. in dil. acetic acid. (Rosenheim, Z. anorg. 1898, 17. 56.)

Cobalt nitrite nitrate,  $2CoO$ ,  $Co_2O_3$ ,  $3N_2O_5$ ,  $Co(NO_2)_2 + 14H_2O$ .

Ppt. (Rosenheim, Z. anorg. 1898, 17. 58.)

Cupric nitrite, basic,  $2CuO$ ,  $N_2O_5$ .

(Hampe, A. 125. 345.)

$Cu(NO_2)_2 \cdot 3Cu(OH)_2$ . Very sl. sol. in  $H_2O$  or alcohol. Easily sol. in dil. acids or ammonia. (van der Meulen, B. 12. 758.)

Cupric nitrite.

Known only in solution.

Cupric lead potassium nitrite,  $CuPbK_2(NO_2)_4$ .

(van Liesen, R. t. c. 10. 13.)

3.056 pts. are sol. in 100 pts.  $H_2O$  at  $20^\circ$ , or 2.51% salt is contained in sat. solution at  $20^\circ$  p. 429. (Przybylla, Z. anorg. 1897, 15. 429.)

Cupric potassium strontium nitrite,  
 $CuSrK_2(NO_2)_4$ .

Sol. in  $H_2O$  with decomp. 10.82 pts. are sol. in 100 pts.  $H_2O$  at  $20^\circ$ , or 9.77 per cent salt is contained in sat. solution at  $20^\circ$ . (Przybylla, Z. anorg. 1897, 15. 425.)

Cupric rubidium nitrite,  $Rb_2Cu(NO_2)_4$ .

Easily sol. in  $H_2O$ . Sol. in alcohol. (Kurttenacker, Z. anorg. 1913, 82. 206.)

Cupric nitrite ammonia,  $Cu(NO_2)_2$ ,  $2NH_3 + 2H_2O$ .

Sol. in little  $H_2O$  with absorption of much heat. Decomp. by much  $H_2O$ . (Peligot, C. R. 53. 209.)

$3CuO$ ,  $N_2O_5$ ,  $2NH_3 + H_2O$ . As above. (Peligot.)

Iridium hydrogen nitrite,  $Ir_2H_4(NO_2)_{12}$ .

See Iridonitrous acid.

Iridium nitrite with  $MnO_2$ .

See Iridonitrite, M.

Iron (ferrous) lead potassium nitrite,

$FePbK_2(NO_2)_4$ .

Ppt.; insol. in cold  $H_2O$ ; stable at ordinary temp. (Przybylla, Z. anorg. 1897, 15. 439.)

Iron (ferrous) lead thallos nitrite,

$FePbTh_2(NO_2)_4$ .

Ppt. (Przybylla, Z. anorg. 1898, 18. 463.)

**Lead nitrite, basic**,  $4\text{PbO}$ ,  $\text{N}_2\text{O}_3 + \text{H}_2\text{O} = \text{Pb}(\text{OH})\text{NO}_2$ ,  $\text{PbO}$ .

Sol. in 143 pts  $\text{H}_2\text{O}$  at  $23^\circ$ , and 33 pts at  $100^\circ$ . (Chevreul.)

Sol. in 1250 pts. cold  $\text{H}_2\text{O}$ , and 34.5 pts. at  $100^\circ$ . (Pelgrot.)

Sol. in cold  $\text{HNO}_3$  or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ .

Composition is  $3\text{PbO}$ ,  $\text{N}_2\text{O}_3 + \text{H}_2\text{O}$ . (Meissner, J. B. 1876. 194.)

Composition is as above (v. Lorenz, W. A. B. 84, 2. 1133.)

$3\text{PbO}$ ,  $\text{N}_2\text{O}_3 = \text{Pb}(\text{NO}_2)_2$ ,  $2\text{PbO}$  Sol. in  $\text{H}_2\text{O}$ . (Bromeis, A. 72. 38; v. Lorenz.)

$2\text{PbO}$ ,  $\text{N}_2\text{O}_3 + \text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Bromeis.)

$+3\text{H}_2\text{O}$ . (Meissner.)

$4\text{PbO}$ ,  $3\text{N}_2\text{O}_3 + 2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Meissner, J. B. 1876. 195.)

**Lead nitrite**,  $\text{Pb}(\text{NO}_2)_2 + \text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$ . (Pelgrot, A. ch. 77. 87.)

**Lead nickel potassium nitrite**,  $\text{Pb}(\text{NO}_2)_2$ ,  $\text{KNO}_3$ ,  $\text{Ni}(\text{NO}_2)_2$ .

Insol. in  $\text{H}_2\text{O}$ . (Baubigny, A. ch. (6) 17. 111.)

Ppt. (Przibylla, Z anorg 1897, 15. 432.)

**Lead nickel thalious nitrite**,  $\text{NiPbTl}_2(\text{NO}_2)_6$ .

Ppt. (Przibylla, Z anorg 1898, 18. 462.)

**Lead potassium nitrite**,  $4\text{Pb}(\text{NO}_2)_2$ ,  $6\text{KNO}_3 + 3\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  and in absolute alcohol. (Hampe, A. 125. 334.)

$\text{Pb}(\text{NO}_2)_2$ ,  $2\text{KNO}_3 + \text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Lang, J. B. 1862. 102.)

**Lead potassium silver nitrite**,  $\text{K}_3\text{AgPb}(\text{NO}_2)_6 + 2\text{H}_2\text{O}$ .

Ppt. (Jamieson, Ann. Ch. J. 1907, 38. 619.)

**Lead nitrite nitrate**.

See Nitrate nitrite, lead.

**Lithium nitrite**,  $\text{LiNO}_2 + \frac{1}{2}\text{H}_2\text{O}$ .

Deliquescent. Easily sol. in alcohol and  $\text{H}_2\text{O}$ . (Vogel, Z. anorg 1903, 35. 403.)

Sat. solution of  $\text{LiNO}_2 + \frac{1}{2}\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  contains at.

$65^\circ$  81.5°  $91^\circ$   $96^\circ$   $92.5^\circ$   
63.8 68.7 72.4 91.8 94.3%  $\text{LiNO}_2$ .  
(Oswald.)

$+ \text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ , readily forming supersat. solutions. Very sol. in abs. alcohol. (Ball, Chem. Soc. 1913, 103. 2133.)

100 pts.  $\text{H}_2\text{O}$  dissolve at:

$0^\circ$   $10^\circ$   $20^\circ$   
125 156 189 pts.  $\text{LiNO}_2 + \text{H}_2\text{O}$ .

$30^\circ$   $40^\circ$   $50^\circ$   
242 316 459 pts.  $\text{LiNO}_2 + \text{H}_2\text{O}$ .

$\text{LiNO}_2$ ,  $\text{H}_2\text{O} + \text{Aq}$  sat. at  $19^\circ$  contains 48.9%  $\text{LiNO}_2$  and has sp. gr. = 1.3186. (Oswald, A. ch. 1914, (9) 1. 61.)

100 g.  $\text{H}_2\text{O}$  dissolve 78.5 g.  $\text{LiNO}_2 + 10.5$  g.  $\text{AgNO}_3$  at  $14^\circ$ . (Oswald.)

**Lithium mercuric nitrite**,  $\text{LiNO}_2$ ,  $\text{Hg}(\text{NO}_2)_2 + \text{H}_2\text{O}$

(Ray, Chem. Soc. 1907, 91. 2033.)

$4\text{LiNO}_2$ ,  $\text{Hg}(\text{NO}_2)_2 + 4\text{H}_2\text{O}$ . Extremely deliquescent. (Ray.)

**Magnesium nitrite**,  $\text{Mg}(\text{NO}_2)_2 + 2\text{H}_2\text{O}$ .

Deliquescent, and sol. in  $\text{H}_2\text{O}$ . Solution decomp. by boiling. Easily sol. in absolute alcohol. (Hampe, A. 125. 334.)

Insol. in absolute alcohol. (Fischer.)

$+3\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  and absolute alcohol.

Very deliquescent. (Vogel, Z. anorg. 1903, 35. 397.)

**Magnesium osmium nitrite**.

See Osminitrite, magnesium.

**Magnesium potassium nitrite**.

Deliquescent, and easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Lang.)

**Magnesium silver nitrite**.

Sol. in  $\text{H}_2\text{O}$  with decomp. (Spiegel, Ch. Z. 1895, 19. 1423.)

**Manganous nitrite**.

Deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Mitscherlich.) Not obtained in a solid state, as the solution decomp. on evaporation. (Lang, Pogg. 118. 290.)

**Mercurous nitrite**,  $\text{Hg}_2(\text{NO}_2)_2$ .

Sol. in  $\text{H}_2\text{O}$  with partial decomp. to  $\text{Hg}$  and  $\text{Hg}(\text{NO}_2)_2$ . (Ray, A. 1901, 316. 252.)

Sol. in cold conc.  $\text{HNO}_3$ . Very slowly sol. in cold dil.  $\text{HNO}_3$ . (Ray, Chem. Soc. 1897, 71. 339.)

Decomp. by boiling  $\text{H}_2\text{O}$  and by cold dil.  $\text{H}_2\text{SO}_4$ . (Ray, Z. anorg. 1896, 12. 366.)

$+ \text{H}_2\text{O}$  Slowly decomp. by  $\text{H}_2\text{O}$ . (Ray, Chem. Soc. 1897, 71. 340.)

**Mercuric nitrite, basic**,  $\text{Hg}(\text{NO}_2)_2$ ,  $2\text{HgO} + \text{H}_2\text{O}$ .

Ppt. (Lang.)

$12\text{HgO}$ ,  $5\text{N}_2\text{O}_5 + 24\text{H}_2\text{O}$ . (Ray, Chem. Soc. 1897, 71. 341.)

**Mercuric nitrite**,  $\text{Hg}(\text{NO}_2)_2$ .

Deliquescent. Partly sol. in boiling  $\text{H}_2\text{O}$ , but the greater part is decomp. into  $\text{HgO} + \text{HNO}_2$ . (Ray, Proc. Chem. Soc. 1904, 20. 57.)

**Mercuriomercuric nitrite, basic**.

a.  $9\text{Hg}_2\text{O}$ ,  $4\text{HgO}$ ,  $5\text{N}_2\text{O}_5 + 8\text{H}_2\text{O}$ .

$\beta$ .  $\text{Hg}_3\text{O}$ ,  $2\text{HgO}$ ,  $\text{N}_2\text{O}_5 + 2\text{H}_2\text{O}$ .  
(Ray, Chem. Soc. 1897, 71. 341.)

Mercuric potassium nitrite,  $\text{Hg}(\text{NO}_2)_2 \cdot 2\text{KNO}_2$ .

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Lang, 1866.)

$\text{KHg}(\text{NO}_2)_2$ . Obtained from  $\text{K}_2\text{Hg}(\text{NO}_2)_4$ ,  $\text{H}_2\text{O}$  + Aq containing a small excess of  $\text{KNO}_2$ . Decomp. by  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1901, 28, 173.)

$\text{K}_2\text{Hg}(\text{NO}_2)_6 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Formula of Lang is incorrect. (Rosenheim, Z. anorg. 1901, 28, 172.)

Mercuric sodium nitrite,  $\text{Na}_2\text{Hg}(\text{NO}_2)_4$ .

Very hygroscopic. Decomp. by hot  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1901, 28, 173.)

+  $2\text{H}_2\text{O}$ . Deliquescent. (Ray, Chem. Soc. 1907, 91, 2032.)

$2\text{Hg}(\text{NO}_2)_2 \cdot 3\text{NaNO}_2$ . Decomp. by  $\text{H}_2\text{O}$ . (Ray, Chem. Soc. 1907, 91, 2032.)

Mercuric strontium nitrite,  $3\text{Hg}(\text{NO}_2)_2 \cdot 2\text{Sr}(\text{NO}_2)_2 + 5\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ . (Ray, Chem. Soc. 1910, 97, 327.)

Mercuric nitrite hydrazine,  $\text{Hg}(\text{NO}_2)_2 \cdot \text{N}_2\text{H}_4$

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Hofmann and Marburg, A. 1899, 305, 215.)

Nickel nitrite, basic,  $2\text{NiO} \cdot \text{N}_2\text{O}_3$

Ppt. (Hampe, A. 125, 343.)

Nickel nitrite,  $\text{Ni}(\text{NO}_2)_2$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Lang, J. B. 1862, 100.)

Nickel potassium nitrite,  $\text{Ni}(\text{NO}_2)_2 \cdot 4\text{KNO}_2$ .

Moderately sol. in  $\text{H}_2\text{O}$ . (Fischer, Pogg. 74, 115.) Extremely sol. in  $\text{H}_2\text{O}$ . (Hampe, A. 125, 346.) Insol. in absolute alcohol.

Nickel potassium strontium nitrite,  $\text{Ni}(\text{NO}_2)_2 \cdot 2\text{KNO}_2 \cdot \text{Sr}(\text{NO}_2)_2$ .

Sl sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$ .

Nickel nitrite ammonia,  $\text{Ni}(\text{NO}_2)_2 \cdot 4\text{NH}_3$ .

Sol. in cold  $\text{H}_2\text{O}$ . Decomp. on standing or by heating. Insol. in alcohol. Can be recrystallized by dissolving in  $\text{NH}_4\text{OH}$  + Aq, and adding much absolute alcohol. (Erdmann, J. pr. 97, 395.)

$\text{Ni}(\text{NO}_2)_2 \cdot 5\text{NH}_3$ . Decomp. in the air giving  $\text{Ni}(\text{NO}_2)_2 \cdot 4\text{NH}_3$ . (Ephraim, B. 1913, 46, 3110.)

Osmium nitrite,  $\text{Os}(\text{NO}_2)_2$ .

Ppt (Wintrebert, C. R. 1905, 140, 587.)

Osmium nitrite with  $\text{MNO}_2$ .

See Osmnitrite, M.

Osmyl nitrite with  $\text{MNO}_2$ .

See Osmynitrite, M.

Osmyl oxynitrite with  $\text{MNO}_2$ .

See Osmylloxynitrite, M.

Osmyl nitrite ammonia,  $\text{OsO}_2(\text{NO}_2)_2 \cdot 4\text{NH}_3$ .

(Wintrebert, A. ch. 1903, (7) 28, 56.)

Palladous nitrite with  $\text{MNO}_2$ .

See Palladonitrite, M.

Platinous hydrogen nitrite,  $\text{H}_2\text{Pt}(\text{NO}_2)_4$ .

See Platonitrous acid.

Platinous nitrite with  $\text{MNO}_2$ .

See Platonitrite, M.

Potassium nitrite,  $\text{KNO}_2$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ .

Pure  $\text{KNO}_2$  is not deliquescent. (Oswald, A. ch. 1914, (9) 1, 32.)

Sol in about  $1/3$  its wt. of  $\text{H}_2\text{O}$ . (Divers, Chem. Soc. 1899, 75, 86)

100 pts.  $\text{H}_2\text{O}$  dissolve at:

0°	10°	20°	30°	40°
281	291	302	313	325 pts. $\text{KNO}_2$ .

50°	60°	70°	80°	90°
337.5	351	365	380	396 pts. $\text{KNO}_2$ .

100°	110°	120°	130°
413	432	451	473 pts. $\text{KNO}_2$ .

Bpt of sat.  $\text{KNO}_2$  + Aq is  $132^\circ$  at 758.5 mm. pressure.

(Oswald, A. ch. 1914, (9) 1, 58.)

Sp. gr. of  $\text{KNO}_2$  + Aq at  $17.5^\circ$  containing:

10	20	30	40% $\text{KNO}_2$
1.049	1.126	1.208	1.295

50	60	70	74.5% $\text{KNO}_2$
1.377	1.491	1.599	1.646

(Oswald.)

100 g.  $\text{H}_2\text{O}$  at  $13.5^\circ$  dissolve 18 g.  $\text{KNO}_2$  + 2.36 g.  $\text{AgNO}_2$ ; at  $25^\circ$ , 23.1 g.  $\text{KNO}_2$  + 5.3 g.  $\text{AgNO}_2$  with excess of  $\text{AgNO}_2$ .

100 g.  $\text{H}_2\text{O}$  at  $13.5^\circ$  dissolve 276 g.  $\text{KNO}_2$  + 26.3 g.  $\text{AgNO}_2$ ; at  $25^\circ$ , 279 g.  $\text{KNO}_2$  + 39.3 g.  $\text{AgNO}_2$  with excess of  $\text{KNO}_2$ . (Oswald.)

See also under  $\text{AgNO}_2$ .

Very sol. in liquid  $\text{NH}_3$  (Franklin, Am Ch J. 1898, 20, 829.)

Deliquesces in 90% alcohol; insol. in cold 94% alcohol. More sol in  $\text{H}_2\text{O}$  than  $\text{KNO}_3$ , but less sol in alcohol. (Fischer.)

Ppt. from its conc. aq. solution by the addition of methyl alcohol. Addition of ethyl alcohol to a conc. aq. solution of  $\text{KNO}_2$  causes separation into two layers, of which the lower aq. solution contains 71.9%  $\text{KNO}_2$  while the upper alcoholic layer contains 6.9%  $\text{KNO}_2$ . (Donath, Ch. Z. 1911, 35, 773.)

Very sl sol. in acetone (Krug and M'Elroy, J. Anal. Ch. 6, 184.)

Insol in acetone. (Tidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4320.)

Insol in methyl acetate. (Naumann, B. 1908, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3602.)

Potassium rhodium nitrite,  $6\text{KNO}_2$ ,  $\text{Rh}_2(\text{NO}_2)_6$ .

See Rhodonitrite, potassium.

Potassium ruthenium nitrite.

See Ruthenonitrite, potassium.

Potassium silver nitrite,  $\text{KNO}_2$ ,  $\text{AgNO}_2 + \frac{1}{2}\text{H}_2\text{O}$

Completely sol. in a little  $\text{H}_2\text{O}$ , but decomp. by more  $\text{H}_2\text{O}$ . Sol. in  $\text{KNO}_2 + \text{Aq}$  without decomp. Insol. in alcohol. (Lang.)

Potassium strontium nitrite,  $2\text{KNO}_2$ ,  $\text{Sr}(\text{NO}_2)_2$ .

Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Lang, Pogg. 118. 293.)

Potassium zinc nitrite,  $2\text{KNO}_2$ ,  $\text{Zn}(\text{NO}_2)_2 + \text{H}_2\text{O}$ .

Deliquescent Easily sol. in  $\text{H}_2\text{O}$ . (Lang, J. B. 1862. 101)

$\text{K}_2\text{Zn}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$  Very hygroscopic  
Decomp. by  $\text{H}_2\text{O}$  (Rosenheim, Z. anorg. 1901, 28. 174)

Rhodium nitrite with  $\text{MNO}_2$ .

See Rhodonitrite, M.

Rubidium nitrite,  $\text{RbNO}_2$ .

Deliquescent; very sol. in  $\text{H}_2\text{O}$ , sl. sol. in hot alcohol, almost insol. in acetone. (Ball, Chem. Soc. 1913, 103. 2131.)

Ruthenium nitrite with  $\text{MNO}_2$ .

See Ruthenonitrite, M.

Silver nitrite,  $\text{AgNO}_2$

Sol. in 120 pts. cold  $\text{H}_2\text{O}$  (Mitscherlich), in 300 pts. (Fischer), and more abundantly in hot  $\text{H}_2\text{O}$ .

1 l.  $\text{H}_2\text{O}$  dissolves 3.1823 g. or 0.02067 g. mols. at  $18^\circ$ . (Naumann and Rucker, B. 1905, 38. 2291.)

1 litre  $\text{H}_2\text{O}$  dissolves at—

$0^\circ$	0.0113 mol. $\text{AgNO}_2$
$8^\circ$	0.0159 " "
$14^\circ$	0.0189 " "
$16^\circ$	0.0203 " "
$18^\circ$	0.0216 " "
$25^\circ$	0.0260 " "
$33^\circ$	0.0370 " "

(Pick and Abegg, Z. anorg. 1906, 51. 3.)

1 l.  $\text{H}_2\text{O}$  dissolves 3.609 g.  $\text{AgNO}_2$  at  $21^\circ$ . (Oswald, A. ch. 1914, (9) 1. 33.)

### Solubility in $\text{H}_2\text{O}$ at $t^\circ$ .

$t^\circ$	% $\text{AgNO}_2$
1	0.1539
15	0.2752
25	0.4125
35	0.6018
51	1.0240
60	1.3625

(Creighton and Ward, J. Am. Chem. Soc. 1915, 37. 2335.)

### Solubility in $\text{AgNO}_3 + \text{Aq}$ at $18^\circ$ .

Mols. $\text{AgNO}_3$ per l. of the solution	Mols. $\text{AgNO}_2$ dissolved per l.
0.	0.0207
0.0026	0.0198
0.0052	0.0190
0.0103	0.0189
0.0207	0.0144
0.0413	0.0117
0.0827	0.0096

(Abegg and Pick, B. 1905, 38. 2573.)

1 l. 0.2-N  $\text{NaNO}_2 + \text{Aq}$  dissolves 4.956 g.  $\text{AgNO}_2$  at  $25^\circ$ . (Ley and Schaefer, B. 1906, 39. 1263.)

1 l. sat.  $\text{KNO}_2 + \text{Aq}$  dissolves 26%  $\text{AgNO}_2$  at  $13.5^\circ$ . (Oswald, A. ch. 1914, (9) 1. 33.)

### Solubility in salts + $\text{Aq}$ at $25^\circ$ .

Salt	Conc. of the salt mols. per l.	G. $\text{AgNO}_2$ in 100 g. of solution
		0.4135
$\text{AgNO}_3$	0.00258 0.00588 0.01177 0.02355 0.04710	0.3991 0.3735 0.3432 0.2943 0.2408
$\text{KNO}_2$	0.00258 0.00588 0.01177 0.02355 0.04710	0.3974 0.3820 0.3560 0.3119 0.2765

(Creighton and Ward, J. Am. Chem. Soc. 1915, 37. 2336.)

See also under  $\text{KNO}_2$ .

$\text{AgNO}_2 + \text{NaNO}_2$ .

1 l. 0.02 N- $\text{NaNO}_2 + \text{Aq}$  dissolves 3.185 g.  $\text{AgNO}_2$  at  $25^\circ$ , 0.2-N  $\text{NaNO}_2$ , 3.016 g.  $\text{AgNO}_2$ . (Ley and Schaefer, B. 1906, 39. 1263.)

100 g.  $\text{H}_2\text{O}$  sat. with  $\text{AgNO}_2$  and  $\text{Sr}(\text{NO}_2)_2$  contain 10.9 g.  $\text{AgNO}_2$  and 78.3 g.  $\text{Sr}(\text{NO}_2)_2$  at  $14^\circ$ . (Oswald)

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am Ch J. 1898, 20, 829.)

Insol in alcohol.

Sol in acetone. (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37, 4328.)

100 pts. acetone dissolve 23 pts. at ord temp.; 40 pts. at  $81.6^\circ$ . (Scholl and Steinkopf, B. 1906, 39, 4393.)

Sl. sol. in methyl acetate. (Bezold, Dissert 1906.)

Insol. in ethyl acetate. (Hammers, Dissert. 1906; Naumann, B. 1910, 43, 314.)

Silver sodium nitrite,  $\text{AgNO}_2$ ,  $\text{NaNO}_2$ .

Completely sol. in a little  $\text{H}_2\text{O}$ , but decomp. by more  $\text{H}_2\text{O}$ . (Fischer.)

$+\frac{1}{2}\text{H}_2\text{O}$ . (Oswald, A. ch. 1914, (9) 1. 75.)

Silver nitrite ammonia,  $\text{AgNO}_2$ ,  $\text{NH}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; less sol. in alcohol; nearly insol in ether. (Reychler, B. 18, 2425.)

$\text{AgNO}_2$ ,  $2\text{NH}_3$ . (Reychler.)

$\text{AgNO}_2$ ,  $3\text{NH}_3$ . Deliquescent. Sol in  $\text{H}_2\text{O}$ . (Reychler.)

Sodium nitrite,  $\text{NaNO}_2$ .

Not deliquescent. Very sol. in  $\text{H}_2\text{O}$ .

More sol. in  $\text{H}_2\text{O}$  than  $\text{NaNO}_3$ , but less in alcohol.

6 pts.  $\text{H}_2\text{O}$  dissolve 5 pts.  $\text{NaNO}_2$  at  $15^\circ$ . (Divers, Chem Soc. 1899, 75, 86.)

100 g.  $\text{H}_2\text{O}$  dissolve 83.25 g.  $\text{NaNO}_2$  at  $15^\circ$ . (Niemetowski and Roszkowski, J. phys. Ch. 1897, 22, 146.)

100 pts.  $\text{H}_2\text{O}$  dissolve at:

$0^\circ$   $10^\circ$   $20^\circ$   $30^\circ$   $40^\circ$   
73 78 84 91.5 98 5 pts.  $\text{NaNO}_2$ ,

$50^\circ$   $60^\circ$   $70^\circ$   $80^\circ$   
107 116 125.5 136 pts.  $\text{NaNO}_2$ ,

$90^\circ$   $100^\circ$   $110^\circ$   $120^\circ$   
147 160 5 178 198 5 pts.  $\text{NaNO}_2$ .

B-pt. of sat.  $\text{NaNO}_2 + \text{Aq} = 128^\circ$  at 761.5 mm. pressure. Sat. solution at  $20^\circ$  has a sp. gr. = 1.3585. (Oswald, A. ch. 1914, (9) 1. 59.)

Solubility in  $\text{NaNO}_2 + \text{Aq}$  at  $t^\circ$ .

$t^\circ$	100 pts $\text{H}_2\text{O}$ dissolve	
	$\text{NaNO}_2$	$\text{NaNO}_2$
0	73	0
	68 5	19
	67 1	36 3
	64 9	41.7*
	50.3	46.8
	30 2	55.4
	0	74 2

Solubility in  $\text{NaNO}_2 + \text{Aq}$  at  $t^\circ$ .—Continued.

$t^\circ$	100 pts $\text{H}_2\text{O}$ dissolve	
	$\text{NaNO}_2$	$\text{NaNO}_2$
21	84.75 81 1 79 7 73 8 73 1 64 2 46 8 21.6 0	0 9 6 23 5 50 8 54.5* 56.7 62 8 74 7 89 3

\* Both salts in solid phase.

(Oswald, A. ch. 1914, (9)-1. 71.)

Solubility in  $H_2O$  is decreased by presence of  $Na_2SO_4$ . 100 pts.  $H_2O$  dissolve 11.8 pts.  $Na_2SO_4$  + 53.9 pts.  $NaNO_2$ . (Oswald.)  
Very sol. in liquid  $NH_3$ . (Franklin, Am Ch. J. 1898, 20, 829.)

Neither dissolved nor attacked by liquid  $NO_2$ . (Frankland, Chem. Soc. 1901, 79, 1361.)

Sol. in warm 90% alcohol. (Hampe, A. 125, 336.)

100 pts. absolute methyl alcohol dissolve 4.43 pts. at  $19.5^\circ$ ; 100 pts. absolute ethyl alcohol dissolve 0.31 pt. at  $19.5^\circ$ . (de Bruyn, Z. phys. Ch. 10, 783.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790); ethyl acetate. (Naumann, B. 1910, 43, 314.)

#### Strontium nitrite, $Sr(NO_2)_2$ .

Very sol. in  $H_2O$ , and very sl. sol. in boiling alcohol. (Lang, Pogg. 118, 287.)

Easily sol. in 90% alcohol. (Hampe, A. 125, 310.)

+  $H_2O$ . Hygroscopic. 100 cem. of the sat. solution contain 62.83 g.  $Sr(NO_2)_2 + H_2O$  at  $19.5^\circ$ . (Vogel, Z. anorg. 1903, 35, 393.)

100 pts. $H_2O$ dissolve at:				
$0^\circ$	$10^\circ$	$20^\circ$	$30^\circ$	
58.9	67.6	75.5	84	pts. $Sr(NO_2)_2 + H_2O$ ,
$40^\circ$	$50^\circ$	$60^\circ$	$70^\circ$	
94	105	116	130	pts. $Sr(NO_2)_2 + H_2O$ ,
$80^\circ$	$90^\circ$	$100^\circ$		
145	162	182	pts.	$Sr(NO_2)_2 + H_2O$

Bpt. of sat. solution is  $112.5^\circ$  at 763 mm. pressure. The sat. solution at  $19^\circ$  contains 39.8%  $Sr(NO_2)_2$  and has sp. gr. at  $19^\circ/0^\circ = 1.4461$ . (Oswald, A. ch. 1914, (9) 1, 64.)

Solubility in alcohol 100 cem. of the solution in 90% alcohol contain 0.42 g.  $Sr(NO_2)_2 + H_2O$  at  $20^\circ$ . 100 cem. of the solution in absolute alcohol contain 0.04 g.  $Sr(NO_2)_2 + H_2O$  at  $20^\circ$ . (Vogel, Z. anorg. 1903, 35, 393.)

#### Thallous nitrite, $TlNO_2$ .

Sol in  $H_2O$ . Ppt. from solution in  $H_2O$  by absolute alcohol (Vogel, Z. anorg. 1903, 35, 404.)

Very sol in  $H_2O$ ; insol in alcohol (Ball, Chem. Soc 1913, 103, 2131.)

Zinc nitrite, basic,  $2ZnO, N_2O_3$ .  
(Hampe, A. 125, 334.)

Zinc nitrite,  $Zn(NO_2)_2 + 3H_2O$ .

Deliquescent. Sol. in  $H_2O$  and alcohol. (Lang, J. B. 1862, 90.)

#### Nitrous oxide, $N_2O$ .

See Nitrogen monoxide.

#### Nitroxyl bromide, $NO_2Br$ .

Decomp. spontaneously or with  $H_2O$ . (Hasenbach, J. pr. (2) 4, 1.)

Does not exist. (Fischlich, A. 224, 270.)

#### Nitroxyl chloride, $NO_2Cl$ .

Decomp. by  $H_2O$  without evolution of gas. Probably does not exist. (Geuther, A. 245, 98.)

#### Nitroxyl fluoride, $NO_2F$ .

Absorbed by  $H_2O$  with formation of  $HNO_2$  and  $HOF$ . Decomp. by  $H_2O$ , alcohol, and ether. (Moissan and Lebeau, C. R. 1905, 140, 1024.)

#### Nitroxypyrosulphuric acid, ( $HO$ ) $S_2O_5$ ( $NO_2$ ), $H_2O$ .

Very deliquescent. Sol in  $H_2O$  with decomp. (Weber, Pogg. 142, 602.)

#### Nitryl chloride, $NO_2Cl$ .

See Nitroxyl chloride.

#### Octamine cobaltic compounds.

The formulae of the following octamine cobaltic compounds should be reduced one-half, and they should be classed with the tetramine cobaltic compounds. (Jorgensen, Z. anorg. 2, 279.)

#### Octamine cobaltic carbonate, $Co_2(NH_3)_8(CO_3)_2 + 3H_2O$ .

Easily sol in  $H_2O$ . (Vortmann and Blasberg, B. 22, 2654.)

#### See Carbonatotetramine carbonate.

$Co_2(NH_3)_8(CO_3)_4 + 3H_2O$ . Rather difficultly sol in  $H_2O$ .

— — — chloride (?),  $Co_2(NH_3)_8(OH)_2Cl_4 + 2H_2O$ .

Ppt.  
 $Co_2(NH_3)_8(OH)_2Cl_4$ ,  $2HgCl_2$ ,  
 $Co_2(NH_3)_8(OH)_2Cl_4$ ,  $PtCl_4 + H_2O$ . (Vortmann and Blasberg, B. 22, 2654.)

— — — mercuric chloride,  $Co_2(NH_3)_8Cl_6$ ,  $3HgCl_2 + H_2O$ .

$Co_2(NH_3)_8Cl_6$ ,  $HgCl_2$ . Difficultly sol. in cold  $H_2O$ , decomp. on warming (Vortmann.)

— — — chlorosulphite,  $Co_2(NH_3)_8(SO_3)_2Cl_2 + 4H_2O$ .

Sol. in  $H_2O$  (Vortmann and Magdeburg, B. 22, 2635.)

— — — chromate,  
 $Co_2(NH_3)_8(CrO_4)_2(H_2O)_2 + 2H_2O$ .

Sol. in  $H_2O$  or acetic acid, +  $8H_2O$ . Sol in warm  $H_2O$  or acetic acid.  
 $Co_2(NH_3)_8(CrO_4)_2Cr_2O_7(H_2O)_2 + H_2O$ . Easily sol in  $H_2O$ , from which it is precipitated by dil.  $HNO_3$  + Aq. (Vortmann, B. 15, 5896.)

Octamine cobaltic nitrate,  $\text{Co}_2(\text{NH}_3)_8(\text{NO}_3)_4 + 2\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ , precipitated by conc  $\text{HNO}_3 + \text{Aq}$  (Vortmann.)

— — — nitratocarbonate,  
 $\text{Co}_2(\text{NH}_3)_8(\text{NO}_3)_2(\text{CO}_3)_2 + \text{H}_2\text{O}$ .

Less sol than other octamine carbonates. (Vortmann and Blasberg, B 22. 2650.)

See Carbonatotetramine cobaltic nitrate.

— — — purpureochloride,  
 $\text{Co}_2(\text{NH}_3)_8\text{Cl}_6(\text{H}_2\text{O})_2$ .

Easily sol. in  $\text{H}_2\text{O}$ ; partly precipitated from aqueous solution by conc  $\text{HCl} + \text{Aq}$ . (Vortmann, B. 10. 1451.)

= Chlorotetramine cobaltic chloride,  
 $\text{ClCo}(\text{NH}_3)_4(\text{OH})_2\text{Cl}_2$ , wick see. (Jorgensen, J pr. (2) 42. 211.)

— — — purpureomercuric chloride,  
 $\text{Co}_2(\text{NH}_3)_8\text{Cl}_6(\text{H}_2\text{O})_2, 6\text{HgCl}_2$ .

Sl. sol in cold, easily in hot  $\text{H}_2\text{O}$ . (Vortmann)

= Chlorotetramine cobaltic mercuric chloride. (Jorgensen, J pr. (2) 42. 211.)

— — — purpureomercuric hydroxychloride,  
 $\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgCl})_4(\text{HgOH})_4\text{Cl}_4$ .

Ppt. (Vortmann and Morgulis, B 22. 2647.)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgOH})_4\text{Cl}_4$  (V and M.)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgOH})_4\text{Cl}_4(\text{OH})_2$ . (V. and M.)

— — — purpureomercuriodide, basic,  
 $\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgOH})_4\text{I}_4$

(Vortmann and Borsbach, B 23. 2805)

— — — purpureochloroplatinate.

Very sl sol. in  $\text{H}_2\text{O}$ . (Vortmann)

= Chlorotetramine cobaltic chloroplatinate,  
 $\text{ClCo}(\text{NH}_3)_4(\text{OH})_2\text{PtCl}_6 + 2\text{H}_2\text{O}$ . (Jorgensen, J. pr. (2) 42. 215.)

— — — roseochloride,  $\text{Co}_2(\text{NH}_3)_8\text{Cl}_6(\text{H}_2\text{O})_2 + 2\text{H}_2\text{O}$ , or  $4\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Vortmann, B 15. 1891.)

See Roseotetramine cobaltic chloride.

— — — roseomercuric chloride,  
 $\text{Co}_2(\text{NH}_3)_8\text{Cl}_6(\text{H}_2\text{O})_2, 6\text{HgCl}_2 + 3\text{H}_2\text{O}$ .  
Ppt. (Vortmann)

— — — roseomercuric hydroxychloride,  
 $\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgCl})_4(\text{HgOH})_4\text{Cl}_6$ .

(Vortmann and Morgulis, B 22. 2647)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgOH})_4\text{Cl}_6$ . (V. and M.)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgOH})_4\text{Cl}_6(\text{OH})_2$ . (V. and M.)

— — — roseomercuric iodide,  
 $\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgI})_4\text{I}_4$

Ppt Sol in  $\text{HCl}$  or  $\text{HNO}_3$ . (Vortmann and Borsbach, B. 23. 2806.)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgI})_4\text{I}_6$  Ppt. (V. and B.)

$\text{Co}_2\text{N}_8\text{H}_{16}(\text{HgI})_4(\text{OH})_2$  Ppt. (V and B.)

Octamine cobaltic sulphate,  
 $\text{Co}_2(\text{NH}_3)_8(\text{OH})_2(\text{SO}_4)_2 + 3\text{H}_2\text{O}$ . (?)

Insol. in  $\text{H}_2\text{O}$  or dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sol. in moderately conc  $\text{HCl} + \text{Aq}$ . (Vortmann and Blasberg, B. 22. 2653.)

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_4)_2 + 6\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Vortmann.)

$+ 4\text{H}_2\text{O}$ . Easily sol in  $\text{H}_2\text{O}$ .

See Roseotetramine cobaltic sulphate.

— — — sulphatocarbonate,  
 $\text{Co}_2(\text{NH}_3)_8\text{SO}_4(\text{CO}_3)_2 + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vortmann, B 10. 1458)

See Carbonatotetramine cobaltic sulphate.

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_4)_2\text{CO}_3 + 4\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ . (Vortmann and Blasberg, B. 22. 2650.)

— — — ammonium sulphate,  
 $\text{Co}_2(\text{NH}_3)_8(\text{SO}_3\text{NH}_4)_6 + 10\text{H}_2\text{O}$

See Octamine cobaltisulphite, ammonium.

Octamine cobaltisulphurous acid.

Ammonium octamine cobaltisulphite,  
 $\text{Co}_2(\text{NH}_3)_8(\text{SO}_3\text{NH}_4)_6 + 10\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vortmann and Magdeburg, B. 22. 2632.)

$\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_2(\text{SO}_3\text{NH}_4)_2 + 4\text{H}_2\text{O}$ .

Ammonium barium — — —  
 $\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_2\text{Ba}_2(\text{NH}_4)_2 + 7\text{H}_2\text{O}$   
Ppt. (V. and M.)

Barium — — —,  $\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_2\text{Ba}_2 + 7\text{H}_2\text{O}$ .

Ppt (V and M)

Cobaltic — — —,  
 $\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_2\text{Co}_2 + 36\text{H}_2\text{O}$ , and  
 $24\text{H}_2\text{O}$ .

Luteocobaltic — — —,  
 $\text{Co}_2(\text{NH}_3)_8(\text{SO}_3)_2(\text{NH}_3)_{12}\text{Co}_2 + 3\text{H}_2\text{O}$ .  
Ppt. (V. and M.)

Octamine iridium chloride,  
 $\text{Ir}_2(\text{NH}_3)_8\text{Cl}_6$ .

Very sol. in  $\text{H}_2\text{O}$  (Palmaer, B. 22. 16.)

Octamine iridium chlorosulphate,  
 $\text{Ir}_2(\text{NH}_3)_8\text{Cl}_6\text{SO}_4 + 4\text{H}_2\text{O}$ .  
(Palmaer.)

Osmiamic acid,  $\text{H}_2\text{N}_2\text{O}_8\text{O}_6$ , or  
 $\text{H}_2\text{N}_2\text{O}_8\text{O}_6(?)$ .

Known only in aqueous solution, which is unstable

**Ammonium osmiamate.**

Easily sol. in  $H_2O$  or alcohol. (Fritzsche and Struve, J. pr. 41. 97.)

**Barium osmiamate,  $BaOsOs_2$ .**

Moderately sol. in  $H_2O$ .

**Lead osmiamate.**

Ppt. Sol. in acids without decomp.

**Lead osmiamate chloride.**

Ppt.

**Mercurous osmiamate.**

Ppt.

**Mercuric osmiamate.**

Ppt.

**Potassium osmiamate,  $K_2OsOs_2$ , or  $K_2N_2Os_2Os_2$ .**

Sl. sol. in cold, much more easily in hot  $H_2O$ . Sl. sol. in alcohol. Insol. in ether.

**Silver osmiamate,  $Ag_2N_2Os_2Os_2$ .**

Extremely sl. sol. in  $H_2O$  or cold  $HNO_3$  + Aq. Sol. in  $NH_4OH$  + Aq.

**Sodium osmiamate.**

Easily sol. in  $H_2O$  or alcohol.

**Zinc osmiamate,  $ZnN_2Os_2Os_2$ .**

Decomp. by  $H_2O$ . Nearly insol. in  $NH_4OH$  + Aq.

**Osmic acid,  $H_2OsO_4$ .**

Stable in  $H_2O$  containing alcohol. Sol. in  $HNO_3$  or  $HCl$  + Aq. Not attacked by  $H_2SO_4$  + Aq. (Moraht and Wischin, Z. anorg. 3. 153.)

100 g.  $H_2O$  dissolve 5.68 g.  $H_2OsO_4$  at  $15^\circ$ . (Squire and Cains, Pharm. J. 1905, 74. 720.)

Attacked by liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 828.)

**Barium osmate,  $BaOsO_4 + H_2O$ .**

Insol. in  $H_2O$ . (Claus, Pogg. 65. 205.)

**Calcium osmate,  $CaOsO_4$ .**

Insol. in  $H_2O$ . (Fremy, J. pr. 33. 411.)

**Lead osmate.**

Insol. in  $H_2O$ . (Fremy.)

**Potassium osmate,  $K_2OsO_4 + 2H_2O$ .**

Sl. sol. in cold, much more sol. in hot  $H_2O$ , but is decomp. thereby. Sl. sol. in  $KNO_3$  + Aq. Insol. in dil. or conc. alcohol and ether. (Fremy, A. ch. (3) 12. 516.)

Insol. in conc. saline solutions. (Gibbs, Am. J. Sci. (2) 31. 70.)

**Sodium osmate,  $Na_2OsO_4$ .**

Sol. in  $H_2O$ ; insol. in alcohol and ether. (Fremy, l. c.)

**Perosmic acid.**

See Perosmic acid.

**Osminitrous acid.****Ammonium osminitrite,  $(NH_4)_2Os(NO_2)_2 + 2H_2O$** 

Sol. in  $H_2O$ . Decomp. when solution is warmed. (Wintrebert, C. R. 1905, 140. 586.)

**Barium osminitrite,  $BaOs(NO_2)_2$ .**

+  $H_2O$ ; +  $4H_2O$ . (Wintrebert.)

**Calcium osminitrite,  $CaOs(NO_2)_2 + 4H_2O$ .**

(Wintrebert.)

**Magnesium osminitrite,  $MgOs(NO_2)_2 + 4H_2O$ .**

(Wintrebert.)

**Potassium osminitrite,  $K_2Os(NO_2)_2$** 

Very hygroscopic. Very sol. in  $H_2O$ . Decomp. by  $HCl$ ,  $HBr$  and  $HI$ . (Wintrebert, A. ch. 1903, (7) 28. 135.)

**Silver osminitrite,  $Ag_2Os(NO_2)_2 + 2H_2O$ .**

Sl. sol. in  $H_2O$  with partial decomp. (Wintrebert, C. R. 1905, 140. 586.)

**Sodium osminitrite,  $Na_2Os(NO_2)_2 + 2H_2O$ .**

Sol. in  $H_2O$ . (Wintrebert.)

**Strontium osminitrite,  $SrOs(NO_2)_2 + 2H_2O$ .**

(Wintrebert.)

**Zinc osminitrite,  $ZnOs(NO_2)_2 + \frac{1}{2}H_2O$ .**

(Wintrebert.)

**Osmyloxynitrous acid.****Ammonium osmyloxynitrite,**

$(NH_4)_2OsO_3(NO_2)_2$ .

Decomp. by boiling conc.  $HCl$  and by  $KOH$  + Aq. (Wintrebert, A. ch. 1903, (7) 28. 107.)

**Barium osmyloxynitrite,  $BaOsO_3(NO_2)_2 + 4H_2O$ .**

(Wintrebert.)

**Potassium osmyloxynitrite,  $K_2OsO_3(NO_2)_2 + 3H_2O$ .**

Sl. sol. in cold  $H_2O$ . Aqueous solution decomp. slowly. Sol. with decomp. in dil.  $KOH$  + Aq. (Wintrebert.)

**Silver osmyloxynitrite,  $Ag_2OsO_3(NO_2)_2 + H_2O$ .**

(Wintrebert.)

Strontium osmyloxynitrate,  $\text{SrOsO}_3(\text{NO}_2)_2 + 3\text{H}_2\text{O}$ . (Wintrebert.)

### Osmynitrous acid.

Potassium osmylnitrite,  $\text{K}_2\text{OsO}_2(\text{NO}_2)_4$ .

Decomp. by  $\text{H}_2\text{O}$  and by excess of  $\text{KOH} + \text{Aq}$ . (Weinland, A. ch. 1903, (7) 28. 64.)

### Osmisulphurous acid.

Potassium osmisulphite,  $[\text{Os}(\text{H}_2\text{O})(\text{SO}_2)_2]\text{K}_3 + 4\text{H}_2\text{O}$ .

Ppt. (Rosenheim, Z. anorg. 1899, 21. 144.)

Potassium hydrogen osmisulphite,  $[\text{Os}_2(\text{H}_2\text{O})(\text{SO}_2)_{11}]\text{K}_{11}\text{H}_2 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  without decomp. (Rosenheim.)  
 $[\text{Os}(\text{SO}_2)_2]\text{K}_4\text{H}_2 + 2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  without decomp. (Rosenheim.)

Sodium osmisulphite,  $[\text{Os}(\text{SO}_2)_2]\text{Na}_4 + 8\text{H}_2\text{O}$ .

Only sl. sol. in  $\text{H}_2\text{O}$ .

$[\text{Os}_2(\text{H}_2\text{O})(\text{SO}_2)_2]\text{Na}_8 + 4\text{H}_2\text{O}$ . Ppt.  
 $[\text{OsO}(\text{SO}_2)_2]\text{Na}_4 + 3\text{H}_2\text{O}$ . Ppt. (Rosenheim.)

### Osmium, Os.

When finely divided and not ignited to a very high temperature, Os is sol. in  $\text{HNO}_3 + \text{Aq}$  or aqua regia. When ignited it is not attacked by any acid.

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. ch. J. 1898, 20.. 828)

### Osmium ammonium comps.

See—

Oxyosmiumamine comps.,  $\text{OsO}(\text{NH}_3)_2\text{X}$ .  
 Oxyosmiumdiamine comps.,  $\text{OsO}_2(\text{NH}_3)_4\text{X}_2$ .

### Osmium bromide with MBr.

See Bromosmate, M.

### Osmium dichloride, $\text{OsCl}_2$ .

Deliquescent. Sol. in little, but decomp. by more  $\text{H}_2\text{O}$ , with pptn. of Os. Sol. in conc. alkali chlorides + Aq with combination and partial decomp. (Berzelius.)

Sol. in alcohol and ether.

Insol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$ . Sl. sol. in  $\text{HNO}_3$  and aqua regia. Slowly sol. in strong alkali. Insol. in liquid  $\text{Cl}_2$ . Insol. in alcohol and formaldehyde (Ruff, Z. anorg. 1910, 66. 455.)

### Osmium trichloride, $\text{OsCl}_3$ .

Hydrosopic. Sol. in conc.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and conc.  $\text{HNO}_3$ . Sol. in alkali and in  $\text{NH}_4\text{OH}$ . Insol. in liquid  $\text{Cl}_2$ . Easily sol. in alcohol. Sl. sol. in ether. (Ruff, Z. anorg. 1910, 66. 453.)

+  $3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Moraht and Wischin, Z. anorg. 3. 153.)

### Osmium tetrachloride, $\text{OsCl}_4$ .

Sol. in a little  $\text{H}_2\text{O}$ , but decomp. by further addition of that solvent. Sol. in conc.  $\text{HCl} + \text{Aq}$ .

### Osmium trichloride with MCl.

See Chlorosmate, M.

### Osmium tetrachloride with MCl.

See Chlorosmate, M.

### Osmium sodium chloride, $\text{Na}_2\text{OsCl}_3 + 2\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  and in alcohol (Rosenheim, Z. anorg. 1899, 21. 133.)

### Osmium tetrafluoride, $\text{OsF}_4$ .

Sol. in  $\text{H}_2\text{O}$ . (Ruff, B. 1913, 46. 948.)

### Osmium hexafluoride, $\text{OsF}_6$ .

Decomp. by  $\text{H}_2\text{O}$  and conc.  $\text{H}_2\text{SO}_4$ . Sol. in  $\text{NaOH} + \text{Aq}$ . (Ruff, B. 1913, 46. 945.)

### Osmium octofluoride, $\text{OsF}_8$ .

Sol. in  $\text{H}_2\text{O}$ , but is somewhat hydrolyzed. Sol. in conc.  $\text{H}_2\text{SO}_4$  with decomp. Sol. in  $\text{NaOH} + \text{Aq}$ . (Ruff, B. 1913, 46. 944.)

### Osmium monohydroxide, $\text{OsO}$ , $x\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{KOH} + \text{Aq}$ . Slowly but completely sol. in acids. (Berzelius.)

### Osmium dihydroxide, $\text{OsO}_2$ , $\text{H}_2\text{O}$ .

Sol. in  $\text{HCl} + \text{Aq}$  while still moist. Insol. in  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3 + \text{Aq}$ .  
 +  $2\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  while still moist (Claus and Jacoby.)

### Osmium sesquihydroxide, $\text{Os}_2\text{O}_3\text{H}_4$ .

Sol. in acids, and partly sol. in  $\text{KOH} + \text{Aq}$ . (Claus and Jacoby.)

### Osmium iodide, $\text{OsI}_4$ .

Extremely deliquescent. Sol. in  $\text{H}_2\text{O}$  of alcohol, but solution is unstable. (Moraht and Wischin, Z. anorg. 3. 153.)

### Osmium potassium nitroschloride, $\text{K}_2\text{Os}(\text{NO})\text{Cl}_4$ .

Stable in aqueous solution. Only sl. attacked by hot  $\text{HNO}_3$ . (Wintrebert, A. ch. 1903, (7) 28. 132.)

### Osmium monoxide, $\text{OsO}$ .

Insol. in  $\text{H}_2\text{O}$  or acids. (Claus and Jacoby.)

### Osmium dioxide, $\text{OsO}_2$ .

Insol. in  $\text{H}_2\text{O}$  or acids.

### Osmium sesquioxide, $\text{Os}_2\text{O}_3$ .

Insol. in acids. (Claus and Jacoby.)

**Osmium trioxide, "Osmic acid,"**  $\text{OsO}_3$ .

See Osmic acid.

**Osmium tetroxide, "Perosmic acid,"**  $\text{OsO}_4$ .

Slowly but abundantly sol in  $\text{H}_2\text{O}$ . Sol in alcohol and ether with gradual decomposition. Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$ , the solution undergoing decomposition on heating.

**Osmium oxide ammonia,**  $\text{OsO}_2 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$ .

See Oxyosmiumamine hydroxide.

**Osmium oxysulphide,**  $\text{Os}_2\text{S}_3\text{O}_5 + 2\text{H}_2\text{O}$ .

Unstable.

$\text{OsSO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ . (v. Meyer, J. pt. (2) 16, 77.)

$\text{Os}_2\text{O}_3\text{S}_2 + \text{H}_2\text{O}$  Decomp and dissolved by  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Moraht and Wischin, Z. anorg. 3, 153.)

**Osmium sulphide,**  $\text{Os}_2\text{S}_3$  (?).

(Berzelius)

Mm *Lauride* Insol in all acids, even in aqua regia.

**Osmium disulphide,**  $\text{OsS}_2$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; not more sol in alkali hydrates or carbonates + Aq. Insol. in alkalis after drying (Fremy, A. ch. (3) 12, 521)

**Osmium tetrakisulphide,**  $\text{OsS}_4 + \text{H}_2\text{O}$ .

Insol. in alkali sulphides, carbonates, or hydroxides + Aq. Sol. in cold dil  $\text{HNO}_3 + \text{Aq.}$  (Claus.)

**Osmocyanhydric acid,**  $\text{H}_4\text{Os}(\text{CN})_6$ .

Easily sol. in  $\text{H}_2\text{O}$  and alcohol. Insol in ether (Martius, A. 117, 361.)

**Barium osmocyanide,**  $\text{Ba}_2\text{Os}(\text{CN})_6 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  and dil. alcohol. (M.)

**Barium potassium osmocyanide,**

$\text{BaK}_2\text{Os}(\text{CN})_6 + 3\text{H}_2\text{O}$

Efflorescent. Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ .

**Ferric osmocyanide,**  $\text{Fe}_4[\text{Os}(\text{CN})_6]_3 + x\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ .

**Potassium osmocyanide,**  $\text{K}_4\text{Os}(\text{CN})_6 + 3\text{H}_2\text{O}$ .

Moderately sol. in boiling, less in cold  $\text{H}_2\text{O}$ . Insol in alcohol and ether.

**Osmosyl ammonium comps.**

See Oxyosmium amine comps.

**Osmosyl potassium bromide,**  $\text{K}_2\text{OsO}_3\text{Br}_4 + 2\text{H}_2\text{O}$

Same properties as the chloride. (Wintrebert, A. ch. 1903, (7) 28, 94.)

**Osmyl potassium chloride,**  $\text{K}_2\text{OsO}_2\text{Cl}_4$ .

Very sol in  $\text{H}_2\text{O}$ . Solution is stable only in the presence of a small amt. of  $\text{HCl}$ . Decomp. by hot conc.  $\text{HCl}$ .

+  $2\text{H}_2\text{O}$ . As the anhydrous salt. (Wintrebert, A. ch. 1903, (7) 28, 86)

**Osmyl ditetramine comps.**

See Oxyosmium diamine comps.

**Oxamidodisulphonic acid.**

See Hydroxylamine monosulphonic acid.

**Oximidosulphonic acid.**

See Hydroxylamine disulphonic acid.

**Oxyamidodisulphonic acid.**

See Hydroxylamine sulphonic acid.

**Oxyammonium salts.**

See Hydroxylamine salts.

**Oxycobaltamines, acid comps.**

(Maquenne, C. R. 96, 344.)

Are anhydrous oxycobaltamine comps., which see. (Vortmann, M. ch. 6, 404)

**Oxycobaltamine chloride,**

$\text{Co}_2(\text{NH}_3)_{10} \left( \begin{smallmatrix} \text{OH} \\ \text{O}(\text{OH}) \end{smallmatrix} \right) \text{Cl}_4$ .

(Vortmann, M. ch. 6, 404.)

$\text{Co}_2(\text{NH}_3)_{10}\text{O}_2\text{Cl}_4$ ,  $\text{HCl} + 3\text{H}_2\text{O}$ . Is anhydrous oxycobaltamine chloride, which see.

— chloronitrate hydrochloride,

$\text{Co}_2(\text{NH}_3)_{10}(\text{OH})(\text{O.OH})(\text{NO}_2)_2\text{Cl}_2$ ,  $4\text{HCl} + 3\text{H}_2\text{O}$ .

Is anhydrous oxycobaltamine chloronitrate, which see.

— chlorosulphate,

$\text{Co}_2(\text{NH}_3)_{10} \left( \begin{smallmatrix} \text{OH} \\ \text{O}(\text{OH}) \end{smallmatrix} \right) (\text{SO}_4)_2\text{Cl}_2$ ,  $4\text{HCl}$

Easily decomp.

— iodide,  $\text{Co}_2(\text{NH}_3)_{10} \left( \begin{smallmatrix} \text{OH} \\ \text{O}(\text{OH}) \end{smallmatrix} \right) \text{I}_4$

Sl. sol in  $\text{H}_2\text{O}$ . Decomp. by much  $\text{H}_2\text{O}$ . (Vortmann)

— nitrate,  $\text{Co}_2(\text{NH}_3)_{10}(\text{OH})(\text{O.OH})(\text{NO}_3)_4 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ .

$\text{Co}_2(\text{NH}_3)_{10}(\text{OH})(\text{O.OH})(\text{NO}_3)_4$ ,  $\text{HNO}_3 + 2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ .

— nitratodisulphate,

$\text{Co}_2(\text{NH}_3)_{10}(\text{OH})(\text{O.OH})(\text{SO}_4)(\text{NO}_3)_3$ ,  $4\text{HNO}_3$ .

Decomp. at once by  $\text{H}_2\text{O}$ .

Oxycobaltamine sulphate,  
 $\text{Co}_2(\text{NH}_3)_{10}\text{O}_2(\text{SO}_4)_2, \text{H}_2\text{SO}_4 + \text{H}_2\text{O}.$

Verv sl. sol in  $\text{H}_2\text{O}$  with decomp; more easily sol. in acidified  $\text{H}_2\text{O}$  Sol. in acids (Maquenne, C. R. 96. 344)

violently by  $\text{H}_2\text{O}$

**Oxygen, O.**

100 vols  $\text{H}_2\text{O}$  absorb 4.6 vols O gas at ord temp (Ost-Graham)

Sol in 27 pts  $\text{H}_2\text{O}$  at ord temp (Pelouze and Fremy)

100 vols  $\text{H}_2\text{O}$  dissolve 0.025 vol O (Gay-Lussac)

1 vol  $\text{H}_2\text{O}$  at  $t^\circ$  and 760 mm. absorbs V vols. O gas, reduced to  $0^\circ$  and 760 mm.

$t^\circ$	V	$t^\circ$	V	$t^\circ$	V
0	0.04114	7	0.03465	14	0.03034

(Müller.)

Abundantly absorbed by oil of turpentine. Oil of turpentine absorbs its own vol. O when exposed two weeks to the air, but does not give it off on boiling. (Brandes.)

Absorbed by other oils, but this is decomposition rather than absorption, as the oils are oxidized. (See Storer's Diet.)

100 vols. arterial blood dissolve 10-13 vols. O. (Magnus.)

Coefficient of absorption for petroleum = 0.202 at 20°; 0.229 at 10°. (Gniewas and Walfisz, Z. phys. Ch. 1, 70.)

The author examined the solubility of O<sub>2</sub> and N<sub>2</sub> at low temp. in alcohols, ethers, acetone, CHCl<sub>3</sub>, petroleum, benzene and various inorganic liquids; at low temp. the solubility of the N<sub>2</sub> increases at the same rate as that of the O<sub>2</sub> (Claude, C. R. 1900, 131, 448.)

## Oxymercuriammonium bromate,

(Rammelsberg, Pogg. 55, 82.)

— carbonate, (NH<sub>4</sub>OH<sub>2</sub>)CO<sub>3</sub> +  $\frac{1}{2}$ H<sub>2</sub>O.

Insol. in H<sub>2</sub>O. Decomp. by HCl + Aq. only when conc. Not decomp. by boiling KOH + Aq. Decomp. by KI or K<sub>2</sub>S + Aq. (Hnzcl.) + H<sub>2</sub>O. As above. (Hnzcl.)

**Oxydimercuri ammonium chloride,**  
( $\text{NH}_2\text{OH}_2$ )Cl.

Is dimercuri ammonium chloride,  $\text{NH}_2\text{Cl} + \text{H}_2\text{O}$ , which see

— **oxybimercuri ammonium chloride,**  
( $\text{NH}_2\text{OH}_2$ )Cl, ( $\text{NH}_2\text{OH}_2$ ) $\text{H}_2\text{Cl}$  (?)

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{HCl} + \text{Aq.}$  More difficultly sol. in very dil.  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3 + \text{Aq.}$  Insol. in conc.  $\text{H}_2\text{SO}_4$ . Sol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq.}$  or ( $\text{NH}_4$ ) $\text{SO}_4 + \text{Aq.}$  Decomp. by  $\text{KOH} + \text{Aq.}$  (Schmieder.)

— **chromate,** ( $\text{NH}_2\text{OH}_2$ ) $\text{CrO}_4$ .

Not decomp. by  $\text{KOH} + \text{Aq.}$  (Hirzel, J. B. 1852. 421.)

— **mercuric chromate,** ( $\text{NH}_2\text{OH}_2$ ) $\text{CrO}_4$ ,  $4\text{HgO}$ ,  $3\text{CrO}_3$

Decomp. by  $\text{HNO}_3$  without going into solution. Easily sol. in  $\text{HCl}$  (Hirzel.)

Composition is ( $\text{NH}_2\text{OH}_2$ ) $\text{O}$ ,  $2\text{CrO}_3$ ,  $3[(\text{NH}_4)_2\text{O}$ ,  $2\text{Cr}_2\text{O}_3] = (\text{NH}_2\text{OH}_2)_2\text{Cr}_2\text{O}_7$ ,  $3(\text{NH}_4)_2\text{Cr}_2\text{O}_7$ . (Heusgen, R. t. c. 6. 187.)

Probably ( $\text{NH}_2\text{OH}_2$ ) $\text{Cr}_2\text{O}_7$ ,  $3(\text{NH}_4)_2\text{Cr}_2\text{O}_7 + 2\text{H}_2\text{O}$ .

— **fluoride, acid,** ( $\text{NH}_2\text{OH}_2$ )F, HF.

(Finkener, Pogg. 110. 632.)

Probably  $\text{NH}_2\text{F}$ ,  $\text{HF} + \text{H}_2\text{O}$

— **hydroxide,** ( $\text{NH}_2\text{OH}_2$ )OH =  $\text{NH}_2\text{OH} + \text{H}_2\text{O}$ .

(Millon's base.) Sl. sol. in  $\text{H}_2\text{O}$ , especially if warm. Sol. in 13,000 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ , and 1700 pts. at  $80^\circ$ . Insol. in alcohol or ether. (Gerresheim, A. 195. 373.)

+  $\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  or alcohol. Sol. in traces in  $\text{NH}_4\text{OH} + \text{Aq.}$  Not decomp. by cold  $\text{KOH} + \text{Aq.}$ ; sl. decomp. if hot (Millon.)

— **ammonium iodate,** ( $\text{NH}_2\text{OH}_2$ )IO $_3$ ,  $2\text{NH}_4\text{IO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . (Millon, A. ch. (3) 18. 410.)

— **iodide,** ( $\text{NH}_2\text{OH}_2$ )I.

Sol. in warm  $\text{HCl} + \text{Aq.}$  Not decomp. by boiling  $\text{KOH} + \text{Aq.}$  Sol. in warm  $\text{KI} + \text{Aq.}$  (Rummelsberg, Pogg. 48. 170.)

Correct formula is  $\text{NH}_2\text{OI} + \text{H}_2\text{O}$ . (Rummelsberg.)

— **nitrate,** ( $\text{NH}_2\text{OH}_2$ )NO $_3$ .

Insol. in  $\text{H}_2\text{O}$ ; not decomp. by boiling  $\text{KOH} + \text{Aq.}$  Sol. in cold  $\text{HCl} + \text{Aq.}$  from which it is precipitated by  $\text{H}_2\text{O}$ . Sl. sol. without decomp. in  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4 + \text{Aq.}$  Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Soubeiran.)

Is dimercuri ammonium nitrate,  $\text{NH}_2\text{NO}_3$ . (Pesci, Gazz. ch. it. 20. 485.)

— **ammonium nitrate,**  $\text{NH}_2\text{OH}_2\text{NO}_3$ ,  $2\text{NH}_4\text{NO}_3 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Kane, A. ch. 72. 242.)

Is dimercuri ammonium ammonium nitrate,  $\text{NH}_2\text{NO}_3$ ,  $2\text{NH}_4\text{NO}_3 + 2\text{H}_2\text{O}$ . (Pesci.)

**Oxybimercuri ammonium oxide,**  
( $\text{NH}_2\text{OH}_2$ ) $\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or alcohol; not attacked by boiling conc.  $\text{KOH} + \text{Aq.}$  Sol. in hot  $\text{NH}_4\text{NO}_3$ , +  $\text{Aq.}$ ,  $\text{NH}_4\text{Cl} + \text{Aq.}$ , ( $\text{NH}_4$ ) $\text{SO}_4 + \text{Aq.}$ ,  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq.}$ , ( $\text{NH}_4$ ) $\text{C}_2\text{O}_4 + \text{Aq.}$  (Millon, A. ch. (3) 18. 397.)

— **mercuric phosphate,**  $\text{Hg}(\text{NH}_2\text{OH}_2)\text{PO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Slowly sol. in hot  $\text{HNO}_3 + \text{Aq.}$ , not decomp. by boiling with  $\text{KOH} + \text{Aq.}$ , but by  $\text{KI}$  or  $\text{K}_2\text{S} + \text{Aq.}$  Sol. in  $\text{HCl} + \text{Aq.}$  or much hot ( $\text{NH}_4$ ) $\text{HPO}_4 + \text{Aq.}$  (Hirzel.)

— **mercuric sulphite,** ( $\text{NH}_2\text{OH}_2$ ) $\text{SO}_3$ ,  $\text{HgSO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in much ( $\text{NH}_4$ ) $\text{SO}_4 + \text{Aq.}$  Sol. in  $\text{HCl} + \text{Aq.}$  with decomposition. Insol. in boiling  $\text{KOH} + \text{Aq.}$  (Hirzel.)

— **sulphate,** ( $\text{NH}_2\text{OH}_2$ ) $\text{SO}_4$ .

Sol. in traces in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq.}$  (Kane.)

Insol. in  $\text{HNO}_3 + \text{Aq.}$  (Hirzel.)

Slowly sol. in boiling conc.  $\text{H}_2\text{SO}_4$ . (Hirzel.)

Insol. in conc., easily sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Schmieder, J. pr. 75. 147.)

Moderately sol. in much ( $\text{NH}_4$ ) $\text{SO}_4$  or boiling  $\text{NH}_4\text{Cl} + \text{Aq.}$  Not decomp. by boiling  $\text{KOH} + \text{Aq.}$  (Hirzel.)

Easily decomp. by boiling with dil.  $\text{KOH} + \text{Aq.}$  (Schmieder.)

Does not exist. (Pesci.)

$2\text{NH}_3$ ,  $2\text{HgO}$ ,  $\text{SO}_4$

See Dimercuri ammonium sulphate.

**Oxytrimercuri ammonium chloride,**  
( $\text{NH}_2\text{OH}_2$ ) $\text{Cl}$  (?)

Insol. in  $\text{H}_2\text{O}$ .

— **nitrate,** ( $\text{NH}_2\text{OH}_2$ )NO $_3$ .

Sol. in cold  $\text{HCl} + \text{Aq.}$  from which it is precipitated by  $\text{NH}_4\text{OH} + \text{Aq.}$  Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  without decomp. Not decomp. by  $\text{H}_2\text{SO}_4$  or warm  $\text{KOH} + \text{Aq.}$  (Pagenstecher.) Does not exist (Pesci, Gazz. ch. it. 20. 485.)

**Oxytrimercuri diammonium sulphate,**  
 $2\text{NH}_3$ ,  $3\text{HgO}$ ,  $\text{SO}_4$ .

See Trimercuri ammonium sulphate.

**Oxytrimercuri oxydimercuri ammonium sulphate,**  
 $\text{NH}_2\text{Hg}_2\text{O}_2 > \text{SO}_4$ .

Completely sol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  or ( $\text{NH}_4$ ) $\text{SO}_4 + \text{Aq.}$  Sol. in dil. or conc.  $\text{HCl} + \text{Aq.}$  and very dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  Insol. in  $\text{HNO}_3 + \text{Aq.}$  or conc.  $\text{H}_2\text{SO}_4$ . (Schmieder.)

Does not exist. (Pesci.)

**Oxytetramercuriammonium mercuric nitrate** (?),  $2(\text{NH}_4\text{O}_2)\text{NO}_2$ ,  $\text{HgNO}_2$  (?).

Completely insol. in  $\text{HNO}_3 + \text{Aq.}$  Sol. in warm  $\text{HCl} + \text{Aq.}$  Slowly decomp. by boiling  $\text{KOH} + \text{Aq.}$  Gradually sol. in hot conc.  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Hirzel.)

Does not exist. (Pesci, Gazz. ch. it. 20. 485.)

**Oxynitrosulphonic anhydride,**

Sol. in  $\text{H}_2\text{O}$  with decomp. (Weber, Pogg. 123. 339.)

**Oxysmiumamine hydroxide (Osmosyldiamine hydroxide),**

Insol. in  $\text{H}_2\text{O}$ . Sl. sol. in acids. Sol. in  $\text{KOH} + \text{Aq.}$  When moist, sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$

**Oxysmiumdiamine chloride (Osmyletamine chloride),**  $\text{OsO}_2(\text{N}_2\text{H}_4\text{Cl})_2$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Insol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Gibbs, Am. Ch. J. 3. 233.)

— chloroplatinate,  $\text{OsO}_2(\text{N}_2\text{H}_4\text{Cl})_2$ ,  $\text{PtCl}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

— hydroxide,  $\text{OsO}_2(\text{N}_2\text{H}_4\text{OH})_2$ .

Known only in solution

— nitrate,  $\text{OsO}_2(\text{N}_2\text{H}_4\text{NO}_2)_2$ .

— sulphate,  $\text{OsO}_2(\text{N}_2\text{H}_4)_2\text{SO}_4 + \text{H}_2\text{O}$ .

(Gibbs, Am. Ch. J. 3. 233.)

**Oxyphosphuretted hydrogen** (?),  $\text{P}_2\text{H}(\text{OH})$ .

$\text{P}_2\text{O}$  of Leverrier, and Goldschmidt has this formula according to Franke (J. pr. (2) 35. 341). Decomp. slowly by  $\text{H}_2\text{O}$  or alkalis. Forms potassium salt,  $\text{P}_2\text{H}(\text{OK})$ , sol. in  $\text{H}_2\text{O}$ .

— hydroxide,  $\text{P}_2\text{H}(\text{OH})$ ,  $\text{HI}$ .

Decomp. at  $80^\circ$ .

**Sesquioxysulphuric acid,**  $\text{Pt}_2\text{O}_5$ ,  $3\text{SO}_3$ ,  $\text{SO}_4\text{H}_2 + 11\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Blondel, A. ch. 1905, (8) 6. 113.)

**Barium sesquioxysulphate,**  $\text{Pt}_2\text{O}_5$ ,  $3\text{SO}_3$ ,  $\text{SO}_4\text{Ba} + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Blondel.)

**Potassium sesquioxysulphate,**  $\text{Pt}_2\text{O}_5$ ,  $3\text{SO}_3$ ,  $\text{SO}_4\text{K}_2 + 2\text{H}_2\text{O}$

(Blondel.)

**Sodium sesquioxysulphate,**  $\text{Pt}_2\text{O}_5$ ,  $3\text{SO}_3$ ,  $\text{SO}_4\text{Na}_2 + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Blondel.)

**Oxysulphantimonic acid.**

See Sulphoxyantimonic acid.

**Oxysulpharsenic acid.**

See Sulphoxyarsenic acid.

**Oxysulphazotic acid,**  $\text{H}_2\text{S}_2\text{N}_2\text{O}_{14} =$

Known only in its salts. (Claus, A. 158. 52, 194.)

(Raschig, A. 241. 161.)

**Potassium oxysulphazotate,**  $\text{NO}(\text{SO}_2\text{K})_2$ .

Insol. in alcohol (Fremy, A. ch. (3) 15. 451.)

According to Raschig the formula is

Very sol. in water, with rapid decomposition. (Raschig.)

See also Peroxylaminesulphonate, potassium.

**Oxysulphotungstic acid.**

See Sulphotungstic acid.

**Oxysulphovanadic acid.**

See Sulphoxyvanadic acid.

**Ozone,  $\text{O}_3$ .**

Not appreciably sol. in  $\text{H}_2\text{O}$ . (Schönbein.) Imparts its taste and properties to  $\text{H}_2\text{O}$ . (Williamson.)

Later, Carius (B. 5. 520) found that 1000 vols.  $\text{H}_2\text{O}$  at  $1-2.5^\circ$  absorb 5.11 vols.  $\text{O}_3$  (red. to  $0^\circ$  and 760 mm.). He also still later (A. 174. 1) found, by conducting the gas for 9-12 hours through  $\text{H}_2\text{O}$ , that 1000 vols.  $\text{H}_2\text{O}$  absorb a maximum of 28.160 vols.  $\text{O}_3$ . The ozonized oxygen used contained 3.44 vols.  $\text{O}_2$  in 100 vols.  $\text{O}_3$ . Since gases are absorbed in proportion to their partial pressure, which is very small for the  $\text{O}_3$ , the amount of absorption of water for the  $\text{O}_3$  is very considerable. Carius calculated the coefficient of absorption at  $+1^\circ$  to be 0.834.

Ozone is not at all absorbed by  $\text{H}_2\text{O}$ ; the  $\text{H}_2\text{O}$  through which ozone had been passed gave no reactions for ozone. (Rammelsberg, B. 6. 603.)

Schöne (B. 6. 1224) corroborates Carius, and finds 8.81 vols. to 1000 vols.  $\text{H}_2\text{O}$  as a maximum amount absorbed.

Sol. in  $\text{H}_2\text{O}$ . (Leeds, B. 12. 1831.)

H<sub>2</sub>O takes up  $\frac{2}{3}$  of its vol of O<sub>3</sub> at 0° and 760 mm. pressure and  $\frac{1}{2}$  of its vol at 12°, or about 15 times that of oxygen at the same pressure and temp (Mailfert, C R 1894, 119. 951.)

Solubility in H<sub>2</sub>O at t°.

Temp	Wt. O <sub>3</sub> dissolved in 1 l H <sub>2</sub> O	Wt O <sub>3</sub> in gas-ous mixture above the solution	Coefficient of solubility of O <sub>3</sub>
0	39.4 mgr.	61.5 mgr.	0.641
6	34.3	61	0.562
11.8	29.9	59.6	0.500

42.7	0.174	
40	0.156	
57	0.096	

(Mailfert.)

0.00002 pt. by weight is sol in 1 pt. by weight H<sub>2</sub>O at ordinary temp. and pressure (Ladenburg, B 1898, 31. 2510.)

The solution of O<sub>3</sub> in H<sub>2</sub>O cannot be brought into equilibrium, because when the gas is blown through the liquid, a portion is continually decomposed, although the concentration remains constant (Ingles, Chem. Soc. 1903, 89. 1012.)

About 10 mg. ozone are sol. in 1 l. H<sub>2</sub>O at +2°; 1.5 mg. ozone are sol. at +28°. (Moufang, C. C. 1911, II. 1674.)

Solubility in 0.1-N H<sub>2</sub>SO<sub>4</sub>

C solution: C gas = 0.23 at 20°; 0.44 at 0°. (Luther, Z. Elektrochem 1905, 11. 833.)

The absorption coefficient of the gas in 0.1 N H<sub>2</sub>SO<sub>4</sub> solution is 0.487 (Rothmund, C. C. 1912, I. 1261.)

Sol. in H<sub>2</sub>C<sub>2</sub>O<sub>4</sub> + Aq. (Jeremin, B. 11. 988.) Completely absorbed by oil of turpentine and oil of cinnamon. (Soret, A. ch. (4) 17. 113.)

Dipalladamine chloride, Cl<sub>2</sub>Pd<sub>2</sub>(NH<sub>3</sub>)<sub>4</sub>Cl<sub>4</sub> =

Sl. sol. in H<sub>2</sub>O. (Dewille and Debray, C. R. 38. 296.)

Palladium, Pd

Not attacked by H<sub>2</sub>O. Sl. attacked by HCl + Aq, but Pd sponge or filings are easily dissolved in warm HCl + Aq, with access of air. HNO<sub>3</sub> + Aq of 1.2 sp. gr dissolves Pd slightly, but it is easily sol in HNO<sub>3</sub> + Aq of 1.35 sp gr (Rose)

Easily sol. in aqua regia. Sl sol in conc., but insol in dil HI + Aq. Sol in conc boiling H<sub>2</sub>SO<sub>4</sub>. Sol. in boiling FeCl<sub>3</sub> + Aq. Sol. in HBr + Aq with a little HNO<sub>3</sub>.

Insol in liquid NH<sub>3</sub>. (Gore, Am. Ch. J. 1898, 20. 828)

Palladium ammonium compounds.

See—

Dipalladamine comp., Cl<sub>2</sub>Pd<sub>2</sub>(NH<sub>3</sub>)<sub>4</sub>Cl<sub>4</sub>

Palladosamine " Pd(NH<sub>3</sub>)<sub>2</sub>Cl<sub>2</sub>

Palladosamine " Pd(NH<sub>3</sub>)<sub>2</sub>Cl<sub>2</sub>

Palladium dibromide.

Not known in pure state.

Palladium bromide with MBr.

See Bromopalladite, M.

Palladium tetrabromide with MBr.

See Bromopalladate, M.

Palladous phosphorus bromide, Pd<sub>2</sub>P<sub>2</sub>Br<sub>10</sub>.

Properties as the corresponding chloride. (Strecker, B. 1909, 42. 1776)

Palladium subchloride, Pd<sub>2</sub>Cl<sub>3</sub>

Deliquescent. Decomp. by H<sub>2</sub>O, NH<sub>4</sub>Cl, KI, or NH<sub>4</sub>OH + Aq. (Kane.)

Sol. in acetone. Naumann, B 1904, 37. 4328.)

Palladium dichloride, PdCl<sub>2</sub>

Slowly but completely sol. in H<sub>2</sub>O + 2H<sub>2</sub>O. Not deliquescent when pure. Slowly sol. in H<sub>2</sub>O. Much more sol in H<sub>2</sub>O containing HCl

Sol. in acetone (Eidmann, C. C. 1899, II. 1014.)

Sol. in ethyl acetate. Naumann, B 1904, 37. 3601)

Palladium dichloride with MCl.

See Chloropalladite, M.

Palladium tetrachloride with MCl.

See Chloropalladate, M.

Palladous phosphorus chloride, PdCl<sub>2</sub>, PCl<sub>2</sub>.

Decomp. by H<sub>2</sub>O into deliquescent P(OH)<sub>3</sub>, PdCl<sub>2</sub>. Decomp by alcohol. (Fink, C. R. 115. 176.)

Decomp. by H<sub>2</sub>O. Sol. in CHCl<sub>3</sub> and C<sub>6</sub>H<sub>6</sub>. Insol in ligroin and CCl<sub>4</sub>. (Strecker, B 1909, 42. 1775)

PdCl<sub>2</sub>, 2PCl<sub>2</sub>. Sol. in C<sub>6</sub>H<sub>6</sub>, and decomp. by H<sub>2</sub>O (Fink.)

**Palladous chloride carbon monoxide**,  $\text{PdCl}_2 \cdot 2\text{CO}$

Decomp. by heat (Fink, C. R. 1898, 126, 648)

$2\text{PdCl}_2 \cdot 3\text{CO}$  Decomp. by  $\text{H}_2\text{O}$  Sol. in  $\text{CCl}_4$  (Fink)

**Palladium difluoride**,  $\text{PdF}_2$

Sl. sol. in  $\text{H}_2\text{O}$  or  $\text{HF} + \text{Aq}$  Sl. sol. while moist, in  $\text{NH}_4\text{OH} + \text{Aq}$ , insol. after drying, in  $\text{NH}_4\text{OH} + \text{Aq}$  Insol. in boiling  $\text{NaF}$  or  $\text{NaHF}_2 + \text{Aq}$  (Berzelius)

**Palladium hydride**,  $\text{Pd}_3\text{H}$  (?)

**Palladous hydroxide**,  $\text{PdO} \cdot x\text{H}_2\text{O}$  (?)

Easily sol. in acids or excess of alkali hydrates, and carbonates +  $\text{Aq}$  Sol. in hot  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rose.)

Insol. in  $\text{Na}_2\text{B}_4\text{O}_7$ , and  $\text{Na}_2\text{HPO}_4 + \text{Aq}$ . (Claus.)

**Palladic hydroxide**,  $\text{PdO}_2 \cdot x\text{H}_2\text{O}$

Slowly sol. in acids Sol. in conc.  $\text{HCl} + \text{Aq}$  without decomp. With dil.  $\text{HCl} + \text{Aq}$ ,  $\text{Cl}_2$  is evolved. (Berzelius)

**Palladous hydroxide hydroxylamine**,

$\text{Pd}(\text{NH}_2\text{O})_4(\text{OH})_2$

Sl. sol. in  $\text{H}_2\text{O}$  Sol. in dil.  $\text{HCl}$  and in dil.  $\text{H}_2\text{SO}_4$ . (Ziesel, A. 1907, 351, 445)

**Palladous iodide**,  $\text{PdI}_2$

Insol. in  $\text{H}_2\text{O}$ . Can be detected as a brown coloration in presence of 400,000 pts.  $\text{H}_2\text{O}$ . (Lassaigne)

Sl. sol. in  $\text{HI} + \text{Aq}$  Easily sol. in  $\text{KI} + \text{Aq}$  (Lassaigne, J. ch. méd. 11, 57.)

Insol. in dil.  $\text{HCl} + \text{Aq}$ , but slightly sol. in saline solutions (Fresenius)

Sl. sol. in hot conc.  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ ,  $\text{Cl}_2 + \text{Aq}$ ,  $\text{Br}_2 + \text{Aq}$ ,  $\text{I}_2 + \text{Aq}$ , and  $\text{CN} + \text{Aq}$ , also in  $\text{HCN}$ , and  $\text{MCN} + \text{Aq}$ . Insol. in dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ ,  $\text{H}_3\text{PO}_4$ ,  $\text{HNO}_3$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ , or in the  $\text{K}$ ,  $\text{Na}$ , or  $\text{NH}_4$  salts of those acids Insol. in  $\text{CuCl}_2$ ,  $\text{ZnCl}_2$ , or  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ . Insol. in  $\text{KBr} + \text{Aq}$  except in presence of a free mineral acid, but not  $\text{HC}_2\text{H}_3\text{O}_2$ . Insol. in sugar or starch +  $\text{Aq}$ , uric acid, alcohol, ether, or oil of lemon. Somewhat sol. in urine. Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , even when dil., with evolution of heat and decomposition (Kersten, A. 87, 28.)

Insol. in alcohol or ether.

Sol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

**Palladous potassium iodide**.

See Iodopalladite, potassium.

**Palladium suboxide**,  $\text{Pd}_2\text{O}$ .

Decomp. by acids into palladous salt and  $\text{Pd}$  (Kane, Phil. Trans. 1842, 1, 276.)

Insol. in acids, even boiling aqua regia. (Willm. B. 25, 220.)

**Palladous oxide**,  $\text{PdO}$ .

Slowly sol. in acids by boiling. (Wohler, A. 174, 160)

**Palladic oxide**,  $\text{PdO}_2$ .

Very sl. attacked by acids.

**Palladopalladic oxide**,  $4\text{PdO}$ ,  $\text{PdO}_2$

Not attacked by aqua regia (Schneider, Pogg. 141, 528)

**Palladous oxychloride**,  $3\text{PdO}$ ,  $\text{PdCl}_2 + 4\text{H}_2\text{O}$  (?)

Sol. in dil. acids (Kane.)

**Palladous oxychloride ammonia**,  $\text{PdO}$ ,  $\text{PdCl}_2$ ,  $6\text{NH}_3$  (?)

Sol. in  $\text{HCl} + \text{Aq}$   
 $3\text{PdO}$ ,  $\text{PdCl}_2$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$  (?) Ppt. (Kane.)

**Palladium selenide**,  $\text{PdSe}$ .

Insol. in  $\text{HNO}_3$  and aqua regia (Rössler, A. 180, 240)

**Palladium subsulphide**,  $\text{Pd}_2\text{S}$

Not attacked by acids except aqua regia, which attacks slightly (Schneider, Pogg. 141, 530.)

**Palladium monosulphide**,  $\text{PdS}$

Insol. in  $\text{H}_2\text{O}$  or  $(\text{NH}_4)_2\text{S} + \text{Aq}$  Sol. in  $\text{HCl} + \text{Aq}$  Pptd. in presence of 10,000 pts.  $\text{H}_2\text{O}$  (Fellenberg, Pogg. 50, 65)

Sol. in potassium thiocarbonate +  $\text{Aq}$ . (Rosenblatt, Z. anal. 26, 15)

A sol. colloidal form was obtained in very dilute solution (Winninger, Bull. Soc. (2) 49, 452.)

Does not exist (Kritschenko, Z. anorg. 4, 247.)

**Palladium disulphide**,  $\text{PdS}_2$

$\text{HNO}_3$  dissolves out part of the  $\text{S}$  Easily sol. in aqua regia without separation of  $\text{S}$  (Schneider)

**Palladium sulphide with  $\text{M}_2\text{S}$** .

See Sulphopalladate,  $\text{M}$ .

**Palladodiamine bromide**,  $\text{Pd}(\text{N}_2\text{H}_4\text{Br})_2$ .

Easily sol. in  $\text{H}_2\text{O}$ .

— bromopalladite,  $\text{Pd}(\text{N}_2\text{H}_4\text{Br})_2$ ,  $\text{PdBr}_2$ .

Properties as the corresponding chloropalladite

— carbonate.

Sol. in  $\text{H}_2\text{O}$ .

— chloride,  $\text{Pd}(\text{N}_2\text{H}_4\text{Cl})_2$ .

Easily sol. in  $\text{H}_2\text{O}$ .

**Palladodiamine chloropalladite**,  $\text{Pd}(\text{N}_2\text{H}_4\text{Cl})_2$ ,  $\text{PdCl}_2$ .

"Vauquelin's red salt." Insol. in cold  $\text{H}_2\text{O}$  (Fischer)

Sol. in boiling  $\text{H}_2\text{O}$  with decomp. Sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq.}$

— fluoride.

Easily sol. in  $\text{H}_2\text{O}$ . (Müller.)

— fluosilicate.

Sl. sol. in cold, easily in warm  $\text{H}_2\text{O}$ . Insol. in alcohol.

— hydroxide,  $\text{Pd}(\text{N}_2\text{H}_4\text{OH})_2$ .

Sol. in  $\text{H}_2\text{O}$ .

— iodide,  $\text{Pd}(\text{N}_2\text{H}_4\text{I})_2$ .

Sol. in  $\text{H}_2\text{O}$ .

— nitrate,  $\text{Pd}(\text{N}_2\text{H}_4\text{NO}_3)_2$

Easily sol. in  $\text{H}_2\text{O}$ ,  $\text{HNO}_3$ , or  $\text{NH}_4\text{OH} + \text{Aq}$   
Insol. in alcohol.

— palladous nitrite,  $\text{Pd}(\text{N}_2\text{H}_4\text{NO}_2)_2$ ,  
 $\text{Pd}(\text{NO}_2)_2$ .

Easily sol. in  $\text{H}_2\text{O}$ .

— sulphate,  $\text{Pd}(\text{N}_2\text{H}_4)_2\text{SO}_4 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  Insol. in alcohol

— sulphite,  $\text{Pd}(\text{N}_2\text{H}_4)_2\text{SO}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ .

#### **Palladochloronitrous acid.**

**Potassium palladochloronitrite**,  
 $\text{Pd}(\text{NO}_2)_2\text{Cl}_2\text{K}_2$ .

Sol. in 2 pts. hot, and 3 pts. cold  $\text{H}_2\text{O}$ .  
(Vézes, C. R. 115. 111)

#### **Palladocyanhydric acid.**

**Ammonium palladocyanide**,  
 $(\text{NH}_4)_4\text{Pd}(\text{CN})_4$  (?).

Sol. in hot  $\text{H}_2\text{O}$  (Rossler, Z. ch. 1866. 175)

**Barium** —,  $\text{Ba}_2\text{Pd}(\text{CN})_4 + 4\text{H}_2\text{O}$ .

Not efflorescent Sol. in  $\text{H}_2\text{O}$ .

**Calcium** —,  $\text{CaPd}(\text{CN})_4 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

**Cupric** —,  $\text{CuPd}(\text{CN})_4$ .

Ppt.

**Lead** —,  $\text{PbPd}(\text{CN})_4$ .

Ppt.

**Magnesium** —,  $\text{MgPd}(\text{CN})_4$ .

Very sol. in  $\text{H}_2\text{O}$ .

**Magnesium** — platinumocyanide,  $\text{MgPd}(\text{CN})_4$ ,  
 $\text{MgPt}(\text{CN})_4 + 14\text{H}_2\text{O}$ .

Extremely sol. in  $\text{H}_2\text{O}$ .

**Potassium** —,  $\text{K}_2\text{Pd}(\text{CN})_4 + 3\text{H}_2\text{O}$ .

Efflorescent. Sol. in  $\text{H}_2\text{O}$ .

+  $\text{H}_2\text{O}$ . Not efflorescent

**Silver** —,  $\text{Ag}_2\text{Pd}(\text{CN})_4$ .

Ppt.

**Sodium** —,  $\text{Na}_2\text{Pd}(\text{CN})_4$ .

Not efflorescent Sol. in  $\text{H}_2\text{O}$

+  $\text{H}_2\text{O}$

#### **Palladoiodonitrous acid.**

**Potassium palladoiodonitrite**,  
 $\text{Pd}(\text{NO}_2)_2\text{I}_2\text{K}_2 + 3\text{H}_2\text{O}$ .

Effloresces in the air

Decomp. by  $\text{H}_2\text{O}$  and dil. acids (Rosenheim, Z. anorg. 1900, 23. 28.)

#### **Palladonitrous acid.**

**Potassium palladonitrite**,  $\text{K}_2\text{Pd}(\text{NO}_2)_4 + 2\text{H}_2\text{O}$ .

Efflorescent, sol. in  $\text{H}_2\text{O}$ . (Lang, J. pr. 83. 415.)

**Silver palladonitrite**,  $\text{Ag}_2\text{Pd}(\text{NO}_2)_4$ .

Easily sol. in hot  $\text{H}_2\text{O}$ . (Lang.)

**Sodium** —,  $\text{Na}_2\text{Pd}(\text{NO}_2)_4$ .

(Fischer)

**Palladosamine bromide**,  $\text{Pd}(\text{NH}_2\text{Br})_2$ .

Insol. in cold, sl. sol. in hot  $\text{H}_2\text{O}$  Easily sol. in  $\text{HC}_2\text{H}_3\text{O}_2$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{KOH}$ ,  $\text{NH}_4\text{OH}$ , or alkali carbonates +  $\text{Aq.}$  (Müller, A. 86. 341.)

— carbonate,  $\text{Pd}(\text{NH}_2)_2\text{CO}_3$ .

Moderately sol. in  $\text{H}_2\text{O}$ .

— chloride,  $\text{Pd}(\text{NH}_2\text{Cl})_2$ .

Insol. in  $\text{H}_2\text{O}$ , but very gradually decomp. by boiling therewith.

Sol. in warm  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq.}$  Sol. in cold  $\text{NH}_4\text{OH} + \text{Aq.}$  Sol. in  $\text{KOH} + \text{Aq.}$  without evolution of  $\text{NH}_3$ .

+  $2\text{H}_2\text{O}$  Efflorescent. Insol. in  $\text{H}_2\text{O}$ . (Baubigny, A. Suppl. 4. 253.)

— cyanide,  $\text{Pd}(\text{NH}_2\text{CN})_2$ .

Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$

— fluoride.

Known only in solution.

— hydroxide,  $\text{Pd}(\text{NH}_2\text{OH})_2$

Easily sol. in  $\text{H}_2\text{O}$ . Slowly decomp. by boiling with  $\text{H}_2\text{O}$ . (Müller, A. 86. 341.)

**Palladosamine iodide,  $\text{Pd}(\text{NH}_3\text{I})_2$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in boiling  $\text{HNO}_3$  with evolution of  $\text{I}_2$  (Fehling, A 39. 106.)

— nitrate.

Known only in solution, which decomp on evaporation

— nitrite,  $\text{Pd}(\text{NH}_3\text{NO}_2)_2$ .

Moderately sol in  $\text{H}_2\text{O}$ . (Lang.)

— palladous nitrite,  $\text{Pd}(\text{NH}_3\text{NO}_2)_2$ ,  
 $\text{Pd}(\text{NO}_2)_2$ .

Slowly sol. in cold, easily in hot  $\text{H}_2\text{O}$  (Lang.)

— sulphate,  $\text{Pd}(\text{NH}_3)_2\text{SO}_4$ .

Moderately sol in  $\text{H}_2\text{O}$ . (Müller)

— sulphite,  $\text{Pd}(\text{NH}_3)_2\text{SO}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Müller.)

**Pentathionic acid,  $\text{H}_2\text{S}_5\text{O}_6$ .**

Known only in aqueous solution

Conc. solution is decomp by boiling, but made stable by addition of acids

Sp. gr of aqueous solution of pentathionic acid at 22°:

Sp gr.	1 233	1 320	1 474	1 506
% $\text{H}_2\text{S}_5\text{O}_6$	32 1	41 7	53	59 7

(Kessler, Pogg. 74. 279.)

Does not exist. (Spring, Bull Acad. roy. Belg.)

Existence proven by Smith (Chem. Soc. 43. 355.)

**Barium pentathionate,  $\text{BaS}_5\text{O}_6 + 2\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Aqueous solution is precipitated by alcohol.

Contains  $3\text{H}_2\text{O}$ . (Lewes, C. N. 43. 41.)

**Barium pentathionate tetrathionate,  $\text{BaS}_5\text{O}_6$ ,  $\text{BaS}_4\text{O}_6 + 6\text{N}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . Not precipitated from aqueous solution by two vols. alcohol. (Ludwig, Arch. Pharm. (2) 51. 264.)

**Cupric pentathionate,  $\text{CuS}_5\text{O}_6 + 4\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Debus, Chem. Soc. 53. 360.)

**Lead pentathionate,  $\text{PbS}_5\text{O}_6 + 4\text{H}_2\text{O}$ .**

Ppt.

**Potassium pentathionate,  $\text{K}_2\text{S}_5\text{O}_6$ .**

Sol. in  $\text{H}_2\text{O}$  (Rammelsberg, J. B. 1857. 136.)

Solution decomposes very quickly when neutral, but is more stable in presence of salts or acids.

Sol. in about 2 pts.  $\text{H}_2\text{O}$ .

Insol in alcohol. (Debus, Chem. Soc. 53. 295.)

+ $\text{H}_2\text{O}$ . (Shaw, Chem. Soc. 43. 351.)

+ $1\frac{1}{2}\text{H}_2\text{O}$ . (Debus, A 244. 76 )

+ $2\text{H}_2\text{O}$  (Lewes, C N 43. 41 )

**Perarsenic acid.****Sodium perarsenate,  $\text{NaAsO}_4$ .**

(Alvarez, C. N 1906, 94. 270 )

**Perboric acid.****Ammonium perborate,  $\text{NH}_4\text{BO}_3$ .**

(Constam and Bennett, Z. anorg. 1900, 25. 265.)

+ $\frac{1}{2}\text{H}_2\text{O}$  Stable in dry air 100 pts.  $\text{H}_2\text{O}$  at 17.5° dissolve 1 55 g anhydrous salt.

Decomp. in aqueous solution at ord. temp.

Decomp. by dil and conc.  $\text{H}_2\text{SO}_4$  and by  $\text{HCl}$ . (Melikoff, B 1898, 31. 953 )

+ $\text{H}_2\text{O}$ . (Bruhat, C R. 1905, 140 508 )

Much more sol. in  $\text{H}_2\text{O}$  than the Na salt.

(Tanatar, Z. phys. Ch 1898, 26. 133.)

+ $3\text{H}_2\text{O}$ . (Melikoff, B. 1898, 31. 954.)

$\text{NH}_4\text{BO}_3$ ,  $\text{NH}_4\text{BO}_3 + \text{H}_2\text{O}$  (Petrenko, C. C. 1902, I 1192.)

**Barium perborate**,  $\text{Ba}(\text{BO}_2)_2 + 7\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$  (Mehkoff, B. 1898, 31. 951.)

**Cæsium perborate**,  $\text{CsBO}_2 + \text{H}_2\text{O}$ .

As  $\text{NH}_4$  salt. (Christensen.)

**Calcium perborate**.

Sl. sol. in  $\text{H}_2\text{O}$  Decomp. in water much more rapidly than the Ba salt. (Mehkoff, B. 1898, 31. 954.)

**Copper perborate**.

Very unstable. Insol. in  $\text{H}_2\text{O}$  (Mehkoff, B. 1898, 31. 954.)

**Nickel perborate**.

Very unstable. Insol. in  $\text{H}_2\text{O}$  (Mehkoff)

**Potassium perborate**,  $2\text{KBO}_2 + \text{H}_2\text{O}$ .

1.25 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $0^\circ$ ; 2.5 pts., at  $15^\circ$ .

Insol. in alcohol and ether. (Girsewald, B. 1900, 42. 867.)

**Potassium perborate hydrogen peroxide**,  $2\text{KBO}_2, \text{H}_2\text{O}_2$ .

0.70 pt. is sol. in 100 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Girsewald, B. 1900, 42. 868.)

**Potassium perkborate**,  $\text{KB}_2\text{O}_5 + 2\text{H}_2\text{O}$

Ppt. (Bruhat, C. R. 1905, 140. 508.)

**Rubidium perborate**,  $\text{RbBO}_2 + \text{H}_2\text{O}$

As Na salt. (Christensen.)

**Sodium perborate**,  $\text{Na}_2\text{B}_4\text{O}_8 + 10\text{H}_2\text{O}$ .

100 g.  $\text{H}_2\text{O}$  dissolve 4.2 g. at  $11^\circ$ ; 7.1 g. at  $22^\circ$ , 13.8 g. at  $32^\circ$  (Jaubert, C. R. 1904, 134. 700.)

+  $4\text{H}_2\text{O}$ . Slowly decomp. in cold solution, rapidly when boiled. (Tanatar, Z. phys. Ch. 1898, 26. 132.)

Sol. in  $\text{H}_2\text{O}$ . 100 g.  $\text{H}_2\text{O}$  dissolve 1.17 g. Aq. solution decomp. on warming. (Mehkoff, B. 1898, 31. 679.)

100 g.  $\text{H}_2\text{O}$  dissolve 2.55 g. at  $15^\circ$ , 2.69 g. at  $21^\circ$ ; 2.85 g. at  $26^\circ$ ; 3.78 g. at  $32^\circ$ . (Jaubert and Lion, Rev. gén. Chim. 1905, (7) 8. 163.)

**Uranyl perborate**,  $\text{UBO}_4$ .

(Bruhat, C. R. 1905, 140. 508.)

**Perbromic acid**,  $\text{HBrO}_4$ .

Known only in aqueous solution, which can be concentrated to a thick liquid on water bath. Not decomp. by  $\text{HCl}$ ,  $\text{SO}_2$ , or  $\text{H}_2\text{S}$ . (Kämmerer, J. pr. 85. 452; 90. 190.)

Does not exist. (Muir, C. N. 33. 256; MacIvor, C. N. 33. 35.)

**Barium perbromate**,  $\text{Ba}(\text{BrO}_4)_2$

Very sl. sol. in boiling  $\text{H}_2\text{O}$  (Kämmerer, J. pr. 90. 190.)

Does not exist. (Wolfiam, A. 198. 95.)

**Potassium perbromate**,  $\text{KBrO}_4$

Less sol. in  $\text{H}_2\text{O}$  than  $\text{KBrO}_3$ , but more sol. than  $\text{KClO}_4$ . (Kämmerer, J. pr. 90. 190.)

Does not exist (Wolfiam, A. 198. 95.)

**Silver perbromate**,  $\text{AgBrO}_4$ .

Sl. sol. in cold, more abundantly in hot  $\text{H}_2\text{O}$ . (Kämmerer, J. pr. 90. 190.)

Does not exist. (Wolfiam, A. 198. 95.)

**Perbromoplatinocyanhydric acid**,

$\text{H}_2\text{Pt}(\text{CN})_4\text{Br}_2 + x\text{H}_2\text{O}$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ , alcohol, and ether (Holst, Bull. Soc. (2) 22. 347.)

**Aluminium perbromoplatinocyanide**,

$\text{Al}_2\text{Pt}(\text{CN})_4\text{Br}_2 + 22\text{H}_2\text{O}$

Deliquescent. Very sol. in  $\text{H}_2\text{O}$

**Ammonium —**,  $(\text{NH}_4)_2\text{Pt}(\text{CN})_4\text{Br}_2$ .

Sol. in  $\text{H}_2\text{O}$

**Barium —**,  $\text{BaPt}(\text{CN})_4\text{Br}_2 + 5\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  or alcohol.

**Cadmium —**,  $\text{CdPt}(\text{CN})_4\text{Br}_2 + x\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ .

**Calcium —**,  $\text{CaPt}(\text{CN})_4\text{Br}_2 + 7\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

**Cobaltous —**,  $\text{CoPt}(\text{CN})_4\text{Br}_2 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  Sl. sol. in alcohol

**Glucinum —**,  $\text{GlPt}(\text{CN})_4\text{Br}_2$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ .

**Ferrous —**.

Very sl. sol. in  $\text{H}_2\text{O}$ .

**Lead —**,  $\text{PbPt}(\text{CN})_4\text{Br}_2 + 2\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ .

**Lithium —**,  $\text{Li}_2\text{Pt}(\text{CN})_4\text{Br}_2$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ .

**Magnesium —**,  $\text{MgPt}(\text{CN})_4\text{Br}_2 + x\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

**Nickel —**,  $\text{NiPt}(\text{CN})_4\text{Br}_2 + x\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$

**Potassium —**,  $\text{K}_2\text{Pt}(\text{CN})_4\text{Br}_2$ .

Sol. in  $\text{H}_2\text{O}$ .  
+  $2\text{H}_2\text{O}$ . Efflorescent.

Silver perbromoplatinocyanide,  
 $\text{Ag}_2\text{PtBr}_2(\text{CN})_4$ .

Ppt. (Miolata, Gazz. ch. it. 1900, 30, 588.)

Sodium —,  $\text{Na}_2\text{Pt}(\text{CN})_4\text{Br}_2$ .

Deliquescent Sol in  $\text{H}_2\text{O}$ .

Strontium —,  $\text{SrPt}(\text{CN})_4\text{Br}_2 \cdot 7\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ .

Zinc —,  $\text{ZnPt}(\text{CN})_4\text{Br}_2 \cdot 5\text{H}_2\text{O}$ .

Not very sol in  $\text{H}_2\text{O}$ .

### Percarbonic acid.

Ammonium percarbonate,  $(\text{NH}_4)_2\text{CO}_4 + 2\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  with evolution of  $\text{NH}_3$ . Insol. in alcohol and ether. (Kasanevsky, C. C 1902, I, 1263.)

Barium percarbonate,  $\text{BaCO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Merck, C. C 1906, II, 1743.)

Decomp. slowly in the air. Not rapidly decomp. by  $\text{H}_2\text{O}$ . Rapidly decomp. by acids (Wolfenstein, B. 1908, 41, 280.)

Potassium percarbonate,  $\text{K}_2\text{CO}_4$ .

Sol in  $\text{H}_2\text{O}$  with decomp. Sl. sol. in alcohol. (v. Hansen, Z. Elektrochem. 1897, 3, 448.)

$\text{K}_2\text{C}_2\text{O}_8$ . Sol in  $\text{H}_2\text{O}$  at  $0^\circ$  with only slight decomp. but is decomp. at ord. temp. Sl. sol. in alcohol. (Treadwell, Ch. Z. 1901, 25, 1008.)

Rubidium percarbonate,  $\text{Rb}_2\text{CO}_4 \cdot 2\text{H}_2\text{O}_2 + \text{H}_2\text{O}$ .

Hydroscopic; decomp. by  $\text{H}_2\text{O}$ ; pptd. by alcohol.

$\text{Rb}_2\text{CO}_4 \cdot \text{H}_2\text{O}_2 + 2\text{H}_2\text{O}$ . Hydroscopic; decomp. by  $\text{H}_2\text{O}$ ; pptd. by alcohol.

$\text{Rb}_2\text{CO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$ . Hydroscopic; decomp. by  $\text{H}_2\text{O}$ ; pptd. by alcohol (Feltner, B. 1909, 42, 1782.)

$\text{Rb}_2\text{C}_2\text{O}_8$ . Very deliquescent (Constam and Hansen, Z. Elektrochem. 1897, 3, 144.)

Sodium percarbonate,  $\text{Na}_2\text{CO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  with gradual decomp. (Tanatar, B. 1899, 32, 1544.)

Sodium hydrogen percarbonate,  $4\text{Na}_2\text{CO}_3 \cdot \text{H}_2\text{CO}_3$ .

Ppt. (Merck, Chem. Soc 1908, 94, (2) 180.)

### Perchloric acid, $\text{HClO}_4$ .

Combines with  $\text{H}_2\text{O}$  with a hissing sound and evolution of much heat.

Solution in  $\text{H}_2\text{O}$  is very stable.

When dil.  $\text{HClO}_4 + \text{Aq}$  is distilled,  $\text{H}_2\text{O}$  and  $\text{HClO}_4$  distil off until a temp. of  $203^\circ$  is reached, when an acid of constant composition containing 71.6–72.2%  $\text{HClO}_4$  ( $=\text{HClO}_4 + 2\text{H}_2\text{O}$ ) is obtained. Forms hydrate  $\text{HClO}_4 \cdot \text{H}_2\text{O}$ , which is deliquescent, and dissolves in  $\text{H}_2\text{O}$  with evolution of much heat.  $\text{HClO}_4$  is very unstable,  $\text{HClO}_4 + \text{H}_2\text{O}$  more stable, and  $\text{HClO}_4 + 2\text{H}_2\text{O}$  is very stable. (Roscoe, A. 121, 346.)

Sp. gr. of  $\text{HClO}_4 + \text{Aq}$ . at  $15^\circ/4^\circ$ .

+ $\text{H}_2\text{O}$ . Deliquescent. (Roscoe, A. 121. 346.)+2 $\text{H}_2\text{O}$ .  $\text{HClO}_4 + 2\text{H}_2\text{O}$  has 1.65 sp. gr.

and boils at 200° (Serullas); has 1.72-1.82 sp. gr. and boils at 200° (Nativelle, J. p. 26. 405)

Sol. in alcohol with decomp.; often explosive

+2 $\frac{1}{2}\text{H}_2\text{O}$ . (v. Wyck.)+3 $\text{H}_2\text{O}$ . (v. Wyck.)+3 $\frac{1}{2}\text{H}_2\text{O}$ . (v. Wyck.)**Perchlorates.**

All perchlorates are sol in  $\text{H}_2\text{O}$ ,  $\text{KClO}_4$ ,  $\text{RbClO}_4$ , and  $\text{CsClO}_4$  somewhat difficultly. They are all deliquescent, and sol in alcohol, excepting  $\text{NH}_4\text{ClO}_4$ ,  $\text{KClO}_4$ ,  $\text{Pb}(\text{ClO}_4)_2$ , and  $\text{Hg}_2(\text{ClO}_4)_2$  (Serullas, A. ch. (2) 46. 296.)

Aluminum perchlorate,  $\text{Al}(\text{ClO}_4)_3 + 6\text{H}_2\text{O}$ .

Very deliquescent. (Weinland, Z. anorg. 1913, 84. 370.)

Aluminum sodium perchlorate,  $\text{AlNa}(\text{ClO}_4)_4 + 12\text{H}_2\text{O}$ .

Sl hygroscopic. (Weinland, Z. anorg. 1913, 84. 370.)

Sol. in acetone (Naumann, B 1904, 87. 4328.)

Ammonium perchlorate,  $\text{NH}_4\text{ClO}_4$ .Permanent. Sol. in 5 pts.  $\text{H}_2\text{O}$ ; somewhat sol. in alcohol. (Mitscherhoh, Pogg. 25. 800)Solubility of  $\text{NH}_4\text{ClO}_4$  in  $\text{H}_2\text{O}$  at t°.

t°	G per l. solution	Sp. gr.
0	115.63	1.059
20	208.45	1.098
40	305.77	1.128

120	645	2.195
140	758	2.230

(Carlson, Festsak. Stockholm, 1911. 262.)

Bismuth perchlorate, (BiO)ClO<sub>4</sub>.

Insol. in H<sub>2</sub>O. Easily sol in HCl or HNO<sub>3</sub>+Aq. less easily in H<sub>2</sub>SO<sub>4</sub>+Aq (Muir, C. N. 33. 15.)

Cadmium perchlorate, Cd(ClO<sub>4</sub>)<sub>2</sub>.

Very deliquescent. Sol. in H<sub>2</sub>O and alcohol. (Serullas, A. ch. 46. 305.)

+4H<sub>2</sub>O. (Salvadori, C. C. 1912, II. 414.)

+6H<sub>2</sub>O. (S)

Cadmium perchlorate ammonia, Cd(ClO<sub>4</sub>)<sub>2</sub>, 6NH<sub>3</sub>.

Cd(ClO<sub>4</sub>)<sub>2</sub>, 4NH<sub>3</sub>. (Salvadori, C. C. 1912, II. 414.)

Cæsium perchlorate, CsClO<sub>4</sub>.

Very sl. sol. in H<sub>2</sub>O. (Retgers, Z. phys. Ch. 8. 17.)

Solubility in H<sub>2</sub>O 100 g H<sub>2</sub>O dissolve at:  
8.5° 14° 33.7° 42° 50°  
0.91 1.19 2.99 4.09 5.47 g. CsClO<sub>4</sub>.

60° 70° 84° 99°  
7.30 9.79 16.51 28.57 g. CsClO<sub>4</sub>.

(Calzolari, Acc. Sc. Med. Ferrara, 1911, 85. 150)

Solubility in H<sub>2</sub>O at t°.

5	0.97	1.007
25	2.05	1.010
80	17.05	1.064

(Carlson, Festsak. Stockholm, 1911. 262.)

Calcium perchlorate, Ca(ClO<sub>4</sub>)<sub>2</sub>.

Very deliquescent. Very sol. in H<sub>2</sub>O and alcohol. (Serullas, A. ch. 46. 304)

Cerous perchlorate, Ce(ClO<sub>4</sub>)<sub>3</sub>+8H<sub>2</sub>O.

Very deliquescent. (Johm.)

Chromic perchlorate, Cr(ClO<sub>4</sub>)<sub>3</sub>+6H<sub>2</sub>O.

Very hygroscopic. (Weinland, Z. anorg. 1913, 84. 371.)

+9H<sub>2</sub>O. Can be cryst. from H<sub>2</sub>O. (Weinland.)

Cobaltous perchlorate, Co(ClO<sub>4</sub>)<sub>2</sub>+9H<sub>2</sub>O.

Solubility in H<sub>2</sub>O at t°.

t°	G anhydrous salt in 100 ccn	Sp gr of sat. solution at t°/4°
-30 7	83.14	..
-21 3	90.57	..
0	100.13	1.5639
+7.5	101.92	1.5658

26	113.45	1.5811
45	115.10	1.5878

(Golblum and Terlikowsky, Bull. Soc. 1912, (4) 11. 146)

+6H<sub>2</sub>O. (Salvadori, Gazz. ch. it. 1912, 42. (1) 458.)

Cobalt perchlorate ammonia, Co(ClO<sub>4</sub>)<sub>2</sub>, 6NH<sub>3</sub>.

Co(ClO<sub>4</sub>)<sub>2</sub>, 5NH<sub>3</sub>

Co(ClO<sub>4</sub>)<sub>2</sub>, 4NH<sub>3</sub>, and +2H<sub>2</sub>O.

Co(ClO<sub>4</sub>)<sub>2</sub>, 3NH<sub>3</sub>, and +3H<sub>2</sub>O

Co(ClO<sub>4</sub>)<sub>2</sub>, 3NH<sub>3</sub>+2H<sub>2</sub>O.

(Salvadori, Gazz. ch. it. 1912, 42. (1) 458.)

Cupric perchlorate, basic, Cu(ClO<sub>4</sub>)<sub>2</sub>, Cu(OH)<sub>2</sub>.

Ppt. (Salvadori, C. C. 1912, II. 414.)

Cupric perchlorate, Cu(ClO<sub>4</sub>)<sub>2</sub>.

Deliquescent. Sol. in H<sub>2</sub>O and alcohol. (Serullas, A. ch. 46. 306.)

+4H<sub>2</sub>O (Salvadori, C. C. 1912, II. 414)

Cupric perchlorate ammonia, Cu(ClO<sub>4</sub>)<sub>2</sub>, 4NH<sub>3</sub>+2H<sub>2</sub>O.

Not deliquescent. Sol. in NH<sub>4</sub>OH+Aq. (Roscoe, A. 121. 346)

Cu(ClO<sub>4</sub>)<sub>2</sub>, NH<sub>3</sub>+H<sub>2</sub>O.

Cu(ClO<sub>4</sub>)<sub>2</sub>, 2CuO+2H<sub>2</sub>O, NH<sub>3</sub>.

Cu(ClO<sub>4</sub>)<sub>2</sub>, 2CuO+2H<sub>2</sub>O, 2NH<sub>3</sub>.

Cu(ClO<sub>4</sub>)<sub>2</sub>, Cu(OH)<sub>2</sub>+2H<sub>2</sub>O, 6NH<sub>3</sub>.

Cu(ClO<sub>4</sub>)<sub>2</sub>, Cu(OH)<sub>2</sub>+2H<sub>2</sub>O, 4NH<sub>3</sub>.

(Salvadori, C. C. 1912, II. 414.)

Didymium perchlorate, D<sub>2</sub>(ClO<sub>4</sub>)<sub>3</sub>+9H<sub>2</sub>O.

Very deliquescent. Very sol. in H<sub>2</sub>O and alcohol. (Cleve.)

Erbium perchlorate, Er(ClO<sub>4</sub>)<sub>3</sub>+8H<sub>2</sub>O.

Very deliquescent.

Gluccinum perchlorate, Gl(ClO<sub>4</sub>)<sub>3</sub>+4H<sub>2</sub>O.

Very deliquescent, and sol. in H<sub>2</sub>O. (Atterberg)

Hydrazine perchlorate, (N<sub>2</sub>H<sub>4</sub>)(HClO<sub>4</sub>)<sub>2</sub>+3H<sub>2</sub>O

1 l. of sat. solution in H<sub>2</sub>O contains 417.2 g. at 18°, sp. gr.=1.264, 669 g. at 35°, sp. gr.=1.391. (Carlson, Festsak. Stockholm, 1911. 262.)

**Indium perchlorate,  $\text{In}(\text{ClO}_4)_3 \cdot 8\text{H}_2\text{O}$** 

Deliquescent.  $\text{H}_2\text{O}$  solution decomp at  $40^\circ$  with separation of basic salt. Sol in  $\text{H}_2\text{O}$  and easily forms sat. solutions. Sol. in abs. alcohol, but much less sol in ether. (Mathers, J. Am. Chem. Soc. 1908, 30, 212.)

**Iodine perchlorate,  $\text{I}(\text{ClO}_4)_3 \cdot 2\text{H}_2\text{O}$** 

Decomp. by  $\text{H}_2\text{O}$ . Indifferent toward organic solvents (Fichter, Z. anorg. 1915, 91, 135.)

**Iron (ferrous) perchlorate,  $\text{Fe}(\text{ClO}_4)_2$** 

Tolerably permanent, sol. in  $\text{H}_2\text{O}$  (Seuillas, A. ch. 46, 335.)

**Iron (ferric) perchlorate,  $\text{Fe}(\text{ClO}_4)_3$** 

Sol. in  $\text{H}_2\text{O}$ . (Seuillas)

**Iron (ferric) sodium perchlorate,**

Hygroscopic. Can be cryst. from  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1913, 84, 366.)

**Lanthanum perchlorate,  $\text{La}(\text{ClO}_4)_3 \cdot 9\text{H}_2\text{O}$** 

Extremely deliquescent. Sol. in  $\text{H}_2\text{O}$  and absolute alcohol (Cleve)

**Lead perchlorate, basic,  $2\text{PbO}, \text{Cl}_2\text{O}_7 \cdot 2\text{H}_2\text{O}$** 

Decomp. by  $\text{H}_2\text{O}$  into an insol. more basic salt, and sol.  $\text{Pb}(\text{ClO}_4)_2$ . (Marignac.)

**Lead perchlorate,  $\text{Pb}(\text{ClO}_4)_2 \cdot 3\text{H}_2\text{O}$** 

Permanent; extremely easily sol. in  $\text{H}_2\text{O}$ . (Roscoe, A. 121, 356.)

Sol. in about 1 pt.  $\text{H}_2\text{O}$ . (Seuillas.)

**Lithium perchlorate,  $\text{LiClO}_4$** 

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol (Seuillas)

+  $3\text{H}_2\text{O}$ . (Wyrnoff, Zeit. Kryst. 10, 620.)

**Magnesium perchlorate,  $\text{Mg}(\text{ClO}_4)_2$** 

Deliquescent, and sol. in  $\text{H}_2\text{O}$  and alcohol. (Seuillas)

+  $6\text{H}_2\text{O}$  (Weinland, Z. anorg. 1913, 84, 372.)

**Manganous perchlorate,  $\text{Mn}(\text{ClO}_4)_2$** 

Very deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (Seuillas, A. ch. 46, 335.)

+  $6\text{H}_2\text{O}$ . Sol. in 0.342 pts  $\text{H}_2\text{O}$ . (Salvadori, C. C. 1912, II, 414.)

**Manganous perchlorate ammonia,  $\text{Mn}(\text{ClO}_4)_2 \cdot 5\text{NH}_3 \cdot \text{H}_2\text{O}$** 

Sol. in  $\text{HCl}$ ; insol. in  $\text{HNO}_3$ . (Salvadori, C. C. 1912, II, 414.)

**Mercurous perchlorate,  $(\text{HgClO}_4)_2 \cdot 4\text{H}_2\text{O}$** 

Very sol. in  $\text{H}_2\text{O}$ . Gradually decomp. by

$\text{H}_2\text{O}$ . Decomp. by alcohol (Chikashigé, Chem. Soc. 1895, 67, 1016.)

+  $6\text{H}_2\text{O}$ . Very deliquescent (Roscoe, A. 121, 356.)

Permanent. (Seuillas.)

**Mercuric perchlorate, basic,  $\text{HgO}, 2\text{Hg}(\text{ClO}_4)_2$** 

Anhydrous Ppt. Insol. in either  $\text{HCl}$  or  $\text{HNO}_3$ . Decomp. and dissolved by a mixture of the two. (Chikashigé, Chem. Soc. 1905, 87, 824.)

+  $12\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  (Chikashigé.)

$2\text{HgO}, \text{Hg}(\text{ClO}_4)_2$ .

$\alpha$ -salt. Decomp. by  $\text{H}_2\text{O}$ . Sol. in acids. (Chikashigé, Chem. Soc. 1895, 67, 1015.)

$\beta$ -salt. Insol. in  $\text{H}_2\text{O}$ ; insol. in  $\text{HCl}$  or  $\text{HNO}_3$ . (Chikashigé, Chem. Soc. 1905, 87, 825.)

**Mercuric perchlorate,  $\text{Hg}(\text{ClO}_4)_2$** 

Very deliquescent. Sol. in  $\text{H}_2\text{O}$ ; sl. sol. with decomp. in alcohol (Seuillas, A. ch. 34, 243.)

+  $6\text{H}_2\text{O}$ . Very hygroscopic. Very sol. in  $\text{H}_2\text{O}$ . Slowly decomp. by  $\text{H}_2\text{O}$ , more easily by alcohol. (Chikashigé, Chem. Soc. 1895, 67, 1014.)

**Mercuric perchlorate bromide,  $\text{HgClO}_4\text{Br}$** 

Decomp. by  $\text{H}_2\text{O}$  (Borelli, Gazz. ch. it 1908, 38, (2) 421.)

**Mercuric perchlorate cyanide,  $\text{Hg}(\text{ClO}_4)_2, \text{Hg}(\text{CN})_2$** 

Very sol. in  $\text{H}_2\text{O}$ . Sol. in alcohol. (Borelli.)

**Mercuric perchlorate iodide,  $\text{Hg}(\text{ClO}_4)_2\text{I}$** 

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Sol. in much alcohol. Decomp. by  $\text{HNO}_3$ . Completely sol. in  $\text{KI}$  or  $\text{KCN} + \text{Aq.}$  (Borelli.)

**Mercuric perchlorate sulphocyanide,  $\text{Hg}(\text{ClO}_4)_2, \text{Hg}(\text{SCN})_2$** 

Insol. in  $\text{H}_2\text{O}$  and conc. acids. Sol. in aqua regia. (Borelli.)

+  $6\text{H}_2\text{O}$ . (Salvadori, C. C. 1912, II, 414.)

**Nickel perchlorate,  $\text{Ni}(\text{ClO}_4)_2$** 

Deliquescent, easily sol. in alcohol and  $\text{H}_2\text{O}$ . (Groth, Pogg. 133, 226.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	G anhydrous salt in 100 ccm.	Sp. gr. of the sat. solution

(Golblum and Terlikowsky, Bull. Soc. 1912, (4) 11, 147.)

- +5H<sub>2</sub>O. (Golblum and Terlikowsky.)  
 +6H<sub>2</sub>O. (Salvadori, C. C. 1912, II 414.)  
 +9H<sub>2</sub>O. (Golblum and Terlikowsky.)

Nickel perchlorate, ammonia, Ni(ClO<sub>4</sub>)<sub>2</sub>.  
 6NH<sub>3</sub>.  
 Ppt. (Salvadori.)

Nitrosyl perchlorate, NO.O.ClO<sub>4</sub>+H<sub>2</sub>O.  
 Ppt.; sl. hygroscopic; decomp. by H<sub>2</sub>O.  
 (Hofmann, B. 1909, 42. 2032.)

Platinum perchlorate, Pt<sub>2</sub>ClO<sub>4</sub>+15H<sub>2</sub>O.  
 Insol. in H<sub>2</sub>O (Prost, Bull. Soc. (2) 46.  
 156.)

Potassium perchlorate, KClO<sub>4</sub>.

Sol. in 57.9 pts. H<sub>2</sub>O at 21° (Longumme, A. 121  
 123), in 66 pts. H<sub>2</sub>O at 15° (Scurullas, A. ch. (2) 46 297),  
 in 88 pts. H<sub>2</sub>O at 10°, in 55 pts. H<sub>2</sub>O at 100° (Hutstein,  
 J. B. 1851 381)

Solubility in H<sub>2</sub>O.

1 pt. KClO<sub>4</sub> dissolves in 142.9 pts. H<sub>2</sub>O at  
 6°, and solution has sp. gr.=1.0005; in 52.5  
 pts. H<sub>2</sub>O at 25°, and solution has sp. gr.=  
 1.0123; in 15.5 pts. H<sub>2</sub>O at 50°, and solution  
 has sp. gr.=1.0181; in 5.04 pts. H<sub>2</sub>O at 100°,  
 and solution has sp. gr.=1.0660. (Muir, C.  
 N. 83. 15.)

1 l. H<sub>2</sub>O dissolves 78.07 millimols. KClO<sub>4</sub>  
 at 10°; 120.4 millimols. at 20°; 179.9 millimols.  
 at 30°. (Noyes and Sammet, Z. phys.  
 Ch. 1903, 43. 538.)

1 l. H<sub>2</sub>O dissolves 0.1475 mol. KClO<sub>4</sub> at  
 25°. (Rothmund, Z. phys. Ch. 1909, 69. 539.)

Solubility in H<sub>2</sub>O at t°

t°	G. KClO <sub>4</sub> in 100 g H <sub>2</sub> O	t°	G. KClO <sub>4</sub> in 100 g H <sub>2</sub> O

100	20.98	1.067

(Carlson, Festak. Stockholm, 1911 262)

1 l. H<sub>2</sub>O dissolves 0.1481 equivalents  
 KClO<sub>4</sub> at 25°. (Noyes and Boggs, J. Am.  
 Chem. Soc. 1911, 33. 1652.)

100 cc. of sat. solution of KClO<sub>4</sub> in H<sub>2</sub>O con-

tains 2.085 g. KClO<sub>4</sub> at 25.2°. (Thin and Cum-  
 ming, Chem. Soc. 1915, 107. 361.)

KClO<sub>4</sub> is sol. in 22.2 pts. H<sub>2</sub>O at ord. temp.,  
 and 4.00 pts. at 100°, in 29.6 pts. NH<sub>4</sub>OH +  
 Aq (conc.) at ord. temp., in 30.4 pts. NH<sub>4</sub>OH  
 + Aq (1 vol conc + 3 vols H<sub>2</sub>O) at ord.  
 temp.; in 22.4 pts. HNO<sub>3</sub> + Aq (1 vol conc. +  
 5 vols. H<sub>2</sub>O) at ord. temp., and 5.00 pts. at  
 100°; in 30.4 pts. HCl + Aq. (1 vol conc. +  
 4 vols H<sub>2</sub>O) at ord. temp., 45.2 pts. HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>  
 + Aq (1 vol. commercial acid + 1 vol. H<sub>2</sub>O)  
 at ord. temp., in 24.4 pts. NH<sub>4</sub>C<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq.  
 (dil. HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + dil. NH<sub>4</sub>OH + Aq) at ord.  
 temp., and 6.00 pts. at 100°, in 25.8 pts.  
 NH<sub>4</sub>Cl + Aq (1 pt. NH<sub>4</sub>Cl + 10 pts. H<sub>2</sub>O) at  
 ord. temp., and 6.00 pts. at 100°, in 16.0 pts.  
 NH<sub>4</sub>NO<sub>3</sub> + Aq (1 pt. NH<sub>4</sub>NO<sub>3</sub> + 10 pts. H<sub>2</sub>O)  
 at ord. temp., and 4.00 pts. at 100°; in 25.6  
 pts. NaC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq (conc. HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> +  
 Na<sub>2</sub>CO<sub>3</sub> + 4 vols. H<sub>2</sub>O) at ord. temp., and  
 7.00 pts. at 100°, in 29.2 pts. Cu(C<sub>2</sub>H<sub>3</sub>O<sub>2</sub>)<sub>2</sub> +  
 Aq (Stolba, Z. anal. 2. 390) at ord. temp.,  
 and 7.00 pts. at 100°; in 27.3 pts. cane sugar  
 (1 pt. + 10 pts. H<sub>2</sub>O) at ord. temp.; in 38.8  
 pts. grape sugar (1 pt. + 10 pts. H<sub>2</sub>O) at ord.  
 temp. (Approximate) (Pearson, Zeit. Chem.  
 1869. 662)

Solubility of KClO<sub>4</sub> in HClO<sub>4</sub> at 25.2°.

Normality of HClO <sub>4</sub>	% KClO <sub>4</sub>
0.01	1.999
0.10	1.485
1.00	0.527

(Thin and Cumming, Chem. Soc. 1915, 107.  
 361.)

Solubility in KCl + Aq at 25°.

0.04973	0.1282
0.09933	0.1123

(Noyes and Boggs, J. Am. Chem. Soc. 1911,  
 33. 1652.)

Solubility in K<sub>2</sub>SO<sub>4</sub> + Aq at 25°

Concentration of K <sub>2</sub> SO <sub>4</sub> Equivalents per litre	Solubility of KClO <sub>4</sub> Equivalents per litre
0.04970	0.1315
0.09922	0.1181

(Noyes and Boggs)

Very sl. sol. in abs. alcohol, and insol. if  
 alcohol contains trace of an acetate. (Ros-  
 coe.) Insol. in alcohol of 0.835 sp. gr. (Schlö-  
 sing, C. R. 73. 1269.)

Sol. in 6400 pts. 97.2% alcohol; in 5000  
 pts. 95.3% alcohol, in 2500-3000 pts. 90%  
 alcohol, in 25,000 pts. alcohol-ether (2 pts.  
 97% alcohol + 1 pt ether) Practically insol.

in an alcoholic solution of  $\text{HClO}_4$ . (Wenze' Z. angew. Ch. 1891. 691.)

Solubility of  $\text{KClO}_4$  in ethyl alcohol + Aq at  $25.2^\circ$ .

Vol. % alcohol	G. $\text{KClO}_4$ sol. in 100 g alcohol
51.2	0.754
93.5	0.051
98.8	0.019

(Thun and Cumming, Chem. Soc. 1915, 107. 361.)

Solubility in organic compds. + Aq. at  $25^\circ$ .

Solvent	Mol $\text{KClO}_4$ vol in 1 litre

60	6.27	1.028
80	11.04	1.050
100	15.75	1.070

(Carlson, Festsch. Stockholm, 1911. 262.)

Scandium perchlorate.

(Crookes, Roy Soc Proc 1908, 80. A, 518.)

Silver perchlorate,  $\text{AgClO}_4$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (Serullas, A. ch. 46. 307.)

Sodium perchlorate,  $\text{NaClO}_4$ .

Deliquescent, and very sol. in  $\text{H}_2\text{O}$  and alcohol. (Serullas.)

Not deliquescent. (Potilitsin, J. russ. Soc. 1889, 1. 258.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	G. in 1 l. of solution	Sp. gr.
15	1076	1.666
50	1234	1.731

30	19.72	1.146
50	39.62	1.251
70	65.32	1.430
80	81.49	1.520

(Carlson, Festsch. Stockholm, 1911. 262.)

Sl. sol. in alcohol (Roscoe.)

**Thallie perchlorate,  $\text{Tl}(\text{ClO}_4)_3 \cdot 6\text{H}_2\text{O}$** 

Very hygroscopic, sol in  $\text{H}_2\text{O}$ . Decomp. in moist air (Gewecke, Z. anorg. 1912, 75, 274.)

**Uranyl perchlorate,  $(\text{UO}_2)(\text{ClO}_4)_2 \cdot 4\text{H}_2\text{O}$** 

(Salvadori, Ch. Z 1912, 36, 513.)  
+  $6\text{H}_2\text{O}$  (Salvadori.)

**Yttrium perchlorate,  $\text{Y}(\text{ClO}_4)_3 \cdot 8\text{H}_2\text{O}$** 

Very deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol (Cleve.)

**Zinc perchlorate,  $\text{Zn}(\text{ClO}_4)_2$** 

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol (Serullas, A. ch 46, 302.)  
+  $4\text{H}_2\text{O}$ , and  $6\text{H}_2\text{O}$ . (Salvadori, C. C 1912, II 414.)

**Zinc perchlorate, ammonia,  $\text{Zn}(\text{ClO}_4)_2 \cdot 4\text{NH}_3$** 

Ppt. (Salvadori, C. C 1912, II 414.)  
 $\text{Zn}(\text{ClO}_4)_2 \cdot 6\text{NH}_3$ . (Ephraim, B 1915, 48, 643.)

**Perchromic acid.**

Sol. in ethyl acetate and valerate; in amyl chloride, formate, acetate, butyrate, and valerate. (All give blue solutions.)

Insol. in  $\text{CS}_2$ ,  $\text{C}_2\text{H}_4$ ,  $\text{CHCl}_3$ ,  $\text{CCl}_4$ ,  $\text{C}_6\text{H}_5\text{NH}_2$ ,  $\text{C}_6\text{H}_5\text{NO}_2$  and toluene (Grosvenor, J. Am. Chem. Soc 1895, 17, 41-43.)  
 $\text{H}_2\text{CrO}_5 + 2\text{H}_2\text{O}$ . Decomp. above  $-30^\circ$  (Riesenfeld, B. 1914, 47, 552.)

**Ammonium perchromate,  $(\text{NH}_4)_2\text{CrO}_5$** 

Very unstable. Sl. sol in cold  $\text{H}_2\text{O}$ . Decomp. by conc  $\text{H}_2\text{SO}_4$ . Insol. in pure alcohol and pure ether. Decomp. by boiling alcohol containing more than 50%  $\text{H}_2\text{O}$ . (Wohlers, B. 1905, 38, 1888.)

$\text{CrO}_5 \cdot 3\text{NH}_4$ . Sol. in 10%  $\text{NH}_4\text{OH} + \text{Aq}$ ; sol. in  $\text{H}_2\text{O}$  with decomp., insol. in other solvents. (Wiede, B 1897, 30, 2181.)

$\text{NH}_4\text{CrO}_5 \cdot \text{H}_2\text{O}_2$ . Decomp. in the air. Sol. in ice cold  $\text{H}_2\text{O}$ , decomp. when warmed. Insol. in alcohol, ether, ligroin and  $\text{CHCl}_3$ . (Wiede, B. 1895, 31, 515.)

**Ammonium hydrogen perchromate,  $\text{CrO}_5(\text{O} \cdot \text{O} \cdot \text{NH}_4)(\text{O} \cdot \text{OH})$** 

Sol. in  $\text{H}_2\text{O}$  with decomp. Difficultly sol. in cold abs alcohol. (Hofmann, B. 1904, 37, 3406.)

**Barium perchromate,  $\text{BaCr}_2\text{O}_8$** 

(Byers and Reid, Am. Ch. J. 1904, 32, 513.)

**Calcium perchromate,  $\text{CaCr}_2\text{O}_8$** 

Very sol. in  $\text{H}_2\text{O}$ . (Mylus, B. 1900, 33, 3689; Byers and Reid, Am. Ch. J. 1904, 32, 513.)

**Lithium perchromate,  $\text{Li}_2\text{Cr}_2\text{O}_8$** 

(Byers and Reid, Am. Ch. J. 1904, 32, 511.)

**Magnesium perchromate,  $\text{MgCr}_2\text{O}_8$** 

(Byers and Reid.)

**Potassium perchromate,  $\text{K}_2\text{Cr}_2\text{O}_8$** 

Sl. sol in cold  $\text{H}_2\text{O}$ . Decomp. by conc.  $\text{H}_2\text{SO}_4$ . Insol. in pure alcohol and pure ether. Decomp. by boiling alcohol containing more than 50%  $\text{H}_2\text{O}$ . (Wohlers, B. 1905, 38, 1888.)

+  $\tau\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  at  $0^\circ$  without decomp. (Riesenfeld and Kutsch, B. 1908, 41, 3948.)

$\text{K}_2\text{Cr}_2\text{O}_8$ . Sol. in  $\text{H}_2\text{O}$ . Decomp. in the air. (Byers and Reid, Am. Ch. J. 1904, 32, 505.)

$\text{KCrO}_5 \cdot \text{H}_2\text{O}_2$  or  $\text{KH}_2\text{CrO}_7$ . Sol. in ice cold  $\text{H}_2\text{O}$ , decomp. when warmed, explosive. (Wiede, B 1898, 31, 520.)

**Sodium perchromate,  $\text{Na}_2\text{Cr}_2\text{O}_8$** 

Sl. sol in cold  $\text{H}_2\text{O}$ . Decomp. by conc.  $\text{H}_2\text{SO}_4$ . Insol. in pure alcohol and pure ether. Decomp. by boiling with alc. containing more than 50%  $\text{H}_2\text{O}$ . (Wohlers, B. 1905, 38, 1888.)

$\text{Na}_2\text{Cr}_2\text{O}_8 + 28\text{H}_2\text{O}$ . Efflorescent. Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ , with decomp. Not decomp. by  $\text{NaOH} + \text{Aq}$ . (Haussenmann, J. pr. (2) 48, 70.)

$\text{Na}_2\text{Cr}_2\text{O}_8$ . (Byers and Reid, Am. Ch. J. 1904, 32, 511.)

**Perchloroplatinocyanhydric acid,**

$\text{H}_2\text{Pt}(\text{CN})_4\text{Cl}_2 + 4\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$  and alcohol

**Ammonium perchloroplatinocyanide,**

$(\text{NH}_4)_2\text{Pt}(\text{CN})_4\text{Cl}_2 + 2\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ .

**Barium —,  $\text{BaPt}(\text{CN})_4\text{Cl}_2 + 5\text{H}_2\text{O}$** 

Very sol. in  $\text{H}_2\text{O}$ .

**Calcium —,  $\text{CaPt}(\text{CN})_4\text{Cl}_2$** 

Sol. in  $\text{H}_2\text{O}$ .

**Magnesium —,  $\text{MgPt}(\text{CN})_4\text{Cl}_2 + \tau\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$ .

**Manganous —,  $\text{MnPt}(\text{CN})_4\text{Cl}_2 + 5\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$  and alcohol.

**Potassium —,  $\text{K}_2\text{Pt}(\text{CN})_4\text{Cl}_2 + 2\text{H}_2\text{O}$** 

Very efflorescent, and sol in  $\text{H}_2\text{O}$  and alcohol.

**Percolumbic acid,  $\text{HClbO}_4 \cdot n\text{H}_2\text{O}$** 

Insol. in  $\text{H}_2\text{O}$ . Sol. with decomp. in warm  $\text{H}_2\text{SO}_4$ . (Melikoff, Z. anorg. 1899, 20, 341.)

**Cæsium percolumbate,  $\text{Cs}_2\text{C}_2\text{O}_8$** 

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30, 1658.)

**Cæsium magnesium percolumbate,** .  
 $\text{MgCsCbO}_8 + 8\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$  without decomp (E. F. Smith.)

**Calcium potassium percolumbate,**  
 $\text{CaKCbO}_8 + 4\text{H}_2\text{O}$ .  
 Difficultly sol in  $\text{H}_2\text{O}$  (E. F. Smith.)

**Calcium sodium percolumbate,**  $\text{CaNaCbO}_8 + 4\text{H}_2\text{O}$ .  
 Difficultly sol. in  $\text{H}_2\text{O}$ . (E. F. Smith.)

**Magnesium potassium percolumbate,**  
 $\text{MgKCbO}_8 + 7\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$  without decomp (E. F. Smith.)

**Magnesium rubidium percolumbate,**  
 $\text{MgRbCbO}_8 + 7\frac{1}{2}\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$  without decomp (E. F. Smith.)

**Magnesium sodium percolumbate,**  
 $\text{MgNaCbO}_8 + 8\text{H}_2\text{O}$ .  
 Sol in  $\text{H}_2\text{O}$  without decomp. (E. F. Smith.)

**Potassium percolumbate,**  $\text{K}_2\text{CbO}_8$ .  
 Sol in  $\text{H}_2\text{O}$ . Ppt. from aq solution by alcohol. (E. F. Smith.)  
 $\text{K}_2\text{CbO}_8 + 3\text{H}_2\text{O}$  Sol. with decomp. in  $\text{H}_2\text{O}$  Ppt. by alcohol. Sol. in  $\text{KOH} + \text{H}_2\text{O}_2 + \text{Aq}$  (Mehkoff, Z anorg 1899, 20. 342.)

**Rubidium percolumbate,**  $\text{Rb}_2\text{CbO}_8$ .  
 Sol. in  $\text{H}_2\text{O}$ . Insol in alcohol (E. F. Smith.)

**Sodium percolumbate,**  $\text{Na}_2\text{CbO}_8$ .  
 Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol (E. F. Smith.)

### Perferricyanhydric acid.

**Potassium perferricyanide,**  $\text{K}_3\text{Fe}(\text{CN})_6 + \text{H}_2\text{O}$  (?).

Very hygroscopic, and sol in  $\text{H}_2\text{O}$ . Nearly insol. in absolute alcohol. Decomp. by hot  $\text{H}_2\text{O}$ . (Skraup, A. 189. 368.)

### Periodic acid, $\text{H}_5\text{IO}_6$ .

Deliquescent in moist air, very sol. in  $\text{H}_2\text{O}$ . (Bengieser, A. 17. 254.)

Rather easily sol in alcohol and ether. (Bengieser.)

Rather easily sol. in alcohol, less in ether. (Langtoch.)

Sl. sol. in alcohol, still less in ether. (Langlois, J. pr. 56. 36.)

Sp. gr. of  $\text{H}_5\text{IO}_6 + \text{Aq}$ .  
 $\text{H}_5\text{IO}_6 + 20\text{H}_2\text{O} = 1.4008$ .  
 $\text{H}_5\text{IO}_6 + 40\text{H}_2\text{O} = 1.2165$ .  
 $\text{H}_5\text{IO}_6 + 80\text{H}_2\text{O} = 1.1121$ .  
 $\text{H}_5\text{IO}_6 + 160\text{H}_2\text{O} = 1.0570$ .  
 $\text{H}_5\text{IO}_6 + 320\text{H}_2\text{O} = 1.0288$ .  
 (Thomsen, B. 7. 71.)

### Periodates.

Most periodates are insol or sl. sol in  $\text{H}_2\text{O}$ , all are insol. or very sl. sol in alcohol, but they all dissolve in dil  $\text{HNO}_3 + \text{Aq}$ . (Bengieser.)

**Aluminum metaperiodate,**  $\text{Al}(\text{IO}_4)_3 + 3\text{H}_2\text{O}$ .  
 Stable in solution containing  $\text{HNO}_3$ . (Eakle, C. C. 1896. II, 649.)

**Ammonium metaperiodate,**  $\text{NH}_4\text{IO}_4$ .  
 Sl. sol in  $\text{H}_2\text{O}$ . Cryst with  $3\text{H}_2\text{O}$  (Ihre, B. 3. 316),  $2\text{H}_2\text{O}$  (Langlois, A. ch (3) 34. 257).  
 Stable in solution containing free ammonia. (Eakle, Zeit Kryst. 1896, 26. 258-88.)  
 100 pts  $\text{H}_2\text{O}$  dissolve 27 pts  $\text{NH}_4\text{IO}_4$  at  $16^\circ$ ; sp. gr. of sat. solution at  $16^\circ/4^\circ = 1.0178$  (Barker, Chem. Soc. 1908, 93. 17.)

**Ammonium dimesoperiodate,**  $(\text{NH}_4)_2\text{I}_2\text{O}_9 + 3\text{H}_2\text{O}$ .  
 Sol in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 134. 379.)

Stable in solution containing free ammonia. Two modifications. (Eakle, Zeit Kryst. 1896, 26. 558-88; C. C. 1896. II, 649.)

**Ammonium lithium dimesoperiodate,**  
 $(\text{NH}_4)_2\text{Li}_2\text{I}_2\text{O}_9 + 7\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Ihre.)

**Ammonium magnesium mesoperiodate,**  
 $\text{NH}_4\text{MgI}_2\text{O}_9 + 3\text{H}_2\text{O}$ .  
 Precipitate. (Rammelsberg, Pogg. 134. 510.)

**Barium metaperiodate,**  $\text{Ba}(\text{IO}_4)_2$ .  
 Known only in solution

**Barium dimesoperiodate,**  $\text{Ba}_2\text{I}_2\text{O}_9$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ , easily sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Rammelsberg, Pogg. 134. 391.)  
 Cryst also with  $3\text{H}_2\text{O}$ ,  $5\text{H}_2\text{O}$ , and  $7\text{H}_2\text{O}$ .

**Barium mesoperiodate,**  $\text{Ba}_2(\text{IO}_4)_3 + 6\text{H}_2\text{O}$ .  
 (Ihre.)

**Barium orthoperiodate,**  $\text{Ba}_4(\text{IO}_3)_2$ .  
 Insol in  $\text{H}_2\text{O}$ . Sol in  $\text{HNO}_3 + \text{Aq}$ . (Rammelsberg.)

**Barium dimesodiperoxide,**  $\text{Ba}_2\text{I}_2\text{O}_{10} + 5\text{H}_2\text{O}$ .  
 Precipitate. Sol. in dil.  $\text{HNO}_3 + \text{Aq}$  (Rammelsberg, Pogg. 134. 395.)

**Barium periodate tungstate.**  
 See Tungstoperoxide, barium.

**Cæsium metaperiodate,**  $\text{CsIO}_4$ .  
 Sl. sol. in cold  $\text{H}_2\text{O}$ ; readily sol in hot  $\text{H}_2\text{O}$ . (Wells, Am. Ch. J. 1901, 26. 279.)  
 2.15 pts. are sol in 100 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ .  
 Sp. gr. of the sat aq solution at  $15^\circ/4^\circ = 1.0166$ . (Barker, Chem. Soc. 1908, 93. 17.)

**Cæsium periodate hydrogen fluoride,  $2\text{CsIO}_4$ ,  $3\text{HF} + \text{H}_2\text{O}$** 

Sol in 40–60% HF + Aq. Decomp. by  $\text{H}_2\text{O}$ . Efflorescent. (Weinland, Z anorg 1899, 22. 263.)

**Cadmium metaperiodate,  $\text{Cd}(\text{IO}_3)_2$ .**

Ppt. (Rammelsberg, Pogg. 134. 516)

**Cadmium dmesoperiodate,  $\text{Cd}_2\text{I}_2\text{O}_9 + 9\text{H}_2\text{O}$ .**

Insol in  $\text{H}_2\text{O}$ . (Rammelsberg.)

**Cadmium mesoperiodate,  $\text{Cd}_3(\text{IO}_3)_2 + 5\text{H}_2\text{O}$ .**

Ppt  
 $\text{CdHIO}_6$ . (Kimmins, Chem Soc 55. 151.)

**Cadmium dimeriodate,  $\text{Cd}_4\text{I}_2\text{O}_{11} + 3\text{H}_2\text{O}$** 

Insol in  $\text{H}_2\text{O}$  (Rammelsberg)

**Cadmium periodate,  $\text{Cd}_{12}\text{I}_4\text{O}_{31} + 15\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  (Rammelsberg)

**Calcium metaperiodate,  $\text{Ca}(\text{IO}_3)_2$ .**

Sol in  $\text{H}_2\text{IO}_6$  + Aq and acids (Rammelsberg, Pogg. 134. 405)

**Calcium dmesoperiodate,  $\text{Ca}_2\text{I}_2\text{O}_9 + 7\text{H}_2\text{O}$ , and  $9\text{H}_2\text{O}$** 

Sl sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)  
+  $3\text{H}_2\text{O}$ . (Langlois)

**Calcium orthoperiodate,  $\text{Ca}_3(\text{IO}_3)_2$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  + Aq (Rammelsberg, Pogg. 44. 577.)

**Cobaltous periodate,  $7\text{CoO}$ ,  $2\text{I}_2\text{O}_7 + 18\text{H}_2\text{O}$ .**

Attacked by HCl, and sol. on warming. Slowly but completely sol. in  $\text{NH}_3$  (Lautsch, J. pr. 100. 89)

Could not be obtained by Rammelsberg.

**Cupric dmesoperiodate,  $\text{Cu}_2\text{I}_2\text{O}_9 + 6\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  without dissolving. (Rammelsberg.)

**Cupric orthoperiodate,  $\text{Cu}_2\text{HIO}_6$ .**

Very sol. in  $\text{HNO}_3$  + Aq. (Kimmins, Chem. Soc. 55. 150)

**Cupric dimeriodate,  $\text{Cu}_4\text{I}_2\text{O}_{11} + \text{H}_2\text{O}$ .**

Insol in  $\text{H}_2\text{O}$ , sol. in dil  $\text{HNO}_3$  + Aq. (Rammelsberg.)  
+  $7\text{H}_2\text{O}$ . (R)

**Cupric periodate,  $5\text{CuO}$ ,  $\text{I}_2\text{O}_5 + 5\text{H}_2\text{O}$ .**

Wholly insol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. 1. 73)

**Didymium peroidate,  $\text{Dy}_2\text{O}_3(\text{IO}_3)_2$ .**

Precipitate.  
 $\text{DyIO}_6 + 4\text{H}_2\text{O}$ . Ppt. (Cleve, Bull. Soc. (2) 43. 362.)

**Erbium periodate.**

Sol. in  $\text{H}_2\text{O}$  (Hoglund)

**Glucinum periodate,  $\text{Gl}_2(\text{IO}_3)_2 + 11\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  without dissolving. Easily sol. in  $\text{HNO}_3$  + Aq  
+  $13\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . (Atterberg, B. 7. 474.)

**Iron (ferrous) orthoperiodate,  $\text{Fe}_2(\text{IO}_3)_2$ .**

(Kimmins, Chem. Soc. 55. 150)

$\text{FeH}_2\text{IO}_6$  (Kimmins)

**Iron (ferric) periodate,  $2\text{Fe}_2\text{O}_3$ ,  $\text{I}_2\text{O}_7 + 21\text{H}_2\text{O}$ .**

Ppt (Rammelsberg.)

**Iron (ferric) dmesoperiodate,  $\text{FeH}_2\text{IO}_6$ .**

Insol in dil  $\text{HNO}_3$  + Aq. (Kimmins, Chem. Soc. 55. 149)

**Iron (ferric) metaperiodate,  $\text{Fe}(\text{IO}_3)_2$ .**

(Kimmins)

**Lanthanum periodate,  $\text{La}(\text{IO}_3)_3 + 2\text{H}_2\text{O}$ .**

Precipitate. (Cleve)

**Lead metaperiodate,  $\text{Pb}(\text{IO}_3)_2$ .**

Sol. in  $\text{HNO}_3$  + Aq. (Kimmins)

**Lead orthoperiodate,  $\text{Pb}_2\text{H}_4(\text{IO}_3)_2$ .**

Sol in  $\text{HNO}_3$  + Aq. (Kimmins, Chem. Soc. 55. 149.)

**Lead mesoperiodate,  $\text{Pb}_2(\text{IO}_3)_2 + 2\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  or excess of periodic acid + Aq. Decomp. by dil.  $\text{H}_2\text{SO}_4$  + Aq. (Bengieser, A. 17. 254)

**Lithium metaperiodate,  $\text{LiIO}_4$ .**

Difficultly sol in  $\text{H}_2\text{O}$ . (Rammelsberg, B. 1. 132.)

Somewhat deliquescent.

+  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_2\text{O}$ . (Barker, Chem. Soc. 1911, 99. 1326)

**Lithium dmesoperiodate,  $\text{Li}_4\text{I}_2\text{O}_9 + 3\text{H}_2\text{O}$ .**

Very sl. sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 134. 387.)

**Lithium orthoperiodate,  $\text{Li}_3\text{IO}_6$ .**

$\text{H}_2\text{O}$  dissolves out a slight amount of  $\text{LiI}$ . Easily sol. in  $\text{HNO}_3$  + Aq. (Rammelsberg, Pogg. 137. 313)

**Magnesium metaperiodate,  $\text{Mg}(\text{IO}_3)_2 + 10\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)

**Magnesium dimeriodate,  $\text{Mg}_4\text{I}_2\text{O}_{11} + 6\text{H}_2\text{O}$ , or  $9\text{H}_2\text{O}$** 

Sl efflorescent Insol. in  $\text{H}_2\text{O}$  (Rammelsberg.)

**Magnesium dimesoperiodate**,  $Mg_3I_2O_8 + 3H_2O$ .

(Rammelsberg, Pogg. 134. 499.)  
+15H<sub>2</sub>O. Insol. in H<sub>2</sub>O. Sol. in periodic acid + Aq. (Langlois.)

**Manganic periodate.**

See Manganiperiodic acid.

**Mercurous dimerperiodate**,  $5Hg_2O, I_2O_7$ , or  $4Hg_2O, I_2O_7 = Hg_4I_2O_{11}$ .

Insol. in H<sub>2</sub>O. Easily sol. in HNO<sub>3</sub> + Aq and in HCl + Aq. (Lautsch, J. pr. 100. 86.)

**Mercuric orthoperiodate**,  $Hg_2(IO_6)_2$

Insol. in H<sub>2</sub>O. Easily sol. in HCl. Sl. sol. in HNO<sub>3</sub>. (Lautsch)

**Mercuric potassium periodate**,  $10HgO, 5K_2O, 6I_2O_7$ .

Insol. in H<sub>2</sub>O. Difficultly sol. in warm HNO<sub>3</sub> without decomp. (Rammelsberg, Pogg. 134. 526)

**Nickel dimesoperiodate**,  $Ni_2I_2O_8$ .

(Kinnus, Chem. Soc. 55. 151.)

**Nickel mesoperiodate**,  $Ni_2(IO_6)_2$ .

(Kinnus)

**Nickel periodate**,  $7NiO, 4I_2O_7 + 63H_2O$ .

Insol. in H<sub>2</sub>O. Easily sol. in H<sub>2</sub>IO<sub>6</sub> + Aq. (Rammelsberg, Pogg. 134. 514.)

**Potassium metaperiodate**,  $KIO_4$ .

Sl. sol. in H<sub>2</sub>O. Sol. in 290 pts. cold H<sub>2</sub>O. (Rammelsberg, Pogg. 134. 320.)

Almost insol. in KOH + Aq.

0.65 pt. is sol. in 100 pts H<sub>2</sub>O at 13°. Sp. gr. of the sat. sol. at 13°/4° = 1.0051. (Barker, Chem. Soc. 1908, 93. 16.)

Insol. in methyl acetate. (Naumann, B. 1900, 42. 3790.)

**Potassium mesoperiodate**,  $K_3IO_8 + 4H_2O$ .

Deliquescent. Easily sol. in H<sub>2</sub>O. (Ihre.)

**Potassium dimesoperiodate**,  $K_4I_2O_8 + 9H_2O$

Sol. in 9.7 pts. cold H<sub>2</sub>O. (Rammelsberg, Pogg. 134. 320.)

Sol. in KOH + Aq.

+3H<sub>2</sub>O.

**Potassium hydrogen dimesoperiodate**,

$K_2HI_2O_8$ .

Less sol. in H<sub>2</sub>O than KIO<sub>4</sub>. (Kinnus, Chem. Soc. 51. 355)

**Potassium manganic periodate.**

See Manganiperiodate, potassium.

**Potassium zinc periodate**,  $K_2O, 4ZnO, 2I_2O_7 + 4H_2O$ .

Ppt. (Rammelsberg, Pogg. 134. 368.)

**Potassium periodate tungstate.**

See Tungstoperiodate, potassium.

**Rubidium periodate**,  $RbIO_4$ .

0.65 pt. is sol. in 100 pts H<sub>2</sub>O at 13°. Sp. gr. of the sat. aq. solution at 13°/4° = 1.0052. (Barker, Chem. Soc. 1908, 93. 16.)

**Samarium periodate**,  $Sm(IO_6)_2 + 4H_2O$ .

Precipitate. (Cleve.)

**Silver metaperiodate**,  $AgIO_4$ .

Decomp. by cold H<sub>2</sub>O into  $Ag_4I_2O_8 + 3H_2O$ , and by warm H<sub>2</sub>O into  $Ag_4I_2O_8 + H_2O$ . (Ammermüller and Magnus, Pogg. 28. 516.)

+H<sub>2</sub>O. Insol ppt (Kinnus)

**Silver mesoperiodate**,  $Ag_3IO_8$

(Fornlund, J. pr. 100. 99.)

$Ag_3HIO_8$ . Insol. ppt. (Kinnus, Chem. Soc. 51. 358)

Ppt by dil. HNO<sub>3</sub>; sol. in HNO<sub>3</sub>. (Rosenheim, A. 1899, 308. 57.)

**Silver dimesoperiodate**,  $Ag_4I_2O_8 + H_2O$ , or  $3H_2O$

Insol ppt. (Kinnus.)

Decomp. by boiling H<sub>2</sub>O into  $Ag_3IO_8$  (Rammelsberg.)

**Silver orthoperiodate**,  $Ag_2IO_6$ .

Sol. in HNO<sub>3</sub> or NH<sub>4</sub>OH + Aq. (Rammelsberg, Pogg. 134. 386)

Sol. in excess NH<sub>4</sub>OH + Aq; pptd. by HNO<sub>3</sub>. (Rosenheim, A. 1899, 308. 56)

$Ag_2H_2IO_6$ . Insol ppt (Kinnus, Chem. Soc. 51. 358.)

$Ag_2H_2IO_6$ . As above (Kinnus.)

Sol. in dil. HNO<sub>3</sub>. (Rosenheim, A. 1899, 308. 53)

**Silver dimerperiodate**,  $Ag_5I_2O_{11}$ .

Sl. sol. in HNO<sub>3</sub> + Aq; insol. in NH<sub>4</sub>OH + Aq. (Lautsch, J. pr. 100. 75.)

**Silver dimesodimerperiodate**,  $Ag_{10}I_4O_{19}$ .

HNO<sub>3</sub> + Aq dissolves out Ag<sub>2</sub>O. Insol. in NH<sub>4</sub>OH + Aq. (Lautsch.)

**Sodium metaperiodate**,  $NaIO_4$

Easily sol. in H<sub>2</sub>O

+2H<sub>2</sub>O. (Langlois.)

+3H<sub>2</sub>O. Efflorescent; sol. in 12 pts H<sub>2</sub>O at ord. temp. (Rammelsberg, J. pr. 103. 278.)

**Sodium dimesoperiodate**,  $Na_4I_2O_8 + 3H_2O$

Scarcely sol in cold, sl. sol. in hot H<sub>2</sub>O. (Magnus and Ammermüller, Pogg. 28. 514.)

Very sol. in dil. HNO<sub>3</sub> + Aq. (Langlois)

Sol. in HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq with decomp. (Bengesser, A. 17. 254.)

Insol. in methyl acetate. (Naumann, B. 1900, 42. 3790)

+4H<sub>2</sub>O.

Sodium *mesoperiodate*,  $\text{Na}_4\text{IO}_6 + \frac{1}{4}\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Ther.)  
 $+\text{H}_2\text{O} = \text{Na}_3\text{H}_2\text{IO}_6$ . Less sol. in  $\text{H}_2\text{O}$  than  
 $\text{Na}_4\text{I}_2\text{O}_7 + 3\text{H}_2\text{O} (= \text{Na}_3\text{H}_2\text{IO}_6)$ . (Kimmmins,  
 Chem. Soc. 51. 357.)

Sodium *orthoperiodate*,  $\text{Na}_4\text{IO}_6$

$\text{Na}_3\text{H}_2\text{IO}_6$ . Correct composition for  
 $\text{Na}_4\text{I}_2\text{O}_7 + 3\text{H}_2\text{O}$ . (Kimmmins.)  
 $\text{Na}_3\text{H}_2\text{IO}_6$ . Correct composition for  $\text{Na}_4\text{IO}_6$   
 $+\text{H}_2\text{O}$ . (Kimmmins.)

Strontium *metaperiodate*,  $\text{Sr}(\text{IO}_4)_2 + 6\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ .

Strontium *dimesoperiodate*,  $\text{Sr}_2\text{I}_2\text{O}_8$ .

Decomp. by  $\text{H}_2\text{O}$ .  
 $+3\text{H}_2\text{O}$ .

Strontium *mesoperiodate*,  $\text{Sr}_3(\text{IO}_6)_2$ .

Precipitate.

Strontium *orthoperiodate*,  $\text{Sr}_2(\text{IO}_6)_2$ .

(Rammelsberg, Pogg. 44. 577.)

Thallic periodate,  $3\text{Ti}_2\text{O}_3, \text{I}_2\text{O}_5 + 30\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ . Decomp. by alkalis.  
 (Rammelsberg, B. 3. 361.)

Thorium periodate.

Precipitate Sol. in  $\text{HNO}_3 + \text{Aq}$ .

Uranous periodate.

Precipitate, which quickly decomposes.

Ytterbium periodate,  $\text{YbIO}_3 + 2\text{H}_2\text{O}$ .

Hydrosopic. (Cleve, Z. anorg. 1902, 32.  
 136.)

Yttrium periodate,  $\text{Y}_2(\text{IO}_4)_2 + 8\text{H}_2\text{O}$ .

Very slightly sol. (Cleve.)  
 $3\text{Y}_2\text{O}_3, 2\text{I}_2\text{O}_5 + 6\text{H}_2\text{O}$ . Precipitate. (Cleve)

Zinc *dimesoperiodate*,  $\text{Zn}_2\text{I}_2\text{O}_8 + 6\text{H}_2\text{O}$ .

(Rammelsberg, Pogg. 134. 513.)

Zinc periodate,  $3\text{ZnO}, 2\text{I}_2\text{O}_5 + 7\text{H}_2\text{O}$ .

(Langlois)

Zinc *disperiodate*,  $\text{Zn}_4\text{I}_4\text{O}_{11} + \text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$ , sl. acid with  $\text{HNO}_3$ .  
 (Langlois, A. ch. (3) 34. 257.)

Zinc *dimesodisperiodate*,  $\text{Zn}_2\text{I}_4\text{O}_{19} + 14\text{H}_2\text{O} (?)$ .

(Rammelsberg.)

Zinc periodate,  $9\text{ZnO}, 2\text{I}_2\text{O}_5 + 12\text{H}_2\text{O}$ .

(Rammelsberg)

Periodoplatinocyanhydric acid.

Barium periodoplatinocyanide,  $\text{BaPt}(\text{CN})_4\text{I}_2$   
 $+ 2\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  or alcohol (Holst, Bull.  
 Soc. (2) 22. 347.)

Potassium periodoplatinocyanide,

$\text{K}_2\text{Pt}(\text{CN})_4\text{I}_2$

Permanent Easily sol. in  $\text{H}_2\text{O}$  or alcohol

Permanganic acid,  $\text{HMnO}_4$ .

Known only in solution, which decomposes  
 by evaporation or warming.

Permanganates.

All permanganates are sol. in  $\text{H}_2\text{O}$ , except-  
 ing  $\text{AgMnO}_4$ , which is sl. sol

Ammonium permanganate,  $\text{NH}_4\text{MnO}_4$ .

Sol in 12.6 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  (Aschoff.)  
 Sol in  $\text{H}_2\text{O}$  with decomp. (Christensen,  
 Z. anorg. 1900, 24. 206.)

Barium permanganate,  $\text{Ba}(\text{MnO}_4)_2$

Sol in  $\text{H}_2\text{O}$ .

Cadmium permanganate,  $\text{Cd}(\text{MnO}_4)_2 + 8\text{H}_2\text{O}$ .

Stable. (Klobb, Bull. Soc. 1894, (3) 11  
 607.)

Cadmium permanganate ammonia,

$\text{Cd}(\text{MnO}_4)_2, 4\text{NH}_3$ .

Sol in  $\text{H}_2\text{O}$  with decomp. (Klobb, Bull.  
 Soc. (3) 3. 510.)

Cesium permanganate,  $\text{CsMnO}_4$

Sl. sol. in cold, somewhat more easily sol.  
 in hot  $\text{H}_2\text{O}$ . (Muthmann, B. 1893, 26. 1018.)  
 Solubility in  $\text{H}_2\text{O}$ .

100 ccm. of the sat. solution contain at

$1^\circ$   $19^\circ$   $59^\circ$   
 0.097 0.23 1.25 g.  $\text{CsMnO}_4$ .

(Patterson, J. Am. Chem. Soc. 1906, 28.  
 1735.)

Calcium permanganate,  $\text{Ca}(\text{MnO}_4)_2 + 5\text{H}_2\text{O}$ .

Deliquescent.

Cupric permanganate.

Deliquescent.

Cupric permanganate ammonia,  $\text{Cu}(\text{MnO}_4)_2 \cdot 4\text{NH}_3$ .

Sol. in  $\text{H}_2\text{O}$  with slow decomp (Klobb, Bull. Soc. (3) 3. 509.)

Didymium permanganate,  $\text{Di}(\text{MnO}_4)_2 + 2\text{H}_2\text{O}$ .

Sl sol. in  $\text{H}_2\text{O}$ . (Frerichs and Smith, A 191. 331.)

Has not been prepared. (Cleve, B. 11. 912.)

Lanthanum permanganate,  $\text{La}(\text{MnO}_4)_3 + 2\text{H}_2\text{O}$ .

Ppt. (Frerichs and Smith, A 191. 331.)

Has not been prepared (Cleve, B 11. 910.)

Lead permanganate.

Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Forchhammer)

Lithium permanganate,  $\text{LiMnO}_4 + 3\text{H}_2\text{O}$

Sol. in 14 pts  $\text{H}_2\text{O}$  at  $16^\circ$ . (Aschoff)

Magnesium permanganate,  $\text{Mg}(\text{MnO}_4)_2$

Insol. in  $\text{CHCl}_3$ ,  $\text{CCl}_4$ ,  $\text{C}_6\text{H}_6$ , toluene, nitrobenzene, ligroin, ether and  $\text{CS}_2$ . Sol in methyl alcohol, acetone, pyridine, and readily sol. in glacial acetic acid. Only pyridine and glacial acetic acid are sufficiently stable toward the salt to be of any practical use for oxidation purposes (Michael and Garner, Am. Ch. J. 1906, 35. 268)  
+  $6\text{H}_2\text{O}$ . Easily deliquescent

Nickel permanganate ammonia,  $\text{Ni}(\text{MnO}_4)_2 \cdot 4\text{NH}_3$

Sol in  $\text{H}_2\text{O}$  with decomp (Klobb, Bull. Soc. (3) 3. 509)

Potassium permanganate,  $\text{KMnO}_4$ .

Sol. in 16 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Mitscherlich)

Solubility in 100 pts  $\text{H}_2\text{O}$  at  $t^\circ$

(Herz and Knoch, Z. anorg. 1904, 41. 317.)

Sol. in benzonitrile (Naumann, B 1914, 47. 1369)

Difficultly sol in methyl acetate. (Naumann, B. 1909, 42. 3795)

Sol. in ethyl acetate. (Naumann, B 1904, 37. 3601)

 Rubidium permanganate, RbMnO<sub>4</sub>.

 Solubility in H<sub>2</sub>O lies between K and Cs salts (Muthmann, B. 1893, 26. 1018)

 Solubility in H<sub>2</sub>O.  
 100 cem of the sat solution contain at.

2°	19°	60°
0 46	1 06	4 68 g. RbMnO <sub>4</sub> .

 (Patterson, J Am. Chem. Soc 1906, 28. 1735.)

 Silver permanganate, Ag<sub>2</sub>MnO<sub>4</sub>

 Sol in 109 pts cold H<sub>2</sub>O and much less hot H<sub>2</sub>O. Decomp. by boiling (Mitscherlich, Pogg. 25. 301)

Silver permanganate ammonia.

 Sl. sol. in cold, more easily in hot H<sub>2</sub>O (Klobb, C. R. 103. 384)

**Sodium permanganate,  $\text{NaMnO}_4 + 3\text{H}_2\text{O}$ .**

Deliquescent. Extremely sol in  $\text{H}_2\text{O}$

Moderately sol in liquid  $\text{NH}_3$ . (Franklin, *Am. Ch. J.* 1898, 20, 829)

**Strontium permanganate,  $\text{Sr}(\text{MnO}_4)_2 + 4\text{H}_2\text{O}$**

Deliquescent. Sol in  $\text{H}_2\text{O}$ . (Fronherz)

**Thalious permanganate,  $\text{TIMnO}_4$ .**

Sol in  $\text{H}_2\text{O}$  with decomp. (R. Meyer, *Z. anorg.* 1899, 22, 188)

**Zinc permanganate,  $\text{Zn}(\text{MnO}_4)_2 + 6\text{H}_2\text{O}$ .**

Deliquescent. Very sol in  $\text{H}_2\text{O}$  (Martenson, *J. B.* 1873, 274.)

**Zinc permanganate ammonia,**

$\text{Zn}(\text{MnO}_4)_2 \cdot 4\text{NH}_3$

Sol. in  $\text{H}_2\text{O}$  with decomp. (Klobb, *Bull. Soc.* (3) 3, 509)

**Permanganomolybdic acid,  $\text{MnO}_2$ ,**

$12\text{MoO}_3 + 10\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Decomp. by alkalis. Sol. in alcohol. (Péchar, *C. R.* 1897, 125, 31)

**Ammonium permanganomolybdate,**

$2(\text{NH}_4)_2\text{O}, \text{MnO}_2, 7\text{MoO}_3 + 5\text{H}_2\text{O}$ .

(Friedheim and Samelson, *Z. anorg.* 1900, 24, 73)

$3(\text{NH}_4)_2\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 6\text{H}_2\text{O}$ . (Friedheim and Allemann, *Mitt. d. Nat. Ges. Bern.* 1904, 23)

$+7\text{H}_2\text{O}$ . (Friedheim and Samelson, *Z. anorg.* 1900, 24, 70)

$4(\text{NH}_4)_2\text{O}, \text{MnO}_2, 11\text{MoO}_3 + 7\text{H}_2\text{O}$ . (Friedheim and Samelson.)

$3(\text{NH}_4)_2\text{O}, \text{MnO}_2, 12\text{MoO}_3 + 5\text{H}_2\text{O}$ . Sol in cold  $\text{H}_2\text{O}$ . Decomp. by alkalis. Insol. in alcohol. (Péchar, *C. R.* 1897, 125, 30.)

**Ammonium manganous permanganomolybdate,  $3[(\text{NH}_4)_2, \text{Mn}]\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 6\text{H}_2\text{O}$  and  $+7\text{H}_2\text{O}$**

(Friedheim and Allemann, *Mitt. d. Nat. Ges. Bern.* 1904, 23.)

$3[(\text{NH}_4)_2, \text{Mn}]\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 10\text{H}_2\text{O}$  (Friedheim and Samelson, *Z. anorg.* 1900, 24, 91.)

$4[(\text{NH}_4)_2, \text{Mn}]\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 6\text{H}_2\text{O}$ . (Friedheim and Samelson, *Z. anorg.* 1900, 24, 75.)

$4[(\text{NH}_4)_2, \text{Mn}]\text{O}, \text{MnO}_2, 11\text{MoO}_3 + 8\text{H}_2\text{O}$  (Friedheim and Samelson, *Z. anorg.* 1900, 24, 72.)

**Ammonium manganous potassium permanganomolybdate,  $2(\text{NH}_4)_2\text{O}, \text{MnO}, \text{K}_2\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 5\text{H}_2\text{O}$ .**

Very sl. sol. in cold, easily sol. in  $\text{H}_2\text{O}$  at 79° (Z. anorg. 1898, 16, 79.)

$3[(\text{NH}_4)_2, \text{Mn}]\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 11\text{H}_2\text{O}$ . (Friedheim and Allemann, *Mitt. d. Nat. Ges. Bern.* 1904, 23.)

$4[(\text{NH}_4)_2, \text{K}_2, \text{Mn}]\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 5\text{H}_2\text{O}$ . (Friedheim and Samelson, *Z. anorg.* 1900, 24, 97.)

$3[(\text{NH}_4)_2, \text{K}_2, \text{Mn}]\text{O}, \text{MnO}_2, 10\text{MoO}_3 + 6\text{H}_2\text{O}$ , and  $+10\text{H}_2\text{O}$  (Friedheim and Samelson, *Z. anorg.* 1900, 24, 92)

**Ammonium potassium permanganomolybdate,  $3[(\text{NH}_4)_2, \text{K}_2]\text{O}, \text{MnO}_2, 8\text{MoO}_3 + 4\text{H}_2\text{O}$ .**

(Friedheim and Samelson)

**Barium permanganomolybdate,  $3\text{BaO}, \text{MnO}_2, 9\text{MoO}_3 + 12\text{H}_2\text{O}$**

Ppt. (Hall, *J. Am. Chem. Soc.* 1907, 29, 700.)

**Manganous potassium permanganomolybdate,  $2\text{K}_2\text{O}, \text{MnO}, \text{MnO}_2, 9\text{MoO}_3 + 8\text{H}_2\text{O}$**

True formula for  $5\text{K}_2\text{O}, \text{Mn}_2\text{O}_3, 16\text{MoO}_3 + 12\text{H}_2\text{O}$  of Stauv. (Friedheim and Samelson, *Z. anorg.* 1900, 24, 86.)

$3[\text{K}_2, \text{Mn}]\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 6\text{H}_2\text{O}$ . (Friedheim and Allemann, *Mitt. d. Nat. Ges. Bern.* 1904, 23)

$2\text{K}_2\text{O}, 0.4\text{MnO}, \text{MnO}_2, 9\text{MoO}_3 + 7\text{H}_2\text{O}$ . Ppt. (Hall, *J. Am. Chem. Soc.* 1907, 29, 700)

$4[\text{K}_2, \text{Mn}]\text{O}, \text{MnO}_2, 11\text{MoO}_3 + 7\text{H}_2\text{O}$ . (Friedheim and Samelson, *Z. anorg.* 1900, 24, 80)

**Manganous potassium sodium permanganomolybdate,  $3[\text{K}_2, \text{Na}_2, \text{Mn}]\text{O}, \text{MnO}_2, 8\text{MoO}_3 + 4\text{H}_2\text{O}$ .**

(Friedheim and Allemann, *Mitt. d. Nat. Ges. Bern.* 1904, 48)

**Manganous sodium permanganomolybdate,  $3[\text{Na}_2, \text{Mn}]\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 15\text{H}_2\text{O}$ .**

(Friedheim and Allemann.)

**Potassium permanganomolybdate,  $3\text{K}_2\text{O}, \text{MnO}_2, 8\text{MoO}_3 + 3\text{H}_2\text{O}$ .**

Much less sol. in  $\text{H}_2\text{O}$  than  $\text{NH}_4$  comp. (Friedheim and Samelson, *Z. anorg.* 1900, 24, 78.)

$+5\text{H}_2\text{O}$ . Nearly insol. in cold or hot  $\text{H}_2\text{O}$ . (Rosenheim and Itzig, *Z. anorg.* 1893, 16, 81)

$3\text{K}_2\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 5\text{H}_2\text{O}$ . (Friedheim and Samelson, *Z. anorg.* 1900, 24, 81.)

$+6\text{H}_2\text{O}$ . (Hall, *J. Am. Chem. Soc.* 1907, 29, 700)

$3\text{K}_2\text{O}, \text{MnO}_2, 12\text{MoO}_3 + 4\text{H}_2\text{O}$ . Nearly insol. in cold  $\text{H}_2\text{O}$ . Decomp. by alkalis. Insol. in alcohol. (Péchar, *C. R.* 1897, 125, 31.)

**Silver permanganomolybdate,  $3\text{Ag}_2\text{O}, \text{MnO}_2, 9\text{MoO}_3 + 6\text{H}_2\text{O}$ .**

Ppt. (Hall, *J. Am. Chem. Soc.* 1907, 29, 700)

**Sodium permanganomolybdate**,  $3\text{Na}_2\text{O}$ ,  $\text{MnO}_2$ ,  $12\text{MoO}_3 + 13\text{H}_2\text{O}$ .

Efflorescent. Very sol in  $\text{H}_2\text{O}$ . Decomp by alkalis. Insol in alcohol. (Péchar, C R. 125. 31.)

**Permanganotungstic acid.**

**Ammonium manganous permanganotungstate**,  $4(\text{NH}_4)_2\text{O}$ ,  $\text{MnO}$ ,  $\text{MnO}_2$ ,  $12\text{WO}_3 + 23\text{H}_2\text{O}$

Readily sol in  $\text{H}_2\text{O}$ . Can be cryst therefrom (Rogers and Smith, J Am Chem. Soc. 1904, 26. 1475)

**Sodium permanganotungstate**,  $3\text{Na}_2\text{O}$ ,  $\text{MnO}_2$ ,  $5\text{WO}_3 + 13\text{H}_2\text{O}$ .

Rather easily sol. in hot  $\text{H}_2\text{O}$ . Solution decomp on long boiling with separation of manganese peroxide (Just, B 1903, 36. 3621)

**Permolybdic acid**,  $\text{Mo}_2\text{O}_7$ ,  $5\text{H}_2\text{O} = \text{HMoO}_4 + 2\text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$ , and not decomp. by boiling (Péchar, A. ch. (6) 28. 550.)

$\text{H}_2\text{MoO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$  "Oxo-molybdic acid." Only very sl. sol. in  $\text{H}_2\text{O}$  after being dried in the air. Sol in fairly conc.  $\text{H}_2\text{SO}_4$ . (Muthmann, B. 1898, 31. 1838.)

$\text{H}_2\text{MoO}_7$ ,  $\text{H}_2\text{O}_2$  Sl. sol in cold, more easily sol in hot  $\text{H}_2\text{O}$ , but does not separate on cooling. Sol. in dil. acids, also in  $\text{H}_3\text{PO}_4$ . (Cammerer, Ch Z. 1891, 16. 957.)

**Ammonium permolybdate**,  $\text{NH}_4\text{MoO}_4 + 2\text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$ , sl sol in alcohol, but alcohol extracts it from  $\text{H}_2\text{O}$ , forming a very conc supersat. solution, which is pptd. by a crystal of  $\text{NH}_4\text{MoO}_4$ , and only a sl. amount remains in solution. (Péchar)

$3(\text{NH}_4)_2\text{O}$ ,  $5\text{MoO}_3$ ,  $2\text{MoO}_4 + 6\text{H}_2\text{O}$ . (Muthmann, B 1898, 31. 1837.)

$3(\text{NH}_4)_2\text{O}$ ,  $7\text{MoO}_4 + 12\text{H}_2\text{O}$  Ppt. (Muthmann, Z. anorg. 1898, 17. 78.)

$3(\text{NH}_4)_2\text{O}$ ,  $5\text{MoO}_4 + 6\text{H}_2\text{O}$ . Ppt (Muthmann.)

**Ammonium nickel permolybdate ammonia**,  $(\text{NH}_4)_2\text{Ni}(\text{MoO}_4)_2$ ,  $2\text{NH}_3$ .

Decomp by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{NH}_4\text{OH}$  (Briggs, Chem. Soc. 1904, 85. 674.)

**Barium permolybdate**,  $\text{Ba}(\text{MoO}_4)_2 + 2\text{H}_2\text{O}$ .

(Péchar, A. ch. 1893, (6) 28. 537.)

$8\text{BaO}$ ,  $16\text{MoO}_3$ ,  $2\text{H}_2\text{O}_2 + 13\text{H}_2\text{O}$ . (Baerwald, Dissert 1885.)

**Cæsium permolybdate**,  $\text{Cs}_2\text{O}$ ,  $4\text{MoO}_4 + 6\text{H}_2\text{O}$ .

Sol. hot  $\text{H}_2\text{O}$ . (Muthmann, B. 1898, 31. 1841.)

$3\text{Cs}_2\text{O}$ ,  $7\text{MoO}_3$ ,  $3\text{MoO}_4 + 4\text{H}_2\text{O}$  Ppt. (Muthmann.)

**Copper permolybdate**,  $\text{Cu}(\text{MoO}_4)_2 + \text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ ; easily sol. in acids. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  with decomp. (Péchar)

**Magnesium permolybdate**,  $\text{Mg}(\text{MoO}_4)_2 + 10\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ , sl. sol in alcohol. (Péchar.)

**Mercurous permolybdate.**

Insol in  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Péchar.)

**Potassium permolybdate**,  $\text{KMoO}_4 + 2\text{H}_2\text{O}$ .

Sl sol in cold, more in hot  $\text{H}_2\text{O}$ . Sl. sol. in alcohol (Péchar)

$\text{K}_2\text{O}$ ,  $2\text{MoO}_3$ ,  $\text{MoO}_4 + 3\text{H}_2\text{O}$ . Ppt. (Muthmann, Z. anorg. 1898, 17. 77)

$\text{K}_2\text{O}$ ,  $\text{MoO}_4$ ,  $\text{H}_2\text{O}_2$  Decomp by  $\text{H}_2\text{O}$ . (Melikoff and Pissarjewsky, B. 1898, 31. 2449.)

$\text{K}_2\text{MoO}_4 + 3\text{H}_2\text{O}$  Nearly insol in cold, easily sol. in hot  $\text{H}_2\text{O}$ . (Mazzuchelli and Zangrilli, Gazz. ch. it. 1910, 40. (2) 56)

**Rubidium permolybdates.**

"Rubidium oxo-molybdate"

$3\text{Rb}_2\text{O}$ ,  $10\text{MoO}_4 + 14\text{H}_2\text{O}$  Ppt

$\text{Rb}_2\text{O}$ ,  $2\text{MoO}_3$ ,  $\text{MoO}_4 + 3\text{H}_2\text{O}$ . May be recryst. from  $\text{H}_2\text{O}_2 + \text{Aq}$ .

$3\text{Rb}_2\text{O}$ ,  $5\text{MoO}_3$ ,  $2\text{MoO}_4 + 6\text{H}_2\text{O}$  Ppt

$\text{Rb}_2\text{O}$ ,  $3\text{MoO}_4$ ,  $\text{MoO}_4 + 4\text{H}_2\text{O}$  Ppt. (Muthmann, B 1898, 31. 1830-41.)

**Silver permolybdate**,  $\text{AgMoO}_4$ .

(Péchar.)

**Sodium permolybdate**,  $\text{NaMoO}_4 + 3\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol, but behaves similarly to K salt. (Péchar)

**Thalious permolybdate.**

Insol. in  $\text{H}_2\text{O}$ . (Péchar, A. ch 1893, (6) 28. 559)

**Pernitric acid**,  $\text{NO}_3$ .

See Nitrogen hexoxide.

**Silver pernitrate**, basic,  $3\text{Ag}_2\text{O}_3$ ,  $\text{AgNO}_3$ .

Decomp.  $\text{H}_2\text{O}$ . (Mulder, R. t c 1898, 17. 142.)

**Perosmic acid.**

**Potassium perosmate (?)**.

Sol. in  $\text{H}_2\text{O}$ , but very easily decomp.

**Peroxyntic acid.**

**Silver peroxyntate.**

Analysis of the black compound formed, under certain circumstances, in a silver voltameter when an aqueous solution of  $\text{AgNO}_3$

is electrolyzed, points to the composition  $3\text{Ag}_2\text{O}$ ,  $5\text{O}$ ,  $\text{AgNO}_3$ , perhaps  $2\text{Ag}_2\text{O}_4$ ,  $\text{AgNO}_3$  or  $3\text{Ag}_2\text{O}_2$ ,  $\text{AgNO}_3$ . (Mulder, Chem. Soc 1896, 70. (2) 561)

### Peroxyaminesulphonic acid.

Potassium peroxyaminesulphonate,  
 $\text{N}_2\text{O}_7(\text{SO}_3\text{K})_4$ .

Very unstable in  $\text{H}_2\text{O}$ . Very sl sol. in cold  $\text{H}_2\text{O}$ . More stable in  $\text{N}/10$   $\text{KOH} + \text{Aq}$ .

100 pts  $\text{N}/10$   $\text{KOH} + \text{Aq}$  dissolve 0.62 pt of the salt at  $3^\circ$ ; 6.6 pts. at  $29^\circ$  (Haga, Chem Soc 1904, 85. 86)

### Perstannic acid, $\text{H}_2\text{Sn}_2\text{O}_7$ .

Known in colloidal state, sol in  $\text{H}_2\text{O}$  (Spring, Bull Soc (2) 51. 180.)

Potassium perstannate,  $\text{KSnO}_4 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  Insol in alcohol. (Tanatar, B. 1905, 38. 1185)

Sodium perstannate,  $\text{NaSnO}_4 + 2\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$  with decomp (Tanatar)

### Persulphuric acid, $\text{S}_2\text{O}_8$

See Sulphur heptoxide.

$\text{H}_2\text{S}_2\text{O}_8$

Sp gr. of  $\text{H}_2\text{S}_2\text{O}_8 + \text{Aq}$ .

Sp gr $15^\circ/15^\circ$	% $\text{H}_2\text{S}_2\text{O}_8$	g $\text{H}_2\text{S}_2\text{O}_8$ per l
1.042	7.2	75
1.096	15.4	169
1.154	23.6	272
1.246	35.2	438

(Elbs and Schonherr, Z. Elektrochem. 1896, 2. 245)

Ammonium persulphate,  $(\text{NH}_4)_2\text{S}_2\text{O}_8$

Very sol in  $\text{H}_2\text{O}$ . 100 pts  $\text{H}_2\text{O}$  at  $0^\circ$  dissolve 58.2 pts.  $(\text{NH}_4)_2\text{S}_2\text{O}_8$  (Marshall, Chem. Soc 59. 771.)

Solubility in  $\text{H}_2\text{O}$  equals 58% at  $8^\circ$  (Moreau, C. C. 1901, II. 56)

100 pts.  $\text{H}_2\text{O}$  dissolve 65 pts. at ord temp. (Elbs, J pr. 1893, (2) 48. 185.)

Ammonium lead persulphate,

$(\text{NH}_4)_2\text{Pb}(\text{SO}_4)_3$

Decomp. by  $\text{H}_2\text{O}$ . Almost insol in cold  $\text{H}_2\text{SO}_4$  of sp. gr.=1.7. Sl. sol. in  $\text{H}_2\text{SO}_4$  (sp. gr.=1.7) at  $50^\circ$ . Sol. in fuming  $\text{H}_2\text{SO}_4$ , and in cold conc  $\text{HCl}$ . Sol. in acetic acid, in Na acetate +  $\text{Aq}$  acidified with acetic acid and in excess of cold 20%  $\text{NaOH} + \text{Aq}$ . (Elbs, Z. Elektrochem. 1900, 7. 346)

Ammonium mercurous persulphate ammonia,  $(\text{NH}_4)_2\text{HgS}_2\text{O}_8 \cdot 2\text{NH}_3$ .

Decomp by  $\text{H}_2\text{O}$  Insol. in dil or conc., hot or cold  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$ . Sol. in  $\text{HCl}$ . (Taupp, Gazz ch. it. 1903, 33. (1) 131.)

Barium persulphate,  $\text{BaS}_2\text{O}_8 + 4\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . 100 pts  $\text{H}_2\text{O}$  at  $0^\circ$  dissolve 39.1 pts.  $\text{BaS}_2\text{O}_8$ , or 52.2 pts.  $\text{BaS}_2\text{O}_8 + 4\text{H}_2\text{O}$ . Sol. in absolute alcohol with pptn. of  $\text{BaS}_2\text{O}_8 + \text{H}_2\text{O}$  Insol. in alcohol (Marshall)

Cadmium persulphate ammonia,  $\text{CdS}_2\text{O}_8 \cdot 6\text{NH}_3$

Sol. in  $\text{H}_2\text{O}$  (Barbieri, Z. anorg. 1911, 71. 350)

Cæsium persulphate,  $\text{Cs}_2\text{S}_2\text{O}_8$

Sol. in  $\text{H}_2\text{O}$ . 8.71–8.98 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $23^\circ$ . (E. F. Smith, J. Am. Chem. Soc. 1899, 21. 935.)

Calcium persulphate.

Very sol. in  $\text{H}_2\text{O}$  (Marshall, J Soc Chem. Ind. 1897, 16. 396.)

Copper persulphate ammonia,  $\text{CuS}_2\text{O}_8 \cdot 4\text{NH}_3$ .

Sol. in  $\text{H}_2\text{O}$  (Barbieri, Z anorg 1911, 71. 351)

Lead persulphate,  $\text{PbS}_2\text{O}_8$

Decomp by  $\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{SO}_4$ , and in pyrosulphuric acid Sol. in cold conc.  $\text{HCl}$  Insol or sol. with decomp in all ord solvents. (Elbs, Z Elektrochem 1900, 7. 345)

Solubility of  $\text{Pb}(\text{SO}_4)_2$  in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . at  $22^\circ$ .  
v = moles of  $\text{H}_2\text{SO}_4$  per mole of  $\text{H}_2\text{O}$ ;  
c = millimols  $\text{Pb}(\text{SO}_4)_2$  in 1 l.

v	c	v	c
0.304	0.00	0.558	37.2
0.348	1.8	0.699	40.5
0.387	3.0	0.917	23.3
0.407	3.9	1.11	23.7
0.435	5.3	1.54	49.6
0.477	14.4	2.08	83.5
0.515	23.3	2.13	88.2

(Dolezalek and Finckh, Z. anorg. 1906, 51. 321.)

+  $3\text{H}_2\text{O}$ . Deliquescent Very sol. in  $\text{H}_2\text{O}$ . (Marshall.)

Lead potassium persulphate,  $\text{K}_2\text{Pb}(\text{SO}_4)_3$

Decomp. by  $\text{H}_2\text{O}$  Almost insol in cold  $\text{H}_2\text{SO}_4$  of sp. gr.=1.7. Sl. sol. in  $\text{H}_2\text{SO}_4$  (sp. gr.=1.7) at  $50^\circ$ . Sol. in fuming  $\text{H}_2\text{SO}_4$ , cold conc.  $\text{HCl}$ , excess of cold 20%  $\text{NaOH} + \text{Aq}$ , acetic acid, and in Na acetate +  $\text{Aq}$  acidified with acetic acid (Elbs, Z. Elektrochem. 1900, 7. 346.)

Nickel persulphate ammonia,  $\text{NiS}_2\text{O}_8 \cdot 6\text{NH}_3$ .

Unstable in the air Sol in  $\text{H}_2\text{O}$  with decomp. (Barbieri, Z. anorg. 1911, 71. 351)

Potassium persulphate,  $\text{K}_2\text{S}_2\text{O}_8$

100 pts  $\text{H}_2\text{O}$  at  $0^\circ$  dissolve 1.77 pts  $\text{K}_2\text{S}_2\text{O}_8$ ; more sol in hot  $\text{H}_2\text{O}$  with very sl. decomp. Less sol. in  $\text{H}_2\text{O}$  than any other persulphate. (Marshall.)

Rubidium persulphate,  $\text{Rb}_2\text{S}_2\text{O}_8$

Sol. in  $\text{H}_2\text{O}$ . 3.32-3.49 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $22.5^\circ$ . (E. F. Smith, J. Am. Chem. Soc. 1899, 21. 934.)

Silver persulphate, basic,  $5\text{Ag}_2\text{O}_3 \cdot 2\text{Ag}_2\text{SO}_7$

Decomp. by  $\text{H}_2\text{O}$  and acids (Mulder, C. C. 1899, I, 16)

Sodium persulphate,  $\text{Na}_2\text{S}_2\text{O}_8$

Very sol. in  $\text{H}_2\text{O}$  (Lowenherz)

Strontium persulphate.

Very sol in  $\text{H}_2\text{O}$ . (Marshall, J. Soc. Chem. Ind 1897, 16. 396)

Thallium persulphate,  $\text{Tl}_2\text{S}_2\text{O}_8$ .

Very sol in  $\text{H}_2\text{O}$  (Smith, J. Am. Chem. Soc. 1898, 21. 936)

Zinc persulphate ammonia,  $\text{ZnS}_2\text{O}_8 \cdot 4\text{NH}_3$

Sol. in  $\text{H}_2\text{O}$ . (Barbieri, Z. anorg. 1911, 71. 350.)

Persulphomolybdic acid.

See Persulphomolybdic acid.

Pertantallic acid,  $\text{HTaO}_4 \cdot n\text{H}_2\text{O}$ .

Ppt. (Mehkoff, Z. anorg. 1899, 20. 345)

Cæsium pertantalate,  $\text{Cs}_2\text{TaO}_6$ .

Ppt. (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1667)

Calcium potassium pertantalate,  $\text{CaKTaO}_6 + \frac{1}{2}\text{H}_2\text{O}$ .

Insol in cold  $\text{H}_2\text{O}$ ; decomp by hot  $\text{H}_2\text{O}$ . (Mehkoff, Z. anorg 1899, 20. 347.)

Calcium sodium pertantalate,  $\text{CaNaTaO}_6 + \frac{1}{2}\text{H}_2\text{O}$ .

Difficultly sol in  $\text{H}_2\text{O}$ . (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1668.)

Magnesium potassium pertantalate,

$\text{MgKTaO}_6 + 7\text{H}_2\text{O}$ .

Somewhat sol in  $\text{H}_2\text{O}$ . (E. F. Smith.)

Magnesium rubidium pertantalate,

$\text{MgRbTaO}_6 + 9\text{H}_2\text{O}$ .

Somewhat sol. in  $\text{H}_2\text{O}$ . (E. F. Smith.)

Magnesium sodium pertantalate,  $\text{MgNaTaO}_6 + 8\text{H}_2\text{O}$

Somewhat sol in  $\text{H}_2\text{O}$ . (E. F. Smith)

Potassium pertantalate,  $\text{K}_4\text{TaO}_6 + \frac{1}{2}\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  with decomp; sol in  $\text{KOH} + \text{H}_2\text{O}_2 + \text{Ag}$ ; pptd by alcohol. (Mehkoff, Z. anorg. 1899, 20. 346)

Rubidium pertantalate,  $\text{Rb}_4\text{TaO}_6$ .

Somewhat sol. in  $\text{H}_2\text{O}$ . (E. F. Smith.)

Sodium pertantalate,  $\text{Na}_4\text{TaO}_6 + \text{H}_2\text{O}$ .

Pptd by alcohol. Sl. sol. in  $\text{H}_2\text{O}$ , decomp on heating with  $\text{H}_2\text{O}$ . (Mehkoff, Z. anorg 1899, 20. 348)

$\text{NaTaO}_4 + \text{NaOTaO}_4 + 13\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}_2 + \text{Ag}$ , pptd by alcohol. (Mehkoff, Z. anorg 1899, 20. 349)

Pertitanic acid.

Ammonium pertitanate,  $(\text{NH}_4)_2\text{O}_3 \cdot \text{TiO}_3 + \text{H}_2\text{O}_2$

Fairly stable; decomp. rapidly in aq. solution. (Mehkoff, B. 1898, 31. 955.)

Barium pertitanate,  $\text{BaO}_3 \cdot \text{TiO}_3 + 5\text{H}_2\text{O}$

Sl. sol. in  $\text{H}_2\text{O}$ . (Mehkoff and Pissarjewsky, Z. anorg 1898, 18. 59.)

Potassium pertitanate,  $\text{K}_2\text{O}_3 \cdot \text{TiO}_3 \cdot \text{K}_2\text{O}_4 + 10\text{H}_2\text{O}$

Stable at zero; deliquesces and decomp. at ordinary temp. (Mehkoff, B. 1898, 31. 650.)

Sodium pertitanate,  $\text{Na}_2\text{O}_3 \cdot \text{TiO}_3 + 3\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . Pptd. in alcohol. (Mehkoff, B. 1898, 31. 955)

$4\text{Na}_2\text{O}_3 \cdot \text{Ti}_2\text{O}_7 + 10\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Mehkoff)

Pertungstic acid.

Barium pertungstate,  $\text{BaO} \cdot 2\text{WO}_3 \cdot \text{O} + 6\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ . Decomp. by acids (Kellner, Dissert. 1909.)

Cæsium pertungstate,  $3\text{Cs}_2\text{O} \cdot 12\text{WO}_3 \cdot 20 + 12\text{H}_2\text{O}$ .

Sl. sol. in cold, easily sol. in warm  $\text{H}_2\text{O}$ . (Kellner)

$5\text{Cs}_2\text{O} \cdot 12\text{WO}_3 \cdot 240 + 11\text{H}_2\text{O}$ .

Sl sol in  $\text{H}_2\text{O}$  (Kellner)

Calcium pertungstate,  $3\text{CaO} \cdot 6\text{WO}_3 \cdot 80 + 8\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Kellner)

Lithium pertungstate,  $\text{Li}_2\text{O} \cdot 2\text{WO}_3 \cdot 20 + 6\text{H}_2\text{O}$

Sl. sol in  $\text{H}_2\text{O}$ . (Kellner.)

$3\text{Li}_2\text{O} \cdot 4\text{WO}_3 \cdot \text{O} + 9\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Kellner.)

**Magnesium pertungstate**,  $2\text{MgO}$ ,  $4\text{WO}_3$ ,  $6\text{O} + 9\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Kellner.)

**Potassium pertungstate**,  $\text{K}_2\text{O}_4$ ,  $\text{WO}_4 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp.; explodes in the air at  $80^\circ$  (Melikoff, B. 1898, 31. 634.)

$\text{K}_2\text{O}$ ,  $2\text{WO}_3$ ,  $4\text{O} + 4\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  from which it is ppt. by alcohol and ether (Kellner.)

$7\text{K}_2\text{O}$ ,  $10\text{WO}_3$ ,  $5\text{O} + 22\text{H}_2\text{O}$  Very sl. sol. in  $\text{H}_2\text{O}$ . (Kellner.)

**Rubidium pertungstate**,  $2\text{Rb}_2\text{O}$ ,  $4\text{WO}_3$ ,  $\text{O} + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with slow decomp. (Kellner.)  $5\text{Rb}_2\text{O}$ ,  $12\text{WO}_3$ ,  $3\text{O} + 12\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . (Kellner.)

**Sodium pertungstate**,  $\text{Na}_2\text{WO}_4 + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Péchar, C. R. 112. 1060.)

$+2\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  but easily decomp. (Kellner.)

$\text{Na}_2\text{WO}_4 + 6\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  and can be cryst. therefrom (Pissarjewsky, Z. anorg. 1900, 24. 113.)

$\text{Na}_2\text{O}_2$ ,  $\text{WO}_4 + \text{H}_2\text{O}_2$ ,  $(\text{Na}_2\text{O}_2)\text{WO}_4 + 7\text{H}_2\text{O}$  Decomp. in the air Sol. in  $\text{H}_2\text{O}$  with decomp (Melikoff, B. 1898, 31. 633.)

$\text{Na}_2\text{O}_2$ ,  $\text{WO}_4$ ,  $\text{H}_2\text{O}_2$  Very unstable. Decomp. in the air and by  $\text{H}_2\text{O}$ . (Melikoff.)

**Strontium pertungstate**,  $\text{SrO}$ ,  $2\text{WO}_3$ ,  $\text{O} + 6\text{H}_2\text{O}$ .

(Kellner.)

**Peruranic acid**,  $\text{UO}_5$ ,  $x\text{H}_2\text{O}$  (?).

Known only in its salts

**Ammonium peruranate**,  $(\text{NH}_4)_2\text{O}_2$ ,  $(\text{UO}_4)_2 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; decomp. by acids and by  $\text{Al}(\text{OH})_3$  in aq. solution. (Melikoff, B. 1897, 30. 2904.)

**Ammonium uranyl peruranate**,

$(\text{NH}_4)_2(\text{UO}_2)\text{UO}_5 + 8\text{H}_2\text{O}$  (?).

Easily sol. in  $\text{H}_2\text{O}$ . (Fairley, Chem. Soc. (2) 31. 134.)

**Barium peruranate**,  $\text{BaUO}_4$ .

As K salt. (de Coninck, C. C. 1909, I. 1870.)

$(\text{BaO}_2)_2\text{UO}_4 + 8\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{SO}_4$  and  $\text{H}_2\text{CO}_3$ . (Melikoff, B. 1897, 30. 2905.)

$\text{BaO}_2(\text{UO}_4)_2 + 9\text{H}_2\text{O}$  Ppt. (Melikoff.)

**Calcium peruranate**,  $\text{CaUO}_4$ .

As K salt. (de Coninck.)

**Calcium peruranate**,  $(\text{CaO}_2)_2\text{UO}_4 + 10\text{H}_2\text{O}$ .

Ppt. (Melikoff, B. 1897, 30. 2906.)

**Copper peruranate**,  $(\text{CuO}_2)_2\text{UO}_4$ .

Ppt. (Melikoff.)

**Lead peruranate**,  $(\text{PbO})_2\text{UO}_4$ ,  $\text{PbO}$ ,  $\text{UO}_3$

Ppt (Melikoff)

**Lithium peruranate**,  $(\text{Li}_2\text{O}_2)(\text{UO}_4)_2 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; decomp. by acids and by  $\text{Al}(\text{OH})_3$  in aq. solution; very unstable. (Melikoff.)

**Nickel peruranate**,  $(\text{NiO})_2\text{UO}_4$

Ppt (Melikoff)

**Potassium peruranate**,  $\text{K}_4\text{UO}_6 + 10\text{H}_2\text{O}$  (?).

Unstable. (Fairley.)

$\text{K}_2\text{UO}_6$  (de Coninck, C. R. 1909, 148. 1769)

$+3\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ ,  $\text{HCl}$  and dil.  $\text{HNO}_3$  (Aloy, Bull. Soc. 1903, (3) 29. 293.)

**Silver peruranate**,  $\text{Ag}_5\text{U}_2\text{O}_{11}$  (?).

(Guyard, Bull. Soc. (2) 1. 95.)

Does not exist. (Alibegoff, A. 233. 117.)

**Sodium peruranate**,  $\text{Na}_4\text{UO}_6 + 8\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . Sl. sol. in alcohol. (Fairley.)  $\text{Na}_2\text{UO}_6$  As K salt. (de Coninck, C. C. 1909, I. 1970.)

$+5\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$  and  $\text{HCl}$ . (Aloy, Bull. Soc. 1903, (3) 29. 293.)

$(\text{Na}_2\text{O}_2)_2\text{UO}_4 + 8\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ ; decomp. by dil.  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and by  $\text{Al}(\text{OH})_3$  in aq. solution. (Melikoff, B. 1897, 30. 2903.)

**Sodium uranyl peruranate**,  $\text{Na}_2(\text{UO}_2)\text{UO}_5 + 6\text{H}_2\text{O}$  (?).

Sol. in  $\text{H}_2\text{O}$ . (Fairley.)

**Pervanadic acid**,  $\text{HVO}_4$  (?).

Sol. in  $\text{H}_2\text{O}$ . (Pissarjewsky, C. C. 1902, II. 505.)

**Ammonium pervanadate**,  $\text{NH}_4\text{VO}_4$ .

Sol. in  $\text{H}_2\text{O}_2 + \text{Aq}$ ; insol. in alcohol. (Scheuer Z. anorg. 1898, 16. 294.)

$(\text{NH}_4)_2\text{VO}_6 + 2\frac{1}{2}\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol (Melikoff, B. 1909, 42. 2202.)

$(\text{NH}_4)_2\text{V}_2\text{O}_{11}$  Sol. in  $\text{H}_2\text{O}_2 + \text{Aq}$ ; ppt. from aq. solution by alcohol (Melikoff, Z. anorg. 1899, 19. 406.)

**Barium pervanadate**,  $\text{Ba}_2(\text{VO}_4)_2$ .

Sl. sol. in  $\text{H}_2\text{O}_2 + \text{Aq}$  free from  $\text{H}_2\text{SO}_4$ ; insol. in alcohol. (Scheuer, Z. anorg. 1898, 16. 288.)

**Cadmium pervanadate**,  $\text{Cd}(\text{VO}_4)_2$ .

Sl. sol. in  $\text{H}_2\text{O}_2 + \text{Aq}$ ; insol. in alcohol. (Scheuer.)

**Calcium pervanadate**,  $\text{Ca}(\text{VO}_4)_2$ .

Sol. in  $\text{H}_2\text{O}_2 + \text{Aq}$ ; insol. in alcohol. (Scheuer.)

**Lead pervanadate,  $\text{Pb}(\text{VO}_4)_2$** 

Sl sol in  $\text{H}_2\text{O}_2 + \text{Aq}$  free from  $\text{H}_2\text{SO}_4$ ; insol in alcohol (Scheuer)

**Lithium pervanadate,  $\text{LiVO}_4$** 

Sol in  $\text{H}_2\text{O}_2 + \text{Aq}$ ; insol. in alcohol (Scheuer)

**Potassium pervanadate,  $\text{KVO}_4$** 

Sol in  $\text{H}_2\text{O}_2 + \text{Aq}$  acidified with  $\text{H}_2\text{SO}_4$ , insol in alcohol (Scheuer)

$\text{K}_2\text{VO}_4 + 2\frac{1}{2}\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ , insol. in alcohol (Melikoff, B. 1909, 42, 2293)

$3\text{K}_2\text{O}_3\text{VO}_4 + 2\text{KVO}_4 + 2\text{H}_2\text{O}$  0.855 g. is sol in 100 g.  $\text{H}_2\text{O}$  at  $19^\circ$ ; sl. sol. in  $\text{KOH} + \text{Aq}$ , very stable in the air. (Melikoff and Pissarewsky, Z. anorg. 1899, 19, 408.)

$\text{K}_4\text{V}_2\text{O}_{11} + 2\text{H}_2\text{O}$  (Melikoff and Pissarewsky, Z. anorg. 1899, 19, 411.)

$\text{K}_4\text{V}_2\text{O}_{11} + 3\frac{1}{2}\text{H}_2\text{O}$  Moderately sol. in  $\text{H}_2\text{O}$  with slow decomp. (Melikoff and Pissarewsky, Z. anorg. 1899, 19, 410)

**Silver pervanadate,  $\text{AgVO}_4$** 

Sl sol in  $\text{H}_2\text{O}_2 + \text{Aq}$  free from  $\text{H}_2\text{SO}_4$ ; sol in alcohol (Scheuer.)

**Sodium pervanadate,  $\text{NaVO}_4$** 

Sol. in  $\text{H}_2\text{O}$ , acidified with  $\text{H}_2\text{SO}_4$ , insol. in alcohol. (Scheuer.)

**Strontium pervanadate,  $\text{Sr}(\text{VO}_4)_2$** 

Sl. sol. in  $\text{H}_2\text{O}_2 + \text{Aq}$  free from  $\text{H}_2\text{SO}_4$ , insol in alcohol (Scheuer.)

**Philippium,  $\text{Ph} (?)$** 

(Deiafontaine, C. R. 87, 559)

Consists of terbium and yttrium. (Roscoe, B. 15, 1274.)

**Phosgene,  $\text{CoCl}_2$** 

See Carbonyl chloride.

**Phosphame,  $\text{PN}_2\text{H} (?)$** 

Insol. in  $\text{H}_2\text{O}$  Insol in dil  $\text{HNO}_3 + \text{Aq}$ ; gradually decomp. by conc  $\text{HNO}_3$ . (Rose, Pogg. 24, 308.)

Insol. in conc  $\text{HNO}_3$  (Faub, A. 123, 236.) Sol. in  $\text{H}_2\text{SO}_4$  with decomp. (Rose.)

Insol in dil, but decomp. by conc  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$

Insol. in alcohol or ether.

Formula is perhaps  $\text{P}_2\text{N}_2\text{H}_4$ . (Salzmann, B. 6, 494.)

**Phosphamic acid,  $\text{PO} \begin{smallmatrix} \diagup \text{NH} \\ \diagdown \text{OH} \end{smallmatrix}$** 

(Schiff.)

Does not exist, but was impure *pyrophosphamic acid* (Gladstone.) Also Mente (A. 248, 245).

***Pyrophosphamic acid*,  $\text{P}_2\text{NH}_2\text{O}_4 =$** 

$\text{P}_2\text{O}_3(\text{OH})_2\text{NH}_2$ .

Deliquescent in moist air, easily sol. in  $\text{H}_2\text{O}$  or alcohol, sl. sol. in ether (Gladstone, Chem. Soc. 3, 152)

Correct composition is imido-diphosphoric acid,  $\text{P}_2\text{NH}_2\text{O}_4 = \text{HO}-\text{PO} < \begin{smallmatrix} \text{O} \\ \text{NH} \end{smallmatrix} > \text{PO}-\text{OH}$ . (Mente, A. 248, 232.)

**Barium *pyrophosphamate*,  $\text{Ba}_2(\text{P}_2\text{NH}_2\text{O}_4)_2$** 

Sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ , not in  $\text{HCl} \cdot \text{H}_2\text{O}_2 + \text{Aq}$ . (Gladstone and Holmes, Chem. Soc. (2) 2, 233.)

**Cupric —,  $\text{Cu}_2(\text{P}_2\text{NH}_2\text{O}_4)_2 + 2\text{H}_2\text{O}$** 

Ppt. Decomp. by cold  $\text{KOH} + \text{Aq}$ . (Gladstone, Chem. Soc. 3, 135)

**Ferric —,  $\text{Fe}_2(\text{P}_2\text{NH}_2\text{O}_4)_2 + 2\text{H}_2\text{O}$** 

Insol. in dil. acids. Sol in conc.  $\text{H}_2\text{SO}_4$ , and decomp. by warming Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  Decomp. by  $\text{KOH} + \text{Aq}$ . (Gladstone, Chem. Soc. 3, 142)

**Lead —,  $\text{Pb}_2(\text{P}_2\text{NH}_2\text{O}_4)_2 + 4\text{H}_2\text{O}$** 

Insol in  $\text{NH}_4\text{OH} + \text{Aq}$ .

**Potassium —,  $\text{K}_2\text{P}_2\text{NH}_2\text{O}_4$** 

Deliquescent Sol in  $\text{H}_2\text{O}$ . Insol. in alcohol (Gladstone, A. 76, 85)

**Silver —,  $\text{Ag}_2\text{P}_2\text{NH}_2\text{O}_4 + 5\text{H}_2\text{O}$** 

Ppt

**Zinc —,  $\text{Zn}_2(\text{P}_2\text{NH}_2\text{O}_4)_2$** 

(Gladstone and Holmes, Chem. Soc. (2) 2, 225.)

**Phosphamide,  $\text{PON}$ .**

See Phosphoryl nitride.

$\text{PN}_2\text{H}_2\text{O}$ .

See Phosphoryl imidoamide.

**Triphosphamide,  $\text{PON}_3\text{H}_4$** 

See Phosphoryl triamide.

**Trimetaphosphimic acid,  $\text{P}_3\text{N}_3\text{H}_3\text{O}_6$** 

Sol. in  $\text{H}_2\text{O}$ ; aq solution does not coagulate albumen. (Stokes, Am. Ch. J. 1895, 17, 275.)

**Ammonium trimetaphosphimate,**

$(\text{NH}_4)_3\text{P}_3\text{N}_3\text{O}_6\text{H}_3$ .

Sol. in  $\text{H}_2\text{O}$ , insol. in alcohol, unstable. (Stokes, Am. Ch. J. 1896, 18, 643.)

**Barium trimetaphosphimate,  $\text{Ba}_3(\text{P}_3\text{N}_3\text{O}_6\text{H}_3)_2 + 4\text{H}_2\text{O}$** 

+  $6\text{H}_2\text{O}$ . Sl. sol in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  and in  $\text{NaCl} + \text{Aq}$  (Stokes.)

**Barium sodium trimetaphosphimate**,  
 $P_3N_3O_6H_2NaBa + 1\frac{1}{2}H_2O$

Almost insol. in  $H_2O$ , easily sol. in  $NH_4Cl + Aq$  and in  $NaCl + Aq$ . (Stokes.)

**Magnesium trimetaphosphimate**,  
 $(P_3N_3O_6H_2)_2Mg_3 (?)$ .

Sol. in  $H_2O$ ; insol. in alcohol; aq. solution decomp. on boiling. (Stokes.)

**Potassium trimetaphosphimate**,  $K_3P_3N_3O_6H_2$ .  
 Sol. in  $H_2O$ ; insol. in alcohol. (Stokes.)

**Silver trimetaphosphimate**,  $Ag_3P_3N_3O_6H_2$

Ppt.; sol. in  $NH_4OH + Aq$ , insol. in  $H_2O$ ; sl. sol. in  $HNO_3 + Aq$ . (Stokes.)

$\alpha$  **Sodium trimetaphosphimate**,  $P_3N_3O_6H_2Na_3 + 1\frac{1}{2}H_2O$

18.3 pts. are sol. in 100 pts.  $H_2O$  at  $20^\circ$ ; very sol. in hot  $H_2O$ ; decomp. by alkali on long boiling. (Stokes.)

$\beta$  **Sodium trimetaphosphimate**,  $P_3N_3O_6H_2Na_3 + 1\frac{1}{2}H_2O$ .

Sol. in  $H_2O$ , insol. in alcohol. (Stokes.)

**Tetrametaphosphimic acid**,  
 $P_4N_4O_8H_4 + 2H_2O$ .

Very sl. sol. in  $H_2O$ , decomposes the sol. salts of  $HCl$ ,  $H_2SO_4$  and  $HNO_3$  (Stokes, Am. Ch. J. 1895, 17, 290.)

100 pts.  $H_2O$  at  $20^\circ$  dissolve 0.04 pt. crystallized acid. Somewhat more sol. in boiling  $H_2O$ . (Stokes.)

100 pts. 10%  $HNO_3 + Aq$  at  $20^\circ$  dissolve 0.26 pt. of crystallized acid. (Stokes.)

Not decomp. by boiling alkalis +  $Aq$ . (Stokes, Am. Ch. J. 1896, 18, 785.)

Insol. in alcohol (Stokes, Am. Ch. J. 1896, 18, 784.)

**Ammonium tetrametaphosphimate**,  
 $P_4N_4O_8H_4(NH_4)_2$ .

Only sl. sol. in boiling  $H_2O$ , sol. in excess of hot 5%  $HNO_3$ . (Stokes.)

$P_4N_4O_8H_4(NH_4)_4 + 4H_2O$ . Readily sol. in  $H_2O$ ; sl. sol. in  $NH_4OH + Aq$ . (Stokes.)

**Barium tetrametaphosphimate**,  $P_4N_4O_8H_4Ba_2 + 2H_2O$

Ppt.; insol. in  $H_2O$ . (Stokes.)

**Potassium tetrametaphosphimate**,  
 $P_4N_4O_8H_4K_2$ .

Sl. sol. in boiling  $H_2O$ ; sol. in cold dil.  $KOH + Aq$ . (Stokes.)

$P_4N_4O_8H_4K_4 (?)$ . Very sol. in  $H_2O$ . (Stokes.)

**Silver tetrametaphosphimate**,  $P_4N_4O_8H_4Ag_4$

Ppt.; insol. in  $H_2O$ ; sl. sol. in  $HNO_3 + Aq$ . (Stokes.)

$P_4N_4O_8Ag_8$  Ppt., sol. in  $NH_4NO_3 + Aq$ . (Stokes.)

**Sodium tetrametaphosphimate**,  $P_4N_4O_8H_4Na_4 + 2\frac{1}{2} (?) H_2O$

Sl. sol. in cold  $H_2O$ . Easily sol. in hot  $H_2O$ . Ppt. from aqueous solution by excess of alkali. (Stokes.)

**Pentametaphosphimic acid**,

Sol. in  $H_2O$ , pptd. by alcohol. (Stokes, Am. Ch. J. 1898, 20, 748.)

**Magnesium pentametaphosphimate**,  
 $(P_5N_5O_{18}H_8Mg)_2Mg$ .

Ppt. (Stokes.)

$P_5N_5O_{18}H_8Mg_2 + 5H_2O$ . Ppt., insol. in alcohol, almost insol. in  $H_2O$ , sl. sol. in conc acetic acid. (Stokes.)

**Silver pentametaphosphimate**,  $P_5N_5O_{18}H_8Ag_8$ .

Ppt., sol. in cold  $KOH + Aq$  with decomp. (Stokes.)

**Sodium pentametaphosphimate**,  
 $P_5N_5O_{18}H_8Na_8 + 2H_2O$ .

Sol. in  $H_2O$ , insol. in alcohol. (Stokes.)

$P_5N_5O_{18}H_8Na_4 + 2H_2O$ . Sol. in 80% acetic acid; pptd. by alcohol. (Stokes.)

**Hexametaphosphimic acid**.

**Silver hexametaphosphimate**,  $P_6N_6O_{24}H_{12}Ag_{12}$ .

Ppt., decomp. by cold  $KOH + Aq$  (Stokes, Am. Ch. J. 1898, 20, 757.)

**Sodium hexametaphosphimate**,  $P_6N_6O_{24}H_{12}Na_{12} + 2H_2O$ .

Sol. in  $H_2O$ ; pptd. by alcohol. (Stokes.)

**Phosphine**.

See Hydrogen phosphide.

**Pyrophosphodiamic acid**,

Deliquescent. Easily sol. in  $H_2O$ , alcohol, or ether. Sol. in cold conc.  $H_2SO_4$  without decomp. (Gladstone, Chem. Soc. 3, 353.)

Correct composition is dimidodiphosphoric acid,  $P_2N_2H_4O_4 + H_2O = HO-PO = (NH)_2 = PO-OH$ . (Mente.)

**Aluminum pyrophosphodiamate**.

Precipitate. Sol. in  $NH_4OH + Aq$ . Insol. in acids. (Gladstone, A. 76, 82.)

**Ammonium** —,  $P_2O_2(ONH_4)_2$   
 $P_2O_2(NH_2)_2$ .

Very deliquescent in moist air. Sol. in  $H_2O$ . (Schiff, A. 103, 168.)

**Barium pyrophosphodiamate**,  
 $\text{BaP}_2\text{O}_6(\text{NH}_2)_2$ .  
 Precipitate. Sol in  $\text{H}_2\text{O}$  Sol in  
 $\text{NH}_4\text{OH} + \text{Aq.}$  (Gladstone)

**Calcium —**,  $\text{CaP}_2\text{O}_6(\text{NH}_2)_2$ .  
 Insol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  Sol. in  $\text{NH}_4\text{Cl} +$   
 $\text{Aq.}$  and acids (Gladstone and Holmes.)

**Lead —**  
 Ppt Decomp by  $\text{H}_2\text{O}$

**Magnesium —**  
 Ppt. (Gladstone and Holmes)

**Silver —**,  $\text{Ag}_3\text{P}_2\text{O}_6(\text{NH}_2)_2$   
 Sol. in  $\text{H}_2\text{O}$ . Sol in  $\text{HNO}_3 + \text{Aq.}$  (Glad-  
 stone and Holmes)

**Strontium —**.  
 Sol. in acids and  $\text{NH}_4\text{Cl} + \text{Aq.}$  Insol in  
 $\text{NH}_4\text{OH} + \text{Aq.}$  (Gladstone and Holmes,  
 Chem. Soc. (2) 4. 295.)

**Zinc —**,  $\text{ZnP}_2\text{O}_6(\text{NH}_2)_2$   
 Ppt. (Gladstone and Holmes)

**Pyrophosphodiamic acid**,  $\text{P}_2\text{N}_2\text{H}_7\text{O}_4 =$   
 $\text{P}_2\text{O}_6(\text{NH}_2)_2$   
 Decomp. by boiling  $\text{H}_2\text{O}$  or  $\text{HCl}$  Sol. in  
 conc.  $\text{H}_2\text{SO}_4$  upon heating. (Gladstone and  
 Holmes.)

Correct formula is  $\text{HO}-\text{PO} < \frac{\text{NH}}{\text{NH}} > \text{PO}-$   
 $\text{NH}_2 = \text{diamidodiphosphomonamic acid.}$   
 (Mente, A. 248. 241.)

**Ammonium pyrophosphotriamete**,  
 $\text{P}_2\text{O}_6(\text{NH}_2)_3$   
 Insol. in  $\text{H}_2\text{O}$ . (Gladstone and Holmes.)

**Barium —**,  $\text{BaP}_2\text{N}_2\text{H}_5\text{O}_4$ .  
 $\text{BaH}_4(\text{P}_2\text{N}_2\text{H}_5\text{O}_4)_2$  Decomp by  $\text{HCl} + \text{Aq.}$   
 (Gladstone, Chem Soc 4. 6.)

**Cobaltous —**,  $\text{CoP}_2\text{N}_2\text{H}_5\text{O}_4$   
 Slowly decomp by dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  not by  
 $\text{HCl} + \text{Aq.}$  (Gladstone and Holmes, Chem.  
 Soc. (2) 4. 1.)

**Cupric —**,  $\text{CuP}_2\text{N}_2\text{H}_5\text{O}_4$ .  
 Insol in  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq.}$  (Gladstone  
 and Holmes, Chem. Soc. (2) 4. 1.)

**Ferrous —**,  $\text{FeH}_2(\text{P}_2\text{N}_2\text{H}_5\text{O}_4)_2$ .  
 Insol in dil acids (Gladstone, Chem Soc  
 (2) 4. 1.)

**Lead —**,  $\text{H}_2\text{Pb}_2(\text{P}_2\text{N}_2\text{H}_5\text{O}_4)_2$ .  
 Ppt (Gladstone and Holmes, Chem. Soc.  
 (2) 4. 1)

$\text{H}_4\text{Pb}_2(\text{P}_2\text{N}_2\text{H}_5\text{O}_4)_2$  Ppt (G. and H.)  
 $\text{H}_4\text{Pb}(\text{P}_2\text{N}_2\text{H}_5\text{O}_4)_2$  (G and H.)

**Mercuric pyrophosphotriamete**,  
 $\text{Hg}_3\text{P}_2\text{N}_2\text{H}_5\text{O}_4$ .  
 Insol. in  $\text{H}_2\text{O}$  or dil.  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq.}$   
 (Gladstone and Holmes, Chem. Soc. (2) 4. 1.)

**Platinum —**,  $\text{Pt}_2\text{P}_2\text{N}_2\text{H}_5\text{O}_4$ .  
 Decomp by  $\text{H}_2\text{O}$  when freshly pptd (G.  
 and H)

**Potassium —**,  $\text{KP}_2\text{N}_2\text{H}_5\text{O}_4$ .  
 Almost insol. in  $\text{H}_2\text{O}$ . (Gladstone, Chem.  
 Soc 4. 10.)

**Silver —**,  $\text{Ag}_3\text{P}_2\text{N}_2\text{H}_5\text{O}_4$ .  
 Ppt Sol attacked by  $\text{HCl}, \text{H}_2\text{O}_2$ ; decomp.  
 by  $\text{HNO}_3$  or  $\text{NH}_4\text{OH} + \text{Aq.}$  into—  
 $\text{AgH}_2\text{P}_2\text{N}_2\text{H}_5\text{O}_4$  Insol in  $\text{H}_2\text{O}$  Decomp.  
 by  $\text{HCl}$  (Gladstone, Chem. Soc. (2) 4. 1)

**Zinc —**.  
 Insol in  $\text{H}_2\text{O}$  (Gladstone and Holmes)

**Tetraphosphodiamic acid**,  $\text{P}_4\text{N}_2\text{H}_5\text{O}_{11} =$   
 $\text{P}_4\text{O}_{17}(\text{OH})_4$   
 $\text{P}_4\text{O}_{17}(\text{NH}_2)_2$ .  
 Known only as  $\text{NH}_4$  salt

**Ammonium tetraphosphodiamete**,  
 $\text{P}_4\text{O}_{17} \cdot \text{O}_4\text{H}(\text{NH}_4)_2$   
 $(\text{NH}_2)_2$ .  
 Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Glad-  
 stone.)

**Ammonium dihydrogen tetraphosphodiamete**,  
 $\text{P}_4\text{N}_4\text{H}_{10}\text{O}_{13} = \text{P}_4\text{O}_{17} \cdot \text{O}_4\text{H}_2(\text{NH}_4)_2 (?)$ .  
 $(\text{NH}_2)_2$   
 Insol in cold, easily sol in hot  $\text{H}_2\text{O}$  and dil  
 acids. (Gladstone)

**Tetraphosphotetramic acid**,  
 $\text{P}_4\text{N}_4\text{H}_{10}\text{O}_8 = \text{P}_4\text{O}_{17}(\text{OH})_4$ .  
 Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Gladstone.)

**Ammonium tetraphosphotetramete**,  
 $\text{P}_4\text{O}_{17}(\text{O}_2\text{HNH}_4)_4$   
 $\text{P}_4\text{O}_{17}(\text{NH}_2)_4$ .  
 Sol in  $\text{H}_2\text{O}$ , and precipitated from solution  
 by alcohol (Gladstone)

**Silver —**,  $\text{Ag}_3\text{P}_4\text{N}_4\text{H}_4\text{O}_8$ .  
 Ppt  
 $\text{Ag}_3\text{H}_4\text{P}_4\text{N}_4\text{H}_4\text{O}_8$  Ppt.

**Ammonium phosphoarseniovanadico-  
 vanadiotungstate.**  
 See Arseniovanadicovanadiotung-  
 state, ammonium.

**Tetraphosphopentazotic acid,**

Insol. in  $H_2O$ . Decomp. gradually by boiling with  $H_2O$  (Gladstone)

**Ammoniolethaphosphopentazotic acid (?),**

Decomp. by  $H_2O$  (Gladstone)

**Cupric tetraphosphopentazotate.**

(Gladstone, Chem. Soc. (2) 6. 261)

**Lead —.**

(Gladstone, Chem. Soc. (2) 6. 261)

**Potassium —,  $KOP_3N_3H_3O_6$** 

Insol. in  $H_2O$ . (Gladstone, Chem. Soc. (2) 6. 268.)

**Phosphoboric acid,  $H_3BO_3$ ,  $H_3PO_4 = BPO_4 + 3H_2O$ .**

Not decomp. by boiling  $H_2O$  or conc. acids. Sol. in boiling solution of caustic alkalis. (Vogel, N. Repeat. Pharm. 18. 611.)

**Phosphochloroplatinous acid,**

See Chloroplatinophosphoric acid.

**Phosphochromic acid.****Ammonium phosphochromate,  $3(NH_4)_2O$ ,  $P_2O_5$ ,  $8CrO_3 + H_2O$ .**

Sol. in  $H_2O$  with decomp. (Friedheim, Z. anorg. 1894, 6. 284.)

**Potassium phosphochromate,  $2K_2O$ ,  $P_2O_5$ ,  $4CrO_3 + H_2O$ .**

Sol. in  $H_2O$  but cannot be cryst. therefrom without decomp. Can be cryst. without decomp. from  $H_2O$  containing phosphoric acid (Friedheim.)

$3K_2O$ ,  $P_2O_5$ ,  $8CrO_3$ . Sol. in  $H_2O$  but cannot be cryst. therefrom without decomp. (Blondel, C. R. 1894, 118. 194.)

**Phosphohypophosphotungstic acid.****Potassium sodium phosphohypophosphotungstate,  $9K_2O$ ,  $Na_2O$ ,  $4P_2O_5$ ,  $2PO_2H_2$ ,  $20WO_3 + 23H_2O$ .**

Precipitate. Easily sol. in hot  $H_2O$ . (Gibbs, Am. Ch. J. 7. 313.)

**Tetraphosphotetrimidic acid,**

Known only in its salts. (Gladstone.)

**Silver tetraphosphotetrimidate.**

Ppt. (Gladstone.)

**Phosphoiodic acid,  $P_2O_5$ ,  $18I_2O_5 + 4H_2O$ .**

Decomp. by  $H_2O$  (Chrétien, A. ch. 1898, (7) 16. 389.)

**Ammonium phosphoiodate,  $4(NH_4)_2O$ ,  $P_2O_5$ ,  $18I_2O_5 + 12H_2O$** 

Sol. in  $H_2O$ . Sl. sol. in conc.  $H_3PO_4 + Aq$ . (Chrétien.)

**Lithium phosphoiodate,  $3Li_2O$ ,  $P_2O_5$ ,  $18I_2O_5 + 11H_2O$ .**

Sol. in  $H_2O$ . Sl. sol. in conc.  $H_3PO_4 + Aq$ . (Chrétien.)

**Potassium phosphoiodate,  $4K_2O$ ,  $P_2O_5$ ,  $18I_2O_5 + 5H_2O$ .**

Decomp. by a small amt of  $H_2O$ ; sol. in a large amt. Sl. sol. in conc.  $H_3PO_4 + Aq$ . (Chrétien.)

**Sodium phosphoiodate,  $6Na_2O$ ,  $P_2O_5$ ,  $18I_2O_5 + 5H_2O$** 

Sol. in  $H_2O$ . Sl. sol. in conc.  $H_3PO_4 + Aq$ . (Chrétien.)

**Phosphoiridic acid.**

See Chlorophosphoiridic acid.

**Phospholuteotungstic acid,  $H_4PW_9O_{26}$ .**

See under Phosphotungstic acid.

**Phosphomolybdic acid,  $P_2O_5$ ,  $18MoO_3 + 7H_2O$ .**

"Phospholuteomolybdic acid."

Deliquescent. Sol. in  $H_2O$  in all proportions. (Kehrmann, Z. anorg. 1894, 7. 418.)

$3H_2O$ ,  $P_2O_5$ ,  $20MoO_3 + 21H_2O$ . Very sol. in  $H_2O$ . Sol. in ether. By evaporation of  $H_2O$  solution crystals with  $44H_2O$ , or from a strong solution in conc.  $HNO_3 + Aq$ , with  $19H_2O$ , are obtained; also crystals with 38, and  $48H_2O$  are known (Debray, C. R. 66. 704.)

According to Rammelsberg (B. 10. 1776) formula is  $3H_2O$ ,  $P_2O_5$ ,  $22MoO_3$ .

According to Gibbs (Am. Ch. J. 3. 317) formula is  $3H_2O$ ,  $P_2O_5$ ,  $24MoO_3 + 59H_2O$ .

Fuokener (B. 11. 1638) gives the formula as  $3H_2O$ ,  $P_2O_5$ ,  $24MoO_3 + 58H_2O$ , also with  $29H_2O$ .

$P_2O_5$ ,  $20MoO_3 + 52H_2O$ . Sol. in dry ether with evolution of heat, and subsequent separation into two layers, the upper consisting of pure ether, and lower of a solution of acid in ether. Sp. gr. of lower layer, when sat. at  $13^\circ$ , is 1.3. On warming lower layer, ether separates out and forms an upper layer. This redissolves on cooling and shaking. The lower layer is insol. in  $H_2O$  and miscible with alcohol.

100 pts. either thus dissolve 80.6 pts. acid at 0°; 84.7 pts at 8.1°; 96.7 pts at 19.3°, 103.9 pts at 27.4°; 107.9 pts. at 32.9° (Parnmentier, C. R. 104. 688.)

$P_2O_5$ ,  $22MoO_3 + 57H_2O$ , and  $+58H_2O$ .

(Pohl, Dissert. 1906.)

$P_2O_5$ ,  $23MoO_3 + 61H_2O$ . (Pohl.)

$P_2O_5$ ,  $24MoO_3 + 61H_2O$ . (Miolati, C. C. 1903, II. 789)

$+64H_2O$ . (Pohl)

#### Diphosphomolybdic acid,

$H_2P_2Mo_5O_{11} = 3H_2O$ ,  $P_2O_5$ ,  $5MoO_3$

Not known in free state

#### Ammonium phosphomolybdate, $(NH_4)_2O$ ,

$P_2O_5$ ,  $2MoO_3 + 2H_2O$

(Miescher, Dissert. 1894.)

$2(NH_4)_2O$ ,  $P_2O_5$ ,  $4MoO_3 + 5H_2O$ . (Friedheim, Z. anorg. 1894, 6. 33)

$+6H_2O$ . (Perlberger, Dissert. 1904.)

$(NH_4)_2PO_4$ ,  $11MoO_3 + 6H_2O$ .

Formula is  $(NH_4)_2PO_4$ ,  $10MoO_3 + 1\frac{1}{2}H_2O$ , according to the older authorities.

Scarcely sol. in  $H_2O$  or aqueous acid solutions. Easily sol. in ammonia, and alkalies + Aq. (Svanberg and Struve, J. pr. 44. 291.)

It is almost completely insol. in a mixture of  $(NH_4)_2MoO_4 + Aq$ , and dil.  $HNO_3 + Aq$ . Absolutely insol. in a dil. nitric acid solution of ammonium nitrate (Richters, Z. anal. 10. 471.)

Solubility is increased even in presence of ammonium molybdate and free  $HNO_3$  by  $HCl$ , ammonium, and other chlorides, tartaric acid, or large quantities of ammonium oxalate or nitrate. Not precipitated in presence of excess of  $H_3PO_4$ . (Fresenius, Z. anal. 3. 446.)

Sol. in 10,000 pts.  $H_2O$  at 16°, in 6600 pts.  $H_2O$  containing 1 vol %  $HNO_3$ , in 550 pts.  $HCl + Aq$  of 1.12 sp. gr.; in 620 pts. alcohol of 0.80 sp. gr., in 190 pts.  $HNO_3 + Aq$  (sp. gr. = 1.2) at 50°, in 5 pts. conc.  $H_2SO_4$  at 100°; in 3 pts.  $NH_4OH + Aq$  of 0.95 sp. gr. (Eggertz, J. pr. 79. 496.)

Sol. in 21,186 pts.  $H_2O$ , 38,117 pts. dil. alcohol, and 13,513 pts. strong alcohol (Fehner, Analyst, 1879. 23.)

According to Sonnenschein, the solubility is increased by much  $H_2O$  or alcohol, alkaline hydroxides, carbonates, ortho-, pyro-, and metaphosphates, sodium borate, hyposulphate, thiosulphate, acetate, arsenate, and arsenite; potassium sodium tartrate, ammonium oxalate, orthophosphoric acid, and sulphuric acid. It is not increased by ammonium molybdate or sulphate, potassium sulphate, acid tartrate, acid oxalate, nitrate, or chlorate, iodide, chloride, or bromide; sodium bromide or nitrate; nitric, hydrochloric, boric, tartaric, oxalic, and dilute sulphuric acids (Sonnenschein, J. pr. 53. 342.)

Sol. in hot  $H_2O$ . Sol. in cold caustic alkalies, alkali carbonates, and phosphates,

$NH_4Cl$ , and  $(NH_4)_2C_2O_4 + Aq$ ; sl. sol. in  $(NH_4)_2SO_4$ ,  $KNO_3$ , and  $KCl + Aq$ ; very sl. sol. in  $NH_4NO_3 + Aq$ . Sol. in  $K_2SO_4$ ,  $Na_2SO_4$ ,  $NaCl$ ,  $MgCl_2$ ,  $H_2SO_4$ ,  $HCl$ , and conc. or dil.  $HNO_3 + Aq$

Presence of  $(NH_4)_2MoO_4$  totally changes the effect of acid liquids; insol. in dil.  $HNO_3$ , or  $H_2SO_4 + Aq$  containing  $(NH_4)_2MoO_4$ , but somewhat sol. in  $HCl + Aq$ , even in presence of that salt. Tartaric acid and similar organic substances totally prevent the precipitation of this salt (Eggertz in Fresenius' Quant. anal.)

$5(NH_4)_2O$ ,  $48MoO_3$ ,  $2P_2O_5 + 17H_2O = 3(NH_4)_2O$ ,  $24MoO_3$ ,  $P_2O_5 + 2(NH_4)_2O$ ,  $H_2O$ ,  $24MoO_3$ ,  $P_2O_5 + 16H_2O$  Formula of above salt according to Gibbs

$3(NH_4)_2O$ ,  $22MoO_3$ ,  $P_2O_5 + 9H_2O$ , or  $12H_2O$

$8(NH_4)_2O$ ,  $H_2O$ ,  $60MoO_3$ ,  $3P_2O_5 + 11H_2O$  Sl. sol. in  $H_2O$

$3(NH_4)_2O$ ,  $16MoO_3$ ,  $P_2O_5 + 14H_2O$ . Insol. in cold, sol. with decomp. in hot  $H_2O$ . Sol. in  $NH_4OH + Aq$  (Gibbs, Am. Ch. J. 3. 317.)

$5(NH_4)_2O$ ,  $P_2O_5$ ,  $16MoO_3$ . (Miescher, Dissert. 1894.)

$3(NH_4)_2O$ ,  $P_2O_5$ ,  $18MoO_3 + 14H_2O$  Sol. in  $H_2O$ . The aqueous solution is stable at ordinary temp. for several days, but when warmed ordinary ammonium phosphomolybdate separates. (Kehrmann, Z. anorg. 1894, 7. 414)

$3(NH_4)_2O$ ,  $P_2O_5$ ,  $28MoO_3 + 8H_2O$  100 g  $H_2O$  dissolve 0.0233 g. at 15°. 1 pt. is sol. at 15° in 4206 pts.  $H_2O$ , 7300 pts. 5%  $NH_4NO_3 + Aq$ ; 4930 pts. 1%  $HNO_3 + Aq$ . (de Lucchi, Rass. Min. 1910, 32. 21.)

$9(NH_4)_2O$ ,  $2P_2O_5$ ,  $28MoO_3 + 8H_2O$  (Miescher, Dissert. 1894.)

#### Ammonium diphosphomolybdate,

$2(NH_4)_2PO_4$ ,  $5MoO_3 + 7H_2O = 3(NH_4)_2O$ ,  $5MoO_3$ ,  $P_2O_5 + 7H_2O$ .

Easily sol. in hot, less in cold  $H_2O$ . (Zenker, J. pr. 58. 256.)

$5(NH_4)_2O$ ,  $H_2O$ ,  $10MoO_3$ ,  $2P_2O_5 + 6H_2O = 3(NH_4)_2O$ ,  $5MoO_3$ ,  $P_2O_5 + 2(NH_4)_2O$ ,  $H_2O$ ,  $5MoO_3$ ,  $P_2O_5 + 6H_2O$ . Sol. in  $H_2O$  (Gibbs, Am. Ch. J. 1895, 17. 87.)

$+8H_2O$ . (Perlberger.)

$+18H_2O$ . (Mazzuchelli and Zangrilli, Gazz. ch. it. 1910, 40. (2) 55.)

$5(NH_4)_2O$ ,  $P_2O_5$ ,  $10MoO_3 + 13H_2O$ , and  $+14H_2O$ . (Perlberger, Dissert. 1904.)

#### Ammonium barium phosphomolybdate,

$3(NH_4)_2O$ ,  $30BaO$ ,  $P_2O_5$ ,  $30MoO_3$ .

Insol. precipitate. (Selgsohn, J. pr. 67. 478.)

#### Ammonium cadmium phosphomolybdate,

$5(NH_4)_2O$ ,  $CdO$ ,  $P_2O_5$ ,  $6MoO_3 + 8H_2O$ .

(Perlberger, Dissert. 1904.)

$3(NH_4)_2O$ ,  $2CdO$ ,  $2P_2O_5$ ,  $9MoO_3 + 14H_2O$ . (Perlberger)

- Ammonium cobaltous phosphomolybdate**,  $(\text{NH}_4)_2\text{O}$ ,  $2\text{CoO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 10\text{H}_2\text{O}$ .  
Decomp. by cold  $\text{H}_2\text{O}$ . Sol in acids and hot  $\text{H}_2\text{O}$ . (Arnfeld, Dissert. 1898.)  
 $4(\text{NH}_4)_2\text{O}$ ,  $\text{CoO}$ ,  $2\text{P}_2\text{O}_5$ ,  $10\text{MoO}_3 + 12\text{H}_2\text{O}$   
Sl sol in cold, easily sol. in hot  $\text{H}_2\text{O}$ . (Arnfeld.)
- Ammonium manganous phosphomolybdate**,  $(\text{NH}_4)_2\text{O}$ ,  $2\text{MnO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 20\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ , but dissolves clear on heating. (Arnfeld.)  
 $1(\text{NH}_4)_2\text{O}$ ,  $\text{MnO}$ ,  $2\text{P}_2\text{O}_5$ ,  $10\text{MoO}_3 + 13\text{H}_2\text{O}$ . (Arnfeld.)  
 $5(\text{NH}_4)_2\text{O}$ ,  $10\text{MnO}$ ,  $2\text{P}_2\text{O}_5$ ,  $20\text{MoO}_3 + 10\text{H}_2\text{O}$ . Very sl. sol in  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 1895, 17, 87.)
- Ammonium nickel phosphomolybdate**,  $(\text{NH}_4)_2\text{O}$ ,  $2\text{NiO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 10\text{H}_2\text{O}$ .  
Decomp. by cold, but sol. in hot  $\text{H}_2\text{O}$ . (Arnfeld.)  
 $(\text{NH}_4)_2\text{O}$ ,  $\text{NiO}$ ,  $2\text{P}_2\text{O}_5$ ,  $10\text{MoO}_3 + 12\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$ . (Arnfeld.)
- Ammonium potassium phosphomolybdate**,  $6(\text{NH}_4)_2\text{O}$ ,  $15\text{K}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ ,  $60\text{MoO}_3 + 12\text{H}_2\text{O}$   
Sol. in  $\text{H}_2\text{O}$ . Insol in alcohol. (Seligsohn, J. pr. 67, 477.)
- Ammonium sodium phosphomolybdate**,  $6(\text{NH}_4)_2\text{O}$ ,  $15\text{Na}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ ,  $60\text{MoO}_3 + 18\text{H}_2\text{O}$   
Sol. in much boiling  $\text{H}_2\text{O}$ . Insol. in alcohol (Seligsohn, J. pr. 67, 474.)
- Barium phosphomolybdate**,  $3\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{MoO}_3 + x\text{H}_2\text{O}$   
Moderately sol in cold, very easily sol in hot  $\text{H}_2\text{O}$ . Decomp in aqueous solution at ordinary temp on standing (Kehrmann, Z. anorg. 1894, 7, 414)
- Cæsium phosphomolybdate**,  $3\text{Cs}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $6\text{MoO}_3 + 8\text{H}_2\text{O}$ .  
Ppt. (Ephraim, Z. anorg. 1910, 65, 240)  
 $2\text{Cs}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $14\text{MoO}_3 + 3\text{H}_2\text{O}$  Difficultly sol. in  $\text{H}_2\text{O}$ . (Ephraim.)  
 $3\text{Cs}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $21\text{MoO}_3 + 4\text{H}_2\text{O}$  (?). (Ephraim.)
- Calcium potassium phosphomolybdate**,  $2\text{CaO}$ ,  $3\text{K}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ ,  $10\text{MoO}_3 + 22\text{H}_2\text{O}$ .  
(Friedheim, Z. anorg. 1893, 4, 203.)
- Cobaltous phosphomolybdate**,  $2\text{CoO}$ ,  $\text{P}_2\text{O}_5$ ,  $1\text{MoO}_3 + x\text{H}_2\text{O}$   
(Arnfeld, Dissert. 1898.)  
 $3\text{CoO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 16\frac{1}{2}\text{H}_2\text{O}$ , and  $+17\frac{1}{2}\text{H}_2\text{O}$ . Extremely sol. in  $\text{H}_2\text{O}$ . (Arnfeld.)  
 $3\text{CoO}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{MoO}_3 + 38\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Arnfeld.)  
 $3\text{CoO}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{MoO}_3 + 58\text{H}_2\text{O}$ , and  $+60\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Arnfeld.)
- Cobaltous potassium phosphomolybdate**,  $\text{K}_2\text{O}$ ,  $2\text{CoO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 15\text{H}_2\text{O}$  (Arnfeld.)  
 $4\text{K}_2\text{O}$ ,  $\text{CoO}$ ,  $2\text{P}_2\text{O}_5$ ,  $10\text{MoO}_3 + 12\text{H}_2\text{O}$  Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$ . (Arnfeld.)
- Croceocobaltic phosphomolybdate**,  $24\text{MoO}_3$ ,  $\text{P}_2\text{O}_5$ ,  $[\text{Co}(\text{NH}_3)_4(\text{NO}_2)_2]_2\text{O}$ ,  $2\text{H}_2\text{O} + 21\text{H}_2\text{O}$ .  
Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 3, 317.)
- Gold phosphomolybdate ammonia**,  $12\text{Au}_2\text{O}_3$ ,  $7\text{P}_2\text{O}_5$ ,  $3\text{MoO}_3$ ,  $24\text{NH}_3 + 21\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 1895, 17, 172.)
- Gold sodium phosphomolybdate ammonia**,  $5\text{Au}_2\text{O}_3$ ,  $\text{Na}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $11\text{MoO}_3$ ,  $15\text{NH}_3 + 10\text{H}_2\text{O}$   
Sol. in dil.  $\text{HCl}$ . Almost insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Gibbs.)
- Lead phosphomolybdate**,  $23\text{PbMoO}_4$ ,  $\text{P}_2\text{O}_5$ ,  $2\text{PbPO}_4 + 7\text{H}_2\text{O}$   
Sol in 500,000 pts.  $\text{H}_2\text{O}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Easily sol. in  $\text{KOH}$ ,  $\text{NaOH}$ , or  $\text{HNO}_3 + \text{Aq}$ ; somewhat less sol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Beuf, Bull. Soc. (3) 3, 852.)
- Lithium phosphomolybdate**,  $12\text{Li}_2\text{O}$ ,  $4\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 18\text{H}_2\text{O}$ .  
Partially sol. in  $\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1909, 64, 233.)  
 $3\text{Li}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 16\text{H}_2\text{O}$  Ppt. (Ephraim, Z. anorg. 1910, 65, 233-6.)  
 $3\text{Li}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 17\text{H}_2\text{O}$ . Ppt. (E.)  
 $5\text{Li}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ ,  $8\text{MoO}_3 + 28\text{H}_2\text{O}$ . Easily sol in  $\text{H}_2\text{O}$ . (E.)  
 $3\text{Li}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $12\text{MoO}_3 + 18\text{H}_2\text{O}$ . Ppt. (E.)  
 $3\text{Li}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{MoO}_3 + 27\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (E.)
- Manganous phosphomolybdate**,  $3\text{MnO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 20\text{H}_2\text{O}$ .  
Very sol in  $\text{H}_2\text{O}$ . Sl. sol in alcohol (Arnfeld.)  
 $3\text{MnO}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{MoO}_3 + 38\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Arnfeld.)  
 $3\text{MnO}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{MoO}_3 + 58\text{H}_2\text{O}$ , and  $+60\text{H}_2\text{O}$  Easily sol in  $\text{H}_2\text{O}$ . (Arnfeld.)
- Manganous potassium phosphomolybdate**,  $2\text{MnO}$ ,  $3\text{K}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ ,  $10\text{MoO}_3 + 30\text{H}_2\text{O}$ .  
Sol. in hot  $\text{H}_2\text{O}$ . (Arnfeld.)
- Manganous sodium phosphomolybdate**,  $7\text{MnO}$ ,  $9\text{Na}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ ,  $22\text{MoO}_3 + 57\text{H}_2\text{O}$   
Nearly insol. in cold  $\text{H}_2\text{O}$ . Sol. in boiling  $\text{H}_2\text{O}$  but decomp. thereby (Gibbs, Am. Ch. J. 1895, 17, 85.)
- Nickel phosphomolybdate**,  $2\text{NiO}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{MoO}_3 + x\text{H}_2\text{O}$ .  
Ppt. (Arnfeld.)  
 $3\text{NiO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 20\text{H}_2\text{O}$ . Decomp by  $\text{H}_2\text{O}$ . (Arnfeld.)

$3\text{NiO}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{MoO}_3 + 34\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$  (Arnfeld.)

$3\text{NiO}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{MoO}_3 + 58\text{H}_2\text{O}$ , and  $+60\text{H}_2\text{O}$  Efflorescent Sol. in  $\text{H}_2\text{O}$ . (Arnfeld.)

**Nickel potassium phosphomolybdate**,  $\text{K}_2\text{O}$ ,  $2\text{NiO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 13\text{H}_2\text{O}$ .

Decomp. by cold  $\text{H}_2\text{O}$ , but goes into solution by boiling (Arnfeld.)

$4\text{K}_2\text{O}$ ,  $\text{NiO}$ ,  $2\text{P}_2\text{O}_5$ ,  $10\text{MoO}_3 + 12\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$  (Arnfeld.)

**Potassium phosphomolybdate**,  $\text{K}_3\text{PO}_4$ ,  $11\text{MoO}_3 + 1\frac{1}{2}\text{H}_2\text{O} = 3\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $22\text{MoO}_3 + 3\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ . Easily sol in alkalis (Svanberg and Struve.)

100 g.  $\text{H}_2\text{O}$  dissolve 0.007 g. at  $30^\circ$ , 100 g. 10%  $\text{HNO}_3 + \text{Aq}$  dissolve 0.204 g. at  $30^\circ$  (Donk, Bull. 90, Bur. of Chem., U. S. Dept. of Agric. 1906.)

According to older authorities the formula is  $\text{K}_3\text{PO}_4$ ,  $10\text{MoO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

$+6\text{H}_2\text{O}$  (Rammelsberg.)  
 $2\text{K}_2\text{O}$ ,  $\text{H}_2\text{O}$ ,  $24\text{MoO}_3$ ,  $\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$  Sl. sol. in cold  $\text{H}_2\text{O}$

$5\text{K}_2\text{O}$ ,  $\text{H}_2\text{O}$ ,  $44\text{MoO}_3$ ,  $2\text{P}_2\text{O}_5 + 21\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 3. 317.)

$3\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{MoO}_3 + 11\text{H}_2\text{O}$ , and  $+15\text{H}_2\text{O}$  (Elias.)

$+14\text{H}_2\text{O}$ . Sl. sol. in cold, very easily sol. in hot  $\text{H}_2\text{O}$ . Can be cryst. from hot  $\text{H}_2\text{O}$  (Kehrmann, Z. anorg. 1894, 7. 416.)

$3\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $17\text{MoO}_3 + 12\text{H}_2\text{O}$ . Moderately sol. in  $\text{H}_2\text{O}$  (Elias, Dissert. 1906.)

$5\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $17\text{MoO}_3 + 2\text{H}_2\text{O}$  Aqueous solution decomp. rapidly in the cold (Kehrmann, Z. anorg. 1894, 7. 423.)

$4\text{K}_2\text{O}$ ,  $2\text{H}_2\text{O}$ ,  $9\text{MoO}_3$ ,  $\text{P}_2\text{O}_5 + 18\text{H}_2\text{O}$ . (Zenkner.)

$5\text{K}_2\text{O}$ ,  $\text{H}_2\text{O}$ ,  $10\text{MoO}_3$ ,  $\text{P}_2\text{O}_5 + 19\text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. 10. 1776.)

$6\text{K}_2\text{O}$ ,  $15\text{MoO}_3$ ,  $\text{P}_2\text{O}_5$ . Insol in  $\text{H}_2\text{O}$  Sol in  $\text{KOH} + \text{Aq}$ . (Rammelsberg.)

$\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $2\text{MoO}_3 + 13\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  (Friedheim, Z. anorg. 4. 287.)

$2\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{MoO}_3 + 8\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Friedheim.)

**Potassium diphosphopentamolybdate**,  $3\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 7\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ , precipitated by  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq}$ . (Zenkner, J. pr. 68. 261.)

$2\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 6\text{H}_2\text{O}$  (Friedheim.)

**Potassium diphosphopentamolybdate nitrate**,  $2\text{K}_3\text{PO}_4$ ,  $5\text{MoO}_3$ ,  $6\text{KNO}_3 + 9\text{H}_2\text{O}$

(Debray, C. R. 66. 706.)

**Rubidium phosphomolybdates:**

$7\text{Rb}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $22\text{MoO}_3 + 12\text{H}_2\text{O}$ ;  $3\text{Rb}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $20\text{MoO}_3 + 12\text{H}_2\text{O}$ ,  $6\text{Rb}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{MoO}_3 + 10\text{H}_2\text{O}$ ;  $5\text{Rb}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ ,  $9\text{MoO}_3 + 13\text{H}_2\text{O}$ ;  $7\text{Rb}_2\text{O}$ ,  $3\text{P}_2\text{O}_5$ ,  $10\text{MoO}_3 + 15\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1910, 65. 237-9.)

**Silver phosphomolybdate**,  $7\text{Ag}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $20\text{MoO}_3 + 24\text{H}_2\text{O}$ .

Ppt Sol in dil  $\text{HNO}_3 + \text{Aq}$ , forming—  
 $2\text{Ag}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $20\text{MoO}_3 + 7\text{H}_2\text{O}$ . Sl sol in  $\text{H}_2\text{O}$  (Rammelsberg.)

Formula of first salt is—  
 $7\text{Ag}_2\text{O}$ ,  $22\text{MoO}_3$ ,  $\text{P}_2\text{O}_5 + 14\text{H}_2\text{O}$  Sol. in hot  $\text{H}_2\text{O}$ , but solution is quickly decomp. (Gibbs, Am. Ch. J. 3. 317.)

$7\text{Ag}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{MoO}_3$  Ppt. (Miciati, J. pr. 1908 (2) 77. 451.)

**Silver diphosphopentamolybdate**,  $\text{Ag}_5\text{Mo}_5\text{P}_2\text{O}_{12} + 7\text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$ . (Debray, C. R. 66. 705.)

**Sodium phosphomolybdate.**

Sol in  $\text{H}_2\text{O}$  and  $\text{HNO}_3 + \text{Aq}$ . (Sonnen-schein, A. 104. 45.)

$\text{Na}_2\text{O}$ ,  $5\text{H}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{MoO}_3 + 2\text{H}_2\text{O}$   
 $2\text{Na}_2\text{O}$ ,  $4\text{H}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{MoO}_3 + 2\text{H}_2\text{O}$ .

$3\text{Na}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{MoO}_3 + 26\text{H}_2\text{O}$  (Friedheim.)

$3\text{Na}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{MoO}_3 + 42\text{H}_2\text{O}$ . (Rosenheim and Pinsker, Z. anorg. 1911, 70. 79.)

**Sodium diphosphopentamolybdate**,  $3\text{Na}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{MoO}_3 + 14\text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$  (Debray.)

**Sodium auramine phosphomolybdate**,  $\text{Na}_2\text{O}$ ,  $5\text{Au}_2\text{O}_3$ ,  $2\text{P}_2\text{O}_5$ ,  $11\text{MoO}_3$ ,  $15\text{NH}_3$ .

Sol in hot  $\text{H}_2\text{O}$ . Very sol in hot  $\text{HCl}$ . (Gibbs, Am. Ch. J. 1895, 17. 171.)

**Metaphosphomolybdic acid.**

**Ammonium monometaphosphomolybdate**,  $3(\text{NH}_4)_2\text{O}$ ,  $4\text{NH}_4\text{PO}_3$ ,  $10\text{MoO}_3 + 9\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$  (Gibbs, Am. Ch. J. 7. 392.)

**Barium hexametaphosphomolybdate**,  $\text{BaO}$ ,  $\text{Ba}_3(\text{PO}_3)_6$ ,  $14\text{MoO}_3 + 55\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ . (Gibbs.)

**Pyrophosphonitrylic acid**,  $\text{P}_2\text{HNO}_3 =$   
 $\text{P}_2\text{O}_5 \cdot \text{OH}$   
 $\text{N}$ .

Not known in free state

**Ammonium pyrophosphonitrylate**,  $\text{P}_2\text{O}_5 \cdot \text{ONH}_4$   
 $\text{N}$ .

Insol but gradually decomp. by  $\text{H}_2\text{O}$ . (Gladstone.)

**Potassium —**,  $\text{KP}_2\text{NO}_4$

Insol. in  $\text{H}_2\text{O}$  (Gladstone.)

**Silver —**,  $\text{AgP}_2\text{NO}_4$ .

Ppt

**Triphosphonitrilic chloramide,**

Sol. in  $H_2O$  without decomp.; sol. in ether, alcohol; sl. sol. in benzene. (Stokes, Am. Ch. J. 1895, 17. 287.)

**Triphosphonitrilic tetrachlorhydrin,**

Sol. in ether, alcohol, and  $H_2O$ ; insol. in benzene and  $CS_2$ . (Stokes, Am. Ch. J. 1895, 17. 286.)

**Triphosphonitrilic chloride,  $P_3N_3Cl_4$** 

Sol. in glacial acetic acid and  $H_2SO_4$ . 100 pts. ether dissolve 46.5 pts. at  $20^\circ$ . (Liebig.)

Insol. in light petroleum, sol. in benzene. (Stokes, Am. Ch. J. 1897, 19. 783.)

**Tetraphosphonitrilic chloride,  $P_4N_4Cl_4$** 

Sol. in alcohol, ether, benzene,  $H_2SO_4$ . Sl. sol. in  $H_2O$  with decomp. 100 pts. ether dissolve 12.3 pts. at  $20^\circ$ . (Stokes, Am. Ch. J. 1895, 17. 281.)

**Pentaphosphonitrilic chloride,  $(PNCl_2)_5 = P_5N_5Cl_{10}$** 

Sol. in benzene, light petroleum, acetic acid, ether,  $CS_2$ ; insol. in  $H_2O$ . (Stokes, Am. Ch. J. 1897, 19. 790.)

**Hexaphosphonitrilic chloride,  $(PNCl_2)_6 = P_6N_6Cl_{12}$** 

Sol. in benzene, light petroleum, ether,  $CS_2$ ; insol. in  $H_2O$ . (Stokes.)

**Heptaphosphonitrilic chloride,  $(PNCl_2)_7 = P_7N_7Cl_{14}$** 

Sol. in benzene, light petroleum, ether,  $CS_2$ , insol. in  $H_2O$ ; sol. in alcohol with decomp. (Stokes.)

**Polyphosphonitrilic chloride,  $(PNCl_2)_x$** 

Depolymerizes on distillation; insol. in benzene and light petroleum and all neutral solvents; sol. in  $H_2O$  with decomp. (Stokes.)

**Phosphonitrilochloramide,  $P_2N_2Cl_3(NH_2)$** 

Slowly sol. in  $H_2O$  with decomp. Insol. in ether and  $CS_2$ . Sl. sol. in boiling  $CCl_4$ . (Besson and Rosset, C. R. 1908, 146. 1149.)

**Phosphonium bromide,  $PH_4Br$** 

Decomp. violently by  $H_2O$ .

**Phosphonium chloride,  $PH_4Cl$** 

(Ogier, Bull. Soc. (2) 32. 483.)

**Phosphonium titanium chloride,  $2PH_4Cl, 3TiCl_4$** 

Decomp. by  $H_2O$ ,  $HCl$ , or alkalis + Aq R. use.)

**Phosphonium iodide,  $PH_4I$** 

Decomp. by  $H_2O$ , alkalis, alcohol, etc. (Rose, Pogg. 46. 636.)

Decomp. by  $PCl_5$ . (Wilde, B. 16. 217.)

**Phosphonium sulphate (?)**

Deliquescent; very unstable. (Besson, C. R. 109. 644.)

**Phosphoramidate,  $P(NH_2)_3$** 

Insol. in  $NH_4Br, 3NH_3$ ; sol. in  $NH_4I, 3NH_3$ . (Hugot, C. R. 1905, 141. 1235.)

**Phosphortriamide,  $PON_3H_3$** 

See Phosphoryl triamide.

**Phosphoric acid, anhydrous,  $P_2O_5$** 

See Phosphorus pentoxide.

**Metaphosphoric acid,  $HPO_3$** 

Sol. in  $H_2O$ . Not isolated. (Fleitmann, Pogg. 78. 362.)

Deliquescent. Sol. in  $H_2O$ , but aqueous solution decomp. into  $H_3PO_4$ , slowly in the cold, but more rapidly on heating. Conc. solutions decomp. more rapidly than when dil. (Giran, A. ch. 1903, (7) 30. 203.)

Insol. in liquid  $CO_2$ . (Büchner, Z. phys. Ch. 1906, 64. 674.)

**Dimetaphosphoric acid,  $H_2P_2O_5$** 

Not isolated. (Fleitmann.)

**Trimetaphosphoric acid,  $H_3P_3O_7$** 

Sol. in  $H_2O$ ; the solution is permanent in the cold, but on evaporation it is quickly decomp. to  $H_3PO_4$ .

**Tetrametaphosphoric acid,  $H_4P_4O_{13}$** 

Not isolated.

**Hexametaphosphoric acid,  $H_6P_6O_{19}$** 

(Glacial phosphoric acid.)

Deliquescent; easily sol. in  $H_2O$  with evolution of heat and conversion into  $H_3PO_4$ . Not easily sol. in presence of slight impurities.

Insol. in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 828.)

**Orthophosphoric acid,  $H_3PO_4$** 

Very sol. in  $H_2O$ .

100 pts. of the solution contain at:

26.23°	27.02°	29.42°	29.77°
95.9	95.98	96.15	96.11 pts. $H_3PO_4$

37.65° 39.35° 42.30° (mpt.)

97.8 98.48 100 pts.  $H_3PO_4$ .

(Smith and Menzies, J. Am. Chem. Soc. 1909, 31. 1186.)

See also  $10H_3PO_4 + H_2O$ , and  $2H_3PO_4 + H_2O$ .

(Kohlrausch, W. Ann. 1894, 53. 29.)

Miscible with conc  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq.}$  Sol in 30 pts warm creosote1 cc. of a sat. solution of ether in  $\text{H}_2\text{O}$  dissolves 0.0886 grams  $\text{H}_2\text{PO}_4$ .

1 cc. of a sat. solution of  $H_2O$  in ether dissolves 0.00033 grams  $H_3PO_4$ .

Solutions of  $H_3PO_4$  in  $H_2O$  containing less than 0.434 grams acid per 1 cc. lose an insignificant amount of acid to ether when agitated therewith (Berthelot, C. R. 1896, 123. 345.)

The composition of the hydrates formed by  $H_3PO_4$  at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by  $H_3PO_4$  and of the conductivity and sp. gr. of  $H_3PO_4$ +Aq. (Jones, Am. Ch. J. 1905, 34. 331.)

$10H_3PO_4 + H_2O$ . Solubility in  $H_2O$ .

100 pts. of the solution contain at.

24.11°	24.38°	24.40°
94.78	94.80	94.84 pts. $H_3PO_4$

24.81°	25.41°	25.85°
94.95	95.26	95.54 pts. $H_3PO_4$

(Smith and Menzies, J. Am. Chem. Soc. 1909, 31. 1186.)

$2H_3PO_4 + H_2O$ . Solubility in  $H_2O$ .

100 pts. of the solution contain at

-16.3°	0.5°	14.95°	24.03°	27.0°
76.7	78.7	81.7	85.7	87.7 pts. $H_3PO_4$

29.15°	29.35° (mpt.)
90.5	91.6 pts. $H_3PO_4$

28.5°	27.0°	25.41°
92.5	93.4	94.1 pts. $H_3PO_4$

Retroflex part of curve.

(Smith and Menzies, J. Am. Chem. Soc. 1909, 31. 1186.)

**Pyrophosphoric acid (Diphosphoric acid),  $H_4P_2O_7$ .**

Very sol. in  $H_2O$ . The solution may be kept without change, but on heating it is converted into  $H_3PO_4$ .

The acid in solution gradually changes to  $H_3PO_4$ ; the conversion being more rapid with more concentrated solutions. (Montemartini and Egidi, Gazz. ch. it. 1902, 32. (1) 381.)

**Phosphoric acid,  $H_3P_2O_7$  (?).**

Sol. in  $H_2O$ . (Joly, C. R. 100. 447.)

**Phosphates.**

The phosphates of  $NH_4$ ,  $K$ ,  $Na$ ,  $Li$ ,  $Cs$ , and  $Rb$  are sol. in  $H_2O$ , with the exception of certain metaphosphates; the other phosphates excepting neutral  $Tl$  salts, are nearly insol. in  $H_2O$ , excepting when an excess of  $H_3PO_4$  is present. The latter are all sol. in  $HNO_3$ +Aq.

(a) **Metaphosphates.**

**Monometaphosphates.** Only alkali monometaphosphates are known, and they are all insol. in  $H_2O$ .

**Dimetaphosphates.** Alkali dimetaphosphates and some double salts containing an alkali as one of the bases are sol. in  $H_2O$ , the rest are sl sol or insol in  $H_2O$ .

**Trimetaphosphates.** All salts are sol. in  $H_2O$ .

**Tetrametaphosphates.** The alkali salts are sol. in  $H_2O$ , the others are insol.

**Hexametaphosphates.** The alkali salts are sol., the others insol., in  $H_2O$ , but are mostly sol. in  $Na$  hexametaphosphate+Aq.

(b) **Orthophosphates.**  $K$ ,  $Na$ ,  $Li$ ,  $Cs$ , and  $Rb$  orthophosphates are sol. in  $H_2O$ . All the others are insol. in  $H_2O$ , but sol. in excess of  $H_3PO_4$  and  $HNO_3$ +Aq; less easily sol. in  $HC_2H_3O_2$ +Aq.  $Pb$ ,  $Al$ , and  $Fe_3$  phosphates are insol. in  $HC_2H_3O_2$ +Aq. Sl sol. in  $NH_4$  salts+Aq, especially  $NH_4Cl$ +Aq, from which solution they are pptd. by  $NH_4OH$ +Aq. Orthophosphates insol. in  $H_2O$  are also insol. in an excess of alkali orthophosphates+Aq.

All orthophosphates are insol., or very sl. sol. in alcohol.

(c) **Pyrophosphates.** Alkali pyrophosphates are sol. in  $H_2O$ , the others are insol. in  $H_2O$ , but are mostly sol. in an excess of  $Na$  pyrophosphate+Aq.

**Aluminum metaphosphate,  $Al_3(PO_3)_4$ .**

Insol. in  $H_2O$  and conc. acids. (Maddrell, A. 61. 59.)

**Aluminum orthophosphate, basic,  $3Al_2O_3, P_2O_5 + 18H_2O$ .**

Min. *Evanite*.

$4Al_2O_3, 3P_2O_5 + 18H_2O$ . Ppt. Insol. in  $H_2O$ . (Rammelsberg.)

$2Al_2O_3, P_2O_5$ .

+ $3H_2O$ . Min. *Angelite*.

+ $5H_2O$ . Min. *Kalaite* (*Turquoise*). Sol. in  $HCl$ +Aq.

+ $6H_2O$ . Decomp. by  $H_2O$ . (Hautefeuille, J. pr. (2) 37. 111.)

Min. *Peganite*. More or less sol. in  $HCl$ , and  $HNO_3$ +Aq.

+ $8H_2O$ . Ppt. (Munroe, A. 159. 278.)

Min. *Fischerite*. Sl attacked by  $HCl$  or  $HNO_3$ +Aq; sol. in  $H_2SO_4$ +Aq.

$3Al_2O_3, 2P_2O_5 + 8H_2O$ , or  $12H_2O$ . Sol. in acids, even after ignition (Milot, C. R. 82. 89.)

+ $10H_2O$ . Min. *Ceruleolactite*. Sol. in acids.

+ $12H_2O$ . Min. *Wavellite*.

**Aluminum orthophosphate,  $Al_3(PO_4)_2$ .**

**Crystalline.** Not attacked by conc.  $HCl$  or  $HNO_3$ +Aq, difficultly by hot conc.  $H_2SO_4$ . (de Schulten, C. R. 98. 1583.)

**Ignited  $Al_3(PO_4)_2$**  is sl. decomp. by  $H_2O$ , so that solubility determinations are variable. For an extended discussion, see original paper. (Cameron and Hurst, 1904, 26. 898.)

+4H<sub>2</sub>O Easily sol in mineral acids, insol in acetic and other organic acids Easily sol in KOH+Ag, but is reprecipitated by NH<sub>4</sub>Cl+Ag. Sol. in NH<sub>4</sub>OH+Ag. Sol. in a large amount of alum+Ag (Rose), in aluminum acetate and other aluminum salts +Ag (Fleischer, Z anal. 6, 28). More sol than ferric phosphate in ammonium oxalate or citrate+Ag. (Millot.)

Acid NH<sub>4</sub> citrate+Ag dissolves 3% of the P<sub>2</sub>O<sub>5</sub>; neutral NH<sub>4</sub> citrate+Ag dissolves 6.6% of the P<sub>2</sub>O<sub>5</sub>, ammoniacal NH<sub>4</sub> citrate+Ag dissolves completely in 25 min (Erlenmeyer, B. 14, 1869)

Sol in NH<sub>4</sub>OH+Ag, especially in presence of alkali phosphates (de Koninck, Z anal. 23, 90)

Not pptd in presence of alkali tartrates or citrates, sugar, glycerine, etc.

Insol. in ethyl acetate (Naumann, B. 1010, 43, 314)

Min *Vorlesite*. Very quickly sol in warm conc HCl+Ag.

+5H<sub>2</sub>O. Min *Zepharovitchite*

+8H<sub>2</sub>O. Min *Gibbsite*

Aluminum orthophosphate, acid, 2Al<sub>2</sub>O<sub>3</sub>, 3P<sub>2</sub>O<sub>5</sub>+16H<sub>2</sub>O

Insol. in acids after being ignited. (Millot, Bull. Soc. (2) 22, 244)

+4H<sub>2</sub>O, and 6H<sub>2</sub>O Insol in H<sub>2</sub>O or alcohol (Hautefeuille and Margottet, J. pr. (2) 37, 111.)

Al<sub>2</sub>O<sub>3</sub>, 2P<sub>2</sub>O<sub>5</sub>+8H<sub>2</sub>O. Insol in acids or aqua regia after being ignited. (Millot)

2Al<sub>2</sub>O<sub>3</sub>, 5P<sub>2</sub>O<sub>5</sub>+14H<sub>2</sub>O. Decomp by cold H<sub>2</sub>O into—

4Al<sub>2</sub>O<sub>3</sub>, 7P<sub>2</sub>O<sub>5</sub>+9H<sub>2</sub>O. Decomp by hot H<sub>2</sub>O. (Erlenmeyer, A. 194, 200.)

Al<sub>2</sub>O<sub>3</sub>, 3P<sub>2</sub>O<sub>5</sub>+3H<sub>2</sub>O=Al<sub>2</sub>(H<sub>2</sub>PO<sub>4</sub>)<sub>3</sub>. Deliquescent, completely sol in a little cold H<sub>2</sub>O, and conc. solution can be boiled without decomp., but dil solution (1.20) separates Al<sub>2</sub>(PO<sub>4</sub>)<sub>3</sub> on boiling, which redissolves on cooling, the more quickly the more dilute the original solution. (Erlenmeyer, A. 194, 198.)

Aluminum pyrophosphate, Al<sub>4</sub>(P<sub>2</sub>O<sub>7</sub>)<sub>3</sub>+10H<sub>2</sub>O.

Precipitate. Sol in mineral acids, and Na<sub>2</sub>P<sub>2</sub>O<sub>7</sub>+Ag, insol in acetic acid Sol. in KOH+Ag; sol. in NH<sub>4</sub>OH+Ag, but when dissolved in HCl+Ag is reprecipitated by NH<sub>4</sub>OH+Ag, and is not redissolved in an excess thereof. (Schwarzenberg, A. 65, 147.)

Sol. in alum+Ag (Rose, Pogg. 76, 19)

Aluminum pyrometaphosphate, Al<sub>2</sub>O<sub>3</sub>, 2P<sub>2</sub>O<sub>5</sub>.

(Hautefeuille and Margottet, C. R. 96, 849.)

Aluminum ammonium dihydrogen orthophosphate, NH<sub>4</sub>H<sub>2</sub>PO<sub>4</sub>, AlPO<sub>4</sub>.

Partially decomp. by H<sub>2</sub>O. Sol. in acids and alkalis. Nearly insol in 50% acetic acid. (Cohen, J. Am. Chem. Soc. 1907, 29, 720.)

Aluminum calcium phosphate, Al<sub>2</sub>O<sub>3</sub>, 3CaO, P<sub>2</sub>O<sub>5</sub>+3H<sub>2</sub>O.

Min *Tamstackite*.

2Al<sub>2</sub>O<sub>3</sub>, 6CaO, 3P<sub>2</sub>O<sub>5</sub>+3H<sub>2</sub>O Min *Kunzeite*.

Aluminum calcium phosphate sulphate, 3Al<sub>2</sub>O<sub>3</sub>, SO<sub>3</sub>, Ca<sub>3</sub>(PO<sub>4</sub>)<sub>2</sub>+6H<sub>2</sub>O

Min *Svanbergite*. Scarcely attacked by HCl+Ag, and only sl. by H<sub>2</sub>SO<sub>4</sub>+Ag.

Aluminum ferrous magnesium phosphate, (Mg, Fe)<sub>2</sub>Al<sub>2</sub>P<sub>2</sub>O<sub>7</sub>+4H<sub>2</sub>O.

Min. *Childrenite* Slowly sol. in HCl+Ag.

Min. *Eosphorite*. Sol. in HNO<sub>3</sub> or HCl+Ag.

(Mg, Fe)Al<sub>2</sub>P<sub>2</sub>O<sub>7</sub>+H<sub>2</sub>O Min. *Lazulite*

Only sl attacked by acids, when not previously ignited

Aluminum lithium phosphate, Al<sub>2</sub>(PO<sub>4</sub>)<sub>3</sub>, 4Li<sub>2</sub>PO<sub>4</sub>+30H<sub>2</sub>O

Precipitate. (Berzelius)

Insol in H<sub>2</sub>O; easily sol. in acids

Aluminum magnesium phosphate.

Min *Lazulite*.

See Phosphate, aluminum ferrous magnesium.

Aluminum potassium phosphate, Al<sub>2</sub>O<sub>3</sub>, K<sub>2</sub>O, 2P<sub>2</sub>O<sub>5</sub>

Insol in acids. (Ouvrard, A. ch. (6) 16, 289.)

2Al<sub>2</sub>O<sub>3</sub>, 2K<sub>2</sub>O, 3P<sub>2</sub>O<sub>5</sub> (Ouvrard)

Aluminum silver metaphosphate, 2Al<sub>2</sub>O<sub>3</sub>, Ag<sub>2</sub>O, 4P<sub>2</sub>O<sub>5</sub>

(Hautefeuille and Margottet, C. R. 96, 849, 1142)

Aluminum sodium pyrophosphate,

Al<sub>2</sub>Na<sub>2</sub>(P<sub>2</sub>O<sub>7</sub>)<sub>3</sub>.

Insol. in H<sub>2</sub>O and acids (Wallroth.)

Nearly insol. in acids (Ouvrard, A. ch. (6) 16, 338.)

2Al<sub>2</sub>O<sub>3</sub>, 3Na<sub>2</sub>O, 3P<sub>2</sub>O<sub>5</sub>. Sol. in HNO<sub>3</sub>+Ag. (Ouvrard)

Al<sub>2</sub>(P<sub>2</sub>O<sub>7</sub>)<sub>3</sub>, 2Na<sub>2</sub>P<sub>2</sub>O<sub>7</sub>+30H<sub>2</sub>O

Very difficultly sol. in H<sub>2</sub>O. (Pahl, Bull. Soc. (2) 22, 122)

Aluminum phosphate lithium fluoride,

2Al<sub>2</sub>(PO<sub>4</sub>)<sub>3</sub>, 3LiF

Min. *Amblygonite*. Sl. attacked by HCl+Ag, more easily by H<sub>2</sub>SO<sub>4</sub>+Ag.

Ammonium metaphosphate, NH<sub>4</sub>PO<sub>3</sub>.

Insol. in H<sub>2</sub>O. (Flettman, Pogg. 78, 345.)

Ammonium dimetaphosphate, (NH<sub>4</sub>)<sub>2</sub>(PO<sub>3</sub>)<sub>2</sub>.

Sol. in 1.15 pts cold or hot H<sub>2</sub>O. (Flettman, Pogg. 78, 245.) More sol. in dil. alcohol than Na or K salt.

Sol in 0.9 pts  $H_2O$ ; easily sol. in acids especially by boiling with conc.  $H_2SO_4$  (Glatzel, Dissert. 1880.)

**Ammonium trimetaphosphate,  $(NH_4)_3P_3O_9$**

Very sol. in  $H_2O$ . (Lindholm, Acta Lund 1873. 15)

**Ammonium tetrametaphosphate,  $(NH_4)_4P_4O_{12}$**

Sol. in  $H_2O$ . (Warschauer, Z. anorg. 1903, 36. 177.)  
+4 $H_2O$ . Much more sol. in  $H_2O$  than the K or Na salt. 1 pt. is sol. in 8 pts.  $H_2O$ . (Glatzel, Dissert. 1880.)

**Ammonium pentametaphosphate,  $(NH_4)_5P_5O_{15}$**

Sol. in  $H_2O$ . (Tammann, J. pr. 1892, (2) 45. 455)

**Ammonium dekametaphosphate,  $(NH_4)_{10}P_{10}O_{30}$**

Very sl. sol. in  $H_2O$ ; 100 g.  $H_2O$  dissolved 1.20-1.54 g. in 2 months. Easily sol. in hot  $H_2O$  with decomp. (Tammann, J. pr. 1892, (2) 45. 448.)  
+12 $H_2O$  (Tammann, J. pr. 1892, (2) 45. 465.)

**Ammonium orthophosphate,  $(NH_4)_3PO_4 + 3H_2O$**

Difficultly sol. in  $H_2O$ .  
Less sol. in  $H_2O$  than  $(NH_4)_2HPO_4$ . (Berzelius.)  
Insol. in alkalies + Aq. (Berzelius.)  
Sl. sol. in  $H_2O$ . Decomp. in the air. (Schottländer, Z. anorg. 1894, 7. 344.)

Solubility in  $H_3PO_4 + Aq$  at 25°.

In 1000 g. of the solution, mols	
$NH_4$	$PO_4$
7.42	0.084
5.02	0.20
2.95	0.46
3.04	1.02
3.32	1.32
4.78	2.32

(D'Ans and Schreiner, Z. phys. Ch. 1910, 75. 105.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)  
+5 $H_2O$  (Sestini, Gazz. ch. it. 9. 298.)

**Ammonium hydrogen orthophosphate,  $(NH_4)_2HPO_4$**

Easily sol. in  $H_2O$ . Effloresces to form  $NH_4H_2PO_4$ . (Schiff, A. 112. 88.)  
Sol. in 4 pts. cold, and less hot  $H_2O$ . Solution loses  $NH_3$  by boiling. Insol. in alcohol.

100 g.  $H_2O$  dissolve 131 g. at 15°; sp. gr. of sat. solution = 1.343. (Greenish and Smith, Pharm. J. 1901, 66. 774.)

Solubility in  $H_3PO_4 + Aq$  at 25°.

In 1000 g. of the solution, mols	
$NH_4$	$PO_4$
6.42	3.23
6.46	3.74
6.56	4.01
6.78	4.34
7.26	4.83
7.16	4.82

(D'Ans and Schreiner, Z. phys. Ch. 1910, 75. 105.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

**Ammonium dihydrogen orthophosphate,  $NH_4H_2PO_4$**

Does not effloresce  
Less easily sol. in  $H_2O$  than  $(NH_4)_2HPO_4$ . (Mitscherlich, A. ch. 19. 385.)  
Sol. in 5 pts. cold, and less hot  $H_2O$

Solubility in  $H_3PO_4 + Aq$  at 25°.

In 1000 g. of the solution, mols	
$NH_4$	$PO_4$
6.72	4.54
5.62	3.88
4.62	3.36
2.72	2.59
2.50	2.54
2.58	4.29
2.76	6.21
3.06	7.70
3.10	7.86

(D'Ans and Schreiner, Z. phys. Ch. 1910, 75. 106.)

Insol. in acetone (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329)

**Ammonium orthophosphate, acid.**

Decomp. into  $NH_4H_2PO_4$  at 77-78°. (Parravano and Miel, Gazz. ch. it. 1908, 38, II. 536.)

**Ammonium pyrophosphate,  $(NH_4)_2P_2O_7$**

Easily sol. in  $H_2O$ . Alcohol precipitates it from the aqueous solution. (Schwarzenberg, A. 65. 141.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

**Ammonium hydrogen pyrophosphate,  $(NH_4)H_2P_2O_7$**

Very sol. in  $H_2O$ . Insol. in alcohol. (Schwarzenberg, A. 65. 141.)

**Ammonium barium trimetaphosphate,**  
 $(\text{NH}_4)_2\text{BaP}_3\text{O}_9 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  (Lindbom)

**Ammonium cadmium dimetaphosphate,**  
 $(\text{NH}_4)_2\text{CdO} \cdot \text{CdO} \cdot 2\text{P}_2\text{O}_5 + 3\text{H}_2\text{O} =$   
 $(\text{NH}_4)_2\text{Cd}(\text{P}_2\text{O}_5)_2$ .

Efflorescent (Fleitmann, Pogg. 78. 347.)

**Ammonium cadmium orthophosphate,**  
 $\text{NH}_4\text{CdPO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$

Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  and acids.  
 (Drewson, Gm K Handb. 6te Aufl. III 74)

**Ammonium calcium dimetaphosphate,**  
 $(\text{NH}_4)_2\text{Ca}(\text{P}_2\text{O}_5)_2 + 2\text{H}_2\text{O}$ .

Very sl sol in  $\text{H}_2\text{O}$  Not decomp. by acids. (Fleitmann, Pogg. 78. 344)

**Ammonium calcium phosphate,**  $\text{NH}_4\text{CaPO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .

Ppt. (Hertzfeld and Feuerlein, Z. anal. 191.)

+  $7\text{H}_2\text{O}$  Not completely decomp by cold  $\text{H}_2\text{O}$  in  $\frac{3}{4}$  hour; rapidly by hot  $\text{H}_2\text{O}$ . (Lasne, Bull. Soc 1902, (3) 27. 131.)

**Ammonium chromium orthophosphate, basic,**  
 $5(\text{NH}_4)_2\text{H}_2\text{PO}_4 \cdot 2\text{CrPO}_4 \cdot 4\text{Cr}(\text{OH})_3$ .

(Cohen, J. Am. Chem. Soc 1907, 29. 1196.)  
 $(\text{NH}_4)_3\text{HPO}_4 \cdot 2\text{CrPO}_4 + 3\text{H}_2\text{O}$  Ppt. (Cohen.)

**Ammonium chromic pyrophosphate,**  
 $\text{NH}_4(\text{CrP}_2\text{O}_7) \cdot 6\text{H}_2\text{O}$

Sl. sol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . (Rosenheim, B. 1915, 48. 586.)

**Ammonium cobaltous metaphosphate.**

Extremely sol in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Persoz, J. pr. 3. 215)

**Ammonium cobaltous orthophosphate,**  
 $\text{NH}_4\text{CoPO}_4 + \text{H}_2\text{O}$ .

Not decomp. by boiling  $\text{H}_2\text{O}$ . (Debray, J. Pharm. (3) 46. 121)

+  $12\text{H}_2\text{O}$ . Ppt. (Chance, 1862.)  
 $\text{Co}(\text{NH}_4)_2\text{H}_2(\text{PO}_4)_2 + 4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Debray.)

**Ammonium copper dimetaphosphate,**  
 $(\text{NH}_4)_2\text{P}_2\text{O}_5 \cdot \text{CuP}_2\text{O}_5 + 2\text{H}_2\text{O}$

Very sl. sol. in  $\text{H}_2\text{O}$ , insol. in alcohol. (Fleitmann, Pogg. 78. 345.)

+  $4\text{H}_2\text{O}$ . Efflorescent. Very sl. sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol (F.)

Sol. in 50 pts.  $\text{H}_2\text{O}$ . Slowly attacked by acids. Only boiling  $\text{H}_2\text{SO}_4$  attacks easily. (Glatzel, Dissert. 1880.)

**Ammonium glucinum orthophosphate,**  
 $\text{NH}_4\text{GlPO}_4$ .

Insol in cold, sl. sol. in hot  $\text{H}_2\text{O}$ . (Rössler, Z. anal. 17. 148.)

**Ammonium glucinum sodium orthophosphate,**  
 $(\text{NH}_4)_2\text{GlNa}_2(\text{PO}_4)_2 + 7\text{H}_2\text{O}$ .

(Scheffer, A. 109. 146)

**Ammonium iron (ferrous) orthophosphate,**  
 $\text{NH}_4\text{FePO}_4 + \text{H}_2\text{O}$ .

Insol. even in boiling  $\text{H}_2\text{O}$ . When still moist, easily sol. in dil acids, but sparingly and slowly sol. after drying, even in conc. acids. Decomp by  $\text{NH}_4\text{OH}$ ,  $\text{KOH}$ , and  $\text{NaOH} + \text{Aq}$ . Insol in alcohol. (Otto, J. pr. 2. 409.)

$(\text{NH}_4)_2\text{FeH}_2(\text{PO}_4)_2 + 4\text{H}_2\text{O}$ . (Debray.)

**Ammonium iron (ferric) hydrogen orthophosphate, basic,**  $2(\text{NH}_4)_2\text{HPO}_4 \cdot 3\text{Fe}(\text{OH})_3$ .

Ppt. Insol. in 95% alcohol. (Cohen, J. Am. Chem. Soc. 1907, 29. 719)

**Ammonium iron (ferric) hydrogen orthophosphate,**  $\text{NH}_4\text{H}_2\text{Fe}(\text{PO}_4)_2$ .

Ppt. Same properties as Na salt. (Weinland, Z. anorg 1913, 84. 356.)

Partially hydrolyzed by  $\text{H}_2\text{O}$ . Readily sol in  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , and  $\text{H}_2\text{PO}_4$ . Partially hydrolyzed by cold  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol in excess of hot  $\text{NH}_4\text{OH} + \text{Aq}$ . Completely hydrolyzed by caustic alkalies. Practically insol. in 50% acetic acid (Cohen, J. Am. Chem. Soc 1907, 29. 718)

**Ammonium lead dimetaphosphate,**  
 $(\text{NH}_4)_2\text{Pb}(\text{P}_2\text{O}_5)_2$

Very difficultly sol. in  $\text{H}_2\text{O}$  and acids. (Fleitmann, Pogg. 78. 343.)

**Ammonium lithium metaphosphate,**  $\text{Li}_2\text{O}$ ,  $2(\text{NH}_4)_2\text{O}$ ,  $3\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$ .

Not appreciably sol in cold  $\text{H}_2\text{O}$  but rapidly and abundantly sol in  $\text{H}_2\text{O}$  at  $70^\circ$  (Tammann, J. pr. 1892, (2) 45. 442)

**Ammonium lithium phosphate,**  $(\text{NH}_4)_2\text{LiPO}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Ammonium magnesium metaphosphate,**  
 $(\text{NH}_4)_2\text{O}$ ,  $2\text{MgO}$ ,  $2\text{P}_2\text{O}_5 + 9\text{H}_2\text{O}$  (?)

Sol. with difficulty in  $\text{H}_2\text{O}$  or acids when heated. Easily sol. in  $\text{H}_2\text{O}$  before heating. (Wach, Schw. J. 59. 29.)

Precipitated from aqueous solution by alcohol.

**Ammonium magnesium dimetaphosphate,**  
 $(\text{NH}_4)_2\text{Mg}(\text{P}_2\text{O}_5)_2 + 6\text{H}_2\text{O}$ .

Efflorescent. (Fleitmann, Pogg. 78. 346.)

**Ammonium magnesium phosphate,**  
 $\text{NH}_4\text{MgPO}_4$ , and  $+6\text{H}_2\text{O}$ .

1 l  $\text{H}_2\text{O}$  dissolves 66 mg. anhydrous  $\text{NH}_4\text{MgPO}_4$  at  $15^\circ$ . (Fresenius, A. 55. 109.)

1 l  $\text{H}_2\text{O}$  dissolves 74 l mg anhydrous  $\text{NH}_4\text{MgPO}_4$  at  $20.5-22.5^\circ$ . (Ebermayer.)

1 l.  $\text{H}_2\text{O}$  dissolves 106 mg anhydrous  $\text{NH}_4\text{MgPO}_4$ . (Liebig.)

Insol. in  $\text{H}_2\text{O}$ , but when boiled with  $\text{H}_2\text{O}$  it loses  $\text{NH}_3$  and  $\text{H}_2\text{O}$  (Struve, Z. anal. 1898, 37. 485.)

Solubility of  $\text{NH}_4\text{MgPO}_4 \cdot 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	G salt in 100 g. $\text{H}_2\text{O}$
0	0.0231
20	0.0516
40	0.0359
50	0.0303
60	0.0401
70	0.0163
80	0.0195

(Wenger, Dissert. Geneva, 1911.)

Aqueous solution is precipitated by  $\text{NH}_4\text{OH}$ , but not by  $\text{Na}_2\text{HPO}_4 + \text{Aq}$ . (Fresenius.)

Sol. in 44,600 pts.  $\text{H}_2\text{O}$  containing ammonia. More sol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{Cl}$ , and is sol. in 7548 pts. of a solution containing 1 pt.  $\text{NH}_4\text{Cl}$  to 5 pts.  $\text{H}_2\text{O}$  and ammonia, and in 15,627 pts. of a solution containing 1 pt. of  $\text{NH}_4\text{Cl}$  to 7 pts.  $\text{H}_2\text{O}$  and ammonia (Fresenius.)

According to Kremers (J. pr. 55. 190), a solution of 3 pts.  $\text{H}_2\text{O}$  to 1 pt.  $\text{NH}_4\text{OH} + \text{Aq}$  of 0.96 sp. gr. is best suited for washing the precipitated  $\text{NH}_4\text{MgPO}_4$ .

According to Ebermayer (J. pr. 60. 41), 1 pt. anhydrous salt is sol. in 13,497 pts.  $\text{H}_2\text{O}$  at  $23^\circ$ , in 31,098 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (4 pts.  $\text{H}_2\text{O}$ : 1 pt.  $\text{NH}_4\text{OH} + \text{Aq}$  of 0.961 sp. gr.) at  $21.25^\circ$ ; in 36,764 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (3 pts.  $\text{H}_2\text{O}$ : 1 pt.  $\text{NH}_4\text{OH} + \text{Aq}$ ) at  $20.6^\circ$ ; in 43,089 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (1 pt.  $\text{H}_2\text{O}$ : 1 pt.  $\text{NH}_4\text{OH} + \text{Aq}$ ) at  $22.5^\circ$ ; in 45,206 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (1 pt.  $\text{H}_2\text{O}$ : 2 pts.  $\text{NH}_4\text{OH} + \text{Aq}$ ) at  $22.5^\circ$ ; in 52,412 pts.  $\text{NH}_4\text{OH} + \text{Aq}$  (1 pt.  $\text{H}_2\text{O}$ : 3 pts.  $\text{NH}_4\text{OH} + \text{Aq}$ ) at  $22.5^\circ$ ; in 60,883 pts. pure  $\text{NH}_4\text{OH} + \text{Aq}$  (sp. gr. 0.961) at  $22.5^\circ$ .

Almost absolutely insol. in  $\text{H}_2\text{O}$  containing  $\frac{1}{2}$  vol.  $\text{NH}_4\text{OH} + \text{Aq}$  (sp. gr. 0.96) and  $\text{NH}_4\text{Cl}$ , i. e., much more insol. than given by Fresenius (Kubel, Z. anal. 8. 125.)

According to Kissel (Z. anal. 8. 173), 1 l.  $\text{NH}_4\text{OH} + \text{Aq}$  (3 pts.  $\text{H}_2\text{O}$ : 1 pt.  $\text{NH}_4\text{OH} + \text{Aq}$  of 0.96 sp. gr.) dissolves 4.98 mg. in 24 hours, while 13.9 mg. are dissolved if 18 g.  $\text{NH}_4\text{Cl}$  to a litre of  $\text{H}_2\text{O}$  are also present.

$(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  containing 22 g. per litre dissolves 71.7 mg., 30 g., 113 mg.; 10 g., 147 mg.;  $\text{NaCl} + \text{Aq}$  containing 2 g.  $\text{NaCl}$  per l. dissolves 123.4 mg.;  $\text{NaNO}_3 + \text{Aq}$  containing 3 g.  $\text{NaNO}_3$  per l. dissolves 93.1 mg. (Liebig, A. 106. 196.)

Completely insol. in water containing ammonium phosphate or ammonium sodium phosphate. (Berzelius.)

800 ccm  $\text{H}_2\text{O}$ , sat. with  $\text{CO}_2$ , dissolve 1.425 g. (Liebig.)

Easily sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ , acetic and other

acids, also in boiling solution of ammonium citrate. (Milot, Bull. Soc. (2) 18. 20.)

When in presence of Fe or Al salts it is sol to a considerable extent in  $\text{H}_2\text{C}_2\text{H}_3\text{O}_6 + \text{Aq}$ . 6 g.  $\text{NH}_4\text{Cl}$  in 100 ccm  $\text{H}_2\text{O}$  containing 10 ccm. 6.34%  $\text{NH}_4\text{OH} + \text{Aq}$  dissolve pptd. salt = 0.0039 g.  $\text{Mg}_2\text{P}_2\text{O}_7$ . 1 g.  $(\text{NH}_4)_2\text{C}_2\text{O}_4$  in 100 ccm  $\text{H}_2\text{O}$ , and  $\text{NH}_4\text{OH} + \text{Aq}$  dissolve = 0.0061 g.  $\text{Mg}_2\text{P}_2\text{O}_7$ . 2 g. citric acid in excess of  $\text{NH}_4\text{OH} + \text{Aq}$  dissolve = 0.0147 g.  $\text{Mg}_2\text{P}_2\text{O}_7$ . Solubility prevented by excess of magnesia mixture (Lando, C. N. 48. 217.)

Solubility of  $\text{NH}_4\text{MgPO}_4 \cdot 6\text{H}_2\text{O}$  in salts +  $\text{Aq}$  at  $t^\circ$ .

(G salt dissolved in 100 g. solvent.)

$t^\circ$	5% $\text{NH}_4\text{NO}_3 + \text{Aq}$	5% $\text{NH}_4\text{Cl} + \text{Aq}$	1 pt. $\text{NH}_4\text{OH}$ (D = 0.96) + 4 pts. $\text{H}_2\text{O}$

20	0.0165	0.0541
60	0.0274	0.0781

(Wenger, Dissert. Geneva, 1911.)

About 3 times as sol. in  $\text{Ca}(\text{C}_2\text{H}_3\text{O}_6)_2 + \text{Aq}$  as in  $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$ , but solubility is prevented by excess of  $\text{MgCl}_2$ . (Ville, Bull. Soc. (2) 18. 316.)

Sl. sol. in ammonium citrate +  $\text{Aq}$  containing 400 g. ammonium citrate in a litre. Solubility = 0.457% at ord. temp. and 0.53% at  $50^\circ$ . (Bohs, Ch. Z. 1903, 27. 1151.)

Mm Struvite  
+  $\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  or citric acid +  $\text{Aq}$ . (Milot and Maquenne, Bull. Soc. (2) 23. 238.)

Ammonium magnesium hydrogen orthophosphate,  $(\text{NH}_4)_2\text{MgH}_2(\text{PO}_4)_2 \cdot 3\text{H}_2\text{O}$  (?). (Graham.)

Ammonium magnesium phosphate,  $5\text{MgO}$ ,  $(\text{NH}_4)_2\text{O}$ ,  $2\text{P}_2\text{O}_5 + 24\text{H}_2\text{O}$  (Gawalovsky, C. C. 1886. 721.)

Ammonium magnesium sodium pyrophosphate,  $(\text{NH}_4)_2\text{Mg}_2\text{Na}(\text{P}_2\text{O}_7)_4$ .

Insol. in  $\text{H}_2\text{O}$  and not decomp. thereby. (Berthelot and André, A. ch. 1897, (7) 11. 186.)

**Ammonium manganous dimetaphosphate**,  
 $(\text{NH}_4)_2\text{Mn}(\text{PO}_3)_4 + 4\text{H}_2\text{O}$ .  
 Relatively easily attacked by acids (Glatzel, Dissert. 1880.)  
 $+6\text{H}_2\text{O}$ .  
 Efflorescent (Fleitmann, Pogg. 78. 346.)

**Ammonium manganous orthophosphate**,  
 $\text{NH}_4\text{MnPO}_4 + \text{H}_2\text{O}$   
 Sol in 32,092 pts. cold, and 20,122 pts. boiling  $\text{H}_2\text{O}$ , and in 17,755 pts  $\text{NH}_4\text{Cl} + \text{Aq}$  (1.4%  $\text{NH}_4\text{Cl}$ ). (Fresenius.)  
 $+7\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$  below  $70^\circ$ ; at  $70^\circ$  100 g  $\text{H}_2\text{O}$  dissolve 0.0052 g salt; at  $80^\circ$ , 0.0067 (Wenger, Dissert Geneva, 1911.)  
 Easily sol. in dil acids. Decomp by  $\text{KOH} + \text{Aq}$ , but not by  $\text{NH}_4\text{OH} + \text{Aq}$  or  $\text{K}_2\text{CO}_3 + \text{Aq}$ . Insol in  $\text{NH}_4\text{OH}$  or  $\text{NH}_4$  salts  $+ \text{Aq}$ . (Gibbs)

Solubility in salts  $+ \text{Aq}$  at  $t^\circ$ .  
 (G. in 100 g. solvent.)

$t^\circ$	5% $\text{NH}_4\text{NO}_3$ $+ \text{Aq}$ .	5% $\text{NH}_4\text{Cl} + \text{Aq}$	1 pt. $\text{NH}_4\text{OH}$ D = 0.96 $+ 4$ pts $\text{H}_2\text{O}$

(Wenger, l. c.)

Insol in alcohol  
 Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

**Ammonium manganic pyrophosphate**,  
 $\text{NH}_4\text{Mn}_2\text{P}_2\text{O}_7 + 3\text{H}_2\text{O}$ .  
 Decomp by cold  $\text{H}_2\text{O}$  with separation of  $\text{Mn}_2\text{O}_3$  (Rosenheim, B. 1915, 48. 584.)

**Ammonium manganous sodium pyrophosphate**,  $\text{NH}_4\text{NaMn}_2\text{P}_2\text{O}_7 + 3\text{H}_2\text{O}$   
 Insol. in  $\text{H}_2\text{O}$  or alcohol. Easily sol in very dil acids. (Otto, J. pr. 2. 418.)  
 Formula is  $\text{Na}_4(\text{NH}_4)_2\text{Mn}_2(\text{P}_2\text{O}_7)_2 + 12\text{H}_2\text{O}$ , according to Berzelius.

**Ammonium mercuric metaphosphate**.  
 Sol. in  $\text{H}_2\text{O}$ , or at least in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Persoz, J. pr. 3. 215)

**Ammonium nickel metaphosphate**.  
 Insol in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , from which it is reprecip. on evaporation of the  $\text{NH}_3$  (Persoz, J. pr. 3. 215)

**Ammonium nickel dimetaphosphate**,  
 $(\text{NH}_4)_2\text{NiP}_2\text{O}_{12} + 4\text{H}_2\text{O}$ .  
 Sol. in 12.5 pts.  $\text{H}_2\text{O}$ . (Glatzel, Dissert. 1880.)

**Ammonium nickel orthophosphate**,  
 $\text{NH}_4\text{NiPO}_4 + 2\text{H}_2\text{O}$ .  
 Ppt (Debray, C. R. 59. 40)  
 $+ 6\text{H}_2\text{O}$  Decomp. by boiling  $\text{H}_2\text{O}$ . (Debray)

**Ammonium potassium dimetaphosphate**,  
 $(\text{NH}_4)_2\text{K}_2(\text{P}_2\text{O}_6)$ .  
 More sol in  $\text{H}_2\text{O}$  than following salt. (Fleitmann, Pogg. 78. 341.)  
 $\text{NH}_4\text{K}_2\text{P}_2\text{O}_7 + 2\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$ . (Fleitmann.)

**Ammonium potassium pyrophosphate**,  
 $\text{NH}_4\text{K}_2\text{HP}_2\text{O}_7 + \frac{1}{2}\text{H}_2\text{O}$ .  
 Deliquescent. Sol. in  $\text{H}_2\text{O}$ . Decomp. on boiling. (Schwarzenberg.)

**Ammonium sodium dimetaphosphate**,  
 $\text{NH}_4\text{NaP}_2\text{O}_6 + \text{H}_2\text{O}$ .  
 More sol. in  $\text{H}_2\text{O}$  than  $\text{Na}_2\text{P}_2\text{O}_6$ , but less than  $(\text{NH}_4)_2\text{P}_2\text{O}_6$ . Less sol in alcohol than in  $\text{H}_2\text{O}$ . (Fleitmann, Pogg. 78. 340.)

**Ammonium sodium orthophosphate**,  
 $(\text{NH}_4)_2\text{NaPO}_4 + 4\text{H}_2\text{O}$ .  
 Decomp by  $\text{H}_2\text{O}$ . Cryst from  $\text{NH}_4\text{OH} + \text{Aq}$  of 0.96 sp. gr. From  $\text{H}_2\text{O}$  solution,  $\text{NaNH}_4\text{HPO}_4 + 4\text{H}_2\text{O}$  separates out (Uelsmann, Arch. Pharm. (2) 99. 138.)  
 Insol. in acetone. (Naumann, B. 1904, 37. 4329.)  
 $+ 5\text{H}_2\text{O}$   
 $\text{NH}_4\text{Na}_2\text{PO}_4 + 12\text{H}_2\text{O}$ . (Hersfeld, Z. anal. 20. 191.)  
 $(\text{NH}_4)_2\text{Na}_2(\text{PO}_3)_2 + 6\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$  with decomp. Cryst from hot conc  $\text{NH}_4\text{OH} + \text{Aq}$ . (Uelsmann, Arch. Pharm. (2) 99. 138.)

**Ammonium sodium hydrogen phosphate** (Microcosmic salt),  $\text{NH}_4\text{NaHPO}_4 + 4\text{H}_2\text{O}$ .  
 Efflorescent. Easily sol. in  $\text{H}_2\text{O}$ . Sol in 6 pts cold, and 1 pt. boiling  $\text{H}_2\text{O}$ . Insol in alcohol.

Aqueous solution gives off  $\text{NH}_3$ , especially if hot.  
 Insol in acetone. (Eidmann, C. C. 1899, II. 1014.)

*Mm. Sten carlie.*  
 $+ 5\text{H}_2\text{O}$ . (Uelsmann.)  
 The composition of the hydrates formed by this salt at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by the salt and of the conductivity and sp. gr. of its aqueous solutions. (Jones, Am. Ch. J. 1905, 34. 319.)  
 $(\text{NH}_4)_2\text{Na}_2\text{H}_2(\text{PO}_3)_4 + 3\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Filhol and Senderens, C. R. 93. 388.)

**Ammonium sodium pyrophosphate**,  
 $(\text{NH}_4)_2\text{Na}_2\text{P}_2\text{O}_7 + 5\text{H}_2\text{O}$   
 Easily sol in  $\text{H}_2\text{O}$ . Aqueous solution decomp by boiling. (Schwarzenberg, A. 65. 142.)  
 $+ 6\text{H}_2\text{O}$ . (Rammelsberg.)

**Ammonium sodium glucinum orthophosphate,**  
 $(\text{NH}_4)_2\text{Na}_2\text{Gl}(\text{PO}_4)_2 \cdot 7\text{H}_2\text{O}$

Precipitate. (Scheffer.)

**Ammonium thalious orthophosphate,**  
 $(\text{NH}_4)_3\text{PO}_4$ ,  $(\text{NH}_4)_2\text{TiPO}_4$ , or  $\text{H}_2\text{NHL}_2\text{PO}_4$ ,  
 $\text{HTl}_2\text{PO}_4$ .

Sol. in  $\text{H}_2\text{O}$ . (Lamy; Rammelsberg.)

**Ammonium uranyl phosphate,**

Insol. in  $\text{H}_2\text{O}$  and  $\text{HCl}$ ;  $\text{H}_2\text{O}_2$  + Aq. Sol. in mineral acids, from which it is precipitated by  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$  + Aq, in which it is insol (Knop.)

+  $3\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  and acetic acid Sol. in all mineral acids, oxalic acid and  $\text{M}_2\text{CO}_3$  + Aq. (Liebau, Dissert. 1898.)

**Ammonium vanadium phosphate.**

See Phosphovanadate, ammonium.

**Ammonium zinc dimetaphosphate,**

Efflorescent. (Flattmann, Pogg. 78. 347.)

+  $4\text{H}_2\text{O}$  Sol. in 70 pts.  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{SO}_4$ . (Glatzel, Dissert. 1880.)

**Ammonium zinc orthophosphate, basic,**

(Rother, A. 1887, 143. 356.)

$4(\text{NH}_4)_2\text{O}, 6\text{ZnO}, 3\text{P}_2\text{O}_5 + 4\text{H}_2\text{O}$ . (Schweikert, A. 1868, 145. 57.)

**Ammonium zinc orthophosphate,  $\text{NH}_4\text{ZnPO}_4$  +  $\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids, and caustic alkalis. (Bette, A. 15. 129.)

**Ammonium zinc hydrogen phosphate,**

Insol. in  $\text{H}_2\text{O}$ . (Debray.)

$4(\text{NH}_4)_2\text{O}, 6\text{ZnO}, 3\text{P}_2\text{O}_5$ . (Schweikert, A. 146. 57.)

$3(\text{NH}_4)_2\text{O}, 4\text{ZnO}, 2\text{P}_2\text{O}_5 + 13\text{H}_2\text{O}$  (Rother, A. 143. 356.)

**Ammonium phosphate selenate.**

See Selenophosphate, ammonium.

**Barium triphosphate,  $5\text{BaO}, 3\text{P}_2\text{O}_5$ .**

Insol. in  $\text{H}_2\text{O}$ ; insol. in acids after heating to a high temp. (Schwarz, Z. anorg. 1895, 9. 264.)

**Barium metaphosphate,  $\text{Ba}(\text{PO}_3)_2$ .**

Insol. in  $\text{H}_2\text{O}$  or dil. acids. (Maddrell, A. 61. 61.)

Not decomp. by boiling with acids or alkali carbonates + Aq. (Fleitmann, Pogg. 78. 352.)

**Barium dimetaphosphate,  $\text{BaP}_2\text{O}_7 + 2\text{H}_2\text{O}$ .**

More difficultly sol. in  $\text{H}_2\text{O}$  than  $\text{Ba}_3(\text{P}_2\text{O}_7)_2$ . Slightly attacked by boiling conc.  $\text{HCl}$  + Aq or  $\text{HNO}_3$  + Aq. Easily decomp. by  $\text{H}_2\text{SO}_4$  (Fleitmann, Pogg. 78. 254.)

**Barium trimetaphosphate,  $\text{Ba}_3(\text{P}_3\text{O}_{10})_2 + 2\text{H}_2\text{O}$ .**

Somewhat sol. in  $\text{H}_2\text{O}$ . (Fleitmann, A. 55. 313.)

+  $6\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl}$  + Aq. (Lindbom.)

1 l.  $\text{H}_2\text{O}$  dissolves 2.589 g. at ord. temp. (Wiedler, Z. anorg. 1901, 28. 198.)

**Barium hexametaphosphate,  $\text{Ba}_3\text{P}_6\text{O}_{18}$  (?)**

Sol. in  $\text{H}_2\text{O}$  only after boiling several hours.

Nearly insol. in  $\text{H}_2\text{O}$  (Ludert, Z. anorg. 5. 15.)

Insol. in  $\text{NH}_4\text{Cl}$  + Aq. (Wackenroder.)

Sol. in  $\text{Na}_2\text{P}_2\text{O}_7$  + Aq. Sol. in  $\text{HNO}_3$  + Aq. After ignition it is nearly insol. in  $\text{HNO}_3$  + Aq.

**Barium orthophosphate,  $\text{Ba}_3(\text{PO}_4)_2$ .**

Precipitate. Very sl. sol. or insol. in  $\text{H}_2\text{O}$ . (Graham, Pogg. 32. 49.)

Sol. in  $\text{HCl}$  + Aq. Decomp. by  $\text{SO}_2$  + Aq.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

**Barium hydrogen phosphate,  $\text{BaHPO}_4$ .**

Sol. in 10,000 pts.  $\text{H}_2\text{O}$ . (Malaguti, A. ch. (3) 51. 346.)

Sol. in 20,570 pts.  $\text{H}_2\text{O}$  at  $20^\circ$  (Bischof, 1833.)

Not completely soluble in water containing  $\text{CO}_2$ , but  $\text{BaCl}_2$  causes no ppt. in  $\text{Na}_2\text{HPO}_4$  + Aq containing 7.16 g. or less  $\text{Na}_2\text{HPO}_4$  in a litre after it has been saturated with  $\text{CO}_2$ . (Setschenow, C. C. 1875. 97.)

Easily sol. in  $\text{H}_3\text{PO}_4$  + Aq, and dil.  $\text{HCl}$  + Aq.  $\text{HNO}_3$  + Aq of 1.275 sp. gr. if not diluted has scarcely any solvent action, but more dissolves on dilution until a maximum is reached, when 10 vols. of  $\text{H}_2\text{O}$  have been added. (Bischof, Schw. J. 67. 39.)

Sol. in 367–403 pts. acetic acid (1.032 sp. gr.) at  $22.5^\circ$ . (Bischof, l. c.)

Easily sol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{Cl}$ ,  $\text{NH}_4\text{NO}_3$ , or  $\text{NH}_4$  succinate, from which solutions it is completely pptd. by  $\text{NH}_4\text{OH}$  + Aq. (Rose.)

Insol. in  $\text{Na}_2\text{HPO}_4$  or  $\text{BaCl}_2$  + Aq. (Rose, Pogg. 76. 23.)

More sol. in  $\text{BaCl}_2$  or  $\text{NaCl}$  + Aq than in  $\text{H}_2\text{O}$ , 1 pt.  $\text{BaHPO}_4$  being sol. in 4362 pts.  $\text{H}_2\text{O}$  containing 1.2%  $\text{NaCl}$  and 0.8%  $\text{BaCl}_2$ . (Ludwig, Arch. Pharm. (2) 56. 265.)

Sol. in Na citrate + Aq (Spiller.)

**Barium tetrahydrogen phosphate,**

Sol. in  $\text{H}_2\text{O}$ . (Mitscherlich, 1821.)

Decomp. by much  $\text{H}_2\text{O}$  into  $\text{BaHPO}_4$ .

Sol. in phosphoric, and certain other acids. (Berzelius, A. ch. 2. 153.)

**Barium pyrophosphate,  $\text{Ba}_2\text{P}_2\text{O}_7 + x\text{H}_2\text{O}$ .**

Somewhat sol. in  $\text{H}_2\text{O}$ , in much  $\text{H}_3\text{P}_2\text{O}_7$  + Aq, also in  $\text{HCl}$  + Aq or  $\text{HNO}_3$  + Aq. Insol. in  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq or  $\text{Na}_2\text{P}_2\text{O}_7$  + Aq. (Schwarzenberg.)

Insol. in  $\text{NH}_4\text{Cl}$  + Aq. (Wackenroder.)

**Barium hydrogen pyrophosphate**,  $\text{BaH}_2\text{P}_2\text{O}_7$ ,  
 $\text{Ba}_2\text{P}_2\text{O}_7 \cdot 3\text{H}_2\text{O}$ .

Ppt. (Knorre and Oppelt, B. 21. 773.)

**Barium tetraphosphate**,  $\text{Ba}_3\text{P}_4\text{O}_{13}$

Insol. in  $\text{H}_2\text{O}$  or acids when strongly heated.  
(Fleitmann and Henneberg, A. 65. 331)

**Barium manganic pyrophosphate**,  
 $\text{Ba}(\text{MnP}_2\text{O}_7)_2 \cdot 5\text{H}_2\text{O}$

Almost insol. in  $\text{H}_2\text{O}$ . (Rosenheim, B. 1915, 48. 585.)

**Barium potassium trimetaphosphate**,  
 $\text{BaKP}_3\text{O}_9 \cdot \text{H}_2\text{O}$ .

Much less sol. in  $\text{H}_2\text{O}$  than  $\text{NH}_4\text{BaP}_3\text{O}_9$  or  
 $\text{Na}_2\text{BaP}_3\text{O}_9$ . (Lindbom)

Sol. in  $\text{HCl} + \text{Aq}$  after ignition

**Barium potassium orthophosphate**,  $\text{BaKPO}_4$ .

Insol. in  $\text{H}_2\text{O}$  (Ouvryard, A. ch. (6) 16. 297)

+  $10\text{H}_2\text{O}$  (de Schulten, C. R. 96. 706.)

**Barium sodium dimetaphosphate**,

$\text{BaNa}_2(\text{P}_2\text{O}_5)_2 \cdot 4\text{H}_2\text{O}$

(Glatzel, Dissert. 1880.)

**Barium sodium trimetaphosphate**,  $\text{BaNaP}_3\text{O}_9$ ,  
+  $4\text{H}_2\text{O}$

More easily sol. in  $\text{H}_2\text{O}$  than  $\text{Ba}_2(\text{P}_2\text{O}_5)_2$ .  
Sol. in acids, unless ignited (Fleitmann and  
Henneberg, A. 65. 314)

Efflorescent. Sol. in  $\text{HCl} + \text{Aq}$  after igni-  
tion only by long boiling. When fused it is  
easily sol. in  $\text{HCl} + \text{Aq}$ . (Lundbom, Acta  
Lund 1873. 21.)

**Barium sodium orthophosphate**,  $\text{BaNaPO}_4$  +  
 $10\text{H}_2\text{O}$ .

(de Schulten, C. R. 96. 706)

Not attacked by cold, but decomp. by hot  
 $\text{H}_2\text{O}$  (Vilhers, C. R. 104. 1103.)

Sl. sol. in  $\text{H}_2\text{O}$ . (Quartaroli, C. A. 1911.  
2375.)

**Barium sodium pyrophosphate**,

$\text{Ba}_2\text{Na}_4(\text{P}_2\text{O}_7)_2$ .

Sol. in hot  $\text{HCl}$  and  $\text{HNO}_3$  (Tamman,  
J. pr. 1892, (2) 45. 469)

$8\text{Ba}_2\text{P}_2\text{O}_7$ ,  $\text{Na}_4\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$ . Completely  
insol. in  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ , but not insol. in  $\text{H}_2\text{O}$   
or  $\text{NH}_4\text{OH} + \text{Aq}$ . Easily sol. in  $\text{HNO}_3$  or  $\text{HCl}$   
+  $\text{Aq}$ . Insol. in alcohol (Baer, Pogg. 76.  
164.)

**Barium uranous metaphosphate**,  $\text{UO}_2$ ,  $\text{BaO}$ ,  
 $\text{P}_2\text{O}_5$ .

(Colani, A. ch. 1907, (8) 12. 142)

**Barium uranyl orthophosphate**,  
 $\text{Ba}(\text{UO}_2)_2(\text{PO}_4)_2 \cdot 8\text{H}_2\text{O}$

Mm *Uranocircite*.

**Barium phosphate chloride**,  $3\text{Ba}_2(\text{PO}_4)_2$ ,  
 $\text{BaCl}_2$ .

Mm *Barylapatite* (Deville and Caron, A.  
ch. (3) 67. 451.)

$4\text{BaH}_2(\text{PO}_4)_2$ ,  $\text{BaCl}_2$  (Erlenmeyer, J. B.  
1857. 145)

$15\text{BaO}$ ,  $6\text{P}_2\text{O}_5$ ,  $\text{BaCl}_2 + 6\text{H}_2\text{O}$  (?). Sol. in  
18,000 pts. cold  $\text{H}_2\text{O}$ . Much more sol. in  $\text{H}_2\text{O}$   
containing  $\text{BaCl}_2$ ,  $\text{NH}_4\text{Cl}$  and  $\text{NH}_4\text{OH}$ .  
(Ludwig, Arch. Pharm. (2) 56. 271)

**Bismuth orthophosphate**, basic,  $2\text{BiPO}_4$ ,  
 $3\text{Bi}_2\text{O}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . (Cavazzi,  
Gazz. ch. it. 14. 289)

**Bismuth orthophosphate**,  $\text{BiPO}_4$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$ . Sl. sol. in  
 $\text{NH}_4$  salts +  $\text{Aq}$  (Chance, C. R. 50. 418)

Not decomp. by  $\text{H}_2\text{O}$ . Other phosphates  
of Bi are decomp. by  $\text{H}_2\text{O}$ . (Montmartin,  
C. C. 1900, II. 1256)

Not hydrolyzed by hot  $\text{H}_2\text{O}$ ; sl. sol. in  $\text{BiCl}_3$   
+  $\text{Aq}$ , decomp. by boiling alkali. (Caven,  
J. Soc. Chem. Ind. 1897, 16. 30)

More sol. in  $\text{HCl} + \text{Aq}$  than in  $\text{HNO}_3 + \text{Aq}$ .  
(Rose)

Sol. in  $\text{UO}_2(\text{NO}_3)_2 + \text{Aq}$ . (M'Curdy, Am. J.  
Sci. (2) 31. 282.)

Insol. in  $\text{MNO}_3 + \text{Aq}$ .

Insol. in Bi salts +  $\text{Aq}$ . (Rose, Pogg. 76.  
26)

Sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ , but insol. in  $\text{NH}_4\text{NO}_3 +$   
 $\text{Aq}$ . (Brett, 1837.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . (Kühn.)

+  $3\text{H}_2\text{O}$ . Ppt. Decomp. by  $\text{H}_2\text{S}$  or  $\text{KOH}$   
+  $\text{Aq}$ . (Vanino, J. pr. 1906, (2) 74. 151.)

**Bismuth pyrophosphate**, basic,  $2\text{Bi}_2\text{O}_3$ ,  $\text{P}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$  and  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ ; sol. in  
hot  $\text{HCl}$  and  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{Na}_2\text{P}_2\text{O}_7$   
+  $\text{Aq}$ , and  $\text{NH}_4$  citrate +  $\text{Aq}$ . (Passerini,  
Chim. 9. 84)

**Bismuth pyrophosphate**,  $\text{Bi}_2(\text{P}_2\text{O}_7)_2$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$  (Chance,  
C. R. 50. 416)

Decomp. by  $\text{H}_2\text{O}$  (Wallroth, Bull. Soc. (2)  
39. 316.)

Sol. in  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$  (Stromeyer)

**Bismuth sodium pyrophosphate**,  $\text{NaBiP}_2\text{O}_7$ ,  
+  $3\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$  (Rosenheim, B. 1915, 48.  
588.)

**Boron phosphate**,  $\text{BPO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Not attacked by boiling  
alkalies. (Meyer, B. 22. 2919.)

**Bromomolybdenum phosphate.**

See under Bromomolybdenum comps.

**Cadmium triphosphate,  $\text{Cd}_3(\text{P}_3\text{O}_{10})_2$ .**

Insol. in  $\text{H}_2\text{O}$  and acids (Güthmann, Dissert. 1899.)

**Cadmium tetraphosphate,  $6\text{CdO}, 4\text{P}_2\text{O}_5 + 18\text{H}_2\text{O}$** 

Insol. in acids. (Güthmann)

**Cadmium metaphosphate.**

Very sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Persoz, A. ch. 56. 334)

**Cadmium dimetaphosphate,  $\text{Cd}_2(\text{PO}_3)_2 + 2\text{H}_2\text{O}$** 

Sol. in 32 pts.  $\text{H}_2\text{O}$ . Scarcely attacked by acids, especially conc.  $\text{H}_2\text{SO}_4$ . (Glatzel, Dissert. 1880.)

**Cadmium tetrametaphosphate.**

Insol. in  $\text{H}_2\text{O}$ . Easily decomp. by  $\text{Na}_2\text{S} + \text{Aq}$ . (Fleischmann, Pogg. 78. 358.)

$\text{Cd}_2(\text{PO}_3)_4 + 10\text{H}_2\text{O}$ . Not so very difficultly attacked by acids but insol. after ignition. (Glatzel, Dissert. 1880.)

**Cadmium orthophosphate,  $\text{Cd}_3(\text{PO}_4)_2$ .**

Ppt. Insol. in  $\text{H}_2\text{O}$ . Sol. in Cd salts + Aq (Stromeyer)

Easily sol. in  $\text{NH}_4$  sulphate, chloride, nitrate, or succinate + Aq (Wittstein, Repert 57. 32)

$\text{H}_2\text{Cd}_3(\text{PO}_4)_4 + 4\text{H}_2\text{O}$ . Sol. in dil.  $\text{H}_3\text{PO}_4 + \text{Aq}$ . (de Schulten, Bull. Soc. (3) 1. 473.)

**Cadmium tetrahydrogen phosphate,**

Decomp. by great excess of  $\text{H}_2\text{O}$ . (de Schulten)

**Cadmium pyrophosphate,  $\text{Cd}_2\text{P}_2\text{O}_7 + 2\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$ ,  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ , or acids. Insol. in  $\text{KOH} + \text{Aq}$ . Sol. in  $\text{SO}_2 + \text{Aq}$ . (Schwarzenberg, A. 65. 183.)

**Cadmium hydrogen orthophosphate hydrate,  $\text{CdHPO}_4 \cdot 2\text{N}_2\text{H}_4$** 

Decomp. by light (Franzen, Z. anorg. 1908, 60. 283.)

**Cadmium potassium tetrametaphosphate,**

Sol. in 135 pts.  $\text{H}_2\text{O}$ . Difficultly decomp. by acids (Glatzel, Dissert. 1880.)

**Cadmium potassium orthophosphate,**

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HCl} + \text{Aq}$ . (Ouvrard, A. ch. (6) 16. 321.)

**Cadmium potassium pyrophosphate,**

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HCl} + \text{Aq}$ . (Ouvrard)

$5\text{Cd}_2\text{P}_2\text{O}_7, 4\text{K}_2\text{P}_2\text{O}_7 + 30\text{H}_2\text{O}$ . Much more easily sol. in  $\text{H}_2\text{O}$  than the  $\text{CdNa}$  salt (Pahl, Sv. V. A. F. 30, 7. 39.)

**Cadmium sodium triphosphate,  $\text{Na}_3\text{CdP}_3\text{O}_{10} + 12\text{H}_2\text{O}$ .**

Sol. in acids even after ignition. (Güthmann, Dissert. 1899.)

**Cadmium sodium trimetaphosphate,**

Sl. sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Wiesler, Z. anorg. 1901, 28. 204)

**Cadmium sodium tetrametaphosphate,**

Completely insol. in  $\text{H}_2\text{O}$ . (Glatzel, Dissert. 1880.)

**Cadmium sodium orthophosphate,**

Insol. in  $\text{H}_2\text{O}$ , very sol. in dil. acids.  $\text{CdNaPO}_4$ . As above (Ouvrard.)

**Cadmium sodium pyrophosphate,**

Sol. in dil. acids, even acetic acid. (Wallroth.)

$+4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Pahl, Sv. V. A. F. 30, 7. 39)

**Cadmium phosphate bromide,  $3\text{Cd}_3(\text{PO}_4)_2, \text{CdBr}_2$ .**

Sol. in cold very dil.  $\text{HNO}_3 + \text{Aq}$  (de Schulten, Bull. Soc. (3) 1. 472.)

**Cadmium phosphate chloride,  $3\text{Cd}_3(\text{PO}_4)_2, \text{CdCl}_2$ .**

Sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (de Schulten.)

**Cesium metaphosphate,  $\text{Cs}_3\text{PO}_3$ .**

Sol. in  $\text{H}_2\text{O}$  (von Berg, B. 1901, 34. 4185)

**Cesium orthophosphate,  $\text{Cs}_3\text{PO}_4 + 5\text{H}_2\text{O}$ .**

Deliquescent, very sol. in  $\text{H}_2\text{O}$ . (von Berg.)

**Cesium hydrogen orthophosphate,  $\text{Cs}_2\text{HPO}_4 + \text{H}_2\text{O}$** 

Very sol. in  $\text{H}_2\text{O}$ . (von Berg.)

**Cesium dihydrogen orthophosphate,**

Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (von Berg.)

**Cesium pyrophosphate,  $\text{Cs}_2\text{P}_2\text{O}_7$ .**

Very sol. in  $\text{H}_2\text{O}$ ; very hygroscopic (von Berg.)

Calcium triphosphate,  $5\text{CaO}, 3\text{P}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$  (Schwarz, Z. anorg. 1896, 9. 264.)

Calcium monometaphosphate,  $\text{Ca}_3(\text{PO}_3)_2$ .

Insol. in  $\text{H}_2\text{O}$  and dil acids. (Maddrell, A. 61. 61.)

Not decomp by digestion with alkali carbonates + Aq (Fleitmann)

Calcium dimetaphosphate,  $\text{Ca}_2(\text{P}_2\text{O}_5)_2 + 4\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$ . Decomp. by warm  $\text{H}_2\text{SO}_4$ , but not appreciably by conc.  $\text{HCl}$  or  $\text{HNO}_3$  + Aq (Fleitmann, Pogg. 78. 255)

Calcium hexametaphosphate (?)

Insol. in  $\text{H}_2\text{O}$ . Sol in  $\text{Na}_2\text{P}_2\text{O}_5$  + Aq and in  $\text{HCl}$  + Aq. (Rose, Pogg. 76. 3)

$\text{Ca}_6\text{P}_6\text{O}_{18}$ . Nearly insol in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Lüder, Z. anorg. 6. 15.)

Calcium orthophosphate, basic,  $3\text{Ca}_3(\text{PO}_4)_2 + \text{Ca}_2\text{O}_2\text{H}_2$

(Warington, J. B. 1873. 253)

$4\text{CaO}, \text{P}_2\text{O}_5$  (Hilgenstock)

Calcium orthophosphates,

Equilibrium in system  $\text{CaO} + \text{P}_2\text{O}_5 + \text{H}_2\text{O}$

Solubility of  $\text{CaO}$  in  $\text{P}_2\text{O}_5$  + Aq at  $25^\circ$

(Bassett, Z. anorg. 1908, 59. 20.)

Calcium orthophosphate,  $Ca_3(PO_4)_2$ .

Decomp. by long boiling with  $H_2O$  into basic salt,  $3Ca_3(PO_4)_2 \cdot CaO \cdot H_2O$ . This decomp. begins with cold  $H_2O$ , so that the solubility at 6-8° varies from 0.9 to 28.6 mg. in a litre. (Warington, Chem. Soc. (2) 11. 983.)

1 l. cold  $H_2O$  dissolves in 7 days 31 mg. ignited, and 79 mg. freshly precipitated  $Ca_3(PO_4)_2$ . (Volcker, J. B. 1862. 131.)

100,000 pts.  $H_2O$  dissolve 2.36 pts. gelatinous Ca phosphate; 2.56 pts. ignited Ca phosphate; 3.00 pts. Ca phosphate from bone dust. (Maly and Donath, J. pr. (2) 7. 416.)

Solubility of bones in various solvents is given by Maly and Donath, l. c.

0.009 g.  $Ca_3(PO_4)_2$  is sol. in 1 l.  $H_2O$ .  
0.153 " " " " " "

sat. with  $CO_2$ . (Joffre, Bull. Soc. 1898, (3) 19. 372.)

Determinations of solubility in  $H_2O$  as stated in the literature vary because  $Ca_3(PO_4)_2$  is apparently a solid solution of  $CaHPO_4$  and  $CaO$ . When placed in contact with  $H_2O$  more  $PO_4$  ions dissolve than Ca ions, the resulting solution is acid and solid phase richer in Ca than before addition of  $H_2O$ . For material of the approximate composition,  $Ca_3(PO_4)_2$ , the amt. dissolved by  $CO_2$  free  $H_2O$  at ord. temp. is 0.01-0.10 g. per l. depending on conditions of experiment.  $H_2O$  sat. with  $CO_2$  dissolves 0.15-0.30 g. per l. (Cameron and Hurst, J. Am. Chem. Soc. 1904, 26. 903.)

The decomposition of  $Ca_3(PO_4)_2$  in  $H_2O$  is increased by presence of  $CaSO_4$ , decreased by presence of  $CaCO_3$  or of  $CaSO_4$  and  $CO_2$ .  $CO_2$  increases the amount of  $PO_4$  dissolved in the solution of water alone and the sat.  $CaSO_4$  solutions, but has no other effect than to increase the amount of Ca in the solutions in contact with  $CaCO_3$ . (Cameron and Seidell, J. Am. Chem. Soc. 1904, 26. 1458.)

Sol. in  $CO_2 + Aq$

1 l.  $H_2O$  containing 1 vol.  $CO_2$  dissolves in 12 hours at 10° 0.75 g. precipitated  $Ca_3(PO_4)_2$ ; 0.166 g.  $Ca_3(PO_4)_2$  from bone ash; 0.300 g.  $Ca_3(PO_4)_2$  from bones which had been buried 20 years. (Lassaigne, J. ch. méd. (3) 3. 11.)

1 l.  $H_2O$  containing 0.8 vol.  $CO_2$  dissolves 0.61 g.  $Ca_3(PO_4)_2$ . (Liebig, A. 108. 198.)

$H_2O$  sat. with  $CO_2$  at 5-10° and 760 mm. pressure dissolves 0.527-0.60 g.  $Ca_3(PO_4)_2$ , or, if containing 1%  $NH_4Cl$ , 0.739 g.  $Ca_3(PO_4)_2$  (Warington, Chem. Soc. (2) 9. 80.)

Solubility varies according to form of  $Ca_3(PO_4)_2$ .

In apatite, 1 pt.  $Ca_3(PO_4)_2$  dissolves in 222,222 pts.  $H_2O$  sat. with  $CO_2$ ; in raw bones, in 5698 pts.; in bone ash, in 8029 pts.; in So. Carolina phosphate, in 6983 pts.; in phosphatic guano from Orchilla Id., in 8009 pts (Williams, C. N. 24. 306.)

$Al_2O_3 \cdot H_2O$  and  $Fe_2O_3 \cdot H_2O$  prevent the solubility of  $Ca_3(PO_4)_2$  in  $H_2O$  containing  $CO_2$ . (Warington, l. c.)

1 l.  $H_2O$  dissolves 0.22848 g.  $Ca_3(PO_4)_2$  under a  $CO_2$ -pressure of 2 atmos. at 14° (Ehlert, Z. Elektrochem. 1912, 18. 728.)

Sol. in  $SO_2 + Aq$ , forming a liquid of 1.3 sp. gr. at 9° from freshly precipitated  $Ca_3(PO_4)_2$ , and of 1.188 sp. gr. from bone ash.

Sol. in  $H_2S + Aq$ . 1 l.  $H_2O$  sat. with  $H_2S$

dissolves 190-240 mg  $\text{Ca}_3(\text{PO}_4)_2$ . (Béchamp, A. ch. (4) 16, 241.)

Easily sol. in  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq}$ .

100 pts very dil  $\text{HCl} + \text{Aq}$  dissolve 198-225 pts  $\text{Ca}_3(\text{PO}_4)_2$ . (Crum, A. 63, 294)

100 pts  $\text{HCl}$  of 1.153 sp. gr. (containing 31%  $\text{HCl}$ ) dissolve at  $17^\circ$  when diluted with:

0	1	4	7	pts. $\text{H}_2\text{O}$
25.3	45.0	52.3	64.7	pts $\text{Ca}_3(\text{PO}_4)_2$
10	13	16	19	pts $\text{H}_2\text{O}$
68.0	71.9	69.5	69.7	pts $\text{Ca}_3(\text{PO}_4)_2$

(Busch, Schw. J. 67, 39.)

Decomp. by  $\text{H}_2\text{SO}_4$ .

Completely decomp. to  $\text{CaSO}_4$  and  $\text{H}_3\text{PO}_4$  by a mixture of  $\text{H}_2\text{SO}_4$  and alcohol.

Solubility in  $\text{HNO}_3 + \text{Aq}$ .

1 pt. of  $\text{Ca}_3(\text{PO}_4)_2$  dissolves at 16.25-17.5° in pts.  $\text{HNO}_3 + \text{Aq}$  which contain pts.  $\text{H}_2\text{O}$  to 1 pt.  $\text{HNO}_3$  (sp. gr. = 1.23)

Pts $\text{HNO}_3 + \text{Aq}$	Pts $\text{H}_2\text{O}$	Pts $\text{HNO}_3 + \text{Aq}$	Pts $\text{H}_2\text{O}$

(Causse, C. R. 1892, 114, 414)

Very small quantities of the salts of the alkali metals increase the solubility in  $\text{H}_2\text{O}$ . (Lassagne, J. chim. méd. (3) 3, 11)

1 litre cold  $\text{H}_2\text{O}$  with 2 g.  $\text{NaCl}$  dissolves 45.7 mg  $\text{Ca}_3(\text{PO}_4)_2$ ; with 3 g.  $\text{NaNO}_3$ , 33 mg.  $\text{Ca}_3(\text{PO}_4)_2$ . (Liebig.)

1 litre  $\text{H}_2\text{O}$  containing 8.75%  $\text{NaCl}$  dissolves 317.5 mg.  $\text{Ca}_3(\text{PO}_4)_2$ . (Lassagne.)

$\text{NH}_4$  salts have even more effect, especially  $\text{NH}_4\text{Cl} + \text{Aq}$ , which dissolves  $\text{Ca}_3(\text{PO}_4)_2$  in the cold; also ammonium nitrate and succinate (Wittstein.)

$(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  dissolves  $\text{Ca}_3(\text{PO}_4)_2$  as easily as  $\text{CaSO}_4$ . (Liebig, A. 61, 128.)

1 litre  $\text{H}_2\text{O}$  containing 2 g.  $\text{NaCl}$  dissolves at  $7-12.3^\circ$  45.7 mg  $\text{Ca}_3(\text{PO}_4)_2$ ; 3 g.  $\text{NaNO}_3$  at  $17.3^\circ$ , 33 mg.  $\text{Ca}_3(\text{PO}_4)_2$ ; 2.2 g.  $(\text{NH}_4)_2\text{SO}_4$ , 76.7 mg.  $\text{Ca}_3(\text{PO}_4)_2$ . (Liebig, A. 106, 185)

Dry  $\text{Ca}_3(\text{PO}_4)_2$  also dissolves by long boiling with solutions of ammonium chloride, nitrate, succinate (Wittstein), or sulphate (Delkeskamp).

Sol. in 89,448 pts.  $\text{H}_2\text{O}$  (boiled) at  $7^\circ$ ; 19,628 pts  $\text{H}_2\text{O}$  (boiled) containing 1%  $\text{NH}_4\text{Cl}$  at  $10^\circ$ , 4324 pts  $\text{H}_2\text{O}$  (boiled) containing 10%  $\text{NH}_4\text{Cl}$  at  $17^\circ$ , 1788 pts  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  and containing 10%  $\text{NH}_4\text{Cl}$  at  $10^\circ$  and 751 mm pressure, 1351 pts  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  and containing 1%  $\text{NH}_4\text{Cl}$  at  $12^\circ$  and 745 mm pressure; 42,313 pts  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  and containing  $\text{CaCO}_3$  at  $21^\circ$  and 756.3 mm pressure, 18,551 pts  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  and containing  $\text{CaCO}_3$  and 1%  $\text{NH}_4\text{Cl}$  at  $16^\circ$  and 746.1 mm pressure (Warrington, Chem. Soc. (2) 4, 296.)

Aqueous solutions of the following  $\text{NH}_4$  salts dissolve the given amts of  $\text{Ca}_3(\text{PO}_4)_2$ , calculated for 100 pts. of the corresponding acid:  $\text{NH}_4\text{Cl}$ , 0.655 pt.,  $\text{NH}_4\text{NO}_3$ , 0.306 pt.;  $(\text{NH}_4)_2\text{SO}_4$ , 1.050 pts.;  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ , 0.255 pt.;  $\text{NH}_4$  tartrate, 4.56 pts.;  $\text{NH}_4$  citrate, 7.015 pts.;  $\text{NH}_4$  malate, 1.125 pts.  $\text{Ca}_3(\text{PO}_4)_2$  (Terrell, Bull. Soc. (2) 35, 578)

Solubility in various salts +  $\text{Aq}$  under a  $\text{CO}_2$  pressure of 2 atmospheres, at  $14^\circ$ .

Salt	G salt per 100 g $\text{H}_2\text{O}$	G $\text{Ca}_3(\text{PO}_4)_2$ sol in 1 l. of the solvent

(Ehlert and Hempel, Z. Elektrochem. 1912, 18, 728)

$\text{Ca}_3(\text{PO}_4)_2$  is sol. in  $\text{K}_2\text{C}_2\text{O}_4 + \text{Aq}$  100 cem.  $\text{K}_2\text{C}_2\text{O}_4 + \text{Aq}$  (1½%  $\text{K}_2\text{C}_2\text{O}_4$ ) dissolves 57 1% of the  $\text{P}_2\text{O}_5$  from phosphorite, 71% from guano by boiling 25 min. At ord. temp. bone meal gives up 50–80% of its  $\text{P}_2\text{O}_5$  to  $\text{K}_2\text{C}_2\text{O}_4 + \text{Aq}$  in 36 hours. (Liebig, Landw. J. B. 1881. 603.)

Sol. in  $\text{Ca}$  succate +  $\text{Aq}$ . (Bobbier, C. R. 32. 859)

More sol. in  $\text{H}_2\text{O}$  containing starch, glue, or other animal substances than in pure  $\text{H}_2\text{O}$ . (Vauquelin, Pogg. 85. 126.)

Sol. in  $\text{H}_2\text{O}$  containing organic matter, therefore when bones decay under  $\text{H}_2\text{O}$ ,  $\text{Ca}_3(\text{PO}_4)_2$  is dissolved in considerable quantity. (Hayes, Edin. Phil. J. 5. 378.)

Sol. in sodium citrate +  $\text{Aq}$  (Spiller.)

Solubility in  $\text{NH}_4$  citrates +  $\text{Aq}$ .

Ammonium citrate solution of 1.09 sp. gr. at 30–35° dissolves precipitated  $\text{Ca}_3(\text{PO}_4)_2$  completely, but not phosphorite. (Fresenius.)

Dried on the air, with 2½  $\text{H}_2\text{O}$ . Sol. in 40 min. in diammonium citrate +  $\text{Aq}$  (sp. gr. = 1.09); triammonium citrate +  $\text{Aq}$  (sp. gr. =

1.09) dissolves 55 3% of the  $\text{P}_2\text{O}_5$ ; citric acid +  $\text{Aq}$  (¼%) dissolves 83 8% of the  $\text{P}_2\text{O}_5$ . (Erlenmeyer, B. 14. 1253.)

Dried at 50°, with 1½  $\text{H}_2\text{O}$ . Sol. in 45 min. in diammonium citrate +  $\text{Aq}$  (sp. gr. = 1.09); triammonium citrate +  $\text{Aq}$  dissolves 52.3% of the  $\text{P}_2\text{O}_5$ . (Erlenmeyer.)

Ignited. Diammonium citrate +  $\text{Aq}$  (sp. gr. 1.09) dissolves 93% of the  $\text{P}_2\text{O}_5$ , triammonium citrate +  $\text{Aq}$  (sp. gr. 1.09) dissolves 32% of the  $\text{P}_2\text{O}_5$ ; citric acid (¼%) dissolves 53 4% of the  $\text{P}_2\text{O}_5$ . (Erlenmeyer.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in alcohol and ether.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in acetone. (Fadmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

Min. *Apatite*.

0.002 g. is sol. in 1 l.  $\text{H}_2\text{O}$ .

0.014 " " " 1 l.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$ . (Joffre, Bull. Soc. 1898, (3) 19. 374.)

+  $\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ , in  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$ , and in  $\text{H}_2\text{O}$  containing  $\text{CO}_2 + \text{CaH}_2(\text{CO}_3)_2$ . Temp. 16°–20°.

(Schloesing, C. R. 1900, 131. 151.)

Calcium hydrogen phosphate,  $\text{CaHPO}_4$ , and  $+2\text{H}_2\text{O}$

Insol. or nearly so in  $\text{H}_2\text{O}$ . Gradually decomp. by cold, more quickly by hot  $\text{H}_2\text{O}$

1000 pts  $\text{H}_2\text{O}$  dissolve 0.135–0.152 pt  $\text{CaHPO}_4+2\text{H}_2\text{O}$ . Solution clouds up on boiling. (Birnbäum.)

1000 pts  $\text{H}_2\text{O}$  dissolve 0.28 pt., and if sat with  $\text{CO}_2$ , 0.66 pt.  $\text{CaHPO}_4+2\text{H}_2\text{O}$ . (Dusart and Pelouze.)

When this salt dissolves in  $\text{H}_2\text{O}$ , decomp. takes place and a very considerable time is necessary to establish equilibrium (Rindell, C. R. 1902, 134, 112.)

Much less decomp. by  $\text{H}_2\text{O}$  than  $\text{Ca}_3(\text{PO}_4)_2$  or  $\text{CaH}_2(\text{PO}_4)_2$ , and the decomposition of this salt in water depends only slightly upon the relative amounts of solid and solvent which are present. The decomposition is increased by the addition of  $\text{CO}_2$ . The presence of  $\text{CaSO}_4$  or of  $\text{CaCO}_3$  decreased the amount of phosphoric acid which dissolved. See original paper. (Cameron and Seidell, J. Am. Chem. Soc. 1904, 26, 1460.)

When the ratio of  $\text{P}_2\text{O}_5 : \text{CaO}$  is above 1.0 or below 1.27,  $\text{H}_2\text{O}$  dissolves 0.40–0.54 g.  $\text{CaO}$  and 1.11–1.52 g.  $\text{P}_2\text{O}_5$  (see original paper). (Cameron and Bell, J. Am. Chem. Soc. 1905, 27, 1512.)

#### Solubility in $\text{H}_3\text{PO}_4+\text{Aq.}$

G. $\text{H}_3\text{PO}_4$ in 100 cc. $\text{H}_3\text{PO}_4+\text{Aq.}$	G. $\text{CaHPO}_4$ dissolved by 100 cc. of solvent
5	4.30
10	7.15
15	9.30
20	11.86
25	13.40
30	15.10

(Causse, C. R. 1892, 114, 415.)

1 l.  $\text{H}_2\text{O}$  containing 2.2 g.  $(\text{NH}_4)_2\text{SO}_4$ , 2 g.  $\text{NaCl}$ , or 3 g.  $\text{NaNO}_3$  dissolves 79.2, 66.3, or 78.9 mg.  $\text{CaP}_2\text{O}_7$ , which is present in form of  $\text{CaHPO}_4$ . (Liebig, A. 106, 185.) Slowly but completely sol. in boiling  $\text{NH}_4\text{Cl}+\text{Aq.}$  (Kraut, Arch. Pharm. (2) 111, 102.) Easily sol. in  $\text{H}_2\text{SO}_4+\text{Aq.}$  (Gerland, J. pr. (2) 4, 123.) Very sol. in  $\text{HCl}$  or  $\text{HNO}_3+\text{Aq.}$  Less sol. in  $\text{HC}_2\text{H}_3\text{O}_2$ . (Berzelius.) More sol. in dil. than conc.  $\text{HC}_2\text{H}_3\text{O}_2+\text{Aq.}$  but 60 pts  $\text{HC}_2\text{H}_3\text{O}_2$  (1 mol.) dissolve at most 23.1 pts.  $\text{P}_2\text{O}_5$  (1 mol.=142 pts.) from this compound. Aqueous solution of sodium acetate dissolves more easily than  $\text{H}_2\text{O}$ , and becomes turbid on boiling. (Birnbäum.)

Completely sol. in  $\text{K}_2\text{C}_2\text{O}_4+\text{Aq.}$  (Liebig, Landw. J. B. 1881, 603.)

1 l. of sat. solution in N/200 acid K tartrate +  $\text{Aq.}$  at 25° contains 0.235 g.  $\text{CaHPO}_4$ .

Insol. in alcohol. Sol. in many organic substances, as starch or gelatine +  $\text{Aq.}$

Insol. in acetone. (Eidmann, C. C. 1899, II 1014.)

$+1/2\text{H}_2\text{O}$  (Vorbringer, Z. anal. 9, 457.)

$+ \text{H}_2\text{O}$  (Gerlach, J. pr. (2) 4, 104.)

$+2\text{H}_2\text{O}$  Min. *Brushite*

$+3\text{H}_2\text{O}$  Min. *Metabrushite*.

$+5\text{H}_2\text{O}$ . (Dusart, C. R. 66, 327.)

Calcium tetrahydrogen orthophosphate,  $\text{CaH}_4(\text{PO}_4)_2+\text{H}_2\text{O}$ .

Very deliquescent. Crystals take up 97.7 pts  $\text{H}_2\text{O}$  in 16 days, and 220 pts  $\text{H}_2\text{O}$  in 28 days from air saturated with moisture. (Birnbäum, Zeit. Ch. (2) 7, 131.)

Not hygroscopic when pure. (Stocklass, B. 23, 626 R.)

Completely sol. in 100 pts.  $\text{H}_2\text{O}$ , but decomp. by 10–40 pts.  $\text{H}_2\text{O}$  with separation of  $\text{CaHPO}_4$ , which slowly dissolves (Erlenmeyer, J. B. 1873, 254.)

Later (B. 9, 1839) Erlenmeyer says  $\text{CaH}_4(\text{PO}_4)_2+\text{H}_2\text{O}$  is sol. in 700 pts.  $\text{H}_2\text{O}$  and decomp. into  $\text{CaHPO}_4$  by a less amount of  $\text{H}_2\text{O}$ . Wattenberg (Z. anal. 19, 243) says that the decomposition by small ams of  $\text{H}_2\text{O}$  down to 1–4 pts.  $\text{H}_2\text{O}$  to 1 pt salt is inappreciable.

Completely sol. in 200 pts  $\text{H}_2\text{O}$  if pure, and in less  $\text{H}_2\text{O}$  in presence of  $\text{H}_3\text{PO}_4$ . (Stocklass.)

Sol. in 25 pts.  $\text{H}_2\text{O}$  at 15°. Solution begins to decompose when warmed to 50°. (Otto, C. C. 1887, 1563.)

Gently decomp. by  $\text{H}_2\text{O}$  and the resulting solution is to be regarded as a solution of the decomposition products rather than of the substance itself. The presence of an excess of  $\text{CaSO}_4$  does not materially affect the amount of phosphoric acid entering the solution. (Cameron, J. Am. Chem. Soc. 1904, 26, 1462.)

Violently decomp. by  $\text{H}_2\text{O}$  in conc. solution, only sl. decomp. when dissolved in 200 pts.  $\text{H}_2\text{O}$ . (Stocklass, Z. anorg. 1892, 1, 310.)

Solubility of  $\text{CaH}_4\text{P}_2\text{O}_7$  in  $\text{H}_3\text{PO}_4+\text{Aq.}$  at pressure of 745 mm. at high temp.

T °C	100 g of the solution contain		Solid phase
	G $\text{P}_2\text{O}_5$	G $\text{CaO}$	
115°	43.60	5.623	$\text{CaH}_4\text{P}_2\text{O}_7$ , $\text{H}_2\text{O}+\text{CaHPO}_4$
132°	53.43	4.327	$\text{CaH}_4\text{P}_2\text{O}_7+\text{CaH}_2\text{P}_2\text{O}_7$ , $\text{H}_2\text{O}$
169°	63.95	4.489	$\text{CaH}_4\text{P}_2\text{O}_7$

(Bassett, Z. anorg. 1908, 59, 26.)

Glacial  $\text{HC}_2\text{H}_3\text{O}_2$  ppts. it completely from aqueous solution even in presence of  $\text{HNO}_3$ . (Persoz.)

Decomp. by 50 pts. absolute alcohol at b. pt. in 1 hour, by 30 pts. in 2 hours. Sol. in absolute ether. (Erlenmeyer, l. c.)

**Calcium pyrophosphate,  $\text{Ca}_2\text{P}_2\text{O}_7 + 4\text{H}_2\text{O}$** 

Somewhat sol. in  $\text{H}_2\text{O}$ ; completely sol. in mineral acids; less sol. in acetic acid, and insol. in  $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq.}$  (Schwauzenberg, A. 65. 145.) Less sol. in warm than in cold acetic acid. (Baer, Pogg. 75. 155.)

Insol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Wackenroder, A. 41. 316.)

Insol. in  $\text{CaCl}_2 + \text{Aq.}$   
Min. *Pyrophosphorite*.

**Calcium hydrogen pyrophosphate,  $\text{CaH}_2\text{P}_2\text{O}_7 + 2\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$ . (Pahl, B. 7. 478.)

$2\text{CaH}_2\text{P}_2\text{O}_7, \text{Ca}_2\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$  Decomp. by boiling with  $\text{H}_2\text{O}$  into—

$\text{CaH}_2\text{P}_2\text{O}_7, \text{Ca}_2\text{P}_2\text{O}_7 + 3\text{H}_2\text{O}$ . Insol. in hot  $\text{H}_2\text{O}$  (Knorre and Oppelt, B. 21. 771.)

**Tetracalcium hydrogen phosphate,**

$\text{Ca}_4\text{H}(\text{PO}_4)_3 + \text{H}_2\text{O}$ .

Ppt. Insol. in  $\text{H}_2\text{O}$ , but decomp. by boiling therewith. Sol. in acids. (Warrington, Chem. Soc. (2) 4. 296.)

$+ 2\text{H}_2\text{O}$ .

**Calcium tetrathosphate,  $\text{Ca}_3\text{P}_4\text{O}_{13}$** 

Insol. in acids when ignited. (Fleitmann and Henneberg, A. 65. 331.)

**Calcium lithium phosphate,  $\text{CaLiPO}_4$** 

Insol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 77. 298.)

**Calcium potassium dimetaphosphate,**

$\text{CaK}_2(\text{P}_2\text{O}_7)_2 + 4\text{H}_2\text{O}$ .

As  $\text{BaK}$  comp. (Glatzel, Dissert. 1880.)

**Calcium potassium orthophosphate,  $\text{CaKPO}_4$** 

Insol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 77. 291.)

Easily sol. in acids. (Ouvrard, A. ch. (6) 16. 308.)

**Calcium potassium pyrophosphate,  $\text{CaK}_2\text{P}_2\text{O}_7$** 

Insol. in  $\text{H}_2\text{O}$ , easily sol. in dil. acids. (Ouvrard, C. R. 106. 1599.)

**Calcium sodium dimetaphosphate,**

$\text{CaNa}_2(\text{P}_2\text{O}_7)_2 + 4\text{H}_2\text{O}$ .

As  $\text{BaNa}$  comp. (Glatzel.)

**Calcium sodium trimetaphosphate,**

$\text{CaNa}_3\text{P}_3\text{O}_{10} + 3\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Fleitmann, A. 65. 315.)

Easily sol. in  $\text{H}_2\text{O}$ . Difficultly sol. in  $\text{HCl} + \text{Aq}$  when heated to redness. Easily sol. in boiling  $\text{HCl} + \text{Aq}$  after being fused. (Lindbom.)

**Calcium sodium orthophosphate,  $\text{CaNaPO}_4$** 

Insol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 77. 292.)

Easily sol. in dil. acids. (Ouvrard, A. ch. (6) 16. 308.)

$3\text{CaO}, 3\text{Na}_2\text{O}, 2\text{P}_2\text{O}_5$ . Sol. in dil. acids. (Ouvrard, C. R. 1888, 106. 1599.)

**Calcium sodium pyrophosphate,  $\text{CaNa}_2\text{P}_2\text{O}_7 + 4\text{H}_2\text{O}$** 

Insol. in  $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ ,  $\text{HNO}_3 + \text{Aq}$ , and also in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Baer, Pogg. 75. 159.)

$\text{CaNaNa}_6(\text{P}_2\text{O}_7)_6$ . Sol. in acids. (Wallroth, Bull. Soc. (2) 39. 316.)

$3\text{CaO}, 3\text{Na}_2\text{O}, 2\text{P}_2\text{O}_5$ . Easily sol. in acids. (Ouvrard, A. ch. (6) 16. 307.)

**Calcium thorium metaphosphate,  $\text{ThO}_2, \text{CaO}, \text{P}_2\text{O}_5$** 

(Colani, C. R. 1909, 149. 209.)

**Calcium uranous metaphosphate,  $\text{UO}_2, \text{CaO}, \text{P}_2\text{O}_5$** 

Insol. in acids. (Colani, A. ch. 1907, (8) 12. 140.)

**Calcium uranyl phosphate,  $\text{Ca}(\text{UO}_2)_2(\text{PO}_4)_2 + 2, 3, \text{or } 4\text{H}_2\text{O}$** 

Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Debray.)

$\text{Ca}(\text{UO}_2)_2(\text{PO}_4)_2 + 8\text{H}_2\text{O}$ . Min. *Uranite*. Sol. in  $\text{HNO}_3 + \text{Aq}$ .

$3\text{CaO}, 5\text{UO}_3, 2\text{P}_2\text{O}_5 + 16\text{H}_2\text{O}$ . (Blinkoff, Dissert. 1900.)

**Calcium phosphate chloride,  $\text{Ca}_3(\text{PO}_4)_2, \text{CaCl}_2$** 

(Deville and Caron, A. ch. (3) 67. 458.)

$3\text{Ca}_3(\text{PO}_4)_2, \text{CaCl}_2$ . *Chlorapatite*. Insol. in  $\text{H}_2\text{O}$ . (Daubrée, Ann. Min. (4) 19. 684.)

$7\text{CaH}_2(\text{PO}_4)_2, \text{CaCl}_2 + 14\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ .

$4\text{CaH}_2(\text{PO}_4)_2, \text{CaCl}_2 + 8\text{H}_2\text{O}$ .

$\text{CaH}_2(\text{PO}_4)_2, \text{CaCl}_2 + 2\text{H}_2\text{O}$ . Partly sol. in  $\text{H}_2\text{O}$  with decomp. Also with  $8\text{H}_2\text{O}$ . (Erlenmeyer, J. B. 1857. 145.)

**Calcium phosphate chloride fluoride,**

$3\text{Ca}_3(\text{PO}_4)_2, \text{CaClF}$ .

Min. *Apatite*. Boiling  $\text{H}_2\text{O}$  dissolves out  $\text{CaCl}_2$ ; dil. mineral acids dissolve easily, acetic acid with more difficulty. Easily soluble in molten  $\text{NaCl}$ , crystallizing on cooling. (Forchhammer.)

**Calcium phosphate silicate,  $\text{Ca}_2(\text{PO}_4)_2$** 

$\text{Ca}_2\text{SiO}_4$ .

Insol. in  $\text{H}_2\text{O}$ ; decomp. by  $\text{HCl} + \text{Aq}$ . (Carnot and Richard, C. R. 97. 316.)

$4\text{Ca}_3(\text{PO}_4)_2, \text{Ca}_2\text{SiO}_4$ . (Bücking and Linck, C. C. 1887. 562.)

$4\text{Ca}_2(\text{PO}_4)_2, 3\text{Ca}_2\text{SiO}_4$ . (B. and L.)

$\text{Ca}(\text{PO}_4)_2, \text{CaSiO}_3$ . (Stend and Ridsdote, Chem. Soc. 51. 601.)

**Calcium dihydrogen phosphate sulphite,  $\text{CaH}_2(\text{PO}_4)_2, \text{CaSO}_3 + \text{H}_2\text{O}$** 

Not decomp. by cold, slowly by boiling  $\text{H}_2\text{O}$ . Slightly sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol. in mineral acids. Insol. in cold, slowly sol. in boiling acetic acid. More sol. in a solution of oxalic acid. (Gerland, C. N. 20. 268.)

**Cerous metaphosphate,  $\text{Ce}(\text{PO}_3)_3$** 

(Rammelsberg)  
 $\text{Ce}_2\text{O}_3, 5\text{P}_2\text{O}_5$  Insol. in  $\text{H}_2\text{O}$  or acids.  
 (Johnsson, B. 22. 976)

**Cerous orthophosphate,  $\text{CePO}_4$** 

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids  
 (Grandeau, A. ch. (8) 8. 193.)  
 Insol. in acids (Hartley, Proc. Roy. Soc. 41. 202)  
 $+2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in acids.  
 (Jolin.)  
 Insol. in  $\text{H}_3\text{PO}_4 + \text{Aq}$ ; sl. sol. in  $\text{HCl}$  or  
 $\text{HNO}_3 + \text{Aq}$  (Hisinger.)  
 Insol. in  $\text{HNO}_3 + \text{Aq}$  (Boussingault, A. ch. (5) 6. 178)  
 Min. *Cryptolite*. Completely decomp. by  
 $\text{H}_2\text{SO}_4$  when finely powdered. Insol. in dil.  
 $\text{HNO}_3 + \text{Aq}$ .

**Ceric orthophosphate,  $4\text{CeO}_2, 6\text{P}_2\text{O}_5 + 26\text{H}_2\text{O}$ .**  
Ppt. (Hartley, Proc. Roy. Soc. 41. 202.)**Cerous pyrophosphate,  $\text{Ce}_2\text{H}_2(\text{P}_2\text{O}_7)_3 + 6\text{H}_2\text{O}$ .**  
Sol. in cerous nitrate +  $\text{Aq}$ .  
 $\text{Ce}_2(\text{P}_2\text{O}_7)_3 + 12\text{H}_2\text{O}$ . Sol. in excess of  
sodium pyrophosphate +  $\text{Aq}$ . Easily sol. in  
 $\text{HCl}$ . (Rosenheim, B. 1915, 48. 592.)**Cerous lanthanum thorium phosphate,**  
 $(\text{Ce}, \text{La}, \text{Th})_2(\text{PO}_4)_2$ .

Min. *Monazite* Sol. in  $\text{HCl} + \text{Aq}$  with  
 white residue.

**Cerous potassium orthophosphate,  $2\text{Ce}_2\text{O}_3,$   
 $3\text{K}_2\text{O}, 3\text{P}_2\text{O}_5 = 2\text{CePO}_4, \text{K}_4\text{PO}_4$ .**  
 Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Ouvrard, C. R. 107. 37.)**Cerous sodium orthophosphate,  $\text{Ce}_2\text{O}_3, 3\text{Na}_2\text{O},$   
 $2\text{P}_2\text{O}_5 = \text{CePO}_4, \text{Na}_4\text{PO}_4$ .**  
 Insol. in  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 107. 37.)**Cerous sodium pyrophosphate,  $\text{CeNa}_2\text{P}_2\text{O}_7$ .**  
 Insol. in acetic, and cold dil. mineral acids  
 Sol. in warm acids. (Wallroth)**Chromous phosphate,  $\text{Cr}_2(\text{PO}_4)_3$** 

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in citric, tartaric  
 and acetic acids. Sl. sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ .  
 (Moissan, A. ch. 1882, (5) 25. 415.)  
 $+ \text{H}_2\text{O}$ . Precipitate Easily sol. in acids.  
 (Moberg, Moissan, A. ch. (5) 21. 199)

**Chromic metaphosphate,  $\text{Cr}_2(\text{PO}_3)_4$** 

Insol. in  $\text{H}_2\text{O}$  or conc. acids. (Maddrell, A. 61. 53.)

**Chromic orthophosphate,  $\text{CrPO}_4$** 

Hydrolyzed by hot  $\text{H}_2\text{O}$ . Somewhat sol  
 in  $\text{NH}_4\text{OH} + \text{Aq}$  and in  $\text{Cr}_2(\text{SO}_4)_3 + \text{Aq}$ .  
 (Caven, J. Soc. Chem. Ind. 1897, 16. 20)  
 Insol. in methyl acetate. (Naumann, B.

1909, 42. 3790), ethyl acetate (Naumann,  
 B. 1910, 43. 314.)

**Chromic phosphate,  $\text{Cr}_2(\text{PO}_4)_3 + 12\text{H}_2\text{O}$ .**

*Violet modification.* Precipitate. (Ram-  
 melsberg, Pogg. 68. 383.)

$+ 6\text{H}_2\text{O}$ . *Green modification.* Very sl.  
 sol. in  $\text{H}_2\text{O}$  and still less in  $\text{NH}_4\text{NO}_3$  or  
 $\text{NH}_4\text{C}_2\text{H}_3\text{O}_5 + \text{Aq}$ . (Carnot, C. R. 94. 1313.)  
 Insol. in acetic, but easily sol. in mineral  
 acids Easily sol. in cold  $\text{KOH}$  or  $\text{NaOH} +$   
 $\text{Aq}$ , from which it is separated on boiling.  
 (Dowling and Plunkett, Chem. Gaz. 1858.  
 220.)

**Chromic hydrogen phosphate,  $\text{Cr}_2\text{H}_2(\text{PO}_4)_4 +$   
 $16\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  (Haushofer)

**Chromic pyrophosphate,  $\text{Cr}_4(\text{P}_2\text{O}_7)_3$ .**

*Anhydrous* Insol. in  $\text{H}_2\text{O}$  or acids (Ouv-  
 rard, A. ch. (6) 16. 344)  
 $+ 7\text{H}_2\text{O}$  Precipitate. Sol. in strong  
 mineral acids,  $\text{SO}_2 + \text{Aq}$ ,  $\text{KOH} + \text{Aq}$ , and  
 $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ . (Schwarzenberg, A. 65. 149.)  
 Insol. in  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ . (Stromeyer.)

**Chromic potassium phosphate,  $\text{Cr}_2\text{O}_3, \text{K}_2\text{O},$   
 $2\text{P}_2\text{O}_5$ .**

Insol. in  $\text{H}_2\text{O}$  and in acids. (Ouvrard, A. ch. (6) 16. 289.)

**Chromic potassium pyrophosphate,**  
 $\text{K}(\text{CrP}_2\text{O}_7) + 5\text{H}_2\text{O}$ 

Sl. sol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling  
 $\text{H}_2\text{O}$ . (Rosenheim, B. 1915, 48. 588.)  
 $\text{Cr}_2\text{K}_2\text{H}_2(\text{P}_2\text{O}_7)_3$ . Insol. in  $\text{H}_2\text{O}$ , acids, or  
 alkalis. Sl. decomp. by boiling conc.  $\text{H}_2\text{SO}_4$ .  
 (Schjerming, J. pr. (2) 46. 616)

**Chromic silver phosphate,  $2\text{Cr}_2\text{O}_3, 2\text{Ag}_2\text{O},$   
 $5\text{P}_2\text{O}_5$ .**

(Hautefeuille and Margottet, C. R. 96.  
 1142.)

**Chromic sodium orthophosphate,  $\text{Na}_2\text{HPO}_4,$   
 $2\text{CrPO}_4 + 5\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  (Cohen, J. Am. Chem.  
 Soc. 1907, 29. 1197.)

**Chromic sodium pyrophosphate,**  
 $\text{Cr}_2\text{Na}_2(\text{P}_2\text{O}_7)_2$ .

Insol. in acids. (Wallroth, Bull. Soc. (2)  
 39. 316.)  
 $+ 10\text{H}_2\text{O}$ , and  $16\text{H}_2\text{O}$  Sl. sol. in cold  $\text{H}_2\text{O}$ .  
 Decomp. by boiling  $\text{H}_2\text{O}$ . (Rosenheim, B.  
 1915, 48. 586.)

**Cobaltous monometaphosphate,  $\text{Co}(\text{PO}_3)_2(?)$ .**

Insol. in  $\text{H}_2\text{O}$  and dil. acids. Sol. in conc.  
 $\text{HCl} + \text{Aq}$ . (Maddrell, A. 58. 61.)

**Cobaltous dimetaphosphate,  $\text{Co}_2(\text{P}_2\text{O}_5)_2$ .**

Insol. in cold conc.  $\text{H}_2\text{SO}_4$ ; sl. sol. on warming, but sol. in  $\text{H}_2\text{O}$  after treating with  $\text{H}_2\text{SO}_4$ . Sol. in conc.  $\text{NH}_4\text{OH} + \text{Aq.}$  Scarcely attacked by boiling  $\text{Na}_2\text{S} + \text{Aq.}$  (Fleissmann)

**Cobaltous hexametaphosphate (?)**

Ppt. Sol. in sodium hexametaphosphate +  $\text{Aq.}$  (Rose, Pogg. 76. 4.)

**Cobaltous orthophosphate,  $\text{Co}_3(\text{PO}_4)_2 + x\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_3\text{PO}_4 + \text{Aq.}$  or  $\text{NH}_4\text{OH} + \text{Aq.}$ ; sl. sol. in  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Salvetat, C. R. 48. 295.) Sol. in Co salts +  $\text{Aq.}$  +  $2\text{H}_2\text{O}$ . (Debray, A. ch. (3) 61. 438.) +  $8\text{H}_2\text{O}$ . (Reynoso, C. R. 34. 795.)

**Cobaltous hydrogen orthophosphate,  $\text{CoHPO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$ .**

Ppt. (Debray.) +  $2\frac{1}{2}\text{H}_2\text{O}$ . Ppt. Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_3\text{PO}_4 + \text{Aq.}$  (Bödeker, A. 94. 357.)

**Cobaltous tetrahydrogen orthophosphate,  $\text{CoH}_4(\text{PO}_4)_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Reynoso)

**Cobaltous pyrophosphate.**

Ppt. Sol. in  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq.}$  (Stromeyer) Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Schwarzenberg)

**Cobaltous pyrometaphosphate,  $3\text{CoO}, 2\text{P}_2\text{O}_5$ .**

(Braun.)  $6\text{CoO}, 5\text{P}_2\text{O}_5$ . (Braun.)

**Cobaltous potassium phosphate,  $\text{CoKPO}_4$ .**

Insol. in  $\text{H}_2\text{O}$ ; easily sol. in dil acids (Ouvrard, C. R. 106. 1729.)  $3\text{CoO}, 3\text{K}_2\text{O}, 2\text{P}_2\text{O}_5$ . As above

**Cobaltous sodium triphosphate,  $\text{NaCo}_2\text{P}_3\text{O}_{10}$ .**

(Schwarz, Z. anorg. 1895, 9. 260.)  $\text{Na}_2\text{CoP}_3\text{O}_{10} + 12\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ ; decomp. in aq. solution. Sol. in acids. (Schwarz, Z. anorg. 1895, 9. 258.)

**Cobaltous sodium metaposphate,  $\text{Co}_2\text{Na}_2(\text{PO}_3)_2$ .**

Insol. in  $\text{H}_2\text{O}$  or acids, even conc.  $\text{H}_2\text{SO}_4$ . (Watts' Dict.)

**Cobaltous sodium monometaphosphate,  $6\text{Co}(\text{PO}_3)_2, 2\text{NaPO}_3$ .**

Insol. in  $\text{H}_2\text{O}$  and dil. acids. Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Maddrell, A. 61. 57.)

**Cobaltous sodium trimetaphosphate,  $\text{CoNa}_4(\text{PO}_3)_3 + 8\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Fleissmann and Henneberg, A. 66. 315.)

**Cobaltous sodium orthophosphate,  $\text{CoNaPO}_4$ .**

Insol. in  $\text{H}_2\text{O}$  (Ouvrard, C. R. 106. 1729.)  $\text{Co}_3(\text{PO}_4)_2, 2\text{Na}_2\text{HPO}_4 + 8\text{H}_2\text{O}$ . (Debray, J. Pharm. (3) 46. 119)

**Cobaltous sodium pyrophosphate,  $\text{Co}_2\text{Na}_2(\text{P}_2\text{O}_7)_2$ .**

Insol. in  $\text{H}_2\text{O}$  Sol. in acids (Wallroth.) +  $2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Stromeyer.)

**Cobaltous zinc phosphate,  $\text{Co}_3(\text{PO}_4)_2, 3\text{Zn}_3(\text{PO}_4)_2 + 12\text{H}_2\text{O}$ .**

Ppt. Sol. in acids. (Gentile)  $\text{CoZn}_3(\text{PO}_4)_2 + 6\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$

**Columbium phosphate (?)**

Insol. in  $\text{H}_2\text{O}$ . (Blomstrand.)

**Cupric dimetaphosphate,  $\text{Cu}_2(\text{P}_2\text{O}_5)_2$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Maddrell, A. 61. 62.) Insol. in most conc acids and in alkalis, except hot  $\text{NH}_4\text{OH} + \text{Aq.}$  or conc.  $\text{H}_2\text{SO}_4$ , in which it is moderately sol. Not decomp. by  $\text{H}_2\text{S}$ , but by  $(\text{NH}_4)_2\text{S} + \text{Aq.}$ , less easily by  $\text{Na}_2\text{S}$  and  $\text{K}_2\text{S} + \text{Aq.}$  (Fleissmann, Pogg. 78. 242.) +  $8\text{H}_2\text{O}$ . Completely insol. in  $\text{H}_2\text{O}$  (Fleissmann.)

**Cupric hexametaphosphate (?)**

Sol. in  $\text{Na}_2\text{P}_6\text{O}_{18} + \text{Aq.}$  or  $\text{CuCl}_2 + \text{Aq.}$  (Rose, Pogg. 76. 5.)  $\text{Cu}_2\text{P}_6\text{O}_{18}$ . Easily sol. in  $\text{H}_2\text{O}$  or acids, especially when freshly pptd. (Lüder, Z. anorg. 5. 15)

**Cupric orthophosphate, basic,  $6\text{CuO}, \text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$ .**

Min. *Phosphocalcite*.  $5\text{CuO}, \text{P}_2\text{O}_5 + 2\text{H}_2\text{O}$ . Min. *Dihydrite* +  $3\text{H}_2\text{O}$ . Min. *Ehrlite*. Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  and  $\text{HNO}_3 + \text{Aq.}$   $4\text{CuO}, \text{P}_2\text{O}_5 + \text{H}_2\text{O}$ . Slowly sol. in  $\text{NH}_4\text{OH}$  or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$ ; insol. in cold  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq.}$  (Steinschneider, C. C. 1891, II 51.) Sl. sol. in  $\text{CuCl}_2 + \text{Aq.}$  and  $\text{CaSO}_4 + \text{Aq.}$  Decomp. by boiling  $\text{H}_2\text{O}$  and boiling  $\text{Aq.}$  potash. (Caven, J. Soc. Chem. Ind. 1897, 16. 29.)

Min. *Libethenite*. Sol. in acids and  $\text{NH}_4\text{OH} + \text{Aq.}$  +  $2\text{H}_2\text{O}$ . Min. *Pseudolibethenite*. Sol. in acids and  $\text{NH}_4\text{OH} + \text{Aq.}$  +  $3\text{H}_2\text{O}$ . Min. *Taghite*. Sol. in acids and  $\text{NH}_4\text{OH} + \text{Aq.}$

**Cupric triphosphate,  $5\text{CuO}, 3\text{P}_2\text{O}_5 + 13\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ . (Schwarz, Z. anorg. 1895, 9. 262.)

**Cupric dimetaphosphate,  $\text{CuP}_2\text{O}_5 + 4\text{H}_2\text{O}$ .**

Sol. in 78 pts.  $\text{H}_2\text{O}$  Easily decomp. by hot conc.  $\text{H}_2\text{SO}_4$  (Glatzel, Dissert. 1880.)

Cupric trimetaphosphate,  $\text{Cu}_3(\text{P}_3\text{O}_9)_2 + 9\text{H}_2\text{O}$ .  
Very sl. sol. in  $\text{H}_2\text{O}$  (0.04 g. in 1 l. at  $20^\circ$ ).  
(Tammann, J. pr. 1892, (2) 45, 425)

Cupric tetrametaphosphate,  $\text{Cu}_4\text{P}_4\text{O}_{16}$ .  
Insol. in  $\text{H}_2\text{O}$  and in  $\text{HCl}$ . Sl. sol. in boiling  $\text{HNO}_3$ . Very sol. in boiling conc.  $\text{H}_2\text{SO}_4$ . (Glatzel.)  
+  $8\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . Slowly attacked by acids except conc.  $\text{H}_2\text{SO}_4$ . (Glatzel.)

Cupric orthophosphate,  $\text{Cu}_3(\text{PO}_4)_2 + 3\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids, even  $\text{H}_3\text{PO}_4$ ,  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Sl. sol. in  $\text{NH}_4$  salts +  $\text{Aq}$ .  
Sl. sol. in  $\text{Cu}$  salts +  $\text{Aq}$ . (Rose, Pogg. 76, 28)  
Sol. in cold  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ . (Stenschneder, C. C. 1891, II, 51.)  
Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 827.)  
Insol. in methyl acetate. (Naumann, B. 1900, 42, 3790)

Cupric hydrogen phosphate,  $\text{CuHPO}_4 + \frac{1}{2}\text{H}_2\text{O}$  (?).  
Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_3\text{PO}_4 + \text{Aq}$ , and  $\text{HCl}$ ,  $\text{H}_2\text{O}_2 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{Cl}$  and  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Brett, Phil. Mag. (3) 10, 98.)

Cupric pyrophosphate, basic,  $\text{Cu}_2\text{P}_2\text{O}_7$ ,  $2\text{CuO}$ ,  $\text{H}_2\text{O} + 3\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ . (Pahl, J. B. 1873, 229.)

Cupric pyrophosphate,  $\text{Cu}_2\text{P}_2\text{O}_7$ .  
*Anhydrous*. Insol. in  $\text{H}_2\text{O}$ , and very sl. sol. in conc. acids. (Fleissmann, Pogg. 78, 244.)  
As insol. as  $\text{Cu}$  metaphosphate, but decomp. by  $\text{H}_2\text{S}$ . (Rose, Pogg. 76, 14.)  
+  $2\text{H}_2\text{O}$ . Sol. in mineral acids, and  $\text{NH}_4\text{OH} + \text{Aq}$ , also in  $\text{Na}_2\text{F}_2\text{O}_7 + \text{Aq}$  (Schwarzenberg, A. 65, 156.)  
Sol. in cold  $\text{H}_2\text{SO}_4 + \text{Aq}$  without decomp., crystallizing out on boiling.  
Decomp. by boiling  $\text{KOH} + \text{Aq}$ .  
Sol. in large excess of  $\text{CuSO}_4 + \text{Aq}$ .  
+  $2\frac{1}{2}\text{H}_2\text{O}$ . (Pahl, Sv. V. A. F. 30, 7, 40.)  
+  $5\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$ .  
Sol. in dil. acids. (Wiesler, Z. anorg. 1901, 28, 202)

Cupric iron (ferric) pyrophosphate,  
 $\text{Cu}_2\text{Fe}_2(\text{P}_2\text{O}_7)_2 + 12\text{H}_2\text{O}$ .  
Ppt. (Pascal, C. R. 1908, 146, 233.)

Cupric potassium phosphate,  $4\text{CuO}$ ,  $\frac{1}{2}\text{K}_2\text{O}$ ,  $3\text{P}_2\text{O}_5$ .  
Insol. in  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 111, 177.)  
 $\text{CuKPO}_4$ . As above.

Cupric potassium tetrametaphosphate,  
 $\text{K}_2\text{CuP}_4\text{O}_{16} + 4\text{H}_2\text{O}$ .  
Sol. in 58 pts.  $\text{H}_2\text{O}$ . Easily attacked by acids. (Glatzel, Dissert. 1880.)

Cupric potassium pyrophosphate,  $\text{CuK}_2\text{P}_2\text{O}_7$ .  
Extremely easily sol. in  $\text{H}_2\text{O}$ . (Persoz, A. ch. (3) 20, 315.)  
 $\text{Cu}_2\text{P}_2\text{O}_7$ ,  $3\text{K}_2\text{P}_2\text{O}_7 + 4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Pahl, Sv. V. A. F. 30, 7, 44.)

Cupric sodium phosphate,  $\text{Cu}_2\text{Na}_6(\text{PO}_4)_4$ .  
Insol. in  $\text{HCl}$ ,  $\text{H}_2\text{O}_2 + \text{Aq}$ . Sol. in conc. acids. (Wallroth, Bull. Soc. (2) 39, 316.)

Cupric sodium triphosphate,  
 $\text{CuNa}_3\text{P}_3\text{O}_{10} + 12\text{H}_2\text{O}$ .  
Sl. sol. in  $\text{H}_2\text{O}$ ; very unstable.  
Easily sol. in acids. (Stange, Z. anorg. 1896, 12, 458.)

Cupric sodium tetrametaphosphate,  
 $\text{CuNa}_4\text{P}_4\text{O}_{16}$ .  
As insol. in  $\text{H}_2\text{O}$  as  $\text{Cu}$  dimetaphosphate. Difficultly decomp. by digestion with  $\text{Na}_2\text{S} + \text{Aq}$ . (Fleissmann, Pogg. 78, 355.)  
+  $4\text{H}_2\text{O}$ . Sol. in 45 pts.  $\text{H}_2\text{O}$ . (Glatzel, Dissert. 1880.)

Cupric sodium orthophosphate,  $3\text{Cu}_3(\text{PO}_4)_2$ ,  $\text{NaH}_2\text{PO}_4$ .  
Decomp. by  $\text{H}_2\text{O}$  to  $4\text{CuO}$ ,  $\text{P}_2\text{O}_5$ . (Stenschneder, C. C. 1891, II, 52.)  
 $2\text{Cu}_3(\text{PO}_4)_2$ ,  $\text{Na}_2\text{HPO}_4$ . Decomp. by  $\text{H}_2\text{O}$  into—  
 $3\text{Cu}_3(\text{PO}_4)_2$ ,  $\text{Na}_2\text{HPO}_4$ . Decomp. by  $\text{H}_2\text{O}$ . (S.)  
 $\text{Cu}_2(\text{PO}_4)_2$ ,  $\text{NaH}_2\text{PO}_4$ . Decomp. by  $\text{H}_2\text{O}$ . (S.)  
 $6\text{Cu}_3(\text{PO}_4)_2$ ,  $2\text{Na}_2\text{PO}_4$ . Decomp. by  $\text{H}_2\text{O}$ . (S.)

Cupric sodium pyrophosphate,  $\text{CuNa}_2\text{P}_2\text{O}_7$ .  
Insol. in  $\text{H}_2\text{O}$ . (Fleissmann and Henneberg, A. 65, 387.)  
+  $\frac{1}{2}\text{H}_2\text{O}$ . (F. and H.) Much more sol. than the next salt. (Pahl.)  
+  $6\text{H}_2\text{O}$ . (Persoz, A. ch. (3) 20, 315.)  
 $\text{Cu}_2\text{P}_2\text{O}_7$ ,  $\text{CuNa}_2\text{P}_2\text{O}_7 + 3\frac{1}{2}\text{H}_2\text{O}$ . (Very efflorescent, insol. in  $\text{H}_2\text{O}$  (F. and H.)  
+  $10\frac{1}{2}\text{H}_2\text{O}$ . (Pahl, Sv. V. A. F. 30, 7, 42.)  
 $\text{CuNa}_2\text{P}_2\text{O}_7$ ,  $\text{Na}_2\text{P}_2\text{O}_7$ . Sol. in  $\text{H}_2\text{O}$ . (F. and H.)  
+  $2\text{H}_2\text{O}$ . (F. and H.)  
+ 12, and  $16\text{H}_2\text{O}$ . Very efflorescent, and sol. in  $\text{H}_2\text{O}$ . (Pahl.)  
 $\text{Cu}_2\text{Na}_2\text{P}_2\text{O}_{10} + 10\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl}$  and  $\text{HNO}_3$  even after heating. (Stange, Z. anorg. 1896, 12, 456.)

Cupric uranyl phosphate,  $(\text{UO}_2)_2\text{Cu}(\text{PO}_4)_2 + 8\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids. (Debray.)  
Min. *Chalcocite*. Sol. in  $\text{HNO}_3 + \text{Aq}$ .

Cupric *orthophosphate ammonia*,  $\text{Cu}_3(\text{PO}_4)_2 \cdot 4\text{NH}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$ . (Schiff, A. 123. 41.)  
 $2\text{CuO}$ ,  $3\text{P}_2\text{O}_5$ ,  $20\text{NH}_3 + 21\text{H}_2\text{O}$ . Easily sol. in cold  $\text{H}_2\text{O}$ , with subsequent decomp. (Metzner, A. 149. 66.)

$2\text{CuO}$ ,  $\text{P}_2\text{O}_5$ ,  $6\text{NH}_3$ . (Mauerné.)

Cupric *pyrophosphate ammonia*,  $8\text{CuO}$ ,  $3\text{P}_2\text{O}_5$ ,  $4\text{NH}_3 + 4\text{H}_2\text{O}$

Sl. sol. in  $\text{H}_2\text{O}$ . (Schwarzenberg, A. 65. 133.)

$\text{Cu}_2\text{P}_2\text{O}_7$ ,  $4\text{NH}_3 + \text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Schiff, A. 123. 1.)

Didymium *metaphosphate*,  $\text{D}_2(\text{PO}_3)_2$ .

Precipitate. (Smith.)

$\text{D}_2\text{O}_3$ ,  $5\text{P}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ . (Cleve.)

Didymium *phosphate*,  $2\text{D}_2\text{O}_3$ ,  $3\text{P}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 107. 37.)

Didymium *orthophosphate*,  $\text{DiPO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Very sl. sol. in dil. easily sol. in conc. acids. (Marignac.) Insol. in  $\text{H}_2\text{O}$ . (Wallroth, Bull. Soc. (2) 39. 316.)  
 $+ \text{H}_2\text{O}$ . (Frerichs and Smith, A. 191. 355.)

Didymium *trihydrogen phosphate*,

$\text{D}_2\text{H}_3(\text{PO}_4)_3$ .

Precipitate. (Frerichs and Smith.)

Existence is doubtful (Cleve, B. 12. 910.)

Didymium *hexahydrogen phosphate*,

$\text{DiH}_6(\text{PO}_4)_3 + \text{H}_2\text{O}$ .

Precipitate. (Hermann.)

Didymium *pyrophosphate*,  $\text{Di}_2(\text{P}_2\text{O}_7)_2 + 6\text{H}_2\text{O}$ .

Precipitate. (Cleve.)

Didymium *hydrogen pyrophosphate*,

$\text{DiH}_2(\text{P}_2\text{O}_7)_2$ .

Precipitate. Sol. in disodium pyrophosphate + Aq. (Frerichs and Smith, A. 191. 355.)

Does not exist. (Cleve.)

Didymium *potassium phosphate*,  $2\text{D}_2\text{O}_3$ ,

$3\text{K}_2\text{O}$ ,  $3\text{P}_2\text{O}_5 = 2\text{DiPO}_4$ ,  $\text{K}_3\text{PO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 107. 37.)

Didymium *sodium orthophosphate*,  $\text{D}_2\text{O}_3$ ,

$3\text{Na}_2\text{O}$ ,  $2\text{P}_2\text{O}_5 = \text{DiPO}_4$ ,  $\text{Na}_3\text{PO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Ouvrard.)

Didymium *sodium pyrophosphate*,  $\text{Di}_2\text{O}_3$ ,

$\text{Na}_2\text{O}$ ,  $2\text{P}_2\text{O}_5 = \text{DiNaP}_2\text{O}_7$ .

Insol. in  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 107. 37.)

Dysprosium *orthophosphate*,  $\text{DyPO}_4 + 5\text{H}_2\text{O}$ .

Nearly insol. in  $\text{H}_2\text{O}$ .

Easily sol. in dil. acids or acetic acid. (Jantsch, B. 1911, 44. 1276.)

Erbium *phosphate*,  $\text{ErPO}_4 + \text{H}_2\text{O}$ .

Precipitate

Erbium *pyrophosphate*,  $\text{ErHP}_2\text{O}_7 + 3\frac{1}{2}\text{H}_2\text{O}$ .

Scarcely sol. in boiling  $\text{H}_2\text{O}$ . Slowly sol. in acids.

Erbium *sodium pyrophosphate*,  $\text{ErNaP}_2\text{O}_7$ .

Precipitate. (Wallroth.)

Glucinum *metaphosphate*,  $\text{Gl}(\text{PO}_3)_2$ .

Insol. in  $\text{H}_2\text{O}$  and acids. (Bleyer, Z. anorg. 1912, 79. 274)

Glucinum *orthophosphate*, basic.

$2\text{Gl}_2\text{P}_2\text{O}_7$ ,  $\text{GlO} + 13\text{H}_2\text{O}$ .

Ppt. (Bleyer, Z. anorg. 1912, 79. 268.)

Glucinum *orthophosphate*,  $\text{Gl}_2(\text{PO}_4)_3 + 6\text{H}_2\text{O}$ .

Precipitate. Insol. in  $\text{H}_2\text{O}$ . Sol. in acids (Atterberg, Sv. V. A. Handl. 12, 5. 33.)

1 l. 2%  $\text{HCl}$  + Aq. dissolves 0.55 g. of the anhydrous salt, 1 l. 10%  $\text{HCl}$  + Aq. dissolves 1.725 g. (Sestini, Gazz. ch. it. 20. 313.)

$+ 7\text{H}_2\text{O}$ . (Atterberg.)

Glucinum *hydrogen orthophosphate*,  $\text{GlHPO}_4 + 3\text{H}_2\text{O}$ .

$\text{GlH}_4(\text{PO}_4)_2$ , hygroscopic. (Bleyer, Z. anorg. 1912, 79. 268.)

Precipitated by alcohol. (Atterberg.)

Glucinum *phosphate*,  $5\text{GlO}$ ,  $2\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$ .

Ppt. Sol. in  $\text{H}_2\text{O}$  with decomp. (Scheffer.)  
 $3\text{GlO}$ ,  $\text{P}_2\text{O}_5$ ,  $3\text{H}_2\text{O} + \text{H}_2\text{O}$ . (Sestini, Gazz. ch. it. 20. 313.)

Glucinum *pyrophosphate*,  $\text{Gl}_2\text{P}_2\text{O}_7 + 5\text{H}_2\text{O}$ .

Precipitate (Scheffer.)

Sol. in  $\text{Na}_4\text{P}_2\text{O}_7$  + Aq. (Stromeyer.)

Glucinum *potassium phosphate*,  $\text{GlKPO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 110. 1333.)

Glucinum *sodium phosphate*,  $\text{GlNaPO}_4$ .

Sl. sol. in cold, easily sol. in hot acids. (Wallroth.) Insol. in acetic acid.

Min. *Beryllonite*.

$\text{GlO}$ ,  $2\text{Na}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 110. 1333.)

Gold (Auric) *sodium pyrophosphate* (?),

$\text{Au}_4(\text{P}_2\text{O}_7)_3$ ,  $2\text{Na}_4\text{P}_2\text{O}_7 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Persoz.)

Gold sodium *pyrophosphate*, ammonia,  $14\text{Au}_2\text{O}_3, 6\text{P}_2\text{O}_5, 3\text{Na}_2\text{O}, 14\text{NH}_3 + 24\text{H}_2\text{O}$   
Insol. in  $\text{H}_2\text{O}$ . (Gibbs, Am Ch J. 1895, 17. 172)

Iron (ferrous) *trimetaphosphate*,  $\text{Fe}(\text{P}_3\text{O}_{10})_2 + 12\text{H}_2\text{O}$ .

Rather sl sol in cold, more easily in hot  $\text{H}_2\text{O}$ . After ignition sol in  $\text{HCl} + \text{Aq}$  only after long boiling (Lundbom, Acta Lund. 1873. 17)

Ferrous *hexametaphosphate*,  $\text{Fe}_2\text{P}_6\text{O}_{18}$ .

When freshly pptd. is sol. in  $\text{H}_2\text{O}$ , and very sol. in least traces of acids, or  $\text{Na}_2\text{P}_6\text{O}_{18} + \text{Aq}$  (Lüdt, Z. anorg. 6. 15)

Ferrous phosphate, basic,  $7\text{FeO}, 2\text{P}_2\text{O}_5 + 9\text{H}_2\text{O}$ .

Min. *Ludlamis*. Sol. in dil.  $\text{H}_2\text{SO}_4$  or  $\text{HCl} + \text{Aq}$ . Decomp by boiling  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ .

Ferrous orthophosphate,  $\text{Fe}_2(\text{PO}_4)_3$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in acids.  
Sol. in 1000 pts  $\text{H}_2\text{O}$  containing more than 1 vol.  $\text{CO}_2$  (Pierre)

Sol. in an excess of ferrous salts +  $\text{Aq}$   
Sol. in 560 pts.  $\text{H}_2\text{O}$  containing  $\frac{1}{1000}$  pt.  $\text{HCl} \cdot \text{H}_2\text{O}$ . Sol. in 1666 pts.  $\text{H}_2\text{O}$  containing 160 pts  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$ . (Pierre, A. ch. (3) 36. 78.)

Sol in  $\text{NH}_4$  salts +  $\text{Aq}$ .  
Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  Not pptd. in presence of  $\text{Na}$  citrate.

Insol in acetone. (Naumann, B. 1904, 37. 4329.)

+  $\text{H}_2\text{O}$ . (Debray, A. ch. (3) 61. 437)  
+  $8\text{H}_2\text{O}$ . Min. *Vivandis*. Easily sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ . Boiling  $\text{KOH} + \text{Aq}$  dissolves out phosphoric acid. Sol. in cold citric acid +  $\text{Aq}$ . (Bolton, C. N. 37. 14)

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Evans, C. C. 1897, I. 580.)

Ferrous hydrogen orthophosphate,  $\text{FeHPO}_4 + \text{H}_2\text{O}$ .

Ppt (Debray, A. ch. (3) 61. 437.)  
Is impure  $\text{Fe}_2(\text{PO}_4)_3$ . (Erlenmeyer and Heinrichs, A. 194. 176.)

Ferrous *tetrahydrogen orthophosphate*,  $\text{FeH}_4(\text{PO}_4)_3 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Not changed by alcohol. (Erlenmeyer and Heinrichs, A. 194. 176.)

Ferrous *pyrophosphate*.

Ppt. Sol in an excess of  $\text{Na}_2\text{P}_2\text{O}_7$  or  $\text{FeSO}_4 + \text{Aq}$ . (Schwarzenberg, A. 65. 153.)

Ferric metaphosphate,  $\text{Fe}_2(\text{PO}_3)_2$  or  $\text{Fe}(\text{PO}_3)_3$ .

Insol. in  $\text{H}_2\text{O}$  or dil. acids Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Maddrell, Phil. Mag. (3) 30. 322.)

Iron (ferrio) *orthophosphate*, basic,  $2\text{Fe}_2\text{O}_3, \text{P}_2\text{O}_5 + x\text{H}_2\text{O}$

Insol. in  $\text{NH}_4$  citrate, sol in  $\text{NH}_4$  tartrate +  $\text{Aq}$ . (Wittstein.)

+  $3\text{H}_2\text{O}$ . Min *Krausite* Easily sol in  $\text{HCl} + \text{Aq}$

+  $4\text{H}_2\text{O}$  Ppt (Millet, C. R. 82. 89)

+  $6\text{H}_2\text{O}$  Min *Dufrenoyte*.  
+  $12\text{H}_2\text{O}$ . Min. *Cacoxene* Sol in  $\text{HCl} + \text{Aq}$ .

+ 18, or  $24\text{H}_2\text{O}$  Min *Delvausite*.

$5\text{Fe}_2\text{O}_3, 3\text{P}_2\text{O}_5 + 14\text{H}_2\text{O}$  Min. *Beraunite*

Sol. in  $\text{HCl} + \text{Aq}$

$3\text{Fe}_2\text{O}_3, 2\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$ . Min *Eleonorite*.

Sol in  $\text{HCl} + \text{Aq}$

Ferric orthophosphate,  $\text{Fe}_3(\text{PO}_4)_2 + x\text{H}_2\text{O}$ , or  $2\text{Fe}_2\text{O}_3, 3\text{P}_2\text{O}_5 + x\text{H}_2\text{O}$ .

+ 4, or  $8\text{H}_2\text{O}$ . (Pptd. ferric phosphate.)

Insol. in  $\text{H}_2\text{O}$ . Sol in 1500 pts. boiling  $\text{H}_2\text{O}$ . (Bergmann, 1816.) Sol in pure  $\text{H}_2\text{O}$  when all traces of soluble salts are absent (Fresenius.) Very sl. sol. in, but decomp by  $\text{H}_2\text{O}$ . (Lachowicz, W. A. B. 101, 2b. 374.) For an extended discussion of solubility in and decomposition by  $\text{H}_2\text{O}$  and effect of salts see Cameron and Hurst, (J. Am. Chem. Soc. 1904, 26. 888.)

Easily sol in dil. mineral acids, excepting  $\text{H}_3\text{PO}_4 + \text{Aq}$  Insol. in cold  $\text{H}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Wittstein.) 100 cem. cold  $\text{H}_2\text{O}$  containing 10%  $\text{HCl} \cdot \text{H}_2\text{O}$  dissolve 0.007 g salt (Sestini, Gazz. ch. it 5. 252.) When freshly pptd. easily sol in  $\text{H}_2\text{SO}_4 + \text{Aq}$ , or  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ . (Berthier.) Easily sol. in tartaric or citric acid +  $\text{Aq}$ , also in  $\text{NH}_4$  salts of those acids, and  $\text{Na}$  citrate +  $\text{Aq}$ . (Heydenreich, C. N. 4. 158.) See below.

Sol. in 12,500 pts  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$ . (Pierre, A. ch. (3) 36. 78.)

Insol. in  $\text{NH}_4$  salts +  $\text{Aq}$  (Wittstein.) Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  in presence of  $\text{Na}_2\text{HPO}_4$ ; insol. in hot  $\text{Na}_2\text{HPO}_4 + \text{Aq}$ ; sol in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Berzelius).  $\text{NH}_4\text{OH}$ ,  $\text{KOH}$ , or  $\text{NaOH} + \text{Aq}$  dissolve out  $\text{H}_3\text{PO}_4$ .

Sol. in ferric salts +  $\text{Aq}$ , even ferric acetate, but insol. in ferrous acetate +  $\text{Aq}$ .

Partially sol. in large amt. of  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . Not pptd. in presence of  $\text{Na}$  citrate. (Spiller.) Arth (Bull. Soc. (3) 2. 324) obtained a modification of  $\text{Fe}_2(\text{PO}_4)_3$  insol in  $\text{HNO}_3 + \text{Aq}$ , but sol. in hot conc  $\text{HCl} + \text{Aq}$ .

+  $4\text{H}_2\text{O}$ . Min. *Strengite*. Easily sol in  $\text{HCl} + \text{Aq}$ ; insol. in  $\text{HNO}_3 + \text{Aq}$

+  $5\text{H}_2\text{O}$ . Only sl. sol. in  $\text{H}_2\text{O}$  Slowly sol. in  $\text{HNO}_3$ , easily sol. in  $\text{HCl}$ . (Weinland, Z. anorg. 1913, 84. 361.)

Diammonium citrate +  $\text{Aq}$  dissolves 4.8% of the  $\text{P}_2\text{O}_5$ ; triammonium citrate, 5.8%  $\text{P}_2\text{O}_5$ ; and with an excess of  $\text{NH}_4\text{OH}$ , 21.2%  $\text{P}_2\text{O}_5$  is dissolved. (Erlenmeyer, B. 14. 1253.)

+  $9\text{H}_2\text{O}$ . Dissolves in 35 min in diammonium citrate +  $\text{Aq}$  (sp. gr. 1.09); in 55 min. in triammonium citrate +  $\text{Aq}$  (sp. gr. 1.09); citric acid +  $\text{Aq}$  (¼% citric acid) dissolves 17.5% of the  $\text{P}_2\text{O}_5$ . (Erlenmeyer, l. c.)

**Iron (ferric) phosphate, acid,  $8\text{Fe}_2\text{O}_3, 9\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . (Rumpler, Z anal. 12. 151.)  
 $6\text{Fe}_2\text{O}_3, 7\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$ .  
 $4\text{Fe}_2\text{O}_3, 5\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$ .

$2\text{Fe}_2\text{O}_3, 3\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$ . Ppt. Decomp. by  $\text{H}_2\text{O}$  finally into  $\text{Fe}_2(\text{PO}_4)_2$  (Erlenmeyer and Heinrich, A. 194. 176.)

$8\text{Fe}_2\text{O}_3, 11\text{P}_2\text{O}_5 + 9\text{H}_2\text{O}$ . As above (E. and H.)

$4\text{Fe}_2\text{O}_3, 7\text{P}_2\text{O}_5 + 9\text{H}_2\text{O}$ . As above. (E. and H.)

$\text{Fe}_2\text{O}_3, 2\text{P}_2\text{O}_5 + 8\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl}, \text{H}_2\text{SO}_4 + \text{Aq}$ ; sol. in  $\text{NH}_4$  citrate, alkali hydrates, or carbonates + Aq. (Winkler.) Slowly decomp. by  $\text{H}_2\text{O}$ . (E. and H.)

+  $10\text{H}_2\text{O}$ . (Warne, C. N. 36. 132)

$2\text{Fe}_2\text{O}_3, 5\text{P}_2\text{O}_5 + 17\text{H}_2\text{O}$ .

$\text{Fe}_2\text{O}_3, 3\text{P}_2\text{O}_5 + 6\text{H}_2\text{O} = \text{FeH}_2(\text{PO}_4)_2$ . Dehydroquiescent. Insol. in  $\text{H}_2\text{O}$ , but decomp. into  $\text{Fe}_2(\text{PO}_4)_2$ . (E. and H.)

+  $4\text{H}_2\text{O}$ . (Hautefeuille and Margottet, C. R. 108. 135.)

**Ferric pyrophosphate,  $\text{Fe}_4(\text{P}_2\text{O}_7)_2$ .**

*Two modifications*—(a) Sol. in acids,  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ ,  $\text{FeCl}_3 + \text{Aq}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ , and in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$

Insol. in acetic, sulphurous acid, or  $\text{NH}_4\text{Cl} + \text{Aq}$  Sol. in  $\text{NH}_4$  citrate + Aq. (Schwarzenberg, A. 65. 153)

(b) Insol. in dil acids,  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ ,  $\text{FeCl}_3 + \text{Aq}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Gladstone, Chem. Soc. (2) 5. 435)

**Solubility of  $\text{Fe}_4(\text{P}_2\text{O}_7)_2$  in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $0^\circ$**

100 g. sat. solution contain		100 g. sat. solution contain	
G $\text{NH}_3$	G $\text{Fe}_4(\text{P}_2\text{O}_7)_2$	G $\text{NH}_3$	G $\text{Fe}_4(\text{P}_2\text{O}_7)_2$
0.884	5.606	5.92	14.71
1.59	9.75	8.26	13.89
3.71	14.85	10.55	7.40
4.72	15.94	15.96	2.52
5.93	13.92	18.83	0.445
7.91	14.61		

(Pascal, A ch 1909, (8) 18. 374.)

Insol. in acetone. (Krug and M'Elroy, J. Anal. Appl. Ch. 6. 184.)

Insol. in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20. 828.)

**Ferroferric orthophosphate,  $2\text{Fe}_2(\text{PO}_4)_3, 3\text{Fe}_2\text{O}_3, 2\text{P}_2\text{O}_5 + 16\text{H}_2\text{O}$**

Ppt. Sol. in  $\text{HCl} + \text{Aq}$ . (Rammelsberg.)

$4\text{Fe}_2\text{O}_3, 6\text{FeO}, 5\text{P}_2\text{O}_5 + 40\text{H}_2\text{O}$ . Sol. in 40 min. in diammonium citrate + Aq (sp. gr. = 1.09); diammonium citrate + Aq (sp. gr. = 1.09) dissolves 55.7% of the  $\text{P}_2\text{O}_5$ . (Erlenmeyer, B. 14. 1253)

**Ferrous lithium phosphate,  $\text{Li}_2\text{PO}_4, \text{Fe}_2(\text{PO}_4)_2$ .**

Min. *Triphylite*. Easily sol. in acids; not wholly decomp. by  $\text{KOH} + \text{Aq}$ .

**Iron (ferrous) manganous phosphate,  $\text{Fe}_2(\text{PO}_4)_2, \text{Mn}_2(\text{PO}_4)_2$ .**

Min. *Triphite*. Easily sol. in  $\text{HCl} + \text{Aq}$   
 $5(\text{Mn}, \text{Fe})_2\text{O}_3, 2\text{P}_2\text{O}_5 + 5\text{H}_2\text{O}$ . Min. *Huraultite*. Sol. in acids

**Ferric manganous sodium phosphate,  $\text{FePO}_4, (\text{Na}, \text{Mn})_2\text{PO}_4 + \frac{1}{2}\text{H}_2\text{O}$**

Min.—(?)

**Ferrous manganous phosphate chloride,  $3(\text{Mn}, \text{Fe})_2(\text{PO}_4)_2, \text{MnCl}_2$ .**

(Deville and Caron)

**Ferrous manganous phosphate fluoride,  $(\text{Mn}, \text{Fe})_2(\text{PO}_4)_2, (\text{Mn}, \text{Fe})\text{F}_2$ .**

Min. *Triphite*, *Zwieselite*. Sol. in  $\text{HCl} + \text{Aq}$   
 $3(\text{Mn}, \text{Fe})_2(\text{PO}_4)_2, \text{MnF}_2$ . [(Deville and Caron, C. R. 47. 985)]

**Ferric potassium phosphate,  $2\text{Fe}_2\text{O}_3, 3\text{K}_2\text{O}, 3\text{P}_2\text{O}_5$ .**

Not attacked by boiling  $\text{H}_2\text{O}$ . (Ouvrard, A. ch. (6) 16. 289)

$\text{Fe}_2\text{O}_3, \text{K}_2\text{O}, 2\text{P}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ ; very sl. attacked by acids (Ouvrard.)

**Ferric silver metaphosphate,  $2\text{Fe}_2\text{O}_3, 2\text{Ag}_2\text{O}, 5\text{P}_2\text{O}_5$ .**

(Hautefeuille and Margottet, C. R. 96. 1142)

**Ferric silver pyrophosphate,  $\text{Fe}_3\text{Ag}_2(\text{P}_2\text{O}_7)_2 + 4\text{H}_2\text{O}$ .**

Ppt. (Pascal, C. R. 1908, 146. 232)

**Ferric sodium phosphate,  $2\text{Fe}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{P}_2\text{O}_5$ .**

Decomp by  $\text{H}_2\text{O}$ . (Ouvrard.)

**Ferrous sodium triphosphate,  $\text{FeNa}_2\text{P}_3\text{O}_{10} + 11\frac{1}{2}\text{H}_2\text{O}$**

Stable dry; sol. in  $\text{HNO}_3$ ; decomp. in contact with  $\text{H}_2\text{O}$  (Stange, Z anorg. 1896, 12. 451)

**Ferric sodium hydrogen orthophosphate,  $\text{Fe}(\text{PO}_4)_2\text{H}_2\text{Na} + \text{H}_2\text{O}$ .**

Difficultly sol. in  $\text{H}_2\text{O}$ . Slowly decomp by boiling with  $\text{H}_2\text{O}$  Sol. in dil.  $\text{HCl}$  and dil.  $\text{HNO}_3$ . Decomp by alkalis and alkali carbonates. (Weinland, Z. anorg. 1913, 84. 354)

$\text{Fe}(\text{PO}_4)_2\text{H}_2\text{Na} + \text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$ . Decomp by boiling with  $\text{H}_2\text{O}$  Sol. in dil.  $\text{HCl}$  and in dil.  $\text{HNO}_3$ . Decomp. by alkalis and alkali carbonates (Weinland, Z. anorg. 1913, 84. 358)

**Ferric sodium pyrophosphate,  $\text{Fe}_4(\text{P}_2\text{O}_7)_2, 2\text{Na}_2\text{P}_2\text{O}_7 + 7\text{H}_2\text{O}$ .**

Slowly but completely sol. in  $\text{H}_2\text{O}$ . Pptd. by alcohol. (Milek, J. B. 1865, 263.)

Very sol in  $\text{H}_2\text{O}$ . (Fleitmann and Henneberg.)

+5, and  $6\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ , especially if warm (Pahl, J. B. 1873. 229.)

$\text{FeNaP}_2\text{O}_7$ . Insol. in  $\text{H}_2\text{O}$ , dil.  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ ; sl. sol. in conc.  $\text{HCl} + \text{Aq}$ ; decomp. by cone hot  $\text{H}_2\text{SO}_4$  without solution. (Jørgensen, J. pr (2) 16. 342.)

Insol. in acetone. (Naumann, B. 1904. 37. 4329.)

$\text{Na}_4\text{Fe}_2(\text{P}_2\text{O}_7)_3 + 9\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Rosenheim, B. 1915. 48. 586.)

$\text{Fe}_2(\text{P}_2\text{O}_7)_3$ ,  $5\text{Na}_2\text{P}_2\text{O}_7 + 7\text{H}_2\text{O}$ . (Pahl, J. B. 1873. 229.)

**Iron (ferric) phosphate sulphate**,  $3\text{Fe}_2(\text{PO}_4)_3 \cdot 2\text{Fe}_2(\text{SO}_4)_3$ ,  $2\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ .

Min. *Disacchite*.

**Lanthanum metaphosphate**,  $\text{La}_2(\text{PO}_3)_4$ .

Precipitate. (Frerichs and Smith.)

$\text{La}_2\text{O}_3$ ,  $5\text{P}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ , dil. or conc. acids. (Johnson, B. 22. 976.)

**Lanthanum orthophosphate**,  $\text{LaPO}_4$ .

Precipitate. (Hermann.)

Insol. in  $\text{H}_2\text{O}$  and acids (Ouvrard, C. R. 107. 37.)

**Lanthanum hydrogen phosphate**,

$\text{La}_2\text{H}_2(\text{PO}_4)_3$ .

Precipitate. (Frerichs, B. 7. 709.)

Existence is doubtful. (Cleve, B. 11. 910.)

**Lanthanum phosphate, acid**,  $\text{La}_2\text{O}_3$ ,  $2\text{P}_2\text{O}_5$ .

Precipitate (Hermann.)

**Lanthanum pyrophosphate**,  $\text{LaHP}_2\text{O}_7 + 3\text{H}_2\text{O}$ . (Cleve.)

$\text{La}_2\text{H}_2(\text{P}_2\text{O}_7)_2$ . Precipitate. (Frerichs and Smith.)

Does not exist. (Cleve.)

**Lanthanum potassium orthophosphate**,

$2\text{La}_2\text{O}_3$ ,  $3\text{K}_2\text{O}$ ,  $3\text{P}_2\text{O}_5 = 2\text{LaPO}_4$ ,  $\text{K}_2\text{PO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 107. 37.)

**Lanthanum sodium orthophosphate**,  $\text{La}_2\text{O}_3$ ,

$3\text{Na}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$ . (Ouvrard.)

**Lanthanum sodium pyrophosphate**,

$\text{LaNaP}_2\text{O}_7$ .

Insol. in acetic, and dil. cold mineral acids. Sol. in warm dil. acids. (Walroth.)

**Lead dimetaphosphate**,  $\text{Pb}_2\text{P}_2\text{O}_7$ .

Ppt. Almost insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ . (Fleitmann, Pogg. 78. 253.)

**Lead trimetaphosphate**,  $\text{Pb}_3(\text{P}_3\text{O}_{10})_2 + 3\text{H}_2\text{O}$ .

Nearly insol. in  $\text{H}_2\text{O}$ . Less sol. in  $\text{H}_2\text{O}$  than the corresponding Ag salt. (Fleitmann and Henneberg, A. 65. 304.)

Most insol. of the trimetaphosphates (Landbom, Acta Lund. 1873. 12.)

Anhydrous salt is insol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HNO}_3 + \text{Aq}$ . (Landbom.)

**Lead tetametaphosphate**,  $\text{Pb}_4\text{P}_4\text{O}_{13}$ .

Insol. in  $\text{H}_2\text{O}$ .

More easily decomp. by acids than the other insol. metaphosphates. Easily decomp. by alkali hydrosulphides +  $\text{Aq}$  in the cold. (Fleitmann, Pogg. 78. 353.)

**Lead hexametaphosphate**,  $\text{Pb}_6\text{P}_6\text{O}_{19}$ .

Nearly insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Lüder, Z. anorg. 5. 15.)

**Lead orthophosphate, basic**,  $4\text{PbO}$ ,  $\text{P}_2\text{O}_5$ .

(Gerhardt, A. 72. 85.)

**Lead orthophosphate**,  $\text{Pb}_3(\text{PO}_4)_2$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{HCl}$ ,  $\text{H}_2\text{O}_2 + \text{Aq}$ .

Sl. sol. in  $\text{H}_2\text{O}$ .  $1.35 \times 10^{-4}$  g. is contained in 1 litre of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903. 48. 604.)

Not hydrolyzed by boiling  $\text{H}_2\text{O}$ . Sol. in boiling  $\text{KOH} + \text{Aq}$ , insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in  $\text{Pb}(\text{NO}_3)_2 + \text{Aq}$ . (Caven, J. Soc. Chem. Ind. 1897. 16. 30.)

Sol. in  $782.0$  pts.  $\text{HCl}$ ,  $\text{H}_2\text{O}_2 + \text{Aq}$  containing  $38.94$  pts. pure  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$ . (Bertrand, Monit. Scient. (3) 10. 477.)

Insol. in methyl acetate. (Naumann, B. 1909. 42. 3790); ethyl acetate. (Naumann, B. 1910. 43. 314.)

**Lead hydrogen phosphate**,  $\text{PbHPO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{SO}_4$  or  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{HNO}_3$ , or in  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ . Insol. in  $\text{HCl}$ ,  $\text{H}_2\text{O}_2 + \text{Aq}$ . Sol. in cold  $\text{NH}_4\text{Cl} + \text{Aq}$  (Brett), from which it can be completely precipitated by a great excess of  $\text{NH}_4\text{OH} + \text{Aq}$ .

More sol. in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  at  $18.8-25^\circ$  than in pure  $\text{H}_2\text{O}$ . (Wappen.)

Sol. in sat.  $\text{NaCl} + \text{Aq}$ , but less than  $\text{PbSO}_4$ . (Bequerel, C. R. 20. 1524.)

Insol. in  $\text{Pb}$  salts +  $\text{Aq}$ .

Not pptd. in presence of  $\text{Na}$  citrate (Spillier.)

**Lead pyrophosphate**,  $\text{Pb}_2\text{P}_2\text{O}_7 + \text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ , or  $\text{KOH} + \text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ,  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$ , or  $\text{SO}_2 + \text{Aq}$ . (Schwaizenberg, A. 65. 133.) Sol. in  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$  (Stromeyer.)

Insol. in acetone. (Naumann, B. 1904. 37. 4329.)

**Lead potassium phosphate**,  $\text{PbKPO}_4$ .

Decomp. by hot  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 110. 1333.)

**Lead sodium phosphate**,  $\text{PbNaPO}_4$ .

Very sol. in dil. acids. (Ouvrard, C. R. 110. 1333.)

$10\text{PbO}$ ,  $8\text{Na}_2\text{O}$ ,  $9\text{P}_2\text{O}_5$ . (Ouvrard.)

Lead sodium pyrophosphate,  $\text{PbNa}_2\text{P}_2\text{O}_7$ .

Insol. in hot  $\text{H}_2\text{O}$ . (Gerhardt, A. ch. (3) 22. 506.)

Lead triphosphate sodium pyrophosphate,  $\text{Pb}_2\text{Na}_4\text{P}_3\text{O}_{11} + 10\text{H}_2\text{O}$ .

Sol. in  $\text{HNO}_3$  after melting. (Stange, Z. anorg. 1806, 12. 459.)

Lead phosphate chloride,  $2\text{PbHPO}_4$ ,  $\text{PbCl}_2$ .

Insol. in boiling  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HNO}_3$  + Aq. (Gerhardt, A. ch. (3) 22. 505.)

$2\text{Pb}_3(\text{PO}_4)_2$ ,  $\text{PbCl}_2$ . Ppt. (Heintz, Pogg. 73. 119.)

$3\text{Pb}_3(\text{PO}_4)_2$ ,  $\text{PbCl}_2$ . Min *Pyromorphite*. Sol. in  $\text{HNO}_3$  and  $\text{KOH}$  + Aq.

Sl. sol. in cold citric acid + Aq. (Bolton, C. N. 37. 14.)  
+  $\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HNO}_3$  + Aq. (Heintz.)

Lithium metaphosphate,  $\text{LiPO}_3$ .

Insol. in boiling  $\text{H}_2\text{O}$ . Scarcely sol. in acetic acid. Easily sol. in mineral acids. (Merling, Z. anal. 1879, 18. 565.)

Lithium tetrametaphosphate,  $\text{Li}_4\text{P}_4\text{O}_{12} + 4\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ . (Warschauer, Z. anorg. 1903, 36. 180.)

Lithium orthophosphate,  $\text{Li}_3\text{PO}_4$ .

Very slightly sol. in  $\text{H}_2\text{O}$ .

Sol. in 2530 pts. pure  $\text{H}_2\text{O}$  and 3920 pts. ammoniacal  $\text{H}_2\text{O}$ ; much more readily in  $\text{H}_2\text{O}$  containing  $\text{NH}_4$  salts. Easily sol. in  $\text{HCl}$  + Aq. or  $\text{HNO}_3$  + Aq. (Mayer, A. 98. 193.) Easily sol. in carbonic acid water. (Troost.) Sol. in dil. acids or acetic acid. (de Schulten, Bull. Soc. (3) 1. 479.)

Insol. in methyl acetate. (Naumann, B. 1903, 42. 3790.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C. 1899, II 1014.)

+  $\frac{1}{2}\text{H}_2\text{O}$ , or  $\text{H}_2\text{O}$ .

Lithium hydrogen phosphate,  $\text{Li}_2\text{HPO}_4$ .

Nearly insol. in  $\text{H}_2\text{O}$ . (Gmelin.) Sol. in 833 pts.  $\text{H}_2\text{O}$  at  $12^\circ$ . (Rammelsberg.)

$\text{Li}_2\text{H}(\text{PO}_4)_2 + \text{H}_2\text{O}$ . Sol. in 200 pts.  $\text{H}_2\text{O}$ . (Rammelsberg.)

Lithium dihydrogen phosphate,  $\text{LiH}_2\text{PO}_4$ .

Deliquescent, and very sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)

Heptalithium dihydrogen phosphate,

$\text{Li}_7\text{H}_2(\text{PO}_4)_4$ .  
+  $1\text{H}_2\text{O}$ , or  $2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)

Lithium pentahydrogen phosphate,

$\text{LiH}_4(\text{PO}_4)_3 + \text{H}_2\text{O}$ .  
Deliquescent, and sol. in  $\text{H}_2\text{O}$ .

Lithium pyrophosphate,  $\text{Li}_4\text{P}_2\text{O}_7 + 2\text{H}_2\text{O}$   
(Rammelsberg, B. A. B. 1883. 21.)

Lithium manganous phosphate,  $\text{Li}_2\text{PO}_4$ ,  
 $\text{Mn}_2(\text{PO}_4)_2$ .

Min *Lithophilite*.

Lithium potassium metaphosphate,  $\text{Li}_2\text{O}$ ,  
 $2\text{K}_2\text{O}$ ,  $3\text{P}_2\text{O}_5 + 4\text{H}_2\text{O}$ .

As  $\text{NH}_4$  comp. (Tammann, J. pr. 1892, (2) 45. 443.)

Lithium potassium pyrophosphate,  $\text{Li}_2\text{KP}_2\text{O}_7$ .  
(Kraut, A. 1878, 182. 170.)

Lithium sodium phosphate,  $3\text{Li}_2\text{O}$ ,  $\text{Na}_2\text{O}$ ,  
 $\text{P}_2\text{O}_5$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. acids. (Ouvrard, C. R. 110. 1333.)

$2\text{Li}_2\text{O}$ ,  $\text{Na}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ . As above (Ouvrard.)

Lithium sodium pyrophosphate,  $\text{Li}_4\text{O}$ ,  $\text{Na}_2\text{O}$ ,  
 $\text{P}_2\text{O}_5$ .

$5\text{Li}_2\text{O}$ ,  $\text{Na}_2\text{O}$ ,  $3\text{P}_2\text{O}_5$ .  
 $4\text{Li}_2\text{O}$ ,  $6\text{Na}_2\text{O}$ ,  $5\text{P}_2\text{O}_5$ . (Kraut, A. 1876, 182. 168.)

Magnesium metaphosphate,  $\text{Mg}(\text{PO}_3)_2$ .

Insol. in  $\text{H}_2\text{O}$  or dil. acids, but sol. in  $\text{H}_2\text{SO}_4$  + Aq. (Maddrell, A. 61. 82.)

Not decomp. by very long digestion with alkali carbonates, or orthophosphates + Aq. (Fleitmann.)

Magnesium dimetaphosphate,  $\text{Mg}_2(\text{P}_2\text{O}_5)_2 + 9\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , decomp. by acids. (Fleitmann, Pogg. 78. 259.)

Magnesium trimetaphosphate,  $\text{Mg}_3(\text{P}_3\text{O}_9)_2$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ , more easily in hot  $\text{H}_2\text{O}$ . When ignited, insol. in boiling  $\text{HCl}$  + Aq. (Landborn.)

Cryst. with 12, or  $15\text{H}_2\text{O}$ .

Magnesium tetrametaphosphate,  $\text{Mg}_4\text{P}_4\text{O}_{12}$ .

Insol. in  $\text{H}_2\text{O}$ , somewhat sol. in  $\text{HCl}$  + Aq. More easily sol. in  $\text{HNO}_3$  + Aq, especially easily sol. in conc.  $\text{H}_2\text{SO}_4$ . (Glatzel, Dissert. 1880.)

+  $10\text{H}_2\text{O}$ . Sol. in 70 pts.  $\text{H}_2\text{O}$ . (Glatzel.)

Magnesium orthophosphate,  $\text{Mg}_3(\text{PO}_4)_2$ , and  
+ 5, or  $7\text{H}_2\text{O}$ .

1 litre  $\text{H}_2\text{O}$  dissolves 0.1 g. ignited  $\text{Mg}_3(\text{PO}_4)_2$  in 7 days, but 0.205 g. if freshly precipitated. (Voleker, J. B. 1862. 131.)

1 l.  $\text{H}_2\text{O}$  with 2 g.  $\text{NaCl}$  dissolves 75.8 mg.; 1 l.  $\text{H}_2\text{O}$  with 3 g.  $\text{NaNO}_3$  dissolves 61.9 mg.  $\text{Mg}_3(\text{PO}_4)_2$ . (Liebig, A. 106. 185.)

Easily sol. in acids, except in acetic acid. (Schaffner, A. 50. 145.)

Easily sol. in  $\text{H}_2\text{O}$  in presence of alkali salts.

+6½H<sub>2</sub>O. Sol in 30 min. in diammonium citrate+4q (sp. gr.=1.09); triammonium citrate+4q (sp. gr.=1.09) dissolves 37.5% of the P<sub>2</sub>O<sub>5</sub> (Erlenmeyer, B. 14. 1253.)  
 +20H<sub>2</sub>O. Sol. in 10 min. in diammonium citrate+4q (sp. gr.=1.09), triammonium citrate+4q (sp. gr.=1.09) dissolves 23.2% of the P<sub>2</sub>O<sub>5</sub>, sol. in 15 min. in ¼% citric acid +4q. (Erlenmeyer, l. c.)  
 Insol in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 838.)

**Magnesium hydrogen phosphate, MgHPO<sub>4</sub>+7H<sub>2</sub>O.**

Sol. in 322 pts. cold H<sub>2</sub>O in several days. If heated to 40° becomes milky, and separates a precipitate out at 100° of same salt, so that solution at 100° contains only 1 pt. salt in 498 pts. H<sub>2</sub>O. Much more sol. in H<sub>2</sub>O containing traces of acids, even dil. oxalic or acetic acids. (Graham, Phil. Mag. Ann. 2. 20.) Easily sol. in H<sub>2</sub>SO<sub>4</sub>+4q (Gerland, J. pt. (2) 4. 127.)

Sol in aqueous solution of Mg salts, but insol in Na<sub>2</sub>HPO<sub>4</sub>+4q. (Rose.) Sol. in sodium citrate+4q (Spiller.) When freshly precipitated it is sol. in hot NH<sub>4</sub>Cl+4q, and NH<sub>4</sub>OH+4q does not completely reprecipitate it, less sol. in NH<sub>4</sub>NO<sub>3</sub>+4q (Brett, Phil. Mag. (3) 10. 96.) Insol in alcohol (Berzelius.)

For solubility in H<sub>3</sub>PO<sub>4</sub>, see under MgO.

+½H<sub>2</sub>O. (Debray.)  
 +H<sub>2</sub>O. Easily sol. in dil. acids. (de Schulten, C. R. 100. 263.)  
 +3H<sub>2</sub>O. Sl. sol. in H<sub>2</sub>O, easily in acids (Stoklassa, Z. anorg. 3. 67.)  
 +4½H<sub>2</sub>O. (Bergmann)  
 +6H<sub>2</sub>O. (Debray.)

**Magnesium tetrahydrogen phosphate, MgH<sub>2</sub>(PO<sub>4</sub>)<sub>2</sub>.**

Not hygroscopic. Sol. in 5 pts. H<sub>2</sub>O without decomp. (Stoklassa, Z. anorg. 3. 67.)  
 +2H<sub>2</sub>O. Not hygroscopic. Sol. in H<sub>2</sub>O without decomp. (Stoklassa, Z. anorg. 1. 307.)  
 Decomp. by alcohol into MgHPO<sub>4</sub>+3H<sub>2</sub>O.

**Magnesium pyrophosphate, Mg<sub>2</sub>P<sub>2</sub>O<sub>7</sub>.**

Nearly insol. in H<sub>2</sub>O; readily sol. in HCl or HNO<sub>3</sub>+4q. (Fresenius.)  
 +3H<sub>2</sub>O. Sl. sol. in H<sub>2</sub>O, easily in HCl or HNO<sub>3</sub>+4q; sol. in H<sub>2</sub>SO<sub>4</sub>+4q, and Na<sub>2</sub>P<sub>2</sub>O<sub>7</sub>+4q. (Schwarzenberg.)  
 Sol. in MgSO<sub>4</sub>+4q, and (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+4q.

**Magnesium tetraphosphate, Mg<sub>3</sub>P<sub>4</sub>O<sub>13</sub>.**

Insol. in H<sub>2</sub>O (Fleitmann and Henneberg, A. 65. 331.)

**Magnesium potassium dimetaphosphate, K<sub>2</sub>Mg<sub>2</sub>(P<sub>2</sub>O<sub>5</sub>)<sub>2</sub>.**

Very sol. in dil. acids. (Ouvrard, C. R. 1888, 106. 1729.)  
 +4H<sub>2</sub>O. Sol. in 10.2 pts. H<sub>2</sub>O. (Glatzel.)

**Magnesium potassium orthophosphate, MgKPO<sub>4</sub>.**

Sl. sol. in H<sub>2</sub>O. Decomp. by H<sub>2</sub>O. Easily sol. in acids  
 +6H<sub>2</sub>O  
 2MgO, K<sub>2</sub>O, 3P<sub>2</sub>O<sub>5</sub>. Insol. in H<sub>2</sub>O; sol. in dil. HCl+4q. (Ouvrard, C. R. 106. 1729.)  
 Mg<sub>2</sub>HK(PO<sub>4</sub>)<sub>2</sub>+15H<sub>2</sub>O. (Haushofer.)

**Magnesium rubidium orthophosphate, RbMgPO<sub>4</sub>+6H<sub>2</sub>O.**

Easily sol. in warm dil. HCl+4q.  
 Not decomp. by boiling H<sub>2</sub>O (Erdmann, A. 1897, 294. 73.)

**Magnesium sodium triphosphate, MgNa<sub>2</sub>P<sub>3</sub>O<sub>10</sub>+13H<sub>2</sub>O.**

Decomp. in the air (Stange, Z. anorg. 1896, 12. 454.)

**Magnesium sodium metaphosphate, 3MgO, Na<sub>2</sub>O, 4P<sub>2</sub>O<sub>5</sub>.**

Insol. in H<sub>2</sub>O or H<sub>3</sub>PO<sub>4</sub>+4q. Scarcely sol. in HCl+4q, or aqua regia. Not decomp. by (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+4q. Sol. in conc. H<sub>2</sub>SO<sub>4</sub>. (Maddrell, A. 61. 53.)

**Magnesium sodium dimetaphosphate, MgNa<sub>2</sub>(P<sub>2</sub>O<sub>5</sub>)<sub>2</sub>+4H<sub>2</sub>O.**

Sol. in 25 pts. H<sub>2</sub>O. (Glatzel, Dissert 1880.)

**Magnesium sodium trimetaphosphate, MgNa<sub>3</sub>(P<sub>3</sub>O<sub>9</sub>)<sub>2</sub>+5H<sub>2</sub>O.**

Sl. sol. in H<sub>2</sub>O. After ignition is insol. in H<sub>2</sub>O. (Lindborn.)

**Magnesium sodium phosphate, 10MgO, 8Na<sub>2</sub>O, 9P<sub>2</sub>O<sub>5</sub>.**

Insol. in H<sub>2</sub>O; easily sol. in dil. acids. (Ouvrard, C. R. 106. 1729.)

**Magnesium sodium orthophosphate, MgNaPO<sub>4</sub>.**

Insol. in H<sub>2</sub>O. (Rose.)  
 +9H<sub>2</sub>O. (Schoecker and Violet, A. 140. 232.)  
 MgO, 2Na<sub>2</sub>O, P<sub>2</sub>O<sub>5</sub>. Insol. in H<sub>2</sub>O. (Ouvrard.)  
 3MgO, 3Na<sub>2</sub>O, 2P<sub>2</sub>O<sub>5</sub>. Insol. in H<sub>2</sub>O. (Ouvrard.)

**Magnesium sodium pyrophosphate, basic (?).**

Precipitate; sl. sol. in H<sub>2</sub>O. Easily in HCl+4q, HNO<sub>3</sub>+4q, and Na<sub>2</sub>P<sub>2</sub>O<sub>7</sub>+4q (Baer, Pogg. 75. 188.)  
 Sol. in (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+4q, and in MgSO<sub>4</sub>+4q.  
 Insol. in alcohol.

**Magnesium phosphate chloride, Mg<sub>3</sub>(PO<sub>4</sub>)<sub>2</sub>, MgCl<sub>2</sub>.**

(Deville and Caron, A. ch. (3) 67. 455.)

**Magnesium pyrophosphate nitrogen dioxide,**  
 $\text{Mg}_2\text{P}_2\text{O}_7, \text{H}_2\text{O}, \text{NO}_2$ .

Scarcely sol in water. (Lueck, Z. anal. 13. 255)

**Magnesium phosphate fluoride,  $\text{Mg}_3(\text{PO}_4)_2$ ,  $\text{MgF}_2$ .**

Min. *Wagnerite*. Slowly sol in hot  $\text{HNO}_3$ , and  $\text{H}_2\text{SO}_4$ .

**Magnesium phosphate calcium fluoride,**  
 $2\text{Mg}_3(\text{PO}_4)_2, \text{CaF}_2$

Min. *Kjerulfite*.

**Manganous dimetaphosphate,  $\text{Mn}_2(\text{P}_2\text{O}_6)_2$ .**

Anhydrous Insol in  $\text{H}_2\text{O}$  and dil. acids (Fleitmann.) Sol. in conc  $\text{H}_2\text{SO}_4$ . (Madrell.) Scarcely attacked by warm  $\text{Na}_2\text{S} + \text{Aq}$ , and not much more by  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . Decomp. by  $\text{Na}_2\text{CO}_3 + \text{Aq}$   $+ 8\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$  and dil. acids. (Fleitmann, Pogg 78. 257.)

**Manganous trimetaphosphate,  $\text{Mn}_3(\text{P}_3\text{O}_{10})_2 + 11\text{H}_2\text{O}$ .**

Difficultly sol. in cold or warm  $\text{H}_2\text{O}$ . More easily sol in cold, very easily in warm  $\text{HCl} + \text{Aq}$ . When ignited, is insol. in acids, even aqua regia. (Landborn.)

**Manganous hexametaphosphate.**

Sol in sodium hexametaphosphate  $+ \text{Aq}$ . (Rose, Pogg. 76. 4.)

$\text{Mn}_6\text{P}_{10}\text{O}_{46}$ . Nearly insol. in  $\text{H}_2\text{O}$ ; easily sol in acids. (Lüder, Z. anorg. 6. 15)

**Manganic metaphosphate,  $\text{Mn}(\text{PO}_3)_2$ .**

Insol. in  $\text{H}_2\text{O}$  or acids, decomp. by alkalis. (Sehjerning, J pr. (2) 45. 515)

Insol. in  $\text{H}_2\text{O}$ , sol. in  $\text{HCl}$ ; decomp. by alkalis  $+ \text{Aq}$  (Barbier, C. R. 1902, 136. 1035)

$+ \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  or acids, except  $\text{HCl} + \text{Aq}$ . Sl decomp. by boiling with  $\text{H}_2\text{SO}_4$ . (Hermann, Pogg. 74. 303.)

**Manganous tetrametaphosphate,  $\text{Mn}_2(\text{PO}_2)_4$ .**

Not attacked by acids. (Glatzel, Dissert. 1880.)

$+ 10\text{H}_2\text{O}$ . Sol. only in boiling conc.  $\text{H}_2\text{SO}_4$ . (Glatzel.)

**Manganous dekametaphosphate,**

$5\text{MnO}, 5\text{P}_2\text{O}_5 + 12\text{H}_2\text{O}$ .

Ppt. (Tammann, J pr. 1892, (2) 45. 450.)

**Manganous orthophosphate,  $\text{Mn}_2(\text{PO}_4)_2$ .**

$+ \text{H}_2\text{O}$ . (Debray)

$+ 3\text{H}_2\text{O}$ . Sol. in 20 min. in diammonium citrate  $+ \text{Aq}$  (sp. gr. = 1.09); triammonium citrate  $+ \text{Aq}$  (sp. gr. = 1.09) dissolves 30.2% of the  $\text{P}_2\text{O}_5$ . (Erlenmeyer, B. 14. 1253.)

$+ 4\frac{1}{2} - 5\frac{1}{2}\text{H}_2\text{O}$ . Efflorescent (Erlenmeyer and Heinrich, A. 190. 208.)

$+ 7\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.) Easily sol. in mineral acids; sol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ .

Easily sol. in  $\text{SO}_2 + \text{Aq}$  (Gerland, J. pr. (2) 4. 97)

Somewhat sol. in boiling  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , but deposited on cooling (Berzelius.)

Partly sol in cold  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Jrett.)

Sol. in cold or hot solutions of ammonium sulphate or succinate. (Wittstein)

Sl. sol. in Mn salts  $+ \text{Aq}$ . (Rose, Pogg. 76. 25)

Insol. in alcohol

Sol. in 10 min. in diammonium citrate  $+ \text{Aq}$  (sp. gr. = 1.09); triammonium citrate  $+ \text{Aq}$  (sp. gr. = 1.09) dissolves 53% of the  $\text{P}_2\text{O}_5$ . (Erlenmeyer, B. 14. 1253.)

**Manganous dihydrogen orthophosphate,**  
 $\text{MnHPO}_4 + 3\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Solution decomp at  $100^\circ$ . (Debray) Slowly decomp. by cold  $\text{H}_2\text{O}$  into  $\text{Mn}_2(\text{PO}_4)_2$ . (Erlenmeyer and Heinrich, A. 190. 208)

Easily sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Gerland.)

Sl. sol in  $\text{HC}_2\text{H}_3\text{O}_2$ , easily in conc mineral acids. (Heintz.) Sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , from which it is reprecipitated on boiling. Decomp. by boiling  $\text{KOH} + \text{Aq}$ .

Insol in alcohol.

$\text{Mn}_2(\text{PO}_4)_3, 2\text{MnHPO}_4 + 4\text{H}_2\text{O}$ . (de Schulten, C. C. 1905, I 188.)

**Manganous tetrahydrogen phosphate,**  
 $\text{MnH}_2(\text{PO}_3)_2 + 2\text{H}_2\text{O}$ .

Deliquescent Easily sol. in  $\text{H}_2\text{O}$ , with decomp. to  $\text{MnHPO}_4$ . (Erlenmeyer and Heinrich, A. 190. 208)

Not decomp by  $\text{H}_2\text{O}$ . (Otto, C. C. 1887. 1563.)

$\text{H}_2\text{O}$  decomp. it into  $\text{MnHPO}_4$  and  $\text{H}_2\text{PO}_4$ , containing some dissolved salt. The less  $\text{H}_2\text{O}$  used, the more  $\text{MnHPO}_4$  separates. The acid filtrate separates  $\text{MnHPO}_4$  on boiling. At  $0^\circ$  the decomp. increases in proportion to the amt. of salt, but 1 g. of the salt is unchanged in 100 g.  $\text{H}_2\text{O}$ . With less than 20 g. of salt to 100 g.  $\text{H}_2\text{O}$  the decomp. is analogous to that of  $\text{CaH}_2(\text{PO}_3)_2$ , but with larger amts. of salt it is the opposite, becoming less with increasing amts. of the salt. (Viard, C. R. 1899, 129. 412)

Alcohol dissolves out  $\text{H}_2\text{PO}_4$ . (Heintz.)

**Pentamanganous dihydrogen phosphate,**

$\text{Mn}_5\text{H}_2(\text{PO}_4)_4 + 4\text{H}_2\text{O}$ .

Not decomp. by boiling  $\text{H}_2\text{O}$  (Erlenmeyer and Heinrich, A. 190. 208.)

**Manganic orthophosphate, basic,  $\text{Mn}_3\text{P}_2\text{O}_8 + \text{H}_2\text{O}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ .

Manganic orthophosphate,  $\text{MnPO}_4 \cdot \text{H}_2\text{O}$ .

Sol. in acids. (Christensen, J. pr. (2) 28. 1.)

Manganous pyrophosphate,  $\text{Mn}_2\text{P}_2\text{O}_7$ .

Anhydrous (Lewis, Sill. Am J. (3) 14. 281.)

+  $\text{H}_2\text{O}$ .  
+  $3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{MnSO}_4$  + Aq. but sol in  $\text{Na}_2\text{P}_2\text{O}_7$  + Aq. (Rose.)

Difficultly sol. in  $\text{Na}_2\text{P}_2\text{O}_7$  + Aq. but easily sol in  $\text{K}_4\text{P}_2\text{O}_7$  + Aq. (Pahl.) Decomp. by  $\text{KOH}$  + Aq. Sol. in  $\text{H}_2\text{SO}_4$  + Aq. (Schwarzenberg.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

Manganous hydrogen pyrophosphate,

$\text{MnH}_2\text{P}_2\text{O}_7 \cdot 4\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Pahl.)

Manganic pyrophosphate,

$\text{Mn}_2\text{P}_2\text{O}_7 \cdot 14\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{SO}_4$  and  $\text{H}_3\text{PO}_4$  (Auger, C. R. 1901, 133. 95.)

$\text{MnH}_2\text{P}_2\text{O}_7$ . Insol. in  $\text{H}_2\text{O}$ ; very sl. attacked by dil  $\text{HCl}$  + Aq. easily by conc. Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Schjerning, J. pr. (2) 45. 515.)

Manganous potassium dimetaphosphate,  $\text{K}_2\text{Mn}(\text{PO}_3)_2 \cdot 6\text{H}_2\text{O}$ .

Sol. in 95 pts  $\text{H}_2\text{O}$ . When ignited is not attacked by acids. (Glatzel, Dissert. 1880.)

Manganous potassium orthophosphate,

$\text{MnKPO}_4$ .

Insol. in  $\text{H}_2\text{O}$ , easily sol. in dil. acids (Ouvrard.)

Manganic potassium pyrophosphate,

$\text{MnKP}_2\text{O}_7$ .

+  $5\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ .  
+  $3\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . (Rosenheim, B. 1915, 48. 584.)

Manganous potassium phosphate,  $\text{MnK}_2\text{P}_2\text{O}_7$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids (Ouvrard, C. R. 1906, 1729.)

+  $8\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Pahl.)  
 $\text{Mn}_2\text{P}_2\text{O}_7$ ,  $2\text{K}_2\text{P}_2\text{O}_7$  +  $10\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$  (Pahl.)

Manganic potassium pyrophosphate,

$\text{MnKP}_2\text{O}_7$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by acids and bases. (Schjerning.)

Manganic silver pyrophosphate,

$\text{AgMn}_2\text{P}_2\text{O}_7 \cdot 3\text{H}_2\text{O}$ .

Almost insol. in  $\text{H}_2\text{O}$ . (Rosenheim, B. 1915, 48. 585.)

Manganous sodium triphosphate,

$\text{MnNa}_3\text{P}_3\text{O}_{10} \cdot 12\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ , the melt obtained by heating the salt is readily sol. in  $\text{H}_2\text{SO}_4$ . (Stange, Z. anorg. 1896, 12. 455.)

Manganous sodium dimetaphosphate,

$\text{MnNa}_2(\text{PO}_3)_2 \cdot 6\text{H}_2\text{O}$ .

Easily sol. in boiling  $\text{H}_2\text{SO}_4$ , but not attacked by acids after boiling. (Glatzel, Dissert. 1880.)

Manganous sodium trimetaphosphate,

Sol. in  $\text{H}_2\text{O}$ . (Fleitmann and Henneberg.)  
 $\text{MnNa}(\text{PO}_3)_3$ . Insol. in  $\text{H}_2\text{O}$ , dil. acids, or alkalis. (Schjerning, J. pr. (2) 45. 515.)

Manganous sodium octometaphosphate,

$\text{Mn}_2\text{Na}_2(\text{PO}_3)_8$ .

Insol. in acids except conc.  $\text{H}_2\text{SO}_4$  (Tammann, J. pr. 1892, (2) 45. 469.)

+  $5\text{H}_2\text{O}$ . Almost insol. in cold  $\text{H}_2\text{O}$ .  
Decomp. by boiling  $\text{H}_2\text{O}$  with separation of  $\text{Mn}_2\text{O}_3$ . (Rosenheim, B. 1915, 48. 584.)

Manganous sodium orthophosphate,

$\text{MnNaPO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Ouvrard, C. R. 1906, 1729.)  
 $\text{MnO}$ ,  $2\text{Na}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ . As above.

Manganous sodium pyrophosphate,

$\text{MnNa}_2\text{P}_2\text{O}_7$ .

Insol. in  $\text{H}_2\text{O}$ ; easily sol. in dil. acids. (Wallroth.)

+  $4\frac{1}{2}\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$ . (Pahl.)  
 $3\text{Mn}_2\text{P}_2\text{O}_7$ ,  $2\text{Na}_4\text{P}_2\text{O}_7$  +  $24\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$  (Pahl.)

Manganic sodium pyrophosphate,  $\text{MnNa}_2\text{P}_2\text{O}_7$ .

+  $\text{H}_2\text{O}$ .

(Christensen, J. pr. (2) 28. 1.)

Manganic dypyrophosphate ammonia,

$\text{Mn}_2\text{F}_2\text{O}_{14}$ ,  $2\text{NH}_3$ .

Insol. in  $\text{H}_2\text{O}$ .  
Decomp. by  $\text{HCl}$  and by alkalis (Barbier, C. R. 1902, 135. 1109.)

Manganous phosphate chloride,  $\text{Mn}_2(\text{PO}_4)_2$ .

$\text{MnCl}_2$ .

Insol. in  $\text{H}_2\text{O}$ . (Deville and Caron, A. ch. (3) 67. 459.)

$3\text{Mn}_2(\text{PO}_4)_2$ ,  $\text{MnCl}_2$ . Insol. in  $\text{H}_2\text{O}$ . (Deville and Caron.)

Mercurous hexametaphosphate (?).

Ppt. Sol. in sodium hexametaphosphate + Aq. (Rose.)

$\text{Hg}_2\text{P}_6\text{O}_{18}$ . Insol. in  $\text{H}_2\text{O}$ , very sl. sol. in acids. (Lüdtke, Z. anorg. 5. 15.)

Moderately sol. in  $\text{H}_2\text{O}$  when freshly pptd. More sol. in acids than the mercurous salt. (Lüdtke.)

**Mercurous orthophosphate,  $(\text{Hg}_2)_2(\text{PO}_4)_2$** 

Ppt. Decomp. by boiling with  $\text{H}_2\text{O}$ . (Geihardt.)

Sol. in  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$ . Insol. in  $\text{H}_3\text{PO}_4 + \text{Aq}$ .

**Mercuric orthophosphate,  $\text{Hg}_3(\text{PO}_4)_2$** 

Insol. in  $\text{H}_2\text{O}$ . Sl. sol. in hot  $\text{H}_2\text{O}$ , crystallizing out on cooling. (Haack, A. 262. 185. Slowly sol. in cold dil., quickly in hot dil. or cold conc.  $\text{HCl} + \text{Aq}$ . Less easily sol. in  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{H}_3\text{PO}_4 + \text{Aq}$  (Berzelius.) Insol. in  $\text{H}_3\text{PO}_4 + \text{Aq}$ . (Haack.) Decomp. by  $\text{NaCl} + \text{Aq}$  into insol.  $\text{HgCl}_2$ ,  $3\text{H}_2\text{O}$ , but sol. in  $\text{NaCl} + \text{Aq}$ , containing  $\text{HNO}_3$ . (Haack.)

Sol. in 6 pts.  $\text{NH}_4\text{Cl}$  in aqueous solution by heating (Trommsdorff.)

Sol. in  $(\text{NH}_4)_2\text{CO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . (Wittstein.)

Insol. in alcohol

**Mercuriomercuric orthophosphate,  $7\text{Hg}_2\text{O}$ ,  $11\text{HgO}$ ,  $2\text{P}_2\text{O}_5 + 20\text{H}_2\text{O}$** 

(Brooks, Pogg. 66. 63.)

**Mercurous pyrophosphate,  $\text{Hg}_2\text{P}_2\text{O}_7 + \text{H}_2\text{O}$** 

Sol. in  $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ , when recently pptd. Insol. in  $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ , when heated to  $100^\circ$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ . Decomp. by  $\text{HCl} + \text{Aq}$  (Schwarzenberg, A. 65. 133.)

**Mercuric pyrophosphate,  $\text{Hg}_2\text{P}_2\text{O}_7$** 

Sol. in acids; insol. in  $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ , after being heated to  $100^\circ$ . Sol. in  $\text{NaCl} + \text{Aq}$ ; quickly decomp. by  $\text{NaOH} + \text{Aq}$ , and  $\text{Na}_2\text{HPO}_4 + \text{Aq}$ .

Sol. in 6 pts.  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Trommsdorff.) Sol. in  $\text{NH}_4\text{NO}_3$ ,  $(\text{NH}_4)_2\text{SO}_4$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ ; also in  $\text{KI} + \text{Aq}$ .

**Mercurous silver orthophosphate,  $\text{AgHg}_2\text{PO}_4$** 

Sol. in  $\text{HNO}_3$ . (Jacobsen, Bull. Soc. 1909, (4) 5. 949.)

**Molybdenum phosphate,  $\text{Mo}_2(\text{PO}_4)_2$  (?)**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{MoCl}_5 + \text{Aq}$ .

**Molybdenum sodium pyrophosphate,**

$\text{Na}(\text{MoP}_2\text{O}_7) + 12\text{H}_2\text{O}$

Ppt. (Rosenheim, B. 1915, 48. 589.)

**Nickel dimetaphosphate,  $\text{NiP}_2\text{O}_6$** 

Insol. in  $\text{H}_2\text{O}$  or dil. acids. Sol. in conc.  $\text{H}_2\text{SO}_4$ . Not decomp. by boiling alkali carbonates or sulphides +  $\text{Aq}$ . (Maddrell, A. 61. 58.)

+  $4\text{H}_2\text{O}$ . Sol. in cold acids. (Glatzel, Dissert. 1880.)

**Nickel tetrametaphosphate,  $\text{Ni}_2\text{P}_4\text{O}_{12}$** 

Insol. in  $\text{HCl}$ . Sol. in conc.  $\text{HNO}_3$  and especially sol. in  $\text{H}_2\text{SO}_4$  on boiling. (Glatzel.)

**Nickel tetrametaphosphate,  $\text{Ni}_2\text{P}_4\text{O}_{12} + 12\text{H}_2\text{O}$** 

Easily sol. in acids. (Glatzel.)

**Nickel orthophosphate,  $\text{Ni}_3(\text{PO}_4)_2 + 7\text{H}_2\text{O}$** 

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Rammelsberg, Pogg. 68. 383.)

Sol. in  $\text{Ni}$  salts +  $\text{Aq}$ . (Rose, Pogg. 76. 25.)

Insol. in  $\text{Na}_2\text{HPO}_4 + \text{Aq}$ . (Tupputi, 1811.)

Very sl. sol. in hot  $(\text{NH}_4)_2\text{HPO}_4 + \text{Aq}$

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethylacetate (Naumann, B. 1910, 43. 314.)

**Nickel pyrophosphate,  $\text{Ni}_2\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$** 

Insol. in  $\text{H}_2\text{O}$ ; sol. in mineral acids,  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ , and  $\text{NH}_4\text{OH} + \text{Aq}$ . Not pptd. from  $\text{Ni}_2\text{P}_2\text{O}_7 + \text{Aq}$  by alcohol (Schwarzenberg, A. 66. 158.)

**Nickel potassium dimetaphosphate,**

$\text{NiK}_2\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$

Sol. in 130 pts.  $\text{H}_2\text{O}$  (Glatzel.)

**Nickel potassium orthophosphate,  $\text{Ni}_3\text{KPO}_4$** 

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Ouvrad, R. 106. 1729.)

$3\text{NiO}$ ,  $3\text{K}_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ . As above.

**Nickel sodium triphosphate,  $\text{Na}_2\text{NiP}_3\text{O}_{11} + 12\text{H}_2\text{O}$** 

Very sol. in  $\text{H}_2\text{O}$ ; decomp. in  $\text{Aq}$  solution. (Schwarz, Z. anorg. 1895, 9. 261.)

**Nickel sodium metaphosphate,  $3\text{Ni}(\text{PO}_3)_2$ ,  $\text{NaPO}_3$** 

Insol. in  $\text{H}_2\text{O}$  and dil. acids. Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Maddrell, A. 61. 56.)

$\text{NiNa}_2(\text{PO}_3)_2 + 8\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Lindbom.)

**Nickel sodium dimetaphosphate,  $\text{NiNa}_2\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$** 

Sl. sol. in  $\text{H}_2\text{O}$ . Moderately sol. in acids. (Glatzel, Dissert. 1880.)

**Nickel sodium trimetaphosphate,**

$\text{Ni}_3\text{Na}_3(\text{P}_3\text{O}_{10})_2 + 9\text{H}_2\text{O}$

1 l.  $\text{H}_2\text{O}$  dissolves 60 g. at  $20^\circ$ . (Tammann, J. pr. 1892, (2) 45. 426.)

$\text{Na}_3\text{NiP}_3\text{O}_{10} + 12\text{H}_2\text{O}$ . Insol. and not decomp. by  $\text{H}_2\text{O}$ . Sol. in acids. (Schwarz, Z. anorg. 1895, 9. 261.)

**Nickel sodium octometaphosphate,**

$\text{Na}_2\text{Ni}_3(\text{PO}_3)_8$

(Tammann, J. pr. 1892, (2) 45. 469.)

**Nickel sodium orthophosphate,  $\text{NiNaPO}_4 + 7\text{H}_2\text{O}$** 

Ppt. (Debray, C. R. 59. 40.)

$\text{NiO}$ ,  $2\text{Na}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids. (Ouvrad.)

**Nickel sodium pyrophosphate,**

Insol. in  $\text{H}_2\text{O}$  Moderately sol. in acids (Wallroth)

**Osmium phosphate (?)**

Sl sol in  $\text{H}_2\text{O}$ ; sol in  $\text{HNO}_3 + \text{Aq}$  (Berzelius.)

**Palladium orthophosphate (?)**

Ppt.

**Phosphorus phosphate,  $4\text{P}_2\text{O}_5, 3\text{P}_2\text{O}_6$  (?)**

Decomp. spontaneously Sol in  $\text{H}_2\text{O}$  and alcohol when fresh; insol. in ether. (le Verner, A. 27. 167; Reinitzer, B. 14. 1884)

**Platinum phosphate,  $\text{PtP}_2\text{O}_7$ .**

Insol. in  $\text{H}_2\text{O}$ , acids and alkalies. Decomp. by fusing with potassium carbonate (Barnett, C N 1895, 71. 256.)

**Potassium monometaphosphate,  $\text{KPO}_3$** 

Nearly insol. in  $\text{H}_2\text{O}$ ; sol in weak acids, even in acetic acid (Maddrell, A. 61. 62)

Insol. in  $\text{H}_2\text{O}$  and weak acids (Fleitmann, Pogg. 78. 250)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829)

**Potassium dimetaphosphate,  $\text{K}_2\text{P}_2\text{O}_5 + \text{H}_2\text{O}$ .**

Sol. in 1.2 pts. cold  $\text{H}_2\text{O}$ , but not more in hot  $\text{H}_2\text{O}$ . (Fleitmann, Pogg. 78. 250)

**Potassium trimetaphosphate,  $\text{K}_3\text{P}_3\text{O}_9$ .**

Very sol. in cold  $\text{H}_2\text{O}$  before it is fused. (Lundborn, Acta Lund. 1873. 14)

**Potassium orthophosphate,  $\text{K}_3\text{PO}_4$ .**

Not deliquescent. Very sol in  $\text{H}_2\text{O}$  (Graham, Pogg. 32. 47)

Very sl. sol. in cold; easily in hot  $\text{H}_2\text{O}$  (Darracq)

**Solubility in  $\text{H}_2\text{PO}_4 + \text{Aq}$  at  $25^\circ$ .**

In 1000 g. of the solution, mols

K	$\text{PO}_4$
9.14	3.13
8.84	3.22
8.42	3.44
7.52	3.78
6.90	4.15
6.88	4.12

(D'Ans and Schreiner, Z. phys. Ch. 1910, 75. 103.)

Insol. in alcohol

**Potassium hydrogen orthophosphate,**

Very unstable; very sol in  $\text{H}_2\text{O}$  with decomp. Identical with the substance de-

scribed as dipotassium phosphate by Berzelius. (Staudenmaier, Z. anorg. 1894, 5. 389.)

$3\text{K}_2\text{HPO}_4, \text{KH}_2\text{PO}_4 + 2\text{H}_2\text{O}$ . Very unstable, very sol in  $\text{H}_2\text{O}$  with decomp (Staudenmaier.)

**Potassium hydrogen orthophosphate,**

Deliquescent Very sol. in  $\text{H}_2\text{O}$  and alcohol

**Solubility in  $\text{H}_2\text{PO}_4 + \text{Aq}$  at  $25^\circ$ .**

In 1000 g. of the solution, mols

K	$\text{PO}_4$
6.80	4.08
6.80	4.05
6.76	3.96
6.50	3.81

(Parravano and Mieli.)

Potassium *pyrophosphate*,  $\text{K}_2\text{P}_2\text{O}_7 + 3\text{H}_2\text{O}$

Very deliquescent, and sol in  $\text{H}_2\text{O}$ .

Precipitated from aqueous solution by alcohol (Schwarzenberg, A 65. 136)

Insol. in methyl acetate. (Naumann, B. 1903, 42. 3790.)

Potassium hydrogen *pyrophosphate*,  $\text{K}_2\text{H}_2\text{P}_2\text{O}_7$ .

Very deliquescent, and sol in  $\text{H}_2\text{O}$ . Insol. in alcohol (Schwarzenberg.)

Potassium silver *metaphosphate*,  $\text{K}_2\text{Ag}_2(\text{PO}_3)_4 + \text{H}_2\text{O}$ .

(Tammann, J pr 1892, (2) 45. 417.)

Potassium sodium *dimetaphosphate*,  $\text{KNaP}_2\text{O}_6 + \text{H}_2\text{O}$ .

Sol. in 24 pts.  $\text{H}_2\text{O}$ . (Fleitmann, Pogg 78. 339.)

Potassium sodium phosphate,  $\text{KNaHPO}_4 + 7\text{H}_2\text{O}$ .

Not efflorescent Sol. in  $\text{H}_2\text{O}$ .

Tripotassium *trisodium hexahydrogen phosphate*,  $\text{H}_4\text{Na}_3\text{K}_3(\text{PO}_4)_4 + 22\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Filhol and Senderens, C. R. 93. 358.)

Potassium sodium *pyrophosphate*,  $\text{K}_2\text{Na}_2\text{P}_2\text{O}_7 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Schwarzenberg, A. 65. 140)

Potassium strontium *dimetaphosphate*,  $\text{K}_2\text{Sr}(\text{P}_2\text{O}_6)_2 + 4\text{H}_2\text{O}$

As the KBA comp. (Glatzel, Dissert. 1880.)

Potassium strontium *hexametaphosphate*,  $\text{K}_4\text{Sr}_2\text{P}_6\text{O}_{18}$ .

(Tammann, J pr. 1892, (2) 45. 435.)

Potassium strontium *orthophosphate*,  $\text{K}_2\text{SrP}_2\text{O}_6$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Grandeau, A. ch. (6) 8. 103.)

Potassium strontium *pyrophosphate*,  $\text{K}_2\text{SrP}_2\text{O}_7$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Ouvrard, C. R. 106. 1599.)

Potassium thorium phosphate,  $\text{K}_2\text{O}$ ,  $4\text{ThO}_2$ ,  $3\text{P}_2\text{O}_5$ .

Insol. in  $\text{HCl}$ ,  $\text{HNO}_3$ , or aqua regia. (Troost and Ouvrard, C. R. 102. 1422.)

$\text{K}_2\text{O}$ ,  $\text{ThO}_2$ ,  $\text{P}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HNO}_3$  + Aq. (Troost and Ouvrard)  $6\text{K}_2\text{O}$ ,  $3\text{ThO}_2$ ,  $4\text{P}_2\text{O}_5$ . Sol. in acids. (Troost and Ouvrard.)

Potassium tin (stannic) phosphate,  $\text{K}_2\text{O}$ ,  $4\text{SnO}_2$ ,  $3\text{P}_2\text{O}_5$ .

(Ouvrard, C. R. 111. 177.)

$\text{K}_2\text{O}$ ,  $2\text{SnO}_2$ ,  $\text{P}_2\text{O}_5$ . (Ouvrard.)

Potassium titanium phosphate,  $\text{K}_2\text{O}$ ,  $4\text{TiO}_2$ ,  $3\text{P}_2\text{O}_5$ .

(Ouvrard, C. R. 111. 177.)

$\text{K}_2\text{O}$ ,  $2\text{TiO}_2$ ,  $\text{P}_2\text{O}_5$ . (Ouvrard.)

Potassium uranous phosphate,  $4\text{UO}_2$ ,  $\text{K}_2\text{O}$ ,  $3\text{P}_2\text{O}_5$ .

Practically insol. in conc.  $\text{HNO}_3$  and  $\text{HCl}$ , even when the acids are boiling. Attacked by  $\text{HF} + \text{HNO}_3$ . (Colani, A ch 1907, (8) 12. 133.)

Potassium uranous *metaphosphate*,  $\text{UO}_2$ ,  $\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ .

Easily sol. in  $\text{HNO}_3$ . Sol in conc.  $\text{HCl}$ . (Colani.)

Potassium uranous *pyrophosphate*,  $3\text{UO}_2$ ,  $6\text{K}_2\text{O}$ ,  $4\text{P}_2\text{O}_5$ .

Sol. in acids. (Colani)

Potassium uranyl phosphate,  $\text{K}_2\text{O}$ ,  $\text{UO}_2$ ,  $\text{P}_2\text{O}_5$ .

(Ouvrard, C. R. 110. 1333.)

$2\text{K}_2\text{O}$ ,  $\text{UO}_2$ ,  $\text{P}_2\text{O}_5$ . (Ouvrard.)

$\text{K}_2\text{O}$ ,  $2\text{UO}_2$ ,  $\text{P}_2\text{O}_5$ . (Ouvrard.)

- Potassium uranyl orthophosphate**,  $K(UO_2)PO_4 \cdot 3H_2O$   
As  $NH_4$  comp. (Lienau, Dissert. 1898.)
- Potassium vanadium phosphate**.  
See Phosphovanadate, potassium.
- Potassium yttrium phosphate**,  $3K_2O, Y_2O_3, 2P_2O_5$   
 $K_2O, Y_2O_3, 2P_2O_5$ ,  
 $3K_2O, 5Y_2O_3, 6P_2O_5$  (Duboin, C. R. 107. 622)
- Potassium zinc tetrametaphosphate**,  
 $K_4Zn(PO_3)_4 \cdot 6H_2O$   
Sol. in 70 pts  $H_2O$ . (Glatzel, Dissert 1880.)
- Potassium zinc phosphate**,  $KZnPO_4$ .  
Insol. in  $H_2O$ . Sol. in dil acids. (Ouvrard, C. R. 106. 1729)  
 $K_2ZnF_2O_7$  As above.
- Potassium zirconium phosphate**,  $K_2O, 4ZrO_3, 3P_2O_5$ .  
Insol. in acids or aqua regia. (Troost and Ouvrard, C. R. 102. 1422)  
 $K_2O, ZrO_3, P_2O_5$  Insol. in  $H_2O, HNO_3, HCl$ , or aqua regia. Sol. in hot conc.  $H_2SO_4$ . (Troost and Ouvrard.)
- Potassium phosphate selenate**.  
See Selenophosphate, potassium.
- Potassium hydrogen phosphate sulphate**,  
 $KH_2PO_4, KHSO_4$   
Decomp by  $H_2O$  and alcohol (Jacquelin.)
- Rhodium phosphate, basic**,  $4Rh_2O_3, 3P_2O_5 + 32H_2O$ .  
Insol. in  $H_2O$  or acids. (Claus)  
 $Rh_2O_3, P_2O_5 + 6H_2O = Rh_2PO_4 + 3H_2O$ . Sol. in  $H_2O$ . (Claus)
- Rubidium metaphosphate**,  $RbPO_3$ .  
Sol. in  $H_2O$  (von Berg, B. 1901, 34. 4183)
- Rubidium orthophosphate**,  $Rb_3PO_4 + 4H_2O$   
Hydroscopic; sol. in  $H_2O$ ; pptd. by alcohol. (von Berg, B. 1901, 34. 4183)
- Rubidium hydrogen orthophosphate**,  
 $Rb_3HPO_4 + H_2O$ .  
Sol. in  $H_2O$ ; insol. in conc.  $NH_4OH + Aq$ ; insol. in alcohol. (von Berg.)
- Rubidium dihydrogen orthophosphate**,  
 $RbH_2PO_4$ .  
Very sol. in  $H_2O$ ; pptd. by alcohol (von Berg.)
- Rubidium pyrophosphate**,  $Rb_2P_2O_7$ .  
Hydroscopic; sol. in  $H_2O$ . (von Berg.)
- Samarium anhydrometaphosphate**,  $Sm_2O_3, 5P_2O_5$ .  
Insol. in  $H_2O$  or  $HNO_3 + Aq$ . (Cleve.)
- Samarium orthophosphate**,  $SmPO_4$ .  
Scarcely attacked by boiling  $HNO_3 + Aq$ . (Cleve.)  
 $+ 2H_2O$ .
- Samarium pyrophosphate**,  $SmHP_2O_7 + 1\frac{1}{2}H_2O$ .  
(Cleve.)
- Silicon phosphate**.  
See Silicophosphoric acid.
- Silver metaphosphate**,  $Ag_3O, 2P_2O_5 + H_2O$ .  
(Kroll, Z. anorg. 1912, 78. 408.)
- Silver dimetaphosphate**,  $Ag_3P_2O_6$ .  
Very al. sol. in  $H_2O$ . (Fleitmann, Pogg. 78. 253)  
Sol. in cold aniline metaphosphate +  $Aq$ . (Nicholson.)  
Very al. sol. in  $H_2O$ . (Warschauer, Dissert. 1903.)  
 $+ H_2O$ . Very sol. in  $H_2O$ . (Langheld, B. 1912, 45. 3760.)
- Silver trimetaphosphate**,  $Ag_3P_3O_9$ .  
Sol. in 60 pts cold  $H_2O$ . Can be crystallized from conc.  $HNO_3 + Aq$ . (Fleitmann and Henneberg)  
 $+ H_2O$ . (Lindbom)
- Silver hexametaphosphate**,  $Ag_6P_6O_{18}$ .  
Insol. in  $H_2O$ . Sol. in  $HNO_3$  or  $NH_4OH + Aq$ , and in a large excess of sodium hexametaphosphate +  $Aq$ . (Rose)  
Easily decomp. by  $Na_2S + Aq$   
Decomp. gradually by hot  $H_2O$  into  $Ag_3P_3O_9$ .  
When freshly pptd., easily sol. in  $H_2O$   
Easily sol. in dil acids. (Lüder, Z. anorg. 6. 15.)
- Silver orthophosphate**,  $Ag_3PO_4$ .  
Very al. sol. in  $H_2O$  1 l.  $H_2O$  dissolves  $65 \times 10^{-3}$  g.  $Ag_3PO_4$  at  $19.46^\circ$  (Böttger, Z. phys. Ch. 1903, 46. 603)  
Sol. in  $H_2PO_4, HNO_3$ , or  $HCl, H_2O_2 + Aq$ , in  $NH_4OH$  or  $(NH_4)_2CO_3 + Aq$ . Less easily in ammonium nitrate or succinate, and incompletely in  $(NH_4)_2SO_4 + Aq$ . (Lassaigne, J. Pharm. (3) 16. 289.)  
Insol. in  $Na_2HPO_4 + Aq$ . (Stromeyer.)  
Not pptd. in presence of  $Na$  citrate. (Spiller.)  
If 1 mol.  $Ag_3PO_4$  is boiled with 1 mol.  $Na_2CO_3$ , 44% of it is decomp. (Malaguti.)  
Readily sol. in soluble hyposulphites +  $Aq$  with decomp. (Hersehcl)  
Insol. in  $Ag$  salts +  $Aq$ . (Rose.)  
Insol. in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 829.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)  
Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

**Silver hydrogen orthophosphate,  $\text{Ag}_3\text{HPO}_4$ .**

Decomp. by  $\text{H}_2\text{O}$  or alcohol into  $\text{H}_3\text{PO}_4$  and  $\text{Ag}_3\text{PO}_4$ . (Joly, C. R. 103. 1071.)

Sol. in  $\text{H}_3\text{PO}_4 + \text{Aq}$ ; insol. in ether. (Schwarzenberg, A. 65. 162.)

**Silver pyrophosphate,  $\text{Ag}_2\text{P}_2\text{O}_7$ .**

Insol. in hot or cold  $\text{H}_2\text{O}$  Sol in cold  $\text{HNO}_3 + \text{Aq}$  without decomp. Decomp. by hot  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$  into orthophosphate. Decomp. by  $\text{HCl} + \text{Aq}$  into  $\text{AgCl}$  and  $\text{H}_3\text{PO}_4$ . Insol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp. (Stromeyer, Schw. J. 58. 126.)

Insol. in  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ . Very sl. sol. in  $\text{AgNO}_3 + \text{Aq}$  (Schwarzenberg, A. 65. 161.)  
Not completely insol. in  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$  (Rosc.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

**Silver hydrogen pyrophosphate,  $\text{Ag}_2\text{H}_2\text{P}_2\text{O}_7$ .**

Decomp. by  $\text{H}_2\text{O}$  into  $\text{Ag}_2\text{P}_2\text{O}_7$ . (Hurtzig and Geuther, A. 111. 160.)

Decomp. by cold  $\text{H}_2\text{O}$ . (Cavalier, C. R. 1904, 139. 285.)

**Silver hydrogen pyrophosphate metaphosphate,  $2\text{Ag}_2\text{HP}_2\text{O}_7, \text{HPO}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HNO}_3 + \text{Aq}$ . (H. and G.)

**Silver tetraphosphate,  $6\text{Ag}_2\text{O}, 4\text{P}_2\text{O}_5 = \text{Ag}_8\text{P}_4\text{O}_{18}$ .**

Insol. in, but gradually decomp. by boiling  $\text{H}_2\text{O}$ . (Berzelius.)

Sol. in large excess of the corresponding Na salt + Aq.

**Silver dekaphosphate,  $\text{Ag}_{12}\text{P}_{10}\text{O}_{31}$ .**

Easily sol. in sodium dekaphosphate + Aq. (Fleitmann and Henneberg, A. 65. 330.)

**Silver ultraphosphate,  $\text{Ag}_2\text{O}, 3\text{P}_2\text{O}_5$ .**

(Kroll, Z. anorg. 1912, 76. 407.)

**Silver sodium dimetaphosphate,  $\text{AgNaP}_2\text{O}_6$ .**

Sol. in  $\text{H}_2\text{O}$ . (Fleitmann and Henneberg, Pogg. 65. 310.)

**Silver sodium pyrophosphate,  $6\text{Ag}_2\text{P}_2\text{O}_7, \text{Na}_4\text{P}_2\text{O}_7 + 4\text{H}_2\text{O}$ .**

Not completely sol. in  $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ . Easily sol. in  $\text{HNO}_3 + \text{Aq}$ . (Baer, Pogg. 75. 152.)

Easily sol. in  $\text{H}_2\text{O}$ . (Stromeyer.)

$\text{Ag}_2\text{NaP}_2\text{O}_6 + \frac{1}{2}\text{H}_2\text{O}$ . Ppt. (Stange, Z. anorg. 1896, 12. 460.)

**Silver uranyl phosphate,  $2\text{Ag}_2\text{O}, 6\text{UO}_3, 3\text{P}_2\text{O}_5 + 30\text{H}_2\text{O}$ .**

(Blinkoff, Dissert. 1900.)

**Silver phosphate ammonia,  $\text{Ag}_3\text{PO}_4, 4\text{NH}_3$ .**  
(Widmann, B. 17. 2284.)

**Sodium triphosphate,  $\text{Na}_5\text{P}_3\text{O}_{16}$ .**

Very sol. in  $\text{H}_2\text{O}$ ; decomp. easily in aq. solution at  $100^\circ$ . (Schwarz, Z. anorg. 1895, 9. 253.)

**Sodium monometaphosphate,  $\text{NaPO}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. and conc. acids. (Maddrell, A. 61. 63.)

Insol. in acids. (Graham.)

Gradually decomp. by alkalis

**Sodium dimetaphosphate,  $\text{Na}_2\text{P}_2\text{O}_6 + 2\text{H}_2\text{O}$ .**

Deliquescent. Sol. in 7.2 pts. of cold or hot  $\text{H}_2\text{O}$ . Very sol. in conc.  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{NaOH} + \text{Aq}$ . Insol. in strong, very sl. sol. in dilute alcohol. (Fleitmann, Pogg. 78. 246.)

**Sodium trimetaphosphate,  $\text{Na}_3\text{P}_3\text{O}_{10} + 6\text{H}_2\text{O}$ .**

Sol. in 4.5 pts. cold  $\text{H}_2\text{O}$ . Insol. in strong, very sl. sol. in dil. alcohol. (Fleitmann and Henneberg, A. 65. 307.)

Decomp. by boiling  $\text{H}_2\text{O}$ . (Lindbom.)

**Sodium tetrametaphosphate,  $\text{Na}_4\text{P}_4\text{O}_{12}$ .**

Sol. in  $\text{H}_2\text{O}$ ; cryst. with about  $4\text{H}_2\text{O}$ . Less sol. in alcohol than in  $\text{H}_2\text{O}$ . (Fleitmann, Pogg. 78. 854.)

**Sodium hexametaphosphate,  $\text{Na}_6\text{P}_6\text{O}_{18}$ .**

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Graham, Pogg. 32. 56.)

**Sodium orthophosphate,  $\text{Na}_3\text{PO}_4 + 12\text{H}_2\text{O}$ .**

Not deliquescent in dry air.

100 pts  $\text{H}_2\text{O}$  dissolve 19.6 pts. crystals at  $15.5^\circ$  (Graham.)

100 pts  $\text{H}_2\text{O}$  dissolve 28.3 pts  $\text{Na}_3\text{PO}_4 + 12\text{H}_2\text{O}$  at  $15^\circ$ . (Schiff.)

**Solubility in  $\text{H}_3\text{PO}_4 + \text{Aq}$  at  $25^\circ$ .**

In 1000 g. of the solution, mols	
Na	$\text{PO}_4$

(D'Ans and Schreiner, Z. phys. Ch. 1911, 75, 99.)

\* Transition points.

The composition of the hydrates formed by this salt at different dilutions is calculated

from determinations of the lowering of the fr. pt. produced by the salt and of the conductivity and sp. gr. of its aqueous solutions. (Jones, Am. Ch. J. 1905, 34, 318.)

$\text{Na}_2\text{HPO}_4 + \text{Aq}$  saturated at  $15^\circ$  has 1.0469 sp. gr. (Michel and Krafft), saturated at  $16^\circ$ , 1.0511 (Stolba).

Sp. gr. of  $\text{Na}_2\text{HPO}_4 + \text{Aq}$  at  $19^\circ$ :

$\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$	Sp. gr.	$\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$	Sp. gr.	$\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$	Sp. gr.
1	1.0041	5	1.0208	9	1.0376
2	1.0083	6	1.0250	10	1.0418
3	1.0125	7	1.0292	11	1.0460
4	1.0166	8	1.0332	12	1.0503

(Schiff, A. 110, 70.)

Saturated solution freezes at  $-0.45^\circ$  (Rüddorff, Pogg. 122, 337), and boils at  $105^\circ$  (Griffiths),  $105-106.4^\circ$  (Mulder),  $105.5^\circ$  (Legrand).

Sat.  $\text{Na}_2\text{HPO}_4 + \text{Aq}$  boils at  $105.5^\circ$  (Griffiths), at  $106.5^\circ$ , and contains 113.2 pts  $\text{Na}_2\text{HPO}_4$  to 100 pts  $\text{H}_2\text{O}$  (Legrand), forms a crust at  $106.4^\circ$ , and contains 108.8 pts  $\text{Na}_2\text{HPO}_4$  to 100 pts  $\text{H}_2\text{O}$ , highest temp. observed,  $106.8^\circ$  (Gerlach, Z. anal. 26, 127.)

B.-pt. of  $\text{Na}_2\text{HPO}_4 + \text{Aq}$  containing pts.  $\text{Na}_2\text{HPO}_4$  to 100 pts.  $\text{H}_2\text{O}$ . G = according to Gerlach (Z. anal. 26, 450); L = according to Legrand (A. ch. (2) 59, 426.)

B.-pt.	G	L	B.-pt.	G	L
100.5°	8.6	11.0	104°	68.4	76.4

See also above

Melts in crystal water below  $100^\circ$ , and easily forms supersaturated solutions. (Gay-Lussac.)

Melts in crystal  $\text{H}_2\text{O}$  at  $34.6^\circ$  (Persoz),  $35^\circ$  (Kopp),  $40-41^\circ$  (Mulder).

Melts in crystal  $\text{H}_2\text{O}$  at  $35^\circ$ . (Tilden, Chem. Soc. 45, 409.)

Supersaturated solutions are brought to crystallization by addition of a crystal of  $\text{Na}_2\text{HPO}_4 + 12\text{H}_2\text{O}$  or an isomorphous substance as  $\text{Na}_2\text{HAsO}_4 + 12\text{H}_2\text{O}$ . (Thomson, Chem. Soc. 35, 200.)

Insol. in alcohol

Sodium dihydrogen phosphate,  $\text{NaH}_2\text{PO}_4 + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  Insol. in alcohol (Graham.)

+ $2\text{H}_2\text{O}$ . Unchanged on air. Very sol. in  $\text{H}_2\text{O}$ , and solubility increases rapidly with the temperature. (Joly and Dufet, C. R. 102, 1391.)

100 pts.  $H_2O$  dissolve 59.9 pts at  $0^\circ$ ; 84.6 pts at  $18^\circ$ . (Joly and Dufet.)

Solubility of  $NaH_2PO_4$  in  $H_2O$  at  $t^\circ$ .

G. of anhydrous  $NaH_2PO_4$  in 100 g  $H_2O$ .

Solid phase;  $NaH_2PO_4 + 2H_2O$ .

(Poggiale.)

Sol. in  $H_2SO_4$ . (Walden, Z. anorg. 1902, 29. 384.)

Crystallizes unchanged from  $\text{NH}_4\text{Cl} + \text{Aq}$  (Winkler), or conc.  $\text{NH}_4\text{OH} + \text{Aq}$  (Uelsmann.)

Decomp. into orthophosphate by heating with  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{H}_3\text{PO}_4 + \text{Aq}$ . Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 829.)

Insol. in alcohol. Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

**Sodium hydrogen pyrophosphate**,  $\text{Na}_2\text{H}_2\text{P}_2\text{O}_7$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  containing  $\text{HC}_2\text{H}_3\text{O}_2$  without decomp. (Bayer, J. p. 106, 501.)

Sl. sol. in alcohol. Much more sol. in  $\text{H}_2\text{O}$  than  $\text{NaH}_2\text{PO}_4$ .

+  $6\text{H}_2\text{O}$ . (Rammelsberg, B. A. B. 1883, 21.)

100 g. sat. solution contain 14.95 g.  $\text{Na}_2\text{H}_2\text{P}_2\text{O}_7$  at  $18^\circ$ . (Giran, A. ch. 1902, (7) 30, 249.)

$\text{NaH}_2\text{P}_2\text{O}_7$ . Very hygroscopic. (Salzer, Arch. Pharm. 1894, 232, 369.)

100 g. sat. solution contain 62.7 g. at  $18^\circ$ . (Giran, A. ch. 1902, (7) 30, 249.)

$\text{Na}_4\text{H}_2\text{P}_2\text{O}_7 + \text{H}_2\text{O}$ . Sol. in 3 pts.  $\text{H}_2\text{O}$ . (Salzer, Arch. Pharm. 1894, 232, 366.)

+  $6\text{H}_2\text{O}$ . 100 g. sat. solution contain 28.17 g.  $\text{Na}_4\text{H}_2\text{P}_2\text{O}_7$  at  $18^\circ$ . (Giran.)

**Sodium tetraphosphate**,  $\text{Na}_4\text{P}_4\text{O}_{14}$ .

Slowly sol. in 2 pts. cold  $\text{H}_2\text{O}$ . Easily decomp. +  $18\text{H}_2\text{O}$  (Uelsmann.)

**Sodium hydrogen tetraphosphate**,

Sol. in  $\text{H}_2\text{O}$ .

**Sodium dekaphosphate**,  $\text{Na}_{12}\text{P}_{10}\text{O}_{31}$ .

Sol. in  $\text{H}_2\text{O}$ . (Fleitmann and Henneberg, A. 65, 333.)

**Sodium strontium dincetaphosphate**,

As the  $\text{NaBa}$  comp. (Glatzel, Dissert. 1880.)

**Sodium strontium trimetaphosphate**,

Easily sol. in  $\text{H}_2\text{O}$  and acids. (Fleitmann, A. 65, 315.)

**Sodium strontium orthophosphate**,  $\text{Na}_2\text{SrPO}_4$

Scarcely sol. in  $\text{H}_2\text{O}$ ; sol. in acids.

+  $9\text{H}_2\text{O}$ . (Joly, C. R. 104, 905.)

**Sodium strontium pyrophosphate (?)**.

Sl. sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ . (Baer, Pogg. 75, 166.)

Easily sol. in  $\text{HCl} + \text{Aq}$ , or  $\text{HNO}_3 + \text{Aq}$ .

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

**Sodium thallium pyrophosphate**,

Decomp. by  $\text{H}_2\text{O}$ . (Rosenheim, B. 1915, 48, 588.)

**Sodium thorium orthophosphate**,

Insol. in acids. (Wallroth, Bull. Soc. (2) 39, 316.)

**Sodium thorium phosphate**,  $\text{Na}_2\text{O}$ ,  $4\text{ThO}_2$ ,  $3\text{P}_2\text{O}_5$ .

Insol. in  $\text{HNO}_3$ ,  $\text{HCl}$ , or aqua regia. (Troost and Ouvrard, C. R. 105, 30.)

$5\text{Na}_2\text{O}$ ,  $2\text{ThO}_2$ ,  $3\text{P}_2\text{O}_5$ . Sol. in  $\text{HNO}_3 + \text{Aq}$ . (T and O.)

$\text{Na}_2\text{O}$ ,  $\text{ThO}_2$ ,  $\text{P}_2\text{O}_5$  (T and O.)

**Sodium thorium pyrophosphate**,  $\text{Na}_4\text{P}_2\text{O}_7$ ,  $\text{ThP}_2\text{O}_7 + 2\text{H}_2\text{O}$ .

(Cleve.)

**Sodium tin (stannic) phosphate**,  $\text{Na}_4\text{Sn}_2(\text{PO}_4)_4$ .

(Ouvrard, C. R. 111, 177.)

$\text{Na}_2\text{Sn}(\text{PO}_4)_2$ . (Wunder, J. pr. (2) 4, 339.)

$6\text{Na}_2\text{O}$ ,  $3\text{SnO}_2$ ,  $4\text{P}_2\text{O}_5$ . (Ouvrard.)

**Sodium titanium phosphate**,  $\text{NaTi}_2(\text{PO}_4)_3$ .

Insol. in acids. (Rose, J. B. 1867, 9.)

$6\text{Na}_2\text{O}$ ,  $\text{TiO}_2$ ,  $4\text{P}_2\text{O}_5$ . (Ouvrard, C. R. 111, 177.)

**Sodium uranium phosphate**,  $\text{UO}_2$ ,  $\text{Na}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ .

Easily attacked by acids. (Colani, A. ch. 1907, (8) 12, 137.)

**Sodium uranium metaphosphate**,  $4\text{UO}_2$ ,  $\text{Na}_2\text{O}$ ,  $3\text{P}_2\text{O}_5$ .

Insol. in boiling  $\text{HNO}_3$ . (Colani.)

**Sodium uranium pyrophosphate**,  $3\text{UO}_2$ ,

Sol. in acids. (Colani.)

**Sodium uranyl phosphate**,  $\text{Na}_2\text{O}$ ,  $\text{UO}_2$ ,  $\text{P}_2\text{O}_5$ .

(Ouvrard, C. R. 110, 1333.)

$2\text{Na}_2\text{O}$ ,  $\text{UO}_2$ ,  $\text{P}_2\text{O}_5$ . (Ouvrard.)

$\text{Na}_2\text{O}$ ,  $5\text{UO}_2$ ,  $2\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; decomp. by acetic acid. (Werther, A. 68, 312.)

**Sodium uranyl pyrophosphate**.

Very sol. in  $\text{H}_2\text{O}$ . (Persoz, A. ch. (3) 20, 322.)

**Sodium ytterbium pyrophosphate**,  $\text{NaYbP}_2\text{O}_7$ .

Easily sol. in the strong acids. (Wallroth.)

**Sodium yttrium pyrophosphate**,  $\text{NaYP}_2\text{O}_7$ .

Sol. in  $\text{H}_2\text{O}$ . (Stronmeyer.)

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in strong acids. (Wallroth.)

Sodium zinc triphosphate,  
 $\text{Na}_2\text{O}, 4\text{ZnO}, 3\text{P}_2\text{O}_5 + 19\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Schwarz, Z. anorg. 1895, 9, 266.)

Sodium zinc trimetaphosphate,  $\text{Na}_2\text{O}, 2\text{ZnO}, 3\text{P}_2\text{O}_5$

Ppt. Sol. in  $\text{H}_2\text{O}$ . (Fleischmann and Henneberg, A. 65. 304.)

Sodium zinc tetrametaphosphate,  
 $\text{Na}_2\text{Zn}(\text{PO}_3)_4 + 6\text{H}_2\text{O}$ .  
 As K comp. (Glatzel, Dissert. 1880.)

Sodium zinc octametaphosphate,  
 $\text{Na}_2\text{Zn}_8(\text{PO}_3)_{12}$   
 Insol. in acids.  
 Sol. in conc  $\text{H}_2\text{SO}_4$ . (Tammann, J. pr. 1892, (2) 45. 420.)

Sodium zinc orthophosphate,  $\text{NaZnPO}_4$   
 Difficultly sol. in  $\text{H}_2\text{O}$  or acetic acid. Easily sol. in dil. mineral acids. (Scheffer, A. 145. 53.)  
 $2\text{Na}_2\text{O}, \text{ZnO}, \text{P}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ , sol. in dil. acids. (Ouvrard, C. R. 108. 1796)

Sodium zinc pyrophosphate,  $\text{Na}_2\text{Zn}_2\text{P}_2\text{O}_7$ .  
 Insol. in  $\text{H}_2\text{O}$ , sol. in dil. acids. (Wallroth.)  
 $3\text{Na}_2\text{P}_2\text{O}_7, \text{Zn}_2\text{P}_2\text{O}_7 + 24\text{H}_2\text{O}$ . Very efflorescent. (Pahl.)  
 $\text{Na}_4\text{P}_2\text{O}_7, \text{Zn}_2\text{P}_2\text{O}_7 + 2\frac{1}{2}, 3, 3\frac{1}{2}$ , and  $8\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , sol. in  $\text{Na}_4\text{P}_2\text{O}_7 + \text{Aq}$ . (Pahl, Sv. V. A. F. 30, 7. 35.)  
 $4\text{Na}_2\text{P}_2\text{O}_7, 5\text{Zn}_2\text{P}_2\text{O}_7 + 20\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Pahl.)  
 $\text{Na}_4\text{P}_2\text{O}_7, 4\text{Zn}_2\text{P}_2\text{O}_7 + 12\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$  (Pahl.)

Sodium zirconium phosphate,  $\text{Na}_2\text{O}, 4\text{ZrO}_2, 3\text{P}_2\text{O}_5 = \text{Na}_2\text{Zr}_3(\text{PO}_4)_3$ .  
 Insol. in acids or aqua regia. (Troost and Ouvrard, C. R. 105. 30)  
 $6\text{Na}_2\text{O}, 3\text{ZrO}_2, 4\text{P}_2\text{O}_5$ . Sol. in acids. (T. and O.)  
 $4\text{Na}_2\text{O}, \text{ZrO}_2, 2\text{P}_2\text{O}_5$ . Sol. in acids. (T. and O.)

Sodium phosphate fluoride,  $\text{Na}_2\text{PO}_4, \text{NaF} + 12\text{H}_2\text{O}$   
 100 pts.  $\text{H}_2\text{O}$  dissolve, at  $25^\circ$ , 12 pts. salt and form solution of 1.0329 sp. gr.; at  $70^\circ$ , 57.5 pts. salt and form solution of 1.1091 sp. gr. (Briegleb, A. 97. 95)  
 $2\text{Na}_2\text{PO}_4, \text{NaF} + 10\text{H}_2\text{O}$ , and  $22\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Baumgarten, J. B. 1865. 219.)

Sodium phosphate stannate,  
 $4\text{Na}_2\text{PO}_4, \text{Na}_2\text{SnO}_3 + 48\text{H}_2\text{O}$ .  
 (Prandtl, B. 1907, 40. 2132.)

Sodium phosphate titanate,  
 $\text{Na}_2\text{O}, \text{TiO}_2, \text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$   
 Hygroscopic. (Mazzuchelli and Pantanelli, C. C. 1909, II. 420.)

Sodium phosphate vanadate.  
 See Phosphovanadate, sodium.

Strontium monometaphosphate,  $\text{Sr}(\text{PO}_3)_2$ .  
 Insol. in  $\text{H}_2\text{O}$  and acids. Not decomp. by alkali carbonates + Aq. (Maddrell, A. 61. 61.)

Strontium hexametaphosphate.  
 Nearly insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids. (Ludert, Z. anorg. 5. 15.)

Strontium orthophosphate, basic,  $\text{Sr}(\text{OH})_2, \text{Sr}_3(\text{PO}_4)_2$   
 (Woyczynski, Z. anorg. 1894, 6. 311.)

Strontium orthophosphate,  $\text{Sr}_3(\text{PO}_4)_2$ .  
 Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$  (Erlenmeyer, J. B. 1857. 145.)

Strontium hydrogen phosphate,  $\text{SrHPO}_4$ .  
 Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_3\text{PO}_4$ ,  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . (Vauquelin.) Easily sol. in cold ammonium nitrate, chloride, or succinate + Aq, but is partly precipitated by a little  $\text{NH}_4\text{OH} + \text{Aq}$ . (Brett)  
 Sol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$ . (Fuchs, 1894.)  
 Sol. in Na citrate + Aq. (Spiller.)  
 Partly decomp. by boiling  $\text{Na}_2\text{CO}_3$ , and  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Dulong.)  
 $\text{SrH}_2(\text{PO}_4)_2 + 2\text{H}_2\text{O}$  Decomp. by treating with  $\text{H}_2\text{O}$ , leaving 4.29%  $\text{SrHPO}_4$ . (Barthe.)

Strontium phosphate, acid,  $\text{H}_2\text{O}, 2\text{SrO}, 3\text{P}_2\text{O}_5 + x\text{H}_2\text{O}$ .  
 Entirely sol. in  $\text{H}_2\text{O}$  (Barthe, C. R. 114. 1267.)

Strontium pyrophosphate,  $\text{Sr}_2\text{P}_2\text{O}_7 + \text{H}_2\text{O}$ .  
 Somewhat sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{HCl}_2\text{H}_3\text{O}_4$  or  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ . (Schwarzenberg, A. 65. 144.)  
 $+ 2\frac{1}{2}\text{H}_2\text{O}$  (Knorre and Oppelt, B. 21. 773.)

Strontium hydrogen pyrophosphate,  
 $\text{SrH}_2\text{P}_2\text{O}_7, 2\text{Sr}_2\text{P}_2\text{O}_7 + 6\text{H}_2\text{O}$ .  
 Ppt. (Knorre and Oppelt, B. 21. 772)  
 $\text{SrH}_2\text{P}_2\text{O}_7, 3\text{Sr}_2\text{P}_2\text{O}_7 + \text{H}_2\text{O}$ , and  $+ 2\text{H}_2\text{O}$ . (Knorre and Oppelt.)  
 $\text{Sr}_2\text{H}_2(\text{P}_2\text{O}_7)_2 + 8\text{H}_2\text{O}$ , and  $+ 12\text{H}_2\text{O}$ .  
 Ppt. (Pahl, Gm. - K. 2, 2. 172)  
 $\text{Sr}_2\text{H}_2(\text{P}_2\text{O}_7)_2 + 5\text{H}_2\text{O}$ , and  $+ 18\text{H}_2\text{O}$  and  $+ 20\text{H}_2\text{O}$ .  
 Insol. in  $\text{Sr}(\text{NO}_3)_2 + \text{Aq}$  or  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ . (Pahl, Gm - K. 2, 2. 171.)

Strontium thorium phosphate,  
 $\text{Th}_2\text{O}, \text{SrO}, \text{P}_2\text{O}_5$   
 (Colani, C. R. 1909, 149. 209.)

**Strontium uranium metaphosphate,**  
 $\text{UO}_2, \text{SrO}, \text{P}_2\text{O}_5$ .  
 (Colant, A. ch. 1907, (8) 12. 141.)

**Strontium uranyl phosphate,**  
 $\text{SrO}, 4\text{UO}_2, 2\text{P}_2\text{O}_5 + 21\text{H}_2\text{O}$   
 (Blinkoff, Dissert 1900.)  
 $2\text{SrO}, 5\text{UO}_2, 2\text{P}_2\text{O}_5 + 24\text{H}_2\text{O}$ . As Ba comp.  
 (Blinkoff.)

**Strontium phosphate chloride,**  $3\text{Sr}_3(\text{PO}_4)_2$ ,  
 $\text{SrCl}_2$ .  
*Strontium apatite* Insol. in  $\text{H}_2\text{O}$ . (De-  
 ville and Caron)

**Tellurium phosphate (?)**.  
 Insol. in  $\text{H}_2\text{O}$ . (Berzelius)

**Thalious metaphosphate,**  $\text{TiPO}_3$ .  
 Two modifications:  
 a. Difficultly sol. in  $\text{H}_2\text{O}$ .  
 b. Extremely easily sol. in  $\text{H}_2\text{O}$ . (Lamy)

**Thalious orthophosphate,**  $\text{Ti}_3\text{PO}_4$ .  
 1 pt. is sol. in 201.2 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 149  
 pts. boiling  $\text{H}_2\text{O}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ .  
 (Crookes.) Sl. sol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . Very  
 easily sol. in solutions of  $\text{NH}_4$  salts (Car-  
 stanjen.) Insol. in alcohol (Lamy)

**Thalious hydrogen phosphate,**  $\text{Ti}_2\text{HPO}_4$ .  
*Anhydrous* Much less sol. in  $\text{H}_2\text{O}$  than  
 the hydrous salt, but easily sol. in a solution  
 of the hydrous salt (Lamy)  
 $+ 1\frac{1}{2}\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  Insol. in  
 alcohol (Lamy.)  
 Composition is  $\text{HTi}_2\text{PO}_4$ ,  $2\text{H}_2\text{TiPO}_4$ .  
 (Rammelsberg, W. Ann. 16. 694.)

**Thalious dihydrogen phosphate,**  $\text{TiH}_2\text{PO}_4$ .  
 Very easily sol. in  $\text{H}_2\text{O}$  Insol. in alcohol  
 (Rammelsberg, B. 3. 278.)

**Trithalious trihydrogen phosphate,**  $\text{Ti}_3\text{HPO}_4$ ,  
 $2\text{TiH}_2\text{PO}_4$ .  
 True composition of  $\text{Ti}_3\text{HPO}_4$  of Lamy  
 (Rammelsberg)

**Thalious pyrophosphate,**  $\text{Ti}_2\text{P}_2\text{O}_7$ .  
 Sol. in 2.5 pts.  $\text{H}_2\text{O}$  with slight decomposi-  
 tion. (Lamy.)  
 $+ 2\text{H}_2\text{O}$ . More sol. in  $\text{H}_2\text{O}$  than the above  
 salt, with partial decomp. (Lamy.)

**Thalious hydrogen pyrophosphate,**  $\text{H}_2\text{Ti}_2\text{P}_2\text{O}_7$ ,  
 $+ \text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . (Lamy.)

**Thallic phosphate, basic,**  $2\text{Ti}_2\text{O}_3, \text{P}_2\text{O}_5 +$   
 $5\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ .

**Thallic phosphate, basic,**  $\text{Ti}_2\text{P}_2\text{O}_7 + 13\text{H}_2\text{O}$   
 (Rammelsberg, W. Ann. 16. 694.)  
 $\text{Ti}_6\text{P}_4\text{O}_{19} + 12\text{H}_2\text{O}$  (R.)

**Thallic phosphate,**  $\text{TiPO}_4 + 2\text{H}_2\text{O}$   
 Completely insol. in  $\text{H}_2\text{O}$  Sol. in conc  
 $\text{HNO}_3$ , and dil.  $\text{HCl} + \text{Aq}$ . (Willm.)

**Thorium metaphosphate,**  $\text{Th}(\text{PO}_3)_4$ .  
 Insol. in  $\text{H}_2\text{O}$  (Troost, C. R. 101. 210.)

**Thorium metaphosphate,**  $\text{ThO}_2, 2\text{P}_2\text{O}_5$ .  
 Insol. in acids. (Johansson, B. 22. 976)

**Thorium orthophosphate,**  $\text{Th}_4(\text{PO}_4)_4 + 4\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$  and phosphoric acid (Ber-  
 zelius); also acetic acid (Cleve.)  
 Sol. in  $\text{HCl}$ , and  $\text{HNO}_3 + \text{Aq}$ . (Cleve)

**Thorium hydrogen phosphate,**  $\text{ThH}_2(\text{PO}_4)_2 +$   
 $\text{H}_2\text{O}$ .  
 Precipitate

**Thorium pyrophosphate,**  $\text{ThP}_2\text{O}_7 + 2\text{H}_2\text{O}$ .  
 Precipitate. Insol. in  $\text{H}_2\text{O}$ . Sol. in great  
 excess of pyrophosphoric acid or sodium pyro-  
 phosphate +  $\text{Aq}$ . (Cleve.)

**Thorium phosphate bromide.**  
 See Bromophosphate, thorium.

**Thorium phosphate chloride.**  
 See Chlorophosphate, thorium.

**Tin (stannous) phosphate,**  $5\text{SnO}, 4\text{P}_2\text{O}_5 +$   
 $4\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Lenssen, A. 114. 113.)  
 $\text{Sn}_2(\text{PO}_3)_2$  Insol. in  $\text{H}_2\text{O}$ . Sol. in mineral  
 acids. (Kühn)  
 Insol. in  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . Sol. in  
 $\text{KOH} + \text{Aq}$ .

**Tin (stannic) phosphate,**  $2\text{SnO}_2, \text{P}_2\text{O}_5 +$   
 $10\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$ . (Reynoso, J.  
 pr. 64. 261.)  
*Anhydrous.* Insol. in acids. (Hautefeuille  
 and Margottet, C. R. 102. 1017)

**Tin (stannic) phosphate,**  $\text{SnP}_2\text{O}_7$ .  
 Insol. in acids. (Hautefeuille and Margot-  
 tet, C. R. 102. 1017)

**Tin (stannous) phosphate chloride,**  $3\text{SnO},$   
 $\text{P}_2\text{O}_5, \text{SnCl}_2 + \text{H}_2\text{O}$ .  
 Not decomp. by hot  $\text{H}_2\text{O}$ . (Lenssen, A.  
 114. 113.)

**Titanium phosphate,**  $\text{Ti}_2\text{P}_2\text{O}_7 = 2\text{TiO}_2, \text{P}_2\text{O}_5$ .  
 Insol. in acids. (Hautefeuille and Margot-  
 tet, C. R. 102. 1017.)  
 (Ouvrard, C. R. 111. 177.)  
 $+ 3\text{H}_2\text{O}$ . Ppt. Insol. in  $\text{H}_2\text{O}$ . (Merz.)

$\text{TiO}_2$ ,  $\text{P}_2\text{O}_5$ . (Knop) Is  $\text{NaTi}_3(\text{PO}_4)_3$   
(Wunder, J. B. 1871. 324)  
 $\text{H}_2\text{TiPO}_4$ . Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ .  
Sl sol in  $\text{H}_2\text{PO}_4$   
Sol in  $\text{KOH}$ ,  $\text{NH}_4\text{OH}$ ,  $(\text{NH}_4)_2\text{CO}_3$  and  
 $(\text{NH}_4)_2\text{HPO}_4 + \text{Aq}$   
Very sl. sol in acetic acid. (Faber, Z.  
anal. 1907, 46. 288.)

**Uranous metaphosphate,  $\text{U}(\text{PO}_3)_2$ .**

Insol. in  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4$ , even  
when hot and conc. (Colani, A. ch. 1907, (8)  
12. 105.)

**\*Uranic metaphosphate,  $\text{U}_2(\text{PO}_3)_4$**

Insol. in  $\text{H}_2\text{O}$  and acids. (Hautefeuille and  
Margottet, C. R. 96. 849.)

**Uranous orthophosphate,  $\text{U}_3(\text{PO}_4)_4$ .**

More easily attacked by acids than the pyro  
and meta phosphates, especially by  $\text{HNO}_3$   
(Colani, A. ch. 1907, (8) 12. 123)

**Uranous hydrogen orthophosphate,  $\text{UHPO}_4 + \text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Insol. in dil. sl sol. in  
conc.  $\text{HCl} + \text{Aq}$ . Decomp. by  $\text{KOH} + \text{Aq}$ ,  
not by  $\text{NH}_4\text{OH} + \text{Aq}$  (Rammelsberg, Pogg  
59. 1)

**Uranous pyrophosphate,  $\text{UP}_2\text{O}_7$ .**

Insol in  $\text{H}_2\text{O}$ .  
Sl sol in min. acids. (Colani.)

**Uranous phosphate,  $2\text{UO}_3$ ,  $\text{P}_2\text{O}_5$**

Easily attacked by boiling  $\text{HNO}_3$   
(Colani)  
 $\text{UO}_3$ ,  $\text{P}_2\text{O}_5 + 5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{SO}_4$  and  
in  $\text{HCl} + \text{Aq}$  of medium concentration. Sol.  
in very conc.  $\text{HCl} + \text{Aq}$ . (Aloy, Dissert.  
1901.)

**Uranyl metaphosphate,  $\text{UO}_2(\text{PO}_3)_2$**

(Rammelsberg, B. A. B. 1872. 447.)  
 $\text{UO}_3$ ,  $2\text{P}_2\text{O}_5$ . Insol. in acids. (Johnsson,  
B. 22. 976.)

**Uranyl orthophosphate,  $\text{UO}_2\text{HPO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ .  
 $+3\text{H}_2\text{O}$   
 $+4\text{H}_2\text{O}$ .  
 $+4\frac{1}{2}\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . Sol. in 67,000  
pts.  $\text{HCl} + \text{Aq}$ , 50,000 pts.  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ ,  
and 300,000 pts. of a mixture of the above  
two solutions Sol. in  $\text{K}_2\text{CO}_3$  or  $\text{Na}_2\text{CO}_3 + \text{Aq}$ .  
(Kitschin, C. N. 27. 199)

**Uranyl dihydrogen phosphate,**

$(\text{UO}_2\text{H}_2(\text{PO}_4)_2 + 3\text{H}_2\text{O}$ .  
Decomp. by  $\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{PO}_4 + \text{Aq}$ .  
(Werther, J. pr. 43. 322.)

**Uranyl pyrophosphate,  $(\text{UO}_2)_2\text{P}_2\text{O}_7 + 5\text{H}_2\text{O}$ .**

Efflorescent Insol in  $\text{H}_2\text{O}$ . Sol. in  
 $\text{HNO}_3 + \text{Aq}$ , and  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ . Insol in  
 $\text{Na}_2\text{HPO}_4 + \text{Aq}$ . Insol in alcohol or ether.  
(Garard, C. R. 34. 22.)  
 $+4\text{H}_2\text{O}$ . (Castang, Bull. Soc. (2) 34. 20.)

**Uranyl tetraphosphate (?),  $\text{UO}_2\text{P}_4\text{O}_{11}$ .**

(Johnsson, B. 22. 978.)

**Uranous orthophosphate chloride,  $\text{U}_3(\text{PO}_4)_4$ ,  
 $\text{UCl}_4$**

Sl sol. in  $\text{HCl} + \text{Aq}$  Sol. in  $\text{HNO}_3$  and  
 $\text{HNO}_3 + \text{HCl}$  (Colani, A. ch. 1907, (8) 12.  
127)

**Uranous hydrogen orthophosphate chloride,  
 $\text{U}(\text{HPO}_4)_2$ ,  $\text{UCl}_4$**

Very sl. sol. in  $\text{H}_2\text{O}$ . (Aloy, Dissert. 1901.)

**Vanadium phosphate,  $(\text{VO}_2)_2\text{H}_2\text{PO}_4 + 4\frac{1}{2}\text{H}_2\text{O}$ .**

Sol in  $\text{H}_2\text{O}$   
See Phosphovanadic acid.

**Vanadium pyrophosphate,**

$\text{V}_2(\text{P}_2\text{O}_7)_4 + 30\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$  (Rosenheim, B. 1915. 48.  
500)

**Divanadyl phosphate.**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . Insol.  
in alcohol (Berzelius.)

**Ytterbium metaphosphate,  $\text{Yb}(\text{PO}_3)_2$ .**

Insol in  $\text{H}_2\text{O}$  (Cleve, Z. anorg. 1902. 32.  
149.)

**Ytterbium orthophosphate,  $\text{YbPO}_4 + 4\frac{1}{2}\text{H}_2\text{O}$ .**

Ppt. (Cleve)

**Ytterbium phosphate,  $\text{Yb}_2\text{O}_3$ ,  $2\text{P}_2\text{O}_5 + 5\text{H}_2\text{O}$ .**

Sol in  $\text{H}_2\text{O}$  (Cleve)

**Yttrium metaphosphate,  $\text{Y}(\text{PO}_3)_3$ .**

Insol in  $\text{H}_2\text{O}$  or acids (Cleve.)

**Yttrium orthophosphate,  $\text{YPO}_4$ .**

*Anhydrous.* Insol. in  $\text{H}_2\text{O}$  or acids after  
ignition.

*Mm Xenotime.* Insol. in conc. acids. Sl.  
sol in much conc.  $\text{HCl} + \text{Aq}$ , but easily sol.  
therein when first heated with a little  $\text{HCl} + \text{Aq}$ .  
(Wartha, A. 139. 237.)

**Yttrium hydrogen orthophosphate,  $\text{Y}_2(\text{HPO}_4)_3$**

Decomp. by boiling with  $\text{H}_2\text{O}$  into insol.  
 $\text{YPO}_4$  and sol. acid salt.

**Yttrium pyrophosphate,  $\text{YHP}_2\text{O}_7 + 3\frac{1}{2}\text{H}_2\text{O}$ .**

Difficultly sol in acids Decomp. by  
 $\text{H}_2\text{SO}_4$ . Sol in  $\text{Na}_2\text{P}_2\text{O}_7 + \text{Aq}$ . (Cleve.)  
 $2\text{Y}_2\text{O}_3$ ,  $3\text{P}_2\text{O}_5$ . Insol. in acids. (Johnsson,  
B. 22. 976.)

**Zinc metaphosphate.**Sol in  $H_2O$ . (Berzelius.)**Zinc dimetaphosphate,  $Zn_2P_2O_6$ .**Sol. only in boiling  $H_2SO_4$ . (Fleitmann, Pogg. 78, 350.)Not decomp. by boiling  $Na_2S$  or  $(NH_4)_2S$  + Aq. +  $4H_2O$ . Insol. in  $H_2O$ , but decomp. by boiling therewith. (Fleitmann, Pogg. 78, 258.)Sol. in 4 pts.  $H_2O$ . Conc.  $H_2SO_4$  decomp. it easily; other acids act slightly. (Glatzel, Dissert. 1880.)

Difficultly decomp. by boiling acids

**Zinc trimetaphosphate,  $Zn_3(PO_3)_3 + 9H_2O$ .**1 l.  $H_2O$  dissolves 0.1 g. at  $20^\circ$ . (Tammann, J. pr. 1892, (2) 45, 426.)**Zinc tetrametaphosphate,  $Zn_4(PO_3)_4 + 10H_2O$ .**Sol. in 55 pts.  $H_2O$ . Decomp. by acids only on boiling. (Glatzel, Dissert. 1880.)Somewhat sol. in  $HNO_3$  + Aq. Sol in boiling  $H_2SO_4$ . (Glatzel.)**Zinc orthophosphate,  $Zn_3(PO_4)_2 + 4H_2O$ .**Insol. in  $H_2O$ . Easily sol. in acids,  $NH_4OH$ ,  $(NH_4)_2CO_3$ ,  $(NH_4)_2SO_4$ , or  $NH_4NO_3$  + Aq. (Hantz, A. 143, 356.)Sol. in  $NH_4Cl$  + Aq. (Fuchs.)

Easily sol. in Zn salts + Aq. (Rose.)

Insol. in liq.  $NH_3$ . (Franklin, Am. Ch. J. 1808, 20, 830.)Min. *Hopetite*+  $6H_2O$ . (Roynoso.)**Zinc hydrogen phosphate,  $ZnHPO_4 + H_2O$** Insol. in  $H_2O$ ; sol. in  $H_3PO_4$  + Aq. (Gram.)**Zinc tetrahydrogen phosphate,  $ZnH_4(PO_4)_2 + 2H_2O$ .**Nearly insol. in  $H_2O$ , but decomp. thereby into  $H_3PO_4$  and  $10ZnO$ ,  $4P_2O_5 + 10H_2O$  (Demel, B. 12, 1171.)**Zinc phosphate,  $10ZnO, 4P_2O_5 + 10H_2O$** Insol. in  $H_2O$ . (Demel, B. 12, 1171.)**Zinc pyrophosphate,  $Zn_2P_2O_7 + \frac{1}{2}H_2O$ .**Ppt. Sol. in  $H_2SO_4$  + Aq. Sol. in acids,  $KOH$  + Aq.,  $NH_4OH$  + Aq. (Schwarzenberg, A. 65, 151.)Sol. in  $Na_2P_2O_7$  + Aq. (Gladstone), and in  $ZnSO_4$  + Aq. (Rose.)

Insol. in acetic acid. (Knorre, Z. anorg. 1900, 24, 389.)

+  $5H_2O$ . Insol. in  $H_2O$ . (Pahl, J. B. 1873, 229.)**Zinc hydrogen pyrophosphate.**Sol. in  $H_2O$ . (Pahl, Sv. V. A. F. 30, 7, 45.)**Zinc metaphosphate ammonia.**

Ppt. (Bette.)

**Zinc orthophosphate ammonia,  $2ZnO, P_2O_5, 3NH_3 + 8H_2O$ .**

(Rother, A. 143, 356.)

 $6ZnO, 3P_2O_5, 8NH_3 + 4H_2O$ . (Schweikert, A. 145, 517.)**Zinc pyrophosphate ammonia,  $3Zn_2P_2O_7, 4NH_3 + 9H_2O$ .**Ppt. Insol. in  $H_2O$ . (Bette.)**Zirconium orthophosphate,  $5ZrO_2, 4P_2O_5 + 8H_2O$** 

Somewhat sol. in acids. (Hermann, J. pr. 97, 321.)

Insol. in acids. (Paykull, Bull. Soc. (2) 20, 65.)

 $2ZnO, P_2O_5$ . Not attacked by acids. (Hautefeuille and Margottet, C. R. 102, 1017.)**Zirconium pyrophosphate,  $Zr(PO_3)_2$ .**

(Knop, A. 159, 36.)

**Phosphoricovanadicotungstic acid.****Ammonium phosphoricovanadicotungstate,  $14(NH_4)_2O, 2P_2O_5, 7V_2O_5, 31WO_3 + 78H_2O$ .**Sol. in  $H_2O$ . Insol. in alcohol, ether,  $CS_2$  and benzene. (Rogers, J. Am. Chem. Soc. 1903, 25, 305.)**Phosphorimidamide,  $PN_2H_2$** 

(Joannis, C. R. 1904, 139, 365.)

**Phosphorimide,  $P_2(NH)_2$ .**Very sol. in ammoniacal solution of  $NH_4I$  (Hugot, C. R. 1905, 141, 1236.)**Phosphornitryl,  $PON$** 

See Phosphoryl nitride.

**Phosphorosomolybdic acid,  $P_2O_5$ ,** $24MoO_3 + 63H_2O$ .

(Rosenheim and Pinsker, Z. anorg. 1911, 70, 77.)

**Ammonium phosphorosomolybdate,** $2(NH_4)_2O, 2H_3PO_4, 12MoO_3 + 12\frac{1}{2}H_2O$ .Insol. in cold, slightly sol. in hot  $H_2O$ . (Gibbs, Am. Ch. J. 5, 361.)**Phosphorosophosphomolybdic acid.****Ammonium phosphorosophosphomolybdate,  $9(NH_4)_2O, 2H_3PO_3, 3P_2O_5, 72MoO_3 + 38H_2O$ .**Nearly insol. in  $H_2O$ . (Gibbs.)

**Phosphorosophotungstic acid.**

**Potassium phosphorosophotungstate**,  
 $5K_2O, 2H_2PO_3, P_2O_5, 24WO_3 + 13H_2O$   
 Sol in much boiling  $H_2O$  (Gibbs, Am. Ch. J. 7. 313)

**Phosphorosotungstic acid.**

**Ammonium phosphorosotungstate**,  $6(NH_4)_2O,$   
 $4H_2PO_3, 22WO_3 + 25H_2O$   
 Sl. sol. in cold  $H_2O$

**Potassium —**,  $5K_2O, 16H_2PO_3, 32WO_3 +$   
 $46H_2O$   
 Sl. sol. in hot  $H_2O$ .

**Sodium —**,  $2Na_2O, 8H_2PO_3, 22WO_3 +$   
 $35H_2O$   
 Nearly insol. in cold, sl. sol. in hot  $H_2O$   
 (Gibbs, Am. Ch. J. 7. 313).

**Phosphorous anhydride,  $P_2O_3$** 

See Phosphorus trioxide.

**Phosphorous acid,  $H_3PO_3$** 

Deliquescent Very sol in  $H_2O$

**Phosphites.**

The neutral alkali phosphites are sol. in  $H_2O$ ; most of the others are sl. sol. in  $H_2O$ , but sol. in  $H_2PO_3 + Aq$ ; all are insol. in alcohol

**Aluminum phosphite, basic**,  $Al_2(HPO_3)_3,$   
 $Al_2(OH)_6$

Ppt. (Grützner, Arch. Pharm. 1897, 235. 698.)

**Aluminum phosphite.**

Precipitate. (Rose, Pogg. 9. 39)  
 Sl. sol. in  $H_2O$ .

**Ammonium phosphite**,  $(NH_4)_2HPO_3 + H_2O$ .

Very deliquescent, and sol. in  $H_2O$  (Rose, Pogg. 9. 28.)

Sol in 2 pts. cold, and less hot  $H_2O$ . Insol. in alcohol (Berzelius.)

Insol. in acetone. (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37. 4328.)

**Ammonium hydrogen phosphite**, \*  
 $(NH_4)H_2PO_3$ .

Very deliquescent, and sol. in  $H_2O$ . 1 pt.  $H_2O$  dissolves 1.71 pts. salt at  $0^\circ$ ; 1.9 pts. at  $14.5^\circ$ ; and 2.60 pts. at  $31^\circ$  (Amat, C. R. 106. 809.)

**Ammonium hydroxylamine phosphite**,  
 $NH_4(NH_2OH)HPO_3$ .

Sol. in  $H_2O$  and abs. alcohol. (Hofmann, Z. anorg. 1898, 18. 466.)

**Ammonium magnesium phosphite**,  
 $(NH_4)_2Mg_2(PO_3)_4 + 16H_2O$

Slightly sol. in  $H_2O$ . (Rammelsberg, Pogg. 131. 367)

**Antimonyl phosphite**,  $(SbO)_2H_2PO_3$ .

Very sol. in  $H_2O$  containing HCl. (Grützner, Arch. Pharm. 1897, 235. 694.)

**Barium phosphite**,  $BaHPO_3$ .

100 pts.  $H_2O$  dissolve 0.25 pt. (Ure.)  
 Very slightly sol. in  $H_2O$ , and decomp. by boiling  $H_2O$ . (Dulong)

Easily sol. in  $H_2O$  containing  $NH_4Cl$ . (Wackenroder, A. 41. 315.)

Sol in  $H_2PO_3 + Aq$  or  $HCl + Aq$ . (Raulton.)

**Barium hydrogen phosphite**,  $Ba_2H_2(HPO_3)_2 + 8H_2O$ .

Easily sol. in  $H_2O$ , but decomp. by boiling therewith. Insol. in alcohol (Rammelsberg, Pogg. 132. 496.)

**Barium dihydrogen phosphite**,  $BaH_2(HPO_3)_2 + 1\frac{1}{2}H_2O$ .

Easily sol. in  $H_2O$ . (Rose, Pogg. 9. 215)  
 $+ H_2O$ . Sol. in  $H_2O$ ; decomp. by boiling  $H_2O$  into a neutral insol. and an acid sol. salt.

(Wurtz, A. 58. 66.)

$+ 2H_2O$ . Easily sol. in  $H_2O$  (Rammelsberg, Pogg. 132. 496.)

Insol. in alcohol. (Wurtz)

**Bismuth phosphite**,  $2Bi_2O_3, 3P_2O_3$ .

Insol. in  $H_2O$   
 $Bi_2(HPO_3)_3 + 3H_2O$ . Ppt. (Grützner, Arch. Pharm. 1897, 235. 696.)

Decomp. by  $H_2S$ . Not decomp. by  $KOH + Aq$ . (Vanino, J. pr. 1906, (2) 74. 151.)

**Cadmium phosphite**,  $CdHPO_3 + 3H_2O$ .

Ppt. (Rose, Pogg. 9. 41)

**Calcium phosphite**,  $CaHPO_3 + \frac{1}{2}H_2O$ .

Sl. sol. in  $H_2O$ ; the aqueous solution is decomp. by boiling

$+ H_2O$ . Sol. in  $NH_4Cl + Aq$ . (Wackenroder, A. 41. 315)

Insol. in alcohol.

**Calcium hydrogen phosphite**,  $CaH_2(HPO_3)_2 + H_2O$ .

Sol. in  $H_2O$ . Aqueous solution is decomp. by alcohol (Wurtz, A. ch (3) 7. 212)

**Chromic phosphite.**

Precipitate. Almost insol. in  $H_2O$  (Rose, Pogg. 9. 40.)

**Cobaltous phosphite**,  $CoHPO_3 + 2H_2O$

Ppt. Sl. sol. in  $H_2O$ . (Rose)

Cupric phosphite,  $\text{CuHPO}_3 + 2\text{H}_2\text{O}$ .

Ppt. Insol. in  $\text{H}_2\text{O}$ . (Wurtz, A. ch. (3) 16. 213.)

Didymum phosphite,  $\text{Di}_2(\text{HPO}_3)_2$ .

Precipitate (Frerichs and Smith, A. 191. 331.)

Glucinum phosphite.

Precipitate Insol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 9. 39.)

Iron (ferrous) phosphite,  $\text{FeHPO}_3 + x\text{H}_2\text{O}$ .

Ppt. Nearly insol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 9. 35.)

Iron (ferric) phosphite, basic,  $\text{Fe}_2(\text{HPO}_3)_2 \cdot \text{Fe}_2(\text{OH})_2$ .

(Grützner, Arch. Pharm. 1897, 235. 697.)  
 $\text{Fe}_2(\text{HPO}_3)_2 \cdot \text{Fe}_2(\text{OH})_2 + 5\text{H}_2\text{O}$  Hydrioscopic (Berger, C. R. 1904, 138. 1500.)

Iron (ferric) phosphite,  $\text{Fe}_2(\text{HPO}_3)_2 + 9\text{H}_2\text{O}$ .

Ppt. Sol. in uon alum + Aq. (Rose)

Lanthanum phosphite,  $\text{La}_2(\text{HPO}_3)_2$ .

Precipitate. (Smith)

Lead phosphite, basic,  $4\text{PbO} \cdot \text{P}_2\text{O}_5 + 2\text{H}_2\text{O}$ .

Ppt. (Rose, Pogg. 9. 222.)  
 $3\text{PbO} \cdot \text{P}_2\text{O}_5 + \text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . Sol in warm dil.  $\text{H}_3\text{PO}_4 + \text{Aq}$ , from which it is pptd by  $\text{NH}_4\text{OH} + \text{Aq}$  (Wurtz, A. ch. (3) 16. 211.)

Lead phosphite,  $\text{PbHPO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Very sl. sol. in a solution of phosphorous acid; easily sol in cold  $\text{HNO}_3 + \text{Aq}$ . (Wurtz.)

Lead hydrogen phosphite,  $\text{PbH}_2(\text{PO}_3)_2$ .

Decomp. by  $\text{H}_2\text{O}$  (Amat, C. R. 110. 901.)

Lead pyrophosphite,  $\text{PbH}_2\text{P}_2\text{O}_5$ .

Gradually decomp. by  $\text{H}_2\text{O}$  into  $\text{H}_3\text{PO}_3$  and  $\text{PbHPO}_3$  (Amat, C. R. 110. 903.)

Lithium hydrogen phosphite,  $\text{LiH}_2\text{PO}_3$ .

Very sol. in  $\text{H}_2\text{O}$ . (Amat, A. ch. (6) 24. 309.)

Lithium pyrophosphite,  $\text{Li}_2\text{H}_2\text{P}_2\text{O}_5$ .

Very sol. in  $\text{H}_2\text{O}$ . (Amat, A. ch. 1891, (6) 24. 352.)

Magnesium phosphite,  $\text{MgHPO}_3 + 3\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 9. 28.)

Sol. in 400 pts.  $\text{H}_2\text{O}$ . (Berzelius.)  
 $+ 4\text{H}_2\text{O}$ .

Magnesium pyrophosphite,  $\text{Mg}(\text{H}_2\text{P}_2\text{O}_5)_2$ .

Very sol. in  $\text{H}_2\text{O}$  (Amat, A. ch. 1891, (6) 24. 313.)

Manganous phosphite,  $\text{MnHPO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$ , easily in  $\text{MnCl}_2$  or  $\text{MnSO}_4 + \text{Aq}$  (Rose, Pogg. 9. 33.)

Nickel phosphite,  $\text{NiHPO}_3 + 3\frac{1}{2}\text{H}_2\text{O}$ .

Ppt. Sl sol in  $\text{H}_2\text{O}$

Potassium phosphite,  $\text{K}_2\text{HPO}_3$ .

Very deliquescent. Very sol in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Dulong.)

Potassium hydrogen phosphite,  $(\text{KH})\text{HPO}_3$ .

1 pt.  $\text{H}_2\text{O}$  dissolves about 1.72 pts. salt at  $20^\circ$  (Amat, C. R. 106. 1351.)

$\text{K}_2\text{HPO}_3 \cdot 2\text{H}_2\text{PO}_3$  Very sol in  $\text{H}_2\text{O}$  (Wurtz, A. 58. 63.)

Sol in 3 pts. cold, and in less hot  $\text{H}_2\text{O}$  (Fourcroy and Vauquelin.)

Potassium pyrophosphite,  $\text{K}_2\text{H}_2\text{P}_2\text{O}_5$ .

Very sol in  $\text{H}_2\text{O}$  (Amat, A. ch. (6) 24. 351.)

Sodium phosphite, basic,  $\text{Na}_2\text{HPO}_3$ ,  $\text{NaOH}$  (?)

Not obtained in pure state (Zimmerman, B. 7. 290), =  $\text{Na}_2\text{PO}_3$  (Wischeenus.)

Does not exist (Amat)

Sodium phosphite,  $\text{Na}_2\text{HPO}_3 + 5\text{H}_2\text{O}$

Deliquescent, and very sol in  $\text{H}_2\text{O}$ . Insol in alcohol

Correct formula for  $\text{Na}_2\text{PO}_3$  of Rose and Dulong.

Sodium hydrogen phosphite,  $(\text{NaH})\text{HPO}_3 + 2\frac{1}{2}\text{H}_2\text{O}$

0.56 pt. salt dissolves in 1 pt.  $\text{H}_2\text{O}$  at  $0^\circ$ ; 0.66 pt. at  $10^\circ$ ; 1.93 pts at  $42^\circ$  (Amat, C. R. 106. 1351.)

$\text{Na}_2\text{H}_2(\text{HPO}_3)_2 + \text{H}_2\text{O}$ . Deliquescent in moist air. Sol in 2 pts. cold, and about the same amt hot  $\text{H}_2\text{O}$ . Sl sol in spirit (Fourcroy and Vauquelin.)

Sodium pyrophosphite,  $\text{Na}_2\text{H}_2\text{P}_2\text{O}_5$ .

Very sol. in  $\text{H}_2\text{O}$  with gradual decomp. into  $\text{Na}_2\text{HPO}_3$ . (Amat.)

Strontium phosphite,  $\text{SrHPO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$ . Aqueous solution decomp on heating into a sol. acid salt and an insol basic salt

Strontium hydrogen phosphite,  $\text{SrH}_2(\text{PO}_3)_2$ .

Very sol in  $\text{H}_2\text{O}$ . (Amat, A. ch. (6) 24. 312.)

Thallous hydrogen phosphite,  $\text{TlH}_2\text{PO}_3$ .

Very sol. in  $\text{H}_2\text{O}$ . (Amat, A. ch. (6) 24. 310.)

Thallous pyrophosphite,  $\text{Tl}_2\text{H}_2\text{P}_2\text{O}_5$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$  (Amat)

**Tin (stannous) phosphite,  $\text{SnHPO}_3$**   
Ppt Sol in  $\text{HCl} + \text{Aq.}$  (Rose, Pogg. 9. 45)

**Tin (stannic) phosphite,  $2\text{SnO}_3, \text{P}_2\text{O}_3$**   
Ppt. (Rose, Pogg. 9. 47.)

**Titanium phosphite (?)**  
Precipitate (Rose, Pogg. 9. 47)

**Uranyl phosphite,  $(\text{UO}_2)_3\text{H}_2(\text{HPO}_3)_4 + 12\text{H}_2\text{O}$**   
Precipitate (Rammelsberg Pogg. 132. 500)

**Zinc phosphite,  $\text{ZnHPO}_3$**   
Sol in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 132. 481)  
 $+ 2\frac{1}{2}\text{H}_2\text{O}$  More easily sol in cold than warm  $\text{H}_2\text{O}$  (Rammelsberg.)

**Zinc phosphite, acid,  $\text{Zn}_2\text{H}_3\text{P}_3\text{O}_8$**   
Sol. in  $\text{H}_2\text{O}$ .  
 $+ 2\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 132. 498.)  
 $\text{Zn}_2\text{H}_3\text{P}_3\text{O}_{11}$  Sol in  $\text{H}_2\text{O}$   
 $+ 3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$  (Rammelsberg)  
 $\text{Zn}_2\text{H}_3\text{P}_3\text{O}_{14}$  Sol. in  $\text{H}_2\text{O}$ .  
 $+ \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ . (Rammelsberg.)

**Zirconium phosphite,  $\text{Zr}(\text{PO}_3)_2 + \text{H}_2\text{O}$**   
Ppt Nearly insol. in dil. mineral acids (Hauser, Z anorg. 1913, 84. 92)

**Phosphorous anhydride,  $\text{P}_2\text{O}_3$**   
See Phosphorus trioxide.

## Phosphorus, P.

(a) *Ordinary white phosphorus* Insol. in  $\text{H}_2\text{O}$ , but slowly decomp. thereby (G. K.); very sl. sol in  $\text{H}_2\text{O}$ . (Berzelius and others)

A pure aqueous solution containing 0.1 g. P in 500 cc.  $\text{H}_2\text{O}$  can be obtained by dissolving 0.1 g. P in  $\text{CS}_2$  mixed with ether and hot alcohol; this solution is poured into 500 cc boiling  $\text{H}_2\text{O}$  free from air, and the boiling continued with stirring until the alcohol, ether and  $\text{CS}_2$  are boiled off. (Bokorny, Ch. Ztg. 1896, 20. 1022)

100 g  $\text{H}_2\text{O}$  sat. with P contains 0.0003 g P (Stach, C C 1903, I. 1291)

Sol. with decomp. in hot conc.  $\text{HNO}_3 + \text{Aq}$   
Decomp. by boiling caustic alkalis +  $\text{Aq}$   
Easily sol in  $\text{SCl}_2$ , especially if hot. (Wöhler.)

Sol. in sulphur phosphides.

Largely sol in  $\text{PCl}_3$ .

Easily sol in  $\text{PCl}_5$ .

Sol. in  $\text{PBr}_3$ . Sol in  $\text{PSCl}_3$ , easily on warming, separating on cooling. (Serullas, A. ch. 1829, 42. 25.)

Sol. in liquid  $\text{SO}_2$ . (Sestini, Bull Soc 1868, (2) 10. 226.)

Sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828)

Sol. in  $\text{S}_2\text{Cl}_2$  without foaming. (Nicolardot, C R. 1908, 147. 1304.)

Sol. in  $\text{PS}_2\text{Cl}_4$ . (Gladstone, A 1850, 74. 91)

Sol in 320 pts. cold alcohol of 0.799 sp. gr., and in 240 pts. of the same when warm  
Pptd from alcoholic solution by  $\text{H}_2\text{O}$  (Büchner)

One grain P dissolves in 1 ounce abs alcohol (Schacht)

Sol. in 20 pts. absolute ether at  $20^\circ$  and 240 pts ordinary ether at  $20^\circ$ . (Bucholz.)

Sol in 80 pts. absolute ether at  $15.5^\circ$ , and 240 pts. ordinary ether at  $15.6^\circ$  (Brugnatelli, A. ch. 24. 73)

Solubility of  $\text{P}_2$  in 100 g. ether at  $t^\circ$ .

$t^\circ$	G phosphorus	Sp gr
0	0.4335	.
5	0.62	.

81	10.027	.

(Christomanos.)

Sol. to about 1% in acetic acid. (Vulpinus, Arch. Pharm. 1878, 213. 38.)

100 g. 96% acetic acid dissolve 0.105% P. (Stich, Pharm. Ztg. 1903, 48. 343.)

Sol. in 0.05 pt. CS<sub>2</sub> (Böttger), 0.125 pt (Trommsdorff)

Alcohol ppts. P from CS<sub>2</sub> solution  
1 pt CS<sub>2</sub> dissolves 17-18 pts P. (Vogel, J. B. 1868. 149)

Solubility in CS<sub>2</sub> at t°.  
(g. per 100 g. of solution.)

t°	G. P.	t°	G. P.
-10	31.40	-2 5	75.00
-7 5	35.85	0 0	81.27
-5	41.95	+5 0	86.30
-3 5	66.14	+10.0	89.80
-3 2	71.72		

(Cohen and Inouye, Z. phys. Ch. 1910, 72. 418.)

Very sol. in methylene iodide (Retgers, Z. anorg. 3. 343.)

Strong vinegar dissolves P. (Beudet.)

Sol. in considerable amount in stearic acid. (Vulpinus, Arch. Pharm. (3) 13. 38.)

Sol. in ethyl chloride, benzoyl chloride, stannic chloride, and in liquid cyanogen.

Sl. sol. in ethyl nitrate, and wood-spirit  
Sl. sol. in acetone, with gradual decomposition.

Insol. in nicotine, and conune

Sl. sol. in cold, more sol. in hot benzene. (Mansfield.)

Sol. in 14 pts. hot, and less in cold petroleum from Amiano. (Saussure)

Sl. sol. in "liquid paraffine" (Crismer, B. 17. 649.)

Sl. sol. in warm essential oils, as oil of turpentine, and in the fatty oils.

Sol. in hot oil of copaiba, separating out on cooling

Sol. in hot oil of caraway, and mandarin oil. (Luca.)

Sl. sol. in cold, more sol. in hot caoutchou, depositing on cooling.

Readily sol. in warm, less in cold styrene

Sol. in aniline, and quinaline (Hofmann.)

Sl. sol. in cold creosote.

Somewhat sol. in fusel oil.

Easily sol. in valeric acid, and amyl valerate.

Sol. in hexyl alcohol, ethylene chloride, allyl sulphocyanide, mercury methyl, chloroform, bromoform, warm chloral, acetic ether, aldehyde, hot caecodyl sulphide, and in caecodyl oxide.

100 g. oil of almonds sat with P contain 1.25 g. (Stich, C. C. 1903, I. 1291.)

100 g. oleic acid sat. with P contain 1.06 g (Stich.)

100 g. paraffine sat with P contain 1. g. (Stich.)

(b) *Amorphous phosphorus*. Insol. in H<sub>2</sub>O. Insol. in NH<sub>4</sub>OH + Aq. (Fluckiger.)

Sol. in boiling KOH + Aq.

The statement of Burgess and Chapman, (Chem. Soc. 79. 1235) that red P is sol. in aqueous alcoholic alkali is incorrect. Both ordinary crystalline and amorphous red P are insol. in aqueous alcoholic alkali. (Michaels, A. 1902, 325. 367.)

Insol. in liquid NH<sub>3</sub> (Hugot, A. ch 1900 (7) 21, 31); (Franklin, Am. Ch. J. 1898, 20. 828.)

Bright red variety is sol. in liquid NH<sub>3</sub> at ord. temp leaving a black residue. (Stoch, Böttcher and Lenger, B. 1909, 42. 2854.)

*Red Amorphous*.

Sol. in S<sub>2</sub>Cl<sub>2</sub> with foaming. (Nicolaïdote, C. R. 1908, 147. 1304.)

Solubility of amorphous bright red P, in PBr<sub>3</sub> is diminished by long heating as follows.

	172°	185°
Initial concentration	0.555	0.476
Final concentration	0.374	0.397
Length of expt in hours	34	24
	198°	218°
	0.592	0.476
	0.416	0.592
	18	17

(Buck, Dissert. 1904.)

Ordinary amorphous P<sub>4</sub> is sol. in PBr<sub>3</sub>.

A sample prepared by heating bright red amorphous P with 94.2% P dissolved by heating in PBr<sub>3</sub> as follows

% P	0.106	0.121	0.178
hours	10	20	42

A finely pulverized commercial product containing 98.0% P:

% P	0.92	0.116
hours	10	20

An ordinary commercial product with 98% P.

% P	0.056	0.108
hours	10	42

(Buck.)

100 g. PBr<sub>3</sub> dissolve 0.2601 g. bright red phosphorus at 172°; 0.3634 g at 184° (Sehenk, B. 1902, 35. 353.)

Insol. in KOH + Aq.

Conc. H<sub>2</sub>SO<sub>4</sub> does not act upon it in the cold, but dissolves easily when hot.

Insol. in dil., easily sol. in conc. HNO<sub>3</sub> + Aq. with decomposition.

Much more sol. in HNO<sub>3</sub> + Aq. than ordinary P. (Personne, C. R. 45. 115.)

Insol. in methylene iodide (Retgers)

Appreciably sol. in isobutyl alcohol. (Svedberg.)

Insol. in CS<sub>2</sub>, alcohol, ether, naphtha,

ligroine, PCl<sub>3</sub>, etc.

Sl. sol. in boiling oil of turpentine and

other high-boiling liquids, with conversion into ordinary phosphorus.

Insol in oil of turpentine even at 270°.

(Colson, A. ch. 1908, (8) 14. 554.)

(c) *Crystalline*. Insol. m, and not attacked by dil  $\text{HNO}_3 + \text{Aq}$

Sol. in  $\text{CS}_2$

Phosphorus tetrabromide,  $\text{PBr}_4$

Decomposed by  $\text{H}_2\text{O}$ , slowly at 8°, but very rapidly at 25°. (Löwig, Pogg. 14. 485)

Sol. in liquid  $\text{H}_2\text{S}$  (Antony and Magri, Gazz. ch. it. 1905, 35, (1) 206.)

Sol. in  $\text{AlBr}_3$ . (Isbekow, Z. anorg. 1913, 84. 27.)

Sol. in ether, acetone,  $\text{CHCl}_3$ ,  $\text{C}_6\text{H}_6$  and  $\text{CS}_2$ . (Christomanos, Z. anorg 1904, 41. 287.)

Phosphorus pentabromide,  $\text{PBr}_5$ .

Fumes on air; and is violently decomp by  $\text{H}_2\text{O}$ .

Phosphorus tribromide ruthenium bromide,  $\text{Ru}_2\text{P}_2\text{Br}_{12}$

Decomp by boiling  $\text{H}_2\text{O}$ .

Slowly sol. in hot alcohol with decomp.

Insol in benzene,  $\text{CCl}_4$ , ligroin and cold alcohol. (Strecker, B. 1900, 42. 1775)

Phosphorus thiophosphoryl bromide,  $\text{PBr}_3$ ,  $\text{PSBr}_3$

Decomp. by  $\text{H}_2\text{O}$  into  $\text{PSBr}_3$ . (Michaelis.)

Phosphorus tribromide ammonia,  $3\text{PBr}_3$ ,  $9\text{NH}_3$ .

Slowly but completely sol with decomp. in  $\text{H}_2\text{O}$ . (Storei's Dict.)

Phosphorus pentabromide ammonia,  $\text{PBr}_3$ ,  $9\text{NH}_3$ .

(Besson, C. R. 111. 972.)

Phosphorus monobromotetrachloride,  $\text{PBrCl}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . (Prinvalet, C. R. 74. 868.)

Phosphorus dibromotrichloride,  $\text{PBr}_2\text{Cl}_3$ .

Very unstable. (Michaelis, B. 5. 9.)

Phosphorus tetrabromotrichloride,  $\text{PBr}_4\text{Cl}_3$ .

Decomp. with  $\text{H}_2\text{O}$ . (Geuther.)

Phosphorus heptabromodichloride,  $\text{PBr}_7\text{Cl}_2$ .

Very unstable. (Prinvalet, C. R. 74. 868.)

Phosphorus octobromotrichloride,  $\text{PBr}_8\text{Cl}_3$ .

Very easily decomp. (Michaelis, B. 5. 9.)

Phosphorus bromefluoride,  $\text{PF}_2\text{Br}_2$ .

Decomp. violently with  $\text{H}_2\text{O}$ . (Moissan, Bull. Soc. (2) 43. 2.)

Phosphorus bromonitride.

See Nitrogen bromophosphide.

Phosphorus dichloride,  $\text{P}_2\text{Cl}_4$ .

Decomp by  $\text{H}_2\text{O}$  (Besson, C. R. 1910, 150. 103)

Phosphorus trichloride,  $\text{PCl}_3$

Gradually decomp by  $\text{H}_2\text{O}$

0.11 g. is sol in 100 ccm liquid  $\text{H}_2\text{S}$ . (Antony, Gazz. ch. it. 1905, 35 (1) 206)

Acted upon by liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828)

Miscible with  $\text{CS}_2$ ,  $\text{C}_6\text{H}_6$ ,  $\text{CHCl}_3$ , and ether.

Decomp with alcohol.

Phosphorus pentachloride,  $\text{PCl}_5$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$  with violent decomp and evolution of heat

Sol. in liquid  $\text{HCl}$  Acted upon by liquid  $\text{NH}_3$ . Somewhat sol without decomp. in  $\text{CS}_2$ .

(Schiff, A. 102. 118. (Franklin, Am. Ch. J. 1898, 20. 828.)

Sol. without decomp. in benzoyl chloride. (Gerhardt)

Sol in oil of turpentine with evolution of heat.

Monophosphorus platinous chloride,  $\text{PtCl}_2$ ,  $\text{PtCl}_4$ .

Deliquescent. Sol in  $\text{H}_2\text{O}$  with formation of chloroplatinophosphoric acid.

Similarly decomp. by alcohol. Abundantly sol. in hot benzene, toluene, chloroform, or carbon tetrachloride, and crystallizes on cooling.

(Schützenberger, Bull. Soc. (2) 17. 482.)

Diphosphorus platinous chloride,  $2\text{PtCl}_2$ ,  $\text{PtCl}_4$ .

Decomp. by  $\text{H}_2\text{O}$  with formation of chloroplatinodiphosphoric acid.

Similarly decomp. by alcohol. Sol. without decomp. in  $\text{PCl}_3$ ,  $\text{CCl}_4$ ,  $\text{CHCl}_3$ ,  $\text{C}_6\text{H}_6$ , or  $\text{C}_7\text{H}_8$ .

(Schützenberger.)

Sol in propyl alcohol with formation of the propyl ether of the platinochlorophosphorous acid and  $\text{HCl}$ . (Poincy, C. R. 104. 364.)

Phosphorus diplatinous chloride,  $\text{PtCl}_2$ ,  $2\text{PtCl}_4$ .

Sol. in alcohol, with formation of ether ( $\text{PtCl}_2$ ) $_2\text{P}(\text{OC}_2\text{H}_5)_2$  (Cochin, C. R. 86. 1402.)

Phosphorus platonic chloride,  $\text{PtCl}_2$ ,  $\text{PtCl}_4$ .

(Schützenberger.)

Phosphorus pentachloride platonic chloride,  $\text{PtCl}_2$ ,  $\text{PtCl}_4$ , or  $(\text{PtCl}_4)_2\text{PtCl}_2$ .

Decomp. at once by  $\text{H}_2\text{O}$ . (Baudrimont, A. ch. (4) 2. 47.)

Phosphorus pentachloride selenium tetrachloride,  $2\text{PCl}_5, \text{SeCl}_4$ .

Sol. in  $\text{H}_2\text{O}$  with decomp (Baudrimont, A. ch. (4) 2. 5.)

Phosphorus trichloride ruthenium chloride,  $\text{Ru}_2\text{P}_2\text{Cl}_{10}$ .

Slowly decomp. by boiling  $\text{H}_2\text{O}$

Sol. in benzene and  $\text{CHCl}_3$

Sl. sol. in  $\text{CCl}_4$ . Insol. in ligom. (Strecker, B. 1909, 42. 1774.)

Phosphorus tellurium chloride,  $\text{PCl}_5, 2\text{TeCl}_4$ .

Very deliquescent

Sol. in  $\text{H}_2\text{O}$ . (Metzner, A. ch. 1898, (7) 15. 203.)

Phosphorus pentachloride stannic chloride,  $\text{PCl}_5, \text{SnCl}_4$ .

Very deliquescent. Sol. in much  $\text{H}_2\text{O}$  with evolution of heat, forming  $\text{SnCl}_4, \text{HCl}$ , and  $\text{H}_3\text{PO}_4$ , and soon separates out stannic phosphate. (Casselman, A. 83. 257)

Phosphorus trichloride titanium chloride,  $\text{PCl}_5, \text{TiCl}_4$ .

(Bertrand, Bull Soc (2) 33. 565.)

Phosphorus pentachloride titanium chloride,  $\text{PCl}_5, \text{TiCl}_4$ .

Deliquescent. Decomp. by  $\text{H}_2\text{O}$  and alcohol. Sol. in ether. Sl. sol. in  $\text{PCl}_5$  (Tüttschew, A. 141. 111)

Completely sol. in dil. acids (Weber)

Phosphorus uranium pentachloride,  $\text{PCl}_5, \text{UCl}_6$ .

Decomp. with  $\text{H}_2\text{O}$ .

Phosphorus pentachloride zirconium chloride,  $\text{PCl}_5, \text{ZrCl}_4$ .

Decomp. by  $\text{H}_2\text{O}$  with pptn. of Zr phosphate. (Paykull)

Phosphorus trichloride ammonia,  $\text{PCl}_3, 5\text{NH}_3$ .

Insol. as such in  $\text{H}_2\text{O}$ , but slowly decomp. by boiling  $\text{H}_2\text{O}$ . More easily sol. with decomp. in acids. Sol. with decomp. by boiling with  $\text{KOH}$  or  $\text{NaOH} + \text{Aq.}$  (Berzelius.)

Phosphorus pentachloride ammonia,  $\text{PCl}_5, 5\text{NH}_3$ .

Properties as  $\text{PCl}_3, 5\text{NH}_3$ . (Berzelius.)  $\text{PCl}_5, 8\text{NH}_3$ . Sl. decomp. on air. (Besson, C. R. 111. 972.)

Phosphorus pentachloride tungsten trioxide,  $2\text{PCl}_5, \text{WO}_3(?)$ .

(Persoz and Bloch, C. R. 28. 389.)

Phosphorus chlorobromide.

See Phosphorus bromochloride.

Phosphorus chlorofluoride,  $\text{PCl}_2\text{F}_2$ .

Absorbed by  $\text{H}_2\text{O}$  with decomp. Absorbed by alcohol or ether (Poulenc, A. ch. (6) 24. 555.)

Phosphorus chloriodide,  $\text{PCl}_2\text{I}_2$ .

Decomp. by moist air or  $\text{H}_2\text{O}$ . Sol. in  $\text{CS}_2$ . (Most, B. 13. 2029.)

Phosphorus chloronitride.

See Nitrogen chlorophosphide.

Phosphorus trifluoride,  $\text{PF}_3$ .

Decomp. slowly by  $\text{H}_2\text{O}$ . (Moissan, Bull. Soc (2) 43. 2.)

Rapidly absorbed by  $\text{KOH}$  or  $\text{NaOH} + \text{Aq.}$ , slowly by  $\text{BaO}_2\text{H}_2$  and  $\text{K}_2\text{CO}_3 + \text{Aq.}$ . Absorbed by absolute alcohol with decomp. (Moissan, C. R. 99. 655.)

Phosphorus pentafluoride,  $\text{PF}_5$ .

Fumes on air. (Thorpe, A. 182. 20.)

Phosphorus pentafluoride ammonia,  $2\text{PF}_5, 5\text{NH}_3$ .

(Moissan, C. R. 101. 1490.)

Phosphorus pentafluoride nitrogen peroxide.

Decomp. by  $\text{H}_2\text{O}$ . (Tassel, C. R. 110. 1264)

Phosphorus fluobromide.

See Phosphorus bromofluoride.

Phosphorus fluochloride.

See Phosphorus chlorofluoride.

Phosphorus subiodide,  $\text{P}_2\text{I}_2$ .

Sol. in dil.  $\text{HNO}_3$  and in alkalies +  $\text{Aq.}$  (Boulouch, C. R. 1905, 141. 257.)

Phosphorus diiodide,  $\text{P}_2\text{I}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{CS}_2$ . (Corenwinder, A. ch. (3) 30. 242.)

0.09 g. is sol. in 100 cc. liquid  $\text{H}_2\text{S}$  (Antony, C. C. 1905, I. 1692.)

Phosphorus triiodide,  $\text{PI}_3$ .

Very deliquescent. Decomp. in moist air and by  $\text{H}_2\text{O}$ . (Corenwinder, A. ch. (3) 30. 242.)

Very sol. in  $\text{CS}_2$ .

Phosphorus pentiodide,  $\text{PI}_5(?)$ .

(Hampton, C. N. 42. 180.)

Phosphorus iodosulphide.

See Phosphorus sulphoiodide.

Phosphorus nitride,  $\text{P}_3\text{N}_3$ .

Very slightly decomp. by long boiling with  $\text{H}_2\text{O}$

Completely insol. in any solvent (Stock, B. 1903, 36. 317.)

**Phosphorus suboxide,  $P_2O$ .**

Unchanged in dry, gradually oxidized in moist air. Insol. in  $H_2O$ , alcohol, ether, and oils, not acted on by  $HCl + Aq$ ; oxidized by  $HNO_3$  or  $H_2SO_4$ . (Marchand, J. p. 13. 442.) Sl sol in  $H_2O$ . (le Verrier, A. 27. 167.)

Forms hydrate  $P_2O, 2H_2O$ , which gives up its  $H_2O$  when dried.

Two modifications (a) decomp. slowly by  $H_2O$  or alkalis, (b) not decomp. by  $H_2O$  or alkalis. (Reintzer and Goldschmidt, B. 13. 847.)

Is oxyphosphuretted hydrogen (?),  $P_2H(OH)$  (Franke, J. p. (2) 35. 341.)

**—  $H_2P_2O$ .**

Insol. in all solvents. Decomp. by  $H_2O$ . Not attacked by non-oxidizing acids. Decomp. by dil alkalis (Gautier, C. R. 76. 173.)

**—  $P_2HO$ .**

Insol. in nearly all substances. Not attacked by dilute acids, oxidized by ordinary  $HNO_3$  and conc  $H_2SO_4$  at  $200^\circ$ . Attacked by very dil alkaline solutions. Perhaps identical with phosphorus suboxide  $P_2O$  (Gautier, C. R. 76. 49.)

**Phosphorus oxide,  $P_2O$** 

Decomp by heating with  $H_2O$  at  $100^\circ$ . (Besson, C. R. 1897, 124. 764.)

**Phosphorus trioxide,  $P_2O_3$  (formerly  $P_2O_2$ ).**

Deliquescent, but very slowly dissolved by cold  $H_2O$  to form  $H_3PO_3$ . Violently decomp by hot  $H_2O$  or alcohol.

Sol without decomp. in ether, carbon disulphide, benzene, or chloroform. (Thorpe and Tutton, Chem. Soc. 57. 545.)

**Phosphorus tetroxide,  $P_2O_4$ .**

Very deliquescent. Sol. with evolution of heat in  $H_2O$ . (Thorpe and Fulton, Chem. Soc. 49. 833.)

**Phosphorus pentoxide,  $P_2O_5$ .**

Very deliquescent. Sol. in  $H_2O$  with great evolution of heat, forming  $H_3PO_4$ .

Insol. in liquid  $NH_3$  (Franklin, Am. Ch. J. 1898, 20. 828.)

Insol. in acetone (Edmann, C. C. 1899, (I. 1014); Naumann, B. 1904, 37. 4329.)

**Phosphorus sulphur oxide,  $P_2O_5, 3SO_2 = (PO)_2(SO_2)_3$  (phosphoryl sulphate) (?).**

Decomp. by  $H_2O$ . Sol. in cold, more sol. in warm  $SO_2$ . (Weber, B. 20. 86.)

**Phosphorus oxy-compounds.**

See under Phosphoryl compounds.

**Phosphorus oxysulphide.**

See Phosphorus sulphoxide.

**Phosphorus semiselenide,  $P_2Se$ .**

Decomp. with  $H_2O$ . Insol. in cold, decomp. by boiling  $KOH + Aq$ . Insol. in, but apparently decomp. by alcohol and ether. Easily sol. in  $CS_2$ . (Hahn, J. p. 93. 430.)

**Phosphorus monoselenide,  $P_2Se$ .**

Stable in dry, decomp. in moist air and by  $H_2O$ . Insol. in alcohol and ether. Decomp. by boiling  $KOH + Aq$ .  $CS_2$  dissolves out P. (Hahn, J. p. 93. 430.)

Sl sol. in  $CS_2$ . (Gore, Phil. Mag. (4) 30. 414.)

**Phosphorous sesquiselenide,  $P_4Se_3$ .**

Sol. in  $CCl_4$ ; sl. sol. in  $CS_2$ . (Meyer, Z. anorg. 1902, 30. 258.)

**Phosphorus triselenide,  $P_2Se_3$ .**

Decomp. by boiling  $H_2O$  and slowly in moist air. Easily sol. in cold  $KOH + Aq$ , less easily in  $M_2CO_3 + Aq$ . Insol. in alcohol, ether, and  $CS_2$ . (Hahn, J. p. 93. 430.)

**Phosphorus pentaselenide,  $P_4Se_5$ .**

Slowly decomp. in moist air or by  $H_2O$ , easily by  $KOH + Aq$  or alcohol. Insol. in  $CS_2$ . Sol. in  $CCl_4$ . (Hahn, J. p. 93. 430.)

**Phosphorus selenides with  $M_2Se$ .**

See M phosphoselenide, under M.

**Phosphorus semisulphide,  $P_2S(?)$ .**

1. *Liquid*. Not decomp. by, and insol. in boiled  $H_2O$ . Insol. in alcohol and ether. Sl. sol. in fats and volatile oils; decomp. by alkalis. Dissolves P on warming, with separation on cooling. Sol. in  $CS_2$ .

2. *Red modification*. Not attacked at first by  $HNO_3 + Aq$  (sp. gr. 1.22), but after a time is attacked with the greatest violence. Weak acids attack only when hot (Berzelius, A. 46. 129.)

Existence is doubtful. (Schulze, B. 13. 1862; Isambert, C. R. 95. 1628.)

**Phosphorus monosulphide,  $P_2S(?)$** 

1. *Ordinary*. Same properties as phosphorus semisulphide, 1.

2. *Red modification*. Unchanged by air,  $H_2O$ , or alcohol. Decomp. by conc  $KOH + Aq$ , not by dilute. Sl. sol. in  $NH_4OH + Aq$ . (Berzelius, A. 46. 129.)

Existence is doubtful (Schulze; Isambert.)

Does not exist (Helff, Z. phys. Ch. 12. 206.)

**Phosphorus sesquisulphide,  $P_4S_3$ .**

Not attacked by cold, slowly by hot  $H_2O$ . Cold  $KOH + Aq$  dissolves with decomp.

Oxidized by  $\text{HNO}_3$  and aqua regia. Sol. in alcohol and ether with decomp. Sol. in  $\text{CS}_2$  (100 pts  $\text{CS}_2$  dissolve 60 pts.  $\text{P}_2\text{S}_2$ ),  $\text{PCl}_3$ , and  $\text{PSCl}_3$ , and in  $\text{K}_2\text{S}$  or  $\text{Na}_2\text{S} + \text{Aq.}$  (Lemome, Bull. Soc. (2) 1. 407.)

Very sol. in  $\text{CS}_2$ . (Rebs, A. 246. 367.)

Decomp. by dil. and conc.  $\text{KOH} + \text{Aq.}$

1 pt.  $\text{P}_2\text{S}_2$  is sol. in 9 pts.  $\text{CS}_2$  at  $-20^\circ$ , in 3.7 pts.  $\text{CS}_2$  at  $0^\circ$ ; in 1 pt.  $\text{CS}_2$  at  $17^\circ$ , in 40 pts. benzene at  $17^\circ$ , in 9 pts. benzene at  $80^\circ$ ; in 32 pts. toluene at  $17^\circ$ ; in 6.5 pts. toluene at  $111^\circ$ . (Stock, B. 1910, 43. 156.)

#### Phosphorus trisulphide, $\text{P}_2\text{S}_3$ .

Decomp. by water. (Kekulé, A. 90. 310.)

Sol. in  $\text{M}_2\text{CO}_3 + \text{Aq}$  with separation of S. Easily sol. in  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$  (Berzelius, A. 46. 129.)

Sol. in alcohol and ether. (Lemome.)

Correct formula is  $\text{P}_4\text{S}_6$  (Isambert, C. R. 102. 1386.)

Extremely sl. sol. in  $\text{CS}_2$  (Rebs, A. 246. 368.)

Existence doubtful. (Helff, Z. phys. Ch. 12. 210.)

#### Phosphorus sulphide, $\text{P}_2\text{S}_7$ .

Sl. sol. in  $\text{CS}_2$  (Mai, A. 265. 192.)

Slowly decomp. by cold, rapidly by hot  $\text{H}_2\text{O}$ .

Sol. in cold alkalies

1 pt. is sol. in 3500 pts.  $\text{CS}_2$  at  $17^\circ$ ; in 20,000 pts. at  $0^\circ$  (Stock, B. 1910, 43. 416.)

#### Phosphorus disulphide, $\text{P}_2\text{S}_2$ (formerly $\text{P}_2\text{S}_4$ )

Almost insol. in  $\text{CS}_2$ . (Helff.)

#### Phosphorus pentasulphide, $\text{P}_2\text{S}_5$

Very deliquescent. Decomp. by  $\text{H}_2\text{O}$ . Very sol. in  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol. in  $\text{M}_2\text{CO}_3 + \text{Aq}$  with separation of S at low temp. Decomposes alcohol, acetic acid, etc. (Kekulé, A. 106. 331.)

Sol. in  $\text{CS}_2$ . (Isambert, C. R. 102. 1386.)

Not very sol. in  $\text{CS}_2$ . (Rebs, A. 246. 367.)

Mpt.,  $290^\circ$ ; bpt.,  $513-515^\circ$  at 760 mm.

Decomp. by  $\text{H}_2\text{O}$ .

Easily sol. in warm  $\text{NaOH} + \text{Aq.}$

1 pt. is sol. in 450 pts.  $\text{CS}_2$  at room temp.; in 550 pts. at  $0^\circ$ ; in 1200 pts. at  $-20^\circ$ . (Stock, B. 1910, 43. 1225.)

Ordinary form.

Sol. in 195 pts. boiling  $\text{CS}_2$ .

New form.

Sol. in 32 pts.  $\text{CS}_2$ . (Stock, B. 1905, 38. 2722.)

#### Phosphorus persulphide, $\text{P}_2\text{S}_{10}$ (?).

Decomp. by  $\text{H}_2\text{O}$ , alkalies, etc. Consists of S, and mechanically united P. (Ramme, B. 12. 941.)

#### Phosphorus sulphides with $\text{M}_2\text{S}$ .

See M Phosphosulphide, under M.

#### Phosphorus zinc sulphide, $\text{ZnP}_2\text{S}_2$ .

Sol. in  $\text{HCl} + \text{Aq}$  with separation of  $\text{P}_2\text{S}$  (?). (Berzelius, A. 46. 150.)

#### Phosphorus trisulphide ammonia, $\text{P}_2\text{S}_3, 2\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Bincau.)

#### Phosphorus pentasulphide ammonia,

$\text{P}_2\text{S}_5, 6\text{NH}_3$

Sol. in liquid  $\text{NH}_3$ . (Stock, B. 1903, 36. 314.)

$\text{P}_2\text{S}_5, 7\text{NH}_3$ . (Stock.)

#### Phosphorus sulphobromide.

See Thiophosphoryl bromide.

#### Phosphorus sulphochloride.

See Thiophosphoryl chloride.

#### Phosphorus sulphiodide, $\text{P}_2\text{S}_2\text{I}$ .

Sl. attacked by cold, rapidly by hot  $\text{H}_2\text{O}$ ; violently decomp. by fuming  $\text{HNO}_3$ . Easily sol. in  $\text{CS}_2$ . Sl. sol. in  $\text{C}_6\text{H}_6$  or  $\text{CHCl}_3$ , and still less in ether or absolute alcohol (Ouvrard, C. R. 115. 1301.)

$\text{P}_2\text{S}_2\text{I}_2$ . Easily sol. in  $\text{CS}_2$ . More easily than  $\text{P}_2\text{S}_2\text{I}_2$  and less than  $\text{PI}_3$ . (Ouvrard, A. ch. 1894, (7) 2. 224.)

$\text{P}_2\text{SI}_4$ . Easily decomp. (Ouvrard.)

$\text{P}_2\text{S}_2\text{I}_2$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in warm ether. Sl. sol. in benzene,  $\text{CHCl}_3$ , and glacial acetic acid; sol. in toluene and xylene. (Wolter, Ch. Ztg. 1907, 31. 640.)

Easily sol. in  $\text{CS}_2$ . Sl. sol. in benzene, ether, absolute alcohol and  $\text{CHCl}_3$ . (Ouvrard, C. R. 1892, 115. 1301.)

#### Phosphorus sulphoxide, $\text{P}_4\text{O}_6\text{S}_4$

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in 2 pts  $\text{CS}_2$  without decomp. Sol. in benzene with decomp. (Thorpe and Tutton, Chem. Soc. 59. 1019.)

$\text{P}_2\text{O}_2\text{S}_2$ . Slowly decomp. by  $\text{H}_2\text{O}$ . Violently attacked by fuming  $\text{HNO}_3$ . (Besson, C. R. 1897, 124. 152.)

$\text{P}_2\text{S}_4\text{O}_4$ . Deliquescent; sol. in  $\text{H}_2\text{O}$  with decomp.; insol. in most solvents. (Stock, B. 1913, 46. 1382.)

#### Phosphoryl triamide, $\text{PO}(\text{NH}_2)_3$ .

Insol. in boiling  $\text{H}_2\text{O}$ ,  $\text{KOH} + \text{Aq}$ , or dil. acids. Decomp. by long boiling with  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ . More easily decomp. with aqua regia. Easily sol. in warm  $\text{H}_2\text{SO}_4$  or nitrosulphuric acid. (Schiff, A. 101. 300.)

Does not exist. (Gladstone; Mente, A. 248. 238.)

#### Phosphoryl bromide, $\text{POBr}_3$ .

Not miscible with  $\text{H}_2\text{O}$ , but gradually decomp. in contact with it. Sol. in  $\text{H}_2\text{SO}_4$ , ether, oil of turpentine (Gladstone, Phil. Mag. (3) 35. 345); in  $\text{CHCl}_3$ ,  $\text{CS}_2$  (Baudrimont, Bull. Soc. 1861. 118).

Easily sol in  $\text{AsBr}_3$  (Walden, Z anorg. 1902, 29, 374.)  
Sol. in  $\text{CCl}_4$ , and in  $\text{C}_6\text{H}_6$  (Oddo, Chem. Soc. 1900, 78, (2) 75.)

**Phosphoryl bromide sulphide.**

See Thiophosphoryl bromide.

**Phosphoryl bromochloride,  $\text{POCl}_2\text{Br}$ .**

Decomp. by  $\text{H}_2\text{O}$  (Menschutkin, A. 139, 343.)

**Phosphoryl dibromochloride,  $\text{POClBr}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Geuther, Jena Zeit. 10, 130.)

**Phosphoryl chloride,  $\text{POCl}$ .**

Very hygroscopic. Sol. in  $\text{H}_2\text{O}$  with decomp. Insol. in most solvents. Sol. in  $\text{PCl}_5$ . (Besson, C. R. 1897, 125, 772.)

$\text{POCl}_2$ . Decomp. by  $\text{H}_2\text{O}$ . Not acted on by liquid  $\text{CO}_2$ ,  $\text{P}$ ,  $\text{PH}_3$ ,  $\text{CS}_2$ ,  $\text{I}$ ,  $\text{Br}$ ,  $\text{Cl}$ , etc. Sol. in  $\text{CCl}_4$ ,  $\text{C}_6\text{H}_6$ ,  $\text{CS}_2$ ,  $\text{CHCl}_3$  and ether. (Oddo, Gazz. ch. it. 1899, 29, (2) 318; Chem. Soc. 1900, 78 (2) 74.)

**Phosphoryl boron chloride,  $\text{POCl}_2\text{B}$ ,  $\text{BCl}_3$ .**

See Boron phosphoryl chloride.

**Phosphoryl stannous chloride,  $\text{POCl}_2$ ,  $\text{SnCl}_2$ .**

Deliquescent. Decomp. by  $\text{H}_2\text{O}$  (Casselmann, A. 81, 242.)

**Phosphoryl stannic chloride,  $\text{POCl}_2$ ,  $\text{SnCl}_4$ .**

Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Casselmann.)

**Phosphoryl titanium chloride,  $\text{POCl}_2$ ,  $\text{TiCl}_4$ .**

Deliquescent, and decomp. by  $\text{H}_2\text{O}$  (Weber, Pogg. 132, 453.)

**Pyrophosphoryl chloride,  $\text{P}_2\text{O}_5\text{Cl}_2$ .**

Decomp. violently with  $\text{H}_2\text{O}$ . (Geuther and Michaelis, B. 4, 786.)

Very sol. in  $\text{H}_2\text{O}$  with decomp.; very unstable. (Besson, C. R. 1897, 124, 1100.)

**Metaphosphoryl chloride,  $\text{PO}_2\text{Cl}$**

Decomp. by  $\text{H}_2\text{O}$ . (Gustavson.)

Does not exist. (Michaelis.)

**Phosphoryl fluoride,  $\text{POF}_3$**

Absorbed and decomp. at once by  $\text{H}_2\text{O}$  or alcohol. (Moissan, C. R. 102, 1245.)

**Phosphoryl imidoamide,  $\text{PN}_2\text{H}_3\text{O} = \text{PO}(\text{NH})\text{NH}_2$ .**

Insol. in  $\text{H}_2\text{O}$ ; gradually decomp. by boiling with  $\text{H}_2\text{O}$ , more rapidly in presence of  $\text{KOH}$ . Insol. in boiling conc.  $\text{HCl} + \text{Aq}$ . Insol. in cold, decomp. by hot  $\text{H}_2\text{SO}_4$ . Moderately sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$  dissolves without evolution

of gas. Insol. in boiling nitric or nitrosulphuric acid. (Gerhardt, A. ch. (3) 20, 255.)  
Insol. in alcohol, oil of turpentine, etc.

**Phosphoryl iodide,  $\text{P}_2\text{I}_4\text{O}_5$  (?)**

Sol. in  $\text{H}_2\text{O}$ , alcohol, and ether. (Burton, Am. Ch. J. 3, 280.)  
 $\text{POI}_3$ . (Burton.)

**Phosphoryl nitride,  $\text{PON}$**

Insol. in  $\text{H}_2\text{O}$ , acids, or alkalis. (Gladstone, Chem. Soc. 2, 121.)

**Phosphoryl chlorosulphide,  $\text{P}_2\text{O}_5\text{SCl}_4$ .**

Slowly decomp. in contact with  $\text{H}_2\text{O}$ . (Besson, C. R. 1897, 124, 153.)

**Phosphoryl thio-compounds.**

See Thiophosphoryl compounds.

**Phosphoselenic acid.**

See Selenophosphoric acid.

**Phosphoselenide,  $\text{M}$ .**

See under  $\text{M}$ .

**Phosphosilicic acid.**

See Silicophosphoric acid.

**Phosphosilicosovanadicotungstic acid.**

**Ammonium phosphosilicosovanadicotungstate.**

Exact formula not known. (E. F. Smith, J. Am. Chem. Soc. 1903, 25, 1225.)

**Phosphosilicosvanadic acid,  $3\text{SiO}_2$ ,  $2\text{V}_2\text{O}_5$ ,  $2\text{P}_2\text{O}_5 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Phosphostannosovanadicotungstic acid.**

**Ammonium phosphostannosovanadicotungstate.**

Exact formula not known. (E. F. Smith, J. Am. Chem. Soc. 1903, 25, 1226.)

**Phosphosulphide,  $\text{M}$ .**

See under  $\text{M}$ .

**Phosphosulphuric anhydride,  $\text{P}_2\text{O}_5$ ,  $3\text{SO}_2$ .**

Very easily decomp. (Weber, B. 19, 3190.)

**Phosphotelluric acid.**

**Ammonium phosphotellurate,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $\text{TeO}_2 + 4\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1901, 28, 61.)

$4(\text{NH}_4)_2\text{O}$ ,  $3\text{P}_2\text{O}_5$ ,  $2\text{TeO}_2 + 11\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  without decomp. (Weinland.)

Potassium phosphotellurate,  $15K_2O, P_2O_5, TeO_3$ .  
 $+17.5 H_2O$  Very sol. in  $H_2O$   
 $+4.5 H_2O$  Ppt. (Weinland.)

Rubidium phosphotellurate,  $15Rb_2O, P_2O_5, TeO_3+4.5H_2O$   
 Ppt. (Weinland.)

Sodium phosphotellurate,  $2Na_2O, P_2O_5, 2TeO_3+9H_2O$ .  
 Difficultly sol in cold  $H_2O$ . (Weinland.)

### Phosphothorosovanadicotungstic acid.

Ammonium phosphothorosovanadicotungstate.

Exact formula not known. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1226.)

### Phosphotitanosovanadicotungstic acid.

Ammonium phosphotitanosovanadicotungstate.

Formula not known (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1226.)

### Phosphotungstic acid, $P_2O_5, 12WO_3+42H_2O$

Not efflorescent. Sol. in  $H_2O$ , alcohol, and ether. (Péchar, C. R. 110. 754.)

$P_2O_5, 16WO_3+69H_2O$ . Very efflorescent. Sol. in  $H_2O$ , alcohol, and ether (Péchar, C. R. 109. 301.)

$+xH_2O = H_4PW_6O_{20}+xH_2O$  ( $\alpha$ -phosphotungstic acid). Known only in aqueous solution. (Kehrmann, B. 20. 1808.)

$+48H_2O = H_2PW_6O_{28}+16H_2O$  ( $\alpha$ -anhydrophosphotungstic acid). Sol. in its crystal  $H_2O$  by warmth of the hand; sol. in less than  $\frac{1}{3}$  pt.  $H_2O$ . (Kehrmann.)

Correct composition is represented by  $H_4PW_6O_{21}+9H_2O$  (Kehrmann, Z. anorg. 1. 422.)

$P_2O_5, 20WO_3+8H_2O$  Very efflorescent. (Gibbs, B. 10. 1386.)

$+19H_2O = H_{11}PW_{10}O_{28}+8H_2O$ . Sol. in  $H_2O$ . (Scheibler, B. 5. 801.)

$+50$ , and  $62H_2O$  Very efflorescent. (Péchar, C. R. 109. 301.)

$3H_2O, P_2O_5, 21WO_3+30H_2O$ . Efflorescent. Sol. in  $H_2O$  in nearly every proportion

$P_2O_5, 22WO_3+28H_2O = H_2PW_{11}O_{43}+18H_2O$ . Efflorescent. (Scheibler, B. 5. 801.)

Composition is  $6H_2O, 22WO_3, P_2O_5+45H_2O$ . (Gibbs.)

$H_2PO_4, 12WO_3+18H_2O$ , or  $P_2O_5, 24WO_3+39H_2O$ . Sol. in  $H_2O$ , alcohol and ether. (Soboleff, Z. anorg. 1896, 12. 18.)

$P_2O_5, 24WO_3+40H_2O = 6H_2O, P_2O_5, 24WO_3+34H_2O$ . Very efflorescent. Sol. in  $H_2O$ . (Gibbs.)

$+45H_2O$ .

### Solubility in $H_2O$ at $t^\circ$

$t^\circ$	100 com. $H_2O$ dissolve g. of the cryst. acid	Sp. gr. of the solution
0	16.206	1.1890
22	49.718	1.6913
43	53.64	1.8264
92	86.75	2.5813

(Soboleff, Z. anorg. 1896, 12. 31.)

### Solubility in ether at $t^\circ$ .

$t^\circ$	100 com. ether dissolves g. of the cryst. acid
0	81.196
7.8	85.327
18.2	96.017
24.2	101.348

(Soboleff.)

$+53H_2O = 6H_2O, P_2O_5, 24WO_3+47H_2O$   
 Sol. in  $H_2O$  (Gibbs.)

Sol. in ether. If an equal vol. of ether is placed above a layer of conc. aqueous solution of acid, only drops form between the two layers, which sink to bottom, forming a third layer. The sp. gr. of the latter is 1.525. The crystallized acid dissolved in smallest amt. ether forms an oil of sp. gr. = 2.083. Ethereal solution is miscible with alcohol, and also with a large quantity of  $H_2O$ . (Drechsel, B. 20. 1452.)

$+61H_2O$ . Sol. in  $H_2O$ . (Gibbs, Proc. Am. Acad. 16. 116.)

### Aluminum ammonium phosphotungstate.

See Aluminicophosphotungstate, ammonium.

Ammonium phosphotungstate,  $3(NH_4)_2O, P_2O_5, 7WO_3+Aq$ .

Sl. sol. in cold  $H_2O$  without decomp. Decomp. by hot  $H_2O$ . (Kehrmann, Z. anorg. 1892, 1. 438.)

$2(NH_4)_2O, P_2O_5, 12WO_3+5H_2O$ . Insol. in cold  $H_2O$ . (Péchar, C. R. 110. 754.)

$6(NH_4)_2O, P_2O_5, 16WO_3+10H_2O$ . Easily sol. in hot  $H_2O$ . (Péchar.)

$5(NH_4)_2O, P_2O_5, 16WO_3+xH_2O = (NH_4)_5PW_6O_{23}+xH_2O$ . (Ammonium  $\alpha$ -phosphotungstic acid). Sl. sol. in  $H_2O$ . (Kehrmann.)

$3(NH_4)_2O, P_2O_5, 16WO_3+16H_2O = (NH_4)_3PW_6O_{28}+8H_2O$ . (Ammonium  $\alpha$ -anhydrophosphotungstic acid). Efflorescent.

Easily sol. in  $H_2O$ . (Kehrmann.)

$5(NH_4)_2O, P_2O_5, 17WO_3+16H_2O$  Very sl. sol. in cold  $H_2O$ . (Kehrmann, Z. anorg. 1894, 6. 387.)

$3(NH_4)_2O, P_2O_5, 18WO_3+14H_2O$ . (Phosphotungstic acid). (Kehrmann, Z. anorg. 1893, 4. 140.)

$3(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $21\text{WO}_3 + x\text{H}_2\text{O}$  Rather sol. in cold, easily in hot  $\text{H}_2\text{O}$  and alcohol. Insol. in sat.  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Kehrmann and Freinkel, B. 25. 1972)

$3(\text{NH}_4)_2\text{O}$ ,  $3\text{H}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $22\text{WO}_3 + 18\text{H}_2\text{O}$  Sl. sol. in cold  $\text{H}_2\text{O}$  (Gibbs)

$3(\text{NH}_4)_2\text{O}$ ,  $3\text{H}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{WO}_3 + 26\text{H}_2\text{O}$  Very sl. sol. even in hot  $\text{H}_2\text{O}$  (Gibbs, Proc. Am. Acad. 16. 122)

**Ammonium barium  $\alpha$ -anhydrophosphotungstate**,  $\text{NH}_4\text{BaPW}_9\text{O}_{38} + x\text{H}_2\text{O} = (\text{NH}_4)_2\text{O}$ ,  $2\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $16\text{WO}_3 + x\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Kehrmann.)

**Barium phosphotungstate**,  $2\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $12\text{WO}_3 + 15\text{H}_2\text{O}$ .

Very efflorescent. Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Péchar, C. R. 110. 754.)

$3\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $16\text{WO}_3 + x\text{H}_2\text{O} = \text{Ba}_3(\text{PW}_9\text{O}_{38}) + x\text{H}_2\text{O}$ . (Barium  $\alpha$ -anhydrophosphotungstate). Not efflorescent. Quite difficultly sol. in  $\text{H}_2\text{O}$ . (Kehrmann.)

$2\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $16\text{WO}_3 + 10\text{H}_2\text{O}$ . Efflorescent (Péchar, A. ch. (6) 22. 240)

$2\text{BaO}$ ,  $6\text{H}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $20\text{WO}_3 + 24\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Gibbs, B. 10. 1386.)

$6\text{BaO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $20\text{WO}_3 + 46\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Gibbs, Proc. Am. Acad. 16. 126)

$7\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $22\text{WO}_3 + 59\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , (Sprenger, J. pr. (2) 22. 418.)

$+53\text{H}_2\text{O}$  (Kehrmann, B. 24. 2335)

$4\text{BaO}$ ,  $2\text{H}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $22\text{WO}_3 + 39\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  without decomp. (Gibbs)

$\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{WO}_3 + 59\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Sprenger)

$2\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{WO}_3 + 59\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Sprenger)

$3\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{WO}_3 + 46\text{H}_2\text{O} = 3\text{BaO}$ ,  $3\text{H}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{WO}_3 + 43\text{H}_2\text{O}$  Easily sol. in hot  $\text{H}_2\text{O}$ . (Gibbs)

$3\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{WO}_3 + 48\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Soboleff, Z. anorg. 1896, 12. 18.)

$+58\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Sprenger)

Efflorescent. Sl. sol. in dil.  $\text{BaCl}_2 + \text{Aq}$  (Kehrmann, Z. anorg. 1. 423.)

**Barium potassium phosphotungstate**,  $5\text{BaO}$ ,  $2\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $22\text{WO}_3 + 48\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Kehrmann and Freinkel, B. 25. 1968.)

**Barium silver phosphotungstate**,  $4\text{BaO}$ ,  $3\text{Ag}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $22\text{WO}_3 + 34\text{H}_2\text{O}$

Very sl. sol. in  $\text{H}_2\text{O}$ . (Kehrmann and Freinkel, B. 25. 1966.)

**Barium sodium phosphotungstate**,  $2\text{BaO}$ ,  $\text{Na}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $24\text{WO}_3 + 46\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ , forming cloudy liquid, which clears up. Solution in  $\text{HCl}$  is not cloudy. (Brandhorst and Kraut, A. 249. 380.)

**Calcium phosphotungstate**,  $\text{CaO}$ ,  $5\text{H}_2\text{O}$ ,  $16\text{WO}_3$ ,  $\text{P}_2\text{O}_5 + 3\text{H}_2\text{O}$ .

Readily sol. in  $\text{H}_2\text{O}$ . (Gibbs, Proc. Am. Acad. 16. 130.)

$2\text{CaO}$ ,  $\text{P}_2\text{O}_5$ ,  $12\text{WO}_3 + 19\text{H}_2\text{O}$  Efflorescent. Insol. in alcohol. (Péchar, C. R. 110. 754.)

$2\text{CaO}$ ,  $\text{P}_2\text{O}_5$ ,  $20\text{WO}_3 + 22\text{H}_2\text{O}$ . Efflorescent (Péchar, A. ch. (6) 22. 233.)

**Cadmium phosphotungstate**,  $2\text{CdO}$ ,  $\text{P}_2\text{O}_5$ ,  $12\text{WO}_3 + 13\text{H}_2\text{O}$ .

Sl. efflorescent. Very sol. in  $\text{H}_2\text{O}$  (Péchar, C. R. 110. 754.)

**Cupric phosphotungstate**,  $3\text{CuO}$ ,  $24\text{WO}_3$ ,  $\text{P}_2\text{O}_5 + 58\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Sprenger, J. pr. (2) 22. 418.)

$2\text{CuO}$ ,  $\text{P}_2\text{O}_5$ ,  $12\text{WO}_3 + 11\text{H}_2\text{O}$ . Very efflorescent. (Péchar, C. R. 110. 754.)

$2\text{CuO}$ ,  $\text{P}_2\text{O}_5$ ,  $20\text{WO}_3 + 13\text{H}_2\text{O}$  Efflorescent (Péchar, A. ch. (6) 22. 235)

**Lead phosphotungstate**,  $2\text{PbO}$ ,  $\text{P}_2\text{O}_5$ ,  $12\text{WO}_3 + 6\text{H}_2\text{O}$

Insol. in cold, sol. in boiling  $\text{H}_2\text{O}$ . (Péchar, C. R. 110. 754.)

$2\text{PbO}$ ,  $\text{P}_2\text{O}_5$ ,  $20\text{WO}_3 + 6\text{H}_2\text{O}$ . Sol. in boiling  $\text{H}_2\text{O}$ . (Péchar, A. ch. (6) 22. 236.)

**Lithium phosphotungstate**,  $\text{Li}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $12\text{WO}_3 + 21\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Péchar, C. R. 110. 754.)

**Magnesium phosphotungstate**,  $2\text{MgO}$ ,  $\text{P}_2\text{O}_5$ ,  $12\text{WO}_3$

Sl. efflorescent. (Péchar, C. R. 110. 754.)

$2\text{MgO}$ ,  $\text{P}_2\text{O}_5$ ,  $20\text{WO}_3 + 19\text{H}_2\text{O}$ . Sl. efflorescent. (Péchar, A. ch. (6) 22. 234)

**Mercurous phosphotungstate**.

Insol. in dil.  $\text{HNO}_3 + \text{Aq.}$  (Péchar, C. R. 110. 754.)

**Potassium phosphotungstate**,  $\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $12\text{WO}_3 + 9\text{H}_2\text{O}$ .

Insol. in cold, sl. sol. in hot  $\text{H}_2\text{O}$  (Péchar, C. R. 110. 754.)

$5\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $16\text{WO}_3 + x\text{H}_2\text{O} = \text{K}_5\text{PW}_9\text{O}_{38} + x\text{H}_2\text{O}$ . (Potassium  $\alpha$ -phosphotungstate).

Very sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Sol. in cold dil.  $\text{HNO}_3 + \text{Aq.}$  (Kehrmann.)

$3\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $16\text{WO}_3 + 16\text{H}_2\text{O} = \text{K}_3\text{PW}_9\text{O}_{38} + 8\text{H}_2\text{O}$ . (Potassium  $\alpha$ -anhydrophosphotungstate). Efflorescent. Easily sol. in  $\text{H}_2\text{O}$ . (Kehrmann.)

$5\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $17\text{WO}_3 + 21$  or  $22\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . (Kehrmann, Z. anorg. 1894, 6. 387.)

$3\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{WO}_3 + 28\text{H}_2\text{O}$ . (Duparc and Pearce, Bull. Soc. Min. 1895, 18. 42.)

$\text{K}_2\text{O}$ ,  $5\text{H}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{WO}_3 + 14\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$  (Gibbs.)

$6\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $18\text{WO}_3 + 30\text{H}_2\text{O}$ , and  $23\text{H}_2\text{O}$ .

The  $23\text{H}_2\text{O}$  salt is more sol. in  $\text{H}_2\text{O}$  than the  $30\text{H}_2\text{O}$  salt (Gibbs.)

$7\text{K}_2\text{O}, \text{H}_2\text{O}, \text{P}_2\text{O}_5, 20\text{WO}_3 + 27\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Gibbs, B. 10. 1386.)

$\text{K}_2\text{O}, \text{P}_2\text{O}_5, 20\text{WO}_3 + 5\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . (Péchar, A. ch. (6) 22. 231.)

$8\text{K}_2\text{O}, \text{P}_2\text{O}_5, 20\text{WO}_3 + 18\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

$3\text{K}_2\text{O}, \text{P}_2\text{O}_5, 21\text{WO}_3 + 31\text{H}_2\text{O}$ . Easily sol. in cold  $\text{H}_2\text{O}$  or alcohol. Much less sol. in very dil.  $\text{HCl} + \text{Aq}$  or  $\text{KCl} + \text{Aq}$ . Decomp. by boiling  $\text{H}_2\text{O}$ . (Kehrmann and Frankel, B. 25. 1971.)

$2\text{K}_2\text{O}, 4\text{H}_2\text{O}, \text{P}_2\text{O}_5, 22\text{WO}_3 + 2\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

$7\text{K}_2\text{O}, \text{P}_2\text{O}_5, 22\text{WO}_3 + 31\text{H}_2\text{O}$ . Easily sol. in cold or hot  $\text{H}_2\text{O}$ . Insol. in alcohol (Kehrmann, B. 25. 1966.)

$3\text{K}_2\text{O}, 3\text{H}_2\text{O}, \text{P}_2\text{O}_5, 24\text{WO}_3 + 8$ , and  $14\text{H}_2\text{O}$  Sol. in a large amount of  $\text{H}_2\text{O}$  with partial decomp. (Gibbs, Proc. Am. Acad. 16. 120.)

Practically insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{NH}_4\text{OH}$ , alkalies, or alkali carbonates +  $\text{Aq}$ . (Kehrmann, B. 24. 2329.)

$6\text{K}_2\text{O}, \text{P}_2\text{O}_5, 24\text{WO}_3 + 18\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Gibbs, Proc. Am. Acad. 15. 1.)

#### Potassium lead $\alpha$ -phosphotungstate.

Sl. sol. in  $\text{H}_2\text{O}$ . (Kehrmann.)

Silver phosphotungstate,  $\text{Ag}_2\text{O}, \text{P}_2\text{O}_5, 12\text{WO}_3 + 8\text{H}_2\text{O}$ .

Ppt. Insol. in  $\text{H}_2\text{O}$ . (Péchar, C. R. 110. 754.)

$5\text{Ag}_2\text{O}, \text{P}_2\text{O}_5, 16\text{WO}_3 + x\text{H}_2\text{O} = \text{Ag}_x\text{PW}_{12}\text{O}_{40} + x\text{H}_2\text{O}$  (Silver  $\alpha$ -phosphotungstate). Ppt. (Kehrmann.)

$3\text{Ag}_2\text{O}, \text{P}_2\text{O}_5, 16\text{WO}_3 + 16\text{H}_2\text{O} = \text{Ag}_x\text{PW}_{12}\text{O}_{40} + 8\text{H}_2\text{O}$  (Silver  $\alpha$ -anhydrophosphotungstate). Easily sol. in  $\text{H}_2\text{O}$ . (Kehrmann.)

$\text{Ag}_2\text{O}, 24\text{WO}_3, \text{P}_2\text{O}_5 + 60\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ .

$3\text{Ag}_2\text{O}, 24\text{WO}_3, \text{P}_2\text{O}_5 + 58\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Sprenger, J. pr. (2) 22. 418.)

Sodium phosphotungstate,  $3\text{Na}_2\text{O}, \text{P}_2\text{O}_5, 7\text{WO}_3 + \text{Aq}$ .

Sol. in  $\text{H}_2\text{O}$ . (Kehrmann, Z. anorg. 1. 437.)

$5\text{Na}_2\text{O}, 11\text{H}_2\text{O}, 2\text{P}_2\text{O}_5, 12\text{WO}_3 + 26\text{H}_2\text{O} = \text{Na}_x\text{H}_{12-x}\text{P}_2\text{W}_{12}\text{O}_{41} + 13\text{H}_2\text{O}$  (?). (Scheibler, B. 5. 801.)

$2\text{Na}_2\text{O}, \text{P}_2\text{O}_5, 12\text{WO}_3 + 18\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Péchar, C. R. 110. 754.)

$5\text{Na}_2\text{O}, 14\text{WO}_3, 2\text{P}_2\text{O}_5 + 42\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

$\text{Na}_2\text{O}, \text{P}_2\text{O}_5, 20\text{WO}_3, 2\text{H}_2\text{O} + 19\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 1895, 17. 183.)

$\text{Na}_2\text{O}, \text{P}_2\text{O}_5, 20\text{WO}_3 + 23\text{H}_2\text{O} = \text{Na}_x\text{O}, 7\text{H}_2\text{O}, \text{P}_2\text{O}_5, 20\text{WO}_3 + 16\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

+  $25\text{H}_2\text{O}$ . Sl. efflorescent; very sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Péchar, A. ch. (6) 22. 227.)

$2\text{Na}_2\text{O}, \text{P}_2\text{O}_5, 20\text{WO}_3 + 10\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Péchar.)

+  $30\text{H}_2\text{O}$ . (P.)

$3\text{Na}_2\text{O}, \text{P}_2\text{O}_5, 20\text{WO}_3 + 32\text{H}_2\text{O}$  As above. (P.)

$2\text{Na}_2\text{O}, \text{P}_2\text{O}_5, 22\text{WO}_3 + 9\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

$3\text{Na}_2\text{O}, \text{P}_2\text{O}_5, 24\text{WO}_3 + 22\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Bianthorst and Kraut, A. 249. 379.)

+  $30\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Soboleff, Z. anorg. 1896, 12. 18.)

+  $42\text{H}_2\text{O}$

#### Solubility in $\text{H}_2\text{O}$ at $t^\circ$ .

$t^\circ$	100 ccm. $\text{H}_2\text{O}$ dissolve g of the crystal salt
0	22.04
22	59.65
93	98.184

(Soboleff, Z. anorg. 1896, 12. 31.)

$2\text{Na}_2\text{O}, 4\text{H}_2\text{O}, 24\text{WO}_3, \text{P}_2\text{O}_5 + 23\text{H}_2\text{O}$ . Readily sol. in  $\text{H}_2\text{O}$ . (Gibbs, Proc. Am. Acad. 16. 118.)

Sp. gr. at  $20^\circ$  of solutions of  $2\text{Na}_2\text{O}, 4\text{H}_2\text{O}, \text{P}_2\text{O}_5, 24\text{WO}_3 + 23\text{H}_2\text{O}$  containing

10.22	20.94	31.13% salt,
1.085	1.190	1.316

42.61	52.92	64.11% salt.
1.496	1.702	2.001

or, by calculation,  $a = \text{sp. gr. if } \% \text{ is crystallized salt}$ ,  $b = \text{sp. gr. if } \% \text{ is anhydrous salt}$ :

5	10	15	20	25% salt,
a. 1.040	1.084	1.131	1.181	1.237
b. 1.044	1.092	1.143	1.199	1.262

30	35	40	45	50% salt,
a. 1.299	1.370	1.440	1.538	1.640
b. 1.333	1.414	1.507	1.613	1.734

55	60	64% salt.
a. 1.754	1.884	1.998
b. 1.872		..

(Bianthorst and Kraut, A. 249. 377.)

Strontium phosphotungstate,  $2\text{SrO}, \text{P}_2\text{O}_5, 12\text{WO}_3 + 17\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Péchar, C. R. 110. 754.)

Thallium phosphotungstate,  $\text{Tl}_2\text{O}, \text{P}_2\text{O}_5, 12\text{WO}_3 + 4\text{H}_2\text{O}$ .

Ppt. (Péchar, C. R. 110. 754.)

Zinc phosphotungstate,  $2\text{ZnO}, \text{P}_2\text{O}_5, 12\text{WO}_3 + 7\text{H}_2\text{O}$ .

Efflorescent. (Péchar, C. R. 110. 754.)

#### Monometaphosphotungstic acid.

Ammonium monometaphosphotungstate,  $(\text{NH}_4)_2\text{O}, 2\text{NH}_4\text{PO}_3, 18\text{WO}_3 + 11\text{H}_2\text{O}$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ .

**Potassium monometaphosphotungstate,**  
 $3K_2O, 2KPO_3, 24WO_3 + 20H_2O$ .

Very sol in  $H_2O$ . (Gibbs, Am. Ch. J. 7, 319)

**Orthometaphosphotungstic acid.****Potassium sodium orthometaphosphotungstate,**  
 $2K_2O, 4Na_2O, 6NaPO_3, 6K_2PO_3, 22WO_3 + 42H_2O$ .

Sl. sol. in  $H_2O$  (Gibbs, Am. Ch. J. 7, 319)

**Pyrophosphotungstic acid.****Ammonium manganous sodium pyrophosphotungstate,**  
 $5(NH_4)_2O, 6MnO, 2Na_2O, 2P_2O_5, 28WO_3 + 48H_2O$ 

Very sol. in cold and in hot  $H_2O$ . (Gibbs, Am. Ch. J. 1895, 17, 90)

**Ammonium sodium pyrophosphotungstate,**  
 $6(NH_4)_2O, 3Na_2P_2O_7, 2(NH_4)_2O, 22WO_3 + 31H_2O$ .

Nearly insol. in cold  $H_2O$  or  $NH_4OH + Aq$ . Sol. in a large amount of hot  $H_2O$ .

**Manganous sodium pyrophosphotungstate,**  
 $6Na_2O, 3MnO, P_2O_5, 14WO_3 + 36H_2O$ .

Efflorescent in dry air. Sol. in  $H_2O$  and can be recryst. therefrom. (Gibbs)

**Potassium pyrophosphotungstate,**  
 $9K_2P_2O_7, 22WO_3 + 49H_2O$ .

Very sl. sol. in cold  $H_2O$ .  
 $6K_2P_2O_7, 3H_2P_2O_7, 22WO_3, K_2O, H_2O + 42H_2O$ . Sl. sol. in cold. Sol. in much boiling  $H_2O$ . (Gibbs, Am. Ch. J. 7, 392.)

**Phosphovanadic acid,**  
 $P_2O_5, V_2O_5, 2H_2O + 9H_2O$ .

Sol. in  $H_2O$ .  
Composition is vanadium phosphate  $(VO_2)_2H_2PO_4 + 4\frac{1}{2}H_2O$ . (Friedheim, B. 23, 1531.)

This is the only "acid" which exists. (F.)  
 $P_2O_5, V_2O_5 + 14H_2O$ . Sol. in  $H_2O$ ; can be recryst. from dil.  $H_2PO_4 + Aq$ . (Ditte, C. R. 102, 757)

$3P_2O_5, 2V_2O_5 + 9H_2O$ . Sol. in  $H_2O$ . (Ditte)  
 $P_2O_5, 3V_2O_5$ . (Berzelius.)  
 $3H_2O, 7P_2O_5, 6V_2O_5 + 34H_2O$ . Sol. in  $H_2O$ .  
Decomp. by much  $H_2O$  into—  
 $6H_2O, P_2O_5, 20V_2O_5 + 53H_2O$ . Sol. in  $H_2O$ . (Gibbs, Am. Ch. J. 7, 209.)

**Ammonium phosphovanadate,**  
 $(NH_4)_2O, P_2O_5, V_2O_5 + H_2O$ 

Sl. sol. in cold  $H_2O$ . (Gibbs, Am. Ch. J. 7, 209.)  
 $+ 3H_2O$ . Composition is  $(VO_2)(NH_4)HPO_4 + H_2O$  (Friedheim.)  
 $(NH_4)_2O, P_2O_5, 2V_2O_5 + 7H_2O$ . Easily sol. in  $H_2O$ . (Gibbs.) Sl. sol. in  $H_2O$ . (Fried-

heim) Composition is  $(NH_4)_2O, V_2O_5, + 2(VO_2)_2H_2PO_4 + 5H_2O$  (Friedheim)

$5(NH_4)_2O, 2P_2O_5, 3V_2O_5 + 24H_2O$ . Easily sol. in  $H_2O$  (Ditte, C. R. 102, 1019.) Could not be obtained (Friedheim)

$5(NH_4)_2O, 4P_2O_5, 2V_2O_5 + 24H_2O$ . As above. (Ditte) Could not be obtained. (Friedheim.)

$7(NH_4)_2O, P_2O_5, 12V_2O_5 + 26H_2O$ . Easily sol. in  $H_2O$ . Composition is  $2(NH_4)_2HPO_4 + 5(NH_4)_2O, 12V_2O_5 + 25H_2O$  (Friedheim.)

**Potassium phosphovanadate,**  
 $K_2O, P_2O_5, 2V_2O_5 + 7H_2O$ .

Sl. sol. in  $H_2O$ ; decomp. thereby to  $7K_2O, 12V_2O_5, P_2O_5 + 26H_2O$

Composition is  $K_2O, V_2O_5 + 2(VO_2)_2H_2PO_4 + 5H_2O$ . (Friedheim)

$3K_2O, 4P_2O_5, 6V_2O_5 + 21H_2O$ . Sl. sol. in  $H_2O$ . (Gibbs.)

$7K_2O, P_2O_5, 12V_2O_5 + 26H_2O$ . Easily sol. in  $H_2O$ . Composition is  $2K_2HPO_4 + 5K_2O, 12V_2O_5 + 25H_2O$  (Friedheim)

$2K_2O, P_2O_5, V_2O_5$   
 $3K_2O, 2P_2O_5, 2V_2O_5 + 5H_2O$ .

$13K_2O, 2P_2O_5, 22V_2O_5 + 58H_2O$ .

$15K_2O, 2P_2O_5, 25V_2O_5 + 76H_2O$ . (Friedheim, Z. anorg. 1894, 5, 446)

$16K_2O, 2P_2O_5, 27V_2O_5 + 57H_2O$ .

$6K_2O, P_2O_5, 11V_2O_5 + 33H_2O$ .

$7K_2O, P_2O_5, 13V_2O_5 + 38H_2O$ .

$4K_2O, P_2O_5, 3V_2O_5 + 3H_2O$ . (Friedheim, Z. anorg. 1894, 5, 459-465)

**Silver phosphovanadate,**  
 $2Ag_2O, P_2O_5, V_2O_5 + 5H_2O$ 

Sl. sol. in cold or hot  $H_2O$ . (Gibbs)

**Phosphovanadicotungstic acid.****Ammonium phosphovanadicotungstate,**  
 $(NH_4)_2O, P_2O_5, V_2O_5, WO_3 + zH_2O$ .

Ppt. (Smith, J. Am. Chem. Soc. 1902, 24, 577.)

$15(NH_4)_2O, 2P_2O_5, 6V_2O_5, 44WO_3 + 106H_2O$ . Sol. in  $H_2O$ . Insol. in alcohol, ether or benzene. (Rogers, J. Am. Chem. Soc. 1903, 25, 303)

**Phosphovanadicozanadotungstic acid.****Ammonium phosphovanadicozanadotungstate,**  
 $14(NH_4)_2O, 2P_2O_5, 3V_2O_5, 7V_2O_5, 27WO_3 + 66H_2O$ .

Sparingly sol. in cold  $H_2O$ . Sol. in hot  $H_2O$ . (Rogers, J. Am. Chem. Soc. 1903, 25, 309.)

**Phosphovanadicozirconosotungstic acid.****Ammonium phosphovanadicozirconosotungstate.**

Exact formula not known. (E. F. Smith, J. Am. Chem. Soc. 1903, 25, 1226.)

**Phosphovanadicovanadic acid.**

**Ammonium phosphovanadicovanadate,**  
 $7(\text{NH}_4)_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ ,  $\text{VO}_2$ ,  $18\text{V}_2\text{O}_5 + 50\text{H}_2\text{O}$   
 Sol. in  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 7. 209.)  
 $7(\text{NH}_4)_2\text{O}$ ,  $14\text{P}_2\text{O}_5$ ,  $16\text{VO}_2$ ,  $6\text{V}_2\text{O}_5 + 65\text{H}_2\text{O}$ .  
 Decomp. by boiling with  $\text{H}_2\text{O}$  into—  
 $5(\text{NH}_4)_2\text{O}$ ,  $10\text{P}_2\text{O}_5$ ,  $11\text{VO}_2$ ,  $\text{V}_2\text{O}_5 + 41\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

**Potassium —**,  $5\text{K}_2\text{O}$ ,  $12\text{P}_2\text{O}_5$ ,  $12\text{VO}_2$ ,  $6\text{V}_2\text{O}_5 + 40\text{H}_2\text{O}$ .  
 Decomp. by hot  $\text{H}_2\text{O}$  into—  
 $7\text{K}_2\text{O}$ ,  $12\text{P}_2\text{O}_5$ ,  $14\text{VO}_2$ ,  $6\text{V}_2\text{O}_5 + 52\text{H}_2\text{O}$ .  
 Sol in  $\text{H}_2\text{O}$  (Gibbs.)

**Sodium —**,  $4\text{Na}_2\text{O}$ ,  $5\text{P}_2\text{O}_5$ ,  $\text{VO}_2$ ,  $4\text{V}_2\text{O}_5 + 37\text{H}_2\text{O}$   
 Insol. in  $\text{H}_2\text{O}$ . (Gibbs.)

**Phosphovanadiomolybdic acid.**

**Ammonium phosphovanadiomolybdate,**  
 $7(\text{NH}_4)_2\text{O}$ ,  $2\text{P}_2\text{O}_5$ ,  $\text{V}_2\text{O}_5$ ,  $48\text{MoO}_3 + 30\text{H}_2\text{O}$ .  
 Sl. sol. in cold, somewhat more in hot  $\text{H}_2\text{O}$  with partial decomp. (Gibbs, Am. Ch. J. 5. 301.)  
 $8(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $8\text{V}_2\text{O}_5$ ,  $14\text{MoO}_3 + 50\text{H}_2\text{O}$ .  
 Easily sol in hot  $\text{H}_2\text{O}$  without decomp. (Gibbs.)  
 $5(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $2\frac{1}{2}\text{V}_2\text{O}_5$ ,  $21\frac{1}{2}\text{MoO}_3 + 50\text{H}_2\text{O}$ .  
 $8(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{V}_2\text{O}_5$ ,  $18\text{MoO}_3 + 45\text{H}_2\text{O}$ .  
 $7(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\frac{1}{2}\text{V}_2\text{O}_5$ ,  $16\frac{1}{2}\text{MoO}_3 + 50\text{H}_2\text{O}$ .  
 $8(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $7\text{V}_2\text{O}_5$ ,  $15\text{MoO}_3 + 50\text{H}_2\text{O}$ .  
 All above compounds are sol. in  $\text{H}_2\text{O}$ . (Blum, J. Am. Chem. Soc. 1908, 30. 1859.)  
 $6(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $7\text{V}_2\text{O}_5$ ,  $9\text{MoO}_3 + 28\text{H}_2\text{O} + 33\text{H}_2\text{O}$ , and  $+37\text{H}_2\text{O}$ .  
 Can be recryst. from  $\text{H}_2\text{O}$ . (Hinsen, Dissert. 1904.)

$4(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $11\text{MoO}_3 + 37\text{H}_2\text{O}$  (Jacoby, Dissert. 1900.)  
 $6(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $7\text{V}_2\text{O}_5$ ,  $11\text{MoO}_3 + 34\text{H}_2\text{O}$  and  $+43\text{H}_2\text{O}$ . (Hinsen, Dissert. 1904.)  
 $8(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $7\text{V}_2\text{O}_5$ ,  $11\text{MoO}_3 + 30\text{H}_2\text{O}$ . (Hinsen.)  
 $5(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $12\text{MoO}_3 + 39\text{H}_2\text{O}$ .  
 1 cc. of solution in  $\text{H}_2\text{O}$  contains 0.2624 g. of hydrous salt Sp. gr. of solution at  $18^\circ = 1.0932$ . (Lahrman, Dissert. 1904.)  
 $6(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $12\text{MoO}_3 + 24\text{H}_2\text{O}$   
 Nearly insol. in cold  $\text{H}_2\text{O}$  (Lahrman.)  
 $7(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$ ,  $12\text{MoO}_3 + 33\text{H}_2\text{O}$ . (Stamm, Dissert. 1905.)  
 $6(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $13\text{MoO}_3 + 37\text{H}_2\text{O}$ .  
 1 cc. of solution sat. at  $18^\circ$  contains 0.1543 g. hydrous salt and has sp. gr. = 1.0900. (Toggenburg, Dissert. 1902.)  
 $6(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{V}_2\text{O}_5$ ,  $13\text{MoO}_3 + 29\text{H}_2\text{O}$ .  
 1 cc. solution sat. at  $18^\circ$  contains 0.2533 g. hydrous salt Sp. gr. = 1.0797. (Stamm, Dissert. 1905.)

$+32\text{H}_2\text{O}$ . (Stamm.)  
 $+34\text{H}_2\text{O}$ . (Stamm.)  
 $6(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $14\text{MoO}_3 + 28\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$  with decomp. (Toggenburg, Dissert. 1902.)  
 $8(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $14\text{MoO}_3 + 24\text{H}_2\text{O}$ .  
 Decomp. by cold  $\text{H}_2\text{O}$ . (Lahrman, Dissert. 1904.)  
 $5(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $3\text{V}_2\text{O}_5$ ,  $5\text{MoO}_3 + 39\text{H}_2\text{O}$   
 1 cc. of solution sat. at  $18^\circ$  contains 0.2445 g. hydrous salt and has sp. gr. = 1.144. (Jacoby, Dissert. 1900.)  
 $6(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $3\text{V}_2\text{O}_5$ ,  $15\text{MoO}_3 + 41\text{H}_2\text{O}$   
 Extraordinarily easily sol. in  $\text{H}_2\text{O}$ . (Jacoby.)  
 $7(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $3\text{V}_2\text{O}_5$ ,  $18\text{MoO}_3 + 31\text{H}_2\text{O}$ . (Schulz, Dissert. 1905.)  
 $6(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $3\text{V}_2\text{O}_5$ ,  $18\text{MoO}_3 + 40\text{H}_2\text{O}$ . (Schulz.)  
 $8(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{V}_2\text{O}_5$ ,  $73\text{MoO}_3 + 26\text{H}_2\text{O} + 33\text{H}_2\text{O}$ . (Stamm, Dissert. 1905.)

**Ammonium barium —**,  $0.5(\text{NH}_4)_2\text{O}$ ,  $5.5\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$ ,  $8\text{MoO}_3 + 38\text{H}_2\text{O}$ . (Hinsen, Dissert. 1904.)  
 $2(\text{NH}_4)_2\text{O}$ ,  $4\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $7\text{V}_2\text{O}_5$ ,  $10\text{MoO}_3 + 43\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$  Decomp. on heating. (Toggenburg, Dissert. 1902.)  
 $(\text{NH}_4)_2\text{O}$ ,  $5\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$ ,  $12\text{MoO}_3 + 49\text{H}_2\text{O}$ . Less sol in  $\text{H}_2\text{O}$  than  $\text{NH}_4$  comp. (Jacoby, Dissert. 1900.)  
 $2(\text{NH}_4)_2\text{O}$ ,  $4\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $13\text{MoO}_3 + 37\text{H}_2\text{O}$ . Sol. in much hot  $\text{H}_2\text{O}$  with decomp. (Toggenburg, Dissert. 1902.)  
 $2(\text{NH}_4)_2\text{O}$ ,  $4\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{V}_2\text{O}_5$ ,  $13\text{MoO}_3 + 46\text{H}_2\text{O}$  (Stamm, Dissert. 1905.)  
 $3(\text{NH}_4)_2\text{O}$ ,  $4\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{V}_2\text{O}_5$ ,  $13\text{MoO}_3 + 40\text{H}_2\text{O}$  (Stamm.)  
 $3(\text{NH}_4)_2\text{O}$ ,  $3\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $14\text{MoO}_3 + 39\text{H}_2\text{O}$ . (Stamm.)  
 $2(\text{NH}_4)_2\text{O}$ ,  $4\text{BaO}$ ,  $\text{P}_2\text{O}_5$ ,  $3\text{V}_2\text{O}_5$ ,  $17\text{MoO}_3 + 46\text{H}_2\text{O}$  (Schulz, Dissert. 1905.)

**Ammonium potassium —**,  $(\text{NH}_4)_2\text{O}$ ,  $6\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$ ,  $10\text{MoO}_3 + 38\text{H}_2\text{O}$ . (Jacoby, Dissert. 1900.)  
 $(\text{NH}_4)_2\text{O}$ ,  $6\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $7\text{V}_2\text{O}_5$ ,  $11\text{MoO}_3 + 25\text{H}_2\text{O}$ . (Jacoby, Dissert. 1900.)  
 $(\text{NH}_4)_2\text{O}$ ,  $5\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $6\text{V}_2\text{O}_5$ ,  $12\text{MoO}_3 + 46\text{H}_2\text{O}$  (Jacoby.)  
 $(\text{NH}_4)_2\text{O}$ ,  $5\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{V}_2\text{O}_5$ ,  $13\text{MoO}_3 + 25\text{H}_2\text{O} + 29\text{H}_2\text{O}$ ;  $+30\text{H}_2\text{O}$ . Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$  (Stamm, Dissert. 1905.)  
 $5\text{K}_2\text{O}$ ,  $(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $4\text{V}_2\text{O}_5$ ,  $14\text{MoO}_3 + 31\text{H}_2\text{O}$  (Stamm.)  
 $(\text{NH}_4)_2\text{O}$ ,  $4\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $3\text{V}_2\text{O}_5$ ,  $15\text{MoO}_3 + 36\text{H}_2\text{O}$ . (Jacoby, Dissert. 1900.)  
 $(\text{NH}_4)_2\text{O}$ ,  $6\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $3\text{V}_2\text{O}_5$ ,  $18\text{MoO}_3 + 43\text{H}_2\text{O}$  (Schulz, Dissert. 1905.)  
 $5(\text{NH}_4)_2\text{O}$ ,  $\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5$ ,  $20\text{MoO}_3 + 52\text{H}_2\text{O}$  (Schulz.)

**Barium potassium —**,  $2\text{BaO}$ ,  $2\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $2\text{V}_2\text{O}_5$ ,  $18\text{MoO}_3 + 47\text{H}_2\text{O}$ . (Schulz, Dissert. 1905.)

**Potassium phosphovanadomolybdate**,  $7K_2O$ ,  $P_2O_5$ ,  $7V_2O_5$ ,  $9MoO_3 + 26H_2O$ .  
(Hinsen, Dissert. 1904.)  
 $5K_2O$ ,  $P_2O_5$ ,  $2V_2O_5$ ,  $20MoO_3 + 53H_2O$ .  
(Schulz, Dissert. 1905.)

### Phosphovanadiotungstic acid.

**Ammonium phosphovanadiotungstate**,  
 $10(NH_4)_2O$ ,  $3P_2O_5$ ,  $V_2O_5$ ,  $60WO_3 + 60H_2O$ .

Nearly insol in cold, sl. sol in hot  $H_2O$ .  
Sol. in  $(NH_4)_2HPO_4 + Aq$ , and in  $NH_4OH + Aq$ .

$5(NH_4)_2O$ ,  $P_2O_5$ ,  $3V_2O_5$ ,  $16WO_3 + 37H_2O$ .  
Easily sol in  $H_2O$  (Gibbs, Am Ch. J. 5. 391.)

$13(NH_4)_2O$ ,  $2P_2O_5$ ,  $8V_2O_5$ ,  $34WO_3 + 86H_2O$ .  
Very sol. in cold and hot  $H_2O$ .  
Insol. in alcohol, ether,  $CS_2$ , benzene and nitrobenzene (Rogers, J. Am. Chem. Soc. 1903, 25. 299.)

**Barium** —,  $18BaO$ ,  $3P_2O_5$ ,  $2V_2O_5$ ,  $60WO_3 + 144H_2O$ .

Easily sol in hot  $H_2O$  with decomp (Gibbs, Am Ch. J. 5. 391.)

**Potassium** —,  $3K_2O$ ,  $P_2O_5$ ,  $V_2O_5$ ,  $7WO_3 + 11H_2O$ .

Sol. in  $H_2O$ .  
 $8K_2O$ ,  $3P_2O_5$ ,  $4V_2O_5$ ,  $18WO_3 + 23H_2O$ . Sol. in hot  $H_2O$  with decomp into preceding salt. (Gibbs, Am Ch. J. 5. 391.)

**Silver** —,  $13Ag_2O$ ,  $2P_2O_5$ ,  $8V_2O_5$ ,  $33WO_3 + 41H_2O$ .

Somewhat sol. in  $H_2O$ .  
Completely sol. in  $H_2O$  containing a few drops  $HNO_3$  (Rogers, J. Am. Chem. Soc. 1903, 25. 302.)

### Phosphovanadiovanadicotungstic acid.

**Barium phosphovanadiovanadicotungstate**,  
 $18BaO$ ,  $3P_2O_5$ ,  $V_2O_5$ ,  $VO_3$ ,  $60WO_3 + 150H_2O$ .

Sl. sol in cold, easily sol. in hot  $H_2O$  (Gibbs, Am Ch. J. 5. 391.)

### Phosphuretted hydrogen.

See Hydrogen phosphide.

### Platibromonitrous acid.

**Potassium platibromonitrite**,  $K_2Pt(NO_2)_2Br_2$ .  
Rather sl. sol. in  $H_2O$  (Blomstrand, J. pr. (2) 3. 214.)

Sol. in about 40 pts. cold, and 20 pts. boiling  $H_2O$ . Insol. in alcohol. Sl. sol in  $KBr$  or  $KNO_3 + Aq$  (Vèzes, A. ch. (6) 29. 198.)

$K_2Pt(NO_2)_2Br_2$ . Sol. in about 5 pts. warm  $H_2O$  with decomp (Vèzes.)

$K_2Pt(NO_2)_2Br_2$ . Sol. in less than 5 pts.  $H_2O$  with decomp. (Vèzes.)

### Platichloronitrous acid.

**Potassium platichloronitrite**,  $K_2Pt(NO_2)_2Cl_2$ .  
Rather sl. sol. in  $H_2O$  (Blomstrand, J. pr. (2) 3. 214.)

Sol. in 40 pts. cold, and 20 pts. boiling  $H_2O$ .  
Insol. in alcohol. Sl. sol. in  $KCl$  or  $KNO_3 + Aq$  (Vèzes, A. ch. (6) 29. 183.)

$K_2Pt(NO_2)_2Cl_2$ . Very sol. in  $H_2O$ . (Vèzes.)  
 $K_2Pt(NO_2)_2Cl_2 + H_2O$ . Sol. in  $H_2O$  with decomp. (Vèzes.)

### Platiodonitrous acid.

**Potassium platiodonitrite**,  $K_2Pt(NO_2)_2I_4$ .

Sl. sol. in cold, more easily in hot  $H_2O$ ; decomp by boiling. (Vèze, A. ch. (6) 29. 207.)

$K_2Pt(NO_2)_2I_4$ . As above (Vèzes.)

### Platin-.

See also *Platino-*, *plato-*, *p'at-*, and *platos-*.

### Platindiamine compounds.

See Chloro-, bromo-, hydroxylo-, iodo-, nitro-, nitrito-, sulphato-, etc., platindiamine compounds.

### Platindiamine carbonate,

$Pt(NH_3)_4(CO_3)_2$ .  
Ppt. Sol. in  $NaOH + Aq$ . (Geddes, J. pr. (2) 26. 257.)

— chloride  $Pt(NH_3)_4Cl_4$ .

Sol. in hot  $H_2O$  (Gerdes.)

— chloroplatinate,  $Pt(NH_3)_4Cl_4$ ,  $PtCl_4 + 2H_2O$ .

Very sl. sol. in  $H_2O$ . (Gerdes.)

— nitrate,  $Pt(NH_3)_4(NO_3)_4$ .

Easily sol in  $H_2O$ , sl. sol in  $HNO_3 + Aq$ . (Gerdes.)

— sulphate,  $Pt(NH_3)_4(SO_4)_2 + H_2O$ .

Nearly insol in  $H_2O$  (Gerdes.)

### Tetraplatinamine iodide, $Pt_4(NH_3)_{16}I_{10}$

(Blomstrand, B. 16. 1469.)

### Ocloplatinamine iodide, $Pt_3(NH_3)_{18}I_{18}$ .

(Blomstrand.)

### Platinic acid.

**Barium platinate, basic (?)**,  $3BaO$ ,  $2PtO_2$ .

Insol. in  $HC_2H_3O_2 + Aq$ ; easily sol. in  $HCl + Aq$  (Rousseau.)

**Barium platinate, BaPtO<sub>6</sub>**

(Rousseau, C R. 109. 144.)

+H<sub>2</sub>O. Insol. in dil. HNO<sub>3</sub>+Aq; sol in warm HCl+Aq. (Topsoe, B. 3. 464.)+4H<sub>2</sub>O Very sl. sol in H<sub>2</sub>O, BaO<sub>2</sub>H<sub>2</sub>, or NaOH+Aq. Easily sol. in dil. acids, except HClO<sub>4</sub>, in which it is insol. in the cold, but decomp on heating. (Topsoe, l. c.)Composition is 3BaPtO<sub>6</sub>, BaCl<sub>2</sub>, PtCl<sub>2</sub>O+4H<sub>2</sub>O (?). (Johannsen, A. 155. 204.)**Calcium platinate chloride (?)**, 2Ca<sub>2</sub>Pt<sub>2</sub>O<sub>3</sub>Cl<sub>2</sub>+7H<sub>2</sub>O (?).

"Herschel's precipitate."

Easily sol. in HCl+Aq, and in HNO<sub>3</sub>+Aq, if freshly pptd. (Herschel.)Very sol. in HNO<sub>3</sub>+Aq (Weiss and Döbereiner, A. 14. 252.)Composition is CaPtO<sub>6</sub>, PtCl<sub>2</sub>O, CaO+7H<sub>2</sub>O (?). (Johannsen, A. 155. 204.)**Potassium platinate.**Sol. in H<sub>2</sub>O. (Berzelius)K<sub>2</sub>O, PtO<sub>3</sub>+3H<sub>2</sub>O. Very sol. in H<sub>2</sub>O. (Blondel, A. ch. 1905, (8) 6. 90.)K<sub>2</sub>Pt(OH)<sub>6</sub>. Sol. in H<sub>2</sub>O; insol. in alcohol. (Bellucci, Z. anorg. 1905, 44. 173.)**Sodium platinate**, Na<sub>2</sub>O, 3PtO<sub>3</sub>+6H<sub>2</sub>O.Dil. acids dissolve out Na<sub>2</sub>O and leave PtO<sub>3</sub>. Sol. in HNO<sub>3</sub>+Aq. (Döbereiner, Pogg. 28. 180.)Na<sub>2</sub>O, PtO<sub>3</sub>+3H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Blondel.)**Metaplatinic acid**, 5PtO<sub>3</sub>, 5H<sub>2</sub>O.Insol. in H<sub>2</sub>O. (Blondel, A. ch. 1905, (8) 6. 103.)**Sodium metaplatinate**, Na<sub>2</sub>O, 5PtO<sub>3</sub>+9H<sub>2</sub>O.Insol. in H<sub>2</sub>O. (Blondel.)**Platinimolybdic acid**, 4H<sub>2</sub>O, PtO<sub>3</sub>, 10MoO<sub>3</sub>. (Gibbs.)**Ammonium platinimolybdate**,8MoO<sub>3</sub>, 2PtO<sub>3</sub>, 3(NH<sub>4</sub>)<sub>2</sub>O+12H<sub>2</sub>O.4MoO<sub>3</sub>, 2PtO<sub>3</sub>, 2(NH<sub>4</sub>)<sub>2</sub>O+19H<sub>2</sub>O.Sol. in hot H<sub>2</sub>O (Gibbs, Am. Ch. J. 1895, 17. 80-82.)**Potassium platinimolybdate**, 60MoO<sub>3</sub>, PtO<sub>3</sub>, 10K<sub>2</sub>O+40H<sub>2</sub>O.Sol. in hot H<sub>2</sub>O. (Gibbs.)**Silver platinimolybdate.****Sodium platinimolybdate**, 4Na<sub>2</sub>O, PtO<sub>3</sub>, 10 MoO<sub>3</sub>+29H<sub>2</sub>O.Sol. in H<sub>2</sub>O. (Gibbs, Sil. Am. J. (3) 14. 61.)**Platinungstic acid.****Ammonium platinungstate**, 4(NH<sub>4</sub>)<sub>2</sub>O, PtO<sub>3</sub>, 10WO<sub>3</sub>+12H<sub>2</sub>O.Sol. in H<sub>2</sub>O. (Gibbs, B. 10. 1384.)**Potassium platinungstate**, 4K<sub>2</sub>O, PtO<sub>3</sub>, 10WO<sub>3</sub>+9H<sub>2</sub>O.Sol. in H<sub>2</sub>O. (Gibbs.)**Sodium platinungstate**, 4Na<sub>2</sub>O, PtO<sub>3</sub>, 10WO<sub>3</sub>+25H<sub>2</sub>O.Sol. in H<sub>2</sub>O. (Gibbs.)5Na<sub>2</sub>O, 7WO<sub>3</sub>, 2PtO<sub>3</sub>+35H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Gibbs.)Is double salt 3Na<sub>2</sub>O, 7WO<sub>3</sub>+2Na<sub>2</sub>PtO<sub>3</sub>. (Rosenheim, B. 24. 2397.)10WO<sub>3</sub>, PtO<sub>3</sub>, 4Na<sub>2</sub>O+23H<sub>2</sub>O.10WO<sub>3</sub>, PtO<sub>3</sub>, 6Na<sub>2</sub>O+28H<sub>2</sub>O.20WO<sub>3</sub>, PtO<sub>3</sub>, 9Na<sub>2</sub>O+58H<sub>2</sub>O.30WO<sub>3</sub>, 2PtO<sub>3</sub>, 15Na<sub>2</sub>O+89H<sub>2</sub>O.30WO<sub>3</sub>, PtO<sub>3</sub>, 12Na<sub>2</sub>O+72H<sub>2</sub>O.All are sol in boiling H<sub>2</sub>O. (Gibbs, Am. Ch. J. 1895, 17. 74-80.)**Platino-**

See also Plato—.

**Platinochlorophosphoric acid.**

See Chloroplatinophosphoric acid.

**Platinocyanhydric acid**, H<sub>2</sub>Pt(CN)<sub>4</sub>.Deliquescent. Very sol in H<sub>2</sub>O, alcohol, and ether.**Ammonium platinocyanide**, (NH<sub>4</sub>)<sub>2</sub>Pt(CN)<sub>4</sub>+3H<sub>2</sub>O.Very sol. in H<sub>2</sub>O.+2H<sub>2</sub>O. Sol. in 1 pt. H<sub>2</sub>O, and still more easily in alcohol.+H<sub>2</sub>O.**Ammonium hydroxylamine platinocyanide**, NH<sub>4</sub>(NH<sub>4</sub>O)Pt(CN)<sub>4</sub>+3½H<sub>2</sub>O.Sol. in H<sub>2</sub>O. (Scholz, M. Ch. 1. 900.)**Ammonium magnesium platinocyanide**, (NH<sub>4</sub>)<sub>2</sub>MgPt(CN)<sub>4</sub>+6H<sub>2</sub>O.**Barium platinocyanide**, BaPt(CN)<sub>4</sub>+4H<sub>2</sub>OSol. in 33 pts. H<sub>2</sub>O at 16°, and in much less at 100°. Sol. in alcohol.**Barium potassium platinocyanide**, BaK<sub>2</sub>Pt(CN)<sub>4</sub>·xH<sub>2</sub>O.Sol. in H<sub>2</sub>O.**Barium rubidium platinocyanide**, BaRb<sub>2</sub>Pt(CN)<sub>4</sub>·xH<sub>2</sub>O.Sol. in H<sub>2</sub>O.

Cadmium platinoeyanide, $\text{CdPt}(\text{CN})_4$ Ppt Sol. in $\text{NH}_4\text{OH} + \text{Aq.}$ (Martius, A. 117. 376) $\text{CdPt}(\text{CN})_4, 2\text{NH}_3 + \text{H}_2\text{O}$ (M)	Lanthanum platinoeyanide, $\text{La}_2[\text{Pt}(\text{CN})_4]_3 + 18\text{H}_2\text{O}$ . Easily sol. in $\text{H}_2\text{O}$ . (Cleve)
Calcium platinoeyanide, $\text{CaPt}(\text{CN})_4 + 5\text{H}_2\text{O}$ Very sol. in $\text{H}_2\text{O}$ .	Magnesium platinoeyanide, $\text{MgPt}(\text{CN})_4 + 2\text{H}_2\text{O}$ . Solubility in $\text{H}_2\text{O}$ . 100 g. of the sat. solution contain at: 98 4° 100° 44.33 43 96 g. $\text{MgPt}(\text{CN})_4$ (Buxhoeveden, Z anorg 1897, 15. 325.)
Calcium potassium platinoeyanide, $\text{CaK}_2[\text{Pt}(\text{CN})_4]_2$ . Sol. in $\text{H}_2\text{O}$ .	+4 $\text{H}_2\text{O}$ . Solubility in $\text{H}_2\text{O}$ . 100 g. of the sat. solution contain at: 42.2° 46.3° 48.7° 55° 40 21 39.79 40 75 40 02 g. $\text{MgPt}(\text{CN})_4$ , 58 1° 69° 77.8° 87.4° 42 01 43.48 44.88 45.52 g. $\text{MgPt}(\text{CN})_4$ , 90° 45 50 45.04 g. $\text{MgPt}(\text{CN})_4$ . (Buxhoeveden.)
Cerium platinoeyanide, $\text{Ce}_2[\text{Pt}(\text{CN})_4]_3 + 18\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ .	+7 $\text{H}_2\text{O}$ . Sol. in 3.4 pts. $\text{H}_2\text{O}$ at 16°. Easily sol. in alcohol and ether. Solubility in $\text{H}_2\text{O}$ 100 g. of the sat. solution contain at -4 12° +0 5° 5 5° 18 0° 24 9 26 33 28 07 31 23 g. $\text{MgPt}(\text{CN})_4$ , 36 6° 45 0° 46 2° 38 36 41 32 41 96 g. $\text{MgPt}(\text{CN})_4$ . (Buxhoeveden.)
Cobaltous platinoeyanide ammonia, $\text{CoPt}(\text{CN})_4, 2\text{NH}_3$ . Insol. in $\text{H}_2\text{O}$ , but sol. in hot $\text{NH}_4\text{OH} + \text{Aq.}$	Magnesium potassium platinoeyanide, $\text{MgK}_2[\text{Pt}(\text{CN})_4]_2 + 7\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ .
Cupric platinoeyanide, $\text{CuPt}(\text{CN})_4 + x\text{H}_2\text{O}$ Ppt.	Mercuric platinoeyanide, $\text{HgPt}(\text{CN})_4$ . Ppt.
Cupric platinoeyanide ammonia, $\text{CuPt}(\text{CN})_4, 2\text{NH}_3 + \text{H}_2\text{O}$ . $\text{CuPt}(\text{CN})_4, 4\text{NH}_3$ . Sol. in $\text{H}_2\text{O}$ , alcohol, and ether.	Mercuric platinoeyanide nitrate, $5\text{HgPt}(\text{CN})_4, \text{Hg}(\text{NO}_3)_2 + 10\text{H}_2\text{O}$ . Ppt.
Didymium platinoeyanide, $\text{Dy}_2[\text{Pt}(\text{CN})_4]_3 + 18\text{H}_2\text{O}$ . Efflorescent in dry air. Sol. in $\text{H}_2\text{O}$ . (Cleve.)	Nickel platinoeyanide ammonia, $\text{NiPt}(\text{CN})_4, 2\text{NH}_3 + \text{H}_2\text{O}$ .
Dysprosium platinoeyanide, $\text{Dy}_2[\text{Pt}(\text{CN})_4]_3 + 21\text{H}_2\text{O}$ Easily sol. in $\text{H}_2\text{O}$ . (Jantsch, B 1911, 44. 1277.)	Potassium platinoeyanide, $\text{K}_2\text{Pt}(\text{CN})_4 + 3\text{H}_2\text{O}$ . Extremely efflorescent. Sl. sol. in cold, easily in hot $\text{H}_2\text{O}$ . (Willm, B. 19. 950) Sol. in alcohol and ether.
Erbium platinoeyanide, $\text{Er}_2[\text{Pt}(\text{CN})_4]_3 + 21\text{H}_2\text{O}$ Sol. in $\text{H}_2\text{O}$ . (Cleve)	Potassium sodium platinoeyanide, $\text{K}_2\text{Pt}(\text{CN})_4, \text{Na}_2\text{Pt}(\text{CN})_4 + 6\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ . (Willm, B. 19. 950)
Gadolinium platinoeyanide, $2\text{Gd}(\text{CN})_3, 3\text{Pt}(\text{CN})_4 + 18\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ ; decomp. in the air. (Benedicks, Z. anorg. 1900, 22. 405.)	Praseodymium platinoeyanide, $2\text{Pr}(\text{CN})_3, 3\text{Pt}(\text{CN})_4$ . Sol. in $\text{H}_2\text{O}$ . (Von Scheele, Z anorg. 1898, 18. 355)
Glucinum platinoeyanide, $\text{GhPt}(\text{CN})_4$ . (Toozynski, Dissert. 1871.)	
Hydroxylamine platinoeyanide, $(\text{NH}_2\text{O})_2\text{Pt}(\text{CN})_4 + 2\text{H}_2\text{O}$ . Deliquescent Very sol. in $\text{H}_2\text{O}$ . (Scholz.)	
Hydroxylamine lithium platinoeyanide, $(\text{NH}_4\text{O})\text{LiPt}(\text{CN})_4 + 3\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$	
Indium platinoeyanide, $\text{In}_2[\text{Pt}(\text{CN})_4]_3 + 2\text{H}_2\text{O}$ Hydrosopic; sol. in $\text{H}_2\text{O}$ . (Renz, B. 1901, 34. 2765)	

**Samarium platincyanide**,  $\text{Sm}_2[\text{Pt}(\text{CN})_4]_2 + 18\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (Cleve.)

**Scandium platincyanide**,  $\text{Sc}_2[\text{Pt}(\text{CN})_4]_2 + 21\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  and insol. in alcohol; when boiled in alcohol it is dehydrated. (Crookes, Phil. Trans 1910, 210. A, 368.)

+21 $\text{H}_2\text{O}$  (Orlow, Ch. Z. 1912, 36. 1407.)

**Silver platincyanide**,  $\text{Ag}_2\text{Pt}(\text{CN})_4$ .

Insol. in  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH} + \text{Aq}$

**Silver platincyanide ammonia**,  $\text{Ag}_2\text{Pt}(\text{CN})_4 \cdot 2\text{NH}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ .

**Silver platincyanide bromide**.

See Bromoplatincyanide, silver.

**Silver platincyanide chloride**.

See Chloroplatincyanide, silver.

**Silver platincyanide iodide**.

See Iodoplatincyanide, silver.

**Sodium platincyanide**,  $\text{Na}_2\text{Pt}(\text{CN})_4 \cdot 3\text{H}_2\text{O}$ . Easily sol in  $\text{H}_2\text{O}$  (Willm, Z anorg. 4. 298.)

Sol. in alcohol.

**Strontium platincyanide**,  $\text{SrPt}(\text{CN})_4 \cdot 5\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ .

**Thallous platincyanide**,  $\text{Tl}_2\text{Pt}(\text{CN})_4$ .

Nearly insol in cold, sl sol. in hot  $\text{H}_2\text{O}$  (Friswell, Chem. Soc. 24. 461.)

**Thallous platincyanide carbonate**,

$2\text{Tl}_2\text{Pt}(\text{CN})_4 \cdot \text{Tl}_2\text{CO}_3$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ . (F)

**Thorium platincyanide**,  $\text{Th}[\text{Pt}(\text{CN})_4]_3 + 16\text{H}_2\text{O}$ .

Somewhat difficultly sol in cold, easily in hot  $\text{H}_2\text{O}$ . (Cleve, Sv. V A. H Bih 2. No. 6.)

**Uranyl platincyanide**,  $(\text{UO}_2)\text{Pt}(\text{CN})_4 \cdot x\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (Levy, Chem. Soc. 1908, 93. 1459.)

**Ytterbium platincyanide**,  $2\text{Yb}(\text{CN})_3 \cdot 3\text{Pt}(\text{CN})_4 + 18\text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve, Z. anorg. 1902, 32. 139.)

**Yttrium platincyanide**,  $\text{Y}_2[\text{Pt}(\text{CN})_4]_3 + 21\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  Insol. in absolute alcohol. (Cleve and Höglund.)

**Zinc platincyanide ammonia**,  $\text{ZnPt}(\text{CN})_4 \cdot 2\text{NH}_3 + \text{H}_2\text{O}$

**Platinonitrous acid**.

See Platinonitrous acid.

**Platinoplatinicyanhydric acid**,  $\text{HPt}(\text{CN})_4 + x\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Levy, Chem. Soc. 1912, 101. 1093.)

**Platinoselenocyanhydric acid**.

**Potassium platinoselenocyanide**,  $\text{K}_2\text{Pt}(\text{SeCN})_6$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Clarke and Dudley, B. 1878, 11. 1325.)

**Platinoselenostannic acid**.

See under Selenostannate, platinum.

**Platinosulphocyanhydric acid**,  $\text{H}_2\text{Pt}(\text{SCN})_4$ .

Known only in aqueous solution.

**Potassium platinosulphocyanide**,  $\text{K}_2\text{Pt}(\text{SCN})_4$ .

Permanent Sol in 25 pts.  $\text{H}_2\text{O}$  at 15°, and more readily at higher temp. Very sol. in warm alcohol.

**Silver —**,  $\text{Ag}_2\text{Pt}(\text{SCN})_4$ .

Insol in  $\text{H}_2\text{O}$  Sol. in  $\text{KSCN} + \text{Aq}$ , and partly sol in  $\text{NH}_4\text{OH} + \text{Aq}$ .

**Platinosulphocyanhydric acid**,  $\text{H}_2\text{Pt}(\text{SCN})_6$ .

Known only in aqueous, and alcoholic solutions

**Ammonium platinosulphocyanide**,  $(\text{NH}_4)_2\text{Pt}(\text{SCN})_4$ .

Sol in  $\text{H}_2\text{O}$  and alcohol.

**Barium —**,  $\text{BaPt}(\text{SCN})_6$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol.

**Ferrous —**,  $\text{FePt}(\text{SCN})_6$ .

Insol. in  $\text{H}_2\text{O}$  or alcohol Not attacked by dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ .

**Lead —**,  $\text{PbPt}(\text{SCN})_6$ .

Sl. sol. in cold, decomp by hot  $\text{H}_2\text{O}$ . Sol. in alcohol

$\text{PbPt}(\text{SCN})_6$ ,  $\text{PbO}$ . Insol. in  $\text{H}_2\text{O}$  or alcohol. Sol in acetic or nitric acids

**Mercurous —**,  $\text{Hg}_2\text{Pt}(\text{SCN})_6$ .

Ppt. Insol. in  $\text{H}_2\text{O}$

**Potassium platinosulphocyanide,**  
 $K_2Pt(SCN)_4$ 

Sol in 12 pts  $H_2O$  at  $60^\circ$ . Much more easily in boiling  $H_2O$ , and still more easily in hot alcohol.

+  $2H_2O$ . (Miolati and Bellucci, Gazz. Ch. it. 1900, 30, II. 592)

**Silver —,  $Ag_2Pt(SCN)_4$ .**

Insol. in  $H_2O$  or  $K_2Pt(SCN)_4 + Aq$ . Sol in cold  $NH_4OH + Aq$  and in  $KCN + Aq$

**Sodium —,  $Na_2Pt(SCN)_4$ .**

Sol. in  $H_2O$  and alcohol

**Platinosulphostannic acid.**

See under Sulphostannate, platinum.

**Platinosulphurous acid.**

See Platosulphurous acid.

**Platinum, Pt.**

Not attacked by  $H_2O$ ,  $H_2SO_4$ ,  $HCl$ , or  $HNO_3 + Aq$ . Slowly sol in aqua regia, or a mixture of  $HBr$  and  $HNO_3$ , but much less easily than Au.

Precipitated Pt is remarkably sol. in  $HCl + Aq$  in presence of air (Wilm, B. 1881, 14, 636.)

Pure Pt foil is attacked by fuming  $HCl$  under influence of light, but not in the dark. (Berthelot, C. R. 1904, 138, 1297.)

Dil.  $HCl + Aq$  dissolves 10–15% Pt from active Pt black. (Wohler, B. 1903, 36, 3482.)

Conc.  $HNO_3$  oxidizes Pt black; Pt sponge, less easily; sheet Pt, slightly. (Wohler, Dissert. 1901.)

Pt in presence of Hg is more or less sol. in conc.  $HNO_3$ . (Tarugi, Gazz. ch. it. 1903, 33, II. 171.)

Pt vessels are attacked by evaporating  $HNO_3$  therein (Jaunek and Meyer, Z. anorg. 1913, 83, 71.)

Sl sol in conc  $H_2SO_4$  containing small amounts of nitrogen oxides (Scheurer-Kestner, C. R. 86, 1082.)

Pt black, pptd. by formic acid, is easily sol in boiling  $H_2SO_4$ . (Deville and Stas, Paris, 1873.)

Thin sheet Pt is attacked by boiling  $H_2SO_4$  containing  $K_2SO_4$ ; 1 sq. cm loses 0.01 g. in 1 hour and velocity of the reaction is not accelerated by addition of  $HNO_3$ . Pt black is completely dissolved under the above conditions in 50 hours. (Delépine, C. R. 1905, 141, 1013.)

Further data on solubility of Pt in  $H_2SO_4$  are given by Delépine. (C. R. 1906, 142, 631.)

95%  $H_2SO_4$  dissolves 0.04 g. Pt from commercial Pt at  $250$ – $260^\circ$  in 28 hours. (Conroy, J. Soc. Chem. Ind. 1903, 22, 465.)

See also Quenessen. (Bull. Soc. 1906, (3) 35, 620)

0.0038 g is dissolved by 10 cc. of boiling  $H_2SO_4$ . (McCoy, Eighth Inter Cong. App. Chem. 1912, 2.)

$HCl + HNO_3$ , so long as they are sufficiently dil or the temperature is so low that they cannot react on each other, have no action on Pt. Addition of  $Cl$  does not bring about reaction, but a few drops of  $KNO_3$  or  $Na_2O_2 + Aq$  bring about an immediate reaction. (Millon) Slowly sol in  $HI + Aq$  (Deville, C. R. 42, 896)

Conc.  $H_3PO_4$  attacks Pt when heated in presence of air, but not in its absence. (Hüttner, Z. anorg. 1903, 59, 216)

Pt dissolves easily in most acids when they contain  $H_2O_2$ . (Fairley, B. 1875, 8, 1600.)

Slowly sol in boiling  $PoCl_3 + Aq$  (Saint-Pierre, C. R. 64, 1077.)

$FeCl_3$  in acid solution is without influence on Pt. (Marie, C. R. 1908, 146, 476.)

Pt is completely insol. in  $KCN + Aq$ . (Rössler, Z. Chem. 1866, 175.)

Pt is attacked by boiling conc.  $KCN + Aq$ . (Deville and Debray, C. R. 82, 241.)

Solubility of Pt in 10%  $KCN + Aq$  is very small at ord. temp. (1.4 mg. in 8 days) but is considerably greater in boiling conc.  $KCN + Aq$  (71.5 mg in 5 hours). (Glaser, Z. Elektrochem. 1903, 9, 15.)

Pt foil is dissolved in boiling  $KCN + Aq$  (0.030 g. for 1 cc. in 1 hour). Insol. in cold  $KCN + Aq$  (Brochet and Pettit, C. R. 1904, C. R. 138, 1255.)

Sol in  $RbCl_4I + Aq$  (Erdmann, Arch. Pharm. 1894, 232, 30)

Insol in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20, 828.)

Platinum antimonide,  $\text{PtSb}_3$ .  
 (Christoffe, 1863.)

Platinum arsenide,  $\text{Pt}_3\text{As}_2$ .  
 (Tivoli, Gazz. ch. it. 14. 487.)

$\text{PtAs}_2$ . Min. *Sperryite*. Sil. attacked by aqua regia. (Wells, Sil. Am. J. (3) 37. 67.)

Platinum arsenic hydroxide (?),  $\text{PtAsOH}$ .

Insol. in, and slowly decomp. by  $\text{H}_2\text{O}$  and alcohol. Easily decomp. by  $\text{HCl} + \text{Aq}$ ; not attacked by  $\text{HNO}_3 + \text{Aq}$ . Sol. in aqua regia; not attacked by cold conc.  $\text{H}_2\text{SO}_4$ , but decomp. on heating. - (Tivoli, Gazz. ch. it. 14. 487.)

**Platinum potassium azoimide.**

Ppt. Explodes violently even in aq. solution (Curtius, J pr 1898, (2) 58. 304)

**Platinum boride,  $Pt_3B_2$** 

Very slowly sol. in aqua regia (Martius, A. 109. 79.)

**Platinous bromide,  $PtBr_2$** 

Insol. in  $H_2O$ . Sol. in  $HBr + Aq$ . Sl sol. in  $KBr + Aq$ . (Topsoe, J. B. 1868. 274.)

**Platinic bromide,  $PtBr_4$** 

Not deliquescent, sol. in  $H_2O$ . (Meyer and Zühlke, B. 13. 404)

Sl. sol. in  $H_2O$ . 100 g.  $PtBr_4 + Aq$  sat. at  $20^\circ$  contain 0.41 g.  $PtBr_4$ . (Halberstadt, B. 17. 2962.)

Easily sol. in  $HBr + Aq$ , sl. sol. in  $HCl + H_2O_2 + Aq$ . Sol. in considerable amount in  $K$  or  $NH_4$  oxalate  $+ Aq$

Very sl. sol. in alcohol or ether, also in glycerine. (Halberstadt.)

**Platinic hydrogen bromide.**

See Bromoplatinic acid.

**Platinous bromide carbonyl.**

See Carbonyl platinous bromide.

**Platinic bromide with  $MBr$ .**

See Bromoplatinate, M.

**Platinum carbide,  $PtC_2$** 

Hot aqua regia dissolves out nearly all the Pt. (Zeise, J pr 20. 209.)

**Platinum carbon disulphide,  $PtCS_2$** 

See Platinum sulphocarbide.

**Platinum monochloride,  $PtCl + xH_2O$** 

Easily sol. in  $HCl$ ; mod. sol. in hot dil.  $H_2SO_4$  without decomp. (Sonstadt, Proc. Chem. Soc. 1898, 14. 179.)

**Platinous chlorids,  $PtCl_2$** 

Insol. in  $H_2O$ , conc.  $H_2SO_4$ , or  $HNO_3$ . Sol. in hot  $HCl + Aq$  with exclusion of air. (Berzelius)

Insol. in alcohol or ether; sol. in  $NH_4OH + Aq$ . (Raewsky, A. ch. (3) 22. 280) Sol. in aqua regia with formation of  $PtCl_4$ .

Insol. in cold conc.  $KI + Aq$ , but sol. when heated. (Lassaigne, A. ch. (2) 51. 117.)

Sl. sol. in liquid  $NH_3$  (Gore, Am. Ch. J. 1898, 20. 828.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

**Platinum trichloride,  $PtCl_3$** 

Sl. sol. in cold, more sol. in hot  $H_2O$ . Partially hydrolyzed by boiling with  $H_2O$ .

Insol. in cold conc.  $HCl$ . Sol. in hot conc.  $HCl$  with decomp.

Sol. in  $KI + Aq$ . (Wöhler, B. 1809, 42. 3961.)

**Platinic chloride,  $PtCl_4$** 

Not deliquescent. Very sol. in  $H_2O$ . (Pulinger, Chem. Soc. 61. 420)

Sp. gr. of aqueous solution containing.

5	10	15	20	25 % $PtCl_4$
1.046	1.097	1.153	1.214	1.285
30	35	40	45	50 % $PtCl_4$
1.362	1.450	1.546	1.666	1.785

(Precht, Z. anal. 18. 512.)

Insol. in conc.  $H_2SO_4$ . (Dumas.)

Sl. sol. in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 828)

Sol. in alcohol and ether; sol. in anhydrous acetone. (Zeise, A. 33. 34)

Insol. in ether. (Willstätter, B. 1903, 36. 1830)

Sl. sol. in methyl acetate. (Naumann, B. 1909, 42. 3790)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4328.)

$+ H_2O$ . Sol. in  $H_2O$ . (Gutbier and Heinrich, Z. anorg. 1913, 81. 378)

$+ 4H_2O$ . Sol. in  $H_2O$ . (Pigeon, C. R. 1891, 112. 792)

$+ 5H_2O$  Not deliquescent. Sol. in  $H_2O$  or  $HCl + Aq$ .

Composition is probably  $H_2PtCl_6O + 4H_2O$ . (Norton, J. pr. 110. 469.)

$+ 7H_2O$ . Sol. in  $H_2O$ . (Pigeon.)

$+ 8H_2O$ . (Blondel, A. Ch. 1905, (8) 6. 98.)

**Platinic thallium chloride,  $Tl_2Pt_2Cl_5H_2O_4$** 

Ppt.; insol. in  $H_2O$ . (Miolati, Z. anorg. 1900, 22. 460)

**Platinous hydrogen chloride.**

See Chloroplatinous acid.

**Platinic hydrogen chloride.**

See Chloroplatinic acid.

**Platinous chloride with  $MCl$ .**

See Chloroplatinite, M.

**Platinic chloride with  $MCl$ .**

See Chloroplatinate, M.

**Platinous phosphorus chloride.**

See Phosphorus platinous chloride.

**Platinic phosphorus chloride.**

See Phosphorus platinic chloride.

**Platinous chloride carbonyl.**

See Carbonyl platinous chloride.

**Platinum chloride hydroxylamine,**

Ppt Sol in alcohol and in ether. Decomp. in aq. solution

$\text{Pt}(\text{NH}_2\text{OH})_2\text{Cl}_2$  Sol in  $\text{H}_2\text{O}$ . (Uhlenhuth, A 1900, 311. 124.)

**Platinous chloride sulphocarbamide,**

Sl. sol in  $\text{H}_2\text{O}$ ; very sol. in hot  $\text{H}_2\text{O}$ , decomp. sl. on boiling (Kurnakow, J pr. 1894, (2) 50. 483.)

**Platinum chloroiodide,  $\text{PtCl}_2\text{I}_2$** 

Very deliquescent (Kammerer, A 148. 329.)

$\text{PtClI}_3$  Insol in  $\text{H}_2\text{O}$ . Sl. sol. in alcohol. Sol. in  $\text{KOH} + \text{Aq}$ , from which it is pptd by  $\text{H}_2\text{SO}_4$ . (Mather, Sill Am J 27. 257.)

**Platinum chloronitride,  $\text{PtNCl}$** 

(Alexander, C C 1887. 1254.)

**Platinous cyanide with  $\text{MCN}$ .**

See Platinocyanide, M.

**Platinous fluoride,  $\text{PtF}_2$ ?**

Insol in  $\text{H}_2\text{O}$  (Moissan, A. ch. (6) 24. 287.)

**Platinic fluoride,  $\text{PtF}_4$** 

Deliquescent. Sol in  $\text{H}_2\text{O}$  with immediate decomp. into  $\text{PtO}_4\text{H}_2$  and  $\text{HF}$  (Moissan, C R 109. 807.)

**Platinous hydroxide,  $\text{PtO}_2\text{H}_2$** 

Sol in  $\text{HCl}$ ,  $\text{HBr}$ , and  $\text{H}_2\text{SO}_4 + \text{Aq}$ , but not in other oxygen acids. Decomp. by boiling  $\text{KOH} + \text{Aq}$ . (Thomsen, J pr. (2) 16. 344.)

When freshly pptd, is insol in dil.  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ , and in  $\text{HC}_2\text{H}_3\text{O}_2$ ; sol. in conc.  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . Very sol. in  $\text{H}_2\text{SO}_4$  and  $\text{HCl}$ . After drying, is insol. in conc.  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$ . (Wöhler, Z. anorg. 1904, 40. 424.)

**Platinic hydroxide,  $\text{Pt}(\text{OH})_4$** 

Easily sol in dil acids and in  $\text{NaOH} + \text{Aq}$ . (Topsoe, J. B. 1870. 386.)

Nearly insol. in acetic acid (Döbereiner) Insol. in all acids except conc.  $\text{HCl}$  and aqua regia. (Wöhler, Z. anorg. 1904, 40. 438.)

+  $\text{H}_2\text{O}$ . Ppt. (Prost, Bull Soc. (2) 44. 256.) Insol in  $2\text{N}-\text{H}_2\text{SO}_4$  and dil.  $\text{HNO}_3 + \text{Aq}$ , mod. sol. in conc.  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ ,  $2\text{N}-\text{HCl}$  and  $\text{NaOH} + \text{Aq}$ . (Wöhler.)

+  $2\text{H}_2\text{O}$ . Easily sol in dil. acids, even acetic acid, and in  $\text{NaOH} + \text{Aq}$ . (Topsoe.)

Insol. in acetic acid; sl. sol. in  $2\text{N}-\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$ ; easily sol. in  $\text{HCl}$ , and  $\text{NaOH} + \text{Aq}$ . (Wöhler.)

**Platinoplatinic hydroxide,  $\text{Pt}_2\text{O}_4 \cdot 9\text{H}_2\text{O}$** 

Ppt (Prost, Bull Soc. (2) 46. 156.)

$\text{Pt}_2\text{O}_{11}$ ,  $11\text{H}_2\text{O}$ . Ppt. (Prost.)

**Platinum hydroxylamine comps.**

See—

Platodioxamine comps.,  $\text{Pt}(\text{NH}_2\text{O})_2\text{R}_2$

Platosoxamine comps.,  $\text{Pt}(\text{NH}_3\text{O})_2\text{R}_2$ .

Platosoxamine-amine comps.,

$\text{Pt}(\text{NH}_3\text{O})_2\text{NH}_3\text{R}_2$

**Platinous iodide,  $\text{PtI}_2$** 

Insol in  $\text{H}_2\text{O}$ , acids, or alcohol (Lassaigne, A ch (2) 51. 113.)

Difficultly sol. in  $\text{Na}_2\text{SO}_3 + \text{Aq}$  (Topsoe.) Gradually decomp. by hot  $\text{HI} + \text{Aq}$  of 1.038 sp gr, also by hot  $\text{KI} + \text{Aq}$ ,  $\text{PtI}_4$  being dissolved out and  $\text{Pt}$  left behind. Not attacked by conc.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ , but gradually decomp. by  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ . (Lassaigne.)

Insol. in acetone. (Eidmann, C. C. 1889, II. 1014.)

**Platinic iodide,  $\text{PtI}_4$** 

Insol in  $\text{H}_2\text{O}$ . Sol. in  $\text{NaOH}$  or  $\text{Na}_2\text{CO}_3 + \text{Aq}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{Na}_2\text{SO}_3 + \text{Aq}$ . Sol. in  $\text{HI} + \text{Aq}$  or alkali iodides +  $\text{Aq}$ . Sol. in alcohol, with partial decomp. Not attacked by acids. (Lassaigne, A. ch. (2) 51. 122.)

Very sol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 828.)

Sol in alcohol. (Bellus, C. C. 1902, I. 625.)

**Platinic iodide with  $\text{ML}$** 

See Iodoplatinate, M.

**Platinum nitride chloride,  $\text{PtNCl}$** 

See Platinum chloronitride.

**Platinous oxide,  $\text{PtO}$** 

Sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Insol. in other acids. (Döbereiner, Pogg 28. 183.)

Sol in conc.  $\text{H}_2\text{SO}_4$ ; easily in conc  $\text{HCl} + \text{Aq}$ . (Stoer's Dict.)

Very sl. sol. in  $\text{HCl} + \text{Aq}$ . Sl. sol. in aqua regia. (Wöhler, B. 1903, 36. 3482.)

**Platinic oxide,  $\text{PtO}_2$** 

Insol. in acids, even aqua regia. (Wöhler, Dissert, 1901.)

**Platinum trioxide,  $\text{PtO}_3$** 

Unattacked by dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$  or acetic acid. Sol. with decomp. in dil and conc.  $\text{HCl}$ , conc.  $\text{H}_2\text{SO}_4$  or conc.  $\text{HNO}_3$ . (Wöhler, B. 1909, 42. 3329.)

**Platinum sesquioxide,  $\text{Pt}_2\text{O}_3 + x\text{H}_2\text{O}$** 

Insol. in dil sol in conc  $\text{H}_2\text{SO}_4$ . Sl. sol. in hot dil  $\text{HNO}_3$ . Sol in  $\text{HCl}$ . Sol. in conc. alkali hydroxides +  $\text{Aq}$ . (Wöhler, B. 1909, 42. 3964.)

+2H<sub>2</sub>O. Insol. in HNO<sub>3</sub> and H<sub>2</sub>SO<sub>4</sub>. Insol. in alkalis + Aq, also cold dil. HCl + Aq. Sol. in aqua regia. (Dudloy, Am. Ch. J. 1902, 28, 66)  
+5H<sub>2</sub>O. (Delépine, Bull. Soc. 1910, (4) 7, 103.)

#### Platinoplatinic oxide, Pt<sub>2</sub>O<sub>4</sub>.

Not attacked by long boiling with HCl, HNO<sub>3</sub>, or aqua regia (Jørgensen, J. pr. (2) 18, 344)

Does not exist. (Wöhler, Z. anorg. 1904, 40, 450.)

#### Platinum oxychloride, 3PtO, PtCl<sub>2</sub> (?)

Sol in HCl, and in KOH + Aq (Kane, Phil. Trans. 1842, 298)

PtCl<sub>2</sub>(OH)<sub>2</sub> = H<sub>2</sub>PtCl<sub>2</sub>O<sub>2</sub> (Jørgensen, J. pr. (2) 18, 345)

5PtO<sub>2</sub>, 2HCl + 9H<sub>2</sub>O. Insol in cold H<sub>2</sub>O; decomp. on boiling. Slowly sol. in HCl. (Blondel, A. ch. 1905, (8) 6, 100.)

#### Platinum oxysulphide, PtOS

See Platinum sulphhydroxide.

#### Platinum phosphide, PtP<sub>2</sub>

Insol in HCl + Aq. Sol in aqua regia (Schrotter, W. A. B. 1849, 303.)

PtP<sub>2</sub>H<sub>4</sub>. Insol in H<sub>2</sub>O, and HCl + Aq. (Cavazzi, Gazz. ch. it. 13, 324)

PtP. Insol in aqua regia (Clark and Joslin)

Pt<sub>2</sub>P. Sol in aqua regia (Clark and Joslin)

Pt<sub>2</sub>P<sub>2</sub>. Partially sol in aqua regia (Clark and Joslin, C. N. 48, 385)

Attacked very slowly by aqua regia. Rapidly sol. in molten alkalis. (Granger, C. N. 1898, 77, 229)

Completely sol in aqua regia if the action sufficiently prolonged, though with difficulty. (Granger, C. R. 1895, 123, 1285)

#### Platinum diselenide, PtSe<sub>2</sub>

As PtS<sub>2</sub> (Minozzi, Chem. Soc. 1909, 96, (2) 899.)

#### Platinum triselenide, PtSe<sub>3</sub>

Sl. attacked by hot conc. HNO<sub>3</sub>; not attacked by cold conc. HCl + Aq; slowly sol. in aqua regia and Cl<sub>2</sub> + Aq; insol. in CS<sub>2</sub>.

#### Platinum silicide, Pt<sub>2</sub>Si

Sol in hot aqua regia (Vigouroux, C. R. 1896, 123, 117)

Pt<sub>2</sub>Si<sub>2</sub>. (Colson, C. R. 94, 27.)

Pt<sub>2</sub>Si<sub>2</sub>. Slowly decomp. by aqua regia. (Guyard, Bull. Soc. (2) 25, 511.)

PtSi. Insol. in HNO<sub>3</sub>, H<sub>2</sub>SO<sub>4</sub>, HF, and HCl. Completely sol. in aqua regia. (Lebeau and Novitzky, C. R. 1907, 145, 241.)

#### Platinum sulphhydroxide, PtOS + H<sub>2</sub>O = PtS(OH)<sub>2</sub>.

Decomp. easily into—

Pt<sub>2</sub>S<sub>2</sub>O<sub>2</sub>H<sub>2</sub> =  $\frac{\text{PtS}}{\text{PtS}} \frac{\text{OH}}{\text{OH}} = \text{PtOS} + \frac{1}{2}\text{H}_2\text{O}$ . H<sub>2</sub>O cannot be removed without decomposing the compound. (v. Meyer, J. pr. (2) 15, 1.)

#### Platinous sulphide, PtS.

Not attacked by boiling acids, aqua regia, or KOH + Aq. (Böttger, J. pr. 2, 274)

Sol in large excess of (NH<sub>4</sub>)<sub>2</sub>S + Aq.

#### Platinoplatinic sulphide, Pt<sub>2</sub>S<sub>3</sub>.

Not attacked by HCl or HNO<sub>3</sub> + Aq, and only slowly by aqua regia. (Schneider, Pogg. 138, 607)

#### Platinic sulphide, PtS<sub>2</sub>

*Anhydrous* Aqua regia attacks sl, other acids not at all (Davy.)

*Hydrated* Insol in HCl + Aq; sl sol. in boiling HNO<sub>3</sub> + Aq. Sol. in aqua regia (Fresenius) Sol in alkali sulphides, hydrides and carbonates + Aq. (Berzelius.) Very sl. sol in (NH<sub>4</sub>)<sub>2</sub>S + Aq. (Claus)

Insol in NH<sub>4</sub>Cl, or NH<sub>4</sub>NO<sub>3</sub> + Aq. 1 pt. PtCl<sub>4</sub> in 100 pts. H<sub>2</sub>O + 25 pts. HCl is not pptd. by H<sub>2</sub>S (Rensch)

Difficultly sol. in alkali sulphhydroxides + Aq, but more easily in presence of SnS, Sb<sub>2</sub>S<sub>3</sub>, As<sub>2</sub>S<sub>3</sub>, or SnS<sub>2</sub> (Ribau, C. R. 85, 283)

#### Platinum sulphide, Pt<sub>2</sub>S<sub>3</sub>, or Tetraplatinum sulphoplatinate, 4PtS, PtS<sub>2</sub>.

Decomp. on moist air, but not attacked by acids (Schneider, J. pr. (2) 7, 214)

#### Platinum sulphides with M<sub>2</sub>S.

See Sulphoplatinate, M.

#### Platinum sulphocarbide, PtC<sub>2</sub>S<sub>2</sub>.

Not attacked by hot HCl, HNO<sub>3</sub> + Aq, slightly by aqua regia. (Schutzenberger, C. R. 111, 391.)

#### Platinum telluride, PtTe.

Decomp. by fused oxidizing agents, slowly sol. in conc. HNO<sub>3</sub>. (Roessler, Z. anorg. 1897, 15, 407)

#### Platinum ditelluride, PtTe<sub>2</sub>.

Insol in boiling conc. KOH + Aq; slowly sol. in boiling conc. HNO<sub>3</sub>; decomp. by fused oxidizing agents. (Roessler)

#### Plato-.

See also Platino-.

**Platoamidosulphonic acid.****Potassium platoamidosulphonate,**  
 $K_2Pt(NH_2SO_3)_4 + 2H_2O$ .

Very sl. sol. in cold  $H_2O$ ; sol. in 10 pts. boiling  $H_2O$ . (Ramberg and St. Kahlenberg, B. 1912, 45, 1514.)

**Sodium —,  $Na_2Pt(NH_2SO_3)_4 + 4H_2O$ .**

Very sol. in  $H_2O$ . (Ramberg and St. Kahlenberg.)

**Platodiamine bromide,  $Pt[(NH_3)_2Br]_2 + 3H_2O$ .**

Easily sol. in  $H_2O$ . (Cleve.)

**— carbonate,  $Pt(N_2H_5)_2CO_3 + H_2O$ .**

Sol. in  $H_2O$ . (Peyrone, A. 51. 14.)

$Pt(N_2H_5CO_2H)_2$ . Sl. sol. in, but decomp by boiling with  $H_2O$  into—

**— sesquicarbonate.**

More sol. than preceding salt. (Reiset, C. R. 11. 711.)

**— chloride,  $Pt[(NH_3)_2Cl]_2 + H_2O$ .**

"Reiset's first chloride." Sol. in 4 pts.  $H_2O$  at 16.5°, and in less hot  $H_2O$ . Insol. in alcohol or ether. (Reiset, A. ch. (3) 11. 419.)

As sol. in  $NH_4Cl + Aq$  as in  $H_2O$ ; insol. in absolute alcohol; sl. sol. in dil. alcohol, very sol. in dil.  $HCl + Aq$  (Peyrone, A. ch. (3) 12. 196)

**— cuprous chloride,  $Pt(NH_3)_4Cl_2, Cu_2Cl_2$ .**

Sol. in  $H_2O$ , and pptd. from  $H_2O$  solution by alcohol. (Buckton.)

**— cupric chloride,  $Pt(NH_3)_4Cl_2, CuCl_2$ .**

Sl. sol. in cold, decomp. by hot  $H_2O$  into  $Pt(NH_3)_2Cl_2, Cu_2Cl_2$ . (Buckton, Chem. Soc. 5. 218.)

Nearly insol. in  $H_2O$ ; easily sol. in warm  $HCl + Aq$ ; insol. in alcohol. (Millon and Commaille, C. R. 57. 822.)

Millon and Commaille's salt is  $Cu(NH_3)_4Cl_2, PtCl_2$ , cuprammonium oblorplatinate

**— lead chloride,  $Pt(NH_3)_4Cl_2, PbCl_2$ .**

Sol. in hot, much less in cold  $H_2O$ . Insol. in  $HCl + Aq$  or alcohol. (Buckton, Chem. Soc. 5. 213.)

**— mercuric chloride,  $Pt(NH_3)_4Cl_2, HgCl_2$ .**

Easily sol. in hot  $H_2O$ , much less in cold. Insol. in  $HCl + Aq$ . (Buckton)

**— zinc chloride,  $Pt(NH_3)_4Cl_2, ZnCl_2$ .**

Easily sol. in hot  $H_2O$ . Insol. in alcohol (Buckton.)

**Platodiamine chloroplatinate,  $Pt(NH_3)_4Cl_2, PtCl_4$ .**

Ppt. Insol. in  $H_2O$ . (Cossa, Gazz. ch. it. 17. 1.)

**— chloroplatinate,  $Pt(NH_3)_4Cl_2, PtCl_2$ .**

(Magnus' green salt.) Insol. in, and not decomp. by  $H_2O, HCl + Aq$ , or alcohol. (Magnus.)

Slowly sol. in boiling  $NH_4OH + Aq$  and in conc.  $NH_3$  salts +  $Aq$ . (Reiset, A. ch. (3) 11. 427.)

Almost as sol. in  $(NH_4)_2CO_3 + Aq$  as in  $NH_4OH + Aq$ . Sol. in hot  $PtCl_4 + Aq$  (Reiset)

Not decomp. by boiling  $KOH$ , dil.  $HCl$ , or  $H_2SO_4 + Aq$ , but easily by  $HNO_3 + Aq$ . (Gros, A. 27. 245.)

**— chromate,  $Pt(NH_3)_4CrO_4$ .**

Scarcely sol. in  $H_2O$  (Cleve.)

**— dichromate,  $Pt(NH_3)_4Cr_2O_7$ .**

Sl. sol. in  $H_2O$ . Insol. in alcohol. Sol. in  $KOH + Aq$ . (Buckton, Chem. Soc. 5. 213.)

**— platinum cyanide,  $Pt(NH_3)_4(CN)_2, Pt(CN)_2$ .**

Sl. sol. in cold, easily in boiling  $H_2O$ ; sol. in  $KOH, HCl$ , and dil.  $H_2SO_4 + Aq$  without decomp., but conc.  $H_2SO_4$  decomposes.

**— potassium ferrocyanide,**

$Pt(NH_3)_4K_4[Fe(CN)_6]_2 + 8H_2O$ .

**— hydroxide,  $Pt(NH_3)_4OH_2$ .**

"Reiset's first base." Easily sol. in  $H_2O$ . Sl. sol. in alcohol.

**— iodide,  $Pt(NH_3)_4I_2$ .**

Sl. sol. in cold, more easily in hot  $H_2O$ , but slowly decomp. on boiling. (Reiset.)

**— nitrate,  $Pt[(NH_3)_2NO_2]_2$ .**

Sol. in about 10 pts. boiling  $H_2O$ . Insol. or but sl. sol. in alcohol (Peyrone, A. ch. (3) 12. 203.)

**— nitrate sulphate,  $[Pt(NH_3)_4NO_3]_2SO_4, Pt(NH_3)_4SO_4$ .**

Very easily sol. in  $H_2O$  (Carlgren, Sv. V. A. F. 47. 310)

**— nitrite,  $Pt[(NH_3)_2NO_2]_2 + 2H_2O$ .**

Efflorescent. Very sol. in hot or cold  $H_2O$ . Insol. in 90% alcohol (Lang.)

**— platinumous nitrite,  $Pt[(NH_3)_2NO_2]_2, Pt(NO_2)_2$ .**

Scarcely sol. in cold, somewhat more easily in hot  $H_2O$ . Not attacked by cold dil. acids. More sol. in  $NH_4OH + Aq$  than in  $H_2O$ . (Lang)

**Platodiamine phosphate**,  $\text{Pt}(\text{N}_2\text{H}_4)_2\text{HPO}_4 \cdot \text{H}_2\text{O}$

Rather difficultly sol. in cold, and very easily in hot  $\text{H}_2\text{O}$ . (Cleve.)

— **ammonium phosphate**,  $\text{Pt}(\text{N}_2\text{H}_4)_2\text{PO}_4(\text{NH}_4)_2$ ,  $4\text{NH}_4\text{H}_2\text{PO}_4 + \text{H}_2\text{O}$ .

Very easily sol. in  $\text{H}_2\text{O}$  with decomp. into—  
 $\text{Pt}(\text{N}_2\text{H}_4)_2\text{PO}_4$ ,  $2\text{NH}_4\text{H}_2\text{PO}_4 + 9\text{H}_2\text{O}$ .  
Much more sol. in  $\text{H}_2\text{O}$  than the preceding comp. (Cleve.)

— **sulphate**,  $\text{Pt}(\text{NH}_3)_4\text{SO}_4$

Sol. in 32 pts  $\text{H}_2\text{O}$  at  $16.5^\circ$ ; more easily when heated (Reiset)

Sol. in 50–60 pts boiling  $\text{H}_2\text{O}$ ; less in cold  $\text{H}_2\text{O}$ , insol. in alcohol. (Cleve.)

— **sulphate, acid**,  $\text{Pt}[(\text{NH}_3)_2\text{SO}_4\text{H}]_2 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  or alcohol into neutral salt.  
 $3\text{Pt}(\text{NH}_3)_4\text{SO}_4$ ,  $\text{H}_2\text{SO}_4 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

— **sulphite**,  $\text{Pt}(\text{NH}_3)_4\text{SO}_3$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ . (Burnbaum, A. 152, 143)

$\text{Pt}[(\text{NH}_3)_2\text{SO}_3\text{H}]_2 + 2\text{H}_2\text{O}$ . Ppt. Sol. in  $\text{HCl} + \text{Aq}$  (Cleve.)

— **platinous sulphite**,  
 $3\text{Pt}(\text{NH}_3)_4\text{SO}_3$ ,  $\text{PtSO}_3 + 2\text{H}_2\text{O}$ .

Scarcely sol. in cold  $\text{H}_2\text{O}$ ; sol. in 190 pts.  $\text{H}_2\text{O}$  at  $100^\circ$ . Easily sol. in warm  $\text{HCl} + \text{Aq}$  with decomp. (Peyrone)

$+ 4\text{H}_2\text{O}$ . (Carlgren, Sv. V. A. F. 47, 308.)  
 $2\text{Pt}(\text{NH}_3)_4\text{SO}_3$ ,  $\text{PtSO}_3$ ,  $\text{H}_2\text{SO}_3$  Insol. in cold  $\text{H}_2\text{O}$  or alcohol. Scarcely sol. in hot  $\text{H}_2\text{O}$ . (Peyrone)

— **sulphocyanide**,  $\text{Pt}(\text{NH}_3)_4(\text{CNS})_2 + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Solution is decomp. on boiling. (Cleve, Sv. V. A. H. 10, 9, 7.)

— **platinous sulphocyanide**,  
 $\text{Pt}(\text{NH}_3)_4(\text{CNS})_2$ ,  $\text{Pt}(\text{CNS})_2$ .

Insol. in  $\text{H}_2\text{O}$  and alcohol; sol. in dil.  $\text{HCl} + \text{Aq}$  (Buckton, Chem. Soc. 13, 122.)

**Platomonodiamine chloride**,  $\text{Pt} \begin{smallmatrix} (\text{NH}_3)_2\text{Cl} \\ \text{NH}_3\text{Cl} \end{smallmatrix}$

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Platomonodiamine chloroplatinate**

$2\text{Pt}(\text{NH}_3)_2\text{Cl}$ ,  $\text{PtCl}_2$ .

Moderately sol. in cold, but more easily in hot  $\text{H}_2\text{O}$ . (Cleve.)

— **nitrate**,  $\text{Pt} \begin{smallmatrix} (\text{NH}_3)_2\text{NO}_3 \\ \text{NH}_3\text{NO}_3 \end{smallmatrix} + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Platomonodiamine sulphate**,  $\text{Pt} \begin{smallmatrix} (\text{NH}_3)_2\text{SO}_4 \\ \text{NH}_3 \end{smallmatrix}$

Easily sol. in cold, but much more in hot  $\text{H}_2\text{O}$ .

**Platosemidiamine bromide**,  $\text{Pt} < \begin{smallmatrix} (\text{NH}_3)_2\text{Br} \\ \text{Br} \end{smallmatrix}$

Sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Cleve.)

— **chloride**,  $\text{Pt} < \begin{smallmatrix} (\text{NH}_3)_2\text{Cl} \\ \text{Cl} \end{smallmatrix}$

(Peyrone's chloride) Sol. in 387 pts  $\text{H}_2\text{O}$  at  $0^\circ$ , and 26 pts at  $100^\circ$  (Cleve), in 33 pts. at  $100^\circ$ . (Peyrone)

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ ; very sl. sol. in  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ ; more easily in  $\text{HNO}_3 + \text{Aq}$ , sol. in alkali carbonates +  $\text{Aq}$ . (Peyrone, A. ch (3) 12, 193)

**Platosemidiamine chlorosulphurous acid**,  
 $\text{Pt} < \begin{smallmatrix} (\text{NH}_3)_2\text{SO}_2\text{H} \\ \text{Cl} \end{smallmatrix}$

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Ammonium platosemidiamine chlorosulphite platosemidiamine sulphite**,

$\text{Pt} < \begin{smallmatrix} (\text{NH}_3)_2\text{SO}_2\text{NH}_4 \\ \text{Cl} \end{smallmatrix}$ ,  $\text{Pt} < \begin{smallmatrix} (\text{NH}_3)_2\text{SO}_2\text{NH}_4 \\ \text{SO}_2\text{NH}_4 \end{smallmatrix} + 2\text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$  Insol. in alcohol. (Cleve.)

**Platosemidiamine cyanide**,

$\text{Pt}(\text{CN})(\text{NH}_3)_2\text{CN}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

— **platinous cyanide**,  $\text{Pt}(\text{CN})(\text{NH}_3)_2\text{CN}$ ,  
 $\text{Pt}(\text{CN})_2(?)$ .

Ppt.

— **hydroxide**,  $\text{Pt} < \begin{smallmatrix} (\text{NH}_3)_2\text{OH} \\ \text{OH} \end{smallmatrix}$

Not known.

— **iodide**,  $\text{Pt} < \begin{smallmatrix} (\text{NH}_3)_2\text{I} \\ \text{I} \end{smallmatrix}$

Sl. sol. in boiling  $\text{H}_2\text{O}$ . (Cleve.)

— **nitrate**  $\text{Pt} \begin{smallmatrix} (\text{NH}_3)_2\text{NO}_3 \\ \text{NO}_3 \end{smallmatrix}$

Moderately sol. in  $\text{H}_2\text{O}$ . (Cleve.)

— **nitrite**,  $\text{Pt} \begin{smallmatrix} (\text{NH}_3)_2\text{NO}_2 \\ \text{NO}_2 \end{smallmatrix}$

Very sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ .

— **oxalate**,  $\text{Pt}(\text{NH}_3)_2\text{C}_2\text{O}_4$ .

(Cleve.)  
 $+ 2\text{H}_2\text{O}$ . (Cleve.)

— **sulphate**,  $\text{Pt} < \begin{smallmatrix} (\text{NH}_3)_2 \\ \text{SO}_4 \end{smallmatrix}$

Very sl. sol. even in hot  $\text{H}_2\text{O}$ . (Cleve.)

**Platosemidiamine sulphocyanide,**  
 $\text{Pt}(\text{SCN})(\text{NH}_4)_2\text{SCN}.$ Easily sol. in warm  $\text{H}_2\text{O}$ , but solution soon decomposes.**Platosemidiamine sulphurous acid.****Ammonium platosemidiamine sulphite,**  
 $\text{Pt} < (\text{NH}_4)_2\text{SO}_3(\text{NH}_4), (\text{NH}_4)_2\text{SO}_3.$ Very sol. in  $\text{H}_2\text{O}$  (Cleve.)**Barium —,**  $\text{Pt}(\text{SO}_3)[(\text{NH}_4)_2\text{SO}_3]\text{Ba}, \text{BaSO}_4.$   
Ppt (Cleve.)**Silver —.**  $\text{Pt}(\text{SO}_3\text{Ag})[(\text{NH}_4)_2\text{SO}_3\text{Ag}],$   
 $\text{Ag}_2\text{SO}_4.$ 

Ppt. (Cleve.)

**Diplatodiamine chloride,**  $\text{Pt}_2(\text{NH}_4)_4\text{Cl}_2.$ Insol. in  $\text{H}_2\text{O}$ .— hydroxide,  $\text{Pt}_2(\text{NH}_4)_4(\text{OH})_2 + \text{H}_2\text{O}$ Insol. in  $\text{H}_2\text{O}$ .— nitrate,  $\text{Pt}_2(\text{NH}_4)_4(\text{NO}_3)_2$ Insol. in  $\text{H}_2\text{O}$ . (Cleve.)— sulphate,  $\text{Pt}_2(\text{NH}_4)_4\text{SO}_4$ Insol. in  $\text{H}_2\text{O}$ . (Cleve.)**Platobromonitrous acid.****Potassium platobromonitrite,**  $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{Br} + 2\text{H}_2\text{O}$ Sol. in about 3 pts. cold, and 2 pts. boiling  $\text{H}_2\text{O}$ . (Vèzes, A. ch. (6) 29. 194.) $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{Br}_2 + \text{H}_2\text{O}$ . Sol. in 1 pt. cold, and still less hot  $\text{H}_2\text{O}$ . Insol. in alcohol (Vèzes.)**Platochloronitrous acid.****Potassium chloronitrite,**  $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{Cl} + 2\text{H}_2\text{O}$ .Sol. in about 3 pts. cold, and 2 pts. boiling  $\text{H}_2\text{O}$ . (Vèzes, A. ch. (6) 29. 178.) $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{Cl}_2$ . Sol. in about 3 pts. cold, and 2 pts. boiling  $\text{H}_2\text{O}$ . (Vèzes.)**Platochlorosulphurous acid.**

See Chloroplatosulphurous acid.

**Platoiodonitrous acid,**  $\text{H}_2\text{Pt}(\text{NO}_2)_2\text{I}_2.$ 

Known only in solution (Nilson, J. pr. (2) 21. 172.)

**Aluminium platoiodonitrite,**  $\text{Al}_3[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 27\text{H}_2\text{O}$ .Easily sol. in  $\text{H}_2\text{O}$ . (Nilson.)**Ammonium —,**  $(\text{NH}_4)_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ ; decomp on heating.**Barium platoiodonitrite,**  $\text{BaPt}(\text{NO}_2)_2\text{I}_2 + 4\text{H}_2\text{O}$ .Very sol. in  $\text{H}_2\text{O}$ **Cadmium —,**  $\text{CdPt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$ Easily sol. in  $\text{H}_2\text{O}$ .**Cæsium —,**  $\text{Cs}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$ Easily sol. in  $\text{H}_2\text{O}$ .**Calcium —,**  $\text{CaPt}(\text{NO}_2)_2\text{I}_2 + 6\text{H}_2\text{O}$ .Very easily sol. in  $\text{H}_2\text{O}$ **Cerium —,**  $\text{Ce}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 18\text{H}_2\text{O}$ .Easily sol. in  $\text{H}_2\text{O}$ .**Cobalt —,**  $\text{CoPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$ Sol. in  $\text{H}_2\text{O}$ .**Didymium —,**  $\text{Dy}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 24\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ .**Erbium —,**  $\text{Er}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 18\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ **Ferrous —,**  $\text{FePt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$ Sol. in  $\text{H}_2\text{O}$ .**Ferric —,**  $\text{Fe}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 6\text{H}_2\text{O}$ Sol. in  $\text{H}_2\text{O}$ **Lanthanum —,**  $\text{La}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 24\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ .**Lead —, basic,**  $\text{PbPt}(\text{NO}_2)_2\text{I}_2, \text{Pb}(\text{OH})_2.$ Insol. in  $\text{H}_2\text{O}$ **Lithium —,**  $\text{Li}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 6\text{H}_2\text{O}$ .Very sol. in  $\text{H}_2\text{O}$ **Magnesium —,**  $\text{MgPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ .**Manganese —,**  $\text{MnPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ .**Mercurous —, basic,**  $2\text{Hg}_2\text{Pt}(\text{NO}_2)_2\text{I}_2,$   
 $\text{Hg}_2\text{O} + 9\text{H}_2\text{O}.$ Insol. in  $\text{H}_2\text{O}$ .**Nickel —,**  $\text{NiPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$ Sol. in  $\text{H}_2\text{O}$ .**Potassium —,**  $\text{K}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$  in all proportions.

Very sol. in alcohol.

**Rubidium —,**  $\text{Rb}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 2\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ .

Silver platiodonitrite,  $\text{Ag}_2\text{Pt}(\text{NO}_2)_2\text{I}_2$ .  
Insol. in  $\text{H}_2\text{O}$

Sodium —,  $\text{Na}_2\text{Pt}(\text{NO}_2)_2\text{I}_2 + 4\text{H}_2\text{O}$   
Very sol in  $\text{H}_2\text{O}$

Strontium —,  $\text{SrPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$ .  
Sol in  $\text{H}_2\text{O}$

Thallium —,  $\text{Tl}_2\text{Pt}(\text{NO}_2)_2\text{I}_2$   
Insol in  $\text{H}_2\text{O}$

Yttrium —,  $\text{Y}_2[\text{Pt}(\text{NO}_2)_2\text{I}_2]_3 + 27\text{H}_2\text{O}$   
Sol in  $\text{H}_2\text{O}$

Zinc —,  $\text{ZnPt}(\text{NO}_2)_2\text{I}_2 + 8\text{H}_2\text{O}$   
Sol. in  $\text{H}_2\text{O}$ .

Triplatoctonitrosylic acid,  $\text{H}_4\text{Pt}_6\text{O}(\text{NO}_2)_8$ .  
(Nilson, J. pr. (2) 18. 241)

Potassium triplatoctonitrosylate.  
See under Platonitrite, potassium.

Platinitrous acid,  $\text{H}_2\text{Pt}(\text{NO}_2)_4$ .  
Sol. in  $\text{H}_2\text{O}$  or alcohol. (Lang J. pr 83. 419.)  
Is called "Platotetranitrosylic acid" by Nilson

Aluminum platonitrite,  $\text{Al}_2[\text{Pt}(\text{NO}_2)_4]_3 + 14\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$   
 $\text{Al}_2(\text{OH})_4[\text{Pt}(\text{NO}_2)_4]_3\text{O}_2 + 10\text{H}_2\text{O}$  Sl sol. in cold, easily in hot  $\text{H}_2\text{O}$  and alcohol (Nilson, B. 9. 1727.)

Ammonium platonitrite,  $(\text{NH}_4)_2\text{Pt}(\text{NO}_2)_4 + 2\text{H}_2\text{O}$   
Moderately sol. in cold  $\text{H}_2\text{O}$  (Nilson, B. 9. 1724.)

Barium platonitrite,  $\text{BaPt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$ .  
Sl. sol. in cold, very sol. in hot  $\text{H}_2\text{O}$  (Lang.)

Cadmium platonitrite,  $\text{CdPt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$   
Easily sol in  $\text{H}_2\text{O}$  (Nilson.)

Cesium platonitrite,  $\text{Cs}_2\text{Pt}(\text{NO}_2)_4$ .  
Resembles K salt.

Calcium platonitrite,  $\text{CaPt}(\text{NO}_2)_4 + 5\text{H}_2\text{O}$ .  
Very sol in  $\text{H}_2\text{O}$ . (Nilson)

Cerium platonitrite,  $\text{Ce}_2[\text{Pt}(\text{NO}_2)_4]_3 + 18\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Nilson)

Chromium diplatonitrite,  
 $\text{Cr}_2(\text{OH})_2[\text{Pt}(\text{NO}_2)_4]_2\text{O}_2 + 24\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Nilson.)

Cobalt platonitrite,  $\text{CoPt}(\text{NO}_2)_4 + 8\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$  (Nilson)

Copper platonitrite,  $\text{CuPt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  (Nilson)  
 $3\text{CuPt}(\text{NO}_2)_4, \text{CuO} + 12\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$  (Nilson)

Didymium platonitrite,  $\text{Dy}_2[\text{Pt}(\text{NO}_2)_4]_3 + 18\text{H}_2\text{O}$ .  
Deliquescent; sol. in  $\text{H}_2\text{O}$ .

Erbium platonitrite,  $\text{Er}_2[\text{Pt}(\text{NO}_2)_4]_3 + 9, \text{ and } 21\text{H}_2\text{O}$   
Deliquescent, sol in  $\text{H}_2\text{O}$ .

Glucinum diplatonitrite,  $\text{GlPt}(\text{NO}_2)_2\text{O} + 9\text{H}_2\text{O}$ .  
Sl sol. in cold  $\text{H}_2\text{O}$ .

Indium diplatonitrite,  $\text{In}(\text{OH})_2[\text{Pt}(\text{NO}_2)_4]_2\text{O}_2 + 10\text{H}_2\text{O}$ .  
Sl sol in  $\text{H}_2\text{O}$

Ferric diplatonitrite,  $\text{Fe}_2[\text{Pt}(\text{NO}_2)_4]_2\text{O}_3 + 30\text{H}_2\text{O}$ .  
Sl sol in cold, easily in hot  $\text{H}_2\text{O}$ .

Lanthanum platonitrite,  $\text{La}_2[\text{Pt}(\text{NO}_2)_4]_3 + 18\text{H}_2\text{O}$   
Deliquescent, sol. in  $\text{H}_2\text{O}$ .

Lead platonitrite,  $\text{PbPt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$ .  
Sl. sol. in  $\text{H}_2\text{O}$ . (Nilson)

Lithium platonitrite,  $\text{Li}_2\text{Pt}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$ .  
Sl. deliquescent, easily sol. in  $\text{H}_2\text{O}$ .

Magnesium platonitrite,  $\text{MgPt}(\text{NO}_2)_4 + 5\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$ .

Manganese platonitrite,  $\text{MnPt}(\text{NO}_2)_4 + 8\text{H}_2\text{O}$   
Sol. in  $\text{H}_2\text{O}$

Mercurous platonitrite,  $\text{Hg}_2\text{Pt}(\text{NO}_2)_4, \text{Hg}_2\text{O}$ .  
Nearly insol. in  $\text{H}_2\text{O}$  (Lang, J pr 83. 415)  
 $+ \text{H}_2\text{O}$ . Nearly insol in  $\text{H}_2\text{O}$ . (Nilson.)

Nickel platonitrite,  $\text{NiPt}(\text{NO}_2)_4 + 8\text{H}_2\text{O}$ .  
Easily sol. in  $\text{H}_2\text{O}$ . (Nilson.)

Potassium platonitrite,  $\text{K}_2\text{Pt}(\text{NO}_2)_4$ .  
Sol. in 27 pts  $\text{H}_2\text{O}$  at  $15^\circ$ ; more easily sol in warm  $\text{H}_2\text{O}$ . (Lang, J. pr. 83. 415)  
 $+ 2\text{H}_2\text{O}$  Efflorescent (Lang.)  
 $\text{K}_2\text{H}_2\text{Pt}_2\text{O}(\text{NO}_2)_4 + 3\text{H}_2\text{O}$ . Very sl. sol. in cold (0.01 mol. in 1 l. at  $16^\circ$ ), but very easily in hot  $\text{H}_2\text{O}$ . (Vézes, A. ch. (8) 29. 182.)  
 $\text{K}_4\text{Pt}_4\text{O}(\text{NO}_2)_8 + 2\text{H}_2\text{O}$ . Sl sol. in warm  $\text{H}_2\text{O}$ . (Nilson)

**Potassium platinitrite bromide.**

See Platibromonitrite and platobromonitrite, potassium.

**Potassium platinitrite chloride.**

See Plati- and platochloronitrite, potassium.

**Potassium platinitrite hydrogen chloride,**  
 $K_2Pt(NO_2)_4$ , HCl.

Sol. in  $H_2O$ . (Miolati, Att. Linc. Rend. 1896, (5) 5, II, 358.)

**Potassium platinitrite iodide.**

See Plati- and platiodonitrite, potassium.

**Potassium platinitrite nitrogen dioxide,**  
 $K_2Pt(NO_2)_4$ ,  $2NO_2$ .

Violently decomp. by  $H_2O$ . (Miolati, Atti Linc. Rend. 1896, (5) 5, II, 356.)

**Rubidium platinitrite,  $Rb_2(Pt)(NO_2)_4$ , and  $+2H_2O$ .**

Very slowly sol. in cold, more easily in warm  $H_2O$ . (Nilson.)

**Silver platinitrite,  $Ag_2Pt(NO_2)_4$ .**

Very sl sol. in cold, easily in hot  $H_2O$

**Silver diplatinitrite,  $Ag_2Pt_2(NO_2)_4O$** 

Insol in  $H_2O$ . (Nilson.)

**Sodium platinitrite,  $Na_2Pt(NO_2)_4$ .**

Easily sol in  $H_2O$ .

**Strontium platinitrite,  $SrPt(NO_2)_4+3H_2O$ .**

Somewhat sl. sol. in cold  $H_2O$ , but easily sol. in warm  $H_2O$ .

**Thallium platinitrite,  $Tl_2Pt(NO_2)_4$** 

Very sl sol. in  $H_2O$ . (Nilson.)

**Yttrium platinitrite,  $Y_2[Pt(NO_2)_4]_3+9$ , or  $21H_2O$ .**

Sol. in  $H_2O$ .

**Zinc platinitrite,  $ZnPt(NO_2)_4+8H_2O$ .**

Sol. in  $H_2O$ .

**Platodioxamine chloride,**

Easily sol. in  $H_2O$ . (Alexander, A. 246. 239.)

**— chloroplatinite,  $Pt(NH_3O.NH_2OCl)_2$ ,  $PtCl_2$ .**

Sol. in warm HCl + Aq Insol. in cold  $H_2O$  or alcohol; very sl. sol. in hot  $H_2O$  (Alexander.)

**— hydroxide,  $Pt(NH_3O.NH_2O)_2(OH)_2$** 

Insol. in  $H_2O$  or alcohol Easily sol. in HCl or  $HNO_3$  + Aq. Difficultly sol. in hot dil.  $H_2SO_4$  + Aq. (Alexander.)

**Platodioxamine oxalate,**  
 $Pt(NH_3O.NH_2O)_2C_2O_4$ .

Insol in cold  $H_2O$ , alcohol, or organic acids. (Alexander)

**— phosphate,  $Pt_2(NH_3O.NH_2O)_{12}(PO_4)_2+3H_2O$** 

Ppt. (Alexander.)

**— sulphate,  $Pt(NH_3O.NH_2O)SO_4+H_2O$ .**

Sl. sol. in  $H_2O$  (Alexander.)

**Platosamine bromide,  $Pt(NH_4Br)_2$ .**

Sl. sol. even in hot  $H_2O$  (Cleve)

**— chloride,  $Pt(NH_4Cl)_2$** 

"Reiset's second chloride" Sol. in 140 pts.  $H_2O$  at  $106^\circ$  (Peyrone, A. 61. 180)

Sol in 130 pts.  $H_2O$  at  $100^\circ$ , and 4472 pts. at  $0^\circ$  (Cleve)

Easily sol. in  $NH_4OH$  + Aq,  $HNO_3$ , or aqua regia, with decomp. Sol. in KCN + Aq with evolution of  $NH_3$ . (Cleve)

**— ammonium chloride,  $Pt(NH_4Cl)_2$ ,  $2NH_4Cl$** 

Sl sol in cold, easily in hot  $H_2O$ ; insol. in alcohol; sol. in  $NH_4OH$  or  $(NH_4)_2CO_3$  + Aq. (Grimm, A. 99. 75)

**Platosamine chlorosulphurous acid,**

Easily sol. in  $H_2O$  without decomp (Cleve.)

**Ammonium platosamine chlorosulphite,**

Sol. in  $H_2O$ . (Peyrone, A. 61. 180.)

**Platosamine cyanide,  $Pt(NH_4CN)_2$ .**

Quite easily sol. in  $H_2O$  or  $NH_4OH$  + Aq. (Buckton)

**— hydroxide,  $Pt(NH_4OH)_2$** 

"Reiset's second base." Very sol. in  $H_2O$ . (Odling, B. 3. 685.)

**— iodide,  $Pt(NH_4I)_2$ .**

Very sl. sol. in  $H_2O$ . Sol in cold  $NH_4OH$  + Aq to form platodiamine iodide (Cleve)

**— nitrate,  $Pt(NH_4NO_3)_2$ .**

Moderately sol. in hot  $H_2O$ . Sol in  $NH_4OH$  + Aq with combination. (Reiset, A. ch. (3) 11. 26)

**— nitrite,  $Pt(NH_4NO_2)_2$** 

Very sl. sol. in cold, easily in hot  $H_2O$ . Insol in alcohol (Lang.)

**Platosamine platinous nitrite**,  $\text{Pt}(\text{NH}_2\text{NO}_2)_2$ ,  $\text{Pt}(\text{NO}_2)_2$ .

Slowly and sl. sol in cold, more easily sol in hot  $\text{H}_2\text{O}$ .

Extremely sl. sol. even in conc. acids; more sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  than in  $\text{H}_2\text{O}$ . (Lang)

— oxide,  $\text{Pt}(\text{NH}_2)_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq}$  (Reiset)

— oxalate,  $\text{Pt}(\text{NH}_2)_2\text{H}_2(\text{C}_2\text{O}_4)_2 + 2\text{H}_2\text{O}$   
Ppt. (Cleve.)

— sulphate,  $\text{Pt}(\text{NH}_2)_2\text{SO}_4 + \text{H}_2\text{O}$ .

Sl. sol in cold, more easily in hot  $\text{H}_2\text{O}$ .

— sulphite,  $\text{Pt}(\text{NH}_2)_2\text{SO}_3 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve)

— sulphocyanide,  $\text{Pt}(\text{NH}_2\text{SCN})_2$ .

Insol. in  $\text{H}_2\text{O}$ , can be cryst. from alcohol, not attacked by  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Buckton)

Very sol. in hot  $\text{H}_2\text{O}$  (Cleve.)

— silver sulphocyanide,

$\text{Pt}(\text{NH}_2)_2\text{Ag}_2(\text{SCN})_6$ .  
(Cleve.)

**Platosamine sulphurous acid**,

$\text{Pt}(\text{NH}_2\text{SO}_2\text{H})_2$ .

Exists only in its salts.

See **Platosamine sulphite**.

**Ammonium platosamine sulphite**,

$\text{Pt}(\text{NH}_2\text{SO}_2\text{NH}_4)_2$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol

**Barium platosamine sulphite**,

$\text{Pt}(\text{NH}_2)_2(\text{SO}_3)_2\text{Ba} + 3\text{H}_2\text{O}$ .

Ppt. (Cleve)

**Cobalt** — — —,  $\text{Pt}(\text{NH}_2)_2(\text{SO}_3)_2\text{Co} + 6\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ . Sol in  $\text{HCl} + \text{Aq}$

**Copper** — — —,  $\text{Pt}(\text{NH}_2)_2(\text{SO}_3)_2\text{Cu} + 5\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ , sol in  $\text{HCl} + \text{Aq}$ .

**Lead** — — —,  $\text{Pt}(\text{NH}_2)_2(\text{SO}_3)_2\text{Pb} + \text{H}_2\text{O}$   
Ppt.

**Manganese** — — —,  $\text{Pt}(\text{NH}_2)_2(\text{SO}_3)_2\text{Mn} + 4\text{H}_2\text{O}$

Ppt. Sl. sol. in  $\text{H}_2\text{O}$ .

**Nickel** — — —,  $\text{Pt}(\text{NH}_2)_2(\text{SO}_3)_2\text{Ni} + 7\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ .

**Sodium platosamine sulphite**,

$\text{Pt}(\text{NH}_2\text{SO}_2\text{Na})_2 + 5\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  100 com. sat. solution at  $20^\circ$  contains 5.52 g. cryst. salt. (Haberland and Hanekop, A. 245. 235.)

**Silver** — — —,  $\text{Pt}(\text{NH}_2\text{SO}_2\text{Ag})_2 + \text{H}_2\text{O}$ .  
Ppt

**Uranyl** — — —,  $\text{Pt}(\text{NH}_2)_2(\text{SO}_3)_2\text{UO}_2 + \text{H}_2\text{O}$ .  
Ppt.

**Zinc** — — —,  $\text{Pt}(\text{NH}_2)_2(\text{SO}_3)_2\text{Zn} + 6\text{H}_2\text{O}$ .  
Ppt. Very sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Platosesemiamine potassium chloride**,

$\text{Pt}^{\text{NH}_4\text{Cl}}_{\text{Cl}}$ ,  $\text{KCl} + \text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Cossa, B. 23. 2507.)

**Platosoxamine chloride**,  $\text{Pt}^{\text{NH}_4\text{OCl}}_{\text{NH}_2\text{OCl}}$

Sol. in  $\text{H}_2\text{O}$ . Much less sol. in  $\text{H}_2\text{O}$  than platosoxamine chloride. (Alexander, A. 246. 239.)

**Platosoxamine amine chloride**,

$\text{Pt}^{\text{NH}_2\text{O.NH}_2\text{Cl}}_{\text{NH}_2\text{NH}_2\text{OCl}}$

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol and conc  $\text{HCl} + \text{Aq}$ . (Alexander, A. 246. 239.)

— chloroplatinite,  $\text{Pt}^{\text{NH}_2\text{O.NH}_2\text{Cl}}_{\text{NH}_2\text{NH}_2\text{OCl}} \cdot \text{PtCl}_6$

Ppt

**Platosulphurous acid**.

**Ammonium platosulphite**,  $(\text{NH}_4)_2\text{Pt}(\text{SO}_3)_2 + 3\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (Birnbbaum, A. 139. 170)  
 $(\text{NH}_4)_2\text{Pt}(\text{SO}_3)_2 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Liebig, Pogg. 17. 108.)

**Ammonium platosulphite chloride**,

$(\text{NH}_4)_2\text{Pt}(\text{SO}_3)_2 \cdot 2\text{NH}_4\text{Cl}$

Sol in  $\text{H}_2\text{O}$ . (Birnbbaum.)  
 $\text{PtClSO}_3\text{H} \cdot 2\text{NH}_4\text{Cl}$ . Deliquescent; sol. in  $\text{H}_2\text{O}$ . (Birnbbaum, A. 152. 143)  
See also Chloroplatosulphite, ammonium.

**Potassium platosulphite**,  $\text{K}_2\text{Pt}(\text{SO}_3)_2 + 4\text{H}_2\text{O}$

Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . Much more sol. than the Na salt. (Birnbbaum, A. 139. 168.)

$+ 3\text{H}_2\text{O}$  (Lang, J. pr. 83. 415.)  
 $6\text{K}_2\text{O} \cdot 2\text{PtO} \cdot 10\text{SO}_3$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Claus, J. B. 1847-48. 453)

Does not exist. (Lang)  
 $\text{K}_2\text{Pt}(\text{SO}_3)_2$ . Sol. in  $\text{H}_2\text{O}$ .

**Silver platosulphite,  $\text{Ag}_3\text{Pt}(\text{SO}_3)_4$ .**

Ppt Very sol. in cold  $\text{NH}_4\text{OH} + \text{Aq}$  (Lang J, pr. 83. 415)

**Sodium platosulphite,  $\text{Na}_4\text{Pt}(\text{SO}_3)_4$ .**

Very sl sol in cold, somewhat more easily in hot  $\text{H}_2\text{O}$ . Not decomp. by boiling  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$ . Gradually sol in  $(\text{NH}_4)_2\text{S}$  or  $\text{K}_2\text{S} + \text{Aq}$ . Insol. in  $\text{NaCl} + \text{Aq}$  or alcohol (Litton and Schneidermann, A. 42. 316)

+  $1\frac{1}{2}\text{H}_2\text{O}$ .

+  $7\text{H}_2\text{O}$ .

$\text{Na}_4\text{Pt}(\text{SO}_3\text{H})_4$ . Moderately sol in  $\text{H}_2\text{O}$ . (Litton and Schneidermann)

**Platothiosulphuric acid.****Sodium platothiosulphate,  $\text{Na}_4\text{Pt}(\text{S}_2\text{O}_3)_4 + 10\text{H}_2\text{O}$ .**

Very sol in  $\text{H}_2\text{O}$  (Schottlander, A. 140. 200.)

$\text{PtS}_2\text{O}_3, 4\text{Na}_2\text{S}_2\text{O}_3 + 10\text{H}_2\text{O}$ .

$\text{PtS}_2\text{O}_3, 6\text{Na}_2\text{S}_2\text{O}_3 + 19\text{H}_2\text{O}$ .

$2\text{PtS}_2\text{O}_3, 7\text{Na}_2\text{S}_2\text{O}_3 + 18\text{H}_2\text{O}$ . (Jochem, C. C. 1886. 642.)

**Plumbic acid.****Barium plumbate,  $\text{Ba}_3\text{PbO}_4$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol in  $\text{HCl} + \text{Aq}$  with evolution of  $\text{Cl}$ . Sol. in acids in presence of a reducing substance (Kassner, Arch Pharm 228. 109)

**Calcium plumbate.**

Insol in  $\text{H}_2\text{O}$ .  $\text{HNO}_3 + \text{Aq}$  dissolves out  $\text{CaO}$ . (Crum, A. 56. 218.)

$\text{Ca}_2\text{PbO}_4$ . Properties as  $\text{Ba}_3\text{PbO}_4$ . (Kassner, Arch Pharm. 228. 109.)

+  $4\text{H}_2\text{O}$ . Easily decomp by  $\text{HNO}_3$ . (Kassner, Arch. Pharm 1894, 232. 378)

**Calcium hydrogen plumbate,  $\text{H}_2\text{CaPb}_2\text{O}_6$ .**

Fairly stable, slowly sol. in  $\text{HNO}_3$  in the cold (Kassner.)

**Calcium lead orthoplumbate,  $\text{CaPbPbO}_4$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$   $\text{HNO}_3$ , acetic and other acids cause a separation of  $\text{PbO}_2$ . (Kassner, Arch. Pharm 1903, 241. 147)

**Copper metaplumbate,  $\text{CuPbO}_3$ .**

Decomp. by acids. Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Acetic acid dissolves  $\text{Cu}$ . (Hoehnel, Arch. Pharm 1896, 234. 399.)

**Lead metaplumbate,  $\text{PbPbO}_3$ .**

Identical with lead sesquioxide. (Hoehnel, Arch. Pharm. 1896, 234. 399.)

**Manganese metaplumbate.**

Decomp. by acids. (Hoehnel, Arch. Pharm. 1896, 234. 399.)

**Potassium plumbate,  $\text{K}_2\text{PbO}_3 + 3\text{H}_2\text{O}$ .**

Very deliquescent. Decomp by pure  $\text{H}_2\text{O}$  into  $\text{PbO}_2$  and  $\text{KOH}$ . Sol in  $\text{KOH} + \text{Aq}$  without decomp. (Fremy, J Pharm (3) 3. 32.)

**Silver metaplumbate,  $\text{Ag}_3\text{PbO}_3$ .**

Ppt (Grütznar, Arch. Pharm 1895, 233. 518)

**Sodium plumbate.**

Sol in  $\text{H}_2\text{O}$  with decomposition. Sl. sol in alkalies +  $\text{Aq}$  (Fremy, A. ch (3) 12. 490)

**Sodium metaplumbate,  $\text{Na}_3\text{PbO}_3 + 4\text{H}_2\text{O}$ .**

Decomp by  $\text{H}_2\text{O}$ ; insol in alcohol. (Hoehnel, Arch Pharm 1894, 232. 224)

**Strontium plumbate,  $\text{Sr}_2\text{PbO}_4$ .**

Properties as  $\text{Ba}_3\text{PbO}_4$ . (Kassner, Arch Pharm. 228. 109.)

**Zinc metaplumbate,  $\text{ZnPbO}_3 + 2\text{H}_2\text{O}$ .**

Decomp. by dil acids; insol. in  $\text{H}_2\text{O}$ . (Hoehnel, Arch. Pharm. 1896, 234. 398.)

**Plumbous acid.****Calcium plumbite.**

Sl sol in  $\text{H}_2\text{O}$ . (Kausten, Seher J. 5. 575)

**Potassium plumbite,  $\text{PbO}, \text{K}_2\text{O}$ .**

Known only in solution.

**Silver plumbite,  $\text{Ag}_3\text{PbO}_3$ .**

Insol in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$  and  $\text{KOH} + \text{Aq}$ ; sol. in  $\text{HNO}_3$  and acetic acid; and in conc.  $\text{H}_2\text{SO}_4$ ,  $\text{HI}$ , and  $\text{HF}$ . (Bullnheimer, B 1898, 31. 1288.)

+  $2\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$ . Decomp. on air. (Kratwig, B 15. 264)

**Sodium plumbite.**

Known only in solution

**Potassium,  $\text{K}_2$ .**

Violently decomposes  $\text{H}_2\text{O}$  or alcohol. Insol in hydrocarbons. Sol. with violent action in acids.

**Solubility in fused  $\text{KOH}$  at  $t^\circ$ .**

$t^\circ$	G. K sol. in 100 g fused $\text{KOH}$
480	7.8-8.9
600	3-4
650	2-2.7
700	0.5-1.3

(Hevesy, Z. Elektrochem 1909, 15. 534.)

Sol. in liquid  $\text{NH}_3$ . (Seely, C N 23. 169); (Franklin, Am Ch J 1898, 20. 829.)  
1 gram atom of  $\text{K}$  dissolves in 4.74 mol.

liquid  $\text{NH}_3$  at  $0^\circ$ , in 4.79 mol. at  $-50^\circ$ ; in 4.82 mol at  $-100^\circ$  (Ruff, B 1903, 39. 839.)  
 Insol in liquid  $\text{CO}_2$ . (Büchner, Z. phys. Ch 1906, 54. 874.)

Slowly sol in ethylene diamine Insol in ethyl amine and in secondary and tertiary amines (Kraus, J. Am Chem. Soc 1907, 29. 1561)

**Potassium acetylide,  $\text{K}_2\text{C}_2$**

(Moissan, C R 1898, 127. 917.)

**Potassium acetylide acetylene,  $\text{K}_2\text{C}_2$ ,  $\text{C}_2\text{H}_2$ .**

(Moissan, C. R. 1898, 127. 915.)

**Potassium amalgams.**

$\text{Hg}_2\text{K}$ ,  $\text{Hg}_3\text{K}$ ,  $\text{Hg}_4\text{K}$ ,  $\text{Hg}_{10}\text{K}$ ,  $\text{Hg}_{12}\text{K}$  and  $\text{Hg}_{16}\text{K}$  (Guntz, C R 1900, 131. 183)

$\text{Hg}_{12}\text{K}$  Stable up to  $0^\circ$ . Can be cryst from Hg without decomp. below  $0^\circ$

$\text{Hg}_{10}\text{K}$  Stable from  $0^\circ$  to  $71^\circ$  or  $73^\circ$  Can be cryst from Hg without decomp. at any temp. between these limits.

$\text{Hg}_3\text{K}$ . Stable from  $71^\circ$  or  $73-75^\circ$ . Can be cryst. from Hg without decomp at any temp between these limits. (Kerp, Z. anorg. 1900, 25. 68.)

**Potassium amide,  $\text{KH}_2\text{N}$ .**

Decomp by water or alcohol Insol in hydrocarbons.

**Potassium ammonickelate,  $\text{Ni}_3\text{N}_2\text{K}_4$ ,  $6\text{NH}_3$**

Decomp by  $\text{H}_2\text{O}$  Sol in liquid  $\text{NH}_3$ . (Bohart, J. phys. Chem. 1915, 19. 559)

**Potassium ammonoargentate,  $\text{AgNHK}$ ,  $\text{NH}_3$  or  $\text{AgNH}_3$ ,  $\text{KNH}_2$**

Ppt, decomp. in the air. Decomp by  $\text{H}_2\text{O}$  or by liquid  $\text{NH}_3$  solutions of acids. (Franklin, J. Am Chem. Soc. 1915, 37. 855)

**Potassium ammonobarate,  $\text{BaNHK}$ ,  $2\text{NH}_3$ .**

Hydrolyzed by  $\text{H}_2\text{O}$  Insol in liquid  $\text{NH}_3$ . Decomp. and dissolved in a solution of  $\text{NH}_4\text{NO}_3$  in liquid  $\text{NH}_3$ . (Franklin, J. Am. Chem Soc. 1915, 37. 2297.)

**Potassium ammonocadmiate,  $\text{Cd}(\text{NHK})_2$ ,  $2\text{NH}_3$**

Ppt. (Franklin, Am. Ch. J. 1912, 47. 310.)  
 $\text{Cd}(\text{NHK})_2$ ,  $2\text{NH}_3$  Decomp. by  $\text{H}_2\text{O}$ . Insol. in liquid  $\text{NH}_3$ . (Bohart, J. phys. Chem. 1915, 19. 542.)

**Potassium ammonocalciate,  $\text{CaNHK}$ ,  $2\text{NH}_3$ .**

Hydrolyzed by  $\text{H}_2\text{O}$  Readily sol. in a solution of  $\text{NH}_4\text{NO}_3$  in liquid  $\text{NH}_3$ . (Franklin, J. Am. Chem. Soc. 1915, 37. 2300.)

**Potassium ammonocuprite,  $\text{CuNHK}_2$ ,  $3\text{NH}_3$ .**

Very sol in liquid  $\text{NH}_3$ .

$\text{CuNHK}_2$ ,  $2\text{NH}_3$ .

$\text{CuNHK}_2$ ,  $\text{NH}_3$ . (Franklin, J. Am. Chem. Soc. 1912, 34. 1503)

$\text{CuNHK}_2$ ,  $2\frac{1}{2}\text{NH}_3$ . Ppt (Franklin, Am. Ch J. 1912, 47. 311.)

**Potassium ammonomagnesate,  $\text{Mg}(\text{NHK})_2$ ,  $2\text{NH}_3$**

Sl. sol in liquid  $\text{NH}_3$ . Rapidly hydrolyzed by  $\text{H}_2\text{O}$ . (Franklin, J. Am. Chem. Soc. 1913, 35. 1463)

**Potassium ammonoplumbite,  $\text{PbNHK}$ ,  $2\frac{1}{2}\text{NH}_3$ .**

Completely hydrolyzed by action of water vapor Violently decomp. by  $\text{H}_2\text{O}$  or dil. acids Sol. in liquid  $\text{NH}_3$ . (Franklin, J. phys Chem. 1911, 15. 519.)

**Potassium ammonostannate,  $\text{Sn}(\text{NHK})_2$ ,  $4\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$  Readily sol. in  $\text{HCl} + \text{Aq}$  Sl. sol. in liquid  $\text{NH}_3$ . Readily sol. in a solution of  $\text{NH}_4\text{I}$  in liquid  $\text{NH}_3$ . (Fitzgerald, J. Am. Chem. Soc. 1907, 29. 1696.)

**Potassium ammonostrontiate,  $\text{SrNHK}$ ,  $2\text{NH}_3$ .**

Hydrolyzed vigorously by  $\text{H}_2\text{O}$ . Sol. in solutions of  $\text{NH}_4\text{NO}_3$  in liquid  $\text{NH}_3$  Insol. in liquid  $\text{NH}_3$ . (Franklin, J. Am Chem. Soc. 1915, 37. 2299.)

**Potassium ammonothallate,  $\text{TlNHK}$ ,  $4\text{NH}_3$**

Sensitive to action of air or moisture. Violently decomp by  $\text{H}_2\text{O}$  or dil. acids. Moderately sol. in liquid  $\text{NH}_3$  at  $20^\circ$ , more sol. at higher temp. and much less sol at lower temp. Decomp. by liquid  $\text{NH}_3$  solutions of acids. (Franklin, J. phys. Chem. 1912, 16. 689.)

**Potassium ammonotitanate,  $(\text{N}) \text{TiNHK}$ .**

Vigorously hydrolyzed by  $\text{H}_2\text{O}$ . Insol. in liquid  $\text{NH}_3$  solutions of either potassium amide or  $\text{NH}_4\text{Br}$  (Franklin, J. Am. Chem. Soc 1912, 34. 1500)

**Potassium ammonozincate,  $\text{Zn}(\text{NHK})_2$ ,  $2\text{NH}_3$ .**

Decomp. by water. Sl. sol. in liquid  $\text{NH}_3$ . (Fitzgerald, J. Am Chem. Soc. 1907, 29. 663.)  
 Decomp. by  $\text{H}_2\text{O}$ . Sol. in dilute acids. Sl. sol. in liquid  $\text{NH}_3$ . Sol. in solutions of ammonium salts in liquid  $\text{NH}_3$ . (Franklin, Z. anorg. 1907, 55. 195.)

**Potassium arsenide,  $\text{K}_3\text{As}$ .**

(Hugot, C. R. 1899, 129. 604.)

$\text{K}_2\text{As}_4$ . (Hugot.)

**Potassium arsenide, ammonia,  $\text{AsK}_3$ ,  $\text{NH}_3$ .**

Nearly insol. in liquid  $\text{NH}_3$ . (Hugot.)

$\text{K}_2\text{As}_4$ ,  $\text{NH}_3$ . (Hugot.)

Potassium azoimide,  $\text{KN}_3$ .

Stable in aq. solution.

48.5 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $10.5^\circ$ .48.9 " " " " 100 "  $\text{H}_2\text{O}$  " 15.5.49.6 " " " " 100 "  $\text{H}_2\text{O}$  " 17.0.1375 " " " " 100 " abs. alcohol at  $16^\circ$ .

Insol. in pure ether. (Curtius, J pr 1898, (2) 68, 280.)

## Potassium bromide, KBr.

Solubility of KBr in 100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts. KBr	$t^\circ$	Pts. KBr
0	53.48	60	85.35
20	64.52	80	93.46
40	74.63	100	102.0

(Kremers, Pogg. 97, 151.)

Solubility of KBr in 100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts. KBr	$t^\circ$	Pts. KBr
-13.4	46.17	43.15	77.0
-6.2	49.57	45.45	77.73
0	53.32	50.5	80.33

177.2	358.1	579.6	64.8
231.1	251.2	806.9	33.4

(Ditte, C. R. 1897, 124. 30.)

Sol in Br<sub>2</sub> at 15°. (Walden, Z. anorg. 1900, 25. 220)

Moderately sol. in liquid NH<sub>3</sub>. (Franklin, Am Ch J 1898, 20. 829)

Sol. in liquid NH<sub>3</sub>. 45 pts are sol. in 100 pts. liquid NH<sub>3</sub> at -50°. (Joannis, C. R. 1905, 140. 1244.)

Attacked by liquid NO<sub>2</sub> with liberation of Br<sub>2</sub>. (Frankland, Chem Soc. 1901, 79. 1361.)

Insol in liquid CO<sub>2</sub>. (Büchner, Z. phys. Ch 1906, 54. 674.)

Sol in SO<sub>2</sub>. (Walden, Z. anorg 1900, 25. 217)

Sol. in SO<sub>2</sub>Cl(OH). (Walden, Z. anorg. 1902, 29. 382)

Difficultly sol. in AsBr<sub>3</sub>. (Walden, Z anorg 1902, 29. 374.)

Sol in SbCl<sub>3</sub>. (Walden, Z anorg. 1900, 25. 220.)

Sol. in liquid SO<sub>2</sub>. (Walden, Z. anorg 1902, 30. 160)

Hydrazine dissolves 56.4 pts KBr at 12.5-13°. (de Bruyn, R. t. c 1899, 18. 297)

Sl. sol. in alcohol (Ballard.)

Sol. in 200 pts cold, and 16 pts boiling 80% alcohol

Sol in 180 pts 90% alcohol. (Hager)

Sol. in 750 pts abs. alcohol at 15°. (Eder, Dingl. 221. 89)

100 pts absolute methyl alcohol dissolve 1.51 pts. at 25°, 100 pts absolute ethyl alcohol dissolve 0.13 pt. at 25° (de Bruyn, Z. phys. Ch. 10. 783.)

### Solubility of KBr in methyl alcohol+Aq at 25°.

P = % by wt. of alcohol in alcohol+Aq.  
S = Sp. gr. of alcohol+Aq sat. with KBr  
L = millimols KBr in 100 cc. of the solution.

P	S 25°/4°	L
0	1.3797	471
10.6	1.300	389
30.8	1.159	252
47.1	1.058	162
64.0	0.9801	87
78.1	0.8906	44
98.9	0.8411	23
100	0.8047	14.2

(Herz and Anders, Z. anorg. 1907, 55. 273.)

100 g. KBr+CH<sub>3</sub>OH contain 0.2 g. KBr at the critical temp. (Centnerszwer, Z. phys. Ch 1910, 72. 437.)

## Solubility of KBr in ethyl alcohol + Aq

Wt % alcohol	Temp = 30°		Temp = 40°	
	G KBr per 100 g		G KBr per 100 g.	
	Solution	Solvent	Solution	Solvent
0	41.62	71.30	43.40	76.65
5	38.98	67.25	40.85	72.70
10	36.33	63.40	38.37	69.00
20	31.09	56.40	33.27	62.30
30	25.98	50.15	28.32	56.45
40	21.24	44.95	23.22	50.46
50	16.27	38.85	18.11	44.25
60	11.50	32.50	13.02	37.40
70	6.90	24.70	7.98	28.90
80	3.09	15.95	3.65	18.95
90	0.87	8.80	1.03	10.45

(Taylor, J. phys. Ch. 1896, 1. 724.)

At room temp., 1 pt. KBr by weight is sol. in:

 52 pts. methyl alcohol, D<sup>15</sup> 0.7990  
 350 " ethyl " D<sup>15</sup> 0.8100.  
 1818 " propyl " D<sup>15</sup> 0.8160

(Rohland, Z. anorg. 1898, 18. 325.)

## Solubility of KBr in ethyl alcohol at 0°

Cons. of alcohol in mol. g. per l H <sub>2</sub> O	G KBr in 1 l H <sub>2</sub> O	Mol. solubility
—	536.75	4.51
1/4	529.25	4.45
1/2	502.85	4.22
1	491.75	4.13
2	455.25	3.82

 (Armstrong and Eyre, Proc. R. Soc. 1910,  
 [A] 84. 127.)

 100 g. methyl alcohol dissolve 2.17 g KBr  
 at 25°.

 100 g. ethyl alcohol dissolve 0.142 g. KBr  
 at 25°.

 100 g. propyl alcohol dissolve 0.035 g KBr  
 at 25°.

 100 g. isoamyl alcohol dissolve 0.003 g KBr  
 at 25°.

 (Turner and Bissett, Chem. Soc. 1913, 103,  
 1909.)

 0.055 g. is sol. in 100 g propyl alcohol  
 (Schlamp, Z. phys. Ch. 1894, 14. 276.)

 Sol. in 5000 pts. ether (sp. gr. 0.729 at 15°).  
 (Eder, l. c.)

 Sol. in 1700 pts. alcohol-ether (1:1) at 15°  
 (Eder, l. c.)

 100 pts. acetone dissolve 0.023 pt. KBr at  
 25°. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

## Solubility of KBr in acetone + Aq at 25°

 A = cc. acetone in 100 cc. acetone + Aq.  
 KBr = millimols KBr in 100 cc. of the  
 solution.

A	KBr	Sp. gr
0	481.3	1.3793
20	366.7	1.2688
30	310.5	1.2118
40	259.0	1.1558
50	202.9	1.0918
60	144.9	1.0275
70	95.3	0.9591
80	46.5	0.89415
90	10.1	0.8340

(Herz and Knoch, Z. anorg. 1905, 45. 282.)

## Solubility of KBr in glycerine + Aq at 25°

 G = g. glycerine in 100 g glycerine + Aq  
 KBr = millimols KBr in 100 cc. of the solution.

G	KBr	Sp. gr
0	481.3	1.3793
13.28	444.3	1.3704
25.98	404.0	1.3655
45.36	340.5	1.3594
54.23	310.4	1.3580
83.84	219.25	1.3603
100	172.65	1.3691

(Herz and Knoch, Z. anorg. 1905, 45. 287.)

 100 g. 95% formic acid dissolve 23.2 g.  
 KBr at 18.5°. (Aschan, Chem. Ztg. 1913, 37.  
 1117.)

 Insol. in methyl acetate. (Naumann, B.  
 1909, 42. 3790), ethyl acetate (Naumann,  
 B. 1904, 37. 3801.)

 Insol. in benzonitrile (Naumann, B.  
 1914, 47. 1370.)

 100 ccm. of a sat. solution of KBr in fur-  
 fural at 25° contain 0.139 pts by wt KBr.  
 (Walden, Z. phys. Ch. 1906, 55. 713.)

 Insol. in CS<sub>2</sub>. (Arcowski, Z. anorg. 1894,  
 6. 257.)

Potassium rhodium bromide.

See Bromorhodite, potassium.

Potassium ruthenium tribromide.

See Bromoruthenite, potassium.

Potassium ruthenium tetrabromide.

See Bromoruthenate, potassium.

Potassium selenium bromide.

See Bromoselenate, potassium.

**Potassium tellurium bromide.**

See Bromotellurate, potassium.

**Potassium thallic bromide,  $\text{KBr}$ ,  $\text{TlBr}_3 + 2\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ .  
 $3\text{KBr}$ ,  $2\text{TlBr}_3 + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Ram-  
melsberg)**Potassium thorium bromide.**Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)**Potassium tin (stannous) bromide,  $\text{KBr}$ ,  $\text{SnBr}_2 + \text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ . (Benas, C. C. 1884. 958.)  
Can be recryst. from  $\text{HBr}$  or  $\text{KBr} + \text{Aq}$ .  
(Richardson, Am. Ch. J. 14. 95.)  
 $2\text{KBr}$ ,  $\text{SnBr}_2 + 2\text{H}_2\text{O}$ . Cannot be recryst.  
from  $\text{HBr} + \text{Aq}$  (Richardson.)**Potassium tin (stannic) bromide,  $2\text{KBr}$ ,  $\text{SnBr}_4$ .**

See Bromostannate, potassium.

**Potassium uranous bromide,  $\text{KUBr}_2$ .**Very sol. in  $\text{H}_2\text{O}$ . (Aloy, Bull. Soc. 1899,  
(3) 21. 264.)**Potassium uranyl bromide,  $2\text{KBr}$ ,  $\text{UO}_2\text{Br}_2 + 2\text{H}_2\text{O}$ .**Very easily sol. in  $\text{H}_2\text{O}$  (Sendtner)**Potassium zinc bromide,  $\text{KBr}$ ,  $\text{ZnBr}_2 + 2\text{H}_2\text{O}$ .**Not hygroscopic (Ephraim, Z anorg  
1903, 59. 60.) $2\text{KBr}$ ,  $\text{ZnBr}_2 + 2\text{H}_2\text{O}$ . Not hygroscopic.  
(Ephraim)**Potassium bromide ammonia,  $\text{KBr}$ ,  $4\text{NH}_3$ .**

(Joannis, C. R. 1905, 140. 1244.)

**Potassium bromide ruthenium dihydronitro-  
sochloride,  $(\text{NO})\text{Ru}_2\text{H}_2\text{Cl}_2$ ,  $2\text{HCl}$ ,  $3\text{KBr}$ .**Ppt Sl. sol. in  $\text{H}_2\text{O}$  (Brizard, A. ch  
1900, (7) 21. 359)**Potassium bromide,  $\text{KBr}_2\text{I}$ .**Decomp. rapidly on air. (Wells and  
Wheeler, Sill Am J. 143. 475)**Potassium carbonyl,  $\text{K}_2\text{C}_2\text{O}_2$ .**Decomp. by  $\text{H}_2\text{O}$  with explosion. (Joannis,  
C. R. 116. 158.)**Potassium chloride,  $\text{KCl}$ .**Sol. in  $\text{H}_2\text{O}$  with absorption of heat  
30 pts.  $\text{KCl} + 100$  pts.  $\text{H}_2\text{O}$  at  $13.2^\circ$  lower  
the temp.  $12.6^\circ$  (Rüdorff, B. 2. 68.)100 pts.  $\text{H}_2\text{O}$  dissolve 29.31 pts.  $\text{KCl}$  at  $0^\circ$ .  
(Gay-Lussac); 28.5 pts.  $\text{KCl}$  at  $0^\circ$  (Mulder;  
Gerardin.)The saturated solution contains 58.5%, and  
boils at  $107.6^\circ$  (Mulder), contains 59.40%, and  
boils at  $108.3^\circ$  (Legrand), contains 59.26%,  
and boils at  $109.6^\circ$  (Gay-Lussac); boils at  
 $110^\circ$ . (Kremers.)Sol. in 3.016 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  (Gerlach); in  
3.03 pts. at  $17.5^\circ$  or 100 pts.  $\text{H}_2\text{O}$  at  $17.5^\circ$  dis-  
solve 33 pts  $\text{KCl}$ . (Schiff.)100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$  dissolve pts  $\text{KCl}$ :

(Winteler, Z. Elektrochem, 1900, 7, 360.)

## KCl+NaCl.

100 pts. KCl+NaCl+Aq sat. at 13–16° contain 30.18 pts. of the two salts. (v. Hauer.)

100 pts. H<sub>2</sub>O dissolve 13.92 pts. KCl and 30.85 pts. NaCl at 15.6°, and solution has sp. gr.=1.233. (Page and Keighley)

100 pts. H<sub>2</sub>O dissolve 10.11 pts. KCl, 32.15 pts. NaCl, and 4.69 pts. K<sub>2</sub>SO<sub>4</sub>, and solution has sp. gr.=1.250. (P and K.)

100 pts. H<sub>2</sub>O dissolve 29.9 pts. NaCl and 15.7 pts. KCl at 18.8° (Rüdorff.)

Solubility of KCl+NaCl in H<sub>2</sub>O at t°. 100 pts. H<sub>2</sub>O dissolve pts. KCl and pts. NaCl.

t°	Pts KCl	Pts NaCl	t°	Pts KCl	Pts NaCl
10	12.5	29.7	60	24.6	27.2
20	14.7	29.2	70	27.3	26.8
30	17.2	28.7	80	30.0	26.4
40	19.5	28.2	90	32.9	26.1
50	22.0	27.7	100	34.7	25.8

(Precht and Wittgen, B 14. 1687.)

100 pts. H<sub>2</sub>O dissolve 13.99 pts. KCl+30.54 pts. NaCl=44.53 pts. mixed salts at 20°. (Nicol, Phil. Mag. (5) 31. 385.)

## Solubility of KCl in NaCl+Aq at 20°

G. per 100 g. H <sub>2</sub> O	
NaCl	KCl
0.0	34.52
6.5	29.37
13.0	4.71
19.5	0.42

(Nicol, Phil. Mag. 1891, 31. 369.)

## Solubility of KCl+NaCl at t°.

t°	G per 100 g. H <sub>2</sub> O	
	KCl	NaCl
25	15.8	14.5
"	29.0	31.3
80	30.0	25.2
"	26.4	34.0

(Soeh, J. phys. Ch. 1898, 2. 46.)

## Solubility of KCl+NaCl at ?°

G salts in 100 g. H <sub>2</sub> O		
NaCl	KCl	Solid phase
9.89	28.34	KCl
18.35	22.75	"
29.88	16.28	KCl+NaCl
31.57	10.91	NaCl
33.17	5.65	"

(Uyeda, Mem. Col. Sc. Kyoto, 1910, 2. 245.)

100 g. H<sub>2</sub>O sat. with NaCl dissolve 0.216 gram-equivalent KCl at 25°

100 g. H<sub>2</sub>O sat. with K<sub>2</sub>SO<sub>4</sub> dissolve 0.466 gram-equivalent KCl at 25°. (Euler, Z. phys. Ch. 1904, 49. 315.)

Solubility in NaCl+Aq at 20°, 30°, 40° and 91°. Tables given in the original show that each salt diminishes the solubility of the other. (Leather, Chem. Soc. 1915, 108. (2) 13.)

Solubility of KCl+NaCl in HCl+Aq at 25°.

% HCl	% NaCl	% KCl
0	19.95	10.90
8 61	10.65	7 58
17 16	3.56	3 80
20.65	2.03	2.86
32 78	0 18	1 27

(Hucks, J. Am. Chem. Soc. 1915, 37. 846.)

See also under NaCl.

KCl+SrCl<sub>2</sub>.

100 pts H<sub>2</sub>O dissolve 11.2 pts KCl and 48.6 pts SrCl<sub>2</sub> at 14.5°. (v Hauer.)

If SrCl<sub>2</sub>+Aq sat. at 14.5 is sat. with KCl at same temp., 100 pts. H<sub>2</sub>O dissolve:

KCl	33.2	11 2	...
SrCl <sub>2</sub> . . .	..	48 6	50 7
		59 8	

(Mulder, Schenk. Verhandel. 1864.)

KCl+(NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>.

Sat solution of KCl+(NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> at b.pt when cooled to 14° has different composition from sat. solution of (NH<sub>4</sub>)Cl and K<sub>2</sub>SO<sub>4</sub>, and its composition is changed by warming it with either KCl or (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>. (Rüdorff)

KCl+K<sub>2</sub>SO<sub>4</sub>.

100 pts. H<sub>2</sub>O contain the following amounts salt at 18.75°: (1) sat. with KCl alone; (2) sat. first with KCl then with K<sub>2</sub>SO<sub>4</sub>; (3) sat. with K<sub>2</sub>SO<sub>4</sub> and KCl together; (4) sat. first with K<sub>2</sub>SO<sub>4</sub> then with KCl; (5) sat. with K<sub>2</sub>SO<sub>4</sub> alone.

	1	2	3	4	5
KCl . . .	34.5	32 96	33.12	33 12	..
K <sub>2</sub> SO <sub>4</sub> . . .		1.79	1 75	1.83	10.8

(Karsten.)

100 pts. H<sub>2</sub>O sat. with both K<sub>2</sub>SO<sub>4</sub> and KCl contain the following amounts.

	At 14.8°		
KCl . . .	33.5	28.2	..
K <sub>2</sub> SO <sub>4</sub> . . .	.	2 0	10.3

	At 15.8°		
KCl . . .	33.6	27.9	..
K <sub>2</sub> SO <sub>4</sub> . . .	.	2.3	10.4

	At 16.1°		
KCl . . .	33.6	27.1	..
K <sub>2</sub> SO <sub>4</sub> . . .	.	3.3	10.4

(Kopp, A. 34. 264.)

Sat. K<sub>2</sub>SO<sub>4</sub>+Aq dissolves KCl only with pptn. of K<sub>2</sub>SO<sub>4</sub>, but sat. KCl+Aq dissolves some K<sub>2</sub>SO<sub>4</sub> without any separation. (Karsten.)

Solubility of KCl+K<sub>2</sub>SO<sub>4</sub>: 100 pts. H<sub>2</sub>O dissolve at t°.

t°	Pts. KCl	Pts. K <sub>2</sub> SO <sub>4</sub>	t°	Pts. KCl	Pts. K <sub>2</sub> SO <sub>4</sub>
10	30 9	1.32	60	43 8	1 94
20	33.4	1.43	70	46.5	2 06
30	36.1	1 57	80	49.2	2 21
40	38.7	1.68	90	52 0	2 38
50	41.3	1.82	100	54 5	2.53

(Precht and Wittgen.)

100 g. H<sub>2</sub>O dissolve 34.76 g. KCl+2.93 g. K<sub>2</sub>SO<sub>4</sub> at 25°. (Van't Hoff and Meyerhoffer, Z. phys. Ch. 1898, 27. 75.)

Sol in 20% KC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>+Aq (Stromeyer.) Quickly attacked by liquid NO<sub>2</sub> in the presence of traces of moisture, with evolution of Cl<sub>2</sub>. (Frankland, Chem. Soc. 1901, 79. 1361.)

Sl. sol in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J 1898, 20. 829)

Easily sol. in liquid HF (Franklin, Z. anorg. 1905, 46. 2.)

100 g. hydrazine dissolves 8.5 pts. KCl at 12.5-13°. (de Bruyn, R. t. c. 1899, 18. 297.)

100 g. anhyd. hydroxylamine dissolves 12.3 g. KCl at 17-18°. (de Bruyn, Z. phys. Ch. 1892, 10. 782.)

100 pts. alcohol of 0.900 sp. gr. dissolve 4.62 pts; 0.872, 1.60 pts; 0.834, 0.38 pt.; 0.817, 0.00 pt KCl (Karwan.)

Sol in 48 pts boiling alcohol (Wenzel) Insol in absolute alcohol containing LiCl (Mitscherlich)

At 15°, 100 pts alcohol of p percentage by volume (S=sp. gr.) dissolve pts. KCl as follows:

p	10	20	30	40
S	0.984	0.972	0.958	0.940
KCl	19 8	14 7	10 7	7 7

p	50	60	80
S	0.918	0.896	0.848
KCl	5.0	2 8	0.45

(Schiff, A. 118. 365)

100 pts. of a mixture of 40% alcohol with 60% H<sub>2</sub>O dissolve 9.2 pts. KCl at 15° (Schiff)

Insol. in absolute alcohol or in 96% alcohol at 15° or below. At 20°, 100 pts. of the latter dissolve 0.04 pt.; at 25°, 0.06 pt., at 30°, 0.20 pt KCl. Dilute alcohol dissolves less KCl than the contained H<sub>2</sub>O would dissolve by itself

Solubility in dil. alcohol. D = sp. gr. of alcohol; S = solubility in 100 pts. alcohol at t°.

D = 0.8004		D = 0.9848		D = 0.9793		D = 0.9726

	60	37.97	56.91	5.12
	70	29.22	68.18	2.60
	80	19.82	79.43	0.76

Since there is but one liquid phase here,  
these figures represent the solubility of KCl in  
acetone+Aq at 30° and 40°.

(Snell, J. phys. Chem. 1898, 2. 484.)

The addition of KCl to mixtures of acetone  
and H<sub>2</sub>O will cause a division into  
two layers. The following table gives  
the temp at which sat solutions of KCl  
in acetone+Aq of varying concentra-  
tions separate into two layers and also  
the compositions of the sat solutions of  
KCl in acetone+Aq

% acetone	Temp of division	100 g of solution contain		
		G H <sub>2</sub> O	G acetone	G KCl
26	46.5°			
30	40.0	59.36	25.44	15.20
40	34.2	53.21	35.47	11.32
50	32.6	45.97	45.97	8.06
60	33.3	37.86	56.80	5.34
70	35.5	29.09	68.25	2.66
75	39.0			
80	45.6	19.80	79.20	1.00

(Snell)

The following table gives the compositions of the solutions of KCl in acetone+Aq at the points at which the solution just divides into two layers. Temp = 40°.

100 g. of the solution contain		
G. H <sub>2</sub> O	G. acetone	G. KCl
56.08	28.63	14.08
53.05	35.67	11.29
50.34	39.82	9.83
47.60	43.83	8.58
44.35	48.36	7.29
42.08	50.75	6.57
38.53	56.26	5.21
36.59	58.84	4.57
32.37	64.18	3.45
30.62	66.43	2.95
28.12	69.45	2.44

(Snell.)

The addition of KCl to aqueous acetone causes the separation of the liquid into two layers. The following table gives the composition of these layers at 40°

Upper layer contains per 100 g. of solution		
G. H <sub>2</sub> O	G. acetone	G. KCl
55.20	31.82	12.90
54.27	36.69	12.03
53.27	35.44	11.20
51.69	37.76	10.55
51.23	48.50	10.27
50.34	39.88	9.77
49.08	41.67	9.20
48.02	43.18	8.79
47.02	43.73	8.64
46.40	45.34	8.17
45.65	46.52	7.83
45.64	46.57	7.79
58.99	25.24	15.77

Lower layer contains per 100 g. of solution

G. H <sub>2</sub> O	G. acetone	G. KCl
28.14	69.42	2.44
29.46	67.83	2.72
30.96	65.97	3.07
31.83	64.83	3.33
32.64	63.79	3.56
34.07	62.01	3.92
35.27	60.49	4.24
37.44	57.67	4.89
38.00	56.96	5.04
38.68	56.17	5.25
39.98	54.36	5.66
40.41	53.78	5.81
23.66	74.91	1.43

(Snell.)

Solubility in acetone+Aq at 20°.

A = cem. acetone in 100 cem. acetone+Aq.  
KCl = millimols KCl in 100 cem. of the solution.

A	KCl

54.23	238.5	1.2189
83.84	149.0	1.2590
100	110.6	1.2860

(Herz and Knoch, Z. anorg. 1905, 45. 267.)

Insol. in CS<sub>2</sub>. (Bayer; Arcetowski, Z. anorg. 1894, 6. 257.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790), ethyl acetate. (Naumann, B. 1910, 43. 314.)

Solubility of KCl in organic compounds +Aq at 25°.

Compound	G. comp. per 1 H <sub>2</sub> O	G. KCl per 100 g. sat. solution
Water		26.89
Acetaldehyde	11.01	27.05
Paraldehyde	11.07	26.42
Glycerol	13.01	25.58
Glycol	15.51	26.43
"	62.05	25.26
Mannitol	45.53	24.86
"	130.59	24.46

(Armstrong and Eyre, Proc. Roy. Soc. 1913, A, 88. 234.)

## Solubility in pyridine+Aq at 10°.

Solvent		100 g of the solution contain g. KCl
H <sub>2</sub> O	Pyridine	
100	0	23.79
90	10	19.76
80	20	16.37
70	30	13.19
60	40	10.05
50	50	6.34
40	60	3.335
30	70	1.245
20	80	0.24
10	90	0.039
0	100	.

(Schroeder, J. pr. 1908, (2) 77. 268.)

Insol in anhydrous pyridine and in 97% pyridine+Aq.

Very al sol. in 95% pyridine+Aq.

Sl. sol in 93% pyridine+Aq. (Kahlenberg, J. Am Chem. Soc 1908, 30. 1107)

100 com. of a sat. solution of KCl in furfural at 25° contain 0.085 pts. by wt. KCl. (Walden, Z. phys. Ch. 1906, 55. 713.)

100 g. H<sub>2</sub>O dissolve 246.5 g. sugar+44.8 g. KCl at 31.25°, 100 g sat solution contain 62.28 g. sugar+11.33 g. KCl. (Köhler, Z. Ver. Zuckeind, 1897, 47. 447.)

## Solubility in glucose+Aq at 25°

Concentration of glucose in 0 mol per 1000 g H <sub>2</sub> O	Solubility in 1000 g H <sub>2</sub> O	Molecular solubility
0.25	362.70	4.86
0.50	366.10	4.91
1.0	369.85	4.96
3.0	376.25	5.04
	402.25	5.39

(Armstrong and Eyre, Proc. Roy. Soc. 1910, 84. 127)

Potassium manganic chloride, K<sub>2</sub>MnCl<sub>4</sub>.

Sol. in H<sub>2</sub>O; less sol. in NH<sub>4</sub>Cl+Aq, unstable. (Neuman, M 1894, 15. 492.)

Potassium rhodium chloride.

See Chlororhodite, potassium.

Potassium ruthenium sesquichloride.

See Chlororuthenite, potassium.

Potassium ruthenium tetrachloride.

See Chlororuthenate, potassium.

Potassium tellurium chloride.

See Chlorotellurate, potassium.

Potassium thallic chloride, 3KCl, TiCl<sub>3</sub>+2H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. Not decomp. by boiling H<sub>2</sub>O. (Rammelsberg.)

Potassium thorium chloride, KCl, 2ThCl<sub>4</sub>+18H<sub>2</sub>O.

Deliquescent; sol. in H<sub>2</sub>O and alcohol. (Berzelius.)

Potassium tin (stannous) chloride (Potassium chlorostannite), KCl, SnCl<sub>2</sub>+H<sub>2</sub>O.

Decomp by H<sub>2</sub>O; sol in hot HCl or KCl+Aq. (Remsen and Richardson, Am Ch. J. 14. 90.)

2KCl, SnCl<sub>2</sub>+H<sub>2</sub>O. Partially decomp. by dissolving in H<sub>2</sub>O. (Rammelsberg, Pogg. 94. 507.)

+2H<sub>2</sub>O. Very sol. in hot, and but slightly in cold HCl+Aq or KCl+Aq. (Remsen and Richardson)

4KCl, SnCl<sub>2</sub>+3H<sub>2</sub>O (Poggiale, C. R. 20. 1182)

Does not exist. (Remsen and Richardson.)

Potassium tin (stannic) chloride, 2KCl, SnCl<sub>4</sub>.

See Chlorostannate, potassium.

Potassium tungsten chloride, K<sub>2</sub>(OH)WCl<sub>5</sub>

Decomp. by moisture Insol in organic solvents. (Olsson, B. 1913, 46. 581.)

K<sub>2</sub>W<sub>2</sub>Cl<sub>7</sub>. Sol. in H<sub>2</sub>O. Nearly insol in most organic solvents. (Olsson.)

Potassium uranium chloride, UCl<sub>4</sub>, 2KCl.

Very hygroscopic, sol in H<sub>2</sub>O with decomp.; sol in acetic acid Decomp. by alcohol. Nearly insol in ether (Aloy, Bull. Soc. 1899, (3) 21. 264)

Potassium uranyl chloride, K<sub>2</sub>(UO<sub>2</sub>)Cl<sub>4</sub>.

Very sol. in H<sub>2</sub>O. Moderately sol in dil alcohol. (Aloy, Dissert. 1901.)

+2H<sub>2</sub>O. Very sol. in H<sub>2</sub>O and alcohol. (Arfvedson.)

Sol. in H<sub>2</sub>O, with decomp. and separation of KCl, unless H<sub>2</sub>O is acidulated with HCl. (Pelgrot, A ch (3) 5. 37)

Solubility in H<sub>2</sub>O at t°.

t°	100 pts. of the solution contain			Solid phase
	Pts. UO <sub>2</sub>	Pts. Cl	Pts. K	
0.8	38.57	13.59	3.86	UO <sub>2</sub> Cl <sub>2</sub> , 2KCl, 2H <sub>2</sub> O +KCl
14.9	33.71	13.51	...	"
17.5	37.36	14.50	5.27	"
25.0	35.01	15.26	...	"
41.5	35.27	15.92	7.39	"
50.0	34.18	16.56	.	"
60.0	34.19	17.25	9.14	UO <sub>2</sub> Cl <sub>2</sub> , 2KCl, 2H <sub>2</sub> O
71.5	33.55	17.44	9.28	"
78.5	35.26	18.24	9.95	"

(Rimbach, B. 1904, 37. 463)

Potassium uranyl chloride is decomp. by  $H_2O$  at temp. below  $60^\circ$ . Above  $60^\circ$ , it is sol. in  $H_2O$  without decomp.

Potassium vanadium chloride,  $VK_2Cl_5 \cdot H_2O$ .

Difficultly sol. in  $H_2O$  and alcohol. (Stahler, B. 1904, 37. 4412.)

Potassium yttrium chloride.

Sol. in  $H_2O$  with evolution of heat

Potassium zinc chloride,  $2KCl, ZnCl_2$ .

Very deliquescent. Sol. in 1 pt. cold, and in all proportions of hot  $H_2O$ . (Pierre, A. ch. (3) 16. 248.)

$\cdot H_2O$ . Not very deliquescent. Can be recryst. (Ephraim, Z. anorg. 1908, 59. 58.)

$KCl, ZnCl_2 \cdot 2H_2O$ . Not deliquescent. Cannot be recryst. without decomp. (Ephraim.)

Potassium chloriodide,  $KCl_2I$ .

Very unstable. (Wells and Wheeler, Sill. Am. J. 143. 475.)

$KCl_2I$ . Sol. in  $H_2O$  with decomp. Ether dissolves out  $ICl_2$ . (Filliol, J. Pharm. 25. 438.)

Potassium fluoride,  $KF$  or  $K_2F_6$ .

Very deliquescent. Very sol. in  $H_2O$ . Sl. sol. in  $HF + Aq$ . Easily sol. in conc.  $KC_2H_3O_2 + Aq$ . Insol. in alcohol. (Berzelius.) Sol. in dilute alcohol. (Stromeyer, A. 100. 83.)

Sp. gr. of aqueous solution of  $KF$  at  $18^\circ$  containing—

5	10	20	30	40%	$KF$ .
1.041	1.084	1.117	1.272	1.378	

(Kohlrausch, W. Ann. 1879. 1.)

Solubility in  $HF + Aq$  at  $21^\circ$ .

(G. per 100 g.  $H_2O$ .)

$HF$	$KF$	$HF$	$KF$
0.0	96.3	13.95	31.4
1.21	72.0	15.98	33.4
1.61	61.0	17.69	35.6
3.73	40.4	20.68	38.4
4.03	32.5	28.60	46.9
6.05	30.4	41.98	61.8
9.25	29.9	53.71	74.8
11.36	29.6	74.20	105.0
12.50	30.5	119.20	169.5

(Ditte, C. R. 1896, 123. 1282.)

Easily sol. in liquid  $HF$ . (Franklin, Z. anorg. 1905, 46. 2.)

Very sl. sol. in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 829.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 8790.)

$KF$  will "salt out" acetone from aqueous solution. The table shows the composition of the solutions at the points at which inhomogeneous solutions of  $KF$ , acetone and  $H_2O$  just become homogeneous at  $20^\circ$

100 g. of the solution contain:

G $KF$	G $H_2O$	G acetone	G $KF$	G $H_2O$	G acetone
5.75	58.91	35.34	0.61	31.95	67.44

At the first quadruple point where the hydrate, acetone, water and vapor are in equilibrium the upper layer contains 98% acetone, while the lower layer contains in 100 g, 46.3 g  $KF$ . A sat. solution of  $KF$  will thus dehydrate acetone to the extent of 98%.

(Frankforter and Cohen, J. Am. Chem. Soc. 1914, 36. 1115.)

Similar data are given for  $KF$  in ethyl and propyl alcohol by Frankforter and Frary. (J. phys. Ch. 1913, 17. 402.)

$+2H_2O$ . Very deliquescent. (Guntz, A. ch. (6) 3. 20.)

Sat. aq. solution at  $18^\circ$  contains 45.3%  $KF$ . (de Forcrand, C. R. 1911, 152. 1210.)

Sp. gr. of solution sat at  $18^\circ = 1.502$ , and contains 48%  $KF$ . (Mylus and Funk, B. 1897, 30. 1718.)

$+4H_2O$ . Not deliquescent. (de Forcrand, C. R. 1911, 152. 1075.)

Sat. aq. solution at  $18^\circ$  contains 35.96%  $KF$ . (de Forcrand, C. R. 1911, 152. 1210.)

Potassium hydrogen fluoride,  $KF$ ,  $HF = KHF_2$ .

Easily sol. in  $H_2O$ . Sl. sol. in  $H_2O$  containing  $HF$ . Easily sol. in conc.  $KC_2H_3O_2 + Aq$ . Sol. in dil. alcohol, but insol. in absolute alcohol.

$KF, 2HF$ . Deliquescent. Decomp. by  $H_2O$  with absorption of heat. (Moissan, C. R. 106. 547.)

$KF, 3HF$ . As above (Moissan.)

Potassium manganic fluoride.

See Fluomanganate, potassium.

Potassium scandium fluoride,  $K_3ScF_6$ .

Sol in  $H_2O$  Decomp. by acids. (R. J. Meyer, Z. anorg. 1914, 86. 275.)

Potassium silicon fluoride.

See Fluosilicate, potassium.

Potassium tantalum fluoride.

See Fluotantalate, potassium.

Potassium tellurium fluoride,  $KF$ ,  $TeF_4$ .

Decomp. by  $H_2O$ . (Högbom, Bull. Soc. (2) 35. 60)

Potassium thallic fluoride,  $2TlF_3$ ,  $KF$ .

Decomp. by moisture Insol. in  $HF$ . (Gewecke, A. 1909, 366. 226)

Potassium thorium fluoride,  $2KF$ ,  $ThF_4 + 4H_2O$ .

Nearly insol. in  $H_2O$  Sol. in  $HF + Ag$   
 $KF$ ,  $ThF_4$  Precipitate (Chydenius)

Potassium tin (stannous) fluoride,  $2KF$ ,  $3SnF_2 + H_2O$

Sol. in  $H_2O$ . (Wagner, B. 19. 896.)

Potassium tin (stannic) fluoride.

See Fluostannate, potassium.

Potassium titanium tetrafluoride.

See Fluotitanate, potassium.

Potassium titanium sesquifluoride,  $4KF$ ,  $Ti_2F_6$ .

Precipitate. Very sl. sol. in  $H_2O$ . Sol. in dil. acids (Pocini, C. R. 97. 1064.)

See also Fluosesquitanate, potassium.

Potassium titanyl fluoride.

See Fluoxypertitanate, potassium.

Potassium tungstyl fluoride.

See Fluoxytungstate, potassium.

Potassium uranium fluoride,  $KF$ ,  $UF_4$ .

Insol. in  $H_2O$  and dil. acids Difficulty sol. in conc.  $HCl + Ag$  Sol. in conc.  $H_2SO_4$ . (Bolton, J. B. 1866. 212.)

Potassium uranyl fluoride.

See Fluoxuyranate, potassium.

Potassium vanadium sesquifluoride.

See Fluovanadate, potassium.

Potassium vanadium tetrafluoride (?).

Easily sol. in  $H_2O$  Insol. in alcohol. (Berzelius.)

Potassium zinc fluoride,  $KF$ ,  $ZnF_2$

Sol. in  $H_2O$ . (R. Wagner.)

$2KF$ ,  $ZnF_2$  Sol. in  $H_2O$ . (Berzelius.)

Potassium zirconium fluoride.

See Fluozirconate, potassium.

Potassium fluoride hydrogen peroxide,  $KF$ ,  $H_2O_2$

Not deliquescent. Very sol. in  $H_2O$ . Is not decomp. at  $70^\circ$  and only partially so at  $110^\circ$  (Tanatar, Z. anorg. 1901, 28. 255)

Potassium fluoride vanadic acid.

See Fluoxivanadate, potassium.

Potassium hydride,  $KH$ .

Decomp. by  $H_2O$  Insol. in oil of turpentine, benzene, ether and  $CS_2$ . (Moissan, C. R. 1902, 134. 18)

Potassium hydrosulphide,  $KSH$ .

Very deliquescent and sol. in  $H_2O$  with gradual decomp. Crystallizes with  $\frac{1}{2}H_2O$ . Sol. in alcohol.

Potassium hydroxide,  $KOH$ .

Very deliquescent, and sol. in  $H_2O$  with evolution of much heat. 100 pts.  $KOH$ , exposed over  $H_2O$  at  $16-20^\circ$  takes up 460 pts.  $H_2O$  in 56 days. (Mulder.)

1 pt.  $KOH$  dissolves in 0.6 pt. cold  $H_2O$  (Lowitz), in 0.47 pt. cold  $H_2O$  (Bineau, C. R. 41. 559), in 1 pt.  $H_2O$  (Abt.)

Solubility of  $KOH$  in  $H_2O$  at  $t^\circ$

$t^\circ$	G. $KOH$ per 100 g		Solid phase

(Pickering, Chem. Soc. 1893, 63. 908.)

100 pts.  $KOH$  are sol. in 93.4 pts.  $H_2O$  at  $15^\circ$  or 100 pts.  $H_2O$  dissolve 107 pts.  $KOH$  at  $15^\circ$ . Sp. gr. = 1.5365 at  $15^\circ$ .

All higher values found in solubility tables are incorrect. (Ferehland, Z. anorg. 1902, 30, 133.)

100 g. sat. aq. solution at 15° contain 50.48 g. KOH. (de Forcrand, C. R. 1909, 149, 719.)

Sat. KOH+Aq boils at 157.7° (Griffiths); 340°. (Gerlach).

B.-pt. of KOH+Aq containing pts. KOH to 100 pts. H<sub>2</sub>O.

(Pickering, Phil. Mag. 1894, (5) 37. 375.)

Sp. gr. of N solution at 18°/4° = 1.0481 (Loomis, W. Ann. 1896, 60. 550.)

## Sp. gr. of KOH+Aq.

% KOH	6.87	12.10
Sp. gr. 20°/20°	1.0601	1.1025

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 272.)

KOH+Aq containing equal pts of KOH and H<sub>2</sub>O freezes at -54°. (Guyton-Morveau, Gm.-K. 2, 1. 18.)

KOH is completely miscible with NaOH and with RbOH in both the liquid and the solid states. (Hevesy, Z. phys. Ch. 1910, 73. 667.)

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 828.)

Abundantly sol. in strong alcohol or wood-spirit.

See below under KOH+2H<sub>2</sub>O.

Readily sol in glycerine.

Sol. in not less than 25 pts. of ether. (Boullay.) Sol in much more than 25 pts of ether. (Connell.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Insol in acetone. Readily sol. in fusel oil.

Insol in acetone and in methylal. (Eidmann, C. C. 1899, II 1014.)

Sol. in aqueous solution of mannite. (Favre, A. ch. (3) 11. 76.)

The composition of the hydrates formed by KOH at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by KOH and of the conductivity and sp. gr. of KOH+Aq. (Jones, Am. Ch. J. 1905, 34. 337.)

+H<sub>2</sub>O.

+2H<sub>2</sub>O. Very deliquescent, and sol in H<sub>2</sub>O with absorption of much heat.

100 g. sat. solution in H<sub>2</sub>O at 30° contain 55.75 g. anhyd. KOH. (de Waal, Dissert. 1910.)

Solubility of KOH+2H<sub>2</sub>O in alcohol+Aq at 30°.

% KOH	% alcohol	% H <sub>2</sub> O
55.75	0	44.25
54.81	0.43	44.76
..	..	..*
31.0	57.50	11.50
28.99	65.07	5.94
27.67	69.92	2.41
27.20	73.01	negative
26.25	81.98	"

\*Separates into two layers

(de Waal, Dissert, 1910)

+4H<sub>2</sub>O.

Potassium hydrogen titanium diimide,  
Ti(NH)NK.

Decomp. by H<sub>2</sub>O and alcohol Insol. in all ord. indifferent organic solvents. (Ruff, B. 1912, 45. 1371.)

## Potassium iodide, KI.

Deliquescent only in very moist air Very sol. in H<sub>2</sub>O with absorption of heat

The temp. of H<sub>2</sub>O can be lowered 24° by dissolving KI (Baup.)

140 pts KI dissolved in 100 pts. H<sub>2</sub>O at 10.8° lower the temp. 22.5°. (Rudorff, Pogg 136. 276.)

100 pts. H<sub>2</sub>O dissolve 120.6 pts. KI at 0° (Kremers); 127.8 pts. KI at 0° (Mulder), 127.9 pts KI at 0°. (Gerardin.)

By boiling, 100 pts. H<sub>2</sub>O dissolve 221 pts. KI at 120° (Baup.); 222.2 pts. KI at 120° (Gay-Lussac); 222.6 pts. KI at 118.4° (Mulder), 223.58 pts. KI at 117° (Legrand); 223.6 pts. KI at 117°. (Gerardin.)

Between those temps the solubility increases proportional to temp.

Sol in 0.735 pt H<sub>2</sub>O at 12°, in 0.709 pt H<sub>2</sub>O at 10°; in 0.7 pt H<sub>2</sub>O at 18°, in 0.43 pt H<sub>2</sub>O at 120° (Graham-Otto)

100 pts KI + liq sat. at 15-16° contain 58.07 pts. KI. (v. Hauser, J. pr 98, 137.)

100 pts H<sub>2</sub>O at 12.5° dissolve 130 pts; at 10°, 141 pts KI (Baup.)

100 pts H<sub>2</sub>O at 18° dissolve 143 pts. KI, at 120°, 271 pts (Gay-Lussac)

Sol. in 0.79 pt H<sub>2</sub>O at 0°, in 0.70 pt H<sub>2</sub>O at 20°; in 0.63 pt H<sub>2</sub>O at 48°, in 0.57 pt H<sub>2</sub>O at 90°, in 0.53 pt H<sub>2</sub>O at 80°, in 0.51 pt. H<sub>2</sub>O at 100°. (Kremers, Pogg 97. 15)

Sol. in 0.71 pt. H<sub>2</sub>O at 15°. (Eder, Dingl. 221. 89.)

Solubility of KI in 100 pts. H<sub>2</sub>O at t°.

t°	Pts. KI	t°	Pts KI	t°	Pts KI

			25.71	67.91	"

(Foote and Chalker, Am. Ch. J. 1908, 39. 504)

See also under Iodine.

KI+Aq sat. at 14.5° containing 139.8 pts KI to 100 pts. H<sub>2</sub>O dissolves 1.0 pt. K<sub>2</sub>SO<sub>4</sub> with separation of 2.2 pts. KI, so that solution contains 137.6 pts KI and 1.0 pt. K<sub>2</sub>SO<sub>4</sub> to 100 pts H<sub>2</sub>O. (Mulder, Rotterdam, 1864.)

100 pts. H<sub>2</sub>O dissolve 86.3 pts. KI and 2.1 pts. Na<sub>2</sub>SO<sub>4</sub> at 14.5°. (Mulder, J. B. 1866. 67.)

Sol. in AsCl<sub>3</sub>, SnCl<sub>4</sub> and POCl<sub>3</sub>. (Walden, Z. anorg. 1906, 25. 214.)

Attacked by dry liquid NO<sub>2</sub> with liberation of I<sub>2</sub>. (Frankland, Chem. Soc 1901, 79. 1361)

Sol. in liquid SO<sub>2</sub> (Walden, B. 1899, 32. 2804.)

Solubility in SO<sub>2</sub> decreases with rise of temp (Walden, Z. phys. Ch. 1903, 42. 456.) Insol. in liquid CO<sub>2</sub>. (Buchner, Z. phys. Ch. 1906, 54. 674.)

Very easily sol. in liquid NH<sub>3</sub> (Franklin, Am. Ch. J. 1898, 20. 829.)

Hydrazine dissolves 135.7 pts. KI at 12.5-13°. (de Bruyn, R. t. c. 1899, 18. 297.)

100 pts alcohol of 0.85 sp. gr. dissolve 18 pts KI at 12.5° 100 pts. absolute alcohol dissolve 2.5 pts. KI at 13.5° Much more sol in hot alcohol (Baup.)

100 pts. alcohol of D sp gr. at 0° dissolve at 18°—

D 0.9904 0.9851 0.9726 0.9665 0.9528

130.5 119.4 100.1 89.9 76.9 pts. KI,

D 0.9390 0.9088 0.8464 0.8322

66.4 48.2 11.4 6.2 pts KI.

That is, aqueous alcohol dissolves approximately the same amount of KI that the water present in the alcohol would dissolve, and it is therefore probable that KI is insol. in strictly absolute alcohol (Gerardin.)

Solubility in 100 pts alcohol of 0.9496 sp. gr at

8° 13° 25° 46° 55° 62°  
67.4 69.2 75.1 84.7 87.5 90.2 pts. KI.

(Gerardin, A. ch. (4) 5. 155)

Sol in 68.3 pts. absolute alcohol (Eder, Dingl. 221. 89); in 370 pts ether (sp. gr. 0.729), (Eder, l. c.), in 120 pts alcohol-ether (1:1), (Eder, l. c.)

Sol in 10-12 pts. 90% alcohol, and 40 pts. absolute alcohol. (Hager, Comm 1883.)

100 pts. absolute methyl alcohol dissolve 16.5 pts. at 20.5°; 100 pts. absolute ethyl alcohol dissolve 1.75 pts at 20.5° (de Bruyn, Z. phys. Ch. 10. 783.)

Solubility of KI in methyl alcohol+Aq at 25°

P = % by wt. of alcohol in alcohol+Aq.

S = Sp. gr. of alcohol+Aq sat with KI.

L = millimols KI in 100 ccm of the solution.

P	S 25°/4°	L
0	1.7213	620
10.6	1.634	555

(Walden, Z. phys. Ch. 1906, 55. 715.)

Insol. in CS<sub>2</sub>. (Aretowski, Z. anorg. 1894, 6. 257.)

Sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Difficultly sol. in methyl acetate (Naumann, B. 1909, 42. 3789.)

Sol. in ethyl acetate. (Casasucca, C. R. 30. 821.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in ethylamine. (Shinn, J. phys. Chem. 1907, 11. 538.)

100 pts. acetone dissolve 2.930 pts. KI at 25°. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

Sol in acetone, insol. in methylal. (Edmann, C. C. 1899. II. 1014.)

3.08 pts. sol. in 100 pts. acetone at -2.5°.

2.38 " " " 100 " " " +22°.

1.21 " " " 100 " " " 56°.

0.26 " " " 100 " pyridine " 10°.

0.11 " " " 100 " " " 119°.

(Lazocynski, B. 1894, 27. 2287.)

Freely sol. in glycerine. Insol. in acetic acid (Berthelot.)

Sol. in 3 pts glycerine, insol. in olive oil. (Cap and Garot.)

100 g. glycerol dissolve 40 g. KI at 15.5°.

(Ossendowski, Pharm. J. 1907, 79. 575.)

Potassium triiodide, KI<sub>3</sub>.

Very deliquescent; very sol. in H<sub>2</sub>O and alcohol (Johnson, Chem. Soc. 1877, 1. 249.)

Solution of I in KI contains this salt (see KI). Decomp. by heat or shaking with CS<sub>2</sub>, ether, chloroform. Sol. in alcohol, from which CS<sub>2</sub> does not remove I. (Jørgensen, J. pr. (2) 2. 247.)

## Potassium periodide.

Solubility determinations show that the compds. KI<sub>2</sub> and KI<sub>3</sub> are the only periodides of potassium which form solids at 25°.

See under KI+I. (Foote and Chalicer, Am. Ch. J. 1908, 39. 566.)

KI<sub>7</sub>. See above.

Potassium mercuric iodide ammonia, K<sub>2</sub>HgI<sub>4</sub>, 2NH<sub>3</sub>.

(Peters, Z. anorg. 1912, 77. 188.)

## Potassium silver iodide, KI, AgI.

Sol. in KI+Aq. Sol. in hot alcohol. (Boullay, A. ch. 34. 377.)

2KI, AgI, Sol. in KI+Aq. Decomp. by H<sub>2</sub>O (Boullay.)

Hygroscopic (Hellwig, Z. anorg. 1900, 25. 180.)

3KI, AgI. Decomp. by H<sub>2</sub>O (Ditte, C. R. 93. 415.)

KI, 2AgI Sol. in methylethylketone. (Marsh, Chem. Soc. 1913, 103. 783.)

Potassium silver polyiodide, AgK<sub>2</sub>I<sub>3</sub>, 3KI+5H<sub>2</sub>O

Very deliquescent. (Johnson, Chem. Soc. 33. 183.)

## Potassium tellurium iodide.

See Iodotellurate, potassium.

Potassium thallic iodide, KI, TI<sub>3</sub>.

Decomp. by H<sub>2</sub>O. Can be crystallized from alcohol (Willm.)

3KI, 2TI<sub>3</sub>+3H<sub>2</sub>O. Partially decomp. by H<sub>2</sub>O (Rammelsberg.)

Potassium (tin) stannous iodide, KI, SnI<sub>2</sub>+1½H<sub>2</sub>O

When treated with a small quantity of H<sub>2</sub>O, KI dissolves out; but when more H<sub>2</sub>O is added, the substance is completely dissolved. More sol. in warm than cold alcohol. (Boullay.)

**Potassium zinc iodide,  $KI, ZnI_2$ .**

Very deliquescent (Rammelsberg, Pogg. 43. 665)

$K_2ZnI_4 + 2H_2O$  Hygroscopic. (Ephraim, Z. anorg. 1910, 67. 382.)

**Potassium iodide sulphur dioxide,  $KI, SO_2$ .**

(Péchar, C. R. 1900, 130. 1188.)

$KI, 4SO_2$ . (Walden, Z. phys. Ch. 1903, 42. 439.)

$KI, 14SO_2$  (Walden.)

**Potassium nitride,  $K_3N$ .**

Decomp. violently by  $H_2O$ . (H. Davy)

**Potassium ruthenium dihydronitrosobromide,  $Ru_3H_2NOBr_3, 2HBr, 3KBr$ .**

Ppt (Brizard, A. ch. 1900, (7) 21. 362)

**Potassium ruthenium nitrosobromide,  $Ru_3H_2NOCl_3, 3KCl, 2HCl$ .**

Sl sol in  $H_2O$ . (Brizard, C. R. 1899, 129. 216.)

**Potassium suboxide.**

Decomposes  $H_2O$ .

Does not exist. (Lupton, Chem Soc 1876, 2. 565.)

**Potassium oxide,  $K_2O$** 

Very sol in  $H_2O$  with much heat.

See Potassium hydroxide.

**Potassium dioxide,  $K_2O_2$ .**

Deliquescent. Sol in  $H_2O$ .

Forms compound  $K_2O_2, 2H_2O_2$ . (Schöne, A. 193. 241)

**Potassium peroxide,  $K_2O_4$ .**

Deliquescent Very sol. with decomp. in  $H_2O$ .

**Potassium silicon oxyfluoride,  $SiF_2(OK)_2$  and  $SiO(F)OK$ .**

(Schiff and Bechi, A. Suppl. 4. 33)

**Potassium tantalum oxyfluoride,  $K_4Ta_4O_4F_{14}$ .**

Insol. in boiling water. Easily sol. in  $HF + Aq$  (Marignac, A. ch. (4) 9. 208.)

**Potassium phosphide,  $KP_3$ .**

Decomp. by  $H_2O$ . (Joannis, C. C. 1894, II. 834.)

$KP_3$ . Easily decomp by  $H_2O$ . (Hugot, C. R. 1895, 121. 208.)

**Potassium hydrogen phosphide,  $PH_3K$ .**

Decomp. by  $H_2O$ . (Joannis, C. R. 1894, 119. 558)

**Potassium phosphoselenide,  $KSeP = K_2Se, P_2Se_3$ .**

Sol in cold  $H_2O$  with rapid decomp. Sol. in alcohol with slight decomp. (Hahn, J. pr. 93. 430.)

**Potassium phosphotriselenide,  $2K_2Se, P_2Se_3$ .**

Deliquescent. Decomp. violently with  $H_2O$ . Sol in alcohol or ether, or in a mixture of the two, with slight decomp., but decomp. gradually on the air. (Hahn, J. pr. 93. 436)

**Potassium phosphopentaseelenide,  $K_4P_2Se_7 = 2K_2Se, P_2Se_5$ .**

Deliquescent, immediately decomp. by  $H_2O$ , alcohol, or ether (Hahn)

**Potassium phosphosulphide,  $4K_2S_2, P_2S_5$ .**

Deliquescent Sol. in  $H_2O$  with decomp.

**Potassium selenide,  $K_2Se$ .**

Sol in  $H_2O$  with subsequent decomp. on the air.

Insol. in liquid  $NH_3$ ; sol. in air free  $H_2O$  to a colorless liquid. (Hugot, C. R. 1899, 129. 299)

+  $2H_2O$ . Sol. in  $H_2O$  with decomp. (Clever, Z. anorg. 1895, 10. 143)

+ 9, 14, or 19  $H_2O$ . (Fabre, C. R. 102. 613.)

**Potassium tetraseelenide,  $K_2Se_4$ .**

Easily sol in  $H_2O$ . Decomp on standing.

Sol. in liquid  $NH_3$ . (Hugot, C. R. 1899, 129. 299)

**Potassium monosulphide,  $K_2S$ .**

Deliquescent. Sol in  $H_2O$  and alcohol.  $H_2O$  solution decomp on air.

Sol in 10 pts. glycerine. (Cap and Garot, J. Pharm. (3) 26. 81.)

Moderately sol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol in acetone and in methylal. (Eidmann, C. C. 1899, II 1014)

Insol in methyl acetate. (Naumann, B. 1909, 42. 3790.)

+  $5H_2O$ . (Schöne, Pogg. 131. 380.)

All potassium sulphides are sol in glycerine; insol in ether and ethyl acetate.

**Potassium disulphide,  $K_2S_2$ .**

Sol. in  $H_2O$  and alcohol, with gradual decomp.

**Potassium trisulphide,  $K_2S_3$ .**

Sol. in  $H_2O$  and alcohol, with gradual decomp on the air.

**Potassium tetrasulphide,  $K_2S_4$ .**

Sol. in  $H_2O$  and alcohol.

+  $2H_2O$ . Sol in  $H_2O$ . Sl sol. in alcohol.

+  $8H_2O$ . Sol in  $H_2O$ . Alcohol takes out water (Schöne.)

**Potassium pentasulphide,  $K_2S_5$ .**

Sol. in  $H_2O$  and alcohol.

**Potassium palladium sulphide.**

See Sulphopalladate, potassium.

**Potassium platinum sulphide.**

See Sulphoplatinate, potassium.

**Potassium silver sulphide,**

Decomp. by  $\text{H}_2\text{O}$ . (Ditte, C R. 1895, 120 91)

**Potassium rhodium sulphide,  $3\text{K}_2\text{S}, \text{Rh}_2\text{S}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Leiché)

**Potassium tellurium sulphide.**

See Sulphotellurate, potassium.

**Potassium thallium sulphide,  $\text{K}_2\text{S}, \text{Tl}_2\text{S}_3$ .**

Not decomposed by  $\text{H}_2\text{O}$ , or hot  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . Decomp. by  $\text{HCl}$  or moderately conc.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Hot  $\text{HNO}_3 + \text{Aq}$  decomp. with separation of S. (Schneider, J. pr. 110. 168.)

**Potassium tin (stannic) sulphide.**

See Sulphostannate, potassium.

**Potassium zinc sulphide,  $\text{K}_2\text{S}, 3\text{ZnS}$** 

Not attacked by  $\text{H}_2\text{O}$ , but easily decomp. by the most dil. acids (Schneider, J. pr. (2) 8. 29.)

**Potassium telluride,  $\text{K}_2\text{Te}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Demarçay, Bull. Soc. (2) 40. 99.)

Sol. in  $\text{H}_2\text{O}$  and liquid  $\text{NH}_3$  (Hugot, C R. 1899, 129. 388.)

**Praseocobaltic chloride,**

Easily sol. in  $\text{H}_2\text{O}$

Dil.  $\text{HCl} + \text{Aq}$  dissolves traces; conc.  $\text{HCl} + \text{Aq}$  dissolves more. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  with decomp. Sol. in conc.  $\text{H}_2\text{SO}_4$  without decomp. Sl sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Rosc.)

— mercuric chloride,  $\text{Co}(\text{NH}_3)_4\text{Cl}_3, \text{HgCl}_2$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ ; insol. in  $\text{HgCl}_2 + \text{Aq}$ . (Vortmann, B. 15. 1892.)

— chloride dichromate,  
 $[\text{CoCl}_2(\text{NH}_3)_4]_2\text{Cr}_2\text{O}_7 + \text{H}_2\text{O}.$

Scarcely sol. in cold, easily sol. in warm  $\text{H}_2\text{O}$ . (Vortmann, B. 15. 1897.)

**Praseocobaltic chloride nitrate,**

Much less sol. in  $\text{H}_2\text{O}$  than the chloride. Precipitated from aqueous solution by dil.  $\text{HNO}_3 + \text{Aq}$ . (Vortmann, B. 16. 1896.)

**Praseodymicotungstic acid.****Ammonium praseodymicotungstate,**

Very sl sol. in  $\text{H}_2\text{O}$ . Decomp. by acids and alkalis. (E. F. Smith, J. Am. Chem. Soc. 1904, 26. 1478.)

**Barium praseodymicotungstate,  $4\text{BaO}, \text{Pr}_2\text{O}_3, 16\text{WO}_3 + 7\text{H}_2\text{O}$ .**

Ppt. Insol in  $\text{H}_2\text{O}$

$6\text{BaO}, \text{Pr}_2\text{O}_3, 16\text{WO}_3 + 9\text{H}_2\text{O}$  Ppt (E. F. Smith)

**Silver praseodymicotungstate,  $4\text{Ag}_2\text{O}, \text{Pr}_2\text{O}_3, 16\text{WO}_3 + 8\text{H}_2\text{O}$ .**

Insol in  $\text{H}_2\text{O}$  (E F Smith)

**Praseodymium, Pr****Praseodymium bromide,  $\text{PrBr}_3 + 6\text{H}_2\text{O}$** 

Very sol. in  $\text{H}_2\text{O}$ , sol. in  $\text{HBr}$ . (von Schule, Z. anorg. 1898, 18. 353.)

**Praseodymium carbide,  $\text{PrC}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ ; insol. in conc.  $\text{HNO}_3$ , decomp. by dil.  $\text{HNO}_3$  (Moissan, C R. 1900, 131. 597)

**Praseodymium chloride,  $\text{PrCl}_3$ .**

Very sol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{PCl}_3$  or  $\text{SnCl}_4$ . Sol. in alcohol. Insol. in ether and most organic solvents. (Matignon, C. R. 1902, 134. 427.)

2.14 g.  $\text{PrCl}_3$  dissolve in 100 g. pyridine at  $15^\circ$ . (Matignon, Int. Cong. App. Chem. 1909, 2. 53.)

+  $\text{H}_2\text{O}$ .

+  $3\text{H}_2\text{O}$ .

+  $7\text{H}_2\text{O}$ . 100 g.  $\text{H}_2\text{O}$  dissolve 334.2 g.  $\text{PrCl}_3 + 7\text{H}_2\text{O}$  or 103.9 g. of the anhydrous salt at  $13^\circ$ . The aqueous solution sat. at  $14^\circ$  has a sp. gr.  $16^\circ/18^\circ = 1.687$ . At  $100^\circ$ , the solubility in  $\text{H}_2\text{O}$  is unlimited. (Matignon, A. ch. 1906, (8) 8. 388.)

Sol. in conc.  $\text{HCl}$ . (von Schule, Z. anorg. 1898, 18. 352.)

100 pts. of a solution of the salt in  $\text{HCl} + \text{Aq}$  contain at  $13^\circ$  41.05 pts. of anhydrous salt and 7.25 pts.  $\text{HCl}$ . Sp. gr. of this solution at  $16^\circ = 1.574$ . (Matignon, A. ch. 1906, (8) 8. 388.)

**Praseodymium hydride,  $\text{PrH}_3$  (?)**

(Muthmann, A. 1904, 331. 59.)

**Praseodymium hydroxide.**

Sol. in citric acid (Baskerville, J. Am. Chem. Soc. 1904, 26. 49.)

**Praseodymium nitride,  $\text{PrN}$ .**

Decomp. in moist air with evolution of  $\text{NH}_3$ . (Muthmann, A. 1904, 331. 59.)

**Praseodymium oxide,  $\text{Pr}_2\text{O}_3$ .**

Easily sol. in  $\text{H}_2\text{O}$  (v. Welsbach, M. 8. 477)

Decomp. by heating in the air. (Scheele, Z. anorg. 1898, 17. 322)

**Praseodymium monoperoxide,  $\text{Pr}(\text{OH})_2\text{H}_2\text{O}$**   
(Melikoff, Chem. Soc. 1902, 82. (2) 140.)

**Praseodymium superoxide,  $\text{Pr}(\text{OH})_2(\text{OOH})$ .**  
Ppt. (Melikoff, C. C. 1902, I. 172)

**Praseodymium bisulphoxide,  $\text{Pr}(\text{OOH})_2$ .**  
Ppt. (Melikoff)

**Praseodymium peroxide,  $\text{Pr}_2\text{O}_7$ .**  
Sol. in acids with evolution of O (v. Welsbach)

**Praseodymium oxysulphide,  $\text{Pr}_2\text{SO}_2$**   
(Biltz, Z. anorg. 1911, 71. 436)

**Praseodymium disulphide,  $\text{PrS}_2$**   
Decomp. by heat (Biltz, Z. anorg. 1911, 71. 437.)

**Purpureocobaltic salts.**

For other purpureocobaltic salts, see—

Chloropurpureocobaltic salts.

Bromopurpureocobaltic salts.

Nitratopurpureocobaltic salts.

Sulphatopurpureocobaltic salts.

**Purpureocobaltic cobaltcyanide,**  
 $\text{Co}(\text{NH}_3)_5\text{Co}(\text{CN})_4 + 1\frac{1}{2}\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ .

— ferricyanide,  $\text{Co}(\text{NH}_3)_5\text{Fe}(\text{CN})_6$ .  
Insol. in cold  $\text{H}_2\text{O}$ . Probably belongs to roseo series.

— mercuric hydroxychloride,  
 $\text{CoN}_3\text{H}_{11}(\text{HgCl})_2(\text{HgOH})\text{Cl}_3$ .  
Ppt. (Vortmann and Morgulis, B. 22. 2045.)  
 $\text{CoN}_3\text{H}_{11}(\text{HgOH})\text{Cl}_3$ . Ppt. (V. and M.)

— mercuriodide, basic,  
 $\text{CoN}_3\text{H}_{11}(\text{HgI}_2)_2(\text{HgOH})\text{I}_3$ .  
Ppt. Sl. sol. in acids. Sol. in KI + Aq. (Vortmann and Borsbach, B. 23. 2804.)

— molybdate,  $\text{Co}_2\text{O}_3(\text{NH}_3)_{10}$ ,  $7\text{MoO}_3 + 3\text{H}_2\text{O}$  (?).  
Insol. in  $\text{H}_2\text{O}$  or dil.  $\text{HCl}$ ,  $\text{H}_2\text{O}_2 + \text{Aq.}$  (Carnot, C. R. 109. 109)

— sulphate.  
See Sulphatopurpureocobaltic salts.

— tungstate,  $\text{Co}(\text{NH}_3)_5\text{O}(\text{WO}_3)$ .  
Scarcely sol. in cold or hot  $\text{H}_2\text{O}$ . (Gibbs.)  
 $\text{Co}_2\text{O}_3(\text{NH}_3)_{10}$ ,  $10\text{WO}_3 + 9\text{H}_2\text{O}$  (?). Insol.

in  $\text{H}_2\text{O}$ , or dil.  $\text{HCl}$ ,  $\text{H}_2\text{O}_2 + \text{Aq.}$  or  $\text{NH}_4\text{OH} + \text{Aq.}$  (Carnot, C. R. 109. 147)

**Purpureocobaltic vanadate,  $\text{Co}_2\text{O}_3(\text{NH}_3)_{10}$ ,  $5\text{V}_2\text{O}_5 + 9\text{H}_2\text{O}$  (?).**

Ppt. Insol. in  $\text{H}_2\text{O}$  (Carnot, C. R. 109. 147)

**Purpureocobaltic octamine salts.**

See Octamine cobaltic purpureo salts.

**Pyrosulphuric acid,  $\text{H}_2\text{S}_2\text{O}_7$** 

See Disulphuric acid.

**Radium, Ra****Radium A.**

More sol. than Radium B and C in all solvents; sol. even in organic solvents, especially  $\text{CS}_2$  (Ramstedt, Le Radium, 1913, 10. 159)

**Radium B.**

More quickly sol. than Radium C in  $\text{H}_2\text{O}$  and acids, less quickly sol. in alkaline solutions, very sl. sol. in organic solvents (Ramstedt, Le Radium, 1913, 10. 159)

**Radium C.**

Sol. in common acids, less so in alkaline solutions and in  $\text{H}_2\text{O}$ , only very sl. sol. in organic solvents (Ramstedt, Le Radium, 1913, 10. 159; Chem. Soc. 1913, 104. (2) 659.)

**Radium bromide.**

Less sol. in  $\text{H}_2\text{O}$  than corresponding Ba comp. (Curie, Dissert. 1903.)

**Radium chloride.**

Less sol. in  $\text{H}_2\text{O}$  than corresponding Ba comp. (Curie, Dissert. 1903.)

**Radium emanation.**

Coefficient of absorption for  $\text{H}_2\text{O} = \text{C}$  245 at  $3^\circ$ ; 0.23 at  $20^\circ$ ; 0.17 at  $40^\circ$ ; 0.135 at  $60^\circ$ ; 0.12 at  $70^\circ$ ; 0.12 at  $80^\circ$ . (Hofmann, Phys. Zeit. 1905, 6. 339)

**Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$** 

Coefficient of solubility = conc. of the emanation in the liquid: conc. of the emanation in the gas

$t^\circ$	Coefficient of solubility
0	0.506
4.3	0.424
5.7	0.398
10.0	0.340
14.0	0.303
17.6	0.280
20.0	0.245
26.8	0.206
31.6	0.193
39.1	0.160

Coefficient of solubility in sea-water of sp. gr. at  $14^\circ = 1.022$  is 0.255.

(Boyle, Phil. Mag. 1911, (6) 22. 850.)

Solubility in  $H_2O$ .

Temp.	0.5°	17.5°	35°	41°	51°
Sol.	0.520	0.283	0.183	0.161	0.138
Temp.	60°	74°	79°	82°	91°
Sol.	0.127	0.112	0.111	0.111	0.108

(Kofler, M. 1913, 34. 389.)

Coefficient of solubility of radium emanation at 14° in various solvents.

Ethyl alcohol	7.34
Amyl alcohol	9.31
Toluene	13.7
Sea water	0.255
Mercury	0

(Boyle, Phil. Mag. 1911, (6) 22. 851.)

Coefficient of solubility emanation of radium in various solvents at t°.

Solvents	t = 18°	t = 0°	t = -18°
Ethyl acetate	7.35	9.41	13.6
Acetone	6.30	7.99	10.8
Absolute alcohol	6.17	8.28	11.4
Aniline	3.80	4.43	.
Benzene	12.82	16.54 at 3°	.
Chloroform	15.08	20.5	28.5
Cyclohexane	18.04 at 80°		
Water	0.285	0.52	
Ether	15.08	20.09	29.1
Glycerine	0.21		
Hexane	16.56	23.4	35.2
Paraffine oil	9.2	12.6	
Carbon-bisulphide	23.14	33.4	50.3
Toluene	13.24	18.4	27
Xylene	12.75		

(Ramstedt, Le Radium, 1911, 8. 255.)

## Solubility in various oils, etc., at t°.

Rape oil		Poppy seed oil		Oil of turpentine	
t°	Solubility	t°	Solubility	t°	Solubility
-3	51.2	-5	50.5	-21	42.5
10	35.3	16	30.2	0	23.1
20	26.1	40	19.1	18	16.6
100	6.2	65	12.4	50	7.5
200	3.3	90	8.4	6.5	4.08

Solubility in 10% dammar resin in oil of turpentine = 16.7 at 18°.

Solubility in 5% colophony in amyl alcohol = 11.2 at 20°.

Solubility in amyl alcohol = 10.6 at 18°.

Solubility in 20% colophony in amyl alcohol = 11.1 at 20°.

(Curie, Thesis. 1910.)

Coefficient of absorption for petroleum =

22.70 at -21°.

12.87 at +3°.

9.55 at 20°.

8.13 at 40°.

7.01 at 60°.

(Hofmann, Phys. Zeit. 1905, 6. 339.)

Rhodicyanhydric acid,  $H_2Rh(CN)_4$ .

Not known in the free state

Potassium rhodicyanide,  $K_2Rh(CN)_4$ .

Sol in  $H_2O$ . Easily decomp. by acids.

Very sol. in  $H_2O$ . (Leidie, C. R. 1900, 130. 89.)

## Rhodium, Rh.

Insol. in all acids, including aqua regia.

Rhodium "sponge" is sol. in  $HNO_3 + Aq$ , and somewhat in  $HCl + Aq$  when exposed to air

## Rhodium ammonia compounds.

See—

Bromopurpureorhodium comps.,  $BrRh(NH_3)_5X_2$ .

Chloropurpureorhodium comps.,  $ClRh(NH_3)_5X_2$ .

Iodopurpureorhodium comps.,  $IRh(NH_3)_5X_2$ .

$IRh(NH_3)_5X_2$ .

Luteorhodium comps.,  $Rh(NH_3)_5X_2$ .

Nitratopurpureorhodium comps.,  $(NO_3)Rh(NH_3)_5X_2$ .

Roseorhodium comps.,  $Rh(NH_3)_5(OH)_2X_2$ .

Xanthorhodium comps.,  $(NO_2)Rh(NH_3)_5X_2$ .

Rhodium tribromide,  $RhBr_3 \cdot 2H_2O$ .

Very sol. in  $H_2O$  (Goloubkine, Chem. Soc. 1911, 100. (2) 45.)

## Rhodium rubidium bromide.

See Bromorhodite, rubidium.

## Rhodium sodium bromide.

See Bromorhodite, sodium.

Rhodium dichloride,  $RhCl_2$  (?).

Insol. in  $H_2O$ ,  $HCl$ , or  $HNO_3 + Aq$ . Not attacked by boiling  $KOH$  or  $K_2CO_3 + Aq$ . (Fellenberg.)

Decomp. by boiling  $KOH + Aq$ . (Bezelius.) Does not exist. (Leidie, C. R. 106. 1076.)

Rhodium trichloride,  $RhCl_3$ .

Insol. in acids, even aqua regia. When boiled for a long time with  $KOH + Aq$ , it becomes sol. in  $HCl + Aq$ .

Insol. in  $H_2O$  and acids; sol. in alkalis +  $Aq$ . (Leidie, C. R. 1899, 129. 1251.)

+  $4H_2O$ . Very sl. deliquescent. Easily sol. in  $H_2O$ ,  $HCl + Aq$ , or alcohol. Insol. in ether. Decomp. by  $H_2SO_4$  only when boiling (Claus, J. pr. 80. 282.)

No definite amount of crystal  $H_2O$ . (Leidié A. ch. (6) 17. 271.)

**Rhodium chloride with MCl.**

See Chlororhodite, M.

**Rhodium dihydroxide,  $RhO_2 \cdot 2H_2O$ , or Rhodium rhodate,  $Rh_2O_3$ ,  $RhO_3 \cdot 6H_2O$**

Sol in  $HCl + Aq$

**Rhodium sesquihydroxide,  $Rh_2O_3 \cdot H_2O$ .**

Only sl. sol. in conc.  $HCl + Aq$ . (Claus.)  
 $+ 2H_2O$ . Easily sol in  $HCl$ ,  $H_2SO_4$ ,  $H_2SO_5$ ,  $HNO_3$ , or  $HSCN + Aq$ , also when moist, in  $H_2C_2O_4 + Aq$ . Sol. in conc.  $KOH + Aq$ ; very sl sol in  $H_2BO_3$ ,  $H_3PO_4$ ,  $H_2C_2H_4O_4$ , and  $H_2CN + Aq$ . Sol in acid alkali oxalates  $+ Aq$ . (Leidié, C R. 107. 234)

**Rhodium trioxide,  $RhI_3$ .**

Ppt (Goloubkine, Chem Soc. 1911, 100. (2) 45)

**Rhodium monoxide,  $RhO$ .**

Not attacked by acids. (Deville and Debray, A. ch (3) 61. 83.)

**Rhodium sesquioxide,  $Rh_2O_3$ .**

Insol in  $H_2O$ , boiling  $KOH + Aq$ , or any acid, even aqua regia (Claus.)

**Rhodium dioxide,  $RhO_2$ .**

Insol. in all acids or alkalis

**Rhodium trioxide,  $RhO_3$ .**

"Rhodic acid." Known only in solution of "Potassium rhodate," which is very easily decomp. (Claus)

**Rhodium oxybromide,  $Rh(OH)_2Br + 2H_2O$ .**

Sol. in  $H_2O$ . (Goloubkine, Chem Soc. 1911, 100. (2) 45)

**Rhodium monosulphide,  $RhS$ .**

Insol in aqua regia.

**Rhodium sesquisulphide,  $Rh_2S_3$ .**

Sol. in alkali sulphides  $+ Aq$ . (Debray, C. R. 97. 1332)

Insol in alkali sulphides  $+ Aq$ . Not attacked by  $HNO_3$ , aqua regia, or  $Br_2 + Aq$ . (Leidié, Bull. Soc. (2) 60. 664)

**Rhodium sodium sulphide,  $3Na_2S$ ,  $Rh_2S_3$ .**

Decomp. by  $H_2O$ . (Leidié)

**Rhodium sesquisulphydride,  $Rh_2S_3 \cdot H_2S$ .**

Easily sol. in aqua regia or  $Br_2 + Aq$ . Insol. in alkali sulphides  $+ Aq$  or acids. (Leidié, Bull. Soc. (2) 60. 664.)

**Rhodochromium bromide,**

$HO Cr_2(NH_4)_{10} Br_4 + H_2O$

Rather difficultly sol in  $H_2O$ . Decomp. by boiling or standing. Sol in  $NH_4OH + Aq$  or  $NaOH + Aq$ . Insol. in dil  $HBr + Aq$ ,  $KBr + Aq$ , or alcohol. (Jørgensen, J. pr (2) 26. 321.)

— bromide, basic,  $HO Cr_2(NH_4)_{10}(OH) Br_4 + H_2O$ .

Sl sol in  $H_2O$ . Sol in  $NH_4OH$  or  $NaOH + Aq$ . Insol in alcohol (Jørgensen.)

— bromoplatinate,  $HO Cr_2(NH_4)_{10} Br_4 Pt Br_2$ ,  $HO Cr_2(NH_4)_{10} Br_4 (Pt Br_2)_2 + 4H_2O$ .

Ppt (Jørgensen.)

— chloraurate,  $HO Cr_2(NH_4)_{10} Cl_2 (Au Cl_4)_2 + 2H_2O$ .

Difficultly sol. but not insol in  $H_2O$  (Jørgensen)

— chloride,  $HO Cr_2(NH_4)_{10} Cl_2 + H_2O$ .

Sol. in about 40 pts of cold  $H_2O$ . Insol in cold dil  $HCl + Aq$ ,  $NH_4Cl + Aq$ , or alcohol. Sol. in  $NH_4OH + Aq$ . (Jørgensen, J. pr. (2) 26. 321)

— chloriodide, basic,  $HO Cr_2(NH_4)_{10}(OH) Cl_2 I_2$ .

Sl sol in cold  $H_2O$ ; insol. in alcohol. (Jørgensen.)

— chloroplatinate,  $HO Cr_2(NH_4)_{10} Cl_2 Pt Cl_6$ ,  $HO Cr_2(NH_4)_{10} Cl_2 (Pt Cl_6)_2 + 4H_2O$ .

Precipitate. (Jørgensen.)

— dithionate,  $[HO Cr_2(NH_4)_{10}]_2 (S_2O_6)_2 + 2H_2O$

Nearly insol. in  $H_2O$ .

— dithionate, basic,  $HO Cr_2(NH_4)_{10}(OH) (S_2O_6)_2 + H_2O$ .

Insol. in  $H_2O$ , cold  $NH_4OH + Aq$ , or  $NaOH + Aq$

— iodide,  $HO Cr_2(NH_4)_{10} I_2 + H_2O$ .

Very difficultly sol in  $H_2O$ . Insol. in very dil  $HI + Aq$  or alcohol. Sl. sol. in  $NH_4OH$  or  $KOH + Aq$  (Jørgensen.)

— nitrate,  $HO Cr_2(NH_4)_{10} (NO_3)_2$ .

Rather difficultly sol. in  $H_2O$ , from which it is precipitated by a few drops of  $HNO_3 + Aq$ . Sol. in hot dil  $NH_4OH + Aq$ .

— nitrate chloroplatinate,  $HO Cr_2(NH_4)_{10} (NO_3)_2 (Pt Cl_6)_2 + 4H_2O$ .

Precipitate (Jørgensen.)

**Rhodochromium sulphate,**

$[HO Cr_2(NH_4)_{10}]_2 (SO_4)_4 + 2H_2O$

Very sl sol in cold  $H_2O$ . Easily sol. in cold dil.  $H_2SO_4 + Aq$ .

Almost insol. in a mixture of 3 vols.  $\text{H}_2\text{O}$ , 1 vol. alcohol, and  $\frac{1}{2}$  vol dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Jørgensen)

### Rhodonitrous acid.

**Ammonium rhodonitrite**,  $(\text{NH}_4)_2\text{Rh}_2(\text{NO}_2)_{12}$

Newly insol in cold, sl sol in hot  $\text{H}_2\text{O}$  Insol in conc.  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  Insol. in alcohol (Leidlé, C. R. 111. 108)

**Barium rhodonitrite**,  $\text{Ba}_2\text{Rh}_2(\text{NO}_2)_{12}$

Sl sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . (Lamy)

+  $12\text{H}_2\text{O}$ . Sol in 50 pts  $\text{H}_2\text{O}$  at  $16^\circ$ , and 6.5 pts. at  $100^\circ$  (Leidlé, C. R. 111. 108)

**Potassium rhodonitrite**,  $\text{K}_2\text{Rh}_2(\text{NO}_2)_{12}$

Nearly insol. in cold, very sl sol. in boiling  $\text{H}_2\text{O}$ . Completely insol in  $\text{KNO}_3 + \text{Aq}$ , and in  $\text{KCl} + \text{Aq}$  (30%  $\text{KCl}$ ), or  $\text{KC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (50%  $\text{KC}_2\text{H}_3\text{O}_2$ ) Insol. in alcohol (Leidlé, C. R. 111. 106.)

**Sodium rhodonitrite**,  $\text{Na}_2\text{Rh}_2(\text{NO}_2)_{12}$

Sol in  $2\frac{1}{2}$  pts.  $\text{H}_2\text{O}$  at  $17^\circ$ , and 1 pt at  $100^\circ$  Insol. in alcohol Decomp by  $\text{HCl} + \text{Aq}$ . (Leidlé, C. R. 111. 107)

### Rhodosochromium bromide.

Sol in  $\text{H}_2\text{O}$ ; insol in dil  $\text{HBr} + \text{Aq}$  (1). (Jørgensen, J. pr. (2) 45. 260)

— **chloraurate**,  $\text{Cr}_2(\text{NH}_3)_4(\text{HO})_2\text{Cl}_3$ ,  $2\text{AuCl}_3 + 2\text{H}_2\text{O}$

Not insol. in cold  $\text{H}_2\text{O}$ . (Jørgensen.)

— **chloride**,  $\text{Cr}_2(\text{NH}_3)_4(\text{HO})_2\text{Cl}_3 + 2\text{H}_2\text{O}$ .

Sol in 10.6 pts  $\text{H}_2\text{O}$  at  $18^\circ$ ; decomp by boiling. Pptd. by  $\frac{1}{2}$  to 1 vol. dil  $\text{HCl} + \text{Aq}$ . Sol in cold dil  $\text{NH}_4\text{OH} + \text{Aq}$ . (Jørgensen, J. pr. (2) 45. 260)

— **chloroplatinate**,  $2\text{Cr}_2(\text{NH}_3)_4(\text{OH})_2\text{Cl}_3$ ,  $3\text{PtCl}_4 + 6\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  (Jørgensen.)

$\text{Cr}_2(\text{NH}_3)_4(\text{OH})_2\text{Cl}_3$ ,  $2\text{PtCl}_4 + 2\text{H}_2\text{O}$  Insol. in 95% alcohol. (Jørgensen.)

— **chromate**,  $(\text{Cr}_2(\text{NH}_3)_4(\text{OH})_2(\text{CrO}_4)_2 + 7\text{H}_2\text{O}$ . (Jørgensen.)

Very sl sol. in  $\text{H}_2\text{O}$ . (Jørgensen.)

— **iodide**,  $\text{Cr}_2(\text{NH}_3)_4(\text{OH})_2\text{I}_3 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  Insol. in dil.  $\text{HI} + \text{Aq}$ . (Jørgensen.)

— **nitrate**,  $\text{Cr}_2(\text{NH}_3)_4(\text{OH})_2(\text{NO}_3)_2 + \text{H}_2\text{O}$ .

Much less sol. in cold  $\text{H}_2\text{O}$  than the chloride Insol in dil.  $\text{HNO}_3 + \text{Aq}$ . (Jørgensen.)

— **oxalate**,  $(\text{Cr}_2(\text{NH}_3)_4(\text{OH})_2)_2(\text{C}_2\text{O}_4)(\text{HC}_2\text{O}_4)_4 + 2\text{H}_2\text{O}$

Sol. in cold  $\text{H}_2\text{O}$ , but not very easily. (Jørgensen.)

### Rhodosochromium sulphate,

$[\text{Cr}_2(\text{NH}_3)_4(\text{OH})_2]_2(\text{SO}_4)_3 + 5\text{H}_2\text{O}$

Very sl sol in cold  $\text{H}_2\text{O}$ . Easily sol in dil.  $\text{NH}_4\text{Cl} + \text{Aq}$  (Jørgensen)

$[\text{Cr}_2(\text{NH}_3)_4(\text{OH})_2]\text{SO}_4 \cdot \text{HSO}_4 + 1\frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  into  $\text{H}_2\text{SO}_4$  and above compound (Jørgensen.)

— **persulphide**,  $[\text{Cr}_2(\text{NH}_3)_4(\text{OH})_2]_2\text{S}_{11} + 4\text{H}_2\text{O}$

Ppt Insol in  $\text{H}_2\text{O}$  (Jørgensen)

### Rhodosulphuric acid.

**Potassium rhodosulphate**,  $\text{K}_2\text{Rh}_2(\text{SO}_4)_4$ .

Two modifications

(a) Slowly sol in cold, easily in hot  $\text{H}_2\text{O}$

(b) Insol in  $\text{H}_2\text{O}$ .

Does not exist. (Leidlé, C. R. 107. 234.)

### Sodium rhodosulphate.

Insol in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{HNO}_3$ , or aqua regia. (Claus)

Does not exist (Leidlé)

$\text{Na}_2\text{Rh}_2(\text{SO}_4)_4$  Insol in  $\text{H}_2\text{O}$ . (Seubert and Kobbé, B. 23. 2560)

### Rhodosulphurous acid.

**Potassium rhodosulphite**,  $\text{K}_2\text{Rh}_2(\text{SO}_3)_2 + 6\text{H}_2\text{O}$

Nearly insol. in  $\text{H}_2\text{O}$ . Slowly sol. in acids. Not decomp. by boiling  $\text{KOH} + \text{Aq}$ . (Claus.)

### Sodium rhodosulphite,

$\text{Na}_2\text{Rh}_2(\text{SO}_3)_2 + 4\frac{1}{2}\text{H}_2\text{O} = 3\text{Na}_2\text{SO}_3$ ,  $2\text{RhSO}_3$

Insol in cold, very sl sol. in hot  $\text{H}_2\text{O}$ . Easily sol in  $\text{HNO}_3 + \text{Aq}$ . (Seubert and Kobbé, B. 23. 2558)

### Roseochromium bromide,

$\text{Cr}(\text{NH}_3)_5\text{Br}_2 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  Insol in  $\text{HBr} + \text{Aq}$ . (Christensen, J. pr. (2) 23. 26)

— **bromochromate**,  $\text{Cr}(\text{NH}_3)_5\text{Br}(\text{CrO}_4)$ .

Somewhat sol. in  $\text{H}_2\text{O}$ , but decomp. on standing. (Jørgensen, J. pr. (2) 25. 398.)

— **bromoplatinate**,  $\text{Cr}(\text{NH}_3)_5\text{Br}(\text{PtBr}_6) + 2\text{H}_2\text{O}$ .

Preprecipitate Difficultly sol. in  $\text{H}_2\text{O}$ . (Christensen, l. c.)

— **chloride**,  $\text{Cr}(\text{NH}_3)_5\text{Cl}_2 + \text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$  with subsequent decomp. Insol. in alcohol (Christensen, J. pr. (2) 23. 26)

— **mercuric chloride**,  $\text{Cr}(\text{NH}_3)_5\text{Cl}_2$ ,  $3\text{HgCl}_2 + 2\text{H}_2\text{O}$ .

Sl sol. in  $\text{H}_2\text{O}$ . Sol in dil.  $\text{HCl} + \text{Aq}$  with decomposition (Christensen, l. c.)

**Roseochromium dithionate, basic,**

Easily sol in very dil.  $\text{HCl} + \text{Aq.}$  (Jørgensen, J pr (2) 25. 398.)

— **iodide,  $\text{Cr}(\text{NH}_4)_2\text{I}_2$** 

Easily sol in  $\text{H}_2\text{O}$ ; decomp by boiling (Christensen, l. c.)

— **nitrate,  $\text{Cr}(\text{NH}_4)_2(\text{NO}_3)_2 + \text{H}_2\text{O}$** 

Rather easily sol in  $\text{H}_2\text{O}$ . (Christensen, l. c.)

$\text{Cr}(\text{NH}_4)_2(\text{NO}_3)_2(\text{OH})_2$ ,  $\text{HNO}_3$ . Decomp. by  $\text{H}_2\text{O}$  or alcohol (Jørgensen, J pr (2) 44. 63)

— **sulphate,  $[\text{Cr}(\text{NH}_4)_2]_2(\text{SO}_4)_2 + 5\text{H}_2\text{O}$** 

Easily sol in  $\text{H}_2\text{O}$ . Precipitated by alcohol (Christensen, l. c.)

— **sulphate bromoplatinate,**

Difficultly sol in  $\text{H}_2\text{O}$ . (Christensen, l. c.)

— **sulphate chloroplatinate,**

Difficultly sol in  $\text{H}_2\text{O}$ . (Christensen, l. c.)

**Roseocobaltic bromide,**

Sol in  $\text{H}_2\text{O}$ ; insol. in  $\text{HBr} + \text{Aq}$  (Jørgensen, J. pr. (2) 31. 49)

— **bromoplatinate,  $\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{Br}_2$** 

Somewhat sol in  $\text{H}_2\text{O}$  or dil. alcohol. Insol in strong alcohol. (Jørgensen.)

$2\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{Br}_2$ ,  $3\text{PtBr}_4 + 4\text{H}_2\text{O}$  Ppt (Jørgensen)

— **bromosulphate,**

Sol in  $\text{H}_2\text{O}$ . (Krok.)

— **bromosulphate bromaurate,**— **carbonate.**

Very sol in  $\text{H}_2\text{O}$ .

— **chloraurate,  $\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{Cl}_2$ ,  $\text{AuCl}_3$** 

Moderately sol. in cold  $\text{H}_2\text{O}$ .

— **chloride,  $\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{Cl}_2$** 

Sol. in 4.8 pts  $\text{H}_2\text{O}$  at  $10^\circ$ , but decomp. on heating.

100 pts.  $\text{H}_2\text{O}$  dissolve 16.12 pts at  $0^\circ$ , and 24.87 pts. at  $16^\circ$ . (Kurnakoff, J. russ Soc. 24. 269)

Sl. sol. in 1000 pts. fuming  $\text{HCl} + \text{Aq}$ , more easily in 20%  $\text{HCl} + \text{Aq}$  (Rose.)

**Roseocobaltic mercuric chloride,**

More easily sol in solvents than the anhydrous purpureo salt. (Carstanjen.)

$\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{Cl}_2$ ,  $\text{HgCl}_2$ . Sol. in  $\text{HCl} + \text{Aq}$  with decomp. into above salt. (Jørgensen.)

— **chloroplatinate,**

Decomp by  $\text{H}_2\text{O}$ . (Jørgensen)

$2\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{Cl}_2$ ,  $\text{PtCl}_4 + 2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ .

$2\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{Cl}_2$ ,  $3\text{PtCl}_4 + 6\text{H}_2\text{O}$ . Not difficultly sol. in warm  $\text{H}_2\text{O}$ . (Gibbs.)

$\text{Co}(\text{NH}_4)_2\text{Cl}_2$ ,  $\text{PtCl}_4 + \text{H}_2\text{O}$  (Gibbs.)

— **chlorosulphate,  $\text{Co}(\text{NH}_4)_2\text{Cl}(\text{SO}_4)$** 

Easily sol in  $\text{H}_2\text{O}$ .

— **chlorosulphate mercuric chloride,**

Sol. in bot  $\text{H}_2\text{O}$ , and can be recrystallized without decomp. (Krok)

— **dichromate,**

Can be recrystallized out of weak acetic acid

— **cobalticyanide,  $\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{Co}(\text{CN})_6$** 

Nearly absolutely insol. in cold  $\text{H}_2\text{O}$ . (Jørgensen.)

$+ \text{H}_2\text{O}$ . (Gibbs and Gentile.)

— **dithionate,  $\text{Co}(\text{NH}_4)_2(\text{S}_2\text{O}_6)(\text{OH})$** 

Decomp by  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 58. 296.)

$\text{Co}(\text{NH}_4)_2(\text{OH})_2(\text{S}_2\text{O}_6) + 2\text{H}_2\text{O}$ . Ppt. (Jørgensen.)

— **hydroxide,  $\text{Co}(\text{NH}_4)_2(\text{OH})_2$** 

Known only in aqueous solution.

— **mercuric hydroxychloride,**

Ppt Sol. in dil. acids. (Vortmann and Morgulis, B. 22. 2646.)

$\text{CoN}_4\text{H}_{12}(\text{HgOH})_2\text{Cl}_2(\text{OH})$ . Ppt Sol. in dil. acids. (Vortmann and Morgulis.)

— **iodide,  $\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{I}_2$** 

Less sol. in  $\text{H}_2\text{O}$  than bromide Insol. in  $\text{HI} + \text{Aq}$  (Jørgensen)

— **iodosulphate,  $\text{Co}(\text{NH}_4)_2(\text{OH})_2\text{I}(\text{SO}_4)$** 

Easily sol in  $\text{H}_2\text{O}$ . (Krok)

— **mercuriodide,  $[\text{CoN}_4\text{H}_{12}]_2(\text{HgI})_2\text{I}_2$** 

Ppt. (Vortmann and Borsbach, B. 23. 2805.)

$\text{CoN}_4\text{H}_{12}(\text{HgI})_2\text{I}_2$ . Ppt. (Vortmann and Borsbach)

$\text{CoN}_4\text{H}_{12}(\text{HgI})_2\text{I}_2(\text{OH})$  Ppt.

**Roseocobaltic nitrate,**  
 $\text{Co}(\text{NH}_3)_4(\text{OH}_2)(\text{NO}_3)_2$

Three modifications:

$\alpha$ . Sol. in 20 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Jørgensen)  
 $\beta$  Known only in solution. Insol in cold  $\text{HNO}_3$  + Aq. (Gibbs.)

$\gamma$ . Easily sol. in hot  $\text{H}_2\text{O}$  (Gibbs) (Purpureo salt?)

$\text{Co}(\text{NH}_3)_4(\text{OH}_2)(\text{NO}_3)_2$ ,  $\text{HNO}_3$  Decomp by  $\text{H}_2\text{O}$  or alcohol. (Jørgensen, J. pr. (2) 44. 83.)

— **nitrate chloroplatinate,**  
 $\text{Co}(\text{NH}_3)_4(\text{OH}_2)(\text{NO}_3)\text{Cl}_2$ ,  $\text{PtCl}_4 + \text{H}_2\text{O}$   
 Ppt. (Jørgensen.)

— **nitatosulphate,**  
 $\text{Co}(\text{NH}_3)_4(\text{OH}_2)(\text{NO}_3)(\text{SO}_4)$   
 Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ .

— **oxalate,**  $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)]_2(\text{C}_2\text{O}_4)_2 + 2\text{H}_2\text{O}$ .  
 Nearly insol in  $\text{H}_2\text{O}$ .  
 $[\text{Co}(\text{NH}_3)_4]_2(\text{C}_2\text{O}_4)_2$ ,  $4\text{H}_2\text{C}_2\text{O}_4$ .

— **oxalochloroplatinate,**  
 $[\text{Co}(\text{NH}_3)_4]_2(\text{C}_2\text{O}_4)\text{Cl}_2$ ,  $\text{PtCl}_4$ .  
 Sol. in hot  $\text{H}_2\text{O}$ .

— **oxalosulphate,**  $[\text{Co}(\text{NH}_3)_4]_2(\text{SO}_4)_2\text{C}_2\text{O}_4$ ,  
 $\text{H}_2\text{C}_2\text{O}_4 + 2\text{H}_2\text{O}$ .  
 Sol. in hot  $\text{H}_2\text{O}$ .  
 $[\text{Co}(\text{NH}_3)_4]_2(\text{SO}_4)_2(\text{C}_2\text{O}_4)(\text{OH})_2 + 6\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ .

— **orthophosphate,**  
 $\text{Co}(\text{NH}_3)_4(\text{OH}_2)(\text{PO}_4\text{H})(\text{OH}) + x\text{H}_2\text{O}$ .  
 Nearly insol. in  $\text{H}_2\text{O}$ .  
 $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)]_2(\text{PO}_4\text{H})_2 + 4\text{H}_2\text{O}$  Very sl. sol in cold  $\text{H}_2\text{O}$ ; easily in  $\text{H}_2\text{O}$  containing  $\text{HCl}$ . (Jørgensen.)

— **pyrophosphate,**  
 $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)]_4(\text{P}_2\text{O}_7)_2 + 12\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Jørgensen)  
 $\text{Co}(\text{NH}_3)_4(\text{OH}_2)(\text{P}_2\text{O}_7\text{Na}) + 12\text{H}_2\text{O}$  Nearly insol in cold, easily sol. in hot  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{OH}$ . (Jørgensen, J. pr. (2) 23. 252.)

— **sulphate,**  $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)]_2(\text{SO}_4)_2 + 3\text{H}_2\text{O}$ .  
 Three modifications:  
 $\alpha$  Sl. sol. in cold  $\text{H}_2\text{O}$ . Sol. in 58 pts. at  $27^\circ$  (Gibbs); 83.5 pts. at  $20.2^\circ$ , and 94.6 pts. at  $17.2^\circ$  (Jørgensen); more easily sol in hot  $\text{H}_2\text{O}$ , and still more easily in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
 $\beta$ . Sol. in 1–2 pts.  $\text{H}_2\text{O}$ . (Gibbs.)  
 $\gamma$ . Less sol. than lutesulphate. (Jørgensen.)  
 $+2\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Vortmann.)

**Roseocobaltic sulphate, acid,**  
 $[\text{Co}(\text{NH}_3)_4]_2(\text{SO}_4)_2 \cdot 2\text{H}_2\text{SO}_4 + 3\text{H}_2\text{O}$ .  
 (Fremy), or  $4[\text{Co}(\text{NH}_3)_4]_2(\text{SO}_4)_2 \cdot 9\text{H}_2\text{SO}_4 + 11\text{H}_2\text{O}$  (Jørgensen)  
 More easily sol. in  $\text{H}_2\text{O}$  than neutral sulphate, into which it is converted by recrystallization. Sol. in about 13 pts  $\text{H}_2\text{O}$ . (Jørgensen.)

— **cerium sulphate,**  
 $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)]_2(\text{SO}_4)_2$ ,  $\text{Ce}_2(\text{SO}_4)_3 + 2\frac{1}{2}\text{H}_2\text{O}$ .  
 Sl. sol. in cold, practically insol. in boiling  $\text{H}_2\text{O}$ . Sol. in acids (Gibbs, Am. Ch. J. 15. 560)  
 $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)]_2(\text{SO}_4)_2$ ,  $\text{Ce}(\text{SO}_4)_2 + 2\frac{1}{2}\text{H}_2\text{O}$  As above. (Gibbs.)

— **sulphate chloraurate.**  
 Three modifications:  
 $\alpha$ .  $\text{Co}(\text{NH}_3)_4(\text{OH}_2)(\text{SO}_4)\text{Cl}$ ,  $\text{AuCl}_3$  Ppt. (Jørgensen)  
 $\beta$   $\text{Co}(\text{NH}_3)_4(\text{SO}_4)$ ,  $\text{AuCl}_3 + 2\text{H}_2\text{O}$  Sl. sol. in cold  $\text{H}_2\text{O}$ . (Gibbs.)  
 $\gamma$ . As above. Can be recrystallized from hot  $\text{H}_2\text{O}$

— **sulphate chloroplatinate,**  
 $2\text{Co}(\text{NH}_3)_4(\text{OH}_2)(\text{SO}_4)\text{Cl}_2$ ,  $\text{PtCl}_4$ .  
 Three modifications, all difficultly sol. in hot or cold  $\text{H}_2\text{O}$ . (Jørgensen.)

— **sulphite,**  $[\text{Co}(\text{NH}_3)_4(\text{OH}_2)]_2(\text{SO}_3)_2 + \text{H}_2\text{O}$ .  
 Sl. sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . (Gibbs.)

— **cobaltic sulphite,**  
 $[\text{Co}(\text{NH}_3)_4]_2(\text{SO}_3)_2$ ,  $\text{Co}_2(\text{SO}_3)_3 + 9\text{H}_2\text{O}$ .  
 Insol in cold, decomp. by hot  $\text{H}_2\text{O}$ . (Künzel.)

**Roseocobaltic octamine compounds.**

See Roseotetramine cobaltic compounds.

**Roseoiridium compounds.**

See Iridoquoquepentamine compounds.

**Roseorhodium bromide,**

$\text{Rh}(\text{NH}_3)_4(\text{OH}_2)\text{Br}_2$   
 Sol. in cold  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 34. 394.)

**Roseorhodium cobalticyanide,**

$\text{Rh}(\text{NH}_3)_4(\text{OH}_2)\text{Co}(\text{CN})_3$   
 Scarcely sol. in  $\text{H}_2\text{O}$ .

— **iodosulphate,**  $\text{Rh}(\text{NH}_3)_4(\text{OH}_2)\text{I}(\text{SO}_4)$ .  
 Very sl. sol. in  $\text{H}_2\text{O}$ , easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Jørgensen.)

— **nitrate,**  $\text{Rh}(\text{NH}_3)_4(\text{OH}_2)(\text{NO}_3)_2$ .  
 Moderately sol. in cold  $\text{H}_2\text{O}$  (Jørgensen)  
 $\text{Rh}(\text{NH}_3)_4(\text{OH}_2)(\text{NO}_3)_2$ ,  $\text{HNO}_3$ . Decomp.

by  $H_2O$  or alcohol. (Jørgensen, J. pr. (2) 44. 63.)

**Roseorhodium nitrate chloroplatinate,**  
 $[Rh(NH_3)_4(OH_2)_2(NO_3)_2]PtCl_6 + 2H_2O$ .  
 Ppt (Jørgensen)

— **orthophosphate,**  
 $[Rh(NH_3)_4(OH_2)_2(HPO_4)_2] + 4H_2O$ .  
 Very sl sol in  $H_2O$

— **sodium pyrophosphate,**  
 $[Rh(NH_3)_4(OH_2)_2Na_2P_2O_7] + 23H_2O$ .  
 Ppt Very sl sol in cold  $H_2O$ . Easily sol. in very dil. acids.

— **sulphate,**  
 $[Rh(NH_3)_4(OH_2)_2(SO_4)_2] + 3H_2O$ .  
 Very sl sol in cold, much more in hot  $H_2O$ .

— **sulphate chloroplatinate,**  
 $[Rh(NH_3)_4(OH_2)_2(SO_4)_2]PtCl_6$ .  
 Ppt. Nearly insol in  $H_2O$  or alcohol

**Roseotetramine cobaltic bromide,**  
 $Co(NH_3)_4(OH_2)_2Br_2$   
 Sol in  $H_2O$ ; insol in  $HBr + Aq$  Nearly insol in alcohol. (Jørgensen, Z anorg 2. 295.)

— **chloride,**  $Co(NH_3)_4(OH_2)_2Cl_2$   
 Easily sol in  $H_2O$ ; insol in conc  $HCl + Aq$ ; sol. in sat.  $HgCl_2 + Aq$  (Jørgensen)

— **cobaltcyanide,**  
 $Co(NH_3)_4(OH_2)_2Co(CN)_6$ .  
 (Jørgensen.)

— **oxalate sulphate,**  
 $[Co(NH_3)_4(OH_2)_2(SO_4)_2]C_2O_4$ .  
 Ppt (Jørgensen.)

— **pyrophosphate,**  
 $[Co(NH_3)_4(OH_2)_2(P_2O_7)_2] + 6H_2O$ .  
 Nearly insol in  $H_2O$ , but easily sol. in very dil. acids +  $Aq$  (Jørgensen.)

— **sulphate,**  
 $[Co(NH_3)_4(OH_2)_2(SO_4)_2] + 3H_2O$ .  
 Sol. in about 35 pts.  $H_2O$ , and more easily by addition of dil  $HCl$  or  $H_2SO_4 + Aq$ . (Jørgensen.)

— **sulphate bromaurate,**  
 $[Co(NH_3)_4(OH_2)_2(SO_4)_2]AuBr_4$ .  
 Sl. sol. in cold  $H_2O$ ; insol. in alcohol. (Jørgensen.)

— **sulphate chloroplatinate,**  
 $[Co(NH_3)_4(OH_2)_2(SO_4)_2]PtCl_6$ .  
 As the bromaurate. (Jørgensen.)

## Rubidium, Rb<sub>2</sub>

Decomp  $H_2O$  with violence Insol. in hydrocarbons. Sol. in liquid  $NH_3$  (Seely, C N 23. 169), (Franklin, Am Ch. J 1898, 20. 829)

## Rubidium acetylde acetylene $RbC_2, C_2H_2$

Very hygroscopic.  
 Insol in  $CCl_4$  and in ether. (Moissan, C R. 1903, 136. 1220.)

## Rubidium amalgam, $RbHg_{12}$

Stable in contact with  $Hg$  below  $0^\circ$   
 Above  $0^\circ$  the composition of the amalgam varies Can be cryst from  $Hg$  without decomp below  $0^\circ$ . (Kerp, Z. anorg. 1900, 25. 68.)

## Rubidium amide, $RbNH_2$

Very deliquescent Violently decomp. by  $H_2O$ ; less violently acted on by alcohol. (Titherley, Chem. Soc 1897, 71. 470.)

## Rubidium ammonia, $RbNH_3$

Decomp. by  $H_2O$ .  
 Very sol in liquid  $NH_3$  (Moissan, C. R. 1903, 136. 1178.)

## Rubidium azoimide, $RbN_3$

Sl. hygroscopic.  
 Stable in aq. solution  
 107 1 pts are sol in 100 pts  $H_2O$  at  $16^\circ$ .  
 114 1 " " " " 100 "  $H_2O$  "  $17^\circ$ .  
 0 182 " " " " 100 " abs alcohol at  $18^\circ$ .  
 Insol. in pure ether.  
 (Curtius, J pr. 1898, (2) 58. 281.)

## Rubidium bromide, $RbBr$

100 pts  $H_2O$  dissolve 98 pts at  $5^\circ$ , 104.8 pts. at  $16^\circ$ . (Reissig, A. 127. 33.)  
 Solubility in  $H_2O$   
 100 pts of the solution contain at  
 0.5° 5 0° 16 0°  
 47 26 49 50 51 17 pts.  $RbBr$ ,  
 39 7° 57 5° 113.5°  
 56 87 60 39 67 24 pts.  $RbBr$ .  
 (Rumbach, B. 1905, 38. 1557.)

Sp. gr. of  $RbBr$  containing g. equiv.  $RbBr$  per l.

G equiv $RbBr$	Sp. gr. $6^\circ/6^\circ$	Sp. gr. $18^\circ/18^\circ$	Sp. gr. $30^\circ/30^\circ$
0.508	1.06448	1.06389	1.06326
1 020	1.12931	1.12799	1.12626
2 031	1.25622	1.25366	1.25187
4.072	1.50574	1.50107	1.49870

(Clausen, W. Ann 1914, (4) 44. 1070)

RbBr + Aq. containing 6.60% RbBr has sp. gr.  $20^{\circ}/20^{\circ} = 1.0525$ .

RbBr + Aq. containing 14.36% RbBr has sp. gr.  $20^{\circ}/20^{\circ} = 1.1220$

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19, 279)

Sol. in acetone. (Fidmann, C. C. 1899, II 1014.)

Difficultly sol. in acetone (Naumann, B. 1904, 37, 4328.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790)

#### Rubidium tribromide, RbBr<sub>3</sub>.

Very sol. in H<sub>2</sub>O; decomp. by alcohol and ether (Wells and Wheeler, Sil. Am. J. 143, 475.)

#### Rubidium ruthenium bromide.

See Bromoruthenate and bromoruthenite, rubidium.

#### Rubidium selenium bromide.

See Bromoselenate, rubidium.

#### Rubidium tellurium bromide.

See Bromotellurate, rubidium.

#### Rubidium thallic bromide, RbBr, TlBr<sub>3</sub> + H<sub>2</sub>O

Recryst. from H<sub>2</sub>O unchanged (Pratt, Am. J. Sci. 1895, (3) 49, 403)

3RbBr, TlBr<sub>3</sub> + H<sub>2</sub>O. Very sol. in H<sub>2</sub>O. (Pratt)

#### Rubidium stannic bromide.

See Bromostannate, rubidium.

#### Rubidium bromochloride, RbBrCl.

Easily decomp., even by H<sub>2</sub>O (Wells and Wheeler.)

RbBrCl<sub>2</sub>. Sol. in H<sub>2</sub>O; decomp. by alcohol and ether. (Wells and Wheeler)

#### Rubidium bromochloriodide, RbBrClI.

Sol. in H<sub>2</sub>O and alcohol. Decomp. by ether. (Wells and Wheeler)

#### Rubidium bromiodide, RbBrI.

Very sol. in H<sub>2</sub>O. Sat. solution contains about 44% RbBrI, and sp. gr. = 3.84. (Wells and Wheeler)

#### Rubidium carbide, Rb<sub>2</sub>C<sub>2</sub>

Decomp. violently by H<sub>2</sub>O. (Moissan, C. R. 1903, 136, 1221)

#### Rubidium chloride, RbCl.

100 pts H<sub>2</sub>O dissolve 76.38 pts. at 1°, 82.89 pts. at 7°. (Bunsen)

Solubility in H<sub>2</sub>O at t°  
100 pts of the solution contain pts. RbCl

t°	Pts RbCl
0 4	43 61
15 5	46 56
57 3	53 71
114 9	59 48

(Rimbach, B. 1902, 35, 1304.)

Solubility of RbCl in H<sub>2</sub>O at t°.

t°	G RbCl per 100 g.		t°	G RbCl per 100 g	
	H <sub>2</sub> O	Solution		H <sub>2</sub> O	Solution
0	77 0	43 5	60	115 5	53 6

2 073	1.18200	1 17959	1 17828
3 984	1.34334	1 33967	1 33757

(Clausen, W. Ann. 1914, (4) 44, 1069.)

Very sl sol in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20. 829.)

Solubility in alcohols at 25°.

100 g methyl alcohol dissolve 1.41 g.

100 g ethyl alcohol dissolve 0.078 g.

100 g propyl alcohol dissolve 0.015 g.

100 g isoamyl alcohol dissolve 0.0025 g.

(Turner and Bissett, Chem. Soc. 1913, 103. 1909.)

Insol. in anhydrous pyridine and in 97% pyridine + Aq. Very sl. sol. in 95% pyridine + Aq; sl sol. in 93% pyridine + Aq. (Kahlenberg, J. Am. Chem. Soc. 1903, 30. 1107.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790), acetone; (Naumann, B. 1904, 37. 4329), (Eidmann, C. C. 1899, II 1014).

Rubidium ruthenium trichloride.

See Chlororuthenite, rubidium.

Rubidium ruthenium tetrachloride.

See Chlororuthenate, rubidium.

Rubidium oxyruthenium chloride,

$\text{Rb}_2\text{RuO}_2\text{Cl}_4$

Ppt; decomp. by  $\text{H}_2\text{O}$ , sol in cold  $\text{HCl}$  (Howe, J. Am. Chem. Soc. 1901, 23. 779.)

Rubidium tellurium chloride.

See Chlorotellurate, rubidium.

Rubidium thallic chloride,  $2\text{RbCl}$ ,  $\text{TiCl}_3 + \text{H}_2\text{O}$

Can be recryst. from  $\text{H}_2\text{O}$  without change. (Patt, Am. J. Sci. 1895, (3) 49. 399.)

$3\text{RbCl}$ ,  $\text{TiCl}_3$ . Crystallizes from  $\text{HCl}$  solution. (Neumann, A. 244. 848.)

+  $\text{H}_2\text{O}$  Very sol in cold  $\text{H}_2\text{O}$  (Pratt, Am. J. Sci. 1895, (3) 49. 398.)

+  $2\text{H}_2\text{O}$  Efflorescent in dry air Sol. in 7.5 pts.  $\text{H}_2\text{O}$  at 18°, and 1.6 pts. at 100°. (Godefroy, Zetschr. d. allgem. oesterr. Apothekerv. 1880. No. 9.)

Rubidium stannic chloride.

See Chlorostannate, rubidium.

Rubidium titanium chloride,  $2\text{RbCl}$ ,  $\text{TiCl}_3 + \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Stahler, B. 1904, 37. 4408.)

Rubidium tungsten chloride,  $\text{Rb}_2\text{W}_2\text{Cl}_9$ .

Sl. sol in cold, more sol. in hot  $\text{H}_2\text{O}$

Sol. in very dil.  $\text{NaOH} + \text{Aq}$

Nearly insol. in most organic solvents. (Olsson, B. 1913, 46. 574.)

Rubidium uranous chloride,  $\text{Rb}_2\text{UCl}_6$ .

As K salt. (Aloy, Bull. Soc. 1899, (3) 21. 264.)

Rubidium uranyl chloride,  $2\text{RbCl}$ ,  $(\text{UO}_2)_2\text{Cl}_2 + 2\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$ .

100 pts of the solution contain at

24 8° 80.3°

57 8 65.73 pts  $\text{UO}_2\text{Cl}_2$ ,  $2\text{RbCl}$

(Rumbach, B. 1904, 37. 467.)

Rubidium vanadium chloride,  $\text{Rb}_2\text{VCl}_5$

+  $\text{H}_2\text{O}$

Sl sol. in  $\text{H}_2\text{O}$  and alcohol.

Decomp by  $\text{H}_2\text{O}$  on standing so that it dissolves. (Stahler, B. 1904, 37. 4411.)

Rubidium zinc chloride,  $2\text{RbCl}$ ,  $\text{ZnCl}_2$

Easily sol in  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq}$ . (Godefroy, B. 8. 9.)

Rubidium chloride selenium dioxide,  $\text{RbCl}$ ,  $2\text{SeO}_2 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Muthmann, B. 1893, 26. 1013.)

Rubidium chloriodide,  $\text{RbCl}_2\text{I}$ .

Properties are similar to those of  $\text{RbBrClI}$ . (Wells.)

$\text{RbCl}_2\text{I}$ . Sol. in alcohol, not attacked by ether. (Wells and Wheeler, Sill. Am. J. 144. 42.)

Sol in  $\text{POCl}_3$ . (Walden, Z. anorg. 1900, 25. 212.)

Nearly insol in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 28. 374.)

Very stable; sl sol in  $\text{H}_2\text{O}$  at 0°; only vey sl. sol in  $\text{HCl}$  (Eidmann, Arch. Pharm. 1894, 232. 32.) (C. C. 1894, I. 670.)

Rubidium fluoride,  $\text{RbF}$ .

Very sol in  $\text{H}_2\text{O}$  (Egging, Z. anorg. 1905, 46. 174.)

100 g.  $\text{H}_2\text{O}$  dissolve 130.6 g.  $\text{RbF}$  at 18° (de Forcrand, C. R. 1911, 152. 1210.)

Sol in dil.  $\text{HF}$  (Pennington, J. Am. Chem. Soc. 1896, 18. 57.)

Insol in liquid  $\text{NH}_3$ . (Corc, Am. Ch. J. 1898, 20. 829.)

Rubidium hydrogen fluoride,  $\text{RbF}$ ,  $\text{HF}$ .

Very deliquescent.

Insol. in alcohol and ether. (Chabré, C. R. 1905, 140. 91.)

Very hygroscopic Sol in  $\text{H}_2\text{O}$ . (Egging, Z. anorg. 1905, 46. 175.)

$\text{RbF}$ ,  $2\text{HF}$ . Very sl sol in  $\text{H}_2\text{O}$ . (Egging, Z. anorg. 1905, 46. 176.)

Rubidium silicon fluoride.

See Fluosilicate, rubidium.

Rubidium tantalum fluoride.

See Fluotantalate, rubidium.

Rubidium uranyl fluoride,  $4\text{RbF}$ ,  $\text{UO}_2\text{F}_2 + 6\text{H}_2\text{O}$ .

(Ditte, C. R. 91. 115.)

**Rubidium hydride, RbH**

Decomp. by  $H_2O$  with evolution of  $H_2$  (Moissan, C. R. 1903, 136. 589.)

**Rubidium hydroxide, RbOH**

Deliquescent, and very sol in  $H_2O$ . Sol. in alcohol. (Bunsen.)

Sat. RbOH + Aq contains 64.17% RbOH at 15°. (de Forcrand, C. R. 1900, 149. 1344.)

**Rubidium iodide, RbI.**

100 pts  $H_2O$  dissolve 137.5 pts. at 6.9°, 152 pts. at 17.4° (Reussig, A. 127. 33.)

Sat. RbI + Aq. at 25° contains 61.93% RbI (Foote and Chalker, Am. Ch. J. 1908, 39. 567.)

Sp. gr. of RbI + Aq containing

5%	10%	cold sat.	hot sat.
----	-----	-----------	----------

Sp. gr. 1.0353 1.0755 1.726 1.9629 (Erdmann, Arch. Pharm. 1894, 232. 25.)

Sp. gr. of RbI + Aq containing g. equiv. RbI per l.

G equiv RbI	Sp. gr. 0°/0°	Sp. gr. 18°/18°	Sp. gr. 30°/30°
0.510	1.08347	1.08268	1.08226
1.025	1.16751	1.16569	1.16433
2.025	1.33012	1.32837	1.32631
4.015	1.64781	1.64144	1.63780

(Clausen, W. Ann. 1914, (4) 44. 1070.)

Nearly insol. in  $AsBr_3$  (Walden, Z. anorg. 1902, 29. 374.)

Sol. in  $AsCl_3$ . (Walden, Z. anorg. 1900, 25. 214.) liquid  $SO_2$ . (Walden, Z. anorg. 1902, 30. 161.)  $S_2Cl_2$ . (Walden, Z. anorg. 1900, 25. 217.)  $SO_2Cl_2$ . (Walden);  $POCl_3$ . (Walden.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Solubility in organic solvents at t°.

C = pts. by wt. of RbI in 100 ccm. of the sat. solution

L = no. of litres which at the saturation temp. hold in solution 1 mol. RbI

Solvent	t°	C	L
Furfural	25°	4.93	4.31
Acetonitrile	25°	1.350	15.73
"	0°	1.478	14.36
Propionitrile	25°	0.305	69.61
"	0°	0.274	77.48
Nitromethane	25°	0.518	41.00
"	0°	0.567	37.44
Acetone	25°	0.674	31.5
"	0°	0.960	22.1

(Walden, Z. phys. Ch. 1906, 55. 718.)

**Rubidium triiodide, RbI<sub>3</sub>**

Very sol. in  $H_2O$ . Sol. in about  $\frac{1}{3}$  pt  $H_2O$  at 20°; sol. in alcohol. Decomp. by ether. (Wells and Wheller, Sill. Am. J. 143. 475.)

Solubility determinations show that RbI<sub>3</sub> is the only polyiodide of rubidium formed at 25°. RbI<sub>2</sub> and RbI<sub>4</sub>, mentioned by Abegg and Hamburger, (Z. anorg. 50, 403) could not be obtained. (Foote and Chalker, Am. Ch. J. 1908, 39. 567.)

**Rubidium silver iodide, 2RbI, AgI.**

Easily decomp. by  $H_2O$ . (Wells and Wheeler, Sill. Am. J. 144. 155.)

RbI, AgI +  $\frac{1}{2}H_2O$  (Marsh, Chem. Soc. 1913, 103. 783.)

RbI, 2AgI. Not deliquescent.

Very sol. in acetone (Marsh, Chem. Soc. 1913, 103. 783.)

**Rubidium tellurium iodide.**

See Iodotellurate, rubidium.

**Rubidium thallio iodide, RbI, TlI<sub>3</sub> + 2H<sub>2</sub>O.**

Decomp. by  $H_2O$ . (Pratt, Am. J. Sci. 1895, (3) 49. 403.)

**Rubidium nitride,**

Decomp. by heat (Franz Fischer, B. 1910, 43. 1468.)

See also Rubidium azotimide.

**Rubidium dioxide, RbO<sub>2</sub>.**

Decomp. by  $H_2O$ . (Erdmann, A. 1897, 294. 68.)

**Rubidium sulphide, Rb<sub>2</sub>S + 4H<sub>2</sub>O**

Deliquescent; very sol. in  $H_2O$  (Biltz, Z. anorg. 1906, 43. 299.)

**Rubidium disulphide, Rb<sub>2</sub>S<sub>2</sub>**

Anhydrous.

Sol. in  $H_2O$ .

Very hygroscopic. (Biltz, Z. anorg. 1906, 50. 72.)

+  $H_2O$ . From Rb<sub>2</sub>S<sub>2</sub> + Aq.

Hydroscopic. (Biltz.)

**Rubidium trisulphide, Rb<sub>2</sub>S<sub>3</sub>.**

Anhydrous

Sol. in  $H_2O$ .

Hydroscopic. (Biltz, Z. anorg. 1906, 50. 75.)

+  $H_2O$ . From Rb<sub>2</sub>S<sub>3</sub> + Aq (Biltz.)

**Rubidium tetrakisulphide, Rb<sub>2</sub>S<sub>4</sub> + 2H<sub>2</sub>O.**

Sol. in  $H_2O$ . (Biltz, Z. anorg. 1906, 43. 304.)

**Rubidium pentasulphide, Rb<sub>2</sub>S<sub>5</sub>.**

Deliquescent. Decomp. by  $H_2O$ .

Very easily sol. in 70% alcohol.

Insol. in ether, ethyl sulphide or  $CHCl_3$ . (Biltz, B. 1905, 38. 127.)

**Rubidium hydrogen sulphide, RbHS**

Deliquescent, very sol. in  $H_2O$  (Biltz, Z anorg 1900, 48. 300.)

**Rubidium copper tetrasulphide, RbCuS<sub>4</sub>**

Decomp. very slowly in the air  
Sl sol in  $H_2O$ .

Very slowly decomp. by cold conc., more rapidly by hot conc., and still more rapidly by dil. HCl,  $H_2SO_4$  and  $HNO_3$ . Sl. sol in alcohol. (Biltz, B. 1907, 40. 978.)

**Ruthenic acid.****Barium ruthenate, BaRuO<sub>4</sub> + H<sub>2</sub>O.**

Ppt. (Debray and Joly, C R 106. 1494)

**Calcium ruthenate, CaRuO<sub>4</sub>.**

Ppt.

**Magnesium ruthenate, MgRuO<sub>4</sub>**

Ppt.

**Potassium ruthenate, K<sub>2</sub>RuO<sub>4</sub> + H<sub>2</sub>O.**

Very sol. in  $H_2O$ .

**Perruthenic acid.****Potassium perruthenate, KRuO<sub>4</sub>.**

Sl sol. in  $H_2O$  (Debray and Joly, C R 106. 1494)

**Sodium perruthenate, NaRuO<sub>4</sub> + H<sub>2</sub>O.**

Sl. sol. in  $H_2O$ .

**Ruthenium, Ru.**

Not attacked by acids, except aqua regia, which dissolves it only very slightly. (Claus, Pogg. 65. 218.)

**Ruthenium ammonium comps.**

See Ruthenodiamine comps, etc

**Ruthenium tribromide, RuBr<sub>3</sub>.**

Sol. in  $H_2O$ . Solution decomposes slowly on standing, but rapidly on heating. (Gutbier, Z. anorg. 1905, 45. 178.)

**Ruthenium tribromide, ammonia,**

$2RuBr_3 \cdot 7NH_3$ .

Sol. in  $H_2O$  and ammonia with slight warming.

Insol. in alcohol (Gutbier, Z. anorg. 1905, 45. 182.)

**Ruthenium dichloride, RuCl<sub>2</sub>.**

Insol. in acids, even in aqua regia. Sl. attacked by acids. Traces are dissolved by boiling with conc. KOH + Aq +  $xH_2O$ . Known only in aqueous solution. (Claus, A. 59. 238.)

**Ruthenium trichloride, RuCl<sub>3</sub>.**

Deliquescent. Sol. in  $H_2O$  and alcohol, but solution is decomp. by heating into  $Ru_2O_3$  and HCl. (Claus.)

Pure  $RuCl_3$  is insol in cold  $H_2O$ , mineral, or organic acids. Slowly decomp. by boiling  $H_2O$ . Insol in  $CCl_4$ ,  $CS_2$ ,  $CHCl_3$ ,  $PCl_3$ , or ether. Slowly sol. in hot absolute alcohol, but decomp. into  $Ru(OH)Cl_2$  by 95% alcohol. (Joly, C. R. 114. 292)

Hydroscopic

Sol in  $H_2O$ , decomp. at 50°.

Sol in alcohol (Gutbier, Z anorg. 1905, 45. 174.)

See also Ruthenium nitroschloride.

**Ruthenium tetrachloride, RuCl<sub>4</sub>.**

Sol. in  $H_2O$  and alcohol (Claus)

**Ruthenium trichloride with MCl.**

See Chlororuthenite, M.

**Ruthenium tetrachloride with MCl.**

See Chlororuthenate, M.

**Ruthenium sesquihydroxide, Ru<sub>2</sub>O<sub>3</sub>H<sub>2</sub>.**

Sol in acids; insol in alkalis. Less sol. in  $NH_4OH$  + Aq than any other oxide of the Pt metals (Claus)

**Ruthenium dihydroxide, RuO<sub>2</sub>H<sub>2</sub> + 3H<sub>2</sub>O**

Sol in acids and alkalis. (Claus, A. 59. 237)

Contains NO Joly, C. R. 107. 994)

**Ruthenium triiodide, RuI<sub>3</sub>.**

Ppt (Claus.)

Insol. in  $H_2O$ , KI + Aq, and alcohol. (Gutbier, Z. anorg. 1905, 45. 181.)

**Ruthenium triiodide ammonia,**

$2RuI_3 \cdot 7NH_3$ .

Sol in  $H_2O$  and ammonia with slight warming.

Insol in alcohol. (Gutbier, Z. anorg. 1905, 45. 182.)

**Ruthenium nitroschloride, RuCl<sub>2</sub>(NO) + H<sub>2</sub>O, and 5H<sub>2</sub>O**

Slowly sol. in cold, easily in hot  $H_2O$ . (Joly, C. R. 108. 855.)

**Ruthenium dihydronitroschloride,**

$NO \cdot Ru_2H_2Cl_3 \cdot 2HCl$ .

Sol in  $H_2O$ . (Brizard, A. ch. 1900, (7) 71. 353.)

**Ruthenium silver nitroschloride,**

$NO \cdot Ru_2H_2Cl_3 \cdot 2HCl, 3AgCl$ .

Ppt (Brizard, A. ch. 1900, (7) 21, 357.)

**Ruthenium nitrosesquioxide, Ru<sub>2</sub>O<sub>3</sub>(NO)<sub>2</sub> + 2H<sub>2</sub>O.**

Ppt (Joly, C. R. 108. 854.)

**Ruthenium dihydronitrosohydroxide,**  
 $\text{NO} \cdot \text{Ru}_2\text{H}_2(\text{OH})_2 + 2\text{H}_2\text{O}$ Sl sol. in cold  $\text{H}_2\text{O}$  with decomp (Brizard, A. ch. 1900, (7) 21. 349)**Ruthenium dihydronitrosooxychloride,**  
 $\text{NO} \cdot \text{Ru}_2\text{H}_2\text{Cl}_2\text{OH} + 2\text{H}_2\text{O}$ 

Ppt (Brizard, A. ch. 1900, (7) 21. 349.)

**Ruthenium monoxide, RuO.**

Insol. in acids. (Claus, A 59. 236.)

**Ruthenium sesquioxide, Ru<sub>2</sub>O<sub>3</sub>.**Insol in acids. Mixture of Ru and RuO<sub>2</sub>. (Debray and Joly, C. R. 108. 1494.)

See Ruthenium nitrososesequioxide.

**Ruthenium dioxide, RuO<sub>2</sub>.**

Insol. in acids (Debray and Joly.)

**Ruthenium trioxide, RuO<sub>3</sub>**

"Ruthenic acid." Known only in its salts.

**Ruthenium tetroxide, RuO<sub>4</sub>.**Rather difficultly and slowly sol in  $\text{H}_2\text{O}$  (Claus.)Decomp in aqueous solution into  $\text{Ru}_2\text{O}_7 + 2\text{H}_2\text{O}$ . (Debray and Joly)**Ruthenium pentoxide, Ru<sub>2</sub>O<sub>5</sub>.**

(Debray and Joly, C. R. 106. 1494.)

+  $2\text{H}_2\text{O}$ . Ppt. (Debray and Joly)**Ruthenium heptoxide, Ru<sub>2</sub>O<sub>7</sub>.**

"Perruthenic acid." Known only in its salts.

**Ruthenium oxide, Ru<sub>4</sub>O<sub>6</sub>.**

(Debray and Joly)

**Ruthenium oxychloride, Ru(OH)Cl<sub>2</sub>.**Very sol. in  $\text{H}_2\text{O}$ , but decomp. by an excess. (Joly, C. R. 114. 293.)**Ruthenium silicide, RuSi.**Insol. in boiling acids; slowly attacked by a mixture of fused  $\text{KHSO}_4$  and  $\text{KNO}_3$ . (Moissan, C. R. 1903, 137. 231)**Ruthenium trisulphide, RuS<sub>3</sub>.**

Ppt. (Antony, Gazz. ch. it 1900, 30. 539)

**Ruthenomonamine hydroxide,** $\text{Ru}(\text{OH})_2(\text{NH}_3)_2 + 4\text{H}_2\text{O}$ 

See Ruthenosamine hydroxide.

**Ruthenediamine carbonate,** $\text{Ru}(\text{N}_2\text{H}_5)_2\text{CO}_3 + 5\text{H}_2\text{O}$ Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Claus.)**Ruthenosdamine chloride,** $\text{Ru}(\text{N}_2\text{H}_5\text{Cl})_2 + 3\text{H}_2\text{O}$ Not very sol in cold, easily sol. in hot  $\text{H}_2\text{O}$ . Insol in alcohol

See Ruthenonitrosodiamine comps.

— **mercuric chloride, Ru(N<sub>2</sub>H<sub>5</sub>Cl)<sub>2</sub>, HgCl<sub>2</sub>.**Nearly insol. in cold, sol in hot  $\text{H}_2\text{O}$ . (Gibbs, Sill Am J (2) 34, 350.)— **chloroplatinate, Ru(N<sub>2</sub>H<sub>5</sub>Cl)<sub>2</sub>, PtCl<sub>4</sub>**Sl. sol in  $\text{H}_2\text{O}$ . (Claus)— **hydroxide, Ru(N<sub>2</sub>H<sub>5</sub>OH)<sub>2</sub>**

Known only in aqueous solution.

— **nitrate, Ru(N<sub>2</sub>H<sub>5</sub>NO<sub>2</sub>)<sub>2</sub> + 2H<sub>2</sub>O**Somewhat difficultly sol in cold, easily in hot  $\text{H}_2\text{O}$  Insol. in alcohol— **sulphate, Ru(N<sub>2</sub>H<sub>5</sub>)<sub>2</sub>SO<sub>4</sub> + 4H<sub>2</sub>O**Moderately sol in  $\text{H}_2\text{O}$ . Insol. in alcohol (Claus.)**Ruthenocyanhydric acid, H<sub>4</sub>Ru(CN)<sub>6</sub>.**Easily sol in  $\text{H}_2\text{O}$  and alcohol Less sol in ether (Claus, J. B. 1855. 444.)**Potassium ruthenocyanide, K<sub>4</sub>Ru(CN)<sub>6</sub> + 3H<sub>2</sub>O.**Sl. efflorescent Very sol in  $\text{H}_2\text{O}$ , sl. sol. in dil alcohol (Claus.)**Ruthenonitrosodiamine bromide,** $\text{Ru}(\text{NO})(\text{NH}_3)_2\text{Br}_2$ Sl sol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 111. 969.) $\text{Ru}(\text{NO})(\text{OH})(\text{NH}_3)_2\text{Br}_2$ . Less sol than corresponding chloride (Joly, C. R. 108. 300)— **chloride, Ru(NO)(NH<sub>3</sub>)<sub>2</sub>Cl<sub>2</sub>.**Sl. sol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 111. 969.) $\text{Ru}(\text{NO})(\text{OH})(\text{NH}_3)_2\text{Cl}_2$ . Sol. in  $\text{H}_2\text{O}$  (Joly, C. R. 108. 1300.) $\text{Ru}(\text{NO})(\text{NH}_3)_2\text{Cl}_2 + 2\text{H}_2\text{O} =$  $\text{Ru}(\text{NO})(\text{OH})(\text{NH}_3)_2\text{Cl}_2, \text{HCl} + \text{H}_2\text{O} (?)$ Very sol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 111. 969.)— **chloroplatinate, Ru(NO)(OH)(NH<sub>3</sub>)<sub>2</sub>PtCl<sub>6</sub>.**Scarcely sol in boiling  $\text{H}_2\text{O}$ . (Joly, C. R. 108. 1300.) $\text{Ru}(\text{NO})(\text{NH}_3)_2\text{Cl}_2, \text{PtCl}_4$  Ppt (Joly, C. R. 111. 969)— **iodide, Ru(NO)(NH<sub>3</sub>)<sub>2</sub>I<sub>2</sub>**Sl sol in  $\text{H}_2\text{O}$  (Joly, C. R. 111. 969) $\text{Ru}(\text{NO})(\text{OH})(\text{NH}_3)_2\text{I}_2$  Less sol. than the corresponding bromide (Joly, C. R. 108. 1300.)— **nitrate, Ru(NO)(NH<sub>3</sub>)<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub>.**More sol in  $\text{H}_2\text{O}$  than $\text{Ru}(\text{NO})(\text{OH})(\text{NH}_3)_2(\text{NO}_3)_2$ . (Joly, C. R. 111. 969.)

$\text{Ru}(\text{NO})(\text{OH})(\text{NH}_3)_4(\text{NO}_3)_2$  Sl. sol. in cold  $\text{H}_2\text{O}$ ; insol in conc  $\text{HNO}_3 + \text{Aq.}$  (Joly, C. R. 108. 1300.)

#### Ruthenonitrosodiamine sulphate,

Sl. sol in  $\text{H}_2\text{O}$  (Joly, C. R. 111. 969)  
 $[\text{Ru}(\text{NO})(\text{NH}_3)_4](\text{SO}_4)_2 \cdot \text{H}_2\text{SO}_4 + \text{H}_2\text{O}$  Decomp. by cold  $\text{H}_2\text{O}$  (Joly)  
 $\text{Ru}(\text{NO})(\text{OH})(\text{NH}_3)_4\text{SO}_4 + \text{H}_2\text{O}$  Most sol. in  $\text{H}_2\text{O}$  of this class of salts (Joly, C. R. 108. 1300.)

#### Ruthenonitrous acid.

Ammonium ruthenonitrite,  $\text{RuH}_2(\text{NO}_2)_4$ ,  
 $8\text{NH}_4\text{NO}_2 + 2\text{H}_2\text{O}$ .

Easily sol in  $\text{H}_2\text{O}$ ; practically insol. in  $\text{KCl} + \text{Aq.}$  (Brizard, A. ch. 1900, (7) 21. 368)

#### Potassium ruthenonitrite,

Easily sol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Gibbs, Sill. Am. J. (2), 34. 344)  
 Sl. sol in  $\text{H}_2\text{O}$  Easily sol in  $\text{KNO}_3 + \text{Aq.}$  (Claus)

$\text{K}_4\text{Ru}_2(\text{NO}_2)_{10} = \text{Ru}_2\text{O}_3(\text{N}_2\text{O}_5)_2, 4\text{KNO}_2$ .  
 Very sol. in  $\text{H}_2\text{O}$  (Joly and Vèzes, C. R. 109. 667)

$\text{K}_5\text{Ru}_2(\text{NO}_2)_{14} = \text{Ru}_2\text{O}_3(\text{N}_2\text{O}_5)_3, 8\text{KNO}_2$  Sl. sol in  $\text{H}_2\text{O}$ . Sol in cold dil acids (Joly and Vèzes.)

$\text{Ru}_2\text{H}_2(\text{NO}_2)_4, 3\text{KNO}_2 + 4\text{H}_2\text{O}$  Very sol. in  $\text{H}_2\text{O}$  Aqueous solution decomp. sl. on long boiling Almost insol. in conc.  $\text{KCl} + \text{Aq.}$  (Brizard, C. R. 1899, 129. 216)

Silver ruthenonitrite,  $\text{NO Ru}_2\text{H}_2(\text{NO}_2)_4$ ,  
 $3\text{AgNO}_2 + 2\text{H}_2\text{O}$ .

Ppt. (Brizard, A. ch. 1900, (7) 21. 368.)

Sodium ruthenonitrite,  $\text{Ru}_2(\text{NO}_2)_4, 4\text{NaNO}_2 + 4\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  without decomp. (Joly, C. R. 1894, 118. 469)

#### Ruthenosamine hydroxide,

Very deliquescent, and sol in  $\text{H}_2\text{O}$ . (Claus)

#### Samarium, Sm.

The element has not been isolated.

Samarium bromide,  $\text{SmBr}_3 \cdot 6\text{H}_2\text{O}$ .

Very deliquescent. (Cleve.)

Samarium carbide,  $\text{SmC}_2$ .

Decomp by water and acids. (Moissan, C. R. 1900, 131. 925)

Samarium dichloride,  $\text{SmCl}_2$ .

Decomp by  $\text{H}_2\text{O}$  with liberation of  $\text{H}_2$  and formation of samarium oxide and samarium oxychloride Insol. in  $\text{CS}_2$ ,  $\text{CHCl}_3$ , benzene, abs alcohol, pyridine and toluene. (Matignon, C. R. 1906, 142. 85)

Samarium trichloride,  $\text{SmCl}_3$ .

The anhydrous salt is very hygroscopic and easily sol in  $\text{H}_2\text{O}$ . (Matignon, C. R. 1902, 134. 1309)

Very sol in  $\text{H}_2\text{O}$ . Very sol. in abs. alcohol 0.38 g are sol. in 100 grams pyridine at ord temp.; insol in quinoline (Matignon, A. ch. 1906, (8) 8. 406.)

$+3\text{H}_2\text{O}$ . Deliquescent.

Samarium chloride ammonia,  $\text{SmCl}_2 + \text{NH}_3$ ,

$+2\text{NH}_3$ ,  $+3\text{NH}_3$ ;  $+4\text{NH}_3$ ;  $+5\text{NH}_3$ ;

$+8\text{NH}_3$ ,  $+9.5\text{NH}_3$ ,  $+11.5\text{NH}_3$ .

(Matignon, C. R. 1905, 140. 143)

Samarium fluoride,  $\text{SmF}_2 + \frac{1}{2}\text{H}_2\text{O}$ .

Precipitate Insol in  $\text{H}_2\text{O}$  and dil. acids. (Cleve)

Samarium iodide,  $\text{SmI}_2$

(Matignon, A. ch. 1906, (8) 8. 413.)

Samarium hydroxide,  $\text{Sm}_2(\text{OH})_6$

Insol in alkalis; easily sol in acids, and decomposes ammonium salts (Cleve, C. N. 51. 145.)

Samarium oxide,  $\text{Sm}_2\text{O}_3$

Easily sol. in acids (Cleve, C. N. 51. 145.)

Samarium peroxide,  $\text{Sm}_4\text{O}_6$

Precipitate (Cleve)

Samarium oxychloride,  $\text{SmOCl}$ .

(Matignon, A. ch. 1906, (8) 8. 412)

Samarium sulphide,  $\text{Sm}_2\text{S}_3$ .

(Matignon, A. ch. 1906, (8) 8. 415.)

#### Scandium, Sc.

Element has not been isolated

Scandium bromide,  $\text{Sc}_2\text{Br}_6 + 3\text{H}_2\text{O}$ , and  $+12\text{H}_2\text{O}$ .

(Crookes, Roy. Soc. Proc. 1908, 80. A, 518.)

Scandium chloride,  $\text{Sc}_2\text{Cl}_6 + 3\text{H}_2\text{O}$ , and  $+12\text{H}_2\text{O}$

(Crookes, Roy. Soc. Proc. 1908, 80. A, 518.)

Scandium hydroxide.

Easily sol in conc  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq.}$  (Crookes, Roy. Soc. Proc. 1908, 80. A, 518.)

**Scandium oxide,  $\text{Sc}_2\text{O}_3$** 

Easily sol. by boiling with conc.  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq}$

**Scandium sulphide,  $\text{Sc}_2\text{S}_3$** 

Decomp. by  $\text{H}_2\text{O}$  and by acids with evolution of  $\text{H}_2\text{S}$ . (Wirth, Z. anorg. 1914, 87. 5)

**Selenantimonic acid.**

Sodium selenantimonate,  $\text{Na}_3\text{SbSe}_4 + 9\text{H}_2\text{O}$ .

Sol. in 2 pts. cold  $\text{H}_2\text{O}$ . Insol. in alcohol. (Hofacker, A. 107. 6)

Sl. sol. in  $\text{H}_2\text{O}$ , unstable. (Pouget, A. ch. 1899, (7) 18. 562.)

**Selenantimonous acid.**

Potassium orthoselenantimonite,  $\text{K}_2\text{SbSe}_3$

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 560.)

Potassium paraselenantimonite,  $\text{K}_2\text{Sb}_4\text{Se}_7 + 3\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; unstable (Pouget, A. ch. 1899, (7) 18. 560)

Sodium orthoselenantimonite,  $\text{Na}_3\text{SbSe}_3 + 9\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Aqueous solution on standing deposits red crystals of sodium selenantimonate,  $\text{Na}_3\text{SbSe}_4 + 9\text{H}_2\text{O}$  (Pouget, A. ch. 1899, (7) 18. 562.)

Sodium paraselenantimonite,  $\text{Na}_3\text{Sb}_4\text{Se}_7$ .

(Pouget, A. ch. 1899, (7) 18. 561)

**Selenic acid,  $\text{H}_2\text{SeO}_4$** 

Very sol. in  $\text{H}_2\text{O}$  with evolution of heat

If aqueous solution is evaporated at temp. of  $165^\circ$ , acid has 2.524 sp. gr.; at temp. of  $267^\circ$ , acid has 2.60 sp. gr.; at temp. of  $285^\circ$ , acid has 2.625 sp. gr. Decomp. to  $\text{H}_2\text{SeO}_3$  at higher temp. (Mitscherlich, Pogg. 9. 623.)

By evaporation at  $265^\circ$ , acid of 2.609 sp. gr. containing 95%  $\text{H}_2\text{SeO}_4$  is obtained. If brought at same temp. in vacuo over  $\text{H}_2\text{SO}_4$ , acid of 2.627 sp. gr. with 97.5%  $\text{H}_2\text{SeO}_4$  is obtained. (Fabian, A. Suppl. 1. 243.)

**Sp. gr. of  $\text{H}_2\text{SeO}_4 + \text{Aq}$ .**

% $\text{H}_2\text{SeO}_4$	Sp. gr.	% $\text{H}_2\text{SeO}_4$	Sp. gr.

(Diemer and Lenher. J. phys. Chem. 1909, 13. 509.)

Sol. in conc. or fuming  $\text{H}_2\text{SO}_4$ .  
 Insol in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830.)  
 Decomp. by alcohol.  
 +  $\text{H}_2\text{O}$ . (Cameron and Macallan, C. N. 59. 232.)  
 +  $2\text{H}_2\text{O}$ , and +  $6\text{H}_2\text{O}$  (?). (C. and M.)  
 +  $4\text{H}_2\text{O}$ . (Kreuzmann and Hofmeier, M. 1908, 29. 1117.)

## Selenates.

All the neutral and acid salts of  $\text{H}_2\text{SeO}_4$  are sol in  $\text{H}_2\text{O}$ , except  $\text{BaSeO}_4$ ,  $\text{SrSeO}_4$ ,  $\text{CaSeO}_4$ , and  $\text{PbSeO}_4$ , which are nearly or quite insol in  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$

Aluminum selenate,  $\text{Al}_2(\text{SeO}_4)_3$ .

Resembles in every way aluminum sulphate. (Berzelius.)

## Aluminum ammonium selenate,

More sol in  $\text{H}_2\text{O}$  than the corresponding sulphate. (Wohlwill, A. 114. 191.)

Aluminum cesium selenate,  $\text{Al}_2\text{Cs}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ .

(Peterson, B. 9. 1563.)

Much more sol in  $\text{H}_2\text{O}$  than the corresponding sulphate (Fabre, C. R. 105. 114.)

Aluminum potassium selenate,  $\text{Al}_2\text{K}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ .

More sol in  $\text{H}_2\text{O}$  than common alum. (Weber, Pogg. 108. 615.)

Aluminum rubidium selenate,  $\text{Al}_2\text{Rb}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ .

(Peterson, B. 9. 1563.)

Much more sol in  $\text{H}_2\text{O}$  than the corresponding sulphate (Fabre, C. R. 105. 114.)

Aluminum sodium selenate,  $\text{Al}_2\text{Na}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ .

Sl. efflorescent. Very sol in  $\text{H}_2\text{O}$ . (Wohlwill, A. 114. 191.)

Aluminum thallium sulphate,  $\text{Al}_2\text{Th}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Fabre, C. R. 105. 114.)

Aluminum selenate potassium sulphate,  $\text{Al}_2(\text{SeO}_4)_3, \text{K}_2\text{SO}_4 + 24\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (v. Gerichten, A. 168. 222.)

Ammonium selenate,  $(\text{NH}_4)_2\text{SeO}_4$ .

Easily sol in  $\text{H}_2\text{O}$ .

100 g.  $\text{H}_2\text{O}$  dissolve 117 g.  $(\text{NH}_4)_2\text{SeO}_4$  at  $7^\circ$ ; 164 g. at  $59^\circ$ ; 197 g. at  $100^\circ$ . (Tutton, Proc. Roy. Soc. 1907, 79. A. 351.)  
 Insol in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 826.)

Ammonium hydrogen selenate,  $\text{NH}_4\text{HSeO}_4$ .

Sol. in  $\text{H}_2\text{O}$ . (Topsoe.)

Ammonium cadmium selenate,  $(\text{NH}_4)_2\text{SeO}_4, \text{CdSeO}_4 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Topsoe, W. A. B. 66. 2. 2.)  
 +  $6\text{H}_2\text{O}$  Efflorescent. Very easily sol in  $\text{H}_2\text{O}$ . (Topsoe.)

**Ammonium cerous selenate**,  
 $(\text{NH}_4)_2\text{Ce}_2(\text{SeO}_4)_4 + 9\text{H}_2\text{O}$   
 Easily sol. in  $\text{H}_2\text{O}$ . (John.)

**Ammonium chromium selenate**,  
 $(\text{NH}_4)_2\text{Cr}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$   
 Sol. in  $\text{H}_2\text{O}$ . (Fabre, C. R. 105. 114.)

**Ammonium cobaltous selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{CoSeO}_4 + 6\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Ammonium cupric selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{CuSeO}_4 + 6\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Ammonium didymium selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{Dy}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)  
 $+10\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 43. 363.)

**Ammonium erbium selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{Er}_2(\text{SeO}_4)_3 + 4\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Ammonium ferrous selenate**,  $(\text{NH}_4)_2\text{Fe}(\text{SeO}_4)_2$ ,  
 $+6\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Topsoë.)  
 $+2\text{H}_2\text{O}$

**Ammonium lanthanum selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{La}_2(\text{SeO}_4)_3 + 9\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Ammonium magnesium selenate**,  
 $(\text{NH}_4)_2\text{Mg}(\text{SeO}_4)_2 + 6\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Ammonium manganous selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{MnSeO}_4 + 6\text{H}_2\text{O}$ .  
 Not deliquescent. Easily sol. in  $\text{H}_2\text{O}$ .  
 (Topsoë.)

**Ammonium nickel selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{NiSeO}_4 + 6\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Ammonium samarium selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{Sm}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Ammonium thallium selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{Tl}_2(\text{SeO}_4)_2 + 8\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Fortin, C. C. 1903, II. 706.)

**Ammonium uranyl selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $(\text{UO}_2)_2\text{SeO}_4 + 2\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$ . (Sendtner.)

**Ammonium yttrium selenate**,  $(\text{NH}_4)_2\text{SeO}_4$ ,  
 $\text{Y}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Ammonium zinc selenate**,  
 $(\text{NH}_4)_2\text{SeO}_4$ ,  $\text{ZnSeO}_4 + 6\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Antimony selenate**.  
 Insol. in  $\text{H}_2\text{O}$ . Not very sol. in acids. Sol.  
 in  $\text{H}_2\text{SeO}_4$ . (Cameron and Macallan.)

**Barium selenate**,  $\text{BaSeO}_4$ .  
 Somewhat more sol. in  $\text{H}_2\text{O}$  and dil. acids  
 than  $\text{BaSO}_4$ . (Rose.) 100 ccm.  $\text{H}_2\text{O}$  dissolve  
 11.8 mg. in the cold, and 13.8 mg. at  $100^\circ$ .  
 (Pettersson, Z. anal. 12. 287.)  
 Not decomp. by  $\text{H}_2\text{SO}_4$ . Insol. in  $\text{HNO}_3$  +  
 Aq. (Berzelius), but decomp. by solution of  
 alkali carbonates at ordinary temp.  
 Very slowly decomp. by  $\text{HCl}$  + Aq. (Rose,  
 Pogg. 95. 426.)

**Bismuth selenate**.  
 Insol. in, and not decomp. by cold or hot  
 $\text{H}_2\text{O}$ . (Cameron and Macallan.)

**Cæsium selenate**,  $\text{Cs}_2\text{SeO}_4$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Pettersson, B. 9. 1561.)  
 100 g.  $\text{H}_2\text{O}$  at  $12^\circ$  dissolve 244.8 g.  $\text{Cs}_2\text{SeO}_4$ .  
 (Tutton, Chem. Soc. 1897, 71. 850.)  
 Sp. gr. of  $\text{Cs}_2\text{SeO}_4$  + Aq. at  $20^\circ$  compared  
 with  $\text{H}_2\text{O}$  at  $4^\circ$ , containing:

% $\text{Cs}_2\text{SeO}_4$	45.94	53.43
Sp. gr.	1.5841	1.7432

(Tutton.)

**Cæsium hydrogen selenate**,  $\text{CsHSO}_4$ .  
 Ppt. Very hygroscopic. (Norris, Am. Ch.  
 J. 1901, 28. 322.)

**Cæsium chromic selenate**,  $\text{Cs}_2\text{Cr}_2(\text{SeO}_4)_4 +$   
 $24\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Fabre, C. R. 105. 114.)

**Cæsium cobaltous selenate**,  $\text{Cs}_2\text{Co}(\text{SeO}_4)_2 +$   
 $6\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Cæsium indium selenate**,  $\text{CsIn}(\text{SeO}_4)_2 +$   
 $12\text{H}_2\text{O}$ .  
 Efflorescent; sol. in  $\text{H}_2\text{O}$ . (Mathers, J.  
 Am. Chem. Soc. 1908, 30. 215.)

**Cæsium iron (ferric) selenate**,  $\text{Cs}_2\text{Fe}_2(\text{SeO}_4)_4$   
 $+24\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . (Roncogliolo, Gazz. ch.  
 it. 1905, 35. (2) 553.)

**Cæsium magnesium selenate**,  $\text{Cs}_2\text{SeO}_4$ ,  
 $\text{MgSeO}_4 + 6\text{H}_2\text{O}$ .  
 (Tutton, Chem. Soc. 1905, 87, 1163.)

**Cæsium zinc selenate**,  $\text{Cs}_2\text{Zn}(\text{SeO}_4)_2 + 6\text{H}_2\text{O}$ .  
 (Tutton, Zeit. Kryst. 1900, 33. 14.)

Cadmium selenate,  $\text{CdSeO}_4 \cdot 2\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$  (v. Hauer, W. A. B. 39. 299.)

Cadmium potassium selenate,  $\text{CdSeO}_4, \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; can be recrystallized without decomp. (v. Hauer, W. A. B. 54. 209.)

Calcium selenate,  $\text{CaSeO}_4 \cdot 2\text{H}_2\text{O}$ .

Less sol. in hot than in cold  $\text{H}_2\text{O}$ . (v. Hauer, J. pr. 80. 214.)

Sat.  $\text{CaSeO}_4 + \text{Aq}$  contains at.

—1° +5° 20° 37° 67°  
7.4 7.3 7.6 6.8 5.1%  $\text{CaSeO}_4$ .

(Etard, A. ch. 1894, (7) 2. 551.)

Cerous selenate,  $\text{Ce}_2(\text{SO}_4)_3 \cdot 6\text{H}_2\text{O}$ ,  $9\text{H}_2\text{O}$ , or  $12\text{H}_2\text{O}$

More sol. in cold than hot  $\text{H}_2\text{O}$  (Jolin) +4 $\text{H}_2\text{O}$ . Very easily in cold, sl. sol. in hot  $\text{H}_2\text{O}$  (Cingolani, C. C. 1908, I. 1606.)

Stable above 100°.

+5 $\text{H}_2\text{O}$ . Stable at 92–100°.

+7 $\text{H}_2\text{O}$ . Stable at 80–92°.

+8 $\text{H}_2\text{O}$ . Stable at 50–78°.

+10 $\text{H}_2\text{O}$ . Stable at 34–40°.

+11 $\text{H}_2\text{O}$ . Stable at 12–23°.

+12 $\text{H}_2\text{O}$ . Stable at 0–12°. (Cingolani, C. A. 1908, 2658.)

Solubility of  $\text{Ce}_2(\text{SeO}_4)_3$  in  $\text{H}_2\text{O}$  at t°.

(G. salt calculated as anhydrous  $\text{Ce}_2(\text{SO}_4)_3$  dissolved in 100 cc.  $\text{H}_2\text{O}$ .)

t°	Using $\text{Ce}_2(\text{SeO}_4)_3 + 11\text{H}_2\text{O}$	Using $\text{Ce}_2(\text{SeO}_4)_3 + 12\text{H}_2\text{O}$	t°	Using $\text{Ce}_2(\text{SeO}_4)_3 + 11\text{H}_2\text{O}$	Using $\text{Ce}_2(\text{SeO}_4)_3 + 12\text{H}_2\text{O}$

(Cingolani, l. c.)

Cerous potassium selenate,  $\text{Ce}_2(\text{SeO}_4)_3, 5\text{K}_2\text{SeO}_4$ .

More sol. in  $\text{H}_2\text{O}$  than the corresponding sulphate. (Jolin)

Cerous sodium selenate,  $\text{Ce}_2(\text{SeO}_4)_3, \text{Na}_2\text{SeO}_4 + 5\text{H}_2\text{O}$ .

Quite sol. in  $\text{H}_2\text{O}$ . (John.)

Chromic potassium selenate,  $\text{Cr}_2\text{K}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ .

Resembles the sulphate in every particular.

Chromic rubidium selenate,  $\text{Cr}_2\text{Rb}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ .

Chromic sodium selenate,  $\text{Cr}_2\text{Na}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$   
Sol. in  $\text{H}_2\text{O}$ . (Fabre, C. R. 105. 114.)

Chromic thalious selenate,  $\text{Cr}_2\text{Ti}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Fabre, C. R. 105. 114.)

Chromic selenate potassium sulphate,  $\text{Cr}_2(\text{SeO}_4)_3, \text{K}_2\text{SO}_4 + 24\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (v. Gorchichten)

Cobaltous selenate, basic,  $4\text{CoO}, 3\text{SeO}_2 + \text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ ; sol. in acids (Bogdan, Bull. Soc. (3) 9. 586)

$\text{Co}_3(\text{OH})_2(\text{SeO}_4)_3$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Bogdan, C. C. 1895. 630.)

Cobaltous selenate,  $\text{CoSeO}_4 \cdot 5\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Topsoe.)

+6 $\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  (Topsoe.)

+7 $\text{H}_2\text{O}$ . Efflorescent. Extremely sol. in  $\text{H}_2\text{O}$ . (Topsoe.)

+13 $\text{H}_2\text{O}$ . Very unstable. (Copaux, A. ch. 1905, (8) 6. 553.)

Cobaltous potassium selenate,  $\text{CoSeO}_4, \text{K}_2\text{SeO}_4 + 6\text{H}_2\text{O}$ .

More sol. in  $\text{H}_2\text{O}$  than corresponding sulphate. (v. Hauer, W. A. B. 39. 837)

Cobaltous rubidium selenate,  $\text{CoRb}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Topsoe)

Cobaltous thalious selenate,  $\text{CoTi}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Topsoe)

Cupric selenate, basic,  $3\text{CuO}, 2\text{SeO}_4 + 4\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Bogdan, Bull. Soc. (3) 9. 588.)  
+5 $\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . (Metzner, C. R. 1898, 127. 55.)

Cupric selenate,  $\text{CuSeO}_4 \cdot 5\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$ :—

257 g. salt in 1 l. sat. solution at 15°.

346 " " " 1 " " 35°

435 " " " 1 " " 55°

Aq. solution decomp. at 70°. (Metzner, C. R. 1898, 127. 55.)

+ $\text{H}_2\text{O}$ , and +2 $\text{H}_2\text{O}$ . (Metzner.)

Cupric hydrazine selenate,  $\text{N}_2\text{H}_4 \cdot \text{H}_2\text{SeO}_4, \text{CuSeO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .

Decomp. in aq. solution (Rimini, C. C. 1907, I. 86.)

Cupric magnesium selenate, $\text{CuMg}_2(\text{SeO}_4)_4 + 28\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ . (Wohlwill.)	Glucinum selenate, $\text{HfSeO}_4 + 4\text{H}_2\text{O}$ Very sol in $\text{H}_2\text{O}$ (Atterberg.)
Cupric nickel selenate, $\text{CuSeO}_4$ , $\text{NiSeO}_4 + 14\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ . (Wohlwill.)	Gold (auric) selenate, $\text{Au}_2(\text{SeO}_4)_3$ . Insol in $\text{H}_2\text{O}$ Sol in hot conc. $\text{H}_2\text{SeO}_4 + \text{Aq}$ Somewhat sol. in $\text{H}_2\text{SO}_4$ and $\text{HNO}_3 + \text{Aq}$ . Decomp. by $\text{HCl} + \text{Aq}$ . (Lenher, J. Am. Chem. Soc. 1902, 24, 355.)
Cupric potassium selenate, $\text{CuSeO}_4$ , $\text{K}_2\text{SeO}_4 + 6\text{H}_2\text{O}$ . Sl. sol. in $\text{H}_2\text{O}$ . (Topsoe.)	Indium selenate, $\text{In}_2(\text{SeO}_4)_3 + 10\text{H}_2\text{O}$ Hygroscopic; easily sol in $\text{H}_2\text{O}$ (Mathers, J. Am. Chem. Soc. 1908, 30, 214.)
Cupric zinc selenate, $\text{CuZn}_2(\text{SeO}_4)_4 + 28\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ (Wohlwill.)	Iron (ferrous) selenate, $\text{FeSeO}_4 + 5\text{H}_2\text{O}$ . Sol in $\text{H}_2\text{O}$ (Wohlwill, A. 114, 169) $+ 7\text{H}_2\text{O}$ Efflorescent, and sol in $\text{H}_2\text{O}$ . (Topsoe.)
Cupric selenate ferrous sulphate, $2\text{CuSeO}_4$ , $3\text{FeSO}_4 + 35\text{H}_2\text{O}$ . Sol in $\text{H}_2\text{O}$ (Wohlwill.)	Iron (ferrous) potassium selenate, $\text{FeSeO}_4$ , $\text{K}_2\text{SeO}_4 + 6\text{H}_2\text{O}$ . Easily sol. in $\text{H}_2\text{O}$ . Solution decomp. somewhat on standing. (Topsoe.)
Cupric selenate magnesium sulphate, $\text{CuSeO}_4$ , $3\text{MgSO}_4 + 28\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ . (Wohlwill.)	Iron (ferric) rubidium selenate, $\text{Rb}_2\text{Fe}_2(\text{SeO}_4)_4 + 24\text{H}_2\text{O}$ . Sl. sol. in $\text{H}_2\text{O}$ . (Roncogliolo, Gazz. ch. it. 1905, 35, (2) 553.)
Cupric selenate zinc sulphate, $\text{CuSeO}_4$ , $3\text{ZnSO}_4 + 28\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ . (Wohlwill.)	Iron (ferric) selenate potassium sulphate, $\text{Fe}_2(\text{SeO}_4)_3$ , $\text{K}_2\text{SO}_4 + 24\text{H}_2\text{O}$ . Sol in $\text{H}_2\text{O}$ . (v. Gerichten.)
Didymium selenate, $\text{Dy}_2(\text{SeO}_4)_3 + 5\text{H}_2\text{O}$ , and $6\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ . $+ 8\text{H}_2\text{O}$ Easily sol. in $\text{H}_2\text{O}$ . (Cleve.) $+ 10\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ . (Cleve.)	Lanthanum selenate, $\text{La}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$ , and $10\text{H}_2\text{O}$ . Easily sol. in cold $\text{H}_2\text{O}$ . (Cleve) $+ 12\text{H}_2\text{O}$ . (Frerichs and Smith, A. 191, 355.)
Didymium potassium selenate, $\text{Dy}_2(\text{SeO}_4)_3$ , $\text{K}_2\text{SeO}_4 + 9\text{H}_2\text{O}$ . Not deliquescent Easily sol. in $\text{H}_2\text{O}$ . (Cleve)	Lanthanum potassium selenate, $\text{La}_2(\text{SeO}_4)_3$ , $\text{K}_2\text{SeO}_4 + 9\text{H}_2\text{O}$ . Quite sol. in $\text{H}_2\text{O}$ . (Cleve.)
Didymium sodium selenate, $\text{Dy}_2(\text{SeO}_4)_3$ , $\text{Na}_2\text{SeO}_4 + 4\text{H}_2\text{O}$ . Easily sol in $\text{H}_2\text{O}$ . (Cleve)	Lanthanum sodium selenate, $\text{La}_2(\text{SeO}_4)_3$ , $\text{Na}_2\text{SeO}_4 + 4\text{H}_2\text{O}$ . Easily sol. in $\text{H}_2\text{O}$ . (Cleve)
Dysprosium selenate, $\text{Dy}_2(\text{SeO}_4)_3 + 8\text{H}_2\text{O}$ . Easily sol. in $\text{H}_2\text{O}$ ; insol. in alcohol. (Jantsch, B. 1911, 44, 1275.)	Lead selenate, basic, $2\text{PbO}$ , $\text{SeO}_2$ . Decomp. by acids with separation of $\text{PbSeO}_4$ . $3\text{PbO}$ , $\text{PbSeO}_4 + \text{H}_2\text{O}$ . Ppt. (Strömholm, Z. anorg. 1904, 38, 443.)
Erbium selenate, $\text{Er}_2(\text{SeO}_4)_3 + 8\text{H}_2\text{O}$ , and $9\text{H}_2\text{O}$ . Easily sol in $\text{H}_2\text{O}$ . (Topsoe)	Lead selenate, $\text{PbSeO}_4$ . Insol. in $\text{H}_2\text{O}$ or $\text{HNO}_3 + \text{Aq}$ . (Schafarik, W. A. B. 47, 256) Min. <i>Kerselenate</i>
Erbium potassium selenate, $\text{Er}_2(\text{SeO}_4)_3$ , $\text{K}_2\text{SeO}_4 + 8\text{H}_2\text{O}$ . Easily sol. in $\text{H}_2\text{O}$ . (Cleve)	Lithium selenate, $\text{Li}_2\text{SeO}_4 + \text{H}_2\text{O}$ . Not deliquescent. Easily sol. in $\text{H}_2\text{O}$ . (Topsoe.)
Gadolinium selenate, $\text{Gd}_2(\text{SeO}_4)_3 + 10\text{H}_2\text{O}$ . Decomp. in the air. (Benedicks, Z. anorg. 1900, 22, 410.)	
Gadolinium potassium selenate, $\text{Gd}_2(\text{SeO}_4)_3$ , $3\text{K}_2\text{SeO}_4 + 4\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ . (Benedicks, Z. anorg. 1900, 22, 412)	

**Magnesium selenate,  $\text{MgSeO}_4 \cdot 6\text{H}_2\text{O}$ .**

Solubility resembles closely that of  $\text{MgSO}_4$  (Topsoë.)

**Magnesium potassium selenate,  $\text{MgK}_2(\text{SeO}_4)_2 \cdot 6\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$  (Topsoë.)

**Magnesium rubidium selenate,  $\text{MgSeO}_4 \cdot \text{Rb}_2\text{SeO}_4 \cdot 6\text{H}_2\text{O}$** 

(Tutton, Chem. Soc. 1905, 87, 1163)

**Manganous selenate,  $\text{MnSeO}_4 \cdot 2\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Topsoë.)  
+  $5\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . Solution  
decomp on warming or standing (Topsoë)

**Manganous potassium selenate,  $\text{K}_2\text{SeO}_4 \cdot \text{MnSeO}_4$ .**

Not deliquescent. Easily sol. in  $\text{H}_2\text{O}$  (Topsoë)

**Mercurous selenate,  $6\text{Hg}_2\text{O}, 5\text{SeO}_2$ .**

Very sl sol. in  $\text{H}_2\text{O}$ . Sl attacked by boiling  $\text{HNO}_3$ . Insol. in  $\text{HCl} + \text{Aq}$ . (Köhler, Pogg. 89, 146)

$\text{Hg}_2\text{SeO}_4$ . Very sl. sol. in  $\text{H}_2\text{O}$ ; insol. in  $\text{HCl} + \text{Aq}$ . (Cameron and Davy, C N 44, 63.)

**Mercuric selenate, basic,  $6\text{HgO}, 2\text{SeO}_2 + \text{H}_2\text{O}$** 

Insol. in  $\text{H}_2\text{O}$ , or cold  $\text{HNO}_3 + \text{Aq}$ . Sol. in hot  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq}$ . (Köhler)

$\text{HgSeO}_4, 2\text{HgO}$ . Sol. in 10,330 pts  $\text{H}_2\text{O}$  (Cameron and Davy.)

**Mercuric selenate,  $\text{HgSeO}_4 + \text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  with formation of basic salt. (Köhler.)

Sol. in  $\text{H}_2\text{SeO}_4, \text{H}_2\text{SO}_4, \text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ , but decomp. by  $\text{H}_2\text{O}$  to  $2\text{HgO}, \text{HgSeO}_4$ . (Cameron and Davy, C. N. 44, 63.)

**Nickel selenate,  $\text{NiSeO}_4 \cdot 6\text{H}_2\text{O}$ .**

Very easily sol. in  $\text{H}_2\text{O}$ . (v. Hauer, W. A B 39, 305.)

**Nickel potassium selenate,  $\text{NiSeO}_4, \text{K}_2\text{SeO}_4 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Nickel thallium selenate,  $\text{NiSeO}_4, \text{Th}_2\text{SeO}_4 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Petersson.)

**Platinum selenate.**

Sol. in boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . Insol. in alcohol (Cameron and Macallan, Lond. R. Soc. Proc 46, 13)

**Potassium selenate,  $\text{K}_2\text{SeO}_4$ .**

Nearly equally sol. in cold and hot  $\text{H}_2\text{O}$ . (Mitscherlich, Pogg. 9, 623.)

100 g  $\text{H}_2\text{O}$  dissolve 110.5 g.  $\text{K}_2\text{SeO}_4$  at  $0^\circ$ ; 112.8 g. at  $20^\circ$ , 122.2 g. at  $100^\circ$ . (Étard, C. R. 1888, 106, 741)

51.5	51.7	52.0% $\text{K}_2\text{SeO}_4$

$18^\circ$	$97^\circ$
52.6	54.9% $\text{K}_2\text{SeO}_4$

(Étard, A. ch. 1894, (7) 2, 550)

100 g.  $\text{H}_2\text{O}$  at  $12^\circ$  dissolve 115.0 g.  $\text{K}_2\text{SeO}_4$ . (Tutton, Chem. Soc. 1897, 71, 850)

Sp. gr of  $\text{K}_2\text{SeO}_4 + \text{Aq}$  at  $20^\circ$  compared with  $\text{H}_2\text{O}$  at  $4^\circ$ , containing:

% $\text{K}_2\text{SeO}_4$	35.76	41.79	50.00
Sp. gr	1.3591	1.4385	1.5590

(Tutton, Chem. Soc. 1897, 71, 851.)

**Potassium hydrogen selenate,  $\text{KHSO}_4$ .**

Sol. in  $\text{H}_2\text{O}$ .

**Potassium praseodymium selenate,  $3\text{K}_2\text{SeO}_4, \text{Pr}_2(\text{SeO}_4)_3 + 4\text{H}_2\text{O}$ .**

Sl sol. in  $\text{H}_2\text{O}$ . (von Scheele, Z. anorg. 1898, 18, 361)

**Potassium samarium selenate,  $\text{K}_2\text{SeO}_4, \text{Sm}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$** 

Easily sol. in  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 43, 166.)

**Potassium sodium selenate,  $3\text{K}_2\text{SeO}_4, \text{Na}_2\text{SeO}_4$** 

Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Potassium thallium selenate,  $\text{K}_2\text{SeO}_4, \text{Th}_2(\text{SeO}_4)_3 + 8\text{H}_2\text{O}$ .**

Very sol. in dil. acids. (Fortini, C. C. 1903, II, 705.)

**Potassium uranyl selenate,  $\text{K}_2\text{SeO}_4, (\text{UO}_2)\text{SeO}_4 + 2\text{H}_2\text{O}$ .**

Sl sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Sendtner.)

**Potassium yttrium selenate,  $\text{K}_2\text{SeO}_4, \text{Y}_2(\text{SeO}_4)_3 + 6\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Potassium zinc selenate,  $\text{K}_2\text{SeO}_4, \text{ZnSeO}_4 + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

+  $6\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Topsoë.)

**Potassium selenate aluminum sulphate,  $\text{K}_2\text{SeO}_4, \text{Al}_2(\text{SO}_4)_3 + 24\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (v. Gerichten)

Potassium selenate chromic sulphate,  
 $K_2SeO_4, Cr_2(SO_4)_3 + 24H_2O$ .  
 Sol. in  $H_2O$ . (v. Gerichten.)

Potassium selenate ferric sulphate,  $K_2SeO_4, Fe_2(SO_4)_3 + 24H_2O$ .  
 Sol. in  $H_2O$ . (v. Gerichten.)

Potassium selenate manganous sulphate,  
 $K_2SeO_4, MnSO_4 + 6H_2O$ .  
 Sol. in  $H_2O$ . (v. Gerichten, A. 168. 225)

Potassium selenate manganic sulphate,  
 $K_2SeO_4, Mn_2(SeO_4)_3 + 24H_2O$ .  
 Sol. in  $H_2O$ . (v. Gerichten.)

Praseodymium selenate,  $Pr_2(SeO_4)_3$   
 Sol. in  $H_2O$ . (von Schule, Z. anorg. 1898,  
 18, 360.)  
 $+8H_2O$ . Sl. sol. in  $H_2O$ ; sol. in  $H_2SO_4$ .  
 (von Schule.)

Rubidium selenate,  $Rb_2SeO_4$ .  
 Sol. in  $H_2O$ . (Petersson)  
 100 g.  $H_2O$  at  $12^\circ$  dissolve 158.9 g.  $Rb_2SeO_4$ .  
 (Tutton, Chem. Soc. 1897, 71. 850)  
 Sp. gr. of  $Rb_2SeO_4 + Aq$  at  $20^\circ$  compared  
 with  $H_2O$  at  $4^\circ$ , containing:  

% $Rb_2SeO_4$	40.60	47.07
Sp. gr.	1.4688	1.5806

 (Tutton.)

Rubidium hydrogen selenate,  $RbHSeO_4$ .  
 Sol. in equal pts.  $H_2O$ ; very hygroscopic.  
 (Norris, Am. Ch. J. 1901, 26. 321)

Rubidium zinc selenate,  $Rb_2Zn(SeO_4)_2 + 6H_2O$ .  
 (Tutton, Zeit. Kryst. 1900, 33. 8.)

Samarium selenate,  $Sm_2(SeO_4)_3 + 8H_2O$ .  
 More sol. in  $H_2O$  than  $Sm_2(SO_4)_3$ .  
 $+12H_2O$ . Efflorescent. (Cleve)

Scandium selenate,  $Sc_2(SeO_4)_3 + 2H_2O$ , and  
 $+8H_2O$ .  
 (Crookes, Roy. Soc. Proc. 1908, 80, A.  
 518.)

Silver selenate,  $Ag_2SeO_4$ .  
 As  $Ag_2SO_4$ . (Mitscherlich, Pogg. 12. 138.)

Silver selenate ammonia,  $Ag_2SeO_4, 4NH_3$ .  
 Easily sol. in  $H_2O$  or  $NH_4OH + Aq$  without  
 decomp. (Mitscherlich, Pogg. 12. 141.)

Sodium selenate,  $Na_2SeO_4$ .  
 Very sol. in  $H_2O$ , forming supersat. solu-  
 tions. Cryst. also with  $10H_2O$ , which  
 effloresce. Maximum point of solubility is  
 at  $33^\circ$ . (Mitscherlich.)

# Solubility in $H_2O$ at $t^\circ$ .

$t^\circ$	% $Na_2SeO_4$	Mols $H_2O$ to 1 mol $Na_2SeO_4$	Mols anhy- drous salt to 100 mols $H_2O$
35 2	45 47	12 59	7.94
39 5	45 26	12. 70	7.87
50	44 49	13 10	7.63
75	42 83	14 00	7.14
100	42 14	14 42	6.93

(Funk, B. 1900, 33. 3697.)

# $+10H_2O$ Solubility in $H_2O$ at $t^\circ$ .

$t^\circ$	% $Na_2SeO_4$	Mols $H_2O$ to 1 mol $Na_2SeO_4$	Mols anhy- drous salt to 100 mols $H_2O$
0	11 74	79.08	1.26
15	25 01	31 48	3.18
25 2	36 91	17 95	5.57
27	39 18	16 30	6.13
30	44 05	13 33	7.50

(Funk.)

Sp. gr. of sat. solution at  $18^\circ = 1.315$ .  
 (Funk.)

Sodium selenate vanadate.  
 See Selenovanadate, sodium.

Strontium selenate,  $SrSeO_4$ .  
 Insol. in  $H_2O$  or  $HNO_3 + Aq$ ; decomp. by  
 long boiling with  $HCl + Aq$

Tellurium selenate,  $2TeO_2, SeO_3$ .  
 As sulphate. (Metzner, A. ch. 1898, (7)  
 16. 203)

Thallous selenate,  $Tl_2SeO_4$ .  
 Sl. sol. in cold, much more in hot  $H_2O$ .  
 Insol. in alcohol and ether. (Kuhmann.)  
 100 g.  $H_2O$  dissolve 2.13 g. at  $9.3^\circ$ ; 2.4 g.  
 at  $12^\circ$ ; 10.86 g. at  $100^\circ$ . (Tutton, Proc.  
 Roy. Soc. 1907, 79. A. 351.)  
 28 g. are sol. in 100 g.  $H_2O$  at  $20^\circ$ , 8.5 g.  
 at  $80^\circ$ . (Glauser, Z. anorg. 1910, 66. 437.)

Thallous hydrogen selenate,  $HTlSeO_4 + 3H_2O$ .  
 (Oettinger.)

Thallous zinc selenate,  $Tl_2SeO_4, ZnSeO_4 + 6H_2O$ .  
 Easily sol. in  $H_2O$ , but less than the cor-  
 responding sulphate. (Werther, Bull. Soc.  
 1865. 60.)

Thorium selenate,  $Th(SeO_4)_4 + 9H_2O$ .  
 100 pts.  $H_2O$  dissolve 0.498 pt.  $Th(SeO_4)_4$   
 at  $0^\circ$ , and 1.972 pts. at  $100^\circ$ . (Cleve.)

Tin (stannic) selenate, basic,  $\text{SnO}(\text{SeO}_4) + \text{H}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 231)

Uranyl selenate,  $(\text{UO}_2)_2\text{SeO}_4, \text{H}_2\text{SeO}_4 + 18\text{H}_2\text{O}$ .

Very deliquescent.  
 $2(\text{UO}_2)_2\text{SeO}_4, \text{H}_2\text{SeO}_4 + 12\text{H}_2\text{O}$  Efflorescent. Sol. in  $\text{H}_2\text{O}$  (Sendtner, A. 195. 325.)

Ytterbium selenate,  $\text{Yb}_2(\text{SeO}_4)_3$ .

Anhydrous.  
 $+15\text{H}_2\text{O} (?)$ ,  $+8\text{H}_2\text{O}$  Ppt. (Cleve, Z anorg 1902, 32. 145)

Yttrium selenate,  $\text{Y}_2(\text{SeO}_4)_3$

Anhydrous Sol. in  $\text{H}_2\text{O}$  with hissing and evolution of heat. (Popp)  
 $+8\text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$ . (Cleve.)  
 $+9\text{H}_2\text{O}$  Efflorescent.

Zinc selenate,  $\text{ZnSeO}_4 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Topsos)  
 $+6\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Topsos.)  
 $+7\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ .

Selenious acid,  $\text{H}_2\text{SeO}_3$ .

Deliquescent in moist, efflorescent in dry air. Very sol. in cold, and in nearly every proportion in hot  $\text{H}_2\text{O}$  Easily sol. in alcohol. (Berzelius)

Sp gr of  $\text{H}_2\text{SeO}_3$  and of  $\text{H}_2\text{SeO}_3 + \text{Aq}$  at  $t^\circ$   
 Two series of experiments.

	$t^\circ$	Sp. gr at $t^\circ$
$\text{H}_2\text{SeO}_3 + \text{Aq}$ (A)	18 0	1.4386

(de Connock, C. C. 1905, I. 1693.)

See also Selenious dioxide.

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830)

Selenites.

Alkali selenites are sol. in  $\text{H}_2\text{O}$ . The other neutral selenites are insol. in  $\text{H}_2\text{O}$ , but sol. in  $\text{HNO}_3 + \text{Aq}$ , Pb, and Ag salts slowly. The

neutral salts are insol. in  $\text{HCl} + \text{Aq}$ . The acid salts of the heavy metals are sol. in  $\text{H}_2\text{O}$ .

Aluminum selenite, basic,  $4\text{Al}_2\text{O}_3, 9\text{SeO}_2 + 36\text{H}_2\text{O}$ .

Precipitato. (Nilson, Upsala, 1876.)

Aluminum selenite,  $\text{Al}_2(\text{SeO}_3)_3$ .

Precipitato. (Berzelius)  
 $+7\text{H}_2\text{O}$ . Sl sol. in  $\text{H}_2\text{O}$ . (Nilson.) Sol. in  $\text{H}_2\text{SeO}_3 + \text{Aq}$ .  
 $+3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Boutzoureano, A. ch (6) 17. 289.)

Aluminum selenite, acid,  $\text{Al}_2\text{O}_3, 4\text{SeO}_2 + 3\text{H}_2\text{O}$

(Boutzoureano)  
 $2\text{Al}_2\text{O}_3, 9\text{SeO}_2 + 12\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Nilson.)  
 $\text{Al}_2\text{O}_3, 6\text{SeO}_2$  Very sol. in  $\text{H}_2\text{O}$ . (Berzelius)  
 $+5\text{H}_2\text{O}$ . (Nilson.)  
 $+2\text{H}_2\text{O}$ . (Boutzoureano.)

Ammonium selenite,  $(\text{NH}_4)_2\text{SeO}_3$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ .  
 Precipitated from aqueous solution by alcohol. Insol. in ether. (Muspratt, A. 70. 275)

Ammonium hydrogen selenite,  $\text{NH}_4\text{HSeO}_3$ .

Not deliquescent Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

Ammonium trihydrogen selenite,

$\text{NH}_4\text{H}_2(\text{SeO}_3)_3$ .

Deliquescent. (Berzelius.)

Ammonium vanadium selenite.

See Vanadiouselenite, ammonium.

Ammonium uranyl selenite,  $(\text{NH}_4)_2\text{SeO}_3$ ,  $(\text{UO}_2)_2\text{SeO}_3$ .

Completely insol. in  $\text{H}_2\text{O}$ . (Sendtner)

Antimony selenite,  $\text{Sb}_2(\text{SeO}_3)_3, \text{SeO}_2$

(Nilson, Bull. Soc. (2) 23. 494.)

Barium selenite,  $\text{BaSeO}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{SeO}_3 + \text{Aq}$ . So in acids. (Nilson)  
 $+ \text{H}_2\text{O}$  (Nilson)

Barium pyroselenite,  $\text{BaSe}_2\text{O}_6$

Very sl. sol. in cold, more in warm  $\text{H}_2\text{O}$ . (Berzelius)

Bismuth selenite,  $\text{Bi}_2(\text{SeO}_3)_3, \text{H}_2\text{SeO}_3$ .

(Nilson)

$\text{Bi}_2(\text{SeO}_3)_3$ . (Nilson.)

Cadmium selenite,  $\text{CdSeO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{SeO}_3 + \text{Aq}$ . (Muspratt, Chem Soc. 2. 65.)

$2\text{CdO}$ ,  $3\text{SeO}_2 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , sol. in acids. (Boutzoureano.)  
 $+ \frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids (Boutzoureano.)

Cadmium selenite ammonia,  $\text{CdSeO}_3, \text{NH}_3$ .  
 Insol. in cold or hot  $\text{H}_2\text{O}$ . (Boutzoureano, A. ch. (6) 17. 289.)

Calcium selenite,  $\text{CaSeO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .  
 Very sl. sol in  $\text{H}_2\text{O}$ . (Berzelius) More sol. in  $\text{H}_2\text{SeO}_3 + \text{Aq}$ .  
 $+ 2\text{H}_2\text{O}$ . (Nilson.)

Calcium hydrogen selenite,  $\text{CaH}_2(\text{SeO}_3)_2 + \text{H}_2\text{O}$ .  
 Quite sol. in  $\text{H}_2\text{O}$ . (Nilson.)  
 $\text{Ca}_2\text{H}_2\text{Se}_2\text{O}_{11}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Nilson.)

Cerous selenite, basic,  $2\text{Ce}_2\text{O}_3, 5\text{SeO}_2 + 30\text{H}_2\text{O}$ .  
 Precipitate. (Nilson.)

Cerous selenite,  $\text{Ce}_2(\text{SeO}_3)_3 + 3\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ . Sol. in much selenious acid. (Jolin.)  
 $+ 12\text{H}_2\text{O}$ . (Nilson.)

Cerous selenite, acid,  $\text{Ce}_2\text{O}_3, 4\text{SeO}_2 + 5$ , or 6  $\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$ , but sol. in selenious, and other acids. (Jolin.)  
 $\text{Ce}_2\text{O}_3, 6\text{SeO}_2 + 5\text{H}_2\text{O}$ . Not decomp. by  $\text{H}_2\text{O}$ . (Nilson.)

Ceric selenite,  $\text{Ce}(\text{SeO}_3)_2$ .  
 Insol. in  $\text{H}_2\text{O}$ .  
 Sl. sol. in conc.  $\text{HNO}_3$ . Sol. in dil. acids. Sol. in  $\text{H}_2\text{O}_2 + \text{Aq}$ . (Barbicri, B. 1910, 43. 2215.)

Chromium selenite, basic,  $4\text{Cr}_2\text{O}_3, 9\text{SeO}_2 + 64\text{H}_2\text{O}$ .  
 Precipitate. (Nilson.)

Chromic selenite,  $\text{Cr}_2(\text{SeO}_3)_3 + 3\text{H}_2\text{O}$ .  
 (Boutzoureano.)  
 $+ 15\text{H}_2\text{O}$ . (Nilson.)  
 Very sl. sol. or insol. in  $\text{H}_2\text{O}$ , sl. sol. in  $\text{H}_2\text{SeO}_3 + \text{Aq}$ ; sol. in hot conc.  $\text{HCl} + \text{Aq}$  (Taquet, C. R. 96. 107.)

Chromic selenite, acid,  $\text{Cr}_2\text{O}_3, 4\text{SeO}_2 + 13\text{H}_2\text{O}$ .  
 Slowly sol. in  $\text{HCl} + \text{Aq}$  Insol. in  $\text{H}_2\text{O}$ . (Nilson.)  
 $\text{Cr}_2\text{O}_3, 5\text{SeO}_2 + 9\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Nilson.)

Chromic diselenite.  
 Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Taquet, C. R. 97. 1435.)

Cobaltous selenite,  $\text{CoSeO}_3$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Berzelius)  
 $+ \frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Boutzoureano, A. ch. (6) 17. 289)

Cobaltous hydrogen selenite,  $\text{CoH}_2(\text{SeO}_3)_2$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)  
 $+ 2\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  with decomp. (Boutzoureano.)

Cuprous selenite.  
 Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Berzelius)

Cupric selenite, basic,  $2\text{CuO}, \text{SeO}_2$ .  
 Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Boutzoureano)  
 Sol. in acids.

Cupric selenite,  $\text{CuSeO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{SeO}_3 + \text{Aq}$ . (Berzelius.)  
 $+ \text{H}_2\text{O}$ , and  $2\text{H}_2\text{O}$ . (Boutzoureano.)  
 $+ 2\text{H}_2\text{O}$  Min. *Chalcocite* Insol. in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{SeO}_3 + \text{Aq}$ . (Friedel and Sarasin, Zent. Kryst 1881, 6. 300.)

Cupric selenite, acid,  $\text{CuO}, 2\text{SeO}_2 + \text{H}_2\text{O} = \text{CuH}_2(\text{SeO}_3)_2$ .  
 Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Nilson)  
 $+ 2\text{H}_2\text{O}$ . As above (Boutzoureano.)  
 $+ 4\text{H}_2\text{O}$  As above. (B.)

Cupric selenite ammonia,  $\text{CuSeO}_3, \text{NH}_3 + \text{H}_2\text{O}$ .  
 Decomp. by  $\text{H}_2\text{O}$ . (Boutzoureano, A. ch. (6) 17. 289.)

Didymium selenite, basic,  $3\text{D}_2\text{O}_3, 8\text{SeO}_2 + 28\text{H}_2\text{O}$ .  
 Precipitate. (Nilson.)  
 $+ 21\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  (Cleve, Bull. Soc. (2) 43. 363.)

Didymium selenite,  $\text{D}_2(\text{SeO}_3)_2 + 6\text{H}_2\text{O}$ .  
 Precipitate. (Smith.)

Didymium selenite, acid,  $\text{D}_2\text{O}_3, 4\text{SeO}_2 + 5\text{H}_2\text{O}$ .  
 Precipitate (Cleve.)  
 Composition is  $\text{D}_2(\text{SeO}_3)_2 + 6\text{H}_2\text{O}$ . (Smith.)  
 $+ 9\text{H}_2\text{O}$ . (Nilson.)  
 $2\text{D}_2\text{O}_3, 9\text{SeO}_2 + 18\text{H}_2\text{O}$ . (Nilson.)

Erbium selenite,  $\text{Er}_2(\text{SeO}_3)_3 + 5\text{H}_2\text{O}$ , and  $9\text{H}_2\text{O}$ .  
 Precipitate. (Nilson.)

Erbium hydrogen selenite,  $\text{Er}_2\text{H}_2(\text{SeO}_3)_4 + 4\text{H}_2\text{O}$ .  
 Decomp. by hot  $\text{H}_2\text{O}$

- Gadolinium hydrogen selenite**,  $\text{Gd}_2(\text{SeO}_3)_3 \cdot \text{H}_2\text{SeO}_3 + 6\text{H}_2\text{O}$ .  
Ppt. (Benedicks, Z anorg. 1900, 22, 413.)
- Glucinum selenite, basic**,  $5\text{GfO} \cdot 2\text{SeO}_2 + 10\text{H}_2\text{O}$ .  
Precipitate (Nilson.) According to Atterberg, is  $7\text{GfO} \cdot 3\text{SeO}_2 + 14\text{H}_2\text{O}$ .  
 $2\text{GfO} \cdot \text{SeO}_2 + 4\text{H}_2\text{O}$ . (Atterberg, Bull. Soc. (2) 19, 497.)  
 $3\text{GfO} \cdot 2\text{SeO}_2 + 6\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  (Atterberg.)
- Glucinum selenite**,  $\text{GfSeO}_4 + 2\text{H}_2\text{O}$ .  
Sol. in little  $\text{H}_2\text{O}$ , decomp. by excess. (Nilson.)
- Glucinum selenite, acid**.  
(a)  $3\text{GfO} \cdot 5\text{SeO}_2 + 3\text{H}_2\text{O}$ ; (b)  $\text{GfO} \cdot 2\text{SeO}_2 + \text{H}_2\text{O}$ ; (c)  $3\text{GfO} \cdot 7\text{SeO}_2 + 5\text{H}_2\text{O}$ ; (d)  $\text{GfO} \cdot 3\text{SeO}_2 + 2\text{H}_2\text{O}$ . All are very sl. sol. in cold or warm  $\text{H}_2\text{O}$ . a, b, and c are sol. in warm  $\text{H}_2\text{O}$  containing  $\text{HCl}$ ; d is sol. only in boiling dil.  $\text{HCl} + \text{Aq}$ . (Nilson.)
- Indium selenite, basic**,  $\text{In}_3\text{Se}_2\text{O}_{16} + 64\text{H}_2\text{O}$ . (Nilson.)
- Indium selenite**,  $\text{In}_2(\text{SO}_3)_2 + 6\text{H}_2\text{O}$ .  
Sl. sol. in  $\text{H}_2\text{O}$ . (Nilson.)
- Indium hydrogen selenite**,  $\text{In}_2(\text{SeO}_3)_2 \cdot 3\text{H}_2\text{SeO}_3 + 4\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Nilson.)  
 $2\text{In}_2(\text{SeO}_3)_2 \cdot 3\text{H}_2\text{SeO}_3 + 12\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Nilson.)
- Iron (ferrous) selenite**.  
Ppt. Sol. in  $\text{HCl} + \text{Aq}$  with partial separation of Se. (Berzelius.)
- Iron (ferrous) hydrogen selenite**.  
Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)
- Iron (ferric) selenite, basic**,  $2\text{Fe}_2\text{O}_3 \cdot 3\text{SeO}_2 + x\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ . (Berzelius.)  
 $\text{Fe}_2\text{O}_3 \cdot 2\text{SeO}_2$ . Insol. in  $\text{H}_2\text{O}$ , easily sol. in acids. (Boutzoureano, A. ch. (6) 17, 289.)  
 $3\text{Fe}_2\text{O}_3 \cdot 8\text{SeO}_2 + 28\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Nilson.)
- Iron (ferric) selenite**,  $\text{Fe}_2(\text{SeO}_3)_3 + 4\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ . (Muspratt, Chem. Soc. 2, 52.)  
 $+ \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Boutzoureano, A. ch. (6) 17, 289.)  
 $+ 3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (B.)  
 $+ 10\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (B.)
- Iron (ferric) selenite, acid**,  $\text{Fe}_2\text{O}_3 \cdot 6\text{SeO}_2 + x\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$  (Berzelius.)  
 $+ 2\text{H}_2\text{O}$  (Boutzoureano, A. ch. (6) 17, 289.)  
 $\text{Fe}_2\text{O}_3 \cdot 4\text{SeO}_2 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , sol. in acids (Boutzoureano.)
- Lanthanum selenite, basic**,  $3\text{La}_2\text{O}_3 \cdot 8\text{SeO}_2 + 28\text{H}_2\text{O}$ .  
Precipitate. (Nilson.)
- Lanthanum selenite**,  $\text{La}_2(\text{SeO}_3)_3 + 9\text{H}_2\text{O}$ , or  $12\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ . (Nilson.)
- Lanthanum selenite, acid**,  $\text{La}_2\text{H}_4(\text{SeO}_3)_6 + 4\text{H}_2\text{O}$ .  
(Nilson.)  
 $\text{La}_2\text{H}_2(\text{SeO}_3)_4 + 2\text{H}_2\text{O}$ . (Cleve.)
- Lead selenite**,  $\text{PbSeO}_3$ .  
Scarcely sol. in  $\text{H}_2\text{O}$ , even when it contains  $\text{H}_2\text{SeO}_3$ . Sl. sol. in  $\text{HNO}_3 + \text{Aq}$ . (Berzelius.)
- Lithium selenite**,  $\text{Li}_2\text{SeO}_3 + \text{H}_2\text{O}$ .  
Difficultly sol. in  $\text{H}_2\text{O}$ . (Nilson, Bull. Soc. (2) 21, 253.)
- Lithium hydrogen selenite**,  $\text{LiHSO}_3$ .  
Very sol. in  $\text{H}_2\text{O}$ . (Nilson.)
- Lithium trihydrogen selenite**,  $\text{LiH}_3(\text{SeO}_3)_2$ .  
Not deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Nilson.)
- Lithium vanadium selenite**.  
See Vanadioselenite, lithium.
- Magnesium selenite**,  $\text{MgSeO}_3 + 2\text{H}_2\text{O}$ .  
Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids, especially if warm, also in  $\text{H}_2\text{SeO}_3 + \text{Aq}$ . (Boutzoureano, A. ch. (6) 18, 302.)  
 $+ 3\text{H}_2\text{O}$ . Very sl. sol. in hot  $\text{H}_2\text{O}$ . (Berzelius.)  
 $+ 6\text{H}_2\text{O}$ . As the  $2\text{H}_2\text{O}$  salt. (Boutzoureano.)  
 $+ 7\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in acetic, and mineral acids. (Hilger, Z. anal. 13, 132.)
- Magnesium hydrogen selenite**,  $\text{MgH}_2(\text{SeO}_3)_2 + 3\text{H}_2\text{O}$ .  
Very deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (Nilson.)  
Insol. in alcohol. (Muspratt.)  
 $\text{MgO} \cdot 2\text{SeO}_2$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in acids. (Boutzoureano.)
- Magnesium tetrahydrogen selenite**,  $\text{MgH}_4(\text{SeO}_3)_3$ , and  $+ 3\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Nilson.)

**Manganous selenite,  $\text{MnSeO}_3 + \text{H}_2\text{O}$ .**

Precipitate (Nilson.)

+  $2\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . (Berzelius)

Sol. in cold  $\text{HCl} + \text{Aq}$ . (Muspratt)

+  $\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Boutzoureano.)

**Manganous selenite, acid,  $\text{MnSe}_2\text{O}_5$ .**

Sol. in  $\text{H}_2\text{O}$ . (Berzelius, Nilson.)

$\text{MnO}$ ,  $2\text{SeO}_2 + \text{H}_2\text{O} = \text{MnH}_2(\text{SeO}_4)_2$  (Boutzoureano, A. ch. (6) 17. 289.)

+  $5\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$  to  $\text{MnSeO}_3$ . (Boutzoureano.)

**Manganic selenite, basic,  $\text{Mn}_2\text{O}_3, 2\text{SeO}_2$ .**

Insol. in  $\text{H}_2\text{O}$ , cold  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3 + \text{Aq}$ , insol. in hot dil.  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3 + \text{Aq}$  (Laugier, C. R. 104. 1508.)

Sol. in warm  $\text{HCl} + \text{Aq}$  with decomp

**Manganic selenite,  $\text{Mn}_2(\text{SeO}_3)_2 + 5\text{H}_2\text{O}$ .**  
(Laugier.)

**Manganic selenite, acid,  $\text{Mn}_2\text{O}_3, 4\text{SeO}_2$**

Insol. in  $\text{H}_2\text{O}$ , cold  $\text{H}_2\text{SO}_4$ , and  $\text{HNO}_3 + \text{Aq}$  Insol. in hot  $\text{H}_2\text{SO}_4$ , and  $\text{HNO}_3 + \text{Aq}$ . Sol. in cold  $\text{HCl} + \text{Aq}$ ; and in  $\text{H}_2\text{SO}_4 + \text{Aq}$  with separation of Se. (Laugier, C. R. 104. 1508.)

**Mercurous selenite, basic,  $3\text{Hg}_2\text{O}, 2\text{SeO}_2 + 5\text{H}_2\text{O}$ .**

(Boutzoureano.)

**Mercurous selenite,  $\text{Hg}_2\text{SeO}_3$**

Insol. in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{SeO}_3 + \text{Aq}$ . Sol. in hot  $\text{HNO}_3 + \text{Aq}$ . (Köhler, Pogg. 89. 146.)

Sl. sol. in  $\text{HCl} + \text{Aq}$ , and  $\text{KOH} + \text{Aq}$  (Berzelius.)

**Mercurous selenite, acid,  $3\text{Hg}_2\text{O}, 4\text{SeO}_2$ .**

Insol. in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{SeO}_3 + \text{Aq}$ . Sl. sol. in boiling  $\text{HNO}_3 + \text{Aq}$ . (Köhler)

**Mercuric selenite, basic,  $7\text{HgO}, 4\text{SeO}_2$ .**

Insol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{HNO}_3 + \text{Aq}$ . Easily sol. in  $\text{HCl} + \text{Aq}$  (Köhler, Pogg. 89. 146.)

**Mercuric selenite,  $\text{HgSeO}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . (Berzelius.) Nearly insol. in  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{K}_2\text{SeO}_3 + \text{Aq}$ . (Divers, Chem. Soc. 48. 585.)

Insol. in dil.  $\text{HNO}_3 + \text{Aq}$ ; sol. in  $\text{HCl} + \text{Aq}$ . (Rosenheim and Pritze, Z. anorg. 1909, 63. 278.)

Solubility in  $\text{Na}_2\text{SeO}_3 + \text{Aq}$  at  $25^\circ$ .

$\text{Na}_2\text{SeO}_3 + \text{Aq}$ Normality	% $\text{HgSeO}_3$
2.0	2.73
1.0	1.39
0.5	0.70
0.25	0.53
0.125	0.32
0.0625	0.18

(Rosenheim and Pritze, Z. anorg. 1909, 63. 281.)

$\text{HgSeO}_3, \text{H}_2\text{SeO}_3$  Easily sol. in  $\text{H}_2\text{O}$ ; very sl. sol. in alcohol. (Berzelius)

See also selenium dioxide.

**Mercuric sodium selenite,  $\text{HgSeO}_3, \text{Na}_2\text{SeO}_3$ .**

Decomp. by  $\text{H}_2\text{O}$  and alkalis with pptn. of  $\text{HgSeO}_3$  (Rosenheim and Pritze, Z. anorg. 1909, 63. 279.)

**Mercuric selenite sodium chloride,  $\text{HgSeO}_3, \text{NaCl} + 2\text{H}_2\text{O}$**

Decomp. by  $\text{H}_2\text{O}$ . (Rosenheim and Pritze, Z. anorg. 1909, 63. 280.)

**Nickel selenite,  $\text{NiSeO}_3 + \text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_2\text{SeO}_3 + \text{Aq}$ . (Muspratt, Chem. Soc. 2. 52.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Boutzoureano, A. ch. (6) 17. 28.)

**Nickel selenite, acid.**

Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Potassium selenite,  $\text{K}_2\text{SeO}_3 + \text{H}_2\text{O}$**

Very deliquescent. Sol. in nearly all proportions in  $\text{H}_2\text{O}$  Insol. in alcohol, which separates it as oil from aqueous solution. (Muspratt, Chem. Soc. 2. 52.)

**Potassium hydrogen selenite,  $\text{KHSeO}_3$ .**

Very deliquescent. Very sl. sol. in alcohol. (Muspratt, Chem. Soc. 2. 52.)

**Potassium trihydrogen selenite,  $\text{KH}_3(\text{SeO}_3)_2$ .**

Very deliquescent. Pptd. from  $\text{H}_2\text{O}$  by alcohol. (Muspratt)

Not deliquescent. (Nilson)

**Potassium hydrogen pyroselenite,  $\text{KHSe}_2\text{O}_5 + \text{H}_2\text{O}$ .**

(Muthmann, B. 1893, 26. 1015.)

**Potassium uranyl selenite,  $\text{K}_2\text{SeO}_3, (\text{UO}_2)_2\text{SeO}_4$ .**

Absolutely insol. in  $\text{H}_2\text{O}$ . (Sendtner.)

**Praseodymium hydrogen selenite,**

$\text{Pr}_2(\text{SeO}_3)_3, \text{H}_2\text{SeO}_3 + 3\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  (von Scheele, Z. anorg. 1898, 18. 362.)

**Samarium selenite, basic,  $3\text{Sm}_2\text{O}_3, 8\text{SeO}_2 + 7\text{H}_2\text{O}$**

Precipitate. (Cleve.)

**Samarium selenite, acid,  $\text{Sm}_2\text{O}_3, 4\text{SeO}_2 + 5\text{H}_2\text{O}$ .**

Precipitate. (Cleve.)

**Scandium selenite,  $\text{Sc}_2(\text{SeO}_3)_2 + \text{H}_2\text{O}$ .**

Insol. precipitate.

Scandium hydrogen selenite,  $\text{Sc}_2(\text{SeO}_3)_3$ ,  $3\text{H}_2\text{SeO}_3$ .

Insol. in  $\text{H}_2\text{O}$  Not attacked by cold dil. acids, but easily if warmed

Silver selenite,  $\text{Ag}_2\text{SeO}_3$ .

Very sl sol. in cold, somewhat more sol in hot  $\text{H}_2\text{O}$ . Easily sol in hot  $\text{HNO}_3 + \text{Aq.}$  from which it is precipitated by  $\text{H}_2\text{O}$ . (Berzelius)

Insol. in  $\text{K}_2\text{SeO}_3 + \text{Aq.}$  sl sol. in dil  $\text{HNO}_3 + \text{Aq.}$  (Divers, Chem. Soc. 49. 585.)

Silver selenite ammonia,  $\text{Ag}_3\text{SeO}_3 \cdot \text{NH}_3$ .

Insol. in boiling  $\text{H}_2\text{O}$ . (Boutzoureano, A. ch. (6) 17. 289.)

Sodium selenite,  $\text{Na}_2\text{SeO}_3$ .

Very sol in  $\text{H}_2\text{O}$  Insol. in alcohol. (Berzelius)  
+  $5\text{H}_2\text{O}$

Sodium selenite, acid,  $\text{NaHSO}_3$ .

Permanent. Sol. in  $\text{H}_2\text{O}$   
 $\text{Na}_2\text{Se}_2\text{O}_5$  Sol in  $\text{H}_2\text{O}$ . (Sacc, A. ch. (3) 21. 119.)  
 $\text{NaHS}_2(\text{SeO}_3)_2$  Not deliquescent Sol in  $\text{H}_2\text{O}$ .

Sodium vanadium selenite.

See Vanadioselenite, sodium.

Strontium selenite,  $\text{SrSeO}_3 + 7\text{H}_2\text{O}$

Precipitate. Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3 + \text{Aq.}$  (Musprratt)

Strontium hydrogen selenite,  $\text{SrH}_2(\text{SeO}_3)_2$

Easily sol. in hot or cold  $\text{H}_2\text{O}$ . (Nilson.)  
Nearly insol. in hot or cold  $\text{H}_2\text{O}$ . (Berzelius.)

Thallous selenite,  $\text{Tl}_2\text{SeO}_3$ .

Easily sol in  $\text{H}_2\text{O}$  Insol in alcohol and ether. (Kuhlmann, Bull. Soc. (2) 1. 330.)

Thallous hydrogen selenite,  $\text{TlHSeO}_3$ .

More sol in  $\text{H}_2\text{O}$  than the above comp. (Kuhlmann)

Thallic selenite,  $\text{Tl}_2(\text{SeO}_3)_3$ .

Insol. in  $\text{H}_2\text{O}$  Sol. in dil.  $\text{HNO}_3$ .  
Easily decomp. by  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$ . (Marino, Z. anorg. 1909, 62. 177.)

Thorium selenite,  $\text{Th}(\text{SeO}_3)_2 + \text{H}_2\text{O}$ , or  $8\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl} + \text{Aq}$  (Nilson.)

Thorium selenite, acid,  $2\text{ThO}_3$ ,  $7\text{SeO}_3 + 16\text{H}_2\text{O}$ .

$\text{ThO}_2$ ,  $5\text{SeO}_3 + 8\text{H}_2\text{O}$ . (Nilson.)

Tin (stannic) selenite.

Insol in  $\text{H}_2\text{O}$ ; sol in  $\text{HCl} + \text{Aq.}$  from which it is pptd by  $\text{H}_2\text{O}$  (Berzelius.)

Uranic selenite,  $\text{U}_2\text{O}_3 \cdot \text{SeO}_3$ .

Insol in  $\text{H}_2\text{O}$ . (Boutzoureano)  
+  $2\text{H}_2\text{O}$ . (B)

Uranic selenite, acid,  $2\text{U}_2\text{O}_3$ ,  $3\text{SeO}_3 + 7\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ . (Boutzoureano, A. ch. (6) 17. 289.)

Uranyl selenite,  $(\text{UO}_2)\text{SeO}_3 + 2\text{H}_2\text{O}$

Precipitate. (Nilson)

Uranyl selenite, acid,  $3\text{UO}_3$ ,  $5\text{SeO}_3 + 7\text{H}_2\text{O}$ , or  $9\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$ .  
 $\text{UO}_3$ ,  $2\text{SeO}_3 + \text{H}_2\text{O} = (\text{UO}_3)_2\text{H}_2(\text{SeO}_3)_2$ .  
Absolutely insol. in  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SeO}_3 + \text{Aq.}$  (Sendtner, A. 195. 325)

Vanadium selenite.

See Vanadioselenious acid.

Ytterbium selenite,  $\text{Yb}_2(\text{SeO}_3)_2$

Insol. precipitate

Ytterbium hydrogen selenite,  $\text{Yb}_2\text{H}_2(\text{SeO}_3)_4 + 4\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$

Yttrium selenite,  $\text{Y}_2(\text{SeO}_3)_3 + 12\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{SeO}_3 + \text{Aq.}$  (Berzelius.)  
Sol in hot  $\text{H}_2\text{SeO}_3 + \text{Aq}$  (Nilson.)

Yttrium hydrogen selenite,  $\text{Y}_2\text{H}_2(\text{SeO}_3)_4 + 3\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  Easily sol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$  (Cleve.)

Zinc selenite,  $\text{ZnSeO}_3$ .

Insol. in  $\text{H}_2\text{O}$ , sol. in acids (Boutzoureano, A. ch. (6) 18. 289.)  
+  $2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{SeO}_3$ , or  $\text{HNO}_3 + \text{Aq.}$  (Musprratt, Chem Soc. 2. 52.)

Zinc hydrogen selenite,  $\text{ZnH}_2(\text{SeO}_3)_2$ .

Easily sol in  $\text{H}_2\text{O}$ . (Berzelius.)  
+  $2\text{H}_2\text{O}$ . Sol in cold  $\text{H}_2\text{O}$ . (Boutzoureano.)  
 $\text{ZnO}$ ,  $4\text{SeO}_3 + 3\text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$ . (Wöhler, A. 63. 279.)

Zinc selenite ammonia,  $\text{ZnSeO}_3 \cdot \text{NH}_3$ .

Insol. in cold or hot  $\text{H}_2\text{O}$ . (Boutzoureano, A. ch. (6) 17. 289)

Zirconium selenite, basic,  $4\text{ZrO}_3$ ,  $3\text{SeO}_3 + 18\text{H}_2\text{O}$

Precipitate. Sl. sol. in  $\text{HCl} + \text{Aq.}$  (Nilson.)

**Zirconium selenite,  $Zr(SeO_3)_2$** 

Absolutely insol. in  $H_2O$ ; difficultly sol. in boiling  $HCl + Aq.$  (Nilson)  
 $+ H_2O.$  (Nilson.)

**Selenium, Se.**

Insol. in  $H_2O$  Schultz (J. pr. (2) 32. 390) has obtained a soluble colloidal modification which can be isolated by dialysis.

Insol. in  $HCl + Aq$  Decomp. by  $HNO_3 + Aq$  Sol. in fuming  $H_2SO_4.$  (Schultz-Sellac, B. 4. 113)

1000 pts.  $CS_2$  dissolve 1 pt. cryst. Se at boiling-point ( $46.6^\circ$ ), and 0.16 pt. at  $0^\circ$  (Mitscherlich, J. B. 1855. 314) Solubility of Se in  $CS_2$  is variable—1 pt. Se is sol. in 1376–2464–3746 pts.  $CS_2$  at  $20^\circ$  (Rummelsberg, B. 7. 609). Cryst. Se, which is sol. in  $CS_2$ , becomes insol. in  $CS_2$  after heating to  $110^\circ$ , but after fusion is again sol. (Otto).

**Four modifications.**—(1) Amorphous red, (2) crystalline red, (3) granular gray, (4) laminated. 1 and 2 are sol. in  $CS_2$ , 3 and 4 are insol. in  $CS_2$ . All forms are sol. in  $SeCl_2$ , from which crystallizes a black modification, insol. in  $CS_2$ .  $CCl_4$  with trace of  $CS_2$  dissolves red Se slightly, black Se not at all  $Se(C_2H_5)_2$  dissolves all modifications in small but apparently equal quantities. (Rathke, A. 152. 181)

According to Saunders (J. phys. Chem. 1900, 4. 428) selenium exists in three modifications.

1. Liquid, including vitreous, amorphous, and colloidal selenium.

**a. Vitreous.**

Sol. in liquid  $NH_3$  at  $25^\circ$  (Franklin, Am. Ch. J. 1898, 20. 820)

Insol. in liquid  $NH_3$  between  $-30^\circ$  and  $+10^\circ$ . Franklin's results are due to impure selenium and not completely dry  $NH_3$ . (Hugot, A. Ch. 1900, (7) 21. 5.)

Almost insol. in  $CS_2$ . (Schutzenberger, Chimie générale 1. 438.)

Action of light increases solubility in  $CS_2$ . (Saunders, J. phys. Chem. 1900, 4. 456)

Solubility in methylene iodide at  $12^\circ$  is 1.3 pts. in 100 (Retgers, Z. anorg. 1893, 3. 343.)

Sol. in  $SeCl_2$ , ethyl selenide, and in ethyl sulphide.

Very sol. in  $Se_2Cl_2$ . (Rathke, A. 1869, 152. 181.)

**b. Amorphous.**

Completely sol. in  $CS_2$  at ord. temp. if Se has not been heated. If heated or extracted with warm  $CS_2$  it becomes partly insol. (Peterson, Z. phys. Chem. 1891, 81. 612.)

Passes into red crystalline form in solution in  $CS_2$ ,  $C_6H_6$ , isobutyric acid, acetophenone, acetone,  $CHCl_3$ , thiophene, toluene, benzonitrile, ethyl acetate, and alcohol. (Saunders, J. phys. Chem. 1900, 4. 463.)

Solution in quinoline, aniline, pyridine,

etc., cause conversion into gray metallic form

**c Colloidal**

Forms colloidal solution with  $H_2O$ .

A colloidal solution of Se in  $H_2O$  can be obtained. It is not decomp. by boiling, but is decomp. by electrolytes with separation of red selenium. (Guthrie, Z. anorg. 1902, 32. 106.)

**2. Red crystalline**

Sol. in  $CS_2$ ,

3 Gray, crystalline or metallic.

Sol. in selenium chloride and other solvents as vitreous Se. (Rathke, A. 1869, 152. 181.)

Sl. sol. in  $CS_2$ , toluene, nitrobenzene, quinoline, aniline, and  $KOH$ . Pptd. from conc.  $KOH + Aq$  in long needles with mp.  $219^\circ$ . (Coste, C. R. 1903, 149. 674.)

Sol. in many organic substances at high temp as quinoline, ethyl benzoate, aniline and naphthalene (Saunders, J. phys. Chem. 1900, 4. 469)

Completely insol. in  $CS_2$ . (Saunders, J. phys. Chem. 1900, 4. 474.)

Solubility of the two modifications of gray crystalline Se in  $CS_2$ :

100 cc. boiling  $CS_2$  dissolve mg. Se

I	II	III
Mg. Se	Mg. Se	Mg. Se
3 2	4 1	2 7
2 8	4 0	2 2
3 6	2 9	1 9
3.3	2 8	1 0
2 2	2 9	2 0
	4 0	

I Se heated 1 hr. at  $140^\circ$ . Modification A

II Modification A.

III Se heated 48 hrs. at  $190^\circ$ – $200^\circ$ . Modification B

(Marc, Z. anorg. 1907, 53. 302.)

$Se_2Br_2$  dissolves 22% Se (Schneider, Pogg. 128. 327)

Red Se is sol. in  $(NH_4)_2SO_3 + Aq$  (Uelmann, A. 116. 122.)

Sol. in alkalis and Mg sulphates +  $Aq$ .

365 pts.  $K_2SO_3 + Aq$  dissolve 102 pts. Se.

360 pts.  $MgSO_4 \cdot 3H_2O + Aq$  dissolve 116 pts. Se.

Insol. in  $BaSO_3 + Aq$  (Rathke and Zechische, J. pr. 92. 145.)

Sol. in  $KCN + Aq$  with formation of  $KSeCN$  (Franklin, Am. Ch. J. 1898, 20. 830)

100 pts. methylene iodide dissolve 1.3 pts. Se at  $12^\circ$ . (Retgers, Z. anorg. 3. 343.)

Sol. in quinoline, but reacts with the solvent with evolution of  $H$  (Beckmann and Gabel, Z. anorg. 1903, 51. 236.)

**Selenium monobromide,  $\text{Se}_2\text{Br}_2$** 

Insol. in  $\text{H}_2\text{O}$ , but gradually decomp. thereby. Decomp. by absolute alcohol and benzene. Sol. in  $\text{C}_2\text{H}_5\text{I}$ , but soon decomposed. Miscible with  $\text{CS}_2$ ; less sol. in  $\text{CHCl}_3$  and  $\text{C}_2\text{H}_5\text{Br}$  (Schneider, Pogg. 128. 327.)

**Selenium tetrabromide,  $\text{SeBr}_4$** 

Sol. in  $\text{H}_2\text{O}$  with decomp. Decomp. by alcohol. Sol. in  $\text{HCl} + \text{Aq}$ ; sl. sol. in  $\text{CS}_2$ ,  $\text{CHCl}_3$ , and  $\text{C}_2\text{H}_5\text{Br}$ . (Schneider, Pogg. 129. 460.)

Decomp. by  $\text{C}_2\text{H}_5\text{I}$ .

**Selenium bromotrichloride,  $\text{SeCl}_3\text{Br}$** 

Insol. in  $\text{CS}_2$ . (Fvans and Ramsay, Chem Soc 45. 62.)

**Selenium tetrabromide sulphur trioxide,  $\text{SeBr}_4 \cdot 2\text{SO}_3$** 

Decomp. by  $\text{H}_2\text{O}$ . (Prandtl, Z anorg 1909, 62. 242.)

**Selenium tribromochloride,  $\text{SeClBr}_3$** 

See Selenium chlorotribromide.

**Selenium monochloride,  $\text{Se}_2\text{Cl}_2$** 

Gradually decomp. by  $\text{H}_2\text{O}$ . Dissolves all modifications of selenium on heating (Rathke, A. 162. 181). Insol. in conc.  $\text{H}_2\text{SO}_4$ , easily sol. in fuming  $\text{H}_2\text{SO}_4$ . Sol. in  $\text{CHCl}_3$ ,  $\text{C}_2\text{H}_5$ ,  $\text{CCl}_4$ . Gradually decomp. by  $\text{H}_2\text{O}$ , alcohol, and ether. (Divers and Shmose, B. 17. 862.) Sol. in  $\text{CS}_2$ . (Evans and Ramsay, Chem Soc. 45. 62.)

**Selenium tetrachloride,  $\text{SeCl}_4$** 

Deliquescent on moist air. Decomp. with  $\text{H}_2\text{O}$ . (Berzelius, A. ch. 9. 225.) Insol. in  $\text{CS}_2$ . Easily sol. in hot  $\text{POCl}_3$ , from which it crystallizes on cooling. (Michaelis, Zeit. Chem (2) 6. 460.) Very sl. sol. in  $\text{CS}_2$ . (Evans and Ramsay, Chem Soc. 45. 62.)

**Selenium dichlorobromide,  $\text{SeCl}_2\text{Br}_2$** 

(Evans and Ramsay, Chem. Soc. 45. 62.)

**Selenium chlorotribromide,  $\text{SeClBr}_3$** 

Very sl. sol. in  $\text{CS}_2$ . (Evans and Ramsay.)

**Selenium trichlorobromide,  $\text{SeCl}_3\text{Br}$** 

See Selenium bromotrichloride.

**Selenium fluoride.**

Sol. in conc.  $\text{HF} + \text{Aq}$ . Decomp. immediately by  $\text{H}_2\text{O}$  (Knox.)

**Selenium moniodide,  $\text{SeI}_2$** 

Decomp. by  $\text{H}_2\text{O}$ . All solvents of iodine dissolve out that element. (Schneider, Pogg. 129. 627.)

**Selenium tetraiodide,  $\text{SeI}_4$** 

Slowly decomp. by much  $\text{H}_2\text{O}$ . Iodine is dissolved out by all solvents of that element. (Schneider, Pogg. 129. 627.)

**Selenium nitride.**

See Nitrogen selenide.

**Selenium monoxide,  $\text{SeO}$  (?)**

Sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

Does not exist. (Sacc.)

**Selenium dioxide,  $\text{SeO}_2$** 

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$  and alcohol. Sol. in glacial  $\text{HCl} + \text{H}_2\text{O}_2$ . (Hinsberg, A. 260. 40.)

Solubility in  $\text{H}_2\text{O}$  between  $-3^\circ$  and  $+36^\circ = 45.0 + 0.7692t$ . (Étard, C R 1888, 106. 742.)

1 pt. is sol. in 2.67 pts.  $\text{H}_2\text{O}$  at  $11.3^\circ$

1 pt. " " " 2.60 " " "  $14^\circ$

1 pt. " " " 2.54 " " "  $15.6^\circ$

(de Coninck, C R 1906, 142. 571.)

Sp. gr of  $\text{SeO}_2 + \text{Aq}$  at  $t^\circ$ .

$t^\circ$	% $\text{SeO}_2$	Sp. gr
15.1	1	0.9923
15.3	2	1.0068
13.0	3	1.0200
13.0	4	1.0302
14.5	5	1.0346
14.8	6	1.0402
14.1	7	1.0535
15.0	8	1.0571
15.6	9	1.0719
15.2	10	1.0743

(de Coninck, C R. 1906, 142. 571.)

See also Selenic acid.

1 pt.  $\text{SeO}_2$  is sol. in 9.84 pts. alcohol ( $93^\circ$ ) at  $14^\circ$ .

1 pt.  $\text{SeO}_2$  is sol. in 15.0 pts. methyl alcohol at  $11.8^\circ$ .

1 pt.  $\text{SeO}_2$  is sol. in 23.0 pts. acetone at  $15.3^\circ$ .

1 pt.  $\text{SeO}_2$  is sol. in 90.0 pts. acetic acid at  $12.9^\circ$ . (de Coninck, C. R. 1906, 142. 572.)

Traces dissolve in acetic anhydride. Sol. in phenyl mercaptan. (Hinsberg, A. 1890, 260. 40.)

Insol. in pure  $\text{C}_6\text{H}_6$ . (Clausmizer, A. 1879, 196. 271.)

See Selenic acid.

**Selenium trioxide,  $\text{SeO}_3$** 

Not obtained in a pure state. (Cameron and Macallan.)

See Selenic acid.

Selenium dioxide hydrobromic acid,  $\text{SeO}_2$ ,  
4HBr

Decomp. at  $55^\circ$  (Ditte, A. ch. (5) 10. 82.)

$\text{SeO}_2$ , 5HBr. Decomp. at  $65^\circ$  (Ditte, A. ch. (5) 10. 82.)

Selenium dioxide hydrochloric acid,  $\text{SeO}_2$ ,  
2HCl

Decomp. at  $26^\circ$

$\text{SeO}_2$ , 4HCl. Decomp. at  $0^\circ$ . Sol in  $\text{H}_2\text{O}$  without evolution of gas (Ditte, A. ch. (5) 10. 82)

Selenium dioxide sulphur trioxide,  $\text{SeO}_2$ ,  
 $\text{SO}_3$

Decomp. violently by  $\text{H}_2\text{O}$ . (Weber, B 19. 3185.)

Composition may be  $(\text{SeO})\text{SO}_4$  (?)

Selenium oxy-compounds.

See Selenyl compounds.

Selenium diphosphide,  $\text{P}_2\text{Se}$ .

See Phosphorus monoselenide.

Selenium tetraphosphide,  $\text{P}_4\text{Se}$ .

See Phosphorus semiselenide.

Selenium monosulphide,  $\text{SeS}$ .

Insol in  $\text{H}_2\text{O}$  and ether. Sol in  $\text{CS}_2$ . Decomp. by alcohol. (Ditte, C R 73. 625, 660.)

Other compounds of Se and S are probably mixtures of the two elements

Selenium disulphide,  $\text{SeS}_2$ .

Compound of this formula is a mixture of  $\text{SeS}$  and  $\text{S}$ . (Ditte, C. R. 73. 625, 660.)

Selenium sulphoxide,  $\text{SeSO}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in fuming  $\text{H}_2\text{SO}_4$ , conc.  $\text{H}_2\text{SO}_4$ . Sol. in  $\text{H}_2\text{SO}_4$  of 1.806 sp. gr. without decomp. (Weber, Pogg. 166. 531.)

Decomp. by  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_2\text{SO}_4$ . (Divers and Shmossé, B. 17. 858.)

Seleniuretted hydrogen,  $\text{H}_2\text{Se}$ .

See Hydrogen selenide.

Selenoarsenic acid.

Potassium selenoarsenate,  $\text{KAsSe}_3 + 2\text{H}_2\text{O}$ .

Only sl. sol. in cold  $\text{H}_2\text{O}$ ; sol. in warm  $\text{H}_2\text{O}$  with decomp.; more stable in  $\text{KOH} + \text{Aq.}$  (Clever, Z. anorg. 1895, 10. 132.)

Sodium selenoarsenate,  $\text{Na}_3\text{AsSe}_4 + 9\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ ; very unstable. (Szary, B. 1895, 28. 2654)

Selenoarsenious acid.

Sodium selenoarsenite,  $\text{Na}_3\text{AsSe}_3 + 9\text{H}_2\text{O}$ .

Moderately sol. in  $\text{H}_2\text{O}$ . (Clever and Muthmann, Z. anorg. 1895, 10. 139.)

Selenobismuthous acid.

Potassium metaselenobismuthite,  $\text{Bi}_3\text{Se}_3$ ,  $\text{K}_3\text{Se}$  or  $\text{KBiSe}_3$ .

Insol. in cold  $\text{HCl} + \text{Aq.}$  Sol. on warming, with evolution of  $\text{H}_2\text{Se}$ . (Hilger and van Scherpenberg, Mitt. Pharm. II. 4)

Selenocyanhydric acid,  $\text{HSeCN}$ .

Known only in aqueous solution.

Ammonium selenocyanide,  $\text{NH}_4\text{SeCN}$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ .

Barium —,  $\text{Ba}(\text{SeSCN})_2$ .

Very sol. in  $\text{H}_2\text{O}$ .

Lead —,  $\text{Pb}(\text{SeCN})_2$ .

Sl sol in cold, sol. with al. decomp. in boiling  $\text{H}_2\text{O}$ . Insol. in alcohol.

Mercurous —,  $\text{Hg}_2(\text{SeCN})_2$ .

Ppt

Mercuric —,  $\text{Hg}(\text{SeCN})_2$ .

Sl sol in cold  $\text{H}_2\text{O}$ . Easily sol. in  $\text{MCN}$ ;  $\text{MSCN}$ , or  $\text{MSeCN} + \text{Aq.}$ , also sol. in hot  $\text{HgCl}_2 + \text{Aq.}$  (Cameron and Davy, C. N. 44. 63)

Decomp by hot  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1909, 63. 276.)

Mercuric potassium —,  $\text{Hg}(\text{SeCN})_2$ ,  
 $\text{KSeCN}$ .

Easily sol in  $\text{H}_2\text{O}$ . Sl. sol. in cold alcohol. (Cameron and Davy, C. N. 44. 63)

Mercuric selenocyanide chloride,

$\text{Hg}(\text{SeCN})_2$ ,  $\text{HgCl}_2$ .

Sol. in boiling  $\text{H}_2\text{O}$  and in abs. alcohol. Decomp. by long boiling with  $\text{H}_2\text{O}$ . (Rosenheim and Pritze, Z. anorg. 1909, 63. 276.)

Platinum potassium — (Potassium platino-selenocyanide),  $\text{K}_2\text{Pt}(\text{SeCN})_4$ .

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Clarke, B. 11. 1325.)

Potassium —,  $\text{KSeCN}$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$  with absorption of heat. More sol. in  $\text{H}_2\text{O}$  than  $\text{KSCN}$ . Sol. in alcohol.

Potassium — mercuric bromide,  $\text{KSeCN}$ ,  
 $\text{HgBr}_2$ .

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$  or alcohol. (Cameron and Davy, C. N. 44. 63.)

Potassium selenocyanide mercuric chloride,  
 $\text{KSeCN}$ ,  $\text{HgCl}_2$ .

As the bromide.

Potassium — mercuric iodide,  $\text{KSeCN}$ ,  
 $\text{HgI}_2$ .

Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$  or alcohol  
 (Cameron and Davy.)

Potassium — mercuric sulphocyanide,  
 $\text{KSeCN}$ ,  $\text{Hg(SCN)}_2$ .

Sl. sol. in cold, much more in hot  $\text{H}_2\text{O}$  or  
 alcohol. Somewhat sol. in ether. (Cameron  
 and Davy.)

Silver —,  $\text{AgSeCN}$

Insol. in  $\text{H}_2\text{O}$ . Almost insol. in  $\text{NH}_4\text{OH}$  +  
 Aq or cold dil. acids. Quickly decomp. by  
 hot conc. acids.

Sodium —,  $\text{NaSeCN}$

Very sol. in  $\text{H}_2\text{O}$ .

Selenomolybdc acid.

Potassium selenomolybdate,  $5\text{K}_2\text{O}$ ,  $6\text{SeO}_2$ ,  
 $17\text{MoO}_3$ .

Readily sol. in  $\text{H}_2\text{O}$  without decomp.  
 (Gibbs, *Am. Ch. J.* 1895, 17, 177.)

Selenopentathionic acid.

Sodium selenopentathionate,  $\text{Na}_2\text{S}_5\text{SeO}_6$ .

A dil. solution may be boiled for some time  
 without change (Norris and Fay, *Am. Ch. J.*  
 1900, 23, 121.)

Selenophosphoric acid.

Ammonium selenophosphate,  
 $2(\text{NH}_4)_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $2\text{SeO}_2 + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Wenland, *B.*  
 1903, 36, 1402.)

Potassium selenophosphate,  
 $2\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $2\text{SeO}_2 + 3\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  with decomp.  
 $3\text{K}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $5\text{SeO}_2 + 5.5\text{H}_2\text{O}$ . Easily  
 sol. in  $\text{H}_2\text{O}$ . (Wenland.)

Rubidium selenophosphate,  
 $2\text{Rb}_2\text{O}$ ,  $\text{P}_2\text{O}_5$ ,  $2\text{SeO}_2 + 3\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  with decomp. (Wenland.)

Triselenophosphorous acid.

Potassium triselenophosphite,  
 $\text{K}_3\text{HPSe}_3 + 2\frac{1}{2}\text{H}_2\text{O}$ .

Decomp. by moist air and dil. acids, sol  
 in conc.  $\text{KOH}$  + Aq; sl. sol. in cold, easily sol.  
 in hot  $\text{H}_2\text{O}$  (Muthmann, *Z. anorg.* 1897,  
 13, 198.)

Selenosamic acid,  $\text{HSeO}_2\text{NH}_2$ .

Known only in its salts.

Ammonium selenosamate,  $(\text{NH}_4)_2\text{SeO}_2\text{NH}_2$ .

Deliquescent. Decomp. slowly by  $\text{H}_2\text{O}$   
 into  $(\text{NH}_4)_2\text{SeO}_3$ .

1 pt. is sol. in 116 pts. cold alcoholic am-  
 monia at  $12^\circ$ . More sol. in hot alcoholic  
 ammonia. Sl. attacked by cold  $\text{HCl}$  or  $\text{HNO}_3$ .  
 (Cameron and Macallan, *C. N.* 1888, 57, 163.)

Ammonium hydrogen selenosamate,  
 $\text{NH}_4\text{H}(\text{SeO}_2\text{NH}_2)$ .

Deliquescent. Sol. in 14 pts. alcohol at  
 $14^\circ$  (Cameron and Macallan, *Proc. Roy. Soc.*  
 44, 112.)

Selenostannic acid.

Ammonium selenostannate,  $3\text{SnSe}_2$ ,  $(\text{NH}_4)_2\text{Se}$   
 $+ 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Ditte, *C. R.* 95, 641.)

Platinum potassium —,  $\text{K}_2\text{Se}$ ,  $3\text{PtSe}$ ,  $\text{SnSe}_2$ .  
 Insol. in hot or cold  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$ , or  
 $\text{KOH}$  + Aq. Not attacked by hot  $\text{HCl}$  + Aq  
 (Schneider, *J. pr.* (2) 44, 507.)

Platinum sodium —,  $\text{Na}_2\text{Se}$ ,  $3\text{PtSe}$ ,  $\text{SnSe}_2$ .  
 Properties as the corresponding K salt.  
 (Schneider.)

Potassium —,  $\text{K}_2\text{SnSe}_3 + 3\text{H}_2\text{O}$

Easily sol. in  $\text{H}_2\text{O}$ . (Ditte, *C. R.* 95, 441.)

Selenosulphantimonic acid.

Sodium selenosulphantimonate,  $\text{Na}_3\text{SbSe}_3 +$   
 $9\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Hofacker, *A.* 107, 6.)  
 $\text{Na}_3\text{SbS}_{1.5}\text{Se}_{1.5} + 9\text{H}_2\text{O}$ . Somewhat sol. in  
 $\text{H}_2\text{O}$ . (Pouget, *A. ch.* 1899, (7) 18, 564.)

Selenosulphantimonous acid.

Potassium selenosulphantimonite,  
 $\text{Sb}_2\text{S}_3\text{Se}_3\text{K}_3 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Pouget, *A. ch.* 1899, (7)  
 18, 563.)

Sodium selenosulphantimonite,  $\text{Na}_3\text{SbS}_{1.5}\text{Se}_{1.5}$   
 $+ 9\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Pouget, *A. ch.* 1899, (7) 18,  
 564.)

Selenosulpharsenic acid.

Potassium selenosulpharsenate,  $3\text{K}_2\text{S}$ ,  $\text{As}_2\text{Se}_3$   
 $+ 12\text{H}_2\text{O}$ .

Very unstable in the air. Very sol. in  $\text{H}_2\text{O}$ .  
 Fairly stable in aqueous solution. Decomp.  
 by acids (Clever, *Z. anorg.* 1895, 10, 134.)

**Sodium selenosulpharsenate**,  $\text{Na}_7\text{As}_2\text{S}_5\text{Se} + 8\text{H}_2\text{O}$ .

Decomp. by acids; stable in dry air. (Messinger, B. 1897, 30. 801.)

$3\text{Na}_2\text{S}_2\text{As}_2\text{Se}_2 + 18\text{H}_2\text{O}$  Quite sol. in  $\text{H}_2\text{O}$ ; quite stable in air. (Clever, Z. anorg. 1895, 10. 140.)

$\text{Na}_4\text{As}_2\text{S}_5\text{Se}_3 + 16\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ ; decomp. by acids (Messinger, B. 1897, 30. 803.)

$\text{Na}_4\text{As}_2\text{S}_7\text{Se} + 16\text{H}_2\text{O}$ . Stable in dry air; easily sol. in  $\text{H}_2\text{O}$ ; decomp. by acids. (Messinger, B. 1897, 30. 800.)

$\text{Na}_3\text{As}_2\text{S}_5\text{Se}_2 + 9\text{H}_2\text{O}$ . Decomp in aq solution by dil. acids. (Messinger, B. 1897, 30. 802.)

$\text{Na}_3\text{As}_2\text{SSe}_3 + 8\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ , decomp. by aq acids, hygroscopic. (Messinger.)

### Selenosulphophosphorous acid.

**Potassium selenosulphophosphite**,  $2\text{K}_2\text{S}_2\text{P}_2\text{Se}_2 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ , decomp. by acids. (Muthmann, Z. anorg. 1897, 13. 198.)

### Selenosulphostannic acid.

**Ammonium selenosulphostannate**,  $(\text{NH}_4)_2\text{S}_2\text{SnSe}_2 + 3\text{H}_2\text{O}$

Easily decomp (Ditte, C. R. 1882, 95. 643)

**Potassium —**,  $\text{K}_2\text{SnSe}_2\text{S} + 3\text{H}_2\text{O}$ .

Very easily sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 95. 641.)

**Sodium —**,  $\text{Na}_2\text{SnSe}_2\text{S} + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 95. 641)

### Selenosulphoxyarsenic acid.

**Sodium selenosulphoxyarsenate**,  $\text{Na}_4\text{AsO}_2\text{SSe} + 10\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  but solution rapidly decomp (Messinger, B. 1897, 30. 798.)

$\text{Na}_4\text{As}_2\text{S}_2\text{SeO}_3 + 24\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Messinger.)

$\text{Na}_4\text{As}_2\text{Se}_2\text{O}_4 + 20\text{H}_2\text{O}$ . Stable in dry air. Sl. sol in  $\text{H}_2\text{O}$ ; decomp. by dil. acids (Messinger)

$\text{Na}_4\text{As}_2\text{S}_2\text{Se}_2\text{O}_3 + 20\text{H}_2\text{O}$ . Ppt. (Messinger.)

$\text{Na}_2\text{As}_2\text{S}_2\text{Se}_2\text{O}_3 + 36\text{H}_2\text{O}$ . Decomp. by aq acids; sol. in  $\text{H}_2\text{O}$ ; quite stable. (Messinger.)

### Selenosulphur trioxide, $\text{SeSO}_3$ .

See Selenium sulphoxide.

### Selenosulphuric acid, $\text{H}_2\text{SeSO}_4$ .

Known only in its salts.

**Potassium selenosulphate**,  $\text{K}_2\text{SeSO}_4 + x\text{H}_2\text{O}$

Deliquescent in moist air; decomp by  $\text{H}_2\text{O}$

(Rathke, J. pr. 95. 1)

### Selenotritithionic acid, $\text{H}_2\text{S}_2\text{SeO}_4$ .

Known only in solution, which is stable in dark (Schulze, J. pr. (2) 32. 390.)

### Barium selenotritithionate.

Sol in  $\text{H}_2\text{O}$ . (Rathke)

### Potassium —, $\text{K}_2\text{SeS}_2\text{O}_6$ .

Sol in  $\text{H}_2\text{O}$  with gradual decomp. (Rathke J. pr. 95. 8; 97. 56.)

### Diselenotritithionic acid, $\text{H}_2\text{S}_2\text{Se}_2\text{O}_4$ .

Exceedingly unstable. (Schulze.)

### Selenovanadic acid.

**Lithium selenovanadate**,  $4\text{Li}_2\text{O}, 6\text{V}_2\text{O}_5, 5\text{SeO}_2 + 30\text{H}_2\text{O}$

Very sol in  $\text{H}_2\text{O}$ . (Prandtl and Lustig, Z. anorg. 1907, 53. 401.)

**Potassium selenovanadate**,  $2\text{K}_2\text{O}, 3\text{V}_2\text{O}_5, 12\text{SeO}_2 + 12\text{H}_2\text{O}$ .

(Prandtl and Lustig.)

$3\text{K}_2\text{O}, 5\text{V}_2\text{O}_5, 18\text{SeO}_2 + 40\text{H}_2\text{O}$ . (Prandtl and Lustig)

$4\text{K}_2\text{O}, 6\text{V}_2\text{O}_5, 21\text{SeO}_2 + 37\text{H}_2\text{O}$  (Prandtl and Lustig)

$5\text{K}_2\text{O}, 10\text{V}_2\text{O}_5, 26\text{SeO}_2 + 43\text{H}_2\text{O}$ . (Prandtl and Lustig)

**Sodium selenovanadate**,  $4\text{Na}_2\text{O}, 6\text{V}_2\text{O}_5, 5\text{SeO}_2 + 20\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$  Solution decomp gradually. (Prandtl and Lustig)

$2\text{Na}_2\text{O}, 7\text{V}_2\text{O}_5, 10\text{SeO}_2 + 13\text{H}_2\text{O}$ . (Prandtl and Lustig.)

$2\text{Na}_2\text{O}, 7\text{V}_2\text{O}_5, 12\text{SeO}_2 + 45\text{H}_2\text{O}$ , and  $+90\text{H}_2\text{O}$  (Prandtl and Lustig.)

### Selenoxyarsenic acid.

**Ammonium selenoxyarsenate**,  $2(\text{NH}_4)_2\text{O}, 2\text{SeO}_2, \text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  with decomp. (Weinland, B. 1903, 36. 1403.)

**Barium sodium selenoxyarsenate**,  $\text{BaNaAsO}_5\text{Se} + 9\text{H}_2\text{O}$

Ppt (Weinland, Z. anorg. 1897, 14. 56.)

**Potassium selenoxyarsenate**,  $2\text{K}_2\text{O}, 2\text{SeO}_2, \text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  with decomp (Weinland and Bartlingek, B. 1903, 36. 1403.)

$7\text{K}_2\text{O}, 10\text{SeO}_2, 2\text{As}_2\text{O}_5 + 11\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Weinland and Bartlingek.)

$3\text{K}_2\text{O}, \text{As}_2\text{Se}_6 + 10\text{H}_2\text{O}$ . Easily decomp. by

moisture Very sol in  $H_2O$ . (Clever, Z anorg 1895, 10. 126)

Rubidium selenoxyarsenats,  $2Rb_2O$ ,  $2SeO_3$ ,  $As_2O_3 + 3H_2O$

Sol in  $H_2O$  with decomp (Weinland and Bartlmegg)

Sodium selenoxyarsenate,  $Na_3AsSeO_3$ .

Fairly stable in air and in aq solution. (Weinland, B 1896, 29. 1010.)

$Na_3AsSeO_3 + 12H_2O$  Stable in the air when pure; sol. in  $H_2O$  with decomp (Weinland, Z anorg 1897, 14. 50)

$Na_3AsSeO_3 + 12H_2O$ . Very sol in  $H_2O$ , very unstable (Szarvasy, B. 1895, 28. 2657.)

$3Na_2O$ ,  $3Na_2Se$ ,  $As_2O_3 + 50H_2O$ . Easily sol. in  $H_2O$ . Solution may be boiled for a long time without decomp. (Clever, Z. anorg. 1895, 10. 136.)

### Selenoxyphosphoric acid.

Ammonium triselenmonoxyphosphate,  $(NH_4)_3PSe_3O + 10H_2O$

Ppt (Ephraim, B 1910, 43. 280)

Ammonium hydrogen diselenmonoxyphosphate,  $(NH_4)_2H(PSe_2O)_2 + 18H_2O$ .

Ppt. (Ephraim)

Barium hydrogen diselendioxyposphate,  $BaH_2PSe_2O_4 + 14H_2O$ .

Decomp in moist air (Ephraim)

Potassium selenoxyphosphate,  $K_3PSe_3O_4 + H_2O$

Decomp by  $HNO_3$  Insol in alcohol and ether (Ephraim)

Sodium monoselenotrioxyposphate,  $Na_3PSe_3O_4 + 20H_2O$ .

Decomp by  $H_2O$  (Ephraim)

Sodium triselenmonoxyphosphate,  $Na_3PSe_3O + 10H_2O$ .

Sol. in  $H_2O$ . Decomp. in aq. solution. Easily sol. in conc  $NaOH + Aq$ . (Muthmann, Z. anorg. 1897, 13. 199)

Selenyl bromide,  $SeOBr_2$  (?).

(Schneider, Pogg 129. 450)

Selenyl bromide sulphur trioxide,  $SeOBr_2$ ,  $SO_3$

(Prandtl, Z. anorg. 1909, 62. 242.)

Selenyl chloride,  $Se_2O_3Cl_2$ .

Easily decomp by  $H_2O$  (Weber, Pogg. 118. 615.)

Selenyl sulphur chloride.

See Sulphoselenyl chlorids.

Selenyl stannic chloride,  $2SeOCl_2$ ,  $SnCl_4$

Extremely deliquescent. Completely sol. in  $H_2O$ . (Weber, B. A. B. 1865. 154.)

Selenyl titanium chloride,  $2SeOCl_2$ ,  $TiCl_4$

Decomp. by  $H_2O$  with separation of an insol residue. Decomp by  $NH_4OH + Aq$  (Weber, B. A. B 1865. 154)

### Sesquauramine.

See Sesquauramine.

Sesquihydraurylamine,  $(HOAu)_3N$ ,  $NH_3$ .

See Sesquihydraurylamins.

Silicic acid,  $SiO_2$ ,  $xH_2O$ .

See also Silicon dioxids.

Silicic acid is sol in 1000 pts. pure  $H_2O$ . (Kurwan)

When pptd from alkali silicates +  $Aq$  by  $CO_2$ , 0.021 pt.  $SiO_2$  remains dissolved in 100 pts  $H_2O$  (Struckmann, A. 94. 341.)

When pptd. as above, 100 pts.  $H_2O$  dissolve 0.09 pt  $SiO_2$  in 3 days; 100 pts  $H_2CO_3 + Aq$  dissolve 0.078 pt  $SiO_2$  in 3 days. But if heated much more dissolves, the jelly itself becoming liquid, such jelly containing 2.49 pts  $SiO_2$  to 100 pts  $H_2O$ . This solution is not pptd by considerable quantities of alcohol, but conc  $(NH_4)_2CO_3$ ,  $NaCl$ , or  $CaCl_2 + Aq$ , etc., cause gelatinization (Maschke, J. pr. 68. 234)

Solubility in  $H_2O$  depends on the amt. of  $H_2O$ , in presence of which the silicic acid is set free by dil. acids,  $CO_2$ , or alkali salts +  $Aq$ . If  $H_2O$  is present in sufficient quantity to retain the silicic acid, much more will remain in solution than can be dissolved by digesting the gelatinous acid with  $H_2O$  afterwards. 1 pt  $SiO_2$  can thus be held in solution by 500 pts  $H_2O$ . Presence of  $NH_4OH$ ,  $(NH_4)_2CO_3$ , or  $NH_4Cl$  (in solutions of which  $SiO_2$  is remarkably insol.) diminishes the power of  $H_2O$  to retain  $SiO_2$  in solution.  $SiO_2$  is always more sol. in dil than conc.  $NH_4OH + Aq$  (Liebig, A. 94. 373)

Silicic acid from the coagulation of the colloidal form (see p. 802) is sol in about 5000 pts.  $H_2O$  when formed from a 1% solution, and 10,000 pts. when formed from a 5% solution, but is insol after being dried. (Graham, A. 121. 36)

Silicic acid is more sol in dil. acids than in  $H_2O$ , because, when acid is added in excess to moderately dil  $K_2SiO_3 + Aq$ , the solution remains clear, but if only enough acid is added to neutralize the base present, silicic acid will gradually separate out. If acid is added to conc  $K_2SiO_3 + Aq$ , silicic acid separates out insol. in excess of acid, but if 20-30 pts.  $H_2O$  are present to 1 pt  $K_2SiO_3$ , and an excess of acid added at once, the silicic acid will remain in solution. This result is obtained with  $HCl$ ,  $HNO_3$ ,  $H_2SO_4$ , or

$\text{HCl} \cdot \text{H}_2\text{O}_2 + \text{Aq.}$  These solutions may dissolve a neutral salt until saturated and no silicic acid will separate out. Therefore it is the acid that holds the  $\text{SiO}_2$  in solution, and not the  $\text{H}_2\text{O}$ . (C. J. B. Karsten, (1826) Pogg. 6. 353.)

Even  $\text{CO}_2$  has the power of holding  $\text{SiO}_2$  in solution. (Karsten, *l. c.*)

Solubility in acids of silicic acid of Struckmann (see above). 100 pts. dil  $\text{HCl} + \text{Aq.}$  of 1.088 sp. gr. dissolve 0.0172 g.  $\text{SiO}_2$  in 11 days, 100 pts.  $\text{H}_2\text{O}$  sat. with  $\text{CO}_2$  dissolve 0.0136 g.  $\text{SiO}_2$  in 7 days.

Silicic acid obtained by passing  $\text{SiF}_4$  into  $\text{H}_2\text{O}$  is sol. while still moist in 11,000 pts cold, and 5500 pts boiling  $\text{HCl} + \text{Aq.}$  of 1.115 sp. gr. (Fuchs, A. 82. 119.)

Silicic acid at the moment of separation (as in dissolving cast-iron, steel, etc.) is abundantly sol in aqua regia (3 pts.  $\text{HCl} + \text{Aq.}$  of sp. gr. 1.13 and 1 pt.  $\text{HNO}_3 + \text{Aq.}$  of sp. gr. 1.33). (Wittstein, Z. anal. 7. 433.)

The aq. solution obtained by the hydrolysis of ethyl silicate is more stable in acids + Aq. or alkali than in pure  $\text{H}_2\text{O}$ . (Jordis, Z. anorg. 1903, 35. 16.)

$\text{NH}_4\text{OH} + \text{Aq.}$  dissolves considerable freshly precipitated silicic acid,  $(\text{NH}_4)_2\text{CO}_3$  only a very little (Karsten, Pogg. 6. 357.)

Dry or ignited  $\text{SiO}_2$  is sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  100 pts.  $\text{NH}_4\text{OH} + \text{Aq.}$  containing 10%  $\text{NH}_3$  dissolve: 0.714 pt.  $\text{SiO}_2$  from gelatinous silicic acid; 0.303 pt. from artificially dried silicic acid; 0.377 pt. from amorphous  $\text{SiO}_2$ ; 0.017 pt. from quartz. (Pribram, Z. anal. 6. 119.)

$\text{NH}_4\text{OH} + \text{Aq.}$  dissolves 0.382 pt.  $\text{SiO}_2$  from dry silicic acid. 0.357 pt. from ignited  $\text{SiO}_2$ ; 0.00827 pt. from quartz. (Souhey, Z. anal. 11. 182.)

Silicic acid precipitated from alkali silicates + Aq. with  $\text{CO}_2$  is sol. as follows. 100 pts. pure  $\text{H}_2\text{O}$  dissolve 0.021 pt.  $\text{SiO}_2$ ; 100 pts.  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$  containing 5%  $(\text{NH}_4)_2\text{CO}_3$ , 0.020 pt.; 100 pts. containing 1%  $(\text{NH}_4)_2\text{CO}_3$ , 0.062 pt.; 100 pts.  $\text{NH}_4\text{OH} + \text{Aq.}$  containing 19.2%  $\text{NH}_3$ , 0.071 pt.; 100 pts. containing 1.6%, 0.0986 pt. (Struckmann, A. 94. 341.)

100 pts.  $\text{NH}_4\text{OH} + \text{Aq.}$  (10%  $\text{NH}_3$ ) dissolve of: crystallized  $\text{SiO}_2$ , 0.017 pt.; amorphous  $\text{SiO}_2$ , ignited, 0.38 pt.; amorphous  $3\text{SiO}_2 \cdot 4\text{H}_2\text{O}$ , 0.21 pt.; amorphous silicic acid in form of jelly, 0.71 pt. Upon evaporation no ppt. is formed, even when 80 mols.  $\text{SiO}_2$  are present to 1 mol.  $\text{NH}_3$ . (Wittstein, J. B. 1866. 192.)

Sol. in  $\text{KOH}$  or  $\text{NaOH} + \text{Aq.}$ , especially if warm. (Dumas.)

Sol. in  $\text{K}_2\text{SiO}_3$  or  $\text{Na}_2\text{SiO}_3 + \text{Aq.}$  (Fuchs.)

Easily sol. in boiling  $\text{Na}_2\text{CO}_3 + \text{Aq.}$ , separating as a jelly on cooling. (Pfaff.)

$\text{NH}_4\text{Cl}$  or other  $\text{NH}_4$  salts ppt.  $\text{SiO}_2$  from solution in  $\text{Na}_2\text{CO}_3 + \text{Aq.}$

100 pts.  $\text{Ti}_2\text{O}$  in  $\text{H}_2\text{O}$  dissolve 4.17 pts. amorphous  $\text{SiO}_2$  in 24 hours' boiling. (Flemming, Jena. Zeit. 4. 36.)

Sol. in butyl amine (Wurtz, A. ch. (3) 42. 166.)

Not more sol. in  $\text{H}_2\text{O}$  containing sugar than in pure  $\text{H}_2\text{O}$ . (Petzholdt, J. pr. 60. 368.)

#### Soluble silicic acid.

*Colloidal form by dialysis* Solutions containing 4.9%  $\text{SiO}_2$  may be evaporated until they contain 14%  $\text{SiO}_2$ . The  $\text{SiO}_2$  is separated from its solution thus made in many ways—

(1) By standing. This happens the more easily the more conc. the solution is, and is hastened by heat. A 10–12% solution gelatinizes at ordinary temp. in a few hours, and immediately upon heating. A 5–6% solution may be kept 5–6 days, a 2% solution, 2–3 months, and a 1% solution may be kept 2 or more years without gelatinizing.

(2) When the solution is evaporated to dryness in vacuo at 15° a transparent glass is left which is insol in  $\text{H}_2\text{O}$ .

(3) The coagulation of colloidal silicic acid is accelerated by powdered graphite and other indifferent bodies, and it is brought about in a few minutes by a solution of the alkali carbonates, even when only  $\frac{1}{10,000}$  pt. of the carbonate is present (Graham, A. 121. 36.)

(4) Coagulation is also brought about by passing  $\text{CO}_2$  through the solution. (Liebig.)

$\text{CO}_2$  does not cause coagulation. (Maschke.) Coagulation is not caused by  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ ,  $\text{H}_2\text{C}_2\text{H}_3\text{O}_4$ , or  $\text{NH}_4\text{OH} + \text{Aq.}$  or by neutral or acid salts + Aq. (Graham.)

$\text{NaCl}$  and  $\text{Na}_2\text{SO}_4 + \text{Aq.}$  coagulate the solution. (Maschke.)

Alcohol, sugar, glycerine, or caramel do not coagulate.

Soluble  $\text{Al}_2\text{O}_3 \cdot \text{H}_2\text{O}$ ,  $\text{Fe}_2\text{O}_3 \cdot \text{H}_2\text{O}$ , albumen, and casein precipitate soluble  $\text{SiO}_2$ . (Graham, A. 121. 36.)

The jelly from colloidal  $\text{SiO}_2$  is very sol. in slightly alkaline  $\text{H}_2\text{O}$  1 pt.  $\text{NaOH}$  in 10,000 pts.  $\text{H}_2\text{O}$  dissolves in an hour at 100° an amt. of the jelly corresponding to 200 pts.  $\text{SiO}_2$  (Graham.)

#### Other colloidal forms.

Various solutions of silicic acid may be obtained as follows.

The jelly formed when  $\text{SiF}_4$  is passed through  $\text{H}_2\text{O}$  dissolves in a large amt. of  $\text{H}_2\text{O}$ , and  $\text{SiO}_2$  separates out on evaporation. This is still sol in  $\text{H}_2\text{O}$ , but is made insol. by evaporation with  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . (Berzelius.)

When  $\text{SiF}_4$  is absorbed by crystallized  $\text{H}_2\text{BO}_3$ , and the  $\text{HF}$  and  $\text{H}_2\text{BO}_3$  removed by a large excess of  $\text{NH}_4\text{OH} + \text{Aq.}$ , a silicic acid is obtained which is very sol. in  $\text{H}_2\text{O}$ . The solution is not decomposed by boiling, but on evaporation an insol. powder remains. (Berzelius, A. ch. 14. 366.)

When  $\text{K}_2\text{SiO}_3 + \text{Aq.}$  is precipitated by  $\text{CuCl}_2$ , the precipitate washed and dissolved in  $\text{HCl} + \text{Aq.}$  the solution treated with  $\text{H}_2\text{S}$  filtered and boiled, a solution of silicic acid is obtained

which gelatinizes with KOH or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Dover, A. ch. (3) 21. 40.)

When  $\text{Na}_2\text{SiO}_3 + \text{Aq}$  containing at most 3%  $\text{SiO}_2$  is saturated with  $\text{HCl} + \text{Aq}$  of 1.10 sp gr., and  $\text{Na}_2\text{SiO}_3$  added until the solution is slightly opalescent and carefully warmed to  $30^\circ$ , a gelatinous mass is obtained which will dissolve in  $\text{H}_2\text{O}$  by 12-16 hours' boiling if treated before being exposed to the air. The solution is slightly opalescent. The solution can be evaporated by heat until it contains 6%  $\text{SiO}_2$ . In a vacuum or over  $\text{H}_2\text{SO}_4$ , solutions containing 10% may be obtained. The electric current, freezing, alcohol, or  $\text{H}_2\text{SO}_4$  precipitate or coagulate the solution (Kühn, J. pr. 59. 1)

$\text{SiO}_2$  with  $\text{H}_2\text{O}$  gives off  $\text{H}_2\text{S}$  and forms a solution of  $\text{SiO}_2$  which, after dilution, can be kept for months. But when boiled or evaporated, or when a sol silicate is added, it becomes gelatinous. It leaves an insol. residue when evaporated to dryness. (Fremy, A. ch. (3) 38. 314)

Various forms of silicic acid have been described as definite compounds of  $\text{SiO}_2$  with varying amounts of  $\text{H}_2\text{O}$ , but it is doubtful if any true definite compounds exist, as the percentage of  $\text{H}_2\text{O}$  varies with the moisture of the air to which it is exposed. (See Ebelmen, A. ch. (3) 16. 120; Dover, A. ch. (3) 21. 40; Fuhs, A. 82. 19, Merz, J. pr. 99. 177; van Bemmelen, B. 11. 2232, etc.)

### Silicates.

The silicates are insol. in  $\text{H}_2\text{O}$  with the exception of the alkali salts, and these are sol only when the ratio of the base to the acid is above a certain limit.

#### Aluminum silicate, $2\text{Al}_2\text{O}_3, \text{SiO}_2 + 10\text{H}_2\text{O}$

Min. *Collyrite*. Sol in acids, with formation of  $\text{SiO}_2, x\text{H}_2\text{O}$ . Becomes transparent in  $\text{H}_2\text{O}$  and is decomp.

$4\text{Al}_2\text{O}_3, 3\text{SiO}_2$ . Min. *Dillinite*.  
 $\text{Al}_2\text{O}_3, \text{SiO}_2$ . Min. *Andalusite*, *Chastolite*, *Sillimanite*, *Dishene* or *Cyanite*. Insol. in acids

+5-7  $\text{H}_2\text{O}$ . Min. *Allophane*. Completely sol. in dil. acids; decomp. by conc. acids with separation of  $\text{SiO}_2, x\text{H}_2\text{O}$ .

$2\text{Al}_2\text{O}_3, 3\text{SiO}_2 + 4\text{H}_2\text{O}$ . Min. *Pholerville*. Insol. in  $\text{HNO}_3 + \text{Aq}$

+6 $\text{H}_2\text{O}$ . Min. *Glaucite*.  
 $\text{Al}_2\text{O}_3, 2\text{SiO}_2 + 2\text{H}_2\text{O}$ . Min. *Kaolin*, *Clay*. Insol. in dil.  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ ; moderately dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , when heated to evaporation, extracts  $\text{Al}_2\text{O}_3$  and some  $\text{SiO}_2$ , and leaves the rest of the  $\text{SiO}_2$  sol. in boiling  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . All the  $\text{Al}_2\text{O}_3$  is dissolved by heating with 5-8 pts.  $\text{H}_2\text{SO}_4 + 1$  pt.  $\text{H}_2\text{O}$  until  $\text{H}_2\text{SO}_4$  evaporates, and then treating with  $\text{H}_2\text{O}$ .

Quickly attacked by  $\text{H}_2\text{SiF}_6 + \text{Aq}$ .  
Decomp. by boiling  $\text{KOH} + \text{Aq}$ , with residue of  $\text{SiO}_2$  (Rammelsberg.)

$\text{KOH} + \text{Aq}$  extracts  $\frac{1}{4}$  of the  $\text{SiO}_2$  (Mala-

guti), is converted thereby into double silicates of K and Al, which are sol. in  $\text{HCl} + \text{Aq}$  (Lemberg)

Solubility in  $\text{KOH}$  and  $\text{HCl}$  increased if first heated to a low glow (Gluka, C. C. 1899, II. 1063.)

Colloidal clay (Schlössing, C. R. 79. 473) +4 $\text{H}_2\text{O}$ . *Hallwayite*. Decomp. by acids

$4\text{Al}_2\text{O}_3, 9\text{SiO}_2 + 12\text{H}_2\text{O}$ . Min. *Poissellan clay* from Passau  
 $\text{Al}_2\text{O}_3, 3\text{SiO}_2 + 3\text{H}_2\text{O}$ . Min. *Ryzomoffskine*.

$\text{Al}_2\text{O}_3, 4\text{SiO}_2 + 7\text{H}_2\text{O}$ . Min. *Montmorillonite*. Not decomp. by  $\text{HCl} + \text{Aq}$ , but by hot  $\text{H}_2\text{SO}_4$ .

+ $\text{H}_2\text{O}$ . Min. *Pyrophyllite*. Not decomp. by  $\text{H}_2\text{SO}_4$ .

+3 $\text{H}_2\text{O}$ . Min. *Anauxite*

$2\text{Al}_2\text{O}_3, 9\text{SiO}_2 + 6\text{H}_2\text{O}$ . Min. *Cimolite*

"Aluminum silicate" is insol. in acetone. (Naumann, B. 1904, 37. 4328); ethyl acetate (Naumann, B. 1910, 43. 314.)

#### Aluminum barium silicate, $\text{Al}_2\text{O}_3, \text{BaO}, 2\text{SiO}_2 + \text{H}_2\text{O}$ (?)

Min. *Edingtonite*. Decomp. by  $\text{HCl} + \text{Aq}$  with separation of  $\text{SiO}_2, x\text{H}_2\text{O}$ .

$5\text{Al}_2\text{O}_3, 4\text{BaO}, 10\text{SiO}_2$ . (Fremy and Feil, C. R. 86. 1033.)

$2\text{Al}_2\text{O}_3, 4\text{BaO}, 7\text{SiO}_2$ . Min. *Barylite*. Very sl. decomp. by alkali carbonates +  $\text{Aq}$  (Blomstrand)

#### Aluminum barium potassium silicate,

$\text{Al}_2\text{O}_3, (\text{Ba}, \text{K})_2\text{O}, 6\text{SiO}_2 + 2\text{H}_2\text{O}$ .

Min. *Harmotome*. When finely powdered, difficultly decomp. by  $\text{HCl} + \text{Aq}$  with separation of pulverulent  $\text{SiO}_2, x\text{H}_2\text{O}$ .

$\text{Al}_2\text{O}_3, (\text{Ba}, \text{K})_2\text{O}, 4\text{SiO}_2$ . Min. *Hagallophane*. Scarcely attacked by acids.

#### Aluminum caesium silicate, $\text{H}_2\text{Cs}_2\text{Al}_2\text{Si}_2\text{O}_{15}$ (?)

Min. *Pollucite*. Very sl. decomp. by  $\text{HCl} + \text{Aq}$

#### Aluminum calcium silicate, $\text{Al}_2\text{O}_3, \text{CaO}, 2\text{SiO}_2$ .

Min. *Anorthite*. Completely decomp. by  $\text{HCl} + \text{Aq}$  with separation of pulverulent  $\text{SiO}_2, x\text{H}_2\text{O}$ .

Min. *Barrowite*. Instantaneously decomp. by  $\text{HCl} + \text{Aq}$ , with separation of gelatinous  $\text{SiO}_2, x\text{H}_2\text{O}$

+4 $\text{H}_2\text{O}$ . Min. *Gasmontite*. Gelatinizes with  $\text{HCl} + \text{Aq}$

$\text{Al}_2\text{O}_3, \text{CaO}, 3\text{SiO}_2 + 3\text{H}_2\text{O}$ . Min. *Scolecite*. Easily sol. in  $\text{HCl} + \text{Aq}$ , without formation of gelatinous  $\text{SiO}_2$ . Sol. in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$  with pptn. of  $\text{CaC}_2\text{O}_4$ .

Decomp. by, and sol to a certain extent in  $\text{H}_2\text{CO}_3 + \text{Aq}$ , and decomp. also even by pure  $\text{H}_2\text{O}$ . (Rogers, Am. J. Sci. (2) 5. 403.)

+5 $\text{H}_2\text{O}$ . Min. *Levyite*. Decomp. by acids without gelatinizing

$\text{Al}_2\text{O}_3, \text{CaO}, 4\text{SiO}_2 + 3\text{H}_2\text{O}$ . Min. *Caporcanite*. *Leonhardtite*. Efflorescent. Easily

sol in acids, with pptn. of gelatinous  $\text{SiO}_2$ ,  $x\text{H}_2\text{O}$ .

$\text{Al}_2\text{O}_3$ ,  $\text{CaO}$ ,  $4\text{SiO}_2 + 4\text{H}_2\text{O}$ . Min. *Laumonite*. Easily gelatinized with  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ , but is not affected by  $\text{H}_2\text{SO}_4$  unless hot.

$\text{Al}_2\text{O}_3$ ,  $\text{CaO}$ ,  $6\text{SiO}_2 + 5\text{H}_2\text{O}$ . Min. *Epistilbite*. Gelatinizes with conc.  $\text{HCl} + \text{Aq}$ . (Goldschmidt, Z. anal. 17. 267.)

Scarcely decomp. by boiling conc.  $\text{HCl} + \text{Aq}$ . (Jannasch and Teune, Miner. Jahrb. 1880, 1. 43.)

$+6\text{H}_2\text{O}$ . *Stilbite*. *Heulandite*. Slowly but completely gelatinized by  $\text{HCl} + \text{Aq}$ .

$\text{Al}_2\text{O}_3$ ,  $2\text{CaO}$ ,  $3\text{SiO}_2 + \text{H}_2\text{O}$ . Min. *Prehnite*. Imperfectly decomp. by acids before ignition, but easily afterwards.

$\text{Al}_2\text{O}_3$ ,  $3\text{CaO}$ ,  $3\text{SiO}_2$ . *Lune alumina garnet* *Grossularite*. Partially decomp. by acids before ignition, but easily afterwards.

$2\text{Al}_2\text{O}_3$ ,  $\text{CaO}$ ,  $2\text{SiO}_2 + \text{H}_2\text{O}$ . *Margarite*. Not attacked by acids.

$3\text{Al}_2\text{O}_3$ ,  $4\text{CaO}$ ,  $6\text{SiO}_2 + \text{H}_2\text{O}$ . *Zoisite*. Partially decomp. by  $\text{HCl} + \text{Aq}$ .

$4\text{Al}_2\text{O}_3$ ,  $6\text{CaO}$ ,  $9\text{SiO}_2$ . Min. *Meionite*. Completely sol in  $\text{HCl} + \text{Aq}$ .

**Aluminum calcium ferric silicate**,  $2\text{Al}_2\text{O}_3$ ,  $4\text{CaO}$ ,  $\text{Fe}_2\text{O}_3$ ,  $6\text{SiO}_2 + \text{H}_2\text{O}$ .

Min. *Epulite*. Only sl. attacked by  $\text{HCl} + \text{Aq}$  before ignition.

**Aluminum calcium ferric magnesium silicate**,  $\text{H}_{14}\text{Ca}$ ,  $\text{Mg}$ ,  $\text{Al}_2$ ,  $\text{Fe}_2$ ,  $10\text{Si}_2\text{O}_{17}$ .

Min. *Vesuvianite*, *Idiocase*. Only partially decomp. by  $\text{HCl} + \text{Aq}$  before ignition.

**Aluminum calcium iron, etc., silicate borate**,  $\text{H}_2\text{R}^{\text{I}}(\text{Al}_2, \text{B}_2)\text{Si}_2\text{O}_{12}$ .

Min. *Azomite*. Not attacked by  $\text{HCl} + \text{Aq}$  before ignition.

**Aluminum calcium magnesium silicate**,  $4\text{H}_2\text{Ca}_2\text{Mg}_2\text{Si}_2\text{O}_{24}$ ,  $5\text{H}_2\text{CaMgAl}_2\text{O}_{12} = 15\text{Al}_2\text{O}_3$ ,  $13\text{CaO}$ ,  $37\text{MgO}$ ,  $24\text{SiO}_2 + 13\text{H}_2\text{O}$ .

Min. *Clintonite*. Completely decomp. by  $\text{HCl} + \text{Aq}$  without gelatinization.

$3\text{H}_2\text{Ca}_2\text{Mg}_2\text{Si}_2\text{O}_{24}$ ,  $4\text{H}_2\text{CaMgAl}_2\text{O}_{12}$ . Min. *Brenandite*. Not attacked by  $\text{HCl} + \text{Aq}$ .

Slowly decomp. by boiling conc.  $\text{H}_2\text{SO}_4$ .  $5\text{H}_2\text{Ca}_2\text{Mg}_2\text{Si}_2\text{O}_{24}$ ,  $8\text{H}_2\text{CaMgAl}_2\text{O}_{12}$ . Min. *Xanthophyllite*. Very sl. decomp. by hot  $\text{HCl} + \text{Aq}$ .

$3(\text{Ca}, \text{Mg})\text{O}$ ,  $\text{Al}_2\text{O}_3$ ,  $2\text{SiO}_2$ . Min. *Gehlenite*. Easily decomp. by acids.

**Aluminum calcium potassium silicate**,  $(\text{H}, \text{K})_2\text{CaAl}_2\text{Si}_2\text{O}_{12} + 6\text{H}_2\text{O}$ .

Min. *Chabasite*. Decomp. by  $\text{HCl} + \text{Aq}$ .  $(\text{K}_2, \text{Ca})\text{Al}_2\text{Si}_2\text{O}_{10} + 4\text{H}_2\text{O}$ . Min. *Zeagonite*. Completely sol in  $\text{HCl} + \text{Aq}$ .

**Aluminum calcium sodium silicate**,  $3\text{Al}_2\text{O}_3$ ,  $8\text{CaO}$ ,  $\text{Na}_2\text{O}$ ,  $9\text{SiO}_2$ .

Min. *Sarcosite*. Decomp. by acids.

$2\text{Al}_2\text{O}_3$ ,  $12(\text{Ca}, \text{Na}_2)\text{O}$ ,  $9\text{SiO}_2$  (?) Min. *Melilita*. Gelatinized by acids.

$\text{Na}_2\text{CaAl}_2\text{Si}_2\text{O}_{12}$  (?) Min. *Margarite*.  $\text{Na}_2\text{CaAl}_2\text{Si}_2\text{O}_{12}$  Min. *Favoside*. Decomp. by  $\text{HCl} + \text{Aq}$ .

$(\text{Na}_2, \text{Ca})\text{Al}_2\text{Si}_2\text{O}_{12}$ . Min. *Gmelinite*. Decomp. by  $\text{HCl} + \text{Aq}$ .

$(\text{Ca}, \text{Na}_2)\text{Al}_2\text{Si}_2\text{O}_{10} + 6\text{H}_2\text{O}$ . Min. *Forcite*. Difficultly decomp. by  $\text{HCl} + \text{Aq}$ .

$(\text{Ca}, \text{Na}_2)\text{Al}_2\text{Si}_2\text{O}_8 + 2\frac{1}{2}\text{H}_2\text{O}$ . Min. *Thomsonite*. Gelatinizes with  $\text{HCl} + \text{Aq}$ .

$x\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_{10}$ ,  $y\text{CaAl}_2\text{Si}_2\text{O}_8$ . Min. *Oligoclase*, *Lobadorite*. Sl. decomp. by acids, more easily the larger the amt. of  $\text{Ca}$  present.

**Aluminum calcium sodium silicate sulphate**,  $2(\text{Na}_2, \text{Ca})\text{Al}_2(\text{SiO}_3)_2$ ,  $(\text{Na}_2, \text{Ca})\text{SO}_4$ .

Min. *Hauyn*. Gelatinizes with  $\text{HCl} + \text{Aq}$ .

**Aluminum glaucum silicate**,  $\text{Al}_2\text{O}_3$ ,  $3\text{GIO}$ ,  $6\text{SiO}_2$ .

Min. *Beryl*. Emerald. Not decomp. by acids, excepting partially by  $\text{H}_2\text{SO}_4$  after being ignited.

$\text{Al}_2\text{O}_3$ ,  $2\text{GIO}$ ,  $2\text{SiO}_2 + \text{H}_2\text{O}$ . Min. *Eucrase*. Not attacked by acids.

**Aluminum ferrous silicate**,  $\text{Al}_2\text{Fe}(\text{SO}_4)_2$ .

Min. *Garnet*. Sl. decomp. by  $\text{HCl} + \text{Aq}$ .  $\text{H}_2\text{FeAl}_2\text{SiO}_7$ . Min. *Chlorioid*. Not attacked by  $\text{HCl} + \text{Aq}$ . Completely decomp. by  $\text{H}_2\text{SO}_4$ .

$\text{Al}_2\text{O}_3$ ,  $3\text{FeO}$ ,  $3\text{SiO}_2 + 3\text{H}_2\text{O}$ . Min. *Voigtite*.

**Aluminum iron lithium potassium silicate**,  $\text{K}_2\text{Li}_2\text{Fe}_2\text{Al}_2\text{Si}_2\text{O}_{12}$ .

Min. *Zinnwaldite*. Sl. decomp. by acids.

**Aluminum ferrous magnesium silicate**,  $6\text{Al}_2\text{O}_3$ ,  $3(\text{Mg}, \text{Fe})\text{O}$ ,  $6\text{SiO}_2 + \text{H}_2\text{O}$ .

Min. *Staurolite*. Not attacked by acids.

**Aluminum ferric magnesium silicate**,  $2(\text{Al}_2, \text{Fe})\text{O}_3$ ,  $2\text{MgO}$ ,  $5\text{SiO}_2$ .

Min. *Cordurite*. Sl. attacked by acids  $+ x\text{H}_2\text{O}$ . Min. *Esmarkite*, *Chlorophyllite*.

**Aluminum ferrous manganous silicate**,  $\text{Al}_2\text{O}_3$ ,  $\text{FeO}$ ,  $2\text{MnO}$ ,  $3\text{SiO}_2$ .

Min. *Partschuite*.

**Aluminum ferrous sodium, etc., silicate borate**,  $\text{H}^{\text{I}}(\text{Al}_2)(\text{B}_2)\text{Si}_2\text{O}_{12} + \text{R}^{\text{I}}(\text{Al}_2)(\text{B}_2)\text{Si}_2\text{O}_{12}$ , etc.

Min. *Toumaline*. Not decomp. by  $\text{HCl} + \text{Aq}$ ; very sl. decomp. by  $\text{H}_2\text{SO}_4$ .

**Aluminum lithium silicate**,  $\text{Al}_2\text{O}_3$ ,  $\text{Li}_2\text{O}$ ,  $5\text{SiO}_2$ .

Not attacked by acids. (Hautefeuille, C. R. 90. 541.)

$\text{Al}_2\text{O}_3$ ,  $\text{Li}_2\text{O}$ ,  $6\text{SiO}_2$ .

$\text{Al}_2\text{O}_3$ ,  $\text{Li}_2\text{O}$ ,  $4\text{SiO}_2$ . [Min. *Spodumene*. Not attacked by acids.]

$4\text{Al}_2\text{O}_3, 3\text{Li}_2\text{O}, 30\text{SiO}_2$ . Min *Petalite* Not attacked by acids

Aluminum lithium potassium silicate,  
 $(\text{Li}, \text{K})_3\text{Al}_2\text{Si}_4\text{O}_{13}$ .

Min *Lepidolite* SI decomp by acids.

Aluminum magnesium silicate,  $5\text{Al}_2\text{O}_3, 4\text{MgO}, 2\text{SiO}_2$ .

Min *Sapphirine*

Aluminum magnesium potassium silicate,  
 $2\text{H}_2\text{K}_2\text{Al}_2\text{Si}_6\text{O}_{21}, 2\text{Mg}_2\text{Si}_4\text{O}_{21}$ .

Min. *Lepidomelane* Easily decomp by HCl or  $\text{HNO}_3 + \text{Aq}$ , with residue of a skeleton of  $\text{SiO}_2$ .

$8\text{Al}_2\text{O}_3, 12\text{MgO}, 2\text{K}_2\text{O}, 12\text{SiO}_2 + \text{H}_2\text{O}$  Min. *Anomite*

$7\text{Al}_2\text{O}_3, 35\text{MgO}, 7\text{K}_2\text{O}, 36\text{SiO}_2$ . Min. *Phlogopite*

Aluminum manganous silicate,  $2\text{Al}_2\text{O}_3, 6\text{MnO}, 6\text{SiO}_2$ .

Not decomp by very dil HCl + Aq. (Gorgeu, C R 97. 1303)

Aluminum potassium silicate,  $\text{Al}_2\text{O}_3, \text{K}_2\text{O}, \text{SiO}_2$

Very slowly decomp. by cold  $\text{H}_2\text{O}$ , 12% is dissolved by hot  $\text{H}_2\text{O}$  Sol in alkali hydroxides + Aq, but insol in carbonates + Aq.

$\text{K}_2\text{O}, \text{Al}_2\text{O}_3, 2\text{SiO}_2$ . Insol in cold  $\text{H}_2\text{O}$ , but 6% dissolves on boiling Sol in dil. acids. Insol in alkali hydroxides or carbonates + Aq (Gorgeu, A ch (6) 10 45)

$\text{K}_2\text{O}, \text{Al}_2\text{O}_3, 3\text{SiO}_2 + 3\text{H}_2\text{O}$ . Easily sol in  $\text{HNO}_3 + \text{Aq}$  (Deville, A ch. (3) 61. 313.)

$\text{K}_2\text{O}, \text{Al}_2\text{O}_3, 4\text{SiO}_2$ . Min *Leucite* Decomp by HCl + Aq with separation of pulverulent  $\text{SiO}_2$ .

+  $4\text{H}_2\text{O}$ . Ppt. (Deville, C R 54. 324)

$\text{H}_2\text{K}_2\text{Al}_2\text{Si}_2\text{O}_{12}$  Min. *Muscovite*, "Mica" Not attacked by HCl or  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

$\text{K}_2\text{Al}_2\text{Si}_2\text{O}_{11} + 3\text{H}_2\text{O}$ . Min. *Pinite*. Partly decomp. by HCl + Aq.

$\text{K}_2\text{Al}_2\text{Si}_2\text{O}_{11}$  Min *Orthoclase Feldspar* Scarcely attacked by acids. Slowly sol. in  $\text{H}_2\text{SO}_4$  or HCl + Aq when finely powdered (Rogers)

Aluminum potassium sodium silicate,  
 $\text{K}_2\text{Al}_2(\text{SiO}_3)_4, 5\text{Na}_2\text{Al}_2(\text{SiO}_3)_2 (?)$

Min *Nepheline*. Decomp. by HCl + Aq.

Aluminum silver silicate,  $\text{Al}_2\text{Ag}_2\text{Si}_2\text{O}_6$

Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Silber, B. 14. 941)

$\text{Al}_2\text{Ag}_2\text{Na}_2\text{Si}_2\text{O}_6$ . As above (Silber)

Aluminum sodium silicate,  $\text{Al}_2\text{O}_3, \text{Na}_2\text{O}, \text{SiO}_2$ . Insol in cold  $\text{H}_2\text{O}$ , but 38-40% dissolves in hot  $\text{H}_2\text{O}$  (Gorgeu)

$\text{Al}_2\text{O}_3, \text{Na}_2\text{O}, 2\text{SiO}_2$  Insol. in cold  $\text{H}_2\text{O}$ , boiling  $\text{H}_2\text{O}$  dissolves 1-2% Sol. in HCl or  $\text{HNO}_3$  diluted with 10-20 vols.  $\text{H}_2\text{O}$ . Insol

in alkali hydroxides or carbonates + Aq. (Gorgeu, A ch (6) 10. 145.)

Not attacked by  $\text{H}_2\text{O}$ . (Silber, B. 14. 941.) +  $3\text{H}_2\text{O}$ . Easily sol in HCl + Aq (v. Ammon.)

$\text{Al}_2\text{O}_3, \text{Na}_2\text{O}, 3\text{SiO}_2 + 3\text{H}_2\text{O}$  Decomp by acids (Deville, A ch (3) 61. 326)

$\text{Al}_2\text{O}_3, \text{Na}_2\text{O}, 4\text{SiO}_2 + 3\text{H}_2\text{O}$  Easily sol. in HCl + Aq. (v Ammon)

$2\text{Al}_2\text{O}_3, 3\text{Na}_2\text{O}, 3\text{SiO}_2$ . Insol in cold  $\text{H}_2\text{O}$ , but 27-30% dissolves on boiling. (Gorgeu.)

$\text{H}_4\text{Na}_2\text{Al}_2\text{Si}_4\text{O}_{14}$ . Min *Paragonite*. Decomp. by conc.  $\text{H}_2\text{SO}_4$ .

$\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_{12} + 2\text{H}_2\text{O}$  Min. *Analcite*. Readily decomp. by HCl + Aq

$\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_{10} + 2\text{H}_2\text{O}$  Min *Natrolite*. Sol. in  $\text{H}_2\text{O}$  with separation of  $\text{SiO}_2$ . Also sol in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$

$\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_{10}$ . Min *Albite* Not attacked by acids

Aluminum sodium silicate chloride,

$3\text{Na}_2\text{Al}_2(\text{SiO}_4)_3, 2\text{NaCl}$

Min *Sodalite* Easily decomp by HCl, and  $\text{HNO}_3 + \text{Aq}$

Aluminum sodium silicate sulphate,

$3\text{Na}_2\text{Al}_2(\text{SiO}_4)_3, \text{Na}_2\text{SO}_4$

Min. *Nissan* Easily decomp by HCl + Aq

Aluminum sodium silicate sulphide.

See Ultramarine.

Barium silicate,  $\text{BaSiO}_3$ .

Somewhat sol. in boiling  $\text{H}_2\text{O}$  Completely sol in dil. HCl + Aq (v Ammon)

+  $6\text{H}_2\text{O}$ , or  $7\text{H}_2\text{O}$  Boiling  $\text{H}_2\text{O}$  decomposes, and dissolves about  $\frac{1}{2}$  the weight of this substance. (le Chatelier, C R 92. 931.)

$2\text{BaO}, \text{SiO}_2$  Decomp. by  $\text{H}_2\text{O}$  into  $\text{BaSiO}_3 + 6\text{H}_2\text{O}$  (Laudrin)

Bismuth silicate,  $2\text{Bi}_2\text{O}_3, 3\text{SiO}_2$

Min *Eulytite*. Decomp. by HCl + Aq.

Bismuth ferric silicate,  $\text{Bi}_2\text{Fe}_2\text{Si}_2\text{O}_{17}$ .

Min *Bismuthoferrite*.

Boron calcium silicate.

See Borate silicate, calcium, and Silicate borate, calcium.

Cadmium silicate,  $\text{CdSiO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Sol in HCl + Aq with deposition of pulverulent  $\text{SiO}_2, 2\text{H}_2\text{O}$  (Rousseau and Tite, C. R. 114. 1262)

Cæsium silicate,  $\text{Cs}_2\text{SiO}_3$ .

(Kahlenberg, J. phys. Chem. 1898, 2. 82.)

Calcium silicate,  $\text{CaSiO}_3$ .Slowly sol in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ Sol. in about 100,000 pts.  $\text{H}_2\text{O}$  (Gorgeu, A. ch. 1885, (6) 4. 550)100 cc. sat. aq. solution of air dried calcium silicate contains 0.0046 g.  $\text{CaO} = 0.0095$  g.  $\text{CaSiO}_3$  at  $17^\circ$ . (Weisberg, Bull. Soc. 1896, (3) 15. 1097.)100 cc. sat. solution of air dried calcium silicate in 10% sugar solution at  $17^\circ$  contains 0.0065 g.  $\text{CaO} = 0.0135$  g.  $\text{CaSiO}_3$ ; 20% sugar solution, 0.0078 g.  $\text{CaO} = 0.0175$  g.  $\text{CaSiO}_3$ .After boiling and filtering hot, 10% sugar solution contains 0.0094 g.  $\text{CaO} = 0.0195$  g.  $\text{CaSiO}_3$ ; 20% sugar solution, 0.0120 g.  $\text{CaO} = 0.0249$  g.  $\text{CaSiO}_3$  (Weisberg)

Insol in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314)

 $4\text{CaO}, 3\text{SiO}_2$ . (Laudrin) $5\text{CaO}, 3\text{SiO}_2 + 5\text{H}_2\text{O}$ . When freshly precipitated is somewhat sol in  $\text{H}_2\text{O}$  and easily decomp. by  $\text{HCl} + \text{Aq}$ . (v Ammon.) $\text{CaO}, 3\text{SiO}_2 + 2\text{H}_2\text{O}$ . (Hjeldt, J pr 94. 129.) $2\text{CaO}, 9\text{SiO}_2 + 3\text{H}_2\text{O}$ . Ppt. $\text{CaSiO}_3$  Min. *Wollastonite*. Gelatinizes with  $\text{HCl} + \text{Aq}$  $\text{CaSi}_2\text{O}_6 + 2\text{H}_2\text{O}$  Min. *Okenite*. Easily decomp. by cold  $\text{HCl} + \text{Aq}$  when powderedCalcium glucinum silicate sodium fluoride,  $(\text{Ca}, \text{Gl})_{19}\text{Si}_{11}\text{O}_{43}, 6\text{NaF}$ .Min. *Leucophane*. $7(\text{Ca}, \text{Gl})_1\text{Si}_2\text{O}_7, 6\text{NaF}$  Min. *Melanophane*.Calcium ferrous silicate,  $\text{CaSiO}_3, \text{FeSiO}_3$ .Min. *Hedenbergite*, *Pyroxene*. Sl decomp by acids.Calcium ferric silicate,  $\text{Ca}_2\text{Fe}_2(\text{SiO}_4)_2$ .Min. *Garnet* Sl. decomp by  $\text{HCl} + \text{Aq}$ . $2\text{CaSiO}_3, 11 \text{Fe}_2(\text{SiO}_4)_2$ . Min. *Szabote* Sl attacked by  $\text{HCl} + \text{Aq}$ , and still less by  $\text{H}_2\text{SO}_4 + \text{Aq}$ .Calcium ferroferric silicate,  $2\text{CaO}, 4\text{FeO}, \text{Fe}_2\text{O}_3, 4\text{SiO}_2 + \text{H}_2\text{O} = \text{H}_2\text{Ca}_2\text{Fe}_2\text{Fe}_2\text{Si}_4\text{O}_{18}$ Min. *Lievrite*, *Ikaite*. Easily gelatinizes with  $\text{HCl} + \text{Aq}$ 

Calcium ferrous magnesium silicate,

 $(\text{Ca}, \text{Fe}, \text{Mg})\text{SiO}_3$ .Min. *Amphibole*, *Hornblende*, *Asbestos*, *Actinolite*, *Tremolite*. Only sl. attacked by acids.Calcium ferroferric sodium silicate,  $\text{CaSiO}_3, \text{FeSiO}_3, \text{Fe}_2(\text{SiO}_4)_2, \text{Na}_2\text{SiO}_3$ .Min. *Aegirite*.Calcium magnesium silicate,  $\text{CaO}, \text{MgO}, 4\text{SiO}_2$ .

(Mutschler, A. 176. 86.)

 $\text{Ca}_2\text{SiO}_4, \text{Mg}_2\text{SiO}_4$ . Min. *Monticellite*. Completely sol. in dil.  $\text{HCl} + \text{Aq}$  $(\text{Ca}, \text{Mg})\text{SiO}_3$ . Min. *Diopside*, *Pyroxene*. Very sl. attacked by acidsCalcium manganous silicate,  $\text{CaSiO}_3, 2\text{MnSiO}_3$ .Min. *Bustamite*.

Calcium potassium silicate.

See under Glass.

Calcium sodium silicate,  $(\text{Ca}, \text{Na}_2, \text{H}_2)\text{SiO}_3$ .Min. *Pectolite*. Decomp by  $\text{HCl} + \text{Aq}$ .

See under glass.

Calcium sodium silicate zirconate,

 $\text{Na}_4\text{Ca}(\text{Si}, \text{Zr})_2\text{O}_{11} + 9\text{H}_2\text{O}$ .Min. *Wöhlerite*. Decomp. by  $\text{HCl} + \text{Aq}$ .Calcium uranyl silicate,  $3\text{CaO}, 5\text{UO}_2, 6\text{SiO}_2 + 18\text{H}_2\text{O}$ .Min. *Uranophane*. Gelatinizes with acids. $\text{CaO}, 3\text{UO}_2, 3\text{SiO}_2 + 9\text{H}_2\text{O}$  Min. *Uranotile*.Calcium silicate chloride,  $2\text{CaO}, \text{SiO}_2, \text{CaCl}_2$ .Insol. in  $\text{H}_2\text{O}$  or alcohol Sol in  $\text{HCl} + \text{Aq}$ . (le Chatelier, C R 97. 1510.)Calcium silicate fluoride,  $2\text{CaO}, 3\text{SiO}_2, 6\text{CaF}_2$ . (Deville, C. R. 52. 110.)

Calcium silicate potassium fluoride,

 $4\text{H}_2\text{CaSi}_2\text{O}_6, \text{KF} + 4\text{H}_2\text{O}$ .Min. *Apophyllite*. Decomp by  $\text{HCl} + \text{Aq}$ .

Calcium silicate stannate.

See Silicostannate, calcium.

Calcium silicate titanate,  $\text{CaO}, \text{SiO}_2, \text{TiO}_2$ .

(Hautefeuille, A. ch. (4) 4. 154)

Min. *Titanite*. Incompletely decomp. by  $\text{HCl} + \text{Aq}$ , wholly by  $\text{H}_2\text{SO}_4 + \text{Aq}$ Cerous silicate,  $\text{Ce}_2(\text{SiO}_4)_2$ More or less attacked by  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ , according to the concentration. (Didier, C R. 101. 882.)

Cerium didymium lanthanum silicate,

 $2(\text{Ce}, \text{La}, \text{Di})_2\text{O}_3, 3\text{SiO}_2$ Min. *Cerite*. Gelatinizes with  $\text{HCl} + \text{Aq}$ .

Cerium glucinum yttrium silicate,

 $(\text{Y}, \text{Ce}, \text{Gl})_2\text{SiO}_4$ Min. *Gadolinite*. Easily gelatinized by  $\text{HCl} + \text{Aq}$ .Cerous silicate chloride,  $2\text{Ce}_2\text{O}_3, 3\text{SiO}_2$ , $4\text{CeCl}_2 = \text{Ce}_4(\text{SiO}_4)_3, 4\text{CeCl}_2$ .Insol. in  $\text{H}_2\text{O}$ , but slowly decomp thereby. (Didier, C. R. 101. 882.)

**Cobaltous silicate,  $\text{Co}_2\text{SiO}_4$ .**

Gelatinizes with  $\text{HCl} + \text{Aq.}$  (Bourgeois, C. R. 108. 1077)

**Cupric silicate,  $\text{CuH}_2\text{SiO}_4$ .**

Min. *Droptase* Sol in  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{NH}_4\text{OH} + \text{Aq.}$  with separation of  $\text{SiO}_2$ . Not attacked by  $\text{KOH} + \text{Aq.}$

$\text{CuSiO}_3 + 2\text{H}_2\text{O}$ . Min. *Chrysocola*. Decomp. by  $\text{HCl} + \text{Aq.}$  +  $3\text{H}_2\text{O}$ . Min. *Asperolite*. Easily decomp. by  $\text{HCl} + \text{Aq.}$

"Cupric silicate" is insol. in methyl acetate. (Naumann, B. 1909, 42. 3790)

**Cupric silicate ammonia,  $\text{CuSi}_2\text{O}_5, 2\text{NH}_3$ .**

Ppt (Schiff, A. 123. 38)

**Glucinum silicate,  $\text{Gl}_2\text{SiO}_4$ .**

Min. *Phenacite* Not attacked by acids.

**Glucinum ferrous manganous silicate ferrous manganous sulphide,  $3(\text{Gl}, \text{Fe}, \text{Mn})_2\text{SiO}_4, (\text{Mn}, \text{Fe})\text{S}$** 

Min. *Helvina*. Decomp. by  $\text{HCl} + \text{Aq.}$

**Iron (ferrous) silicate,  $\text{Fe}_2\text{SiO}_4$ .**

Min. *Fayalite*. Gelatinizes with  $\text{HCl} + \text{Aq.}$

$\text{FeSiO}_3$ . Min. *Grunerite* +  $6\text{H}_2\text{O}$ . Min. *Chlorophite*.  $4\text{FeO}, \text{SiO}_2$ . (Zobel, Dingl 184. 111.)

**Iron (ferrio) silicate,  $\text{Fe}_3\text{Si}_2\text{O}_8 + 5\text{H}_2\text{O}$ .**

Min. *Nonttronite* Gelatinizes with hot acids.

$4\text{Fe}_2\text{O}_3, 9\text{SiO}_2 + 18\text{H}_2\text{O}$ . Min. *Hisingerite*.  $2\text{Fe}_2\text{O}_3, 9\text{SiO}_2 + 2\text{H}_2\text{O}$ . Min. *Anthosiderite*.

**Iron (ferroferrie) magnesium silicate,**

$(\text{Fe}, \text{Mg})_2\text{Fe}_2\text{Si}_2\text{O}_{10} + 4\text{H}_2\text{O}$

Min. *Cromastite*. Gelatinizes with acids.

**Iron (ferroferrie) sodium silicate,  $5\text{Na}_2\text{SiO}_3, 2\text{FeSiO}_3, 4\text{Fe}_2(\text{SiO}_3)_3$** 

Min. *Akrite* Sl decomp. by acids.

**Iron (ferrous) magnesium silicate,  $\text{Fe}_2\text{SiO}_4, \text{Mg}_2\text{SiO}_4$** 

Min. *Olivenne*, *Chrysokite*, *Peridot*. Gelatinizes with  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq.}$

$(\text{Fe}, \text{Mg})\text{SiO}_3 + \frac{1}{2}\text{H}_2\text{O}$ . Min. *Picrophyllite*. +  $\frac{1}{2}\text{H}_2\text{O}$ . Min. *Monradite*.

$(\text{Fe}, \text{Mg})\text{SiO}_3$ . Min. *Bronzite*, *Hypersthene*. Not attacked by acids.

$2\text{MgSiO}_3, \frac{1}{2}\text{Fe}_2\text{SiO}_3$ . Min. *Anthophyllite*. Not attacked by acids.

**Iron (ferrous) manganous silicate,  $\text{Fe}_2\text{SiO}_4, \text{Mn}_2\text{SiO}_4$** 

Min. *Knebelite*. Gelatinizes with  $\text{HCl} + \text{Aq.}$

**Iron (ferrous) manganous silicate chloride,**

$7(\text{Fe}, \text{Mn})\text{SiO}_3, (\text{Fe}, \text{Mn})\text{Cl}_2 + 5\text{H}_2\text{O}$

Min. *Pyrosmaite*. " Completely decomp. by conc  $\text{HNO}_3 + \text{Aq.}$

**Iron (ferro) potassium silicate,  $\text{Fe}(\text{SiO}_3)_2, \text{K}_2\text{SiO}_3$ .**

(Hautefeuille and Perrey, C R 107. 1150.)

**Iron (ferro) sodium silicate,  $\text{Na}_2\text{Fe}_2\text{Si}_4\text{O}_{11}$ .**

Min. *Crokydolite*. Not attacked by acids.

**Lead silicate.**

Insol in acetone. (Naumann, B. 1904, 37. 4329); methyl acetate (Naumann, B. 1909, 42. 3790.)

See under Glass.

**Lithium silicate,  $\text{Li}_2\text{Si}_2\text{O}_7$ .**

$\text{Li}_2\text{SiO}_4$

$\text{Li}_2\text{SiO}_3$  More stable towards  $\text{H}_2\text{O}$  than the other alkali metasilicates. (Riecke and Endell, C C. 1911, I. 7)

Decomp. by boiling  $\text{H}_2\text{O}$  and acids. (Friedel, C. C. 1901, II. 89.)

Scarcely attacked by cold  $\text{H}_2\text{O}$ . (Friedel, Bull. Soc. Min. 1901, 24. 141.)

Insol in ethyl acetate. (Naumann, B. 1904, 37. 3601); methyl acetate (Naumann, B. 1909, 42. 3790.)

**Magnesium silicate,  $\text{Mg}_2\text{Si}_2\text{O}_7 + 2\text{H}_2\text{O}$ .**

Min. *Serpentine* Decomp. by  $\text{HCl} + \text{Aq.}$  more easily by  $\text{H}_2\text{SO}_4$ .

Min. *Chrysotile*  $\text{Mg}_3\text{Si}_2\text{O}_8 + 6\text{H}_2\text{O}$ . Min. *Gymnita*, *Soapstone* Decomp. by  $\text{H}_2\text{SO}_4$ .

$\text{MgSiO}_3$ . Not completely decomp. by  $\text{HCl} + \text{Aq.}$

+  $\frac{1}{2}\text{H}_2\text{O}$ . Min. *Aphrodite*. Decomp. by hot acids.

+  $\frac{1}{2}\text{H}_2\text{O}$ . Min. *Picrosine*. +  $1\frac{1}{2}\text{H}_2\text{O}$ . Sol. in dil. acids (v. Ammon.)

Min. *Forsterite*.  $3\text{MgO}, 4\text{SiO}_2 + \text{H}_2\text{O}$  or  $4\text{MgO}, 5\text{SiO}_2 + \frac{1}{2}\text{H}_2\text{O}$ . Min. *Talc* or *Steatite*. Not attacked by  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq.}$

$\text{Mg}_2\text{Si}_2\text{O}_7 + 4\text{H}_2\text{O}$ . Min. *Spadaite*. Decomp. by conc  $\text{HCl} + \text{Aq.}$

$\text{Mg}_2\text{Si}_2\text{O}_7 + 4\text{H}_2\text{O}$ . Min. *Meerchaum*. Decomp. by  $\text{HCl} + \text{Aq.}$

"Magnesium silicate," is insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

**Magnesium potassium silicate,**

$\text{MgO}, \text{K}_2\text{O}, 3\text{SiO}_2$

Easily sol. in acids with decomp (Duboin, C. R. 1895, 120. 681)

**Magnesium silicate fluosilicate,  $\text{Mg}_2\text{Si}_2\text{O}_7, \text{Mg}_2\text{Si}_2\text{F}_{10}$ .**

Min. *Humite*, *Chondrodite*. Gelatinizes with  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq.}$

**Manganous silicate,  $Mn_2SiO_4$ .**

Min *Tephroite* Decomp. by  $HCl + Aq$  with formation of a stiff jelly.

$MnSiO_3$ . Min. *Rhodonite*, *Hermannite*

Not attacked by  $HCl + Aq$ .

$Mn_2Si_2O_7 + 2H_2O$ . Min. *Friedelite*

Easily gelatinized by  $HCl + Aq$

"Manganous silicate" is insol in ethyl

acetate. (Naumann, B. 1910, 43. 314)

**Manganous zinc silicate,  $(Mn,Zn)_2SiO_4$ .**

Min *Troostite*.

**Manganous silicate chloride,  $MnSiO_3$ ,  $MnO$ ,  $MnCl_2$ .**

Decomp by  $H_2O$  (Gorgeu)

**Nickel silicate,  $Ni_2SiO_4$ .**

Easily decomp by acids. (Bourgeois, C. R. 108. 1077.)

**Potassium silicate,  $K_2SiO_3$ .**

Completely sol in  $H_2O$ . (Ordway, Sil. Am. J. (2) 33. 34.)

Insol in methyl acetate. (Naumann, B. 1909, 42. 3790)

$K_2Si_2O_7$ . Sol in  $H_2O$ . Conc.  $K_2Si_2O_7 + Aq$  contains 28% of the salt, and has sp gr 1.25. (Fuchs)

Hygroscopic. Decomp. at once by  $H_2O$ . (Morey, J. Am. Chem. Soc. 1914, 36. 222.)

$K_2Si_2O_7$ . Partially sol in  $H_2O$  as  $K_2SiO_3$ .

$K_2Si_2O_7 + 16H_2O$  Insol. in  $H_2O$  (Forchhammer)

The K silicates are pptd. from their aqueous solution by alcohol with partial decomp., but less readily than Na silicates.

More sol. in  $H_2O$  than the corresponding Na salts (Ordway, Sil. Am. J. (2) 32. 155)

Solution can be obtained which is perfectly clear when  $4\frac{1}{2}SiO_2$  are present to 1  $K_2O$ , if there are no impurities present (Ordway)

The K silicates resemble the Na salts, which see for further data

**Potassium hydrogen silicate,  $KHSi_2O_5$ .**

Not readily affected by  $H_2O$ , even by treatment at 100° for several hours

Decomp. by heating with dil  $HCl$  (Morey, J. Am. Chem. Soc. 1914, 36. 222)

**Potassium zinc silicate.**

Sol. in  $KOH + Aq$ . (Schindler)

$K_2O$ , 8  $ZnO$ , 4  $SiO_2$ . Sol. in  $HCl + Aq$ . (Duboin, C. R. 1905, 141. 255)

8  $K_2O$ , 9  $ZnO$ , 17  $SiO_2$ . Sol. in  $HCl + Aq$ . (Duboin.)

**Potassium zirconium silicate,  $K_2O$ ,  $ZrO_2$ , 2  $SiO_2$ .**

Decomp. by  $HCl + Aq$  (Melliss.)

**Rubidium silicate,  $Rb_2SiO_3$ .**

(Kahlenberg, J. phys. Chem. 1898, 2. 82.)

**Silver silicate,  $Ag_2SiO_3$ .**

Decomp. by all acids, sol in  $NH_4OH + Aq$ . (Hawkins, Sil. Am. J. 139. 311.)

**Sodium silicate,  $Na_2SiO_3$ .**

Rapidly decomp. by  $H_2O$  (Morey, J. Am. Chem. Soc. 1914, 36. 224)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790)

+5, 6, and 8  $H_2O$ . Easily sol. in  $H_2O$ .

+9  $H_2O$ . Solubility in  $\frac{1}{2}$ -N  $NaOH + Aq$ .

100 cem. of the solution contain 25.56 g.  $Na_2SiO_3 + 9H_2O$  at 17.5°

Sp gr. of the solution = 1.129 (Vesterberg, C. C. 1913. 777.)

100 cem. of a sat. solution of sodium silicate in  $\frac{1}{2}$ -N  $NaCl + Aq$  contain 3.83 g.  $Na_2SiO_3 + 9H_2O$  at 17.5°

Sp gr. of solution = 1.15

100 cem. of a sat solution of sodium silicate in sat.  $NaCl + Aq$  contain 20.64 g.  $Na_2SiO_3 + 9H_2O$  at 17.5° (Vesterberg)

$Na_2Si_2O_7$ . Sol. in  $H_2O$ .

Slowly decomp by cold  $H_2O$  (Morey, J. Am. Chem. Soc. 1914, 36. 223.)

$Na_2Si_2O_7$ .

$Na_2Si_2O_7$ .

$Na_2Si_2O_7$ . Slowly sol in  $H_2O$

+12  $H_2O$ .

Above compounds are all more or less indefinite

Water glass  $xNa_2O$ ,  $ySiO_2 + zH_2O$ . Sol. in  $H_2O$ , but solution is decomposed by all weak acids, even  $CO_2$ .

Fused water glass is but little acted on by cold  $H_2O$ , but when pure, easily dissolves in  $H_2O$  by long boiling (Ordway, Am. J. Sci. (2) 32. 337.)

When the  $SiO_2$  is present in greater proportion than in  $Na_2O$ , 3  $SiO_2$ , it is very difficult to dissolve in  $H_2O$ .

Na silicate is less easily sol in  $H_2O$  than the corresponding K compound.

Solubility of water glass in  $H_2O$  is much impaired by earthy impurities, so that traces have great effect in preventing the solubility.

$NH_4$  salts decomp. water glass solutions. A solution containing  $\frac{1}{2}\%$   $Na_2SiO_3$  is scarcely precipitated by  $NH_4Cl$ , but easily by  $NH_4NO_3$  (Fluckinger)

Precipitated by  $NH_4OH + Aq$  as  $Na_2SiO_3$ .

Many sodium and potassium salts, especially the chlorides and acetates, form precipitates in solutions of water glass; these precipitates are larger the more concentrated the solution is, and the greater amount of  $SiO_2$  it contains. Heating hastens the precipitation by chlorides, nitrates, and sulphates, but delays that by acetates.  $KOH + Aq$  does not precipitate.

Cold sat  $Na_2SO_4 + Aq$  does not precipitate even on heating, but 1 pt. anhydrous  $Na_2SO_4$ , dissolved in 2 pts.  $H_2O$  precipitates a hot solution of  $Na_2SiO_3$ .

$\text{NaNO}_3$  dissolved in 1 pt  $\text{H}_2\text{O}$  precipitate  $\text{Na}_2\text{SiO}_3 + \text{Aq}$  of 1392 sp. gr.,  $\text{NaNO}_3$  in 2 pts  $\text{H}_2\text{O}$  when mixed with a solution of  $\text{Na}_2\text{SiO}_3$ , as above, if the two are present in equal vols., causes no ppt in the cold, but solidifies when warmed to  $54^\circ$ , and redissolves on cooling rapidly, but if 2 vols.  $\text{NaNO}_3 + \text{Aq}$  are present to 1 vol.  $\text{Na}_2\text{SiO}_3 + \text{Aq}$ , the precipitate does not disappear on cooling.

If 1 pt  $\text{NH}_4\text{OH} + \text{Aq}$  (0.921 sp. gr.) is added to 10 pts.  $\text{Na}_2\text{SiO}_3 + \text{Aq}$ , no ppt. forms, but by increasing the amt. of  $\text{NH}_4\text{OH} + \text{Aq}$  to 2 pts, the greater pt. of the  $\text{Na}_2\text{SiO}_3$  is pptd., but redissolves on heating to  $90^\circ$ , separating again on cooling. When 1 pt  $\text{NH}_4\text{OH} + \text{Aq}$  is added to 6-8 pts.  $\text{Na}_2\text{SiO}_3 + \text{Aq}$  and heated to  $30^\circ$ , a clear liquid is formed which separates into two layers at ordinary temp.

The most sol. K, Na, Li, and  $\text{NH}_4$  salts separate  $\text{SiO}_2$  from conc.  $\text{Na}_2\text{SiO}_3 + \text{Aq}$ . Most of these salts lose this power by dilution, but the  $\text{NH}_4$  salts and  $\text{KNO}_3$  keep this power until the solution is very dil. This is especially the case with  $\text{NH}_4\text{Cl}$  and  $\text{NH}_4\text{NO}_3$ .

Bromine, chlorine, propyl amine, caesate, phenol, dissolved in glycerine, chloral hydrate, dil. albumen solution, and glue solution ppt.  $\text{SiO}_2$  from  $\text{Na}_2\text{SiO}_3 + \text{Aq}$ ; but sugar, dextrine, glycerine, urea, al. alkaline solution of urea nitrate, conine, nicotine, saponine, convolvuline, jalapine, and colophonum dissolved in  $\text{KOH} + \text{Aq}$  do not ppt.  $\text{SiO}_2$  (Flückinger, Aich Pharm (2) 144. 97.)

Alcohol ppts water glass as such from its aqueous solution, even when this is very dil., but there is some decomposition, the alcohol tending to hold in solution a portion of a silicate more alkaline than that previously dissolved in  $\text{H}_2\text{O}$ , while the ppt. formed contains more  $\text{SiO}_2$  than the original silicate.

Many neutral K or Na salts ppt. water glass as such when added to aqueous solutions. Like alcohol, these solutions exert a decomposing action, the ppt. being always more siliceous than the original silicate. Na silicate yields a larger deposit than K silicate; when a silicate of one base is pptd. by a salt of the other, both bases enter into the composition of the ppt., and the relative proportion of Na and K is very nearly the same as in the average of the liquids mixed.

Different salts have very unequal pptg. power, the acetates and chlorides being particularly efficient. Heat increases the pptg. power of the chlorides, sulphates, and nitrates, and diminishes that of the acetates. The alkali acetates are somewhat more efficient than the chlorides, but  $\text{NaC}_2\text{H}_3\text{O}_2$  gives only a slight ppt. with  $\text{Na}_2\text{O}$ ,  $2\frac{1}{2}\text{SiO}_2$ , even after some time.

$\text{NaNO}_3$  has but little effect on the more alkaline silicates.

$\text{Na}_2\text{SO}_4$  has still less power than  $\text{NaNO}_3$ .  $\text{Na}_2\text{CO}_3$  has no pptg. power, and  $\text{Na}_2\text{AsO}_4$  or  $\text{Na}_2\text{PO}_4$  have very little effect.

$\text{MHSO}_4$ ,  $\text{MHCO}_3$ ,  $\text{M}_2\text{HPO}_4$ ,  $\text{M}_2\text{HAsO}_4$ , ppt.  $\text{SiO}_2$ .  $\text{NH}_4$  salts also have that effect.

Pptd. water glass, as mentioned above, is much more sol. in  $\text{H}_2\text{O}$  than ordinary water glass, and dissolves in  $\text{H}_2\text{O}$  without decomp. For numerous further details, see articles by Ordway in Sil. Am. J. Sci. vols. 32 and 33; also Storer's Dict.

Sp. gr. of water glass solution containing 14-15%  $\text{SiO}_2$ , 13-14%  $\text{Na}_2\text{O}$ , and 70-72%  $\text{H}_2\text{O}$  is 1.30-1.35 (Hager, Comm. 1883.)

Sp. gr. of sat.  $\text{Na}_2\text{SiO}_3 + \text{Aq}$  freshly prepared at  $18^\circ$  is 1.2600, and 1 litre contains 4.5 gramme-equivalents  $\frac{1}{2}\text{Na}_2\text{SiO}_3$ .

Sp. gr. of sat. solution of  $\text{Na}_2\text{O}$ , 3.480, is 1.306, and 1 litre contains 3.7 gramme-equivalents  $\frac{1}{2}(\text{Na}_2\text{O}, 3.48\text{SiO}_2)$  (Kohl-  
ausch, Z. phys. Ch. 12. 773.)

**Sodium zirconium silicate,  $\text{Na}_2\text{O}, \text{ZrO}_2, \text{SiO}_2$ .**

Decomp. by hot  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$  (Gibbs, Pogg. 71. 559.)

$\text{Na}_2\text{O}, 8\text{ZrO}_2, \text{SiO}_2 + 11\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{SO}_4$  (Melliss.)

**Strontium silicate,  $\text{SrSiO}_3$ .**

(Stein, Z. anorg. 1907, 55. 164.)

$+ \text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Jordis and Kanter, Z. anorg. 1903, 35. 90.)

$\text{Sr}_2\text{SiO}_4$  (Stein, Z. anorg. 1907, 55. 167.)

$3\text{SrO}, \text{SiO}_2$ . Sol. in  $\text{H}_2\text{O}$  Sol. in acids.

(Vauquelin.)

**Thalious silicate,  $3\text{Ti}_2\text{O}_3, 10\text{SiO}_2$ .**

100 pts. of a solution of  $\text{Ti}_2\text{O}_3$  dissolve 4.17 pts.  $\text{SiO}_2$  by 24 hours' boiling. Sol. in  $\text{H}_2\text{O}$ . (Flemming, J. B. 1868. 251.)

**Thorium silicate,  $\text{ThO}_2, \text{SiO}_2$ .**

Insol. in acids. Attacked by  $\text{KHSO}_4$  (Troost and Ouyverd, C. R. 105. 255.)

$+ 1\frac{1}{2}\text{H}_2\text{O}$ . Min. *Thorite* Decomp. by  $\text{HCl} + \text{Aq}$ .

$\text{ThO}_2, 2\text{SiO}_2$  Insol. in acids or  $\text{KHSO}_4$  (T and O.)

**Yttrium silicate,  $\text{Y}_2\text{O}_3, \text{SiO}_2$ .**

Attacked by  $\text{HCl}$ ,  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Dubou, C. R. 107. 99.)

**Zinc silicate,  $\text{ZnSiO}_3$ .**

(Stein, Z. anorg. 1907, 55. 165.)

$\text{Zn}_2\text{SiO}_4$  Min. *Willemit*. Gelatinizes with  $\text{HCl} + \text{Aq}$ ; sol. in  $\text{KOH} + \text{Aq}$ .

Decomp. by cold sat. citric acid +  $\text{Aq}$  (Bolton, C. N. 1881, 43. 34.)

$+ \text{H}_2\text{O}$  Min. *Calamine*. Sol. in  $\text{HCl} + \text{Aq}$  with separation of gelatinous  $\text{SiO}_2, x\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ , and  $\text{KOH} + \text{Aq}$ .

Insol. in  $\text{NH}_4\text{OH} + (\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Brandhorst, Zeit. angew. Ch. 1904, 17. 513.)

$\text{ZnO}, 3\text{SiO}_2$  (Bornträger, Ch. Z. 1893, 8. 186.)

Zirconium silicate,  $\text{SiO}_2, \text{ZrO}_2$ .

Min. *Zircon*. Insol. in acids, except  $\text{H}_2\text{SO}_4$ , in which it is very slowly and sl sol  $3\text{SiO}_2, 2\text{ZrO}_2$  Min. *Auerbachite*.

"Silicium oxide,"  $\text{Si}_2\text{H}_2\text{O}_6$ .

(Geuther, J. pr. 95. 430) This substance is identical with silicoformic anhydride according to Otto-Graham's Handb anorgan. Chem 7te Aufl 2. 953.

Siliciuretted hydrogen.

See Silicon hydride.

Silicobromoform,  $\text{HSiBr}_3$ .

Fumes on air, decomp by  $\text{H}_2\text{O}$ .

Silicochloroform,  $\text{HSiCl}_3$ .

Decomp by  $\text{H}_2\text{O}$  and alcohol

Completely miscible with  $\text{CS}_2, \text{CCl}_4, \text{CHCl}_3, \text{C}_6\text{H}_6, \text{SiCl}_4, \text{SnCl}_4, \text{TiCl}_4$ , and  $\text{AsCl}_3$  (Ruff, B 1905, 38. 2230)

Silicoethane.

See Silicon hydride.

Silicofluoroform,  $\text{SiHF}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Decomp. by  $\text{NaOH}$  and abs. alcohol with evolution of hydrogen. Decomp. by abs. ether. Sol. in toluene. (Ruff, B. 1905, 38. 63)

Silicoformic anhydride,

Somewhat sol. in  $\text{H}_2\text{O}$ . Acids, even conc  $\text{HNO}_3 + \text{Aq.}$  have no action, except  $\text{HF}$ , which dissolves it easily with evolution of hydrogen. Solutions of alkali hydrates, ammonium hydrate, and alkali carbonates +  $\text{Aq.}$  also dissolve with evolution of hydrogen. (Ruff and Wöhler, A. 104. 101.)

Silicolodoform,  $\text{HSiI}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{CS}_2$ . (Friedel, A. 149. 96.)

Miscible with  $\text{C}_6\text{H}_6$  and  $\text{CS}_2$ . (Ruff, B. 1908, 41. 3739)

Silicomethane,  $\text{SiH}_4$ .

See Silicon hydride.

Silicomethyl chloride,  $\text{SiH}_3\text{Cl}$ .

Decomp by  $\text{H}_2\text{O}$  and by alkalis. (Besson and Fournier, C. R. 1909, 148. 556.)

Silicomethylene chloride,  $\text{SiH}_2\text{Cl}_2$ .

Decomp. by  $\text{H}_2\text{O}$  and by alkalis. (Besson and Fournier, C. R. 1909, 148. 556.)

Silicomolybdic acid,  $\text{SiO}_2, 12\text{MoO}_3 + 26\text{H}_2\text{O}$ .

Very easily sol. in  $\text{H}_2\text{O}$  and dil acids. (Parmentier, C. R. 94. 213)

Forms a solution with a little ether, which separates into two layers by addition of  $\text{H}_2\text{O}$  or more ether. (Parmentier, C. R. 104. 686.) (Copaux, Bull Soc Min. 1906, 29. 79)

+  $32\text{H}_2\text{O}$ . Decomp. by alkali (Asch, Z. anorg 1901, 28. 293.)

+  $33\text{H}_2\text{O}$ . (Copaux, Bull Soc Min. 1906, 29. 79)

Aluminum silicomolybdate,  $2\text{Al}_2\text{O}_3, 3(\text{SiO}_2, 12\text{MoO}_3) + 93\text{H}_2\text{O}$ .

(Copaux, A. ch. 1906, (8) 7. 118.)

Aluminum sodium silicomolybdate,  $4(\text{Na}_2\text{O}, \text{Al}_2\text{O}_3, 2\text{SiO}_2), \text{Na}_2\text{MoO}_4 + 7\text{H}_2\text{O}$ .

Sol in  $\text{HCl} + \text{Aq.}$  (Thugutt, Z. anorg 1892, 2. 87.)

Ammonium silicomolybdate.

Sol. in  $\text{H}_2\text{O}$  (Parmentier, C. R. 94. 213)

Barium silicomolybdate,  $2\text{BaO}, \text{SiO}_2, 12\text{MoO}_3 + 16\text{H}_2\text{O}$ .

(Copaux, A. ch. 1906, (8) 7. 118.)

+  $22\text{H}_2\text{O}$  Sol. in 4 pts.  $\text{H}_2\text{O}$  (Copaux, Bull. Soc. Min. 1906, 29. 80.)

+  $24\text{H}_2\text{O}$ . Efflorescent Very sol. in  $\text{H}_2\text{O}$ . (Asch, Z. anorg 1901, 28. 282.)

+  $29\text{H}_2\text{O}$  Efflorescent (Copaux, A. ch. 1906, (8) 7. 118.)

Cadmium silicomolybdate,  $2\text{CdO}, \text{SiO}_2, 12\text{MoO}_3 + 22\text{H}_2\text{O}$ .

Very unusually sol. in  $\text{H}_2\text{O}$ . (Copaux, A. ch. 1906, (8) 7. 140.)

Cæsium silicomolybdate.

Sl. sol. in  $\text{H}_2\text{O}$ , insol in silicomolybdic acid +  $\text{Aq.}$

Calcium silicomolybdate,  $2\text{CaO}, \text{SiO}_2, 12\text{MoO}_3 + 24\text{H}_2\text{O}$

Efflorescent. Very sol. in  $\text{H}_2\text{O}$ . (Asch, Z. anorg. 1901, 28. 282.)

+  $26\text{H}_2\text{O}$ . (Copaux, A. ch. 1906, (8) 7. 118.)

+  $31\text{H}_2\text{O}$ . (Copaux.)

Chromium silicomolybdate,  $2\text{Cr}_2\text{O}_3, 3(\text{SiO}_2, 12\text{MoO}_3) + 93\text{H}_2\text{O}$ .

(Copaux.)

Cupric silicomolybdate,  $2\text{CuO}, \text{SiO}_2, 12\text{MoO}_3 + 31\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Copaux.)

Lithium silicomolybdate,  $2\text{Li}_2\text{O}, \text{SiO}_2, 12\text{MoO}_3 + 29\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ . (Copaux)

Magnesium silicomolybdate,  $2\text{MgO}, \text{SiO}_2, 12\text{MoO}_3 + 30\text{H}_2\text{O}$ .

(Asch, Z. anorg. 1901, 28. 282.)

+  $31\text{H}_2\text{O}$  Very efflorescent and sol in  $\text{H}_2\text{O}$ . (Copaux.)

**Potassium silicomolybdate**,  $2K_2O, SiO_2, 12MoO_3 + 16H_2O$   
Efflorescent. Very sol. in  $H_2O$  (Asch, Z anorg. 1901, 28, 282.)  
1  $5K_2O, SiO_2, 12MoO_3 + 14H_2O$  (Asch.)  
Sol in  $H_2O$  with decomp (Copaux)

**Potassium silver silicomolybdate**,  $K_2O, 3Ag_2O, 2(SiO_2, 12MoO_3) + 14H_2O, + 22H_2O, + 30H_2O$   
Sol. in  $H_2O$  with decomp Sol unchanged in dil mother liquor. (Copaux, Bull. Soc. Min 1907, 30, 293.)

**Rubidium silicomolybdate.**  
Sl. sol in  $H_2O$ .

**Silver silicomolybdate**,  $1.5Ag_2O, SiO_2, 12MoO_3 + 11H_2O$   
Sol. in cold  $H_2O$ . (Asch.)  
 $2Ag_2O, SiO_2, 12MoO_3 + 12H_2O$  Decomp by boiling  $H_2O$  Sol in  $NH_4OH + Aq.$   
 $4Ag_2O, SiO_2, 12MoO_3 + 15H_2O$  (Asch.)

**Sodium silicomolybdate**,  $2Na_2O, SiO_2, 12MoO_3 + 14H_2O$ .  
(Copaux)  
 $2Na_2O, SiO_2, 12MoO_3 + 21H_2O$  Very sol in  $H_2O$ . Efflorescent. (Asch.)  
 $+ 22H_2O$ . (Copaux)  
1  $5Na_2O, SiO_2, 12MoO_3 + 17H_2O$ . (Asch.)  
3  $Na_2O, 2(SiO_2, 12MoO_3) + 17H_2O$  (Copaux.)

**Strontium silicomolybdate**,  $2SrO, SiO_2, 12MoO_3 + 26H_2O$ .  
(Copaux.)

**Zinc silicomolybdate**,  $2ZnO, SiO_2, 12MoO_3 + 31H_2O$ .  
Extremely sol. in  $H_2O$  (Copaux)

## Silicon, Si.

**Amorphous.** Insol. in  $H_2O$  Sol. before igniting in cold  $HF$ . Insol. in other mineral acids and aqua regia. Sol. in conc.  $KOH + Aq.$  When amorphous Si is ignited, it becomes insol. in  $HF$  and  $KOH + Aq.$

Amorphous Si is sol. in aqua regia and in a mixture of  $HNO_3$  and  $HF$  (Vigouroux-Moissan, C. R. 1895, 120, 367.)

Insol. in liquid  $CO_2$ . (Buchner, Z. phys. Ch. 1906, 54, 674)

Insol. in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20, 830)

**Graphitic.** Sol. in  $HNO_3 + HF$ . (Berzelius, A. 49, 247.)

**Crystalline** Insol. in all acids, except a mixture of  $HF$  and  $HNO_3$ . Sol. in moderately conc.  $KOH + Aq$  even when cold. (Deville)

Although it has been generally understood that crystallized Si is not attacked by  $HF$ , it is now found that this applies only to  $HF +$

$Aq.$  Gaseous  $HF$  readily attacks cryst. Si. (Newth, C. N. 1896, 72, 287)

Si cryst. from  $Ag$  is incompletely sol. in  $HF$  According to the temp. to which the  $Ag$  Si mixture has been heated, the following percentages of Si are dissolved in  $HF$ :  $970^\circ$ , 58.02%;  $1150^\circ$ , 27.66%;  $1250^\circ$ , 19%;  $1470^\circ$ , 16%. (Moissan and Siemens, C. R. 1904, 138, 657, 1300.)

Insol in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20, 830.)

## Silicon amide, $Si(NH_2)_4$ .

Unstable, decomp. by  $H_2O$  and partially decomp. by  $HNO_3$ ; sol. in most organic solvents (Lengfeld, Am. Ch. J. 1899, 21, 531.)

Decomp by  $H_2O$ ; insol in liquid  $NH_3$ . (Vigouroux, C. R. 1903, 136, 1670)

## Silicon traboride, $SiB_3$

Slowly attacked by  $HNO_3$  Decomp. by hot conc  $H_2SO_4$  or fused  $KOH$ . (Moissan, C. R. 1900, 131, 142.)

## Silicon hexaboride, $SiB_6$ .

Readily attacked by  $HNO_3$ . Slowly decomp. by hot conc  $H_2SO_4$ . Not attacked by fused  $KOH$ . (Moissan, C. R. 1900, 131, 142.)

## Silicon tribromide, $Si_2Br_6$ .

Decomp. by  $KOH + Aq$  (Friedel and Ladenburg, A. 203, 253)

$HSiBr_3$  See Silicobromoform.

## Silicon tetrabromide, $SiBr_4$ .

Rapidly decomp. by  $H_2O$ ; decomp. in several days by  $H_2SO_4$ . (Friedel and Ladenburg, A. 147, 362)

## Silicon bromide, $Si_2Br_4$ .

(Besson, C. R. 1910, 151, 1056)  
 $Si_2Br_4$ . (Besson.)

## Disilicon hydrogen pentabromide, $HSi_2Br_5$ or $Si_2Br_5$ (?)

Decomp by  $H_2O$  (Mahn, Zeit. Chem. (2) 5, 279.)

## Silicon tetrabromide ammonia, $SiBr_4, 6NH_3$ .

Decomp. by  $H_2O$ . (Lay, Dissert. 1910.)  
 $SiBr_4, 7NH_3$  Decomp. by  $H_2O$ . (Besson, C. R. 110, 240)

## Silicon bromoiodide, $SiIBr_3$

Decomp by  $H_2O$ . Sol in  $CS_2$ . (Friedel, B. 2, 60)

$SiBr_2I_2$ . As above. (F.)

$SiBrI_2$ . As above (F.)

## Silicon bromosulphide, $SiSBr_3$ .

Decomp in moist air. Violently decomp. by  $H_2O$ . Sol in  $CS_2$  and other organic solvents (Blux, B. 1903, 36, 4218.)

**Silicon carbide, SiC.**

Very stable, insol in  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$ ; sol. in fused KOH at red heat (Moissan, Bull. Soc. 1894, (3) 11. 997.)

Cryst. modification. Insol. in acids; sol. in fused alkalis. (Moissan, C. R. 1893, 117. 427.)

Insol. in all acids, sol. in molten alkalis (Muhlhauser, Z. anorg. 1894, 5. 116.)

See Silundum.

**Silicon subchloride,  $\text{SiCl}_2$  (?).**

Decomp. by  $\text{H}_2\text{O}$  (Troost and Hautefeuille, A. ch. (5) 7. 463.)

**Silicon trichloride,  $\text{SiCl}_3$ .**

Decomp. by  $\text{H}_2\text{O}$  and alkalis. (Troost and Hautefeuille, A. ch. (5) 7. 459.)

$\text{SiHCl}_3$ . See Silicochloroform.

**Silicon tetrachloride,  $\text{SiCl}_4$ .**

Decomp. by  $\text{H}_2\text{O}$  and alcohol.

**Silicon octachloride,  $\text{Si}_2\text{Cl}_8$ .**

"Perchlorosilicopropane." Decomp. by  $\text{H}_2\text{O}$ . (Gattermann, B. 1894, 27. 1947.)

**Silicon chloride,  $\text{Si}_4\text{Cl}_{16}$ .**

(Besson, C. R. 1909, 149. 36.)

$\text{Si}_4\text{Cl}_8$ . "Perchlorosilicobutane." Decomp. by  $\text{H}_2\text{O}$ . Fumes in the air (Besson.)

$\text{Si}_2\text{Cl}_4$ . "Perchlorosilicohexane." Decomp. by  $\text{H}_2\text{O}$  (Besson, C. R. 1909, 148. 841.)

**Silicon trichloride ammonia,  $\text{Si}_3\text{Cl}_9, 5\text{NH}_3$ .**

Slowly decomp. by  $\text{H}_2\text{O}$  (Besson, C. R. 110. 515.)

**Silicon tetrachloride ammonia,  $\text{SiCl}_4, 6\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$  (Persoz, A. ch. 44. 319.)

**Silicon tetrachloride hydrazine,  $\text{SiCl}_4, 4\text{N}_2\text{H}_4$ .**

Extremely hygroscopic and quickly decomp. by  $\text{H}_2\text{O}$ . (Lay, Dissert 1910.)

**Silicon chlorobromide,  $\text{SiCl}_2\text{Br}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Friedel and Ladenburg, A. 145. 187.)

$\text{SiCl}_2\text{Br}_2$ . As above (Friedel and Ladenburg.)

$\text{SiBr}_2\text{Cl}_2$ . Decomp. by  $\text{H}_2\text{O}$ . (Reynolds, Chem. Soc. 51. 590.)

**Silicon chlorobromide ammonia,  $2\text{SiCl}_2\text{Br}_2, 11\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. 112. 788.)

$\text{SiCl}_2\text{Br}_2, 5\text{NH}_3$ . As above (B.)

$2\text{SiCl}_2\text{Br}_2, 11\text{NH}_3$ . As above (B.)

**Silicon chlorohydrosulphide,  $\text{SiCl}_2\text{SH}$ .**

Decomp. by  $\text{H}_2\text{O}$  or alcohol. (Pietre, A. ch. (3) 24. 286.)

**Silicon chlorosulphide,  $\text{SiCl}_2\text{S}$ .**

Decomp. by  $\text{H}_2\text{O}$  (Besson, C. R. 112. 611.)

$\text{SiCl}_2\text{S}$ . As above. (B.)

$\text{SiCl}_2$ . As above (B.)

**Silver chlorosulphide ammonia,  $2\text{SiCl}_2\text{S}, 11\text{NH}_3$ .**

(Besson)

$\text{SiCl}_2\text{S}, 5\text{NH}_3$

**Silicon chloronitride,  $\text{Si}_4\text{N}_6\text{Cl}_3$ .**

(Schützenberger, C. R. 92. 1508.)

**Silicon chlorosulphide,  $\text{Si}_2\text{Cl}_2\text{S}_2$ .**

Decomp. violently by  $\text{H}_2\text{O}$ . Sol. in  $\text{CCl}_4$ . (Besson, C. R. 113. 1040.)

$\text{Si}_2\text{Cl}_2\text{S}_2$ . Violently decomp. by  $\text{H}_2\text{O}$ ; sol. in  $\text{CS}_2$  (Blix, B. 1903, 36. 4223.)

**Silicon difluoride,  $\text{SiF}_2$  (?).**

Decomp. by  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq.}$  (Troost and Hautefeuille, A. ch. (5) 7. 464.)

**Silicon tetrafluoride,  $\text{SiF}_4$ .**

Abundantly absorbed by  $\text{H}_2\text{O}$  with decomp. 100 pts  $\text{H}_2\text{O}$  absorb 140.6 pts.  $\text{SiF}_4$  in 24 hours (Berzelius); 124.1 pts.  $\text{SiF}_4$  in 24 hours (Davy)

Absorbed abundantly by  $\text{HNO}_3 + \text{Aq.}$  (Kuhlmann, A. 39. 319.)

Absorbed abundantly by alcohol, without separation of silicic acid, if the alcohol contains less than 8% of water.

Sol. in conc.  $\text{HF} + \text{Aq.}$  Absorbed by ether. Sl. sol. in naphtha, and oil of turpentine.

**Silicon hydrogen fluoride,  $\text{H}_2\text{SiF}_6$ .**

See Fluosilicic acid.

**Silicon fluoride with MF.**

See Fluosilicate, M.

**Silicon fluoride ammonia,  $\text{SiF}_4, 2\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Davy.)

**Silicon hydride,  $\text{SiH}_4$ .**

Insol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{KOH} + \text{Aq.}$  Not changed by  $\text{NH}_4\text{OH} + \text{Aq.}$ ,  $\text{H}_2\text{SO}_4 + \text{Aq.}$ , or  $\text{HCl} + \text{Aq.}$

$\text{Si}_4\text{H}_8$ . "Silicoacetylene"

Sol. in 20%  $\text{NaOH} + \text{Aq.}$  with evolution of  $\text{H}$  (Bradley, C. N. 1900, 82. 149.)

$\text{Si}_2\text{H}_6$ . "Silicoethane" (Lebeau, C. R. 1909, 148. 44.)

Sl. sol. in  $\text{H}_2\text{O}$ . Best solvent is ethyl orthosilicate. (Moissan, Bull. Soc. 1903, (2) 29. 443.)

**Silicon nitrogen hydride,  $\text{SiHN}$ .**

Decomp. by  $\text{H}_2\text{O}$  and  $\text{NaOH}$ . (Ruff, B. 1905, 38. 2241.)

Silicon hydroxide,  $\text{SiO}_2 \cdot 2\text{H}_2\text{O}$ .

See Silicic acid.

$\text{Si}_2\text{H}_2\text{O}_4$ . See Silicooxalic acid.

$\text{Si}_2\text{H}_2\text{O}_3$ . See Silicoformic anhydride.

$\text{Si}_4\text{H}_4\text{O}_4$ . See Silicene.

Silicon imide,  $(\text{Si}(\text{NH})_2)_n$ .

Decomp. by  $\text{H}_2\text{O}$  (Vigouroux, C. R. 1903, 136, 1671.)

Siliconhydride,  $\text{Si}(\text{NH})_3$ .

Decomp. by  $\text{H}_2\text{O}$  with evolution of much heat. (Blx, B. 1903, 36, 4224.)

Silicon imide hydrochloride,  $\text{Si}(\text{NH})_2 \cdot 2\text{HCl}$ .

Rather stable in air. (Blx, B. 1903, 36, 4225.)

Silicon dioxide,  $\text{SiO}_2$ .

Insol. in  $\text{CS}_2$ ,  $\text{CHCl}_3$ ,  $\text{C}_6\text{H}_6$ , and  $\text{SiCl}_4$ . (Friedel and Ladenburg, A. 203, 247.)

Silicon trioxide,  $\text{Si}_2\text{O}_3$ .

Decomp. with  $\text{H}_2\text{O}$  even at  $0^\circ$   
100 pts.  $\text{CS}_2$  dissolve 19 pts  $\text{Si}_2\text{O}_3$  at  $19^\circ$ ;  
20 pts.  $\text{Si}_2\text{O}_3$  at  $27^\circ$ . (Friedel and Ladenburg,  
Bull. Soc. (2) 12, 92.)  
 $\text{HSiCl}_3$ . See Silicochloroform.

Silicon tetroxide,  $\text{SiI}_4$ .

Decomp. by  $\text{H}_2\text{O}$ . Acts on alcohol and ether.

1 pt.  $\text{CS}_2$  dissolves 2.2 pts  $\text{SiI}_4$  at  $27^\circ$  (Friedel, A. 149, 90.)

Silicon nitride,  $\text{Si}_3\text{N}_4$ .

Partially decomp. by boiling with conc  $\text{H}_2\text{SO}_4$ .

Not attacked by dil. acids with the exception of HF. Decomp. by HF.

Partially decomp. by boiling with alkalis + Aq. (Weiss, Z. anorg. 1910, 65, 89.)

$\text{Si}_3\text{N}_4$ . Partially decomp. by boiling with conc  $\text{H}_2\text{SO}_4$ .

Not attacked by dil. acids with the exception of HF. Decomp. by HF.

Partially decomp. by boiling with alkalis + Aq. (Weiss, Z. anorg. 1910, 65, 89.)

$\text{Si}_3\text{N}_4$ . Not attacked by  $\text{H}_2\text{O}$ .

Partially decomp. by boiling with conc  $\text{H}_2\text{SO}_4$ .

Not attacked by dil. acids with the exception of HF. Decomp. by HF.

Partially decomp. by boiling with alkalis + Aq. (Weiss, Z. anorg. 1910, 65, 89.)

Silicon nitride,  $\text{Si}_2\text{N}_2\text{H}_4$ .

"Silicene"

Sol. in HF, and rapidly in KOH + Aq. (Schutzenberger, C. R. 92, 1508.)

Decomp. by cold, more rapidly by hot  $\text{H}_2\text{O}$  and much more rapidly by alkalis. Sol. in HF + Aq. Not attacked by  $\text{HNO}_3$ . Decomp. by conc.  $\text{H}_2\text{SO}_4$ . (Lay, Dissert. 1910.)

Not decomposed by  $\text{H}_2\text{O}$ .

Sol. in hot alkalis + Aq with decomp. (Blx, B. 1903, 36, 4227.)

Silicon suboxide,  $\text{Si}_2\text{O}_2$ .

(Honigschmid, M. 1900, 30, 509.)

Silicon monoxide,  $\text{SiO}$ .

Much less easily sol. in HF + Aq but more easily sol. in alkalis + Aq than  $\text{SiO}_2$ . (Potter, C. C. 1907, II, 1952.)

Silicon dioxide,  $\text{SiO}_2$ .

See also Silicic acid.

(a) *Crystalline*. Min. Quartz, Tridymite. Insol. in  $\text{H}_2\text{O}$ , and acids, except HF.

Sl. sol. in boiling  $\text{K}_2\text{CO}_3$  + Aq, and KOH + Aq, see below.

Insol. in cold KOH + Aq; extremely slowly sol. in boiling KOH + Aq. (Fuchs.)

Sol. in HF with formation of  $\text{SiF}_4$  and  $\text{H}_2\text{O}$ .

Insol. in sugar + Aq, contrary to assertion of Veidel and Russler. (Petzholdt, J. pr. 60, 368.)

(b) *Amorphous*. Min. Opal, etc.

Insol. in  $\text{H}_2\text{O}$ , and acids except HF.

100 pts  $\text{H}_2\text{O}$  containing  $\text{CO}_2$  dissolve 0.078 pt amorphous  $\text{SiO}_2$  (Maschke); 0.0136 pt (Struckmann).

100 pts. cold HCl + Aq of 1.088 sp. gr. dissolve 0.017 pt  $\text{SiO}_2$  (Struckmann.) 100 pts HCl + Aq of 1.115 sp. gr. dissolve in the cold 0.009 pt  $\text{SiO}_2$ , and 0.018 pt. on boiling 100 pts.  $\text{NH}_4\text{OH}$  + Aq (containing 10%  $\text{NH}_3$ ) dissolve 0.017 pt. quartz and 0.38 pt ignited  $\text{SiO}_2$ . (Pribian, Z. anal. 6, 119.)

Sol. in boiling  $\text{K}_2\text{CO}_3$  or  $\text{Na}_2\text{CO}_3$  + Aq, separating out on cooling as a gelatinous mass. (Piaff, Schw. J. 29, 383.) The different forms of  $\text{SiO}_2$  have different degrees of solubility in  $\text{K}_2\text{CO}_3$  + Aq. Unignited amorphous  $\text{SiO}_2$  from  $\text{SiF}_4$  dissolves most readily, then come opal, ignited amorphous  $\text{SiO}_2$ , fused  $\text{SiO}_2$ , and tridymite, quartz powder is the most difficultly soluble (Rose.)

A similar behaviour is shown to KOH + Aq.

Opal is much more sol. in KOH + Aq than quartz, and hyalite is the least sol. of the varieties of opal. (Fuchs.)

Opal is easily sol. in KOH + Aq, even after ignition. (Schaffgotsch, Pogg. 68, 147.)

Rammelsberg (Pogg. 112, 177) made the following experiments on the solubility of  $\text{SiO}_2$  in KOH + Aq. The KOH + Aq used contained 1 pt. KOH to 3 pts  $\text{H}_2\text{O}$ . 1 pt. of the powdered mineral was boiled half an hour in a silver dish with such an amount of the KOH + Aq that 20 pts KOH were present.

7.75% of milky white quartz was dissolved by repeating the above process three times.

12.8-15% of gray hornstone was dissolved by twice boiling, 2.43% of moderately finely powdered agate of 2.661 sp. gr. was dissolved by once boiling, 9.7% of unignited hyalite remained undissolved after three boiling;

21% of ignited hyalite remained undissolved after thrice boiling; 7.21% of semi-opal of 2.101 sp. gr. remained undissolved after thrice boiling; 18.5-19.2% of impure semi-opal of 2.101 sp. gr. remained undissolved after thrice boiling; 79.9% of chalcedony of 2.624 sp. gr. remained undissolved after thrice boiling; 6.12% of chalcedony of 2.567 sp. gr. remained undissolved after fourth boiling; 14.4% chrysoprass of 2.623 sp. gr. remained undissolved after once boiling; 49.41% of chrysoprass of 2.635 sp. gr. remained undissolved after thrice boiling; 6.62% of flint of 2.606 sp. gr. remained undissolved after twice boiling; 38.1% of fire-opal of 2.625 sp. gr. remained undissolved after fourth boiling; 26.6% of fire-opal of 2.625 sp. gr. remained undissolved after fifth boiling.

Insol. in liquid  $\text{CO}_2$  (Büchner, Z. phys. Ch. 1906, 54, 674.)

Insol. in acetone (Naumann, B. 1904, 37, 4329.)

The solubility of crystals of quartz on different faces in HF has been determined by Lebrun. (Belg. Acad. Bull. 1913, 953.)

#### Silicon thorium oxide.

See Silicate, thorium.

#### Silicon zirconium oxide.

See Silicate, zirconium.

#### Silicon oxychloride, $\text{Si}_2\text{OCl}_2$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol. Miscible with  $\text{CS}_2$ ,  $\text{SiCl}_4$ ,  $\text{CCl}_4$ ,  $\text{CHCl}_3$ , or ether. (Friedel and Ladenburg, A. 147, 355.)

$\text{Si}_2\text{O}_2\text{Cl}_2$ ;  $\text{Si}_4\text{O}_4\text{Cl}_4$ ;  $\text{Si}_6\text{O}_6\text{Cl}_6$ ;  $(\text{Si}_2\text{O}_2\text{Cl}_2)_n$ .  $\text{Si}_4\text{O}_4\text{Cl}_4$ . Sol. in above oxychlorides. (Troost and Hautefeuille, Bull. Soc. (2) 36, 360.)

#### Silicon oxyfluorhydride, $\text{Si}_2\text{O}_2\text{F}_2^{\text{OH}}$ .

(Landolt, A. Suppl. 4, 27.)

#### Silicon selenide, $\text{SiSe}_2$ .

Decomp. by  $\text{H}_2\text{O}$  or  $\text{KOH} + \text{Aq.}$  (Sabatier, C. R. 113, 132.)

#### Silicon sulphide, $\text{SiS}_2$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. Acts on alcohol or ether in the cold. (Fremy, A. ch. (3) 38, 314.)

$\text{SiS}$ . Decomp. by  $\text{H}_2\text{O}$ ; easily sol. in dil. alkalis. (Schützenberger, Bull. Soc. (2) 38, 58.)

#### Silicon sulphodiamide, $\text{SiS}(\text{NH}_2)_2$ .

Slowly decomp. in the air. Insol. in cold liquid  $\text{NH}_3$ . (Blix, B. 1903, 36, 4219.)

#### Silicon sulphobromide.

See Silicon bromosulphide.

#### Silicon sulphochloride.

See Silicon chlorosulphide.

#### Silicon sulphourea, $\text{SiS}(\text{NH}_2)_2$ .

Slowly decomp. in air

Decomp. by  $\text{H}_2\text{O}$

Insol. in cold liquid  $\text{NH}_3$ . (Blix, B. 1903, 36, 4219.)

#### Silicone, $\text{Si}_4\text{H}_4\text{O}_4$ .

Insol. in  $\text{H}_2\text{O}$ , but gives off hydrogen when warmed therewith. Not attacked by chlorine or nitric or sulphuric acids even on heating, but is gradually sol. in HF. Decomp. by alkalis, even by the most dil.  $\text{NH}_4\text{OH} + \text{Aq.}$  with greatest violence and evolution of heat and hydrogen gas. Insol. in alcohol,  $\text{SiCl}_4$ ,  $\text{PCl}_3$ , or  $\text{CS}_2$ . (Wohler, A. 127, 257.)

$\text{H}_2\text{Si}_2\text{O}_5$ . Decomp. by  $\text{H}_2\text{O}$  and by dil. acids. Violently decomp. by fuming  $\text{HNO}_3$ . Not attacked by conc.  $\text{H}_2\text{SO}_4$ . Very slowly decomp. by conc.  $\text{HCl}$ , rapidly by alkalis +  $\text{Aq.}$  and by pyridine (Honigschmid, M. 1909, 30, 509.)

Insol. in  $\text{H}_2\text{O}$ , alcohol.  $\text{SiCl}_4$ ,  $\text{PCl}_3$ , and  $\text{CS}_2$ . Not attacked by acids except HF. (Donath and Liesner, C. C. 1909, II 1707.)

$\text{H}_{10}\text{Si}_{10}\text{O}_8$ . Scarcely attacked by acids, but easily decomp. by hot  $\text{H}_2\text{O}$ ,  $\text{NaOH} + \text{Aq.}$  etc. but not by  $\text{NH}_4\text{OH} + \text{Aq.}$  (Kolb, Z. anorg. 1909, 64, 353.)

$\text{H}_{10}\text{Si}_{10}\text{O}_8$  (Kolb.)

$\text{H}_7\text{Si}_7\text{O}_{12}$  As  $\text{H}_{12}\text{Si}_{12}\text{O}_{20}$ . (Kolb.)

#### Silicomesoaxalic acid, $\text{Si}(\text{OH})_2(\text{SiO.OH})_2$ .

Insol. in cold  $\text{H}_2\text{O}$ , decomp. by hot  $\text{H}_2\text{O}$  (Gattermann, B. 1899, 32, 1116.)

#### Silicooxalic acid, $\text{Si}_2\text{H}_2\text{O}_4 = \text{Si}_2\text{O}_2(\text{OH})_2$ .

Decomp. by bases with evolution of hydrogen. Takes up  $\text{HNO}_3$  to form compound, but not  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . (Troost and Hautefeuille, A. ch. (5) 7, 463.)

#### Silicophosphoric acid, $\text{SiO}_2, \text{P}_2\text{O}_5$ .

Slowly decomp. by  $\text{H}_2\text{O}$ . Unchanged by alcohol. Exists also in two modifications which are not attacked by  $\text{H}_2\text{O}$  (Hautefeuille and Margottet, C. R. 99, 789.)

$\text{SiO}_2, 2\text{P}_2\text{O}_5 + 4\text{H}_2\text{O}$ . Decomp. by moist air. Sol. in  $\text{H}_2\text{O}$  at  $0^\circ$ , but decomp. by warming to ordinary temp. (Hautefeuille and Margottet, C. R. 104, 56.)

#### Calcium silicophosphate.

See Phosphate silicate, calcium.

#### Silicostannic acid.

#### Calcium silicostannate, $\text{Ca}(\text{Si.Sn})\text{O}_4$ .

Not attacked by acids,  $\text{KHSO}_4$ , or alkalis +  $\text{Aq.}$  (Bourgeois, Bull. Soc. (2) 47, 297.)

**Silicodectungstic acid**,  $H_3W_{10}SiO_{38} + 3H_2O = 4H_2O, SiO_2, 10WO_3 + 3H_2O$ .

Sometimes sol in  $H_2O$ , but usually separates out gelatinous silica. (Maignac, A. ch. (4) 3. 55.)

See also **Silicoduodecungstic acid**.

**Ammonium silicodectungstate**,  $(NH_4)_3W_{10}SiO_{38} + 8H_2O$

Sol in 4.5 pts.  $H_2O$  at  $18^\circ$ . Very sol in hot  $H_2O$ . (Maignac, A. ch. (4) 3. 59.)  
 $(NH_4)_3W_{10}SiO_{38} + 9H_2O$ . (Maignac.)

**Ammonium potassium —**,

$(NH_4)_2K_2H_8SiW_{10}O_{41} + 15H_2O$ . (Maignac.)

**Barium —**,  $Ba_2SiW_{10}O_{38} + 22H_2O$

Precipitate. Insol in  $H_2O$ . (Maignac.)

**Potassium —**,  $K_3SiW_{10}O_{38} + 17H_2O$ .

Sol. in  $H_2O$ . (Maignac.)  
 $K_4H_8SiW_{10}O_{38} + 8H_2O$ . Sol in  $H_2O$ . (Maignac.)

**Potassium — silicotungstate (?)**,

$K_3SiW_{11}O_{39} + 14H_2O$ .  
 $K_4H_8SiW_{11}O_{39} + 10H_2O$ . (Maignac.)

**Silver —**,  $Ag_8W_{12}SiO_{42} + 3H_2O$

Not appreciably sol. in cold  $H_2O$ . (Maignac, A. ch. (4) 3. 65.)

**Silicotungstic acid or Silicoduodecungstic acid**,  $H_3SiW_{12}O_{42}$ .

( $H_3SiW_{12}O_{42}$ , according to Copaux. (Bull. Soc. 1908, (4) 3. 101.)

+20 $H_2O$  Sol in  $H_2O$ ; very sol. in alcohol; behaves with ether as the acid with 22 $H_2O$  (Maignac, A. ch. (4) 3. 10.)

+22 $H_2O$ . Solubility as acid with 29 $H_2O$ .

100 pts. deliquesce with 13 pts. ether. To this mixture 20–25 pts. of ether can be added, but a further quantity no longer mixes with, but floats above the mixture. Etheral solution is miscible with  $H_2O$ . Ether is taken up by a saturated aqueous solution with evolution of heat, until the volume has become doubled; more ether floats on the mixture. By warming the latter a liquid separates out which forms a layer between the two original layers. Alcoholic solution of the acid mixes with an equal vol of ether, but on adding more ether a conc. etheral solution separates as a syrupy layer. (Maignac, A. ch. (4) 3. 10.)

+29 $H_2O$ . Efflorescent. Sol in  $H_2O$ . Saturated solution at  $18^\circ$  contains 1 pt. crystallized acid to 0.104 pt.  $H_2O$ , and has 2.843 sp. gr. Melts in crystal  $H_2O$ . Easily sol in absolute alcohol and anhydrous ether +2 $H_2O$ . (Drechsel, B. 1887, 20. 1452.)

**Aluminum silicotungstate**,  $Al_4H_{12}(SiW_{12}O_{42})_2 + 75H_2O$ .

Not deliquescent; a very sol. in  $H_2O$ . (Maignac.)

$Al_4(SiW_{12}O_{42})_2 + 60H_2O$  (Wyruboff Chem. Soc. 1897, 72, (2) 174.)

+87 $H_2O$ . (Wyruboff)  
 +93 $H_2O$ . Very efflorescent. (Wyruboff.)

**Aluminum ammonium —**,

$Al_4(NH_4)_{12}(SiW_{12}O_{42})_2 + 75H_2O$ .  
 Sol in  $H_2O$  (Maignac.)

**Ammonium —, basic**,  $(NH_4)_2SiW_{12}O_{42}$

4 $NH_4OH$  + 14 $H_2O$   
 (Wyruboff, Chem. Soc. 1897, 72, (2) 174.)

**Ammonium —**,  $(NH_4)_2SiW_{12}O_{42} + 16H_2O$ .

Very sol. in hot  $H_2O$ . (Maignac, A. ch. (4) 3. 17.)

$(NH_4)_2H_2SiW_{12}O_{42} + 6H_2O$ . Less soluble in  $H_2O$  than the preceding salt. (Maignac.)

$(NH_4)_2SiW_{12}O_{42} + 8H_2O$ . (Wyruboff, Chem. Soc. 1897, 72, (2) 174.)

**Barium —**,  $Ba_2H_4SiW_{12}O_{42} + 14H_2O$ .

Sol in  $H_2O$ .  
 +22 $H_2O$ . Gradually efflorescent. (Maignac.)

Sol in cold  $H_2O$ , 1.07 pts. (Copaux, Bull. Soc. Min. 1906, 29. 80.)

Sol in 4 pts. cold  $H_2O$ . (Wyruboff, Bull. Soc. Min. 1896, 19. 278.)

$Ba_2SiW_{12}O_{42} + 27H_2O$  Nearly insol. in cold, sl. sol in hot  $H_2O$ . (Maignac.)

$Ba_2SiW_{12}O_{42} + 16H_2O$ . (Wyruboff.)

**Barium potassium —**,  $Ba_2K_2SiW_{12}O_{42} + 17H_2O$

(Wyruboff, Chem. Soc. 1897, 72, (2) 176.)

**Barium sodium —**,  $Na_2Ba_2SiW_{12}O_{42} + 28H_2O$ .

$H_2O$  gradually dissolves out sodium silicotungstate

**Cadmium —**,  $Cd_2SiW_{12}O_{42} + 23H_2O$ , and +27 $H_2O$

(Wyruboff.)

4 $CdO$ , 3( $SiO_2$ , 12 $WO_3$ ) + 4 $H_2O$ . (Wyruboff.)

**Cæsium —**,  $Cs_2SiW_{12}O_{42}$ .

100 pts.  $H_2O$  dissolve only 0.005 pt. at  $20^\circ$ ; 0.52 pt. at  $100^\circ$ .

Completely insol. in alcohol, and  $HCl + Aq$ . Somewhat sol. in dil.  $NH_4OH + Aq$ . (Godefroy, B. 9. 1363.)

**Cadmium hydrogen —**,  $2Cd_2SiW_{12}O_{42}$ ,  $H_2SiW_{12}O_{42} + 42H_2O$ .

(Wyruboff.)

**Calcium silicotungstate**,  $\text{Ca}_2\text{H}_2\text{SiW}_{12}\text{O}_{42} + 20\text{H}_2\text{O}$

Not deliquescent. \*Extremely easily sol. in  $\text{H}_2\text{O}$  (Marignac.)

$\text{Ca}_2\text{SiW}_{12}\text{O}_{40} + 18, 24$  and  $27\text{H}_2\text{O}$ . (Wyröuboff.)

**Calcium silicotungstate nitrate**,  $\text{Ca}_2\text{SiW}_{12}\text{O}_{40}$ ,  $\text{Ca}(\text{NO}_3)_2 + 15\text{H}_2\text{O}$ .

(Wyröuboff.)

**Cerous** —,  $\text{Ce}_2\text{SiW}_{12}\text{O}_{40} + 27\text{H}_2\text{O}$ .

(Wyröuboff.)

$\text{Ce}_2\text{SiW}_{12}\text{O}_{40}$ ,  $\text{CeH}_2\text{SiW}_{12}\text{O}_{40} + 34\text{H}_2\text{O}$  (Wyröuboff.)

**Chromium** —,  $\text{Cr}_4(\text{SiW}_{12}\text{O}_{40})_2 + 60, 87$  and  $93\text{H}_2\text{O}$ .

(Wyröuboff.)

**Cupric** —,  $\text{Cu}_2\text{SiW}_{12}\text{O}_{40} + 18, 27$  and  $29\text{H}_2\text{O}$ . Very efflorescent (Wyröuboff.)

**Didymium** —,  $\text{D}_{12}\text{SiW}_{12}\text{O}_{40} + 26$  and  $27\text{H}_2\text{O}$ . (Wyröuboff.)

$\text{D}_{12}\text{SiW}_{12}\text{O}_{40}$ ,  $\text{D}_{12}\text{H}_2\text{SiW}_{12}\text{O}_{40} + 34\text{H}_2\text{O}$  (Wyröuboff.)

**Gallium** —,  $\text{Ga}_4(\text{SiW}_{12}\text{O}_{40})_2 + 60, 87$ , and  $93\text{H}_2\text{O}$ .

(Wyröuboff.)

**Glucinum** —,  $\text{Gl}_4(\text{SiW}_{12}\text{O}_{40})_2 + 45, 87$  and  $93\text{H}_2\text{O}$ .

(Wyröuboff.)

**Indium** —,  $\text{In}_2\text{O}_3$ ,  $\text{H}_2\text{O}$ ,  $2(\text{SiO}_2, 12\text{WO}_3) + 40\text{H}_2\text{O}$ .

(Wyröuboff.)

$2\text{In}_2\text{O}_3$ ,  $3(\text{SiO}_2, 12\text{WO}_3) + 63$  and  $93\text{H}_2\text{O}$  (Wyröuboff.)

**Iron (ferric)** —,  $\text{Fe}_4(\text{SiW}_{12}\text{O}_{40})_2 + 60$  and  $93\text{H}_2\text{O}$ .

(Wyröuboff.)

**Lanthanum** —,  $\text{La}_2\text{SiW}_{12}\text{O}_{40} + 27\text{H}_2\text{O}$ .

Efflorescent (Wyröuboff.)

$\text{La}_2\text{SiW}_{12}\text{O}_{40}$ ,  $\text{LaH}_2\text{SiW}_{12}\text{O}_{40} + 34\text{H}_2\text{O}$ . (Wyröuboff.)

**Lead** —, basic,  $\text{Pb}_2\text{SiW}_{12}\text{O}_{40}$ ,  $2\text{PbO} + 20\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Wyröuboff.)

**Lead** —,  $\text{Pb}_2\text{SiW}_{12}\text{O}_{40} + 21 \text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Wyröuboff.)

**Lithium** —,  $\text{Li}_2\text{O}$ ,  $\text{SiO}_2$ ,  $12\text{WO}_3 + 14$  and  $24\text{H}_2\text{O}$ .

(Wyröuboff.)

**Magnesium** —,  $\text{Mg}_2\text{H}_2\text{SiW}_{12}\text{O}_{42} + 16\text{H}_2\text{O}$ .

Stable on the air (Marignac.)

**Mercurous silicotungstate, basic**,  $\text{Hg}_2\text{SiW}_{12}\text{O}_{40}$ ,  $2\text{Hg}_2\text{O} + 5\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$ . Insol. in dil.  $\text{HNO}_3$ . Slowly sol. in conc. warm  $\text{HNO}_3$  (Wyröuboff.)

**Mercurous** —,  $\text{Hg}_2\text{SiW}_{12}\text{O}_{42}$

Insol. in  $\text{H}_2\text{O}$ . Scarcely sol. in dil.  $\text{HNO}_3$  + Aq (Marignac, A. ch. (4) 3. 43)

**Mercuric** —,  $\text{Hg}_2\text{SiW}_{12}\text{O}_{40} + 15\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . Solution decomp. on boiling (Wyröuboff.)

**Potassium** —, basic,  $\text{K}_4\text{SiW}_{12}\text{O}_{40}$ ,  $4\text{KOH} + 12\text{H}_2\text{O}$

1 pt. is sol. in 10 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Wyröuboff.)

**Potassium** —,  $\text{K}_2\text{SiW}_{12}\text{O}_{42} + 14\text{H}_2\text{O}$ .

Sol. in 10 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ , and less than 3 pts. at  $100^\circ$ . (Marignac.)

+  $20\text{H}_2\text{O}$ . Much less sol. in cold than hot  $\text{H}_2\text{O}$ . Extremely sol. in hot  $\text{H}_2\text{O}$ . More sol. than above comp. (Marignac.)

$\text{K}_2\text{H}_2\text{SiW}_{12}\text{O}_{42} + 7\text{H}_2\text{O}$ . Solubility as preceding salt.

$\text{K}_4\text{H}_2\text{SiW}_{12}\text{O}_{42} + 16\text{H}_2\text{O}$ . Sol. in 3 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ .

$\text{K}_4\text{H}_{16}(\text{SiW}_{12}\text{O}_{42})_2 + 25\text{H}_2\text{O}$ . Decomp. by dissolving in  $\text{H}_2\text{O}$  (Marignac.)

$\text{K}_4\text{SiW}_{12}\text{O}_{40} + 6$  and  $15\text{H}_2\text{O}$  (Wyröuboff.)

$\text{K}_2\text{SiW}_{12}\text{O}_{40}$ ,  $\text{K}_2\text{H}_2\text{SiW}_{12}\text{O}_{40} + 29\text{H}_2\text{O}$  (Wyröuboff.)

**Rubidium** —,  $\text{Rb}_2\text{SiW}_{12}\text{O}_{42}$

Sol. in 145–150 pts.  $\text{H}_2\text{O}$  at  $20^\circ$  and in 19–20 pts. at  $100^\circ$ . Insol. in alcohol; difficultly sol. in  $\text{H}_2\text{O}$ . Easily in ammoniacal . . . . . 9. 1363.)

$\text{Rb}_2\text{SiW}_{12}\text{O}_{40}$ ,  $\text{Rb}_2\text{H}_2\text{SiW}_{12}\text{O}_{40} + 22\text{H}_2\text{O}$  (Wyröuboff.)

**Silver** —,  $\text{Ag}_2\text{H}_2\text{SiW}_{12}\text{O}_{42} + 7\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{HNO}_3$  + Aq (Marignac.)

Sl. sol. in  $\text{H}_2\text{O}$  (Wyröuboff.)

**Sodium** —, basic,  $\text{Na}_4\text{SiW}_{12}\text{O}_{40}$ ,  $4\text{NaOH} + 5\text{H}_2\text{O}$ .

(Wyröuboff.)

**Sodium** —,  $\text{Na}_4\text{SiW}_{12}\text{O}_{42} + 7\text{H}_2\text{O}$

The saturated solution at  $19^\circ$  contains 0.21 pt.  $\text{H}_2\text{O}$  to 1 pt. of the salt dried at  $100^\circ$ , and has sp. gr. = 3.05 (Marignac.)

$\text{Na}_4\text{H}_2\text{SiW}_{12}\text{O}_{42} + 11\text{H}_2\text{O}$ . Stable on air. +  $18\text{H}_2\text{O}$ . Efflorescent. (Marignac.)

$\text{Na}_2\text{H}_2\text{SiW}_{12}\text{O}_{42} + 14\text{H}_2\text{O}$ . Decomp. by dissolving in  $\text{H}_2\text{O}$ .

$\text{Na}_4\text{SiW}_{12}\text{O}_{40}$  . . . . . (Wyröuboff.)

Sodium silicotungstate nitrate,  
 $3\text{Na}_4\text{H}_2\text{SiW}_{12}\text{O}_{42} \cdot 4\text{NaNO}_3 + 39\text{H}_2\text{O}$ .  
 Slightly deliquescent. (Manganese)

Strontium —,  $\text{Sr}_2\text{SiW}_{12}\text{O}_{40} + 16, 17, 23$  and  $27\text{H}_2\text{O}$ .  
 (Wyruboff)

Thallium —,  $\text{Tl}_2\text{H}_2\text{SiW}_{12}\text{O}_{40} + 9\text{H}_2\text{O}$ .  
 (Wyruboff.)

Thorium —, basic.  
 Insol. in  $\text{H}_2\text{O}$ . (Wyruboff.)

Thorium —,  $\text{Th}_2\text{SiW}_{12}\text{O}_{40} + 27\text{H}_2\text{O}$ .  
 Very sol in  $\text{H}_2\text{O}$  (Wyruboff)  
 $\text{Th}_2\text{SiW}_{12}\text{O}_{40} \cdot 2\text{H}_4\text{SiW}_{12}\text{O}_{40} + 45\text{H}_2\text{O}$ .  
 (Wyruboff.)

Uranium —.  
 Thirteen salts are described by Wyruboff.

Uranyl —.  
 Seven salts are described by Wyruboff.

Zinc —,  $\text{Zn}_2\text{SiW}_{12}\text{O}_{40} + 18, 27$  and  $29\text{H}_2\text{O}$ .  
 (Wyruboff)

#### Silicovanadiomolybdic acid.

Ammonium silicovanadiomolybdate,  
 $3(\text{NH}_4)_2\text{O} \cdot \text{SiO}_2 \cdot \text{V}_2\text{O}_5 \cdot 9\text{MoO}_3 + 20\text{H}_2\text{O}$ .  
 Sp. gr. of sat. solution containing 0.32016 g. salt in 1 ccm. at  $18^\circ = 1.21322$ . (Friedheim, B. 1900, 33. 1624)  
 $3(\text{NH}_4)_2\text{O} \cdot \text{SiO}_2 \cdot \text{V}_2\text{O}_5 \cdot 10\text{MoO}_3 + 21\text{H}_2\text{O}$ .  
 Sp. gr. of sat. solution containing 0.35026 g. of salt in 1 ccm. at  $18^\circ = 1.25275$ . (Friedheim.)  
 $3(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot \text{SiO}_2 \cdot 11\text{MoO}_3 + 27\text{H}_2\text{O}$ .  
 Sp. gr. of sat. solution containing 0.38086 g. salt in 1 ccm. at  $18^\circ = 1.29266$ . (Friedheim)  
 $3(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot \text{SiO}_2 \cdot 15\text{MoO}_3 + 24\text{H}_2\text{O}$ .  
 Sp. gr. of sat. solution containing 0.48997 g. salt in 1 ccm. at  $18^\circ = 1.43761$  (Friedheim)

Ammonium potassium —,  $(\text{NH}_4)_2\text{O} \cdot 2\text{K}_2\text{O} \cdot \text{SiO}_2 \cdot \text{V}_2\text{O}_5 \cdot 9\text{MoO}_3 + 20\text{H}_2\text{O}$ .  
 Sp. gr. of sat. solution containing 0.24021 g. salt in 1 ccm. at  $18^\circ = 1.17031$ . (Friedheim.)

$(\text{NH}_4)_2\text{O} \cdot 2\text{K}_2\text{O} \cdot \text{SiO}_2 \cdot \text{V}_2\text{O}_5 \cdot 10\text{MoO}_3 + 21\text{H}_2\text{O}$ . Sp. gr. of sat. solution containing 0.25914 g. salt in 1 ccm. at  $18^\circ = 1.19184$ . (Friedheim)  
 $(\text{NH}_4)_2\text{O} \cdot 2\text{K}_2\text{O} \cdot \text{SiO}_2 \cdot \text{V}_2\text{O}_5 \cdot 11\text{MoO}_3 + 12\text{H}_2\text{O}$ . Sp. gr. of sat. solution containing 0.27914 g. salt in 1 ccm. at  $18^\circ = 1.21378$ . (Friedheim.)

Ammonium zinc —,  $4(\text{NH}_4)_2\text{O} \cdot 2\text{ZnO} \cdot 2\text{SiO}_2 \cdot 3\text{V}_2\text{O}_5 \cdot 18\text{MoO}_3 + 15\text{H}_2\text{O}$ .  
 Sl sol. in  $\text{H}_2\text{O}$ . (Blum, Dissert. 1904.)

#### Silicovanadotungstic acid.

Ammonium silicovanadotungstate,  $3(\text{NH}_4)_2\text{O} \cdot \text{SiO}_2 \cdot \text{V}_2\text{O}_5 \cdot 9\text{WO}_3 + 24\text{H}_2\text{O}$ .  
 Can be cryst. from  $\text{H}_2\text{O}$  (Friedheim, B. 1902, 35. 3244.)  
 $(\text{NH}_4)_2\text{SiV}_2\text{W}_{12}\text{O}_{40} + 21\text{H}_2\text{O}$  1 cc. of sat. solution in  $\text{H}_2\text{O}$  at  $17.5^\circ$  contains 0.6652 g. of the hydrated salt Sp. gr. of this solution = 1.4505. Decomp. by conc. acid and alkali. (Friedheim.)

Ammonium barium potassium —,  
 $(\text{NH}_4)_2\text{K}_2\text{BaSiV}_2\text{W}_{12}\text{O}_{40} + 25\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by conc. acids and alkalis. (Friedheim.)

Ammonium potassium —,  
 $(\text{NH}_4)_2\text{K}_2\text{SiV}_2\text{W}_{12}\text{O}_{40} + 23\text{H}_2\text{O}$ .  
 1 ccm. of sat. solution at  $17.5^\circ$  contains 0.5072 g. of the salt Sp. gr. of the solution at  $20^\circ = 1.3462$ . Can be cryst. from  $\text{H}_2\text{O}$ . Decomp. by conc. acids and alkalis. (Friedheim.)

Barium —,  $\text{Ba}_2\text{SiV}_2\text{W}_{12}\text{O}_{40} + 28\text{H}_2\text{O}$ .  
 1 ccm. of the sat. solution in  $\text{H}_2\text{O}$  at  $17.5^\circ$  contains 0.0384 g. of the salt Sp. gr. of the solution = 1.0307. Decomp. by conc. acids and alkalis (Friedheim, B. 1902, 35. 3245)  
 $6\text{BaO} \cdot 2\text{SiO}_2 \cdot 3\text{V}_2\text{O}_5 \cdot 18\text{WO}_3 + 50\text{H}_2\text{O}$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ . (Friedheim.)  
 $7\text{BaO} \cdot 2\text{SiO}_2 \cdot 3\text{V}_2\text{O}_5 \cdot 18\text{WO}_3 + 33\text{H}_2\text{O}$ .  
 Sl sol. in  $\text{H}_2\text{O}$ . (Friedheim.)

Potassium —,  $\text{K}_2\text{SiV}_2\text{W}_{12}\text{O}_{40} + 22\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . Can be cryst. from  $\text{H}_2\text{O}$  without decomp. Decomp. by conc. acids and alkalis. (Friedheim.)  
 $6\text{K}_2\text{O} \cdot 2\text{SiO}_2 \cdot 3\text{V}_2\text{O}_5 \cdot 18\text{WO}_3 + 31\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Friedheim)  
 $7\text{K}_2\text{O} \cdot 2\text{SiO}_2 \cdot 3\text{V}_2\text{O}_5 \cdot 18\text{WO}_3 + 42\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Friedheim.)

Sodium —,  $\text{Na}_2\text{SiV}_2\text{W}_{12}\text{O}_{40} + 29\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . Decomp. by conc. acids and alkalis (Friedheim)

#### Silundum, $\text{Si}_2\text{Cp}$ .

Not attacked by hot Cl or conc. acids. (Amberg, Z. Elektrochem. 1909, 15. 725)

#### Silver, Ag.

Not attacked by  $\text{H}_2\text{O}$ . Absolutely insol. in  $\text{HCl}$  or  $\text{HClO}_4 + \text{Aq}$ . (Lea, Sil. Am. J. 144. 444.) Easily sol. in  $\text{HNO}_3 + \text{Aq}$  on warming, if not too conc. Only a minute trace is dissolved in an hour by cold dil.  $\text{HNO}_3 + \text{Aq}$  (1 pt.  $\text{HNO}_3 + \text{Aq}$  of sp. gr. 1.40 · 10 pts.  $\text{H}_2\text{O}$ ). (Lea.) Sol. in hot conc.  $\text{H}_2\text{SO}_4$  with evolution of  $\text{SO}_2$ . Sl. sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  (1 4), but with more dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  the different forms of Ag behave differently. (Lea.)

Sol. in  $\text{HI} + \text{Aq}$  at ordinary temperature.

Sol. in KI + Aq with access of air. Sol. in hot KCN + Aq. (Christomanos, Z. anal. 7. 301.)

Sol. in chromic, iodic, chloric and bromic acids. Dil.  $H_2SO_4$  alone is incapable of dissolving finely divided Ag, and the seeming solvent action is due to the oxygen of the air, oxygen dissolved in the acid, or derived from some external source. (Hendrixson, J. Am. Chem. Soc. 1903, 25. 637.)

Boiling  $H_2SO_4$  dissolves pure Ag only when concentration equals 60° B. More dil. acid dissolves only the impure metal (Pannani, Gazz. ch. it. 1909, 39. (2) 234.)

Slowly decom. into AgCl by alkali chlorides + Aq, also by  $CuCl_2$ , etc. + Aq.

Somewhat sol. in  $NH_4OH$  + Aq in presence of O. (Lea, Sill. Am. J. 144. 444.)

Sol. in  $KMnO_4$  + dil.  $H_2SO_4$  + Aq. (Friedheim, B. 20. 2554.)

Sol. in  $Fe_2(SO_4)_3$  + Aq, especially on heating, but completely insol. in  $FeSO_4$  + Aq (Vogel.)

Insol. in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 829.)

**Allotropic forms**—(a). Very sol. in  $H_2O$ . Solution is pptd. by saline solutions or almost any neutral substance. Alkali sulphates, nitrates, and citrates ppt. it in a sol. form, while  $MgSO_4$ ,  $CuSO_4$ ,  $FeSO_4$ ,  $NiSO_4$ ,  $K_2C_2O_7$ ,  $K_4Fe(CN)_6$ ,  $Ba(NO_3)_2$ , and even  $AgNO_3$  + Aq ppt. it in an insol. form, which, however, may be made sol. again by treatment with many substances, as  $Na_2B_4O_7$ ,  $K_2SO_4$ , or  $Na_2SO_4$  + Aq.  $NaNO_2$  + Aq ppts. the Ag from its solution in a perfectly insol. form.

(b) The ppt. from aqueous solution by salts is sol. in  $NH_4OH$  + Aq. (Lea, Sill. Am. J. 137. 476.)

Many other allotropic forms exist. (Lea.) Pure colloidal silver is also sol. in alcohol (Schneider, B. 25. 1164.)

Entirely sol. in  $H_2O$ , even when dry. (Schneider, Z. anorg. 1894, 7. 339.)

### Silver acetylde, $Ag_2C_2$ .

Sol. in KCN + Aq with evolution of  $C_2H_2$ . Decomp. by HCl + Aq. (Arth, C. R. 1897, 124. 1535.)

### Silver amide, $AgNH_2$ .

Ppt., sol. in ammonium salts + Aq and in excess of potassium amide. Sol. in liquid  $NH_3$ . Insol. in Ag salts + Aq. (Franklin, J. Am. Chem. Soc. 1905, 27. 833.)

Sol. in excess of  $KNH_2$ . (Franklin, Z. anorg. 1905, 46. 16.)

### Silver antimonide, $Ag_3Sb$ or $Ag_3Sb$

Min. *Diserazite*. Sol. in  $HNO_3$  + Aq.  $Ag_3Sb$ . Insol. in HCl + Aq; decomp. by  $HNO_3$  + Aq. (Christofle.)

### Silver azoimide, $AgN_3$ .

Insol. in hot or cold  $H_2O$  or dil. acids, sol. in conc. mineral acids. Sol. in  $NH_4OH$  + Aq. (Curtius, B. 23. 3023.)

### Silver bromide, AgBr.

Insol. in  $H_2O$ , or  $H_2O$  acidulated with  $HNO_3$ ,  $H_2SO_4$ , or  $HCl$ , between 0° and 33°. If flocculent or pulverulent, it is sensibly sol. thereon above 33°, but if granular only above 50°, and then very slightly. (Stas, A. ch. (5) 3. 289.) Ag can be detected as AgBr in 10,000,000 pts.  $H_2O$  (Stas.)

Calculated from the electrical conductivity of AgBr + Aq, AgBr is sol. in 1,971,658 pts.  $H_2O$  at 20°, and 775,400 pts. at 38°. (Holleman, Z. phys. Ch. 12. 133.)

By same method Kohlrausch and Rose calculate that 1 l.  $H_2O$  dissolves 0.4 mg. AgBr at 18° (Z. phys. Ch. 12. 240.)

Solubility in  $H_2O$  = 0.109 mg. per l. (Prudhomme, J. chim. Phys. 9. 519.)

Solubility in  $H_2O$  =  $6.6 \times 10^{-7}$  at 25°. (Goodwin, Z. phys. Ch. 1894, 13. 645.)

Solubility of AgBr in  $H_2O$  at 25° equals  $8.1 \times 10^{-7}$  g. mols. per l. (Thiel, Z. anorg. 1900, 24. 57.)

Aq. solution sat. at 21.1° contains  $0.57 \times 10^{-4}$  gr. equiv. per litre. (Kohlrausch, C. C. 1901, II. 1299.)

1 l.  $H_2O$  dissolves 0.000137 g. AgBr at 25°. (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

$0.84 \times 10^{-4}$  g. are dissolved per liter of sat. solution at 20°. (Böttger, Z. phys. Ch. 1903, 46. 608.)

1 l.  $H_2O$  dissolves 0.107 mg. AgBr at 21°. (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

3.7 mg. AgBr are contained in 1 liter of sat. solution at 100°. (Böttger, Z. phys. Ch. 1903, 46. 93.)

1 mg. in 1 l. of sat. solution at 21° (Kohlrausch, Z. phys. Ch. 1903, 46. 168.)

Solubility in  $H_2O$  =  $8.8 \times 10^{-7}$  g. mol. per litre at 25°. (A. E. Hill, J. Am. Chem. Soc. 1908, 30. 74.)

Boiling  $H_2O$  dissolves 0.000003502 of its weight of AgBr.  $HNO_3$  + Aq (1%  $HNO_3$ ) dissolves 0.00000543 of its weight of AgBr at 100° with sl. decomposition. The solution is pptd. by  $AgNO_3$  + Aq or HBr (or MBr) + Aq, but not completely. 1 pt. of AgBr in solution requires 3 pts. of Br as MBr (or HBr), or of Ag as  $AgNO_3$ , in order to be wholly precipitated. (Stas.)

Not attacked by boiling  $HNO_3$  + Aq; sl. sol. in conc. HBr or HCl + Aq (Löwig). Boiling conc.  $H_2SO_4$  decomposes it (Balard), hardly acts on it (Dumas), dissolves a small quantity, which is repptd. by  $H_2O$  (Berzelius.)

Very sl. sol. in dil., easily in conc.  $NH_4OH$  + Aq. 100 pts.  $NH_4OH$  + Aq (0.986 sp. gr.) dissolve 0.51 pt. AgBr (dried at 100°) at 80°, and about double that amount of freshly pptd. AgBr. (Pohl, W. A. B. 41. 267.)

1 g. freshly pptd. AgBr is sol. in 250 ccm. 10%  $NH_4OH$  + Aq, but insol. in an ammoniacal solution of AgCl (Seiner, Pharm. J. Trans. (3) 14. 1.)

1 g. AgBr dissolves in 8779.4 g. 5%  $NH_4OH$  + Aq (sp. gr. = 0.993) at 12°, and in 288.5 g.

10%  $\text{NH}_4\text{OH} + \text{Aq}$  (sp. gr. = 0.96) at  $12^\circ$  (Long, *Gazz. ch. it.* 13. 87.)

Solubility of  $\text{AgBr}$  in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $15^\circ$ .  
G. mols. per l.

$\text{NH}_3$	$\text{AgBr}$	Sp. gr. $15.5^\circ$
1.085	0.0011	0.9932
2.365	0.0031	0.9853
3.410	0.0050	0.9793

0.000264	0.0777

(Whitney and Melcher, *J. Am. Chem. Soc.* 1903, 25. 79.)

Sol. in hot  $\text{NH}_4\text{Cl} + \text{Aq}$ . Very sl. sol. in  $\text{NH}_4$  carbonate, sulphate, or succinate +  $\text{Aq}$ , and still less in nitrate. (Wittstein.) Not very easily sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  when suspended in much  $\text{H}_2\text{O}$ , and is separated out again by  $\text{KBr} + \text{Aq}$ . (Field, *C. N.* 3. 17.)

Sol. in  $\text{KCN} + \text{Aq}$ . Sl. sol. in conc.  $\text{KCl}$ ,

$\text{KBr}$ ,  $\text{NaCl}$ ,  $\text{NaBr}$ ,  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{Br} + \text{Aq}$ ; but insol. when dilute.

Traces only dissolve in alkali nitrates +  $\text{Aq}$ . (Fresenius, *Quant. Anal.*)

Abundantly sol. in  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$ . 100 cc.  $\text{H}_2\text{O}$  containing 10 cc. normal  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$  dissolve 0.0383 g.  $\text{AgBr}$ . (Stas.)

Solubility of  $\text{AgBr}$  in  $\text{Hg}(\text{NO}_3)_2 + \text{Aq}$  at  $25^\circ$ .  
G. mols. per l.

$\text{Hg}(\text{NO}_3)_2$ $\text{HNO}_3$	$\text{AgBr}$	$\text{Hg}(\text{NO}_3)_2$ $\text{HNO}_3$	$\text{AgBr}$
1	0.03660	0.025	0.00459
0.10	0.00873	0.0125	0.00329
0.05	0.00639	0.0100	0.00306

$\text{HNO}_3$  was present in all cases, and it was found that there was no difference in solubility of  $\text{AgBr}$  with concentrations between 0.1N and 2N  $\text{HNO}_3$ . Cryst. and amorphous  $\text{AgBr}$  showed the same solubility. (Morse, *Z. phys. Ch.* 1902, 45. 708.)

Difficultly sol. in hot conc.  $\text{AgNO}_3 + \text{Aq}$ . (Russe, *A.* 111. 39.)

100 cc. of a 3-N solution of  $\text{AgNO}_3$  dissolve 0.04 g.  $\text{AgBr}$  at  $25^\circ$ . Much less sol. in  $\text{AgNO}_3 + \text{Aq}$  than  $\text{AgI}$  (Hellwig, *Z.* anorg. 1900, 25. 176.)

Solubility in  $\text{AgNO}_3 + \text{Aq}$ .

Volumetric measurements

(Wuth, B. 1902, 35. 2416)

At 25°, 1 l ethylamine + Aq containing 0.483 g. mol. C<sub>2</sub>H<sub>5</sub>NH<sub>2</sub> dissolves 0.00231 g. mol. AgBr; 0.200 g. mol. C<sub>2</sub>H<sub>5</sub>NH<sub>2</sub>, 0.0097 g. mol. AgBr (Bodländer and Eberlein, B. 1903, 36. 3948.)

Insol in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol in acetone. (Eidmann, C. C 1899, II, 1014.) (Naumann, B. 1904, 37. 4329.)

Sol in alcoholic thiourea. (Reynolds, Chem. Soc. 1892, 61. 251.)

Insol in methyl acetate (Rebold, Dissert. 1906); (Naumann, B. 1909, 42. 3790.) ethyl acetate (Harners, Dissert. 1906); (Naumann, B. 1910, 43. 314.)

1.49 g. AgBr is dissolved in 1 l. of 1% thiocarbamide + Aq. (Meas and Piper, Photog J. 1912, 36. 239)

Insol in warm pyridine.

Mol wt. determined in piperidine. (Wermer, Z anorg. 1897, 15. 16.)

Min Bromyrite, Bromite.

Silver bromide ammonia, AgBr, NH<sub>3</sub>

(Joannis and Crozier, C. R. 894, 118. 1150.)

AgBr, 1½NH<sub>3</sub> (Jarry, A. ch. 1899, (7) 17. 356.)

2AgBr, 3NH<sub>3</sub> (Joannis and Crozier.)

AgBr, 3NH<sub>3</sub>. Decomp by H<sub>2</sub>O. Sl. sol. in liquid NH<sub>3</sub> (Jarry)

AgBr, 5NH<sub>3</sub> (Jarry, C. R. 1898, 126. 1141.)

Silver carbide, Ag<sub>2</sub>C.

(Gay-Lussac)

Ag<sub>2</sub>C(?) Sol in HNO<sub>3</sub> + Aq with residue of C (Liebig, A. 38. 129.)

Ag<sub>2</sub>C<sub>2</sub>. Sol in HNO<sub>3</sub> + Aq with residue of C (Regnault, A. 19. 153.)

Silver subchloride, Ag<sub>2</sub>Cl<sub>2</sub>.

NH<sub>4</sub>OH + Aq dissolves the greater part, the residue (20%) being sol in HNO<sub>3</sub> + Aq. KCN dissolves the greater part; H<sub>2</sub>SO<sub>4</sub> dissolves about 2%; acetic acid and KOH are without action (Bibra, J pr. 1875, (2) 12. 52)

Argentous chloride, Ag<sub>2</sub>Cl.

Obtained in a pure state by Guntz (C. R. 112. 861). Dil. HNO<sub>3</sub> + Aq does not attack but warm conc. HNO<sub>3</sub> + Aq decomp. Easily sol in KCN + Aq (Guntz, C. R. 112. 1212.)

The following data are for a more or less impure Ag<sub>2</sub>Cl

Boiling conc. HCl + Aq, NaCl + Aq, or NH<sub>4</sub>OH + Aq dissolve out AgCl, and leave Ag (Scheele, Wetzelar, Dulk, Wöhler)

According to Berthollet, wholly sol in NH<sub>4</sub>OH + Aq. Sol for the most part in NH<sub>4</sub>OH + Aq, and the residue is sol in HNO<sub>3</sub> + Aq (= Ag + AgCl) (v Bibra, B. 7. 741)

## Silver chloride, AgCl

Nearly insol. in H<sub>2</sub>O.

When AgCl is left in contact for some hours with pure H<sub>2</sub>O at 20-22°, and especially at 75°, traces go into solution; more Cl is dissolved than Ag. When 1 pt. Ag is pptd as AgCl in presence of 1 million pts. H<sub>2</sub>O a slight bluish milkiness is observed, but in order to have a distinct ppt. 4 pts. Ag should be present.

Dil. HNO<sub>3</sub> + Aq does not increase the solubility of AgCl, but AgCl is not absolutely insol. in stronger HNO<sub>3</sub> + Aq (Mulder.)

1 pt. AgNO<sub>3</sub>, when mixed with HCl + Aq in presence of 120,000 (Pfaff), 240,000 (Harting), pts. H<sub>2</sub>O, causes an opalescence

1 pt. Ag gives a slight turbidity with HCl + Aq in presence of 200,000 pts. H<sub>2</sub>O, a scarcely opalescent cloudiness with 400,000 pts. H<sub>2</sub>O, and the same after the lapse of 15 minutes in presence of 800,000 pts. H<sub>2</sub>O (Lassaigne)

1 pt. Ag can be detected as AgCl in 1 million parts H<sub>2</sub>O at ordinary temp., but not in 2 million parts. In NaNO<sub>2</sub> + Aq containing 0.79 pt. NaNO<sub>2</sub> in 200,000 pts. H<sub>2</sub>O, 1 pt. Ag can be detected as AgCl. This dissolves at 75°, and is visible again on cooling.

If the same liquid contains 1574 pts. NaNO<sub>2</sub>, the AgCl remains in solution after cooling.

In 100 ccm  $H_2O$  containing 0.787 g.  $NaNO_3$ , 13 drops of  $NaCl$  and silver solution, each drop of which contains 0.05 mg.  $Ag$ , cause a precipitate at  $5^\circ$ , 20 drops at  $15-17^\circ$ , 60 drops at  $45-55^\circ$ .

$AgCl$  is somewhat less sol. in  $HNO_3 + Aq$  than in  $NaNO_3 + Aq$  when the amount of  $H_2O$  remains the same.

Therefore, if  $HCl$  is used instead of  $NaCl$ , about  $\frac{1}{2}$  less  $AgCl$  remains in solution.

In 100,000 pts. of  $H_2O$ , which contain  $HNO_3$  and an amount of  $HCl$  corresponding to the amount of  $Ag$  salt, 1.596 pts.  $AgCl$  dissolve at  $25^\circ$ . The solution is precipitated by either  $AgNO_3$  or  $HCl$  (Mulder, Silber Probir-methode, Leipzig, 1859. 62.)

(For further older data, see Storer's Dictionary.)

White flaky  $AgCl$  is appreciably sol. in hot  $H_2O$ , 1000 ccm. boiling  $H_2O$  dissolving about 2 mg.  $AgCl$ . Far less sol. in  $H_2O$  containing  $AgNO_3$ , being practically insol. in  $H_2O$  containing 0.1 g.  $AgNO_3$  in a litre. Solubility is also diminished one-half by addition of  $HCl$  (Cooke, Sill. Am. J. (3) 21. 220.)

Solubility in  $H_2O$  rapidly diminishes as the temp. falls. (Cooke, l. c.)

Not completely insol. in  $H_2O$ . According to Stas (C. R. 73. 998) there are four modifications: (1) gelatinous; (2) cheesy-flocculent; (3) pulverulent; (4) granular, crystalline, or fusible. (4) is almost absolutely insol. in  $H_2O$  at the ordinary temp., but the solubility increases with the temp., and is considerable at  $100^\circ$ ; (2), which is formed by the precipitation of a cold dilute  $Ag$  solution, has the greatest solubility in pure  $H_2O$ , and it changes its solubility by standing, or if made pulverulent by shaking with  $H_2O$ ; (3) is also sol. in  $H_2O$ , the solution of (2) or (3) in pure  $H_2O$ , or  $H_2O$  acidified with  $HNO_3$ , is precipitated by  $AgNO_3$  or  $NaCl + Aq$ .

In order to ppt 1 pt.  $AgCl$  in above solution 3 pts. of  $Cl$  as chloride or  $Ag$  as nitrate are necessary; the pptn. is then complete.

Solubility of granular variety in boiling  $H_2O$  is proportionately large, and pptn. is brought about by 3 pts.  $Cl$  or  $Ag$  as above, but the pptn. in this case is not complete.

The salts formed simultaneously with the  $AgCl$  have no influence on the solubility of the  $AgCl$ . Presence of  $HNO_3$  does not increase the solubility of (2), but has that effect on (3) in proportion to the amt. of  $HNO_3$  present. (Stas, C. R. 73. 998.)

Further determination by Stas are as follows:—

Between  $0^\circ$  and  $30^\circ$  granular  $AgCl$  is insol. in pure  $H_2O$ , or  $H_2O$  acidulated with  $HNO_3$ .

Between  $0^\circ$  and  $30^\circ$  the flocculent and pulverulent forms of  $AgCl$  dissolve without alteration in pure  $H_2O$ , in acidulated  $H_2O$ , in alkali acetates +  $Aq$ , and in  $Hg(C_2H_3O_2)_2 + Aq$  containing an alkali acetate. Their degree of solubility is a function of the state of the chloride, of the temp., and of the nature

and quantity of the solvent within these limits of temp. ( $0^\circ-30^\circ$ ). These solvents, if they contain either  $Ag$  in the state of an  $Ag$  salt, or  $Cl$  as chloride or  $HCl$  in an amount three times that which they can dissolve as  $AgCl$ , exercise no solvent action on any of the modifications of  $AgCl$ . And reciprocally sat.  $AgCl + Aq$  is pptd. instantly by a decinormal solution of  $AgNO_3$  or  $MCl$  (or  $HCl$ ). The  $AgCl$  is wholly pptd. when the quantity of the  $Ag$  or  $Cl$  thus added is equal to three times the quantity of the  $Ag$  or  $Cl$  dissolved as  $AgCl$ .

Between  $50^\circ$  and  $100^\circ$ , however, decinormal solutions of  $Ag$  or chlorides, which cause instant ppts in solutions sat. with any of the modifications of  $AgCl$ , do not eliminate all the dissolved  $AgCl$ . At  $100^\circ$ , they only ppt. 60% of the amt. dissolved. (Stas, A. ch. (5) 3. 323.)

Calculated from electrical conductivity of  $AgCl + Aq$ ,  $AgCl$  is sol. in 715,800 pts.  $H_2O$  at  $13^\circ$ , and 384,100 pts. at  $26.5^\circ$ . (Holleman, Z. phys. Ch. 12. 132.)

Calculated in the same way, 1 l.  $H_2O$  dissolves 0.76 mg. at  $2^\circ$ ; 0.97 mg. at  $10^\circ$ ; 1.52 mg. at  $18^\circ$ ; 2.24 mg. at  $26^\circ$ ; 3.03 mg. at  $34^\circ$ ; 4.05 mg. at  $42^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12. 242.)

Solubility in  $H_2O = 1.25 \times 10^{-5}$  mol./l. at  $25^\circ$ . (Goodwin, Z. phys. Ch. 1894. 13. 645.)

Solubility of  $AgCl$  in  $H_2O$  at  $25^\circ$  is  $1.41 \times 10^{-5}$  (in normality). (Thiel, Z. anorg. 1900, 24. 57.)

$2.16 \times 10^{-5}$  moles are sol. in 1 liter  $H_2O$  at  $25^\circ$ . (Noyes and Kohr, Z. phys. Ch. 1903, 42. 341.)

$1.53 \times 10^{-3}$  g. per liter are dissolved in sat. aq. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 48. 603.)

1 l.  $H_2O$  dissolves 1.6 mg.  $AgCl$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

21.8 milligrams are dissolved in 1 liter of sat. solution at  $100^\circ$ . (Böttger, Z. phys. Ch. 1906, 56. 93.)

1.34 mg. are contained in 1 l. of sat. solution at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

1 l. sat. solution at  $t^\circ$  contains mg.  $AgCl$ .

$t^\circ$	mg. $AgCl$	$t^\circ$	mg. $AgCl$
1 55	0 56	17 51	1 31
4 68	0 66	25 86	1 935
9 97	0 89	34 12	2 74

(Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Solubility in  $H_2O = 1.6 \times 10^{-5}$  g.-mol. per litre at  $25^\circ$ . (A. E. Hill, J. Am. Chem. Soc. 1908, 30. 74.)

1 l.  $H_2O$  dissolves 0.00154 g.  $AgCl$  at  $21^\circ$ ; 0.0217 g. at  $100^\circ$ . (Whitby, Z. anorg. 1910, 67. 108.)

Calculated from electrical conductivity of AgCl+ $\text{Aq}$ , 1 l  $\text{H}_2\text{O}$  dissolves:

0.0105 mill-equivalents AgCl at 18°  
0.0365 " " " " 50°  
0.147 " " " " 100°.

(Malcher, J. Am. Chem. Soc. 1910, **32**, 55.)

1 l  $\text{H}_2\text{O}$  dissolves  $1.02 \times 10^{-5}$  g. equiv at 18°;  $1.429 \times 10^{-5}$  g. equiv. at 25°. (van Rossen, C. C. 1912, I 1539.)

The most probable average value for solubility of AgCl in  $\text{H}_2\text{O}$  is  $1.04 \times 10^{-5}$  g. equiv per l at 18°, and  $1.43 \times 10^{-5}$  g. equiv. per l. at 25°. (van Rossen, C. C. 1912, II, 1807.)

$1.20 \times 10^{-5}$  g. AgCl are sol in 1 l.  $\text{H}_2\text{O}$  at 18°. (Glowczynski, C. A. 1915, 741.)

More sol. in  $\text{H}_2\text{O}$  than AgSCN. (Noimand, Chem. Soc. 1912, 101, 1853.)

Sol in conc. HCl+ $\text{Aq}$ , and also when not very conc., thus the solution of 1 pt.  $\text{AgNO}_3$ + $\text{Aq}$  in 15,000 pts.  $\text{H}_2\text{O}$  is clouded by a little HCl+ $\text{Aq}$ , but clears up by the addition of more. (Reinsch, J. pr. 13, 133.)

1 pt. AgCl dissolves in 200 pts. conc. HCl+ $\text{Aq}$  and in 600 pts. HCl+ $\text{Aq}$  diluted with 2 pts.  $\text{H}_2\text{O}$ . (Pierre, J. Pharm. (3) 12, 237.)

Somewhat sol. in hot alcohol, to which HCl has been added, but is precipitated on cooling. (Erdmann, J. pr. 19, 341.)

100 pts. sat. HCl+ $\text{Aq}$  (sp. gr. 1.165) dissolve 0.2980 pt. AgCl, or AgCl is sol in 336 pts. HCl+ $\text{Aq}$  at old temp., 100 pts. HCl+ $\text{Aq}$  (sp. gr. 1.165) at b-pt dissolve 0.56 g. AgCl, or AgCl is sol. in 178 pts. HCl+ $\text{Aq}$ .

Solubility of AgCl in dil. HCl+ $\text{Aq}$ . 100 cc. HCl+ $\text{Aq}$  (sp. gr. 1.165), to which the given amt.  $\text{H}_2\text{O}$  has been added, dissolve g. AgCl

ccm. HCl	ccm. $\text{H}_2\text{O}$	g. AgCl	Pts. HCl which dissolve 1 pt. AgCl
100	10	0.056	1,785
100	20	0.018	5,555
100	30	0.0089	11,235
100	50	0.0035	18,571

(Vogel, N. Rep. Pharm. **23**, 335.)

If HCl is added to a solution in which  $\frac{1}{1,000,000}$  pt. Ag is suspended, the milkiness disappears. Solubility in HCl+ $\text{Aq}$  increases with the temp., the AgCl separating out on cooling. (Mulder.)

The amounts of AgCl which dissolve in HCl+ $\text{Aq}$  are directly proportional to the volumes of acid (of fixed concentration) used. (Bailew, J. Am. Chem. Soc. 1906, **28**, 1448.)

1 l. 1% HCl dissolves 0.0002 g. AgCl at 21°.

1 l. 5% HCl dissolves 0.0033 g. AgCl at 21°.

1 l. 10% HCl dissolves 0.0555 g. AgCl at 21°.

(Whitby, Z. anorg. 1910, **67**, 108.)

### Solubility in HCl+ $\text{Aq}$ at 25°.

HCl g-equivalents per l	Ag $\times 10^{-3}$ g-equivalents per l
0.640	0.032
1.300	0.126
1.911	0.266
2.149	0.374
2.569	0.610
2.975	0.814
3.576	1.358
4.182	2.147
4.735	3.168
5.508	4.126

(Forbes, J. Am. Chem. Soc. 1911, **33**, 1941.)

### Solubility in 20% HCl + $\text{Aq}$ .

HCl	N/10 $\text{AgNO}_3$ ccm	Opalescent at 1°	G. AgCl to 100 g. anhydrous HCl
20 g. of 20% acid	1.0		
	1.1	0 0	0.39
	2.0	29 5	0.72
	3.0	51 5	1.076
	3.75	70.0	1.346
	4.25	82.0	1.525
	4.75	90.0	1.74
	5.80	107.0	2.08

(Lowry, Roy, Soc. Proc. 1914, **91**, A. 62.)

Sol. in conc. HBr+ $\text{Aq}$  (Löwig.)

Insol. in  $\text{HNO}_3$ + $\text{Aq}$  (Wackenroder.)

Entirely unacted upon by  $\text{HNO}_3$  of 1.43 sp. gr. (Wurtz, Am. J. Sci. (2) **25**, 382.)

Solubility in dil.  $\text{HNO}_3$ + $\text{Aq}$  is the same as solubility in  $\text{H}_2\text{O}$ , i. e.  $\frac{1}{2,000,000}$  pt. of Ag cannot be detected in  $\text{H}_2\text{O}$  with or without  $\text{HNO}_3$ , but  $\frac{1}{1,000,000}$  pt. can be detected in both cases. (Mulder.)

1 pt. Ag in the form of AgCl dissolves at 25° in 83,000 pts.  $\text{H}_2\text{O}$  containing free  $\text{HNO}_3$  and 0.33 pt. of HCl (Mulder.)

100,000 pts. conc.  $\text{HNO}_3$ + $\text{Aq}$  dissolve about 2 pts. AgCl, and solubility is not sensibly affected by lower nitrogen oxides. (Thorpe, Chem. Soc. (2) **10**, 453.)

### Solubility of AgCl in $\text{HNO}_3$ + $\text{Aq}$ at 25°.

G per liter			
$\text{HNO}_3$	AgCl	$\text{HNO}_3$	AgCl

0.630	0.00176		

(Glowczynski, Kolloidchem. Beih. 1914, **6**, 147.)

Insol. in cold conc.  $H_2SO_4$ , but on boiling is in part decomp. and in part dissolved, and does not separate on cooling.

$AgCl$  is not more sol. in dil.  $H_2SO_4$ +Aq than in dil.  $HNO_3$ +Aq.

Unacted upon by cold  $H_2SO_4$ +Aq, and but slightly decomp. on heating. (Vogel.)

Abundantly sol. in  $H_2PtCl_6$ +Aq without decomp. (Birnbaum, Z. Ch. 1867. 520.)

Insol. in cold dil. caustic alkalis+Aq but decomp. by hot conc. solutions. (Gregory)

Decomp. by  $K_2CO_3$ +Aq.

Sl. sol. in cold  $K_2CO_3$ +Aq.

Easily sol. even in dil.  $NH_4OH$ +Aq.

1 pt.  $AgCl$  dissolves in 1288 pts  $NH_4OH$ +Aq of 0.89 sp. gr. (Wallace and Lamont, Chem. Gaz. 1893. 137.)

100 pts.  $NH_4OH$ +Aq of 0.986 sp. gr. dissolve at  $80^\circ$  1.492 pts.  $AgCl$ , dried at  $100^\circ$ . (Pohl, W. A. B. 41. 627.)

1 l.  $NH_4OH$ +Aq of 0.949 sp. gr. dissolves 51.6 g.  $Ag$  as freshly precipitated  $AgCl$ , and 47.6 g. when diluted with 1 l.  $H_2O$ .

1 l.  $NH_4OH$ +Aq of 0.924 sp. gr. dissolves 58 g.  $Ag$  as freshly precipitated  $AgCl$ ; 1 l.  $NH_4OH$ +Aq of 0.899 sp. gr. dissolves 49.6 g.; 0.5 l.  $NH_4OH$ +Aq (of 0.949 sp. gr.)+0.5 l. saturated  $NaCl$ +Aq dissolves 20.8 g.; 0.5 l.  $NH_4OH$ +Aq (of 0.949 sp. gr.)+0.5 l. saturated  $KCl$ +Aq dissolves 20.4 g.; 0.5 l.  $NH_4OH$ +Aq (of 0.949 sp. gr.)+0.5 l. saturated  $NH_4Cl$ +Aq dissolves 22.4 g.  $Ag$  as freshly pptd.  $AgCl$ . (Millon and Commaille, C. R. 56. 309.)

1 g.  $AgCl$  dissolves in 428.64 g. 5%  $NH_4OH$ +Aq (sp. gr. 0.998) at  $12^\circ$ ; 1 g.  $AgCl$  dissolves in 1276 g. 10%  $NH_4OH$ +Aq (sp. gr. 0.998) at  $18^\circ$ . (Long, Gazz. ch. it. 13. 87.)

1 g. freshly pptd.  $AgCl$  is sol. in 17 ccm. 10%  $NH_4OH$ +Aq. Solubility is diminished by presence of  $AgBr$ . (Senier, Pharm. J. Trans. (3) 14. 1.)

#### Solubility in $NH_4OH$ +Aq at $0^\circ$

(Hahn, Wyandotte Silver Smelting Works, 1877.)

1 l. 4-N  $\text{KCl} + \text{Aq}$  dissolves 0.915 g.  $\text{KCl}$  at  $25^\circ$ . (Hellwig, Z. anorg. 1900, 25. 166.)

Solubility in  $\text{KCl} + \text{Aq}$  at  $t^\circ$ .

$t^\circ$	G equiv. per l	
	$\text{Ag} \times 10^{-3}$	$\text{KCl}$
10	1.734	3.325
25	2.415	3.083
35	2.786	2.955

(Forbes, J. Am. Chem. Soc. 1911, 33. 1937.)

Solubility in  $\text{KCl} + \text{Aq}$  at  $25^\circ$ 

G. per liter.

$\text{KCl}$	$\text{AgCl}$	$\text{KCl}$	$\text{AgCl}$
0.00236	0.00184	0.01491	0.00305
0.00471	0.00218	0.02984	0.00321

(Glowczynski, Kolloidchem. Beih. 1914, 6. 147.)

Solubility in  $\text{CaCl}_2 + \text{Aq}$ .

$t^\circ$	G equiv per l	
	$\text{Ag} \times 10^3$	$\frac{\text{CaCl}_2}{2}$
10	0.964	3.512
25	1.514	3.320
35	1.806	3.221

(Forbes, l. c.)

Sat.  $\text{CuCl}_2 + \text{Aq}$  at  $0^\circ$  dissolves 2.835 g.  $\text{AgCl}$  per l; at  $100^\circ$ , 8.147 g. Solubility in sat.  $\text{MgCl}_2 + \text{Aq}$  is still greater. (Hahn, Eng. Min. J. 65. 434.)

More sol. in  $\text{HgCl}_2 + \text{Aq}$  than in  $\text{H}_2\text{O}$ . (Finzi, Gazz. ch. it 1902, 32, (2) 324.)

At  $15^\circ$ , 100 g.  $\text{NaCl}$  in 280 ccm.  $\text{H}_2\text{O}$  dissolve 485 mg.  $\text{AgCl}$ ; 100 g.  $\text{KCl}$  in 300 ccm.  $\text{H}_2\text{O}$  dissolve 334 mg.; 100 g.  $\text{NH}_4\text{Cl}$  in 280 ccm.  $\text{H}_2\text{O}$  dissolve 1051 mg.

The solubility decreases with dilution rapidly at first until about an equal vol. of  $\text{H}_2\text{O}$  has been added, and then much more slowly to a minimum quantity, when the dilution is 1:10 for  $\text{NaCl}$  and  $\text{KCl}$ , and 1:20 for  $\text{NH}_4\text{Cl}$ .

100 g.  $\text{NaCl}$  in 280 ccm.  $\text{H}_2\text{O}$  dissolve 2170 mg.  $\text{AgCl}$  at  $109^\circ$ , 100 g.  $\text{NH}_4\text{Cl}$  in 280 ccm.  $\text{H}_2\text{O}$  dissolve 4000 mg.  $\text{AgCl}$  at  $110^\circ$ ; 100 g.  $\text{NaCl}$  in 620 ccm.  $\text{H}_2\text{O}$  (14% solution) dissolve 15 mg.  $\text{AgCl}$  at  $15^\circ$ , and 774 mg. at  $104^\circ$  (Schierholz, W. A. B. 101, 2b. 4.)

The solubility of  $\text{AgCl}$  in  $\text{NaCl} + \text{Aq}$  decreases with diminishing concentration of  $\text{NaCl} + \text{Aq}$ . (Barlow, J. Am. Chem. Soc. 1903, 25, 1418.)

#### Solubility in $\text{NaCl} + \text{Aq}$ .

## Solubility in salts + Aq at 25°—Continued

Salt	C	Ag $\times 10^{-3}$ g.-equivalents per l
KCl	1 111	0 141
	1 425	0 235
	1 713	0 391
	2 022.	0.616
	2 396	1 050
	2 628	1.390
	2 850	1 845
	3 081	2 435
	3 424	3 602
	3 843	5 725
BaCl <sub>2</sub> 2	1 248	0 186
	1.610	0 339
	2 076	1 274
	3 280	2 366

(Forbes, J. Am. Chem. Soc. 1911, 33, 1940)

Sol in NaNO<sub>3</sub>, KNO<sub>3</sub>, Ca(NO<sub>3</sub>)<sub>2</sub>, Mg(NO<sub>3</sub>)<sub>2</sub>, and NH<sub>4</sub>NO<sub>3</sub> + Aq, sl sol. at ord temp., but solubility is much increased by heat.

Solubility in NaNO<sub>3</sub> + Aq at 15–20°.

ccm. H <sub>2</sub> O	g NaNO <sub>3</sub>	mg AgCl dissolved
100	0 787	1 33
200	0 787	1 93
300	2 361	3 99
100	2 787	2 53

## Solubility increases with ascending temp.

Temp.	ccm H <sub>2</sub> O	g. NaNO <sub>3</sub>	mg AgCl dissolved
5°	100	0 787	0 86
15–17°	100	0 787	1.33
18°	100	0 787	1.46
30°	100	0 787	2 33
45–55°	100	0 787	3 99

(Mulder)

At 25°, 100,000 pts. H<sub>2</sub>O containing a little free HNO<sub>3</sub> and 0.787 g NaNO<sub>3</sub> dissolve 2.128 mg. AgCl. By adding 2 g. more NaNO<sub>3</sub> to above solution, 2.5269 mg. (1/3 more) AgCl are dissolved. (Mulder)

Solubility in H<sub>2</sub>O is not appreciably influenced by 1/10 N to N-KNO<sub>3</sub> or NH<sub>4</sub>NO<sub>3</sub> + Aq. (van Rossum, C. C. 1912, II 1807)

In presence of NaNO<sub>3</sub> and excess of HCl, 1 l. H<sub>2</sub>O dissolves 0.03 mg. AgCl (Richards and Wells)

Hg(NO<sub>3</sub>)<sub>2</sub> + Aq dissolves considerable quantities of AgCl, but the other nitrates do not (Mulder)

Much more sol in hot than in cold Hg(NO<sub>3</sub>)<sub>2</sub> + Aq, and much more sol. therein than in NH<sub>4</sub>NO<sub>3</sub> + Aq. NaCl ppts AgCl from this solution, much less sol. therein in

presence of NaC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> or NH<sub>4</sub>OH + Aq. AgCl is pptd. from above solution by NaC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq (Mulder.)

Sol in Hg(NO<sub>3</sub>)<sub>2</sub> + Aq (Wackenroder, A. 41. 317); in considerable amount (Laebig, A. 81. 128); and is precipitated by HCl, NH<sub>4</sub>Cl, NaCl, KC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> (Debray, C. R. 70. 849); incompletely precipitated by AgNO<sub>3</sub> and not by HNO<sub>3</sub> (Wackenroder).

Solubility of AgCl in Hg(NO<sub>3</sub>)<sub>2</sub> + Aq at 25°.

(G. mols. per l.)

Hg(NO <sub>3</sub> ) <sub>2</sub> HNO <sub>3</sub>	AgCl	Hg(NO <sub>3</sub> ) <sub>2</sub> HNO <sub>3</sub>	AgCl
0 0100	0.00432	0.050	0 00914
0.0125	0 00499	0 100	0 01395
0.025	0 00690	1.000	0 04810

HNO<sub>3</sub> was present in all cases, and it was found that there was no difference in solubility of AgCl with concentrations between 0.1N and 2N HNO<sub>3</sub>. (Morse, Z. phys. Ch. 1902, 45. 708.)

Not sol. to appreciable extent in Cu(NO<sub>3</sub>)<sub>2</sub>, Fe<sub>2</sub>(NO<sub>3</sub>)<sub>6</sub>, Mn(NO<sub>3</sub>)<sub>2</sub>, Co(NO<sub>3</sub>)<sub>2</sub>, Zn(NO<sub>3</sub>)<sub>2</sub>, or Ni(NO<sub>3</sub>)<sub>2</sub> + Aq, insol or exceedingly sl. sol in Pb(NO<sub>3</sub>)<sub>2</sub> + Aq. (Mulder.)

Imperfectly sol in AgNO<sub>3</sub> + Aq. (Wackenroder)

Conc. AgNO<sub>3</sub> + Aq dissolves AgCl perceptibly.

Less sol in AgNO<sub>3</sub> + Aq than AgBr (Risse, A. 111. 39)

Solubility in 0.02N AgNO<sub>3</sub> + Aq = 0.15  $\times 10^{-3}$  g. mols. per l. (Böttger)

100 ccm of 3-N solution of AgNO<sub>3</sub> dissolve 0.08 g AgCl at 25°. More dil. solutions dissolve very slight amounts of AgCl. (Hellwig, Z. anorg 1900, 25. 177.)

Solubility in 2-N AgNO<sub>3</sub> + Aq at ord. temp. = 0.03  $\times 10^{-3}$  g equiv. AgCl. (Forbes, J. Am. Chem. Soc 1912, 33. 1946.)

Solubility in AgNO<sub>3</sub> + Aq at t°.

(Det. by volumetric method.)

AgNO<sub>3</sub>: H<sub>2</sub>O = 2:1

(Valenta, M. 1894, 15. 250.)

Solubility in salts +  $\text{Aq}$ .31.71 cc. of a solution of sodium thiosulphate containing 31.869 g.  $\text{Na}_2\text{S}_2\text{O}_3$  per liter (i. e. 5 g. of the hydrate in 100 cc. of the solution) dissolve 0.6124 g.  $\text{AgCl}$ .21.88 cc. of a solution of ammonium thiosulphate containing 50 g.  $(\text{NH}_4)_2\text{S}_2\text{O}_3$  per liter dissolve 0.7024 g.  $\text{AgCl}$ .27.34 cc. of a solution of potassium cyanide containing 49.511 g.  $\text{KCN}$  per liter dissolve

14926 g. AgCl (Cohn, Z. phys. Ch. 1895, 18, 63.)

Solubility of AgCl in sodium thiosulphate and potassium cyanide solutions may be determined without inference to experimental date. (Cohn.)

Sl. sol. in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20, 829.)

Insol. in moderately dil  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$   
10 cem normal  $\text{Hg}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$  containing 0.1 g. Hg dissolve 0.01892 g. AgCl at 15°.

(Stas)  
100 cem. of a solution of a mixture of Na and Hg acetates dissolve 0.00175 g. AgCl (Stas, A. ch. (5) 3, 145.)

Only sl. sol in liquid  $\text{NH}_3$ .

Solubility curve for AgCl, AgCl,  $3\text{NH}_3$ , AgCl,  $5\text{NH}_3$ . (Jarry, A. ch 1899, 17, 342.)

Insol in alcoholic ammonia. (Bodländer, Z. phys. Ch. 1892, 9, 731.)

Nearly insol in ether (Mylus and Huttner, B 1911, 44, 1316.)

Perceptibly sol. on warming with solution of tartaric acid, but nearly the whole is deposited on cooling.

Insol. in acetone. (Naumann, B 1904, 37, 4329); insol in acetone and in methylal. (Eidmann, C. C. 1899, II 1014.)

Insol. in methyl acetate. (Bezold, Dissert 1906; Naumann, B 1909, 42, 3790.)

Insol. in ethyl acetate. (Hamers, Dissert 1906; Naumann, B. 1910, 43, 314.)

Sol. in methylamine + Aq. (Wurtz, A. ch (3) 30, 453.)

Solubility of AgCl in methylamine at 11.5°.

% $\text{CH}_3\text{NH}_2$	% AgCl	% $\text{CH}_3\text{NH}_2$	% AgCl

(Kahlenberg, J. phys. Chem. 1900, 13, 423.)

Easily sol. in warm piperidine. (Varet, C. R. 1892, 115, 335.)

Mol. wt. determined in piperidine. (Werner, Z. anorg. 1897, 15, 16.)

Quinoline dissolves traces of AgCl. (Varet, C. R. 1893, 116, 60.)

As sol. in conine + Aq as in  $\text{NH}_4\text{OH} + \text{Aq}$  (Blyth, Chem. Soc. 1, 350.)Sol. in sinamine, and thosinamine + Aq. Min. *Cerargyre*.Silver chloride ammonia,  $\text{AgCl} \cdot 2\text{NH}_3$ .Decomp. by  $\text{H}_2\text{O}$  (Terrel, A. Phys. Beibl. 7, 149.) $2\text{AgCl} \cdot 3\text{NH}_3$ . Decomp. on air and in  $\text{H}_2\text{O}$  to AgCl. Sol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ , from which it can be crystallised (Rose.)

Insol. in alcohol (Bodlander, Z. phys. Ch. 9, 730.)

 $\text{AgCl} \cdot 3\text{NH}_3$ . More easily decomp. than  $2\text{AgCl} \cdot 3\text{NH}_3$ .Sl. sol. in liquid  $\text{NH}_3$ . (Jarry, A. ch. 1899, (7) 17, 343.) $\text{AgCl} \cdot 5\text{NH}_3$ . Sl. sol. in liquid  $\text{NH}_3$ . (Jarry, A. ch. 1899, (7) 17, 336.)

Silver chlorobromoidides.

(Rodwell, Proc. Roy. Soc. 25, 202.)

Silver subfluoride (argentous fluoride),  $\text{Ag}_2\text{F}$ Decomp. by  $\text{H}_2\text{O}$  into Ag and AgF. (Guntz, C. R. 110, 1337.)Decomp. by  $\text{H}_2\text{O}$ .

Insol. in abs. alcohol, ether, acetone and xylene. (Wöhler and Rodewald, Z. anorg. 1909, 61, 63.)

Decomp. by  $\text{H}_2\text{O}$  until the solution contains 64.5% AgF, independent of temp. (Guntz, C. R. 1913, 167, 981.)

Silver fluoride, AgF.

Extremely deliquescent. (Gore.)

Sol. in 0.55 pt.  $\text{H}_2\text{O}$  at  $15.5^\circ$  with evolution of heat. Sp. gr. of sat. solution at  $15.5^\circ = 2.61$ . (Gore.)Solubility of AgF in  $\text{H}_2\text{O}$  at  $t^\circ$ .  
G. per 100 g.  $\text{H}_2\text{O}$ .

108	205	$\text{AgF}$

(Guntz, A. ch. 1914, (9) 2, 101.)

Sp. gr. AgF + Aq at  $18^\circ$ .

% AgF	Sp. gr.
7.20	1.07
29.00	1.38
49.20	1.82
56.40	2.09
66.20	2.62

(Guntz, A. ch. 1914, (9) 2, 104.)

Data on solubility of AgF in  $\text{HF} + \text{Aq}$  are given by Guntz (l. c.).Sl. sol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 829.)+  $\text{H}_2\text{O}$ . Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Guntz, A. ch. 1914, (9) 2, 101.)+  $2\text{H}_2\text{O}$ . Deliquescent. Sol. in  $\text{H}_2\text{O}$  (Guntz)+  $4\text{H}_2\text{O}$ . Not deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Guntz)+  $1/3 \text{H}_2\text{O}$ . Unstable in the presence of crystals of  $\text{AgF} + 2\text{H}_2\text{O}$  (Guntz, A. ch. 1914, (9) 2, 101.)

Silver hydrogen fluoride, AgF, HF.

(Guntz.)

AgF, 3HF. Very unstable.

Sol. in HF. (Guntz, Bull. Soc. 1895, (3) 13, 114.)

Silver stannic fluoride.

See Fluostannate, silver.

Silver tungstyl fluoride.

See Fluoxtungstate, silver.

Silver, fulminating.

See Silver nitride.

Silver hydride,  $\text{AgH}$ .Not decomp. by  $\text{H}_2\text{O}$ . (Bartlett, Am. Ch. J. 1896, 19, 52.)Argentous hydroxide,  $\text{Ag}_2\text{O} \cdot \text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ . Known only in solution. (Weltzein, A. 142, 105.)

Silver hydroxide, AgOH.

Decomp. into  $\text{Ag}_2\text{O}$  and  $\text{H}_2\text{O}$  above  $-40^\circ$ . See Silver oxide.

Argentous iodide,  $\text{Ag}_2\text{I}$   
(Guntz, C. R. 112. 861)

Silver imidosulphamide,  $\text{AgN}(\text{SO}_2\text{NH}_2)_2 + 1\frac{1}{2}\text{H}_2\text{O}$ .

Decomp slowly in the air. Somewhat sol in hot, more sol in boiling  $\text{H}_2\text{O}$ , from which it crystallizes unchanged on cooling. In aqueous solution is stable toward alkali. Decomp. by acids. Difficultly sol. in dry pyridine, easily sol. in pyridine + Aq. (Hantzsch, B. 1905, 38. 1035)

$(\text{SO}_2)_2\text{N}_2\text{H}_4\text{Ag}_2 + 5\frac{1}{2}\text{H}_2\text{O}$ . Nearly insol. in hot  $\text{H}_2\text{O}$ . (Ephraim and Michel, B. 1909, 42. 3845)

$(\text{SO}_2)_2\text{N}_2\text{H}_4\text{Ag}_2 + 4\text{H}_2\text{O}$ . (Ephraim and Michel)

$(\text{SO}_2)_2\text{N}_2\text{H}_4\text{Ag}_2 + 1\frac{1}{2}$ , 11, and 28  $\text{H}_2\text{O}$   
Easily sol. in  $\text{HNO}_3$  and  $\text{NH}_4\text{OH}$  + Aq. Sol. in pyridine. Very sol. in pyridine containing pyridine nitrate and can be recryst. therefrom. (Ephraim and Michel)

$(\text{SO}_2)_2\text{N}_2\text{H}_4\text{Ag}_2 + 8\text{H}_2\text{O}$ . (Ephraim and Michel)

Silver iodide,  $\text{AgI}$ .

Insol in  $\text{H}_2\text{O}$

Calculated from electrical conductivity of  $\text{AgI}$  + Aq,  $\text{AgI}$  is sol. in 1,074,040 pts  $\text{H}_2\text{O}$  at  $25.4^\circ$ , and 420, 260 pts at  $40^\circ$  (Holleman, Z. phys. Ch. 12. 130.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.1 mg  $\text{AgI}$  at  $18^\circ$  (Kohlrausch and Rose, Z. phys. Ch. 12. 241)  
Solubility in  $\text{H}_2\text{O} = 1 \times 10^{-4}\text{N}$ . (Rolla.)

Solubility in  $\text{H}_2\text{O} = 0.97 \times 10^{-8}$  g. mols. per l. at  $25^\circ$ . (Goodwin, Z. phys. Ch. 1894, 13. 645.)

Solubility of  $\text{AgI}$  in  $\text{H}_2\text{O}$  at  $25^\circ$  is  $1.05 \times 10^{-8}$  (in normality). (Thiel, Z. anorg. 1900, 24. 57)

A sat aq solution at  $20.8^\circ$  contains 0.0020  $\times 10^{-4}$  g. equiv per l. (Kohlrausch, C. C. 1901, II. 1299.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.0035 mg.  $\text{AgI}$  at  $21^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.00253 mg.  $\text{AgI}$  at  $60^\circ$ . (Semmet, Z. phys. Ch. 1905, 53. 644.)

Solubility in  $\text{H}_2\text{O} = 1.23 \times 10^{-8}$  g.-mol. per litre at  $25^\circ$ . (A. E. Hill, J. Am. Chem. Soc. 1908, 30. 74.)

0.003 mg. are contained in 1 l. of sat. solution at  $21^\circ$ . (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Insol. in dil  $\text{HNO}_3$  + Aq or  $\text{H}_3\text{PO}_4$  + Aq  
Decomp by hot, conc.  $\text{HNO}_3$  + Aq or  $\text{H}_2\text{SO}_4$   
Easily sol in conc.  $\text{HI}$  + Aq

1 pt.  $\text{AgI}$  dissolves in 2510 pts.  $\text{NH}_4\text{OH}$  + Aq of 0.96 sp. gr (Martini, Schw. J. 56. 154); in 2483 pts. of 0.89 sp. gr. (Wallace and Lamont, Ch. Gaz. 1859. 137.)

1 g  $\text{AgI}$  dissolves in 26,300 g. 10%  $\text{NH}_4\text{OH}$  + Aq (sp. gr = 0.96) at  $12^\circ$ . Insol. in 5%  $\text{NH}_4\text{OH}$  + Aq. (Longi, Gazz. ch. it. 13. 87.)

Coefficient of solubility in  $\text{NH}_4\text{OH}$  + Aq (density, 0.926) is found lower than previously obtained and of the order of  $\frac{1}{10000}$  at  $16^\circ$ . (Baubigny, Bull. Soc. 1908, (4) 3. 772.)

According to Field, insol. in cold conc.  $\text{KCl}$  or  $\text{NaCl}$  + Aq, and only in traces on boiling, and separates out on cooling.

100 g.  $\text{NaCl}$  in conc.  $\text{NaCl}$  + Aq dissolve 0.95 mg  $\text{AgI}$  at  $15^\circ$ ; 100 g.  $\text{NH}_4\text{Cl}$  in conc.  $\text{NH}_4\text{Cl}$  + Aq dissolve 2.9 mg.  $\text{AgI}$  at  $15^\circ$ ; 95 g.  $\text{NaCl}$  + 10 g.  $\text{KBr}$  in conc. solution dissolve 1.2 mg  $\text{AgI}$  at  $15^\circ$ ; 100 g.  $\text{KBr}$  + 225 g.  $\text{H}_2\text{O}$  dissolve 430 mg  $\text{AgI}$  at  $15^\circ$ ; 100 g.  $\text{KBr}$  in conc.  $\text{KBr}$  + Aq dissolve 525 mg.  $\text{AgI}$  at  $15^\circ$ ; 100 g.  $\text{KI}$  + 69 g.  $\text{H}_2\text{O}$  dissolve 89.8 g.  $\text{AgI}$  at  $15^\circ$ ; 100 g.  $\text{KI}$  + 92 g.  $\text{H}_2\text{O}$  dissolve 54.0 g.  $\text{AgI}$  at  $15^\circ$ ; 100 g.  $\text{KI}$  + 366 g.  $\text{H}_2\text{O}$  dissolve 7.25 g.  $\text{AgI}$  at  $15^\circ$ . (Schieberholz, W. A. B. 101, 2b. 4)

Sol. in conc.  $\text{KI}$  + Aq, from which it is precipitated by  $\text{H}_2\text{O}$  (Field, C. N. 3. 17)

$\text{KI}$  gives a ppt. with  $\text{AgNO}_3$  in presence of 30,000 pts.  $\text{H}_2\text{O}$  (Harting)

#### Solubility in $\text{KI}$ + Aq at $15^\circ$

5.90	85.0	

(Heliwig, Z. anorg 1900, 25, 171.)

Solubility of AgI in 25% AgNO<sub>3</sub> + Aq reaches a maximum at about 60° and at the point of maximum solubility the quantity dissolved amounts to about 5 g. AgI per 100 g. AgNO<sub>3</sub>. (Lowry, Roy. Soc. Proc. 1914, 91, A, 66.)

Sol. in hot Hg(NO<sub>3</sub>)<sub>2</sub> + Aq, from which it crystallizes on cooling.

#### Solubility of AgI in Hg(NO<sub>3</sub>)<sub>2</sub> + Aq at 25°.

Mols Hg(NO <sub>3</sub> ) <sub>2</sub> per l.	g AgI per l.	Mols Hg(NO <sub>3</sub> ) <sub>2</sub> per l.	g AgI per l.
0.010	0.800	0.050	1.737
0.0125	0.841	0.100	2.730
0.025	1.118	1.000	25.160

Solubility is not affected by presence of 0.1 to 2N HNO<sub>3</sub>.

(Morse, Z. phys. Ch. 1902, 41, 708.)

Sol. in KCN + Aq.

Sl. sol. in Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub> + Aq when suspended in much H<sub>2</sub>O, but separates again on addition of KI + Aq. (Field.)

Insol. in Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub> + Aq. (Fogh, C. R. 1890, 110, 711.)

## Solubility in salts + Aq

(Valenta, M 1894, 15, 250.)

Very sol. in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20, 829; Jarry, A. ch. 1899, (7) 17, 370.)

Easily sol. in liquid  $\text{NH}_3$ . (Ruff and Giesel, B. 1905, 38, 2862.)

Insol. in acetone (Eidmann, C. C. 1899, II, 1014; Naumann, B. 1904, 37, 4329.)

Insol. in methyl acetate. (Bezold, Dissert. 1906; Naumann, B. 1909, 42, 3790.)

Insol. in  $\text{CS}_2$  (Aicowski, Z. anorg. 1894, 6, 287.)

Much less sol. in hot alcoholic thiourea than  $\text{AgCl}$  and  $\text{AgBr}$  (Reynolds, Chem Soc 1892, 61, 253.)

Insol. in benzonitrile (Naumann, B. 1914, 47, 1370.)

Slowly sol. in piperidine at  $100^\circ$  (Varet, C. R. 1892, 115, 336.)

0.10 pts. is sol. in 100 pts. pyridine at  $10^\circ$ . 8.60 pts. are sol. in 100 pts. pyridine at  $121^\circ$ . (Laszczyński, B. 1894, 27, 2288.)

Mol. wt determined in piperidine (Werner, Z. anorg. 1897, 15, 16.)

Min Iodhydrate.

Silver hydrogen iodide,  $3\text{AgI}, \text{HI} + 7\text{H}_2\text{O}$ .

(Berthelot, C. R. 91, 1024.)

Silver sodium iodide,  $2\text{AgI}, \text{NaI}$ .

Very sol. in acetone. (Marsh, Chem. Soc 1913, 103, 784.)

$\text{AgI}, \text{NaI} + 3\frac{1}{2}\text{H}_2\text{O}$ . (Krym, J. Russ. Phys. Chem. Soc. 1909, 41, 382.)

See  $\text{AgI} + \text{NaI}$  under  $\text{AgI}$ .

Silver iodide ammonia,  $\text{AgI}, \text{NH}_3$ .

Sol. in liquid  $\text{NH}_3$ . (Jarry, A. ch. 1899, (7) 17, 371.)

$2\text{AgI}, \text{NH}_3$ . (Rammelsberg, Pogg. 48, 170.)

Composition as  $\text{AgI}, \text{NH}_3$ . (Longi, Gazz. ch. it. 13, 86.)

Sol. in liquid  $\text{NH}_3$ . (Jarry, A. ch. 1899, (7) 17, 371.)

$\text{AgI}, 2\text{NH}_3$ . (Terreil, C. R. 98, 1279.)

Silver nitride,  $\text{Ag}_3\text{N}$

Berthollet's "knallsilber." Very explosive.

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{KCN} + \text{Aq}$ . Slowly sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Raschig, A. 233, 93.)

(Angeh, Chem Soc 1894, 66, (2) 93.)

Argentous oxide,  $\text{Ag}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$ . Decomp. by acids into argentic oxide and silver. Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$  or  $\text{HC}_2\text{H}_3\text{O}_2$ . (v. der Pfordten, B. 20, 1458.)

Contains  $\text{H}_2$  and is a hydroxide  $\text{Ag}_4\text{H}_2\text{O}$ . (v. der Pfordten, B. 21, 2288.)

The above substance is a mixture, according to Friedheim (B. 20, 2557.)

Silver oxide,  $\text{Ag}_2\text{O}$ .

Somewhat sol. in  $\text{H}_2\text{O}$  (Bucholz.)

Sol. in 3000 pts  $\text{H}_2\text{O}$  (Bineau, C. R. 41, 600); sol. in 90 pts.  $\text{H}_2\text{O}$  (Albi)

Sol. in 15,360 pts.  $\text{H}_2\text{O}$ . (Levi, Gazz. ch. it. 1901, 31, (1) 1.)

Solubility in  $\text{H}_2\text{O}$  at  $25^\circ = 2.16 \times 10^{-4}$  mols.  $\text{AgOH}$  per litre (Noyes, J. Am. Chem. Soc. 1902, 24, 1147.)

1 liter sat. aqueous solution at  $19.99^\circ$  contains  $2.14 \times 10^{-2}$  g.; at  $24.94^\circ$  contains  $2.5 \times 10^{-2}$  g.  $\text{Ag}_2\text{O}$ . (Böttger, Z. phys. Ch. 1903, 46, 603.)

1 l.  $\text{H}_2\text{O}$  at  $25^\circ$  dissolves  $1.8 \times 10^{-4}$  gram-atoms of silver. Determined from its solubility in  $\text{NH}_3$ . (Abegg and Cox, Z. phys. Ch. 1903, 46, 11.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.0215 g.  $\text{Ag}_2\text{O}$  at  $20^\circ$ . (Whitby, Z. anorg. 1910, 67, 108.)

The solubility of  $\text{Ag}_2\text{O}$  in  $\text{H}_2\text{O}$  varies with the method of preparation.

Solubility of  $\text{Ag}_2\text{O}$  (prepared by action of  $\text{NaOH}$ , freshly prepared by the solution of  $\text{Na}$  in  $\text{H}_2\text{O}$ , on a dil. solution of  $\text{AgNO}_3$ ) =  $2.16 \times 10^{-4}$  g.-mol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ ;  $2.97 \times 10^{-4}$  g.-mol. at  $50^\circ$

Solubility of  $\text{Ag}_2\text{O}$  (prepared by action of aqueous barium hydroxide on  $\text{AgNO}_3$ ) =  $2.23 \times 10^{-4}$  g.-mol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ ;  $3.09 \times 10^{-4}$  g.-mol. in 1 l.  $\text{H}_2\text{O}$  at  $50^\circ$ .

Solubility of  $\text{Ag}_2\text{O}$  (prepared by action of conc.  $\text{NaOH} + \text{Aq}$  on moist, freshly pptd.  $\text{AgCl}$ ) =  $2.32 \times 10^{-4}$  g.-mol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ ;  $3.55 \times 10^{-4}$  g.-mol. at  $50^\circ$ .

Solubility of  $\text{Ag}_2\text{O}$  (prepared by action of conc.  $\text{NaOH} + \text{Aq}$  on moist, freshly pptd.  $\text{Ag}_2\text{CO}_3$ ) =  $2.95 \times 10^{-4}$  g.-mol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ ;  $3.89 \times 10^{-4}$  g.-mol. at  $50^\circ$  (Rebière, Bull. Soc 1915, (4) 7, 311.)

Sol. in acids,  $\text{NH}_4\text{OH}$ , and  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Decomp. by alkali chlorides, bromides,

and iodides + Aq. Sol. in alkali cyanides, and thiosulphates + Aq. Sl. sol. in nitrates + Aq; insol. in sulphates + Aq. When freshly pptd., sol. in  $\text{NH}_4\text{SCN}$  + Aq. Sl. sol. in  $\text{NH}_4\text{NO}_3$  + Aq. Abundantly sol. in  $\text{Ba}(\text{NO}_3)_2$  + Aq without pptn of  $\text{BaO}_2\text{H}_2$ . Sol. in boiling  $\text{Mn}(\text{NO}_3)_2$ ,  $\text{Ni}(\text{NO}_3)_2$ ,  $\text{Co}(\text{NO}_3)_2$ ,  $\text{Cu}(\text{NO}_3)_2$ , and  $\text{Ca}_2(\text{NO}_3)_6$  + Aq with pptn of oxides. (Persoz.)

Insol. in KOH, and NaOH + Aq. Sl. sol. in  $\text{BaO}_2\text{H}_2$  + Aq. (Berzelius (?)).

Solubility in  $\text{NH}_4\text{OH}$  + Aq at 25°.

(Euler.)

Silver peroxide,  $\text{Ag}_2\text{O}_2$

Sol. in conc.  $\text{H}_2\text{SO}_4$  (Rose), and in pure  $\text{HNO}_3$  + Aq without decomp. Sol. in  $\text{NH}_4\text{OH}$  + Aq. (Schonbein, J. pr. 41. 321.)

Sol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$  with decomp. (Mulder, R. t. c. 1898, 17. 151.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 829.)

Silver oxide ammonia.

See Silver nitride.

Silver oxybromide,  $\text{Ag}_2\text{OBr}_7$ .

Insol. in  $\text{H}_2\text{O}$ . Insol. in  $\text{HNO}_3$ . Sol. in hot ammonia and in  $\text{NaOCl}$  + Aq. (Seyewetz, C. R. 1912, 154. 357.)

Silver oxyfluoride,  $\text{AgF}$ ,  $\text{AgOH}$ .

Decomp. by  $\text{H}_2\text{O}$  with separation of  $\text{Ag}_2\text{O}$ . (Pfaundler.)

Silver peroxyfluoride,  $2\text{Ag}_2\text{O}_4$ ,  $\text{AgF}$ .

(Tanatar, Z. anorg. 1901, 28. 335.)

$4\text{Ag}_2\text{O}_4$ ,  $3\text{AgF}$  (Tanatar, Z. anorg. 1901, 28. 335.)

Silver oxyiodide,  $\text{Ag}_2\text{O}$ ,  $\text{AgI}$ .

(Seyewitz, Bull. Soc. 1894, (3) 11. 452.)

Silver phosphide,  $\text{Ag}_3\text{P}_2$ .

Sol. in  $\text{HNO}_3$ . Attacked by aqua regia. (Granger, C. R. 1897, 124. 897.)

$\text{Ag}_3\text{P}_2$ . Insol. in  $\text{HCl}$  + Aq; easily sol. in  $\text{HNO}_3$  + Aq. (Schrotter, J. B. 1849. 247.)

$\text{Ag}_3\text{P}_2$ . (Hackspall, C. R. 1913, 157. 720.)

$\text{Ag}_3\text{P}$  (?). (Fresenius and Neubauer, Z. anal. 1. 340.)

Silver phosphoselenide,  $\text{Ag}_3\text{Se}$ ,  $\text{P}_2\text{Se}$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl}$  + Aq. Sol. in  $\text{HNO}_3$  + Aq. Insol. in cold, decomp. by hot alkalies + Aq. (Hahn, J. pr. 93. 436.)

$2\text{Ag}_3\text{Se}$ ,  $\text{P}_2\text{Se}_3$ . Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ , or  $\text{HNO}_3$  + Aq; slowly sol. in red fuming  $\text{HNO}_3$ . (Hahn, J. pr. 93. 440.)

$2\text{Ag}_3\text{Se}$ ,  $\text{P}_2\text{Se}_4$ . Sol. only in fuming  $\text{HNO}_3$ . (Hahn.)

Silver phosphosulphide,  $2\text{Ag}_2\text{S}$ ,  $\text{P}_2\text{S}$ .

$\text{Ag}_2\text{S}$ ,  $\text{P}_2\text{S}$  (Berzelius, A. 46. 254.)

$2\text{Ag}_2\text{S}$ ,  $\text{P}_2\text{S}_3$ . Easily sol. in  $\text{HNO}_3$  + Aq without separation of P. (Berzelius.)

$\text{Ag}_2\text{P}_2\text{S}_7$ . (Berzelius.)

$\text{Ag}_2\text{P}_2\text{S}_7$ . Easily attacked by hot conc.  $\text{HCl}$ . Sl. decomp. Insol. in hot  $\text{HNO}_3$ . Decomp. by aqua regia. (Ferrand, A. ch. 1899, (7) 17. 413.)

Silver selenide,  $\text{Ag}_2\text{Se}$ .

Sol. in boiling  $\text{HNO}_3$  + Aq as  $\text{Ag}_2\text{SeO}_3$ , which separates out by dilution with  $\text{H}_2\text{O}$ . (Berzelius.)

Insol. in  $\text{Hg}_2(\text{NO}_3)_2$  + Aq. (Wackenroder, A. 41. 327.)

Min *Naumannite*. Insol. in dil., but sol. in conc.  $\text{HNO}_3 + \text{Aq.}$

Silver sulphamide (silver thionyl amide),  $\text{SO}_2(\text{NHAg})_2$

Insol. in pyridine (Hantzsch and Holl, B. 1901, 34, 3436)  
+  $\text{H}_2\text{O}$ . (Ephraim and Gurevitch, B. 1910, 43, 146.)

Argentous sulphide,  $\text{Ag}_2\text{S}$

Easily sol. in warm dil.  $\text{HNO}_3 + \text{Aq.}$  and in conc.  $\text{H}_2\text{SO}_4$  without separation of S. Sol. in conc.  $\text{KCN} + \text{Aq.}$  (v der Pfordten, B. 20, 1453, Guntz, C. R. 112, 861.)

Silver sulphide,  $\text{Ag}_2\text{S}$ .

Less sol. in  $\text{H}_2\text{O}$  than  $\text{AgI}$ . (Lucas, Z. anorg. 1904, 41, 210)

1 l.  $\text{H}_2\text{O}$  dissolves about  $4 \times 10^{-11}$  g. at  $\text{Ag}_2\text{S}$  at  $18^\circ$ . (Bernfeld, Z. phys. Ch. 1898, 25, 72.)

1 l.  $\text{H}_2\text{O}$  dissolves  $0.8 \times 10^{-6}$  g. mols at  $16-18^\circ$ . (Biltz, Z. phys. Ch. 1907, 58, 291.)

1 l.  $\text{H}_2\text{O}$  dissolves  $0.552 \times 10^{-6}$  g. mols.  $\text{Ag}_2\text{S}$  at  $18^\circ$  (Weigel, Z. phys. Ch. 1907, 58, 294)

Sol. in conc.  $\text{HNO}_3 + \text{Aq.}$  with separation of S. Sol. in hot conc.  $\text{HCl} + \text{Aq.}$  Not decomp. by  $\text{CuCl}_2 + \text{Aq.}$  but by  $\text{CuCl}_2 + \text{NaCl} + \text{Aq.}$  Insol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  Insol. in  $\text{H}_2\text{SO}_4 + \text{Aq.}$  or in  $\text{Hg}(\text{NO}_3)_2 + \text{Aq.}$

Insol. in  $\text{H}_2\text{O}$ , dil. acids, alkalies, and alkali sulphides +  $\text{Aq.}$  (Fresenius)

Sol. in  $\text{HCN} + \text{Aq.}$  (Hahn, C. C. 1870, 240)

Pptd.  $\text{Ag}_2\text{S}$  is very sol. in  $\text{HNO}_3$  containing more than 5%  $\text{HNO}_3$ . (Gruener, J. Am. Chem. Soc. 1910, 32, 1032)

Only very sl. sol. in  $\text{AgNO}_3 + \text{Aq.}$  even at  $100^\circ$ . (Lowry, Roy. Soc. Proc. 1914, 91, A 70)

Sol. in  $\text{KCN} + \text{Aq.}$  (Hahn, C. C. 1870, 240)

Difficultly sol. in  $\text{KCN} + \text{Aq.}$ ; less difficultly if  $\text{Ag}_2\text{S}$  is pptd. from a very dil. solution. Amt. of  $\text{KCN}$  present also has influence on the solubility.  $\text{Ag}_2\text{S}$  dissolved in conc.  $\text{KCN} + \text{Aq.}$  separates out on dilution. (Béchamp, J. pr. 60, 64.)

Insol. in  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  (Brett.)

Min *Argentite*. *Acanthite*. Sol. in conc.  $\text{HNO}_3 + \text{Aq.}$  with separation of S

Sol. in citric acid +  $\text{Aq.}$  with addition of  $\text{KNO}_3$ . (Bolton, C. N. 37, 48)

Silver disulphide,  $\text{Ag}_2\text{S}_2$ .

Sol. in  $\text{H}_2\text{O}$  with decomp.; also sol. with decomp. in  $\text{HCl}$ ,  $\text{HNO}_3$ .  $\text{CS}_2$  does not dissolve out S. (Hantzsch, Z. anorg. 1898, 19, 105.)

Silver sodium sulphide,  $3\text{Ag}_2\text{S}, \text{Na}_2\text{S} + 2\text{H}_2\text{O}$ .

Sol. in conc.  $\text{Na}_2\text{S} + \text{Aq.}$  with decomp.; sol. in  $\text{H}_2\text{O}$  with decomp. (Ditte, C. R. 1895, 120, 93.)

Silver zinc sulphide,  $\text{Ag}_2\text{S}, 3\text{ZnS}$ .

(Schneider, J. pr. (2) 3, 29)

Silver sulphimide (silver thionyl imide),  $\text{SO}_2\text{NAg}$ .

Very sl. sol. in cold, more sol. in hot  $\text{H}_2\text{O}$   
Very sol. in dil.  $\text{HNO}_3$  (Traube, B. 1892, 25, 2474.)

Silver sulphophosphide.

See Silver phosphosulphide.

Silver telluride,  $\text{Ag}_2\text{Te}$ .

Min *Hessite*. Sol. in warm  $\text{HNO}_3 + \text{Aq.}$

Sodammonium,  $\text{Na}_2(\text{NH}_4)_2$ .

100 g. liq.  $\text{NH}_3$  dissolve 60.5 g. at  $-23^\circ$ ; 56.4 g. at  $0^\circ$ ; 53 g. at  $+5^\circ$ ; 55 g. at  $9^\circ$ . (Joannis A. ch. 1906, (8) 7, 41.)

Sodium,  $\text{Na}$ .

Violently decomposes  $\text{H}_2\text{O}$ , alcohol, etc. Insol. in hydrocarbons. Easily sol. in acids with violent action

Solubility in fused  $\text{NaOH}$ .

G sol. in 100 g fused  $\text{NaOH}$  at temp.

$t^\circ$	G per 100 g $\text{NaOH}$
480	25 3
600	10 1
610	9 9
670	9 5
760	7 9
800	6 9

(Hevesy, Z. Elektrochem. 1909, 15, 531.)

Insol. in liquid  $\text{CO}_2$ . (Buchner, Z. phys. Ch. 1906, 54, 674)

Sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 829.)

1 gram atom dissolves.—

at  $+22^\circ$  in 6 l. 4 mol. liquid  $\text{NH}_3$ .

"  $0^\circ$  " 5.87 " " "

"  $-30^\circ$  " 5.52 " " "

"  $-50^\circ$  " 5.39 " " "

"  $-70^\circ$  " 5.20 " " "

"  $-105^\circ$  " 4.98 " " "

(Ruff, B. 1906, 39, 830.)

$\frac{1}{2}$  com. oleic acid dissolves 0.0449 g Na in 6 days (Gates, J. phys. Chem. 1911, 15, 143.)

Insol. in ethylamine and in secondary and tertiary amines (Kraus, J. Am. Chem. Soc. 1907, 29, 1561)

Sodium acetylde acetylene,  $\text{Na}_2\text{C}_2, \text{C}_2\text{H}_2$ .

Very deliquescent. Decomp. by  $\text{H}_2\text{O}$  and by absolute alcohol. Insol. in ether, ligroin, etc. (Moussan, C. R. 1898, 127, 915.)

**Sodium amalgam.**

$\text{NaHg}_6$ . Stable in contact with the liquid amalgam from  $0^\circ$ – $40.5^\circ$ . Can be cryst from Hg without decomp. at any temp between these limits

$\text{NaHg}_8$ . Stable in contact with the liquid amalgam from  $40.5^\circ$ – $150^\circ$ . Can be cryst from Hg without decomp. at any temp between these limits (Kerp, Z. anorg. 1900, 25. 68)

**Sodium amide,  $\text{NaNH}_2$** 

Decomp. by  $\text{H}_2\text{O}$  and alcohol.

**Sodium amidochloride,  $\text{Na}_2\text{NH}_2\text{Cl}$ .**

Sol in  $\text{H}_2\text{O}$  with decomp (Joannis, C. R. 112. 392)

**Sodium arsenide,  $\text{Na}_3\text{As}$** 

Decomp.  $\text{H}_2\text{O}$ . (Lebeau, C. R. 1900, 130. 504.)

**Sodium arsenide ammonia,  $\text{Na}_3\text{As}, \text{NH}_3$ .**

Easily sol. in liquid  $\text{NH}_3$  (Lebeau, C. R. 1900, 130. 502.)

Sl. sol. in liquid  $\text{NH}_3$  (Hugot, C. R. 1898, 127. 554.)

**Sodium azoimide,  $\text{NaN}_3$** 

Not hygroscopic. Sol in  $\text{H}_2\text{O}$ . Insol in alcohol and ether. (Curtius, B. 24. 3344)

40.16 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $10^\circ$ .

40.7 " " " " 100 "  $\text{H}_2\text{O}$  " 15.2

41.7 " " " " 100 "  $\text{H}_2\text{O}$  " 17.0

0.3153 pt. is sol in 100 pts abs alcohol at  $16^\circ$ .

Insol in pure ether. (Curtius, J pr 1898, (2) 58. 279.)

**Sodium bromide,  $\text{NaBr}$ , and  $+2\text{H}_2\text{O}$** 

Not deliquescent. Solubility in  $\text{H}_2\text{O}$  differs according as  $\text{NaBr}$  or  $\text{NaBr}+2\text{H}_2\text{O}$  is used. The following data for anhydrous  $\text{NaBr}$  were found

Pts.  $\text{NaBr}$  dissolved by 100 pts  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts NaBr	$t^\circ$	Pts NaBr	$t^\circ$	Pts NaBr
44.1	115.6	74.5	118.4	97.2	119.9
51.5	116.2	80.5	118.6	100.3	120.6
55.1	116.8	86.0	118.8	110.6	122.7
60.3	117.0	90.5	119.7	114.3	124.0
64.5	117.3	.	.	.	.

Solubility is represented by a straight line of the formula  $S = 110.34 + 0.1075t$ .

Below  $50^\circ$  the salt usually crystallizes with

$2\text{H}_2\text{O}$ , of which the solubility in 100 pts  $\text{H}_2\text{O}$  was found to be as follows.

$t^\circ$	Pts NaBr	$t^\circ$	Pts. NaBr	$t^\circ$	Pts NaBr
-21	71.1	+5	82.0	30	97.3
-20	71.4	10	84.5	35	101.3
-15	73.1	15	87.3	40	105.8
-10	75.1	20	90.3	45	110.6
-5	77.1	25	93.8	50	116.0
0	79.5				

(Coppet, A. ch. (5) 30. 420.)

If solubility  $S$  = pts.  $\text{NaBr}$  in 100 pts. solution,  $S = 40.0 + 0.1746t$  from  $-20^\circ$  to  $+40^\circ$ ;  $S = 52.3 + 0.0125t$  from  $50^\circ$  to  $150^\circ$ . (Etard, C. R. 98. 1432)

100 pts.  $\text{H}_2\text{O}$  dissolve at  $0^\circ$ , 77.5 pts  $\text{NaBr}$ , at  $20^\circ$ , 88.4 pts; at  $40^\circ$ , 104.2 pts, at  $60^\circ$ , 111.1 pts; at  $80^\circ$ , 112.4 pts; at  $100^\circ$ , 114.9 pts. (Kremers)

Sat solution boils at  $121^\circ$ . (Kremers, Pogg. 97. 14)

Sat  $\text{NaBr} + \text{Aq}$  contains at

-22°	-10°	+140°	163°
40.1	42.5	56.5	57.5% $\text{NaBr}$ ,

180°	180°	210°	212°	230°
59.5	59.0	60.9	61.0	62.0% $\text{NaBr}$ .

(Etard, A. ch. 1894, (7) 2. 539.)

100 g. sat  $\text{NaBr} + \text{Aq}$  at  $16.4^\circ$  contain 47 g.  $\text{NaBr}$ . (Greenish, Pharm. J. 1900, 65. 190.)

Solubility of  $\text{NaBr} + 2\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $30^\circ = 65.5\%$  anhydrous  $\text{NaBr}$  (Cocheret, Dissert. 1911.)

Sp. gr. of  $\text{NaBr} + \text{Aq}$  at  $19.5^\circ$  containing.

5	10	15	20	25 % $\text{NaBr}$ ,
1.040	1.080	1.125	1.174	1.226

30	35	40	45	50 % $\text{NaBr}$ .
1.281	1.334	1.410	1.483	1.565

(Gerlach, Z. anal. 8. 285)

$\text{NaBr} + \text{Aq}$  containing 17.15%  $\text{NaBr}$  has sp. gr.  $20^\circ/20^\circ = 1.1473$

$\text{NaBr} + \text{Aq}$  containing 22.72%  $\text{NaBr}$  has sp. gr.  $20^\circ/20^\circ = 1.2060$ .

(Le Blanc and Rohland, Z. phys. Ch. 1896, 19. 278.)

Sp. gr of  $\text{NaBr} + \text{Aq}$  at  $20.5^\circ$ .

Normality of $\text{NaBr} + \text{Aq}$	g $\text{NaBr}$ in 100 g. of solution	Sp gr $20.5^\circ/4^\circ$
4.33	33.57	1.3284
3.00	25.10	1.2284
1.99	17.77	1.1526
0.98	9.41	1.0750

(Oppenheimer, Z. phys. Ch. 1898, 27. 452.)

Sp. gr at 20° of NaBr+AQ containing  
M g mols NaBr per liter.

M	0.01	0.025	0.05	0.075
Sp. gr	1.000732	1.002177	1.004074	1.005972

M	0.10	0.25	0.50	0.75
Sp. gr.	1.00788	1.01964	1.03908	1.05811

M	1.0	1.5	2.0
Sp. gr.	1.07632	1.11963	1.15240

(Jones and Pearce, Am. Ch. J. 1907, 38, 728.)

Sol in H<sub>2</sub>SO<sub>4</sub> (Walden, Z. anorg. 1902, 29, 384.)

100 pts NaBr+AQ sat at 18-19° contain 46.06 pts NaBr; 100 pts NaBr+NaCl+AQ sat at 18-19° contain 46.59 pts of the two salts, 100 pts NaBr+NaI+AQ sat at 18-19° contain 63.15 pts of the two salts; 100 pts NaBr+NaCl+NaI+AQ sat at 18-19° contain 63.20 pts. of the three salts (v. Hauer, J. pr. 98, 137.)

Solubility of NaBr in NaOH+AQ at 17°.

(G. per 100 g H<sub>2</sub>O)

NaOH	NaBr	NaOH	NaBr
0 0	91 38	22 35	59 60
3 26	79 86	24 74	55 03
9 24	68 85	28 43	48 00
13 43	64 90	36 61	38 41
17 17	63 06	46 98	29 37
19 12	62 51	54 52	24 76

(Ditte, C R 1897, 124, 30)

Easily sol in liquid HF (Franklin, Z. anorg. 1905, 46, 2)

Very sl. sol. in alcohol.

NaBr+2H<sub>2</sub>O is sol. in 1.10 pts. H<sub>2</sub>O at 15°; in 159 pts absolute alcohol at 15°; in 1200 pts. absolute ether at 15°. (Eder, Dingl. 321, 89.)

NaBr+2H<sub>2</sub>O is sol in 2.25 pts. 60% alcohol, and 7 pts. 90% alcohol. NaBr is sol in 3 pts 60% alcohol, and 10 pts. 90% alcohol. (Hager.)

100 pts. absolute methyl alcohol dissolve 17.35 pts. at 19.5°. (de Bruyn, Z. phys. Ch. 10, 783.)

100 g. NaBr+CH<sub>3</sub>OH contain 0.9 g NaBr at the critical temp (Centnerszwer, Z. phys. Ch 1910, 72, 437.)

At room temp, 1 pt. NaBr by weight is sol. in:

4 6	pts. methyl alcohol	D <sub>15</sub> 0.7990.
14 0	" ethyl "	D <sub>15</sub> 0.8100.
49 7	" propyl "	D <sub>15</sub> 0.8160.

(Rohland, Z. anorg. 1898, 18, 325.)

Solubility in ethyl alcohol at 30°.

Wt. %		Solid phase
Alcohol	NaBr	
0	59.4	NaBr, 2H <sub>2</sub> O
11.79	42 90	"
31.78	32 12	"

(Herz and Kuhn, Z. anorg. 1908, 60, 159.)

2 05 g are sol. in 100 g propyl alcohol (Schlamp, Z. phys. Ch. 1894, 14, 276)

Sl. sol in acetone. (Krug and M'Elroy, J Anal Ch 6, 184.)

100 g. 95% formic acid dissolve 22.3 g. NaBr at 18.5°. (Aschan, Ch. Ztg. 1913, 37, 1117.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790); ethyl acetate (Naumann, B. 1910, 43, 314); benzonitrile. (Naumann, B. 1914, 47, 1370.)

The composition of the hydrates formed by NaBr at different dilutions is calculated from determinations of the lowering of the frpt. produced by NaBr and of the conductivity and sp gr of NaBr+Ag. (Jones, Am. Ch. J. 1905, 84, 303.)

Sodium stannic bromide.

See Bromostannate, sodium.

Sodium uranous bromide,  $\text{Na}_2\text{UBr}_6$

As K salt. (Aloy, Bull. Soc 1899, (3) 21, 264.)

Sodium zinc bromide,  $\text{NaBr}$ ,  $\text{ZnBr}_2 + \text{H}_2\text{O}$ .

Hygroscopic. (Ephraim, Z. anorg. 1908, 59, 63.)

$2\text{NaBr}$ ,  $\text{ZnBr}_2 + 5\text{H}_2\text{O}$ . Hygroscopic. (Ephraim)

Sodium carbide,  $\text{Na}_2\text{C}_2$ .

Insol. in all neutral solvents; decomp. on heating and by  $\text{H}_2\text{O}$ . (Matignon, C. R. 1897, 125, 1634.)

Sodium carbonyl,  $\text{Na}_2\text{C}_2\text{O}_2$ .

Decomp. by  $\text{H}_2\text{O}$  with explosion. (Joannis, C. R. 116, 1518.)

Sodium subchloride,  $\text{Na}_2\text{Cl}_2$ .

Decomp. by  $\text{H}_2\text{O}$  into  $\text{NaCl}$  and  $\text{NaOH} + \text{Aq}$ . (Kreutz, B. 1897, 30, 403.)

Sodium chloride,  $\text{NaCl}$ .

Sol. in  $\text{H}_2\text{O}$ .

100 pts  $\text{H}_2\text{O}$  at  $t^\circ$  dissolve pts  $\text{NaCl}$

$t^\circ$	Pts. NaCl	Authority
0	More than at 13 89°	Gay-Lussac, A ch (2) 11, 310

45.40	36.60	1.1891	107	39.65	1.1631

(Berkeley, Phil. Trans. Roy Soc. 1904, 203. A. 189.)

Sat. NaCl + Aq. at 25° contains 26.5% NaCl. (Foote, Am. Ch. J. 1906, 35. 239.)

100 g. H<sub>2</sub>O dissolve 35.80 g. NaCl at 25°. (Cameron, Bell and Robinson, J. phys. Ch. 1907, 11. 396.)

100 g. NaCl + Aq. sat. at 15° contains 26.3 g. NaCl; at 30°, 26.47 g. (Schreinemakers, Arch. neér. Sc. 1910, (2) 15. 81.)

5.456 g. mol. are contained in 1 l. NaCl + Aq sat. at 25°. (Herz, Z. anorg. 1911, 73. 274.)

5.40 g. mol. are contained in 1 l. NaCl + Aq sat. at 30°. (Masson, Chem. Soc. 1911, 99. 1136.)

26.47 g. NaCl are contained in 100 g. NaCl + Aq. sat. at 30°. (Cocheret, Dissert. 1911.)

35.79 g. NaCl are sol. in 100 g. H<sub>2</sub>O at room temp. (Frankforter, J. Am. Chem. Soc. 1914, 36. 1103.)

100 mol. H<sub>2</sub>O dissolve at:

19.3° 29.7° 40.1° 54.5°

11.04 11.06 11.15 11.35 mol. NaCl.

(Sudhaus, Miner. Jahrb. Beil. Bd. 1914, 37. 18.)

Solubility of NaCl in H<sub>2</sub>O at 24.5° at varying pressures

S = g NaCl in 100 g solvent.

P = pressure in atmospheres.

P	S	100 g. of solution contains g. NaCl
1	35.90	26.42
250	36.25	26.61
500	36.55	26.77
1000	37.02	27.02
1500	37.36	27.20

(Cohen, Inouye and Euwen, Z. phys. Ch. 1910, 75. 257.)

Sp. gr of NaCl + Aq containing 15% NaCl is 1.109 at 15° (Francœur), 1.116 at 15° (Soubeiran); 1.1107 at 15° (Coulmer), 1.111 at 15° (Baudin, C. R. 66. 932.)

Sp. gr. of NaCl + Aq saturated at 15° is 1.20715 (Michel and Kraft); at 17.5° is 1.2046 (Kursten), at 8° is 1.205 (Anthon).

Sp. gr of NaCl + Aq.

0.0020	1.000,085,1
0.0040	1.000,169,6
0.0050	1.000,211,7
0.0100	1.000,423,3

(Lamb and Lee, J. Am. Chem. Soc. 1913, 35, 1686.)

The saturated solution boils at 109° (Kremsa.)

NaCl+Aq containing 42.9 pts. NaCl to 100 pts. H<sub>2</sub>O boils at 108.8° (Griffiths); containing 41.2 pts. NaCl to 100 pts. H<sub>2</sub>O boils at 108.2° (Legrand); containing 40.38 pts. NaCl to 100 pts. H<sub>2</sub>O boils at 109.78° (Gay-Lussac); containing 38.7 pts. NaCl to 100 pts. H<sub>2</sub>O forms a crust at 108.3°; highest point observed, 108.8° (Gerlach, Z. anal. 26, 426.)

Boiling-point of NaCl+Aq.

(Richmond, Analyst, 1893, 18, 142)

If NaCl is dissolved in 15 pts. H<sub>2</sub>O, heat is absorbed if the temp. is 15°, but much less if temp. is 86°; at 100° there is neither absorption nor evolution of heat. (Berthelot, C. R. 78, 1722.)

86 pts. NaCl mixed with 100 pts. H<sub>2</sub>O at 12.6° lower the temp. 2.6°. (Rüdorff, B. 2, 68.)

88 pts NaCl with 100 pts. snow at -1° give a temp. of -21.3°. (Rüdorff, Pogg. 122, 387.)

The freezing-point of NaCl+Aq is lowered 0.60° for every gram NaCl up to 10 g. When more conc the freezing-point sinks proportional to NaCl, 2H<sub>2</sub>O, 0.342° for every gram of that salt. (Rüdorff, Pogg 113, 163.)

Insol in conc. HCl+Aq.

Solubility of NaCl in HCl+Aq at 0°. NaCl = mols. NaCl (in milligrams) dissolved in 10 cem. of liquid, HCl = mols. HCl (in milligrams) dissolved in 10 cem. of liquid.

37.85	1.12	"
41.42	0.97	NaCl + NaOH, H <sub>2</sub> O
42	0	NaOH, H <sub>2</sub> O

(Schreinemakers, Z. phys. Ch., 1909, 68, 85.)

The presence of other salts increases the solubility of NaCl in H<sub>2</sub>O.

Sol. in sat. NH<sub>4</sub>Cl + Aq with pptn of NH<sub>4</sub>Cl. When the reaction is complete, the solution has sp. gr. 1.1788, and contains 32.82% mixed salts, or 100 pts. H<sub>2</sub>O dissolve 48.42 pts mixed salts, viz., 26.36 pts NaCl and 22.06 pts NH<sub>4</sub>Cl (Karsten.) (See under NH<sub>4</sub>Cl.)

Sol. in sat. BaCl<sub>2</sub> + Aq with pptn of BaCl<sub>2</sub> until a state of equilibrium is reached, when 100 pts H<sub>2</sub>O at 17° dissolve 38.6 pts. of mixed salts, of which 4.1 pts. are BaCl<sub>2</sub>. (Karsten.) (See under BaCl<sub>2</sub>.)

Insol. in sat. CaCl<sub>2</sub> + Aq. (Vauquelin, Ann. de Chim., 13, 95.)

Much more sol. in hot than in cold H<sub>2</sub>O containing MgCl<sub>2</sub> or CaCl<sub>2</sub>, but NaCl is pptd. from sat. NaCl + Aq when that solution is mixed with MgCl<sub>2</sub> or CaCl<sub>2</sub> + Aq. (Fuehs and G. Reichenbach, 1826.) (See under MgCl<sub>2</sub>.)

Less sol. in conc. CaCl<sub>2</sub> + Aq than in H<sub>2</sub>O. (Hermann.)

Solubility of NaCl + CaCl<sub>2</sub> in H<sub>2</sub>O at 25°.  
G. per 100 g. H<sub>2</sub>O.

NaCl	CaCl <sub>2</sub>	Sp. gr. 25°/25°	Solid phase
0	84	1.4441	CaCl <sub>2</sub> , 6H <sub>2</sub> O

"	7.7	350.1
15	0.0	357.6
"	10.0	354.6
30	0.0	360.3
"	13.9	358.1
45	0.0	356.0
"	0.23	361.5

(Fodotseff, Z. phys. Ch., 1904, 49, 170.)

Sol. in sat. KClO<sub>3</sub> + Aq; the solution can then dissolve more KClO<sub>3</sub>. (Margueritte, C. R. 38, 305.)

In solution containing Na, K, Cl and NO<sub>3</sub> ions, the solubility—relations between the four salts NaCl, KCl, NaNO<sub>3</sub> and KNO<sub>3</sub> have been studied (Uyeda, Z. anorg. 1911, 71, 2.)

Sol. in sat. NH<sub>4</sub>NO<sub>3</sub> + Aq, without causing pptn. (Karsten.)

Sol. in sat. NH<sub>4</sub>NO<sub>3</sub> + Aq, from which solution it is not pptd. by salts which would cause its pptn. in aqueous solution (Margueritte, C. R. 38, 307.)

Sol. in sat. Ba(NO<sub>3</sub>)<sub>2</sub> + Aq without causing pptn.

Insol. in Ca(NO<sub>3</sub>)<sub>2</sub> + Aq.

Sol. in Mg(NO<sub>3</sub>)<sub>2</sub> + Aq with pptn. of small portion of Mg(NO<sub>3</sub>)<sub>2</sub>.

Sol. in sat. KNO<sub>3</sub> + Aq, the mixed solution having the power to dissolve more KNO<sub>3</sub>, and the solubility of the KNO<sub>3</sub> apparently increasing in the same ratio as the amount of NaCl present (Foureroy and Vauquelin, Ann. de Chim. 11, 130.)

Sol. in sat. KNO<sub>3</sub> + Aq; the solution thus

obtained at 18-13° contains 40.34% of the mixed salts, or 100 pts. H<sub>2</sub>O dissolve 67.72 pts. of the mixed salts, viz., 38.25 pts. NaCl and 29.45 pts. KNO<sub>3</sub> (Karsten.)

Solubility of NaCl in KNO<sub>3</sub>+Aq at 25°.  
KNO<sub>3</sub>=g. KNO<sub>3</sub> in 100 cc. of solution.

(Etard A. ch. 1894, (7) 3. 277)

(See under KCl)

100 pts. NaCl+NaI+Aq sat. at 18-19° contain 62.33 pts. of the two salts. (v. Hauer.)

Sol. in sat. Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>+Aq with no pptn. (Vauquelin.)

Sol. in sat. (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>+Aq with pptn. of considerable amt. of (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>+Aq. (Vauquelin.)

Sol. in sat. CuSO<sub>4</sub>+Aq.

100 pts. H<sub>2</sub>O dissolve 36.71 pts. NaCl and 7.19 pts. K<sub>2</sub>SO<sub>4</sub> at 15°, and solution has sp. gr. 1.24. (Page and Keightley.)

NaCl is sol. in K<sub>2</sub>SO<sub>4</sub>+Aq, and vice versa, without separation of a salt.

100 pts. H<sub>2</sub>O dissolve 7.03 pts. K<sub>2</sub>SO<sub>4</sub> and 37.80 pts. NaCl, when warmed and cooled to 14°. (Rudorff.)

Solubility of NaCl and K<sub>2</sub>SO<sub>4</sub> in H<sub>2</sub>O at t°  
100 pts. H<sub>2</sub>O contain pts. NaCl, K<sub>2</sub>SO<sub>4</sub>, and KCl.

t°	Pts. NaCl	Pts. K <sub>2</sub> SO <sub>4</sub>	Pts. KCl
10	33.43	8.10	3.18
20	34.01	8.90	3.06
30	34.56	9.56	2.95
40	35.16	10.38	2.81
50	35.77	11.07	2.84
60	36.40	11.93	2.72
70	36.84	12.82	3.20
80	36.04	12.26	5.06
90	35.86	12.42	6.98
100	35.63	12.56	8.79

(Precht and Wittgen, B. 15. 1666.)

Sol. in cold sat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$  at first without pptn., afterwards  $\text{Na}_2\text{SO}_4$  separates out. (Karsten)

Solubility in  $\text{Na}_2\text{SO}_4 + \text{Aq}$  containing 7.45 g.  $\text{Na}_2\text{SO}_4$  in 100 g. of the solution.

t°	g NaCl in 100 g. of the solution
14 80	23 30
17 90	23 33
24 85	23 45
25 60	23.485
27.75	23 525
32 18	23.55
34 28	23.68

(Marie and Marquis, C. R. 1903, 136, 684.)  
See also under  $\text{Na}_2\text{SO}_4$ .

Sol. in sat.  $\text{ZnSO}_4 + \text{Aq}$  with separation of  $\text{Na}_2\text{SO}_4$ ,  $\text{ZnSO}_4$ . (Karsten)  
Insol. in liquid  $\text{CO}_2$ . (Büchner, Z. phys. Ch. 1906, 54, 674.)

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 820.)

12.2 pts. NaCl are sol. in 1 pt. hydrazine at 12.5-13°. (de Bruyn, R. t. c. 1899, 18, 297.)

100 g. hydroxylamine dissolve 14.7 g. NaCl at 17.5°. (de Bruyn, Z. phys. Ch. 1892, 10, 782.)

100 g. 95% formic acid dissolve 5.8 g. at 19.7°. (Aschan, Ch. Ztg. 1913, 37, 1117.)  
Solubility in alcohol.

100 pts. alcohol of 0.900 sp. gr. dissolve 5.8 pts. NaCl; of 0.872 sp. gr. dissolve 3.67 pts. NaCl, of 0.834 sp. gr. dissolve 0.5 pts. NaCl. (Kirwan.)

100 pts. alcohol containing given % by weight of absolute alcohol dissolve pts. NaCl at 25°.

% alcohol	Pts. NaCl	% alcohol	Pts. NaCl	% alcohol	Pts. NaCl
0 0	35 70	33 4	16 08	66 9	5 95
8 4	30 49	41 8	13 28	75 2	3 75
16 7	24 84	50 2	11 28	83 6	1 69
25 1	19 80	58 5	7 90	.	..

(Kopp, A. 40 206)

100 pts. alcohol of 75% by weight dissolve at

14°	15.2°	38°	71.6°
0.091	0.700	0.736	1.038 pts. NaCl

100 pts. alcohol of 85.5% by weight dissolve at:

16°	77.2°
0.174	0.171 pts. NaCl

(Wagner, A. 64, 293.)

100 pts. alcohol containing % alcohol by weight dissolve pts. NaCl at 15°, or 100 pts. solution contain % NaCl.

10	20	30	40	% alcohol,
28.53	22.55	17.51	13.25	pts. NaCl,
22.2	18.4	14.9	11.7	% NaCl,
50	60	80	% alcohol,	
9.77	5.93	1.22	pts. NaCl,	
8.9	5.6	1.2	% NaCl.	

(Schiff, A. 118, 365.)

Solubility of NaCl in alcohol increases with the temperature.

100 pts (by weight) of alcohol of 0.9282 sp. gr. (50.5% by weight) dissolve at:

4°	10°	13°	23°	32°
10.9	11.1	11.43	11.9	12.3 pts. NaCl,

33°	44°	51°	60°	.
12.5	13.1	13.8	14.1	pts. NaCl.

(Gerardin, A. ch. (4) 5, 146.)

Solubility in alcohol at 13°

Sp. gr.	100 ccm. contain in g		
	Alcohol	Water	Salt
1 2030	0	88.70	31 60

25	0.529	50	1.602

(Fastert, N. Jahrb. Min. Beil. Bd. 1912, 23. 286.)

## Solubility of NaCl in formamide + Aq at 25°.

% HCONH <sub>2</sub>	% NaCl	% HCONH <sub>2</sub>	% NaCl
0	31.80	11	29.11
2.3	30.98	15	28.52
5.3	30.86	18.8	27.76
8	30.40		...

(Ritzel, Z. Kryst. Min. 1911, 49. 152.)

Insol. in anhydrous and in 97% pyridine  
 Very sl. sol. in 95% pyridine + Aq. Sl. sol. in 93% pyridine + Aq. (Kahlenberg, J. Am. Chem. Soc. 1908, 30. 1107.)

Insol. in oil of turpentine (T. S. Hunt, Am. J. Sci. (2) 19. 417.)

100 g. H<sub>2</sub>O dissolve 236.3 g. sugar + 42.3 g. NaCl at 31.25°, or 100 g. sat. aq. solution contain 62.17 g. sugar + 11.13 g. NaCl. (Köhler, Z. Ver. Zuckerind., 1897, 47. 447.)

## Solubility of NaCl in glucose + Aq at 25°.

Conc. = concentration of glucose + Aq in g. mol. per 1,000 g. H<sub>2</sub>O.

Sol. = Solubility in 1,000 g. H<sub>2</sub>O.

Conc.	Sol.	Molecular solubility
0	361.40	6.18
0.25	364.15	6.22
0.50	364.30	6.23
1.0	369.90	6.32

(Armstrong and Eyre, Proc. R. Soc. 1910, (A) 84. 127.)

## Min. Halide.

+2H<sub>2</sub>O. Efflorescent below 0°, sl. deliquescent at temps. above 0°. (Fuchs, 1836.)

The solubility in H<sub>2</sub>O at -12.25° corresponds to 32.9 pts. of NaCl per 100 pts. H<sub>2</sub>O. (Matignon, C. R. 1909, 148. 551.)

Sodium stannic chloride, 2NaCl, SnCl<sub>4</sub> + 6H<sub>2</sub>O.

See Chlorostannate, sodium.

Sodium thallic chloride, 3NaCl, TlCl<sub>3</sub> + 12H<sub>2</sub>O.

Very sol. in H<sub>2</sub>O. (Pratt, Am. J. Sci. 1895, (3) 49. 404.)

Sodium uranium chloride, 2NaCl, UCl<sub>4</sub>.

Non volatile and not hygroscopic. (Moissan, C. R. 1899, 122. 1089.)

Sol. in H<sub>2</sub>O. (Colani, A. ch. 1907, (8) 12. 59.)

Sodium uranyl chloride, Na<sub>2</sub>(UO<sub>2</sub>)Cl<sub>4</sub>.

As K salt. (Aloy, Bull. Soc. 1899, (3) 21. 264.)

Sodium zinc chloride, 2NaCl, ZnCl<sub>2</sub> + 3H<sub>2</sub>O.

Deliquescent. Easily sol. in H<sub>2</sub>O. (Schindler, Mag. Pharm. 38. 48.)

Sodium zirconium chloride, 2NaCl, ZrCl<sub>4</sub>.

(Paykull.)

Sodium chloriodide, NaCl<sub>2</sub>I + 2H<sub>2</sub>O.

Easily decomp. by alcohol or ether. (Wells and Wheeler, Sill. Am. J. 143. 42.)

Sodium fluoride, NaF.

Very sl. sol. in cold, and not more abundantly in boiling H<sub>2</sub>O. (Roos.)

100 pts. H<sub>2</sub>O dissolve 4.78 pts. at 16°. (Berzelius.)

100 pts. H<sub>2</sub>O dissolve 4 pts. at 15°. (Fremy, A. ch. (3) 47. 32.)

Sp. gr. of aqueous solutions containing in 100 pts. H<sub>2</sub>O.

1.1081    2.2162    3.3243 pts. NaF.

1.0110    1.0221    1.0333

Sat. solution has sp. gr. 1.0486. (Gerlach, Z. anal. 27. 277.)

Sp. gr. of solution sat. at 18° = 1.044, containing 4.3% NaF. (Mylius and Funk, B. 1897, 30. 1718.)

## Solubility of NaF in HF + Aq at 21°.

g. per 1000 g. H <sub>2</sub> O		g. per 1000 g. H <sub>2</sub> O	
HF	NaF	HF	NaF
0.0	41.7	83.8	22.9
10.0	41.4	120.7	23.8
45.8	22.5	596.4	48.8
56.5	22.7	777.4	81.7

(Ditte, C. R. 1896, 123. 1282.)

Easily sol. in liquid HF. (Franklin, Z. anorg. 1905, 46. 2.)

Sl. sol. in conc. KC<sub>2</sub>H<sub>3</sub>O<sub>2</sub> + Aq. (Stromeyer.)

Almost insol. in alcohol. (Berzelius, Pogg. 1. 13.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Sodium hydrogen fluoride,  $\text{NaHF}_2$ 

Rather difficultly sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . (Berzelius, Pogg. 1. 13)

## Sodium tantalum fluoride.

See Fluotantalate, sodium.

Sodium tin (stannous) fluoride,  $2\text{NaF}$ ,  $3\text{SnF}_2$ .

Sol. in  $\text{H}_2\text{O}$  (Wagner, B. 19. 896.)

## Sodium tin (stannic) fluoride.

See Fluostannate, sodium.

## Sodium tantalum fluoride.

See Fluotantalate, sodium.

Sodium tellurium fluoride,  $\text{NaF}$ ,  $\text{TeF}_4$ .

Decomp. by  $\text{H}_2\text{O}$  (Berzelius)

## Sodium titanium fluoride.

See Fluotitanate, sodium.

## Sodium tungstic fluoride.

See Fluoxytungstate, sodium.

Sodium uranium fluoride,  $\text{NaF}$ ,  $\text{UF}_4$  (?)

Somewhat soluble in  $\text{H}_2\text{O}$ . (Bolton.)

## Sodium uranyl fluoride.

See Fluoxurionate, sodium.

## Sodium vanadium sesquifluoride.

See Fluovanadate, sodium.

Sodium zinc fluoride,  $\text{NaF}$ ,  $\text{ZnF}_2$ .

Sol. in  $\text{H}_2\text{O}$ . (R. Wagner)

Sodium zirconium fluoride,  $5\text{NaF}$ ,  $2\text{ZrF}_4$ .

See Fluozirconate, sodium.

## Sodium fluoride vanadium pentoxide.

See Fluoxovanadate, sodium.

Sodium hydrazide,  $\text{NH}_2$ ,  $\text{NHNa}$ .

Decomp. by  $\text{H}_2\text{O}$  with explosive violence.  
Decomp. by alcohol (Schlenk, B. 1915. 48. 870.)

Sodium hydride,  $\text{NaH}$ .

Decomp. by  $\text{H}_2\text{O}$  and by acids.

Sol. in fused  $\text{Na}$  or  $\text{Na}$  amalgam. Insol. in liquid  $\text{NH}_3$ . Insol. in  $\text{CS}_2$ ,  $\text{CCl}_4$ ,  $\text{C}_6\text{H}_6$  and terebenthene. (Moissan, C. R. 1902. 134. 73)

$\text{Na}_2\text{H}_4$  Decomp. violently by  $\text{H}_2\text{O}$ .

Sodium hydrosulphide,  $\text{NaSH}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol +  $3\text{H}_2\text{O}$ . Difficultly sol. in  $\text{H}_2\text{O}$ . (Damoiseau, C. C. 1885. 36.)

Sodium hydroxide,  $\text{NaOH}$ .

Very deliquescent. 100 pts.  $\text{NaOH}$  under a bell jar with  $\text{H}_2\text{O}$  at  $16-20^\circ$  absorb 552 pts. in 56 days. (Mulder.)  
Very sol. in  $\text{H}_2\text{O}$  with evolution of much heat. Sol. in 0.47 pt  $\text{H}_2\text{O}$ . (Bureau, C. R. 41. 509.)

Solubility of  $\text{NaOH}$  in  $\text{H}_2\text{O}$ .

49.5	9.1	NaOH, H <sub>2</sub> O
54.3	0	"

(Donk, Chem. Weekbl. 1908, 5. 539, 629, 767.)

Easily sol. in alcohol or wood spirit; sol in fusel-oil. Sol. in an aqueous solution of mannite (Favre, A. ch. (3) 11. 76.)

Easily sol in glycerine.

Sol to a certain extent in ether

Insol. in acetone. (Eidmann, C C 1899, II 1014, Naumann, B. 1904, 37. 4329.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1904, 37. 3602); benzonitrile (Naumann, B. 1914, 47. 1370)

+H<sub>2</sub>O. 100 g solution in H<sub>2</sub>O sat at 25° contain 42 g. Na<sub>2</sub>O. (Schreinemakers, Arch Néer. Sc 1910, (2) 15. 81)

Mpt 64.2°. (See above.)

+1 $\frac{1}{2}$ H<sub>2</sub>O. (Cripps, Pharm J. Trans. (3) 14. 833.)

+2H<sub>2</sub>O. See above.

+3 $\frac{1}{2}$ H<sub>2</sub>O. Deliquescent Sol. in H<sub>2</sub>O with absorption of much heat Melts at 6° (Hermes.)

Mpt 15.5°. (See above.)

+4.5 and 7H<sub>2</sub>O. (See above)

The composition of the hydrates formed by NaOH at different dilutions is calculated from determinations of the lowering of the fr.-pt. produced by NaOH and of the conductivity and sp. gr. of NaOH+Aq (Jones, Am. Ch. J 1905, 34. 336.)

Sodium perhydroxide, NaO<sub>2</sub>H.

"Natrly hydroxide"

Decomp by H<sub>2</sub>O. Sol. in cold alcohol or acetic acid (Tafel, B. 1894, 27. 2300.)

Sodium iodide, NaI, and +2H<sub>2</sub>O.

Solubility of NaI and of NaI+2H<sub>2</sub>O in H<sub>2</sub>O differ. Below 65°, NaI+2H<sub>2</sub>O usually separates out, and above that temp. NaI separates.

Solubility of NaI in 100 pts H<sub>2</sub>C at t°.

t°	Pts NaI	t°	Pts NaI	t°	Pts NaI
71.3	294.4	92.4	300.2	124.7	317.5
74.1	295.3	97.1	300.3	132.5	317.3
81.6	296.8	101.7	302.5	138.1	319.2
86.4	298.3	110.7	306.2	..	..

Solubility is represented by a straight line of the formula  $S = 264.19 + 0.3978t$ .

Solubility of NaI+2H<sub>2</sub>O in 100 pts at t°.

t°	Pts NaI	t°	Pts NaI	t°	Pts NaI
-17	149.4	15	173.7	45	215.6
-15	150.3	20	178.7	50	227.8
-5	155.4	25	184.2	55	241.2
0	158.7	30	190.3	60	256.8
5	163.6	35	197.0	65	278.4
10	168.6	40	205.1		

(Coppet, A. ch. (5) 50. 424.)

If solubility  $S$  = pts. NaI in 100 pts solution,  $S = 61.3 + 0.1712t$  from 0° to 80°,  $S = 75 + 0.0258t$  from 80° to 160°. (Etard, C. R. 98. 1432.)

NaI+2H<sub>2</sub>O is sol in 0.55 pt H<sub>2</sub>O at 15°. (Eder, Dingl. 221. 89.)

100 pts. NaI+Aq at 18-19° contain 62.98 pts. NaI (v. Hauer, J. pi 98. 137.)

100 pts. H<sub>2</sub>O dissolve at.

0°	20°	40°	60°
158.7	178.6	208.4	256.4 pts. NaI,
80°	100°	120°	140°
303	312.5	322.5	333.3 pts. NaI.

(Kiemers, Pogg. 97. 14.)

Transition pt. for NaI+2H<sub>2</sub>O to NaI is 64.3°, and sat. solution containing 74.4% NaI. (Panfiloff, J. Russ. Phys. Chem. Soc. 1893, 25. 162)

100 g. H<sub>2</sub>O dissolve 172.4 g NaI at 15°, and sp. gr of sat. solution = 1.8937 (Greenish, Pharm J. 1900, 65. 190.)

100 g. solution of NaI+2H<sub>2</sub>O sat. at 30° contains 65.5 g anhyd. NaI. (Cocherot, Dissert. 1910.)

Sp gr. of NaI+Aq at 19.6° containing:

5	10	15	20	25	30 % NaI,
1.040	1.082	1.128	1.179	1.234	1.294

35 40 45 50 55 60 % NaI.  
1.360 1.432 1.510 1.60 1.70 1.81

(Gerlach, Z. anal. 8. 285)

Sat solution boils at 141°

Sol in liquid SO<sub>2</sub>. (Walden, B. 1899, 32. 2864); POCl<sub>3</sub>. (Walden, Z. anorg 1900, 26. 212.)

Very easily sol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 829)

Sol in 12.0 pts absolute alcohol; in 360 pts. ether (Eder, Dingl. 221. 89.)

Sol. in 3 pts 90% alcohol. (Hager.)

100 pts. absolute methyl alcohol dissolve 77.7 pts NaI at 22.5°; ethyl alcohol, 43.1 pts. (de Bruyn, Z. phys. Ch. 10. 783.)

Very sol. in abs. methyl alcohol and is not pptd. therefrom on the addition of a large volume of abs. ether, while wet ether produces immediate separation. (Loeb, J. Am. Chem. Soc. 1906, 27. 1020.)

Solubility of NaI in ethyl alcohol  
(g NaI in 100 g. alcohol.)

t°	NaI	t°	NaI
10	43.77	200	42.3
30	44.25	220	38.5
50	44.50	230	36.2
80	45.0	240	32.7
100	45.1	250	26.2
120	45.2	255	21.0
160	45.0	260	10.8
180	44.3	261.5*	8.6

\*Critical temp. of solution.

(Tyrer, Chem. Soc. 1910, 97. 626.)

100 g. sat. solution of NaI in ethyl alcohol at 30° contains 30.9 g. (Cocheret, Dissert, 1910.)

Solubility in ethyl alcohol+Aq at 30°

% NaI	% alcohol	Solid phase
65.52	0	NaI, 2H <sub>2</sub> O
64	3.40	"
54.2	18.5	"
54	18.8	"
48.8	28.5	"
42.35	41.7	"
38.5	53.2	"

37.49	55.37	NaI, 2H <sub>2</sub> O+NaI
35.65	59.24	NaI
33.24	61.78	"
30.90	68.70	"

(Cocheret, Dissert. 1911.)

At room temp 1 pt by weight is sol in:

1.2 pts. methyl alcohol D<sup>16</sup> 0.7990  
1.7 " ethyl " D<sup>16</sup> 0.8100  
3.8 " propyl " D<sup>16</sup> 0.8160.

(Rohland, Z. anorg. 1898, 18. 325.)

100 g. methyl alcohol dissolve 90.35 g. NaI at 25°

100 g. ethyl alcohol dissolve 46.02 g. NaI at 25°.

100 g. propyl alcohol dissolve 28.22 g. NaI at 25°.

100 g. isomyl alcohol dissolve 16.30 g. NaI at 25°.

(Turner and Bissett, Chem. Soc. 1913, 103. 1909.)

Solubility in methyl alcohol+ethyl alcohol at 25°.

P = % methyl alcohol in the solvent  
G = g NaI in 10 ccm. of the solution  
S = Sp gr of the sat. solution at 25°

P	G	S 25°/4°
0.00	3.515	1.0806
4.37	3.768	1.1020
10.40	3.971	1.1123
41.02	4.598	1.1742

100	2.411	0.9968

(Herz and Kuhn, Z. anorg. 1908, 60. 159.)

Sol. in normal propyl alcohol. (Loeb, J. Am. Chem. Soc. 1905, 27. 1020.)

28.74 g. are sol. in 100 g. propyl alcohol. (Schlamp, Z. phys. Ch. 1894, 14. 276.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Sol. in ethyl acetate. (Casasaca, C. R. 30. 821.)

Insol. in ethyl acetate. (Naumann, B. 1910, 43. 314.)

Sl. sol. in benzonitrile (Naumann, B 1914, 47. 1369.)

Solubility in organic solvents at t°.

C = pts by wt. of NaI in 100 ccm of the sat. solution.

L = no. of liters which at the saturation temp hold in solution 1 mol NaI.

Solvent	t°	C	L
Furfural	25	25 10	0.597
Acetonitrile	25	18 43	0.813
"	0	22 09	0 679
Propionitrile	25	6 230	2 406
"	0	9.091	1 649
Nitromethane	25	0.478	31.36
"	0	0.339	44.27

(Walden, Z. phys. Ch. 1906, 55. 718.)

Very sol. in acetone. (Walden.)  
+5H<sub>2</sub>O. Transition point of NaI+5H<sub>2</sub>O to NaI+2H<sub>2</sub>O is -13.5°, and sat. solution contains 60.2% NaI. (Panfiloff, J. Russ. Phys. Chem. Soc. 1893, 25. 162.)

Sodium tin (stannous) iodide, NaI, SnI<sub>2</sub>.

Very sol. in H<sub>2</sub>O. When treated with little H<sub>2</sub>O, NaI is dissolved out, but a larger amt. of H<sub>2</sub>O dissolves it completely (Boullay, A. ch. (2) 34. 375)

Sodium zinc iodide, 2NaI, ZnI<sub>2</sub>+3H<sub>2</sub>O.  
Deliquescent.

NaZnI<sub>3</sub>+2H<sub>2</sub>O. Very hygroscopic. (Ephraïm, Z. anorg. 1910, 67. 383.)

Sodium nitride,

Decomp. by heat. (Franz Fisher, B 1910; 43. 1468.)

Sodium suboxide, Na<sub>2</sub>O.

Decomp. by H<sub>2</sub>O. (de Forciand, C. R. 1898, 127. 365)

Sodium oxide, Na<sub>2</sub>O.

Very deliquescent, and sol in H<sub>2</sub>O with evolution of heat

See Sodium hydroxide.

Sodium peroxide, Na<sub>2</sub>O<sub>2</sub>.

Deliquescent, and very sol. in H<sub>2</sub>O with partial decomp.

Solution decomp. on boiling.

Cryst. with 2H<sub>2</sub>O, and 8H<sub>2</sub>O. (Fairley, Chem. Soc. 1877. 125.)

Forms hydrate Na<sub>2</sub>O<sub>2</sub>(OH)<sub>2</sub>+4H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O or dil. acids without decomp. (Schone, A. 193. 241.)

Sodium peroxide carbonate, Na<sub>2</sub>CO<sub>4</sub>

Easily decomp. (Woffenstein, B. 1908, 41. 285.)

Sodium peroxide dicarbonate, Na<sub>2</sub>C<sub>2</sub>O<sub>6</sub>.

Easily decomp. (Woffenstein, B. 1908, 41. 287.)

Sodium trioxide, Na<sub>2</sub>O<sub>3</sub>

Sol. in H<sub>2</sub>O forming a solution of Na<sub>2</sub>O<sub>2</sub>. (Joannis, C. R. 1893, 116. 1371)

Sodium trioxide carbonate, Na<sub>2</sub>CO<sub>3</sub>

(Woffenstein, B 1908, 41. 296.)

Sodium trioxide dicarbonate, NaHCO<sub>4</sub>.

Two isomeric modifications. (Woffenstein, B. 1908, 41. 390)

Sodium trioxide hydrate, NaO OH.

See Sodium perhydroxide.

Isomeric with Tafel's sodyl hydroxide. O.Na OH (B. 27, 2297)

Insol. in alcohol

Very unstable. (Woffenstein, B 1908, 41. 290)

Sodium phosphide, NaP<sub>3</sub>.

Easily decomp. by H<sub>2</sub>O (Hugot, C. R. 1895, 121. 208.)

Sodium hydrogen phosphide, NaH<sub>2</sub>P.

Decomp by H<sub>2</sub>O. (Joannis, C. R. 1894, 119. 558.)

Na<sub>2</sub>H<sub>2</sub>P<sub>2</sub>. Decomp by acids and H<sub>2</sub>O. (Hugot, C. R., 1898, 126. 1721.)

Sodium selenide, Na<sub>2</sub>Se

Very deliquescent. Decomp. by H<sub>2</sub>O. (Uelsmann, A. 116. 127)

Insol. in liquid NH<sub>3</sub>; sol. in air free H<sub>2</sub>O to a colorless liquid. (Hugot, C. R. 1899, 129. 299.)

Cryst with 16H<sub>2</sub>O, 9H<sub>2</sub>O, and 1/2H<sub>2</sub>O. (Fabre, C. R. 102. 613)

+10H<sub>2</sub>O Very sol. in H<sub>2</sub>O; very unstable in the air (Clever, Z. anorg 1895, 10. 145.)

Sodium diselenide, Na<sub>2</sub>Se<sub>2</sub>.

(Jackson, B. 7. 1277)

Sodium triselenide, Na<sub>2</sub>Se<sub>3</sub>.

Sol. in H<sub>2</sub>O. (Mathewson, J. Am. Chem. Soc. 1907, 29. 873.)

Sodium hexaselenide, Na<sub>2</sub>Se<sub>6</sub>.

Sol. in H<sub>2</sub>O. (Mathewson, J. Am. Chem. Soc. 1907, 29. 873.)

Sodium monosulphide, Na<sub>2</sub>S.

Sol. in H<sub>2</sub>O Much less sol. in alcohol than in H<sub>2</sub>O. Insol in ether (Roussin.)

+5H<sub>2</sub>O. Tr. pt. from Na<sub>2</sub>S+5½H<sub>2</sub>O, 94°

+5½H<sub>2</sub>O.

The sat. solution contains.—

28	48	% anhydrous salt at	50°
29	27	" "	55°
29	92	" "	60°
31	38	" "	70°
33	95	" "	80°
37	20	" "	90°

Labile from 48–91.5°; stabile from 91.5–96°.

(Parravano and Fornani, C. C. 1908, I. 5.)

+6H<sub>2</sub>O Less efflorescent than with 9H<sub>2</sub>O. Sol. in H<sub>2</sub>O and alcohol.

The sat. solution contains.—

26	7	% anhydrous salt at	50°
28	1	" "	60°
30	22	" "	70°
32	95	" "	80°
36	42	" "	90°

Tr. pt. to Na<sub>2</sub>S+5½H<sub>2</sub>O, 91.5°.

(Parravano and Fornani.)

+9H<sub>2</sub>O Efflorescent. Much less sol in alcohol than H<sub>2</sub>O. When dissolved in H<sub>2</sub>O, temp. sinks from +22 to –6.1° (Finger, Pogg. 128. 635)

The sat. solution contains—

9	34	% anhydrous Na <sub>2</sub> S at	–10°
13	36	" "	+10°
14	36	" "	15°
15	30	" "	18°
16.2	"	" "	22°
17	73	" "	28°
19	09	" "	32°
20	98	" "	37°
24	19	" "	45°

Tr. pt. to Na<sub>2</sub>S+5½H<sub>2</sub>O, 48.9°.

(Parravano and Fornani.)

Sodium disulphide, Na<sub>2</sub>S<sub>2</sub>

Sol. in H<sub>2</sub>O and alcohol

+5H<sub>2</sub>O. Not efflorescent

Sodium trisulphide, Na<sub>2</sub>S<sub>3</sub>

Sol. in H<sub>2</sub>O with decomp

Cryst. with 3H<sub>2</sub>O from an alcoholic solution (Böttger, A. 223. 355)

Sodium tetrasulphide, Na<sub>2</sub>S<sub>4</sub>+6H<sub>2</sub>O.

Very deliquescent, and sol. in H<sub>2</sub>O. Difficultly sol. in absolute alcohol Insol. in ether. (Schöna)

+8H<sub>2</sub>O. Efflorescent. (Böttger.)

Sodium pentasulphide, Na<sub>2</sub>S<sub>5</sub>+6H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Schöna.)

Sol. in alcohol.

+8H<sub>2</sub>O (Böttger)

Solution is easily decomp. by warming. (Jones, Chem. Soc. 37. 461)

Sodium tellurium sulphide.

See Sulphotellurate, sodium.

Sodium stannic sulphide.

See Sulphostannate, sodium.

Sodium yttrium sulphide, Na<sub>2</sub>S, Y<sub>2</sub>S<sub>3</sub>.

Decomp. by dil. acids, even by HCl. H<sub>2</sub>O<sub>2</sub>+Aq. (Dubouin, C. R. 107. 243)

Sodium zinc sulphide, Na<sub>2</sub>S, 3ZnS

Not so stable as the corresponding K salt. (Schneider, J. pr. (2) 8. 29.)

Sodium sulphoselenide, Na<sub>2</sub>SSe<sub>2</sub>+5H<sub>2</sub>O

Hydroscopic, and decomp. in the air (Meesinger, B. 1897, 30. 806)

Sodium telluride, Na<sub>2</sub>Te.

Sol. in H<sub>2</sub>O. (Demarçay, Bull. Soc. (2) 40. 99)

Sodium tritelluride, Na<sub>2</sub>Te<sub>3</sub>

Sol. in H<sub>2</sub>O

Sol. in liquid NH<sub>3</sub>. (Hugot, C. C. 1899, II. 580)

Stannic acid, H<sub>2</sub>SnO<sub>4</sub>

Insol. in H<sub>2</sub>O Sol. in HCl, and H<sub>2</sub>SO<sub>4</sub>+Aq, even when dil. (Freny.) Easily sol. in acids, from which solution it may be pptd. by dilution or boiling. While moist it is sol. in HNO<sub>3</sub>+Aq, but gradually separates on standing, and conglutinates at once when heated to 50°. If NH<sub>4</sub>NO<sub>3</sub> be added to the solution, it remains clear at ord. temp. (Berzelius)

Easily sol. in HNO<sub>3</sub>+Aq, when previously treated with NH<sub>4</sub>OH+Aq (Thénard.)

Easily sol. in KOH+Aq, but addition of large excess ppts K<sub>2</sub>SnO<sub>3</sub>, insol. in KOH+Aq.

Easily sol. in NaOH+Aq, and not pptd. by an excess of that reagent. (Barfoed, J. B. 1867. 287.)

Sl. sol. in NH<sub>4</sub>OH+Aq or (NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>+Aq Completely sol. in K<sub>2</sub>CO<sub>3</sub>+Aq, but not in Na<sub>2</sub>CO<sub>3</sub>+Aq

Insol. in alkali hydrogen carbonates or NH<sub>4</sub>Cl+Aq.

Sol. in alkali sulphides+Aq (Berzelius.)

Sol. in triethyltoluyl ammonium hydrate+Aq.

Not pptd. by NH<sub>4</sub>OH+Aq in presence of Na citrate+Aq

SnO<sub>2</sub>, 2H<sub>2</sub>O. (Weber, Pogg. 122. 358.)

"*α*-Orthostannic acid" Easily sol. in HCl+Aq. (Neumann, M. 12. 615.)

H<sub>2</sub>SnO<sub>4</sub> (?)

Metastannic acid Insol. in H<sub>2</sub>O, HNO<sub>3</sub>, or H<sub>2</sub>SO<sub>4</sub>+Aq. Insol. in HCl+Aq, but converted thereby into metastannic chloride, which dissolves after excess of HCl has been removed. (Fresenius.) Insol. in HCl+Aq of sp. gr. 1.1 (Barfoed.) Sol. in large amount

of conc. HCl+*Aq.* (Allen, Chem. Soc. (2) 10. 274.)

In contact with HCl+*Aq.*, metastannic acid is converted into stannic acid. (Barfoed.)

Insol. in  $\text{HNO}_3$ +*Aq.* even after treatment with  $\text{NH}_4\text{OH}$ +*Aq.*

Insol. in  $\text{NH}_4\text{OH}$ +*Aq.*

Sol. in KOH or NaOH+*Aq.* with formation of metastannates, which are insol. in dil NaOH+*Aq.*, but sol. in  $\text{H}_2\text{O}$  or KOH+*Aq.*, therefore KOH+*Aq.* dissolves metastannic acid, while NaOH+*Aq.* does not, but if the clear solution in KOH+*Aq.* is treated with a large excess of that reagent, a further pptn. occurs. (Barfoed, J. pr. 101. 368.)

Insol. in  $\text{K}_2\text{CO}_3$ +*Aq.* (Rose); alkali carbonates+*Aq.* (Fremy.)

Insol. in  $\text{NH}_4\text{Cl}$ +*Aq.* even after long boiling

Sol. in  $\text{Fe}(\text{NO}_3)_3$ +*Aq.* containing  $\text{HNO}_3$ . (Lepèz and Storch, W. A. B. 98, 2b. 270.)

Also in  $\text{Cr}(\text{NO}_3)_3$ +*Aq.*, but not in  $\text{Ce}(\text{NO}_3)_3$ ,  $\text{Al}(\text{NO}_3)_3$ ,  $\text{Co}(\text{NO}_3)_2$ +*Aq.*, etc. (L and S.)

A colloidal metastannic acid sol. in  $\text{H}_2\text{O}$  can be obtained. (Lepèz and Storch.)

According to Weber (Pogg. 122. 358), stannic and metastannic acids are only different hydrates of same oxide, and it is not a case of allotropic modification.

*Colloidal.*  $\text{H}_2\text{SnO}_3$  in colloidal state can be obtained in aqueous solution containing 5.164 g  $\text{SnO}_2$  in a litre. This solution is coagulated by  $\text{HNO}_3$ +*Aq.* only when in great excess; easily by dil  $\text{H}_2\text{SO}_4$ +*Aq.*, but not by conc HCl+*Aq.*  $\text{NH}_4\text{OH}$ +*Aq.* in large excess causes coagulation; also  $\text{NH}_4\text{Cl}$ , NaOH, NaCl,  $\text{Na}_2\text{SO}_4$ , etc. (Schneider, Z. anorg. 5. 83.)

*Parastannic acid*,  $\text{H}_2\text{Sn}_2\text{O}_{11}$ + $3\text{H}_2\text{O}$ .

(Engel, C. R. 1897, 125. 711.)

### Stannates.

Stannates of alkali metals are sol. in  $\text{H}_2\text{O}$ ; others are insol. All metastannates, excepting Na, K, and  $\text{NH}_4$  salts, are insol. in  $\text{H}_2\text{O}$  (Fremy, A. ch. (3) 12. 474.)

*Ammonium stannate*,  $(\text{NH}_4)_2\text{O}$ ,  $2\text{SnO}_2$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in dil.  $\text{NH}_4\text{OH}$ +*Aq.* (Berzelius.)

+ $x\text{H}_2\text{O}$ . (Moberg, 1838.)

*Ammonium cupric stannate*,  $(\text{NH}_4)_2\text{O}$ ,  $\text{CuSnO}_2$ + $2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Ditte, C. R. 96. 701.)

*Barium stannate*,  $\text{BaSnO}_3$ + $6\text{H}_2\text{O}$ .

Ppt. Sol. in HCl+*Aq.* (Moberg.)

$\text{Ba}_2\text{SnO}_4$ + $10\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Ditte, C. R. 95. 641.)

*Calcium stannate*,  $\text{CaSnO}_3$ + $4\text{H}_2\text{O}$ .

Ppt. (Moberg.)

+ $5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in acids.

(Ditte, C. R. 96. 701.)

$2\text{CaO}$ ,  $\text{SnO}_2$ . (Zulkowski, Chem. Ind. 1901, 24. 422.)

*Cobaltous stannate*,  $\text{CoSnO}_3$ + $6\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Ditte.)

*Cupric stannate*,  $\text{CuSnO}_3$ + $3\text{H}_2\text{O}$ .

(Moberg.)

+ $4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Ditte.)

*Cuprous stannous stannate*,  $\text{Cu}_2\text{O}$ ,  $3\text{SnO}$ ,  $\text{SnO}_2$ + $5\text{H}_2\text{O}$ .

Slowly decomp. by dil acids, and  $\text{NH}_4\text{OH}$ +*Aq.*; completely decomp. by conc acids. (Lennsen, J. pr. 79. 90.)

*Gold (aurous) stannate.*

See Gold purple.

*Lead stannate*,  $\text{RbSn}(\text{OH})_3$ .

Ppt. (Bellucci, Chem. Soc. 1905, 88. (2) 40.)

*Lithium stannate hexatungstate*,  $2\text{Li}_2\text{O}$ ,  $\text{SnO}_2$ ,  $6\text{WO}_3$ = $\text{Li}_2\text{SnO}_3$ ,  $\text{Li}_2\text{W}_6\text{O}_{19}$ .

Insol. in  $\text{H}_2\text{O}$ . (Knorre, J. pr. (2) 27. 49.)

*Magnesium stannate.*

Ppt. (Moberg.)

*Manganous stannate.*

Ppt. (Moberg.)

*Mercurous stannate*,  $\text{Hg}_2\text{SnO}_3$ + $5\text{H}_2\text{O}$ .

Ppt.

*Mercuric stannate*,  $\text{HgSnO}_3$ + $6\text{H}_2\text{O}$ .

Ppt. (Moberg, J. pr. 28. 231.)

*Nickel stannate*,  $\text{NiSnO}_3$ + $5\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Ditte, C. R. 96. 701.)

*Platinous sodium stannous stannate*,  $2\text{PtO}$ ,  $\text{Na}_2\text{O}$ ,  $\text{SnO}$ ,  $\text{SnO}_2$ (?).

(Schneider, Pogg. 136. 105.)

*Platinous stannous stannate*,  $\text{PtO}$ ,  $2\text{SnO}$ ,  $\text{SnO}_2$ .

Decomp. by conc. alkalis (Schneider, Pogg. 136. 105.)

*Potassium stannate*,  $\text{K}_2\text{SnO}_3$ + $3\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 106.6 pts. at  $10^\circ$ , solution has sp. gr.=1.618, 100 pts. dissolve 110.5 pts. at  $20^\circ$ , solution has sp. gr.=1.627. (Ordway, Sil. Am. J. (2) 40. 173.)

Very sl. sol. in conc. KOH + Aq.  
 Insol. in KCl + Aq. (Fremy.)  
 Insol. in alcohol  
 Pptd. from aqueous solution by the addition of any soluble salt, especially those of K, Na, and  $\text{NH}_4$  (Fremy); by  $\text{NH}_4\text{Cl}$ , but not by KCl or NaCl (Ordway).  
 Insol. in acetone. (Naumann, B. 1904, 37, 329)

**Potassium metastannate,  $\text{K}_2\text{O}$ ,  $10\text{SnO}_2$ .**

$\text{K}_2\text{O}$ ,  $78\text{SnO}_2 + 3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Solution gelatinises on heating (Rose.)  
 $\text{K}_2\text{O}$ ,  $68\text{SnO}_2 + 6\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , but loses its solubility by drying. (Fremy, A. ch. (3) 12, 475)

$\text{K}_2\text{O}$ ,  $58\text{SnO}_2 + 4\text{H}_2\text{O}$ . Completely sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Fremy, A. ch. (3) 23, 396.)

$\text{K}_2\text{O}$ ,  $38\text{SnO}_2 + 3\text{H}_2\text{O}$  Deliquescent. (Fremy)

**Silver stannate,  $\text{Ag}_2\text{SnO}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . Unacted upon by  $\text{NH}_4\text{OH}$  or  $\text{HCl}$  + Aq. (Ditte.)

**Silver (argenteous) stannous stannate (?),  $\text{Ag}_2\text{O}$ ,  $\text{SnO}$ ,  $38\text{SnO}_2 + 3\text{H}_2\text{O}$  (?)**

Cold dil.  $\text{HNO}_3$  + Aq slowly dissolves all Ag, hot  $\text{HNO}_3$  + Aq rapidly  
 Easily sol. in boiling conc.  $\text{H}_2\text{SO}_4$  (Schulze, J. B. 1857, 257)

**Sodium stannate,  $\text{Na}_2\text{SnO}_3 + 3\text{H}_2\text{O}$**

More easily sol. in cold than in hot  $\text{H}_2\text{O}$  (Fremy)

Sol. in 2 pts  $\text{H}_2\text{O}$  at  $20^\circ$  and  $100^\circ$  (Magnac.)

100 pts  $\text{H}_2\text{O}$  dissolve 67.4 pts at  $0^\circ$ , 61.3 pts. at  $20^\circ$ , and solutions have sp. gr. = 1.472 and 1.438 at  $15.5^\circ$  (Ordway, Sil. Am. J. (2) 40, 173.)

Pptd. from  $\text{Na}_2\text{SnO}_3$  + Aq by salts of K, Na, and  $\text{NH}_4$ .

Insol. in acetone. (Naumann, B. 1904, 37, 4329.)

+  $4\text{H}_2\text{O}$  (Prandtl, B. 1907, 40, 2129.)  
 +  $8\text{H}_2\text{O}$  (Haeffely, J. B. 1857, 650.)  
 +  $9\text{H}_2\text{O}$  (Jones, C. C. 1865, 607.)  
 +  $10\text{H}_2\text{O}$ . Very efflorescent. (Seheuer-Kestner, Bull. Soc. (2) 8, 389.)

**Sodium metastannate,  $\text{Na}_2\text{O}$ ,  $9\text{SnO}_2 + 8\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  Insol. in  $\text{NaOH}$  + Aq or alcohol (Barfoed, J. B. 1857, 267)

$\text{Na}_2\text{O}$ ,  $68\text{SnO}_2$  Very difficultly sol. in  $\text{H}_2\text{O}$ . (Fremy, A. ch. (3) 23, 399.)

Insol. in KOH + Aq  
 +  $8\text{H}_2\text{O}$  (Haeffely, Chem. Gaz. 1855, 59.)

**Sodium stannate vanadate,**

$\text{Na}_2\text{SnO}_3$ ,  $3\text{Na}_2\text{VO}_4 + 32\text{H}_2\text{O}$ .  
 $\text{Na}_2\text{SnO}_3$ ,  $4\text{Na}_2\text{VO}_4 + 48\text{H}_2\text{O}$ .  
 $\text{Na}_2\text{SnO}_3$ ,  $5\text{Na}_2\text{VO}_4 + 64\text{H}_2\text{O}$ .  
 $\text{Na}_2\text{SnO}_3$ ,  $6\text{Na}_2\text{VO}_4 + 80\text{H}_2\text{O}$  (Prandtl, B. 1907, 40, 2128.)

**Strontium stannate,  $3\text{SrO}$ ,  $2\text{SnO}_2 + 10\text{H}_2\text{O}$ .**

Ppt. Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Ditte, C. R. 95, 641.)  
 $\text{SrSn}(\text{OH})_6$  (Belluci, Chem. Soc. 1905, 88 (2) 40.)

**Tin (stannous) stannate,  $\text{SnO}$ ,  $6\text{SnO}_2 + 5\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Decomp. by  $\text{HNO}_3$  + Aq into metastannic acid. (Schiff, A. 120, 53.)  
 Sol. in  $\text{HCl}$  + Aq, and in  $\text{KOH}$  + Aq.

**Tin (stannous) metastannate,  $\text{SnO}$ ,  $78\text{SnO}_2$ .**

$\text{SnO}$ ,  $68\text{SnO}_2 + 9\text{H}_2\text{O}$ . Sol. in  $\text{KOH}$  + Aq or in  $\text{HCl}$  + Aq. (Fremy.)  
 +  $4\text{H}_2\text{O}$ . (Schiff.)

**Zinc stannate,  $\text{ZnSnO}_3 + 2\text{H}_2\text{O}$ .**

Ppt. (Moberg, 1838.)  
 $3\text{ZnO}$ ,  $28\text{SnO}_2 + 10\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Ditte.)

**Perstannic acid,  $\text{H}_2\text{Sn}_2\text{O}_7$ .**

See Perstannic acid.

**Stannophosphomolybdic acid.**

**Ammonium stannophosphomolybdate,**  
 $3(\text{NH}_4)_2\text{O}$ ,  $48\text{SnO}_2$ ,  $3\text{P}_2\text{O}_5$ ,  $16\text{MoO}_3 + 28\text{H}_2\text{O}$ .

Quite insol. even in boiling  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 7, 392.)

**Stannophosphotungstic acid.**

**Ammonium stannophosphotungstate,**  
 $2(\text{NH}_4)_2\text{O}$ ,  $28\text{SnO}_2$ ,  $\text{P}_2\text{O}_5$ ,  $22\text{WO}_3 + 15\text{H}_2\text{O}$ .

Precipitate. Sl. sol. in boiling  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 7, 319.)

**Stannosulphuric acid.**

See Sulphate, stannic.

**Stibine.**

See Hydrogen antimonide.

**Strontium, Sr.**

Decomp. by  $\text{H}_2\text{O}$  with violence. Dil.  $\text{H}_2\text{SO}_4$  and  $\text{HCl}$  + Aq decomp. and dissolve; cold  $\text{H}_2\text{SO}_4$  attacks slowly. Fuming  $\text{HNO}_3$  has scarcely any action even when boiling. (Franz, J. pr. 197, 253.)  
 Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 829.)

Sol. in excess of liquid  $\text{NH}_3$  at  $-60^\circ$  forming  $\text{Sr}(\text{NH}_2)_2$ . (Roederer, C. R. 1905, 140, 1252.)

**Strontium amalgam,  $\text{SrHg}_{12}$ .**

Stable below  $30^\circ$ . Above  $30^\circ$  the composition of the amalgam varies. Can be cryst. from Hg at any temp. below  $30^\circ$ . (Kerp, Z. anorg. 1900, 25, 68.)

**Strontium amide,  $\text{Sr}(\text{NH}_2)_2$ .**

(Roederer, Bull. Soc. 1906, (3) 35, 715.)

**Strontium arsenide,  $\text{Sr}_2\text{As}_2$** 

Decomp. by  $\text{H}_2\text{O}$ . (Lebeau, C. R. 1899, 129. 47.)

**Strontium azoimide,  $\text{SrN}_2$** 

Hydroscoptic.

45.83 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $16^\circ$ .

0.095 " " " " 100 " abs alcohol at  $16^\circ$ .

Insol. in pure ether. (Curtius, J. pr. 1898, (2) 58. 287.)

**Strontium boride,  $\text{SrB}_2$** 

Sol. in fused oxidizing agents; not decomp. by  $\text{H}_2\text{O}$ , insol. in aq. acids; sl. sol. in conc.  $\text{H}_2\text{SO}_4$ ; sol. in dil. and conc.  $\text{HNO}_3$ . (Moissan, C. R. 1897, 126. 633.)

**Strontium bromide,  $\text{SrBr}_2$ , and  $+6\text{H}_2\text{O}$ .**

100 pts.  $\text{H}_2\text{O}$  dissolve at:

$0^\circ$  20° 38° 59° 83° 110°  
87.7 99 112 133 182 250 pts.  $\text{SrBr}_2$

(Kremers, Pogg. 103. 65.)

Sat  $\text{SrBr}_2 + \text{Aq}$  contains at.

$-11^\circ$   $-1^\circ$   $+7^\circ$   $18^\circ$   
43.1 46.85 48.2 51.7%  $\text{SrBr}_2$ ,

20° 93° 97° 107°  
51.8 68.5 68.7 69.8%  $\text{SrBr}_2$ .

(Étard, A. ch. 1894, (7) 2. 540.)

Sp. gr. of  $\text{SrBr}_2 + 19.5^\circ$  containing:

5 10 15 20 25 %  $\text{SrBr}_2$   
1.046 1.094 1.146 1.204 1.266

30 35 40 45 50 %  $\text{SrBr}_2$   
1.332 1.41 1.492 1.59 1.694

(Kremers, Pogg. 99. 444; calculated by Gerlach, Z. anal. 8. 285.)

Somewhat sol. in absolute alcohol (Lowig.)

Solubility of anhydrous  $\text{SrBr}_2$  in alcohol is practically constant between  $0^\circ$  and  $40^\circ$ , 100 ccm. of abs. alcohol dissolving about 64.5 g. of the anhydrous salt and forming a solution having a sp. gr. = 1.210 at  $0^\circ$ . (Fonczes-Diacon, Chem. Soc. 1895, 68 (2) 223.)

Much more sol. than  $\text{BaBr}_2$  in boiling amyl alcohol.

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

**Strontium stannic bromide.**

See Bromostannate, strontium.

**Strontium bromide ammonia,  $2\text{SrBr}_2 \cdot \text{NH}_3$ .**

Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 56. 238.

**Strontium bromide hydrazine,  $\text{SrBr}_2 \cdot 3\text{N}_2\text{H}_4$ .**

Very sol. in  $\text{H}_2\text{O}$ . (Franzen, Z. anorg. 1908, 60. 290.)

**Strontium bromofluoride,  $\text{SrF}_2 \cdot \text{SrBr}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Defacqz, A. ch. 1904, (8) 1. 356.)

**Strontium carbide,  $\text{SrC}_2$ .**

Easily decomp. by  $\text{H}_2\text{O}$  and dil. acids. (Moissan, Bull. Soc. 1894, (3) 11. 1008.)

**Strontium carbonyl,  $\text{Sr}(\text{CO})_2$ .**

(Roederer, Bull. Soc. 1906, (3) 35. 725.)

**Strontium chloride,  $\text{SrCl}_2$ , and  $+6\text{H}_2\text{O}$ .**

Deliquescent in moist air.

Sol. in 1.5 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and 0.8 pt. at boiling (Dumas), in 1.906 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  (Gerlach).  
1 pt. anhydrous  $\text{SrCl}_2$  is sol. in 2.27 pts.  $\text{H}_2\text{O}$  at  $0^\circ$ , in 1.88 pts. at  $20^\circ$ , in 1.54 pts. at  $40^\circ$ , in 1.18 pts. at  $60^\circ$ , in 1.08 pts. at  $80^\circ$ , in 0.98 pt. at  $100^\circ$ . (Kremers, Pogg. 103. 66.)

100 pts.  $\text{H}_2\text{O}$  dissolve 106.2 pts.  $\text{SrCl}_2 + 6\text{H}_2\text{O}$  at  $0^\circ$ , and 205.8 pts. at  $40^\circ$ . (Tilden, Chem. Soc. 45. 409.)

Solubility in 100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$

Insol in absolute alcohol. (Gerardin, A. ch. (4) 5. 156.)

100 pts. absolute methyl alcohol dissolve 63.3 pts.  $\text{SrCl}_2 + 6\text{H}_2\text{O}$  at  $6^\circ$ ; ethyl alcohol, 3.8 pts (de Bruyn, Z. phys. Ch. 10. 787.)

Sl. sol. in boiling amyl alcohol. (Browning, Sill Am. J. 144. 459.)

100 g. 95% formic acid dissolve 23 8 g.  $\text{SrCl}_2$  at room temp. (Aschan, Ch. Ztg. 1913, 37. 1117)

Absolutely insol. in acetic ether. (Cann, C. R. 102. 363.)

Very sl. sol. in acetone. (Krug and M'Elroy.)

Sol. in acetone. (Eidmann, C. C. 1899, II 1014.)

Insol in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol in benzonitrile (Naumann, B. 1914, 47 1370.)

Sl sol in anhydrous pyridine Sol in 97%, 95% and 93% pyridine + Aq. (Kahlenberg, J Am Chem. Soc. 1908, 30. 1107.)

+  $2\text{H}_2\text{O}$ . Tr. pt. from +  $6\text{H}_2\text{O}$  is  $61.5^\circ$ . (Richards and Churchill, Z. phys. Ch. 1899, 28. 313.)

+  $6\text{H}_2\text{O}$ . See above

Strontium thallic chloride,  $\text{SrCl}_2 \cdot 2\text{TlCl}_2 + 6\text{H}_2\text{O}$ .

(Gewecke, A. 1909, 366. 223.)

Strontium tin (stannous) chloride,  $\text{SrCl}_2 \cdot \text{SnCl}_2 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Poggiale, C R. 20. 1183.)

Strontium tin (stannic) chloride.

See Chlorostannate, strontium.

Strontium uranium chloride,  $\text{SrCl}_2 \cdot \text{UCl}_4$

Decomp. by  $\text{H}_2\text{O}$ . (Aloy, Bull. Soc. 1899, (3) 21. 265.)

Strontium zinc chloride,  $\text{SrZnCl}_2 + 4\text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$ . (Ephraim, Z. anorg. 1910, 67. 380)

Strontium chloride ammonia,  $\text{SrCl}_2 \cdot 8\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Rose, Pogg. 20. 155.)

Strontium chloride hydrazine,  $\text{SrCl}_2 \cdot 2\text{N}_2\text{H}_4 + \text{H}_2\text{O}$ .

Hydroscopic. (Franzen, Z. anorg. 1908, 60. 289.)

Strontium chloride hydroxylamine,  $2\text{SrCl}_2 \cdot 5\text{NH}_2\text{OH} + 2\text{H}_2\text{O}$ .

As Ca comp. (Antonow, J. Russ. Phys. Chem. Soc 1905, 37. 482)

Strontium hydrogen chloride hydroxylamine,  $2\text{SrCl}_2 \cdot 3\text{HCl} \cdot 9\text{NH}_2\text{OH} + \text{H}_2\text{O}$ .

(Antonow, J. Russ. Phys. Chem. Soc. 1905, 37. 482.)

Strontium chlorofluoride,  $\text{SrF}_2 \cdot \text{SrCl}_2$ .

Decomp. by  $\text{H}_2\text{O}$ , by very dil  $\text{HCl}$ ,  $\text{HNO}_3$  or acetic acid, by hot dil. or conc.  $\text{H}_2\text{SO}_4$ .

Sol. in conc HCl or HNO<sub>3</sub>. Insol. in, and not decomp. by cold or boiling alcohol. (Defacqz, A. ch. 1904, (8) 1. 355)

### Strontium fluoride, SrF<sub>2</sub>.

Somewhat sol. in H<sub>2</sub>O. (Fr. Roudier.)  
1 l. H<sub>2</sub>O dissolves 113.5 mg. SrF<sub>2</sub> at 0.26°;  
117.3 mg. at 17.4°; 119.3 mg. at 27.4°.  
(Kohhausch, Z. phys. Ch. 1908, 64. 168)

Insol in HF + Aq. (Berzelius)  
Boiling HCl + Aq dissolves; sl attacked by boiling HNO<sub>3</sub> + Aq; decomp. by hot H<sub>2</sub>SO<sub>4</sub>. (Poulenc, C. R. 118. 987)

### Strontium stannic fluoride.

See Fluostannate, strontium.

### Strontium titanium fluoride.

See Fluotitanate, strontium.

### Strontium fluorosulfide, SrF<sub>2</sub>, SrI<sub>2</sub>.

Decomp. by cold H<sub>2</sub>O, more rapidly by hot H<sub>2</sub>O. Decomp. by dil HCl, dil. HNO<sub>3</sub>, dil. H<sub>2</sub>SO<sub>4</sub> or conc. H<sub>2</sub>SO<sub>4</sub>, also by alcohol and by ether, if not absolute. (Defacqz, A. ch. 1904, (8) 1. 358.)

### Strontium hydride, SrH.

Decomp. by H<sub>2</sub>O or HCl + Aq. (Winkler, B. 24. 1976)

SrH<sub>2</sub>. Decomp. by H<sub>2</sub>O. (Gautier, C. R. 1902, 134. 100)

### Strontium hydroselenide.

Sol. in H<sub>2</sub>O

### Strontium hydrosulphide, SrS<sub>2</sub>H<sub>2</sub>.

Sol in H<sub>2</sub>O; decomp. by boiling.

### Strontium hydroxide, SrO<sub>2</sub>H<sub>2</sub>, and +SH<sub>2</sub>O.

Deliquescent.

Sol in 50 pts cold, and 2.4 pts boiling H<sub>2</sub>O (Buchholz); in 50 pts. H<sub>2</sub>O at 15.56° (Dalton), in 51.4 pts H<sub>2</sub>O at 15.56°, and 2 pts. at 100° (Hope); in 52 pts H<sub>2</sub>O at 18°, and 2.4 pts at 100° (Berzelius), in 48 pts. H<sub>2</sub>O at 18.75° (Abb.)  
100 pts. H<sub>2</sub>O at 20° dissolve 1.48 pts SrO. (Binouen, C. R. 41. 500)

100 pts. aqueous solution of SrO<sub>2</sub>H<sub>2</sub> contain pts SrO and pts. SrO<sub>2</sub>H<sub>2</sub> + SH<sub>2</sub>O at t°.

(Mosnier, A. ch. 1897, (7) 12, 399.)

$\text{SrI}_4$ . (Herz and Bulla, Z. anorg. 1911, 71, 255.)

Strontium stannous iodide.

Very sol. in  $\text{H}_2\text{O}$ . (Boullay)

Strontium zinc iodide,  $\text{SrZnI}_4 + 9\text{H}_2\text{O}$

Hydrosopic. (Ephraim, Z. anorg. 1910, 67, 385.)

Strontium nitride,  $\text{Sr}_3\text{N}_2$

Decomp.  $\text{H}_2\text{O}$  violently, but not alcohol. (Maquenne, A. ch. (6) 29, 225.)

Strontium oxide,  $\text{SrO}$

Decomp. by  $\text{H}_2\text{O}$  to  $\text{SrO}_2\text{H}_2$ , which see

Sol. in 160 pts  $\text{H}_2\text{O}$  at 15.56° (Dalton); in 50 pts. at 100° (Dalton), in 130 pts. at 20° (Bineau), in 40 pts. cold, and 20 pts. hot  $\text{H}_2\text{O}$  (Dumas)

Very sl. sol. in alcohol. Insol. in ether

1 l. methyl alcohol dissolves 11.2 g.  $\text{SrO}$ . (Neuberg and Rewald, Biochem. Z. 1908, 9, 540.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014.)

Sol. in cane sugar + Aq.

Solubility in  $\text{H}_2\text{O}$  containing 10 g. sugar at t°.

t°	g. $\text{SrO}$	t°	g. $\text{SrO}$
8	1.21	24	1.87
15	1.48	40	3.55

(Sidersky, C. C. 1886, 57.)

See also Strontium hydroxide.

Strontium peroxide,  $\text{SrO}_2$

Sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in acids and  $\text{NH}_4\text{Cl} + \text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Conroy, Chem. Soc. (2) 11, 812.)

Insol. in acetone (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014.)

Strontium oxybromide,  $\text{SrBr}_2, \text{SrO} + 9\text{H}_2\text{O}$ .

Not hydrosopic; sol. in  $\text{H}_2\text{O}$  (Tassilly, C. R. 1895, 120, 1339.)

Strontium oxychloride,  $\text{SrCl}_2, \text{SrO} + 9\text{H}_2\text{O}$ .

Very easily decomp. by  $\text{H}_2\text{O}$  and alcohol. (André, A. ch. (6) 3, 78.)

Strontium oxyiodide,  $2\text{SrI}_2, 5\text{SrO} + 30\text{H}_2\text{O}$ .

Not hydrosopic; sol. in  $\text{H}_2\text{O}$ . (Tassilly, C. R. 1895, 120, 1339.)

Strontium oxysulphide,  $\text{Sr}_2\text{OS}_4 + 12\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ .

Insol. in alcohol, ether, and  $\text{CS}_2$  (Schone.) Mixture of  $\text{Sr}_2\text{O}_3$  and  $\text{SrS}_2$ . (Geuther, A. 224, 178.)

Strontium phosphide,  $\text{Sr}_3\text{P}_2$ .

Crystallized. Sol. in dil. acids, insol. in conc. acids; decomp. by  $\text{H}_2\text{O}$ . Insol. in organic solvents at ord. temp. (Jaboin, C. R. 1899, 129, 764.)

Strontium selenide,  $\text{SrSe}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Fabre, C. R. 102, 1469.)

Strontium silicide,  $\text{SrSi}_2$

Decomp. by  $\text{H}_2\text{O}$ . (Bradley, C. N. 1900, 82, 150.)

**Strontium sulphide, SrS**

Sol. in  $H_2O$  with decomp. into  $SrO_2H_2$  and  $SrS_2H_2$ .

Insol. in acetone. (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37, 4329)  
Insol. in methyl acetate. (Naumann, B. 1900, 42, 3790)

**Strontium tetr sulphide,  $SrS_4$** 

Very deliquescent, and sol. in  $H_2O$  and alcohol. Aqueous solution decomp. on air. Cryst. with 2, or  $6H_2O$ . (Schöne, Pogg. 117, 58)

**Strontium pentasulphide,  $SrS_5$** 

Known only in solution

**Strontium stannic sulphide.**

See Sulphostannate, strontium.

**Sulphaluminic acid.****Silver sulphaluminate,  $4Ag_2S, 5Al_2S_3$** 

(Camb. Reul. Ae. Linc. 1912, (5) 21, II 837.)

**Sulphamic acid,  $HOSO_2NH_2$** 

See Amidosulphonic acid.

**Ammonium sulphamate,  $2NH_3, SO_2$** 

(Woronin)

Is ammonium imidosulphonate, which see (Berghund)

**Ammonium sulphamate, acid,  $3NH_3, 2SO_2$** 

(Woronin)

Is basic ammonium imidosulphonate, which see (Berghund.)

**Barium sulphamate, basic,  $2BaO, 3SO_2, 2NH_3$** 

Somewhat sol. in  $H_2O$ , easily in  $HCl + Aq$  (Jacquelin, A. ch. (3) 8, 304)

$BaSO_3(NH_3)_2$ . Sol. in  $H_2O$ . Decomp. by heating with  $H_2O$ . (Woronin, J. B. 1860, 80)

Is barium imidosulphonate. (Berghund)

**Sulphamide,  $SO_2(NH_2)_2$** 

Very sol. in  $H_2O$ . (Regnault, A. ch. 69, 170; Mente, A. 248, 267)

Insol. in alcohol, ether, etc. (Traube, B. 26, 607)

Very sol. in  $H_2O$ .

Sl. sol. in abs. alcohol.

Sl. sol. in dry ether. (Divers and Ogawa, Chem. Soc. 1902, 81, 504.)

Very sol. in liquid  $NH_3$ . (Franklin and Stafford, Am. Ch. J. 1902, 28, 95.)

Sol. in alcohol; very sol. in  $H_2O$ . (Hantzsch, B. 1901, 34, 3436.)

**Silver sulphamide,  $SO_2(NHAg)_2$** 

Sl. sol. in cold  $H_2O$ . Sol. in  $HNO_3$ , and  $(NH_4)_2CO_3 + Aq$  (Traube, B. 26, 607.)

$3NH_3, 2SO_2$ . (Jacquelin.)

Is basic ammonium imidosulphonate, which see. (Berghund.)

**Sulphamidic acid.**

(Fremy.)

See Imidosulphonic acid.

**Sulphaminoplatinous acid.****Ammonium tetr sulphaminoplatinite,**

$[Pt(SO_2NII_3)_4](NH_4)_7 + 6H_2O$ .

Sl. sol. in cold  $H_2O$ . (Ramberg, B. 1912, 45, 1512.)

**Potassium —,  $[Pt(SO_2NH_3)_4]K_2 + 2H_2O$** 

Very al. sol. in cold  $H_2O$ . (Ramberg.)

**Sodium —,**

Easily sol. in cold  $H_2O$ . (Ramberg.)

**Sulphammonic, and Metasulphammonic acids.**

(Fremy.)

See Nitrosulphonic acid.

**Monosulphammonic acid.**

(Claus.)

See Amidosulphonic acid.

**Disulphammonic acid.**

(Claus)

See Imidosulphonic acid.

**Trisulphammonic acid.**

(Claus.)

See Nitrosulphonic acid.

**Tetrasulphammonic acid.**

(Claus.)

Does not exist. See Nitrosulphonic acid.

**Sulphammonium,  $S(NH_2)_2, 2NH_3$** 

Sol. in liquid  $NH_3$ .

Sol. in abs. alcohol and anhydrous ether. (Moissan, C. R. 1901, 132, 517.)

**Sulphantimonic acid.****Sulphantimonates.**

The alkali sulphantimonates are sol. in  $H_2O$ , but the solutions decomp. on the air; most of the other sulphantimonates are insol. in  $H_2O$ ; all sulphantimonates are insol. in alcohol. (Rammelsberg.)

Ammonium sulphantimonate,  $(\text{NH}_4)_3\text{SbS}_4$ .

Sol. in  $\text{H}_2\text{O}$ .

Sol. in dil. acids with decomp. (Stanek,

Z. anorg. 1898, 17, 122.)

+4 $\text{H}_2\text{O}$ . (Stanek.)

Solubility of  $(\text{NH}_4)_3\text{SbS}_4 + 4\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	% $(\text{NH}_4)_3\text{SbS}_4$	Solid phase
-1.9	9.9	Ice
-5	20.0	"
-8	30.2	"

+20	47.7	"
30	54.5	"

(Donk, Chem. Weekbl, 1908, 5, 529.)

Solubility of  $(\text{NH}_4)_3\text{SbS}_4$  in alcohol at  $10^\circ$ .

Solid phase,  $(\text{NH}_4)_3\text{SbS}_4 + 4\text{H}_2\text{O}$ .

% $\text{C}_2\text{H}_5\text{OH}$	% $(\text{NH}_4)_3\text{SbS}_4$	% $\text{C}_2\text{H}_5\text{OH}$	% $(\text{NH}_4)_3\text{SbS}_4$
0	43.2	43.1	8.7
5.1	35.9	53.1	4.1
19.1	23.1	93.3	0

(Donk, l. c.)

Antimonyl sulphantimonate,  $(\text{SbO})_3\text{SbS}_4$ .

Sol. in  $\text{HCl}$ . (Rammelsberg, Pogg. 1841, 52, 236.)

Barium sulphantimonate,  $\text{Ba}_3(\text{SbS}_4) + 3\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol.

Barium potassium sulphantimonate,

$\text{KBaSbS}_4 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ .

Decomp. by acids. (Glatzel, Z. anorg. 1911, 72, 100.)

Bismuth sulphantimonate.

Ppt.

Cadmium sulphantimonate.

Ppt. (Rammelsberg, Pogg. 52, 236.)

Calcium sulphantimonate,  $\text{Ca}_3(\text{SbS}_4)_2$ .

Partially sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol.

Cobaltous sulphantimonate,  $\text{Co}_3(\text{SbS}_4)_2$ .

Ppt. Decomp. by  $\text{HCl} + \text{Aq}$ . (Rammelsberg, Pogg. 52, 236.)

Cupric sulphantimonate,  $\text{Cu}_3(\text{SbS}_4)_2$ .

Ppt. (Rammelsberg, Pogg. 52, 226.)

Iron (ferrous) sulphantimonate.

Ppt.

Iron (ferric) sulphantimonate,  $\text{Fe}_2(\text{SbS}_4)_2$ .

(Rammelsberg, Pogg. 52, 234.)

Lead sulphantimonate,  $\text{Pb}_3(\text{SbS}_4)_2$ .

Ppt. Decomp. by  $\text{KOH} + \text{Aq}$ . (Rammelsberg, Pogg. 52, 223.)

Lithium sulphantimonate,  $\text{Li}_3\text{SbS}_4 + 8\frac{1}{2}\text{H}_2\text{O}$ .

100 g. sat. solution in  $\text{H}_2\text{O}$  contain 50.8 g. anhyd.  $\text{Li}_3\text{SbS}_4$ .

Solubility in alcohol at  $30^\circ$ .

% alcohol	% $\text{Li}_3\text{SbS}_4$	Solid phase
0	50.8	$\text{Li}_3\text{SbS}_4 \cdot 8\frac{1}{2}\text{H}_2\text{O}$

(Donk, Chem. Weekbl. 1908, 5, 529.)

At  $10^\circ$ , 100 g. sat.  $\text{Li}_3\text{SbS}_4 + 10\text{H}_2\text{O}$  in 10.7 % alcohol contain 41.8 g.  $\text{Li}_3\text{SbS}_4$ ; 26.2 % alcohol, 36.5 g.  $\text{Li}_3\text{SbS}_4$ . (Donk, l. c.)

Magnesium sulphantimonate,  $\text{Mg}_3(\text{SbO}_4)_2$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ . Decomp. by alcohol.

Mercurous sulphantimonate,  $(\text{Hg}_2)_3(\text{SbS}_4)_2$ .

Ppt.

Mercuric sulphantimonate,  $\text{Hg}_3(\text{SbS}_4)_2$ .

Mercuric sulphantimonate chloride,  
 $\text{Hg}_2(\text{SbS}_4)_2, 3\text{HgCl}_2, 3\text{HgO}$ .

Insol. in acids, except aqua regia. (Ram-  
 melsberg.)

Nickel sulphantimonate,  $\text{Ni}_2(\text{SbS}_4)_2$ .

Ppt. Decomp. by hot  $\text{HCl} + \text{Aq}$ . (Ram-  
 melsberg, Pogg. 52, 226.)

Potassium sulphantimonate,  $\text{K}_2\text{SbS}_4$ .

Sol. in  $\text{H}_2\text{O}$ .

Solubility of  $\text{K}_2\text{SbS}_4$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	$\frac{\%}{\text{K}_2\text{SbS}_4}$	Solid phase

(Donk, l. c.)

Sodium sulphantimonate thiosulphate,  
 $\text{Na}_3\text{SbS}_4 \cdot 2\text{Na}_2\text{S}_2\text{O}_3 + 20\text{H}_2\text{O}$ Efflorescent, and decomp. by  $\text{H}_2\text{O}$ . (Unger, Arch. Pharm. (2) 147. 193.)No double salt exists. See Donk,  $\text{Na}_3\text{SbS}_4 + \text{Na}_2\text{S}_2\text{O}_3$  under  $\text{Na}_3\text{SbS}_4$ .

Strontium sulphantimonate.

Sol in  $\text{H}_2\text{O}$ , pptd. by alcohol.

Uranium sulphantimonate.

Ppt

Zinc sulphantimonate,  $\text{Zn}_3(\text{SbS}_4)_2$ .Ppt Sol in hot  $\text{Na}_3\text{SbS}_4 + \text{Aq}$ ; insol in  $\text{ZnSO}_4 + \text{Aq}$ . Partially sol. in  $\text{KOH} + \text{Aq}$ ; sol in hot  $\text{HCl} + \text{Aq}$ . (Rammelsberg, Pogg. 52. 233.)

Sulphantimonous acid.

Ammonium metasulphantimonite,  $\text{NH}_4\text{SbS}_3$ .Insol. in  $\text{H}_2\text{O}$ . (Rouget, C. R. 1898, 126. 1145.)+  $2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  and alcohol  
Decomp. in the air. (Stanek, Z. anorg. 1898, 17. 119.)Ammonium orthosulphantimonite,  
 $(\text{NH}_4)_2\text{Sb}_2\text{S}_5$ Easily decomp. Stable only in presence of  $(\text{NH}_4)_2\text{S}$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol, by which it is pptd. from aqueous solution. (Pouget, A. ch. 1899, (7) 18. 536.)Ammonium parasulphantimonite,  
 $(\text{NH}_4)_2\text{Sb}_2\text{S}_7$ 

Stable in the air.

Insol. in  $\text{H}_2\text{O}$ .

Decomp. by acids. (Stanek, Z. anorg. 1898, 17. 120.)

Stable, cryst. from hot solutions. (Pouget C. R. 1898, 126. 1145.)

Ammonium silver <i>orthosulphantimonite</i> , $\text{NH}_4\text{Ag}_3\text{SbS}_4$ Decomp. by $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 551.)	Cuprous potassium <i>orthosulphantimonite</i> , $\text{Cu}_3\text{KSbS}_4$ Ppt.; easily decomp. by $\text{H}_2\text{O}$ . (Pouget, C. R. 1899, 129. 104.) + $3\text{H}_2\text{O}$ . Ppt., decomp. by $\text{H}_2\text{O}$ . (Pou- get, A. ch. 1899, (7) 18. 556.)
Barium <i>metasulphantimonite</i> , $\text{BaSb}_2\text{S}_4$ + $4\frac{1}{2}\text{H}_2\text{O}$ Insol. in $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 541.)	Iron (ferrous) <i>orthosulphantimonite</i> , $\text{Fe}_3(\text{Sb}_2\text{S})_2$ Ppt. (Pouget, A. ch. 1899, (7) 18. 554.) Min. <i>Berthierite</i> . Sl. sol. in $\text{HCl} + \text{Aq}$ ; easily sol. in aqua regia.
Barium <i>orthosulphantimonite</i> , $\text{Ba}_2\text{Sb}_2\text{S}_5$ + $8\text{H}_2\text{O}$ Decomp. in the air and by $\text{H}_2\text{O}$ Some- what sol. in $\text{BaS} + \text{Aq}$ . (Pouget, C. R. 1898, 126. 1792.)	Lead <i>orthosulphantimonite</i> , $\text{Pb}_2(\text{SbS})_2$ Ppt. Very sl. sol. in $\text{H}_2\text{O}$ . Decomp. by $\text{H}_2\text{O}$ (Pouget, A. ch. 1899, (7) 18. 553.) Min. <i>Boulangerite</i> . Completely sol. in hot $\text{HCl} + \text{Aq}$ ; decomp. by $\text{HNO}_3 + \text{Aq}$ .
Barium <i>pyrosulphantimonite</i> , $\text{Ba}_2\text{Sb}_2\text{S}_5$ + $8\text{H}_2\text{O}$ Decomp. by $\text{H}_2\text{O}$ Nearly insol. in $\text{BaS} + \text{Aq}$ . (Rouget.)	Lead sulphantimonite. Sol. in boiling conc. $\text{HNO}_3 + \text{Aq}$ (Four- net.) $\text{Pb}(\text{SbS}_2)_2$ Min. <i>Zinckenite</i> . Decomp. by hot $\text{HCl} + \text{Aq}$ . $4\text{PbS}, \text{Sb}_2\text{S}_3$ Min. <i>Plagionite</i> . $2\text{PbS}, \text{Sb}_2\text{S}_3$ Min. <i>Jamesonite</i> Decomp. by hot $\text{HCl} + \text{Aq}$ . $4\text{PbS}, \text{Sb}_2\text{S}_3$ Min. <i>Meneghinite</i> . $5\text{PbS}, \text{Sb}_2\text{S}_3$ Min. <i>Geokronite</i> . $6\text{PbS}, \text{Sb}_2\text{S}_3$ Min. <i>Kihlckenite</i> (?).
Barium sulphantimonite, $\text{Ba}_2\text{Sb}_2\text{S}_5 + 10\text{H}_2\text{O}$ . Pptd. from aq. solution of ortho and pyro- barium salts. (Pouget.) $\text{Ba}_4\text{Sb}_2\text{S}_{11} + 16\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 538.)	Lead potassium <i>orthosulphantimonite</i> , $\text{PbKSbS}_2$ Very sl. sol. in $\text{H}_2\text{O}$ . Decomp. by $\text{H}_2\text{O}$ (Pouget, A. ch. 1899, (7) 18. 554.)
Calcium sulphantimonite basic, $\text{Ca}(\text{OH})\text{SbS}_3$ . Insol. in $\text{H}_2\text{O}$ . Sol. in conc. $\text{HCl}$ . (Pouget, A. ch. 1899, (7) 18. 544.)	Lead silver sulphantimonite, $(\text{Ag}_2, \text{Pb})_2\text{Sb}_2\text{S}_{11}$ . Min. <i>Freyesenite</i> .
Calcium <i>pyrosulphoantimonite</i> , $\text{Ca}_2\text{Sb}_2\text{S}_5$ + $15\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ without decomp. (Pouget, C. R. 1898, 128. 1793.)	Lithium <i>orthosulphantimonite</i> , $\text{Li}_2\text{SbS}_2$ • + $3\text{H}_2\text{O}$ . Very deliquescent. Very sol. in $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 530.)
Cobaltous <i>orthosulphantimonite</i> , $\text{Co}_2\text{Sb}_2\text{S}_5$ . Ppt (Pouget, A. ch. 1899, (7) 18. 554.)	Lithium <i>parasulphantimonite</i> , $\text{Li}_2\text{Sb}_2\text{S}_7 + 3\text{H}_2\text{O}$ . Ppt (Pouget, A. ch. 1899, (7) 18. 531.)
Cuprous <i>metasulphantimonite</i> , $\text{CuSbS}_3$ . Sol. in mixture of $\text{HNO}_3$ and tartaric acid with separation of S. Insol. in $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by hot $\text{KOH}$ and alkali sulphides + $\text{Aq}$ . (Sommer- lad, Z. anorg. 1898, 18. 430.) Min. <i>Wolfsbergite</i> Sol. in $\text{HNO}_3 + \text{Aq}$ with separation of S and $\text{Sb}_2\text{O}_3$ .	Lithium silver <i>orthosulphantimonite</i> , $\text{LiAg}_2\text{SbS}_4$ . Decomp. by $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 551.)
Cuprous <i>orthosulphantimonite</i> , $\text{Cu}_2\text{SbS}_4$ . (Sommerlad, Z. anorg. 1898, 18. 432.) Ppt. Insol. in $\text{H}_2\text{O}$ . Decomp. by $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 556.)	Manganous <i>orthosulphantimonite</i> , $\text{Mn}_2\text{Sb}_2\text{S}_4$ . Ppt. Sl. sol. in $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 553.)
Cuprous sulphantimonite, $\text{Cu}_2\text{Sb}_2\text{S}_7$ . Min. <i>Guejarite</i> .	Manganous potassium <i>orthosulphantimonite</i> , $\text{MnKSbS}_2$ . Sl. sol. in $\text{H}_2\text{O}$ . Decomp. by $\text{H}_2\text{O}$ . (Pou- get, A. ch. 1899, (7) 18. 553.)
Cupric <i>orthosulphantimonite</i> , $\text{Cu}_2\text{Sb}_2\text{S}_4$ . Ppt. (Pouget, A. ch. 1899, (7) 18. 557.)	
Cuprous lead sulphantimonite, $\text{Cu}_2\text{SbS}_2$ , $2\text{PbSbS}_3$ . Min. <i>Bourmonite</i> . Decomp. by $\text{HNO}_3 +$ $\text{Aq}$ , and aqua regia.	

**Nickel orthosulphantimonite,  $\text{NiSb}_2\text{S}_4$** 

Ppt. (Pouget, A. ch. 1899, (7) 18. 554.)

**Potassium metasulphantimonite,  $\text{KSbS}_3$** Insol. in cold  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 513.)+  $1\frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , but decomp. quickly.Sol. in  $\text{H}_2\text{O}$ . (Stanek, Z. anorg. 1898, 17. 119.)**Potassium orthosulphantimonite,  $\text{K}_2\text{SbS}_2$** 

Very deliquescent.

Very sol in  $\text{H}_2\text{O}$ 

Decomp. by acids (Pouget, A. ch. 1899, (7) 18. 518.)

**Potassium sulphantimonite,  $\text{K}_2\text{Sb}_2\text{S}_7 + 3\text{H}_2\text{O}$** Sl. sol. in  $\text{H}_2\text{O}$  and not decomp. thereby. (Pouget, A. ch. 1899, (7) 18. 522.)

Decomp. in the air.

Sol. in  $\text{K}_2\text{S} + \text{Aq.}$  (Stanek, Z. anorg. 1898, 17. 120.) $2\text{K}_2\text{S}, \text{Sb}_2\text{S}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 102. 68.) $2\text{K}_2\text{S}, 7\text{Sb}_2\text{S}_3$ . Deliquescent. When  $\text{K}_2\text{S}$  is in excess, sol in  $\text{H}_2\text{O}$ , when  $\text{Sb}_2\text{S}_3$  is in excess, partially sol. Aqueous solution is decomp. by all acids, even  $\text{CO}_2$ , and by  $\text{K}_2\text{CO}_3$ ,  $\text{Na}_2\text{CO}_3$ ,  $\text{NaHCO}_3$ ,  $\text{KHCO}_3$ ,  $\text{NH}_4\text{HCO}_3 + \text{Aq.}$  Insol. in absolute alcohol. (Kohl.)**Potassium hydrogen sulphantimonite,  $\text{KHSb}_2\text{S}_7$** 

(Pouget, A. ch. 1899, (7) 18. 522.)

**Potassium silver orthosulphantimonite,  $\text{Ag}_3\text{KSbS}_3$** Decomp. by boiling  $\text{H}_2\text{O}$  (Pouget, C. R. 1897, 124. 1519.)**Potassium zinc orthosulphantimonite,  $\text{KZnSbS}_3$** Decomp. by  $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 552.)**Silver orthosulphantimonite,  $\text{Ag}_3\text{SbS}_3$** Ppt. Sl. sol. in  $\text{H}_2\text{O}$ . (Pouget, A. ch. 1899, (7) 18. 547.)Min. *Pyrgaryrite*. Sol. in  $\text{HNO}_3 + \text{Aq}$  with residue of S and  $\text{Sb}_2\text{O}_3$ .  $\text{KOH} + \text{Aq}$  dissolves out  $\text{Sb}_2\text{S}_3$ .**Silver sulphantimonite.** $\text{AgSbS}_3$ . Min. *Miargyrite*. $5\text{Ag}_2\text{S}, \text{Sb}_2\text{S}_3$ . Min. *Stephanite*. Easily decomp. by warm  $\text{HNO}_3 + \text{Aq}$ . $12\text{Ag}_2\text{S}, \text{Sb}_2\text{S}_3$ . Min. *Polyargyrite*.**Silver sodium orthosulphantimonite,  $\text{Ag}_3\text{NaSbS}_3$** Decomp. by  $\text{H}_2\text{O}$ . Pouget, A. ch. 1899, (7) 18. 551.)**Sodium metasulphantimonite,  $\text{NaSbS}_3$** Deliquescent. Decomp. by hot  $\text{H}_2\text{O}$ . When  $\text{Na}_2\text{S}$  is in excess, sol. in  $\text{H}_2\text{O}$ , but partially sol. if  $\text{Sb}_2\text{S}_3$  is in excess. (Unger, Arch. Pharm. (2) 148. 1.)Ppt. Insol. in  $\text{H}_2\text{O}$ . (Pouget, C. R. 1898, 126. 1145.)**Sodium orthosulphantimonite,  $\text{Na}_2\text{SbS}_3 + 9\text{H}_2\text{O}$** Decomp. in solution in  $\text{H}_2\text{O}$ . (Pouget, C. R. 1898, 126. 1144.)**Sodium sulphantimonite,  $\text{Na}_2\text{Sb}_2\text{S}_7 + 2\text{H}_2\text{O}$** Sol. in  $\text{H}_2\text{O}$  (Pouget, C. R. 1898, 126. 1145.) $\text{Na}_2\text{Sb}_2\text{S}_7$  (Pouget, C. R. 1898, 126. 1144.) $4\text{Na}_2\text{S}, 3\text{Sb}_2\text{S}_3 + 3\text{H}_2\text{O}$ . Permanent; sol. in  $\text{H}_2\text{O}$  Insol. in alcohol and ether. (Kohl.)**Strontium orthosulphantimonite,  $\text{Sr}_2\text{Sb}_2\text{S}_6 + 10\text{H}_2\text{O}$** Sol. in  $\text{H}_2\text{O}$ . (Pouget, C. R. 1898, 126. 1793.)**Strontium pyrosulphantimonite,  $\text{Sr}_2\text{Sb}_2\text{S}_6 + 15\text{H}_2\text{O}$** Sol. in  $\text{H}_2\text{O}$  without essential decomp. (Pouget, C. R. 1898, 126. 1793.)**Zinc orthosulphantimonite,  $\text{Zn}_2\text{Sb}_2\text{S}_6$** 

Ppt. (Pouget, A. ch. 1899, (7) 18. 552.)

**Orthosulpharsenic acid,  $\text{H}_2\text{AsS}_4$** Ppt. Loses  $\text{H}_2\text{S}$  by prolonged boiling with  $\text{H}_2\text{O}$ . (Nilson, J. pr (2) 14. 145.)

See also Sulphoxyarsenic acid.

**Ammonium sulpharsenate,  $(\text{NH}_4)_4\text{As}_2\text{S}_7$** Known only in solution in  $\text{H}_2\text{O}$ . Decomp. on boiling into— $\text{NH}_4\text{AsS}_3$ . Sol. in alcohol. $(\text{NH}_4)_3\text{AsS}_4$ . Sol. in  $\text{H}_2\text{O}$ . Precipitated by alcohol. $(\text{NH}_4)_2\text{S}, 12\text{As}_2\text{S}_3$ . Ppt. Insol. in  $\text{H}_2\text{O}$ .**Ammonium magnesium sulpharsenate,  $(\text{NH}_4)_2\text{S}, \text{MgS}, \text{As}_2\text{S}_3$** **Ammonium sodium sulpharsenate,  $(\text{NH}_4)_2\text{AsS}_4, \text{Na}_2\text{AsS}_4$** Much more sol. in  $\text{H}_2\text{O}$  than  $\text{Na}_2\text{AsS}_4$ ; sl. sol. in cold, more sol. in hot alcohol. (Berzelius.)**Barium sulpharsenate,  $\text{Ba}(\text{AsS}_3)_2$** Sol. in  $\text{H}_2\text{O}$  and alcohol. Decomp. by evaporation. $\text{Ba}_2\text{AsS}_7$ . Sol. in  $\text{H}_2\text{O}$  in all proportions with decomp. Decomp. by alcohol. $\text{Ba}_3(\text{AsS}_4)_2$ . Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. $\text{BaS}, 3\text{As}_2\text{S}_3$ . Ppt. Insol. in  $\text{H}_2\text{O}$ .

Barium potassium sulpharsenate,  
 $\text{KBaAsS}_4 + 6\text{H}_2\text{O}$   
 Easily sol. in  $\text{H}_2\text{O}$ .  
 Decomp. by acids with separation of  $\text{As}_2\text{S}_3$ .  
 (Glitzel, Z. anorg. 1911, 71. 209.)

Barium sulpharsenate sulpharsenite,  
 $\text{Ba}_3(\text{AsS}_4)_2, \text{Ba}_2\text{As}_2\text{S}_5 + 4\text{H}_2\text{O}$ .  
 Sl. sol in cold, more easily in hot  $\text{H}_2\text{O}$ .  
 (Nilson.)

Bismuth sulpharsenate,  $2\text{Bi}_2\text{S}_3, 3\text{As}_2\text{S}_5$ .  
 Sol. in  $\text{Na}_2\text{AsS}_4 + \text{Aq}$ .  
 $\text{Bi}_2\text{S}_3, 3\text{As}_2\text{S}_5$ . As above. (Berzelius.)

Cadmium sulpharsenate.  
 Ppt. (Berzelius, Pogg. 7. 88.)

Calcium sulpharsenate,  $\text{Ca}_2\text{As}_2\text{S}_7$ .  
 Sol. in  $\text{H}_2\text{O}$  and alcohol.  
 $\text{Ca}_2(\text{AsS}_4)_2$ . Easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol.  
 $+10\text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$ . (Nilson, J. pr. (2) 14. 169.)  
 $5\text{CaS}, 2\text{As}_2\text{S}_5 + 6\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ .  
 (Nilson, J. pr. (2) 14. 163.)

Cerous sulpharsenate,  $\text{Ce}_2\text{As}_2\text{S}_7$ .  
 Ppt.  
 $\text{Ce}_2(\text{AsS}_4)_2$ . Ppt.  
 $\text{Ce}_2(\text{As}_2\text{S}_7)_2$ . Ppt.

Cobaltous sulpharsenate,  $\text{Co}_2\text{As}_2\text{S}_7$ .  
 Ppt. Sol. in excess of sodium sulpharsenate + Aq.

Cuprous sulpharsenate,  $\text{Cu}_2\text{As}_2\text{S}_4$ .  
 Ppt. (Preis, A. 257. 201.)  
 Min. *Enargite*. *Clarite*. Not wholly decomp. by  $\text{HCl} + \text{Aq}$  Sol. in  $\text{HCl} + \text{Aq}$  with residue of  $\text{As}_2\text{O}_3$ . Not attacked by  $\text{KOH} + \text{Aq}$ .

Cupric sulpharsenate,  $\text{Cu}_2\text{As}_2\text{S}_7$ .  
 Ppt. Sol. in  $(\text{NH}_4)_2\text{S} + \text{Aq}$ . Decomp. by  $\text{NH}_4\text{OH} + \text{Aq}$ . (Berzelius.)  
 $\text{Cu}_2(\text{AsS}_4)_2$ . Ppt. (Preis, A. 257. 201.)

Glucinum sulpharsenate.  
 Sl. sol. in  $\text{H}_2\text{O}$ .

Gold sulpharsenate,  $\text{AuAsS}_4$ .  
 Sol. in pure  $\text{H}_2\text{O}$  Insol. in  $\text{Na}_2\text{AsS}_4 + \text{Aq}$ .  
 $2\text{Au}_2\text{S}_3, 3\text{As}_2\text{S}_5$ . Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

Iron (ferrous) sulpharsenate,  $\text{Fe}_2\text{As}_2\text{S}_7$ .  
 Ppt. Sol. in  $\text{Na}_2\text{AsS}_4 + \text{Aq}$ . (Berzelius.)

Iron (ferric) sulpharsenate,  $\text{Fe}_2(\text{As}_2\text{S}_7)_2$ .  
 Ppt. Sol. in  $\text{Na}_2\text{AsS}_4 + \text{Aq}$ . (Berzelius.)

Lead sulpharsenate,  $\text{Pb}_2\text{As}_2\text{S}_7$ .  
 Ppt (Berzelius.)  
 $\text{Pb}_2(\text{AsS}_4)_2$ . Ppt.

Lithium sulpharsenate,  $\text{Li}_4\text{AsS}_4$ .  
 Easily sol. in hot, less sol. in cold  $\text{H}_2\text{O}$ .  
 Insol. in alcohol.  
 $\text{Li}_4\text{As}_2\text{S}_5$ . Completely sol. in  $\text{H}_2\text{O}$ .  
 Decomp. by alcohol  
 $\text{LiAsS}_4$ . Known only in acid solution.

Magnesium sulpharsenate,  $\text{Mg}_2\text{As}_2\text{S}_7$ .  
 Sol. in all proportions of  $\text{H}_2\text{O}$ , and in alcohol.  
 $\text{Mg}_2(\text{AsS}_4)_2$ . Sol. in  $\text{H}_2\text{O}$ . Decomp. alcohol.  
 $3\text{MgS}, \text{As}_2\text{S}_5$ . Nearly insol. in  $\text{H}_2\text{O}$ .  
 $5\text{MgS}, 2\text{As}_2\text{S}_5 + 15\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ .  
 (Nilson.)

Manganous sulpharsenate,  $\text{Mn}_2\text{As}_2\text{S}_7$ .  
 Sl. sol. in  $\text{H}_2\text{O}$ .  
 $\text{Mn}_2(\text{AsS}_4)_2$ . Permanent. Sl. sol. in  $\text{H}_2\text{O}$ .  
 $6\text{MnS}, \text{As}_2\text{S}_5$ . Sl. sol. in  $\text{H}_2\text{O}$ .

Mercurous sulpharsenate,  $(\text{Hg}_2)_2\text{As}_2\text{S}_7$ .  
 Ppt.

Mercuric sulpharsenate,  $\text{Hg}_2\text{As}_2\text{S}_7$ .  
 Ppt. (Berzelius, Pogg. 7. 29.)  
 $\text{Hg}_2(\text{AsS}_4)_2$ . Ppt. (Preis, A. 257. 200.)

Nickel sulpharsenate,  $\text{Ni}_2(\text{AsS}_4)_2$ .  
 Ppt. Not decomp. by  $\text{HCl} + \text{Aq}$ . Sol. in  $\text{Na}_2\text{AsS}_4 + \text{Aq}$ . (Berzelius.)  
 $2\text{NiS}, \text{As}_2\text{S}_5$ . As above.

Potassium sulpharsenate,  $\text{KAsS}_4$ .  
 Known only in alcoholic solution.  
 $\text{K}_4\text{As}_2\text{S}_5$ . Deliquescent. Sol. in  $\text{H}_2\text{O}$ , from which alcohol ppts.  $\text{K}_4\text{AsS}_4$ .  
 $\text{K}_4\text{AsS}_4$ . Deliquescent. Very sol. in  $\text{H}_2\text{O}$ , from which it is precipitated by alcohol.  
 $+ \text{H}_2\text{O}$ . Very deliquescent. (Nilson, J. pr. (2) 14. 160.)

Potassium sodium sulpharsenate.  
 Sol. in  $\text{H}_2\text{O}$ .

Silver sulpharsenate,  $\text{Ag}_2\text{As}_2\text{S}_7$ .  
 Ppt. (Berzelius, Pogg. 7. 29.)  
 $\text{Ag}_2\text{As}_2\text{S}_7$ . Ppt.

Sodium sulpharsenate,  $\text{NaAsS}_4$ .  
 Known only in alcoholic solution.  
 $\text{Na}_4\text{As}_2\text{S}_5$ . Sol. in  $\text{H}_2\text{O}$ . Alcohol ppts.  $\text{Na}_2\text{AsS}_4$  from  $\text{H}_2\text{O}$  solution.  
 $\text{Na}_2\text{AsS}_4 + 7\frac{1}{2}\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ , from which it is precipitated by alcohol.  
 $+ 8\text{H}_2\text{O}$ . Insol. in alcohol; very sol. in  $\text{H}_2\text{O}$ . (McCay, Z. anal. 1895, 34. 726.)  
 $+ 9\text{H}_2\text{O}$ . (Nilson, J. pr. (2) 14. 160.)  
 $\text{Na}_2\text{S}, 12\text{As}_2\text{S}_5$  (?). Insol. in  $\text{H}_2\text{O}$ .

Sodium zinc sulpharsenate,  $\text{NaZnAsS}_4 + 4\text{H}_2\text{O}$ .  
 Sol. in hot  $\text{H}_2\text{O}$  with decomp. (Preis, A. 257. 202.)

**Strontium sulpharsenate,  $\text{Sr}_2(\text{AsS}_4)_2$ .**

Easily sol in  $\text{H}_2\text{O}$ ; insol. in alcohol.  
 $\text{Sr}_2\text{As}_2\text{S}_7$ . Easily sol in  $\text{H}_2\text{O}$ , from which alcohol ppts.  $\text{Sr}_2(\text{AsS}_4)_2$

**Strontium sulpharsenate sulpharsenite,**

$\text{Sr}_2(\text{AsS}_4)_2$ ,  $\text{Sr}_2\text{As}_2\text{S}_4 + 4\text{H}_2\text{O}$   
 Easily sol. in  $\text{H}_2\text{O}$ . (Nilson, J. pr (2) 14. 162.)

**Thallous sulpharsenate,  $\text{Tl}_2\text{AsS}_4$ .**

Not decomp. by  $\text{H}_2\text{O}$ . Decomp. by dil. acids. Insol. in dil. alkali sulphides. Partially decomp. by boiling with a conc solution of sodium sulphide (Hawley, J. Am. Chem. Soc. 1907, 29. 1013)

**Tin (stannous) sulpharsenate.**

Ppt.

**Tin (stannic) sulpharsenate.**

Ppt.

**Uranic sulpharsenate,  $2\text{U}_2\text{S}_5$ ,  $\text{As}_2\text{S}_5$ .**

Ppt. Sol. in  $\text{Na}_2\text{AsS}_4 + \text{Aq.}$

**Zinc sulpharsenate,  $\text{Zn}_2(\text{AsS}_4)_2$ .**

Ppt (Berzelius)  
 $2\text{ZnS}$ ,  $\text{As}_2\text{S}_5$  Ppt. (Berzelius)  
 $\text{ZnS}$ ,  $\text{As}_2\text{S}_5$  (Wohler)

**Disulpharsenic acid.**

See Disulphoxyarsenic acid.

**Sulpharseniosulphomolybdic acid.****Ammonium sulpharseniosulphomolybdate,**  
 $(\text{NH}_4)_4\text{As}_2\text{S}_7(\text{MoS}_4)_2 + 5\text{H}_2\text{O}$ .

Very unstable.  
 Sol. in  $\text{H}_2\text{O}$  with decomp. (Weinland, Z anorg. 1897, 15. 49.)

**Barium —,  $\text{Ba}_2\text{As}_2\text{S}_7(\text{MoS}_4)_2 + 14\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp. (Weinland.)

**Potassium —,  $\text{KAsS}_2(\text{MoS}_4) + 4\text{H}_2\text{O}$** 

(Weinland.)  
 $\text{K}_4\text{As}_2\text{S}_7(\text{MoS}_4)_2 + 8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .  
 Decomp. by mineral acids. Insol. in alcohol. (Weinland.)

**Sodium —,  $\text{NaAsS}_2(\text{MoS}_4) + 6\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{NaOH}$  and  $\text{NH}_3 + \text{Aq.}$  (Weinland.)  
 $\text{Na}_4\text{As}_2\text{S}_7(\text{MoS}_4)_2 + 14\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ .  
 Decomp. by mineral acids. (Weinland.)

**Sulpharseniosulphoxymolybdic acid.****Barium sulpharseniosulphoxymolybdate,**  
 $\text{Ba}_4\text{As}_2\text{S}_7(\text{Mo}_2\text{S}_2\text{O}_4) + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1897, 15. 60.)

**Magnesium sulpharseniosulphoxymolybdate,**  
 $\text{Mg}_2\text{As}_2\text{S}_7(\text{Mo}_2\text{S}_2\text{O}_4) + 16\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Weinland)

**Potassium —,  $\text{KAsS}_2(\text{MoS}_4) + 2\frac{1}{2}\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp. (Weinland.)  
 $\text{K}_4\text{As}_2\text{S}_7(\text{Mo}_2\text{S}_2\text{O}_4) + 6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Weinland)  
 $+ 10\text{H}_2\text{O}$ . (Weinland)

**Sodium —,  $\text{NaAsS}_2(\text{MoS}_4) + 5\text{H}_2\text{O}$** 

Sl. sol. in cold, very sol. in hot  $\text{H}_2\text{O}$ . (Weinland)  
 $\text{Na}_4\text{As}_2\text{S}_7(\text{Mo}_2\text{S}_2\text{O}_4) + 15\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Weinland.)

**Sulpharsenious acid.****Ammonium sulpharsenite,  $\text{NH}_4\text{As}_2\text{S}_5 + 2\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Ppt. Sol. in  $\text{KOH}$  or  $\text{NH}_4\text{OH} + \text{Aq.}$  Sl. attacked by boiling  $\text{HCl} + \text{Aq.}$  (Nilson, J. pr (2) 14. 42.)  
 $(\text{NH}_4)_4\text{As}_2\text{S}_5 = 2(\text{NH}_4)_2\text{S}$ ,  $\text{As}_2\text{S}_5$  Sol. in  $\text{H}_2\text{O}$ , from which alcohol ppts.  $(\text{NH}_4)_2\text{AsS}_3$ .  
 $(\text{NH}_4)_2\text{AsS}_3 = 3(\text{NH}_4)_2\text{S}$ ,  $\text{As}_2\text{S}_5$ . Decomp. on air; sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol  
 $(\text{NH}_4)_2\text{As}_2\text{S}_5$  Sol. in  $\text{H}_2\text{O}$ . (Nilson, J. pr. (2) 14. 160)

**Barium sulpharsenite,  $\text{Ba}_2\text{As}_2\text{S}_5$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by alcohol.  
 $+ 5\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Nilson, J. pr. (2) 14. 46)  
 $+ 15\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$ . (Nilson.)  
 $\text{Ba}_2(\text{AsS}_3)_2$ . Sl. sol. in  $\text{H}_2\text{O}$ . Precipitated by alcohol.  
 $+ 14\text{H}_2\text{O}$ . Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . (Nilson.)  
 $\text{Ba}(\text{AsS}_3)_2 + 2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Nilson, J. pr. (2) 14. 44)  
 $\text{BaAs}_2\text{S}_5$ . Insol. in  $\text{HCl} + \text{Aq}$  (Nilson.)

**Bismuth sulpharsenite,  $2\text{Bi}_2\text{S}_3$ ,  $\text{As}_2\text{S}_5$ .**

Ppt.

**Cadmium sulpharsenite.**

Ppt. (Berzelius, Pogg. 7. 146.)

**Calcium sulpharsenite,  $\text{Ca}_2\text{As}_2\text{S}_5$ .**

Sol. in  $\text{H}_2\text{O}$ , from which alcohol ppts.  $\text{Ca}_2(\text{AsS}_3)_2$ .  
 $\text{Ca}_2(\text{AsS}_3)_2$ . Sol. in  $\text{H}_2\text{O}$ .  
 $+ 15\text{H}_2\text{O}$ . Precipitated by alcohol  
 $\text{Ca}(\text{AsS}_3)_2 + 10\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Nilson, J. pr. (2) 14. 54.)  
 $\text{CaAs}_2\text{S}_5 + 10\text{H}_2\text{O}$  (?). Insol. in cold  $\text{H}_2\text{O}$ .  
 Decomp. by hot  $\text{H}_2\text{O}$ . (Nilson.)  
 $\text{CaAs}_2\text{S}_5 + 10\text{H}_2\text{O}$  (?). Sl. sol. in hot  $\text{H}_2\text{O}$ . (Nilson.)  
 $\text{Ca}_7\text{As}_2\text{S}_{18} + 25\text{H}_2\text{O}$  Sl. sol. in cold or hot  $\text{H}_2\text{O}$ . (Nilson.)

**Cerous sulpharsenite,  $\text{Ce}_2\text{As}_2\text{S}_5$ .**

Ppt.

Chromic sulpharsenite, $2\text{Cr}_2\text{S}_3, 3\text{As}_2\text{S}_3$ . Ppt. Insol. in $\text{Na}_2\text{S} + \text{Aq.}$	Platinum sulpharsenite, $\text{Pt}_2\text{As}_2\text{S}_3$ Ppt
Cobaltous sulpharsenite, $2\text{CoS}, \text{As}_2\text{S}_3$ . Ppt. Sol. in excess of sodium sulpharsenite + Aq.	Potassium sulpharsenite, $\text{K}_4\text{As}_2\text{S}_3$ . Decomp. by $\text{H}_2\text{O}$ or alcohol. (Berzelius.) $\text{K}_3\text{As}_2\text{S}_3$ . Sol. in $\text{H}_2\text{O}$ . Insol. in alcohol. (Berzelius.) $\text{K}_2\text{As}_2\text{S}_3$ . Sol. in $\text{H}_2\text{O}$ and alcohol. (Berzelius.) $\text{K}_3\text{As}_2\text{S}_3$ . Decomp. by $\text{H}_2\text{O}$ . (Berzelius.) $+2\frac{1}{2}\text{H}_2\text{O}$ . Not wholly sol. in $\text{H}_2\text{O}$ . (Nilson, J. pr. (2) 14. 30.) $\text{KAs}_2\text{S}_3 + 8\text{H}_2\text{O}$ . (Nilson.) $\text{KAs}_2\text{S}_3 + \text{H}_2\text{O}$ . Insol. in $\text{H}_2\text{O}$ . Slowly attacked by hot $\text{HCl} + \text{Aq.}$ Sol. in $\text{KOH} + \text{Aq.}$ (Nilson.)
Cuprous sulpharsenite, $3\text{Cu}_2\text{S}, 2\text{As}_2\text{S}_3 = \text{Cu}_3\text{As}_2\text{S}_6$ . Min. <i>Bismite</i> . Decomp. by hot acids and $\text{KOH} + \text{Aq.}$ $2\text{Cu}_2\text{S}, \text{As}_2\text{S}_3 = \text{Cu}_3\text{As}_2\text{S}_6$ . Decomp. by acids, $\text{KOH}$ and $\text{K}_2\text{S} + \text{Aq.}$ (Sommerlad, Z. anorg. 1898, 18. 434.)	Silver sulpharsenite, $12\text{Ag}_3\text{S}, \text{As}_2\text{S}_3$ . Ppt (Sommerlad, Z. anorg. 1898, 18. 428.) $5\text{Ag}_3\text{S}, \text{As}_2\text{S}_3 = \text{Ag}_4\text{As}_2\text{S}_6$ . (Sommerlad.) $\text{Ag}_3\text{AsS}_3$ . Min. <i>Proustite</i> . Sol. in $\text{HNO}_3 + \text{Aq.}$ $\text{KOH} + \text{Aq.}$ dissolves out $\text{Sb}_2\text{S}_3$ . (Senarmont, A. ch. (3) 32. 129; Wöhler, A. 27. 159.) $2\text{Ag}_3\text{S}, \text{As}_2\text{S}_3$ . Partially sol. in $\text{HNO}_3 + \text{Aq.}$ (Berzelius.) $\text{AgAsS}_3$ . (Berzelius, Pogg. 7. 150.)
Cupric sulpharsenite, $\text{Cu}_4\text{As}_2\text{S}_6$ . Insol. in $\text{H}_2\text{O}$ or $\text{HCl} + \text{Aq.}$ Sol. in $\text{Na}_2\text{AsS}_3 + \text{Aq.}$ $\text{Cu}_3\text{As}_2\text{S}_6$ . Ppt (Berzelius.)	Sodium sulpharsenite, $\text{NaAsS}_3 + \frac{1}{2}\text{H}_2\text{O}$ . Attacked by $\text{HCl} + \text{Aq.}$ with difficulty. (Nilson, J. pr. (2) 14. 37.) $+1\frac{1}{2}\text{H}_2\text{O}$ . Forms coagulum with cold, sol. in hot $\text{H}_2\text{O}$ . (Nilson.) $\text{Na}_2\text{As}_2\text{S}_3 + 6\text{H}_2\text{O}$ . Sol. in much $\text{H}_2\text{O}$ ; not easily decomp. by $\text{HCl} + \text{Aq.}$ (Nilson.) $\text{NaAs}_2\text{S}_6 + 4\text{H}_2\text{O}$ Ppt (Nilson, J. pr. (2) 14. 3.)
Iron (ferrous) sulpharsenite. Ppt. Sol. in $\text{Na}_2\text{AsS}_3 + \text{Aq.}$ (Berzelius.)	Strontium sulpharsenite, $3\text{SrS}, \text{As}_2\text{S}_3 + 15\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O} + \text{Aq.}$ ; insol. in alcohol (Voigt and Götting.) $2\text{SrS}, \text{As}_2\text{S}_3$ . Sol. in $\text{H}_2\text{O}$ ; decomp. by alcohol. $+15\text{H}_2\text{O}$ . (Nilson, J. pr. (2) 14. 53.) $\text{Sr}(\text{AsS}_2)_2 + 2\frac{1}{2}\text{H}_2\text{O}$ . Sl. sol. in $\text{H}_2\text{O}$ . (Nilson.)
Iron (ferric) sulpharsenite. Ppt. Sol. in excess of a ferric salt, or $\text{Na}_2\text{AsS}_3 + \text{Aq.}$ (Berzelius.)	Thallous sulpharsenite, $\text{TlAsS}_3$ . Ppt. Decomp. by $\text{KOH} + \text{Aq.}$ (Gunning, J. B. 1868. 247.) Above compound is a mixture of $\text{As}_2\text{S}_3$ and $\text{Tl}_2\text{S}$ . (Hawley, J. Am. Chem. Soc. 1907, 29. 1012.) Min. <i>Lorandite</i> (Kuenner and Loezka, C. C. 1904, II. 844.)
Lead sulpharsenite, $\text{Pb}_2\text{As}_2\text{S}_6$ . Ppt. Min. <i>Dufrenoyite</i> $\text{Pb}(\text{AsS}_2)_2 = \text{PbS}, \text{As}_2\text{S}_3$ . Min. <i>Sartorite</i> . $\text{Pb}_4\text{As}_2\text{S}_7$ . Min. <i>Jordanite</i> .	Tin (stannous) sulpharsenite, $\text{Sn}_2\text{As}_2\text{S}_3$ . Ppt.
Lithium sulpharsenites. Resemble K salts	Tin (stannic) sulpharsenite, $\text{SnAs}_2\text{S}_3$ . Ppt. (Berzelius, Pogg. 7. 147.)
Magnesium sulpharsenite, $\text{Mg}_3\text{As}_2\text{S}_6$ . Almost completely sol. in $\text{H}_2\text{O}$ . Easily sol. in alcohol. (Berzelius.) $+8\text{H}_2\text{O}$ . Sl. sol. in $\text{H}_2\text{O}$ . (Nilson.) $\text{Mg}(\text{AsS}_2)_2 + 5\text{H}_2\text{O}$ . Slowly sol. in both cold and hot $\text{H}_2\text{O}$ . (Nilson, J. pr. (2) 14. 59.) $\text{Mg}_3(\text{AsS}_2)_2 + 9\text{H}_2\text{O}$ . (Nilson.)	Uranic sulpharsenite, $2\text{U}_2\text{S}_3, \text{As}_2\text{S}_3$ . Ppt.
Manganous sulpharsenite, $\text{Mn}_2\text{As}_2\text{S}_6$ . Ppt. Decomp. by $\text{HCl} + \text{Aq.}$	
Mercurous sulpharsenite, $(\text{Hg}_2)_2\text{As}_2\text{S}_6$ . Ppt (Berzelius.)	
Mercuric sulpharsenite, $\text{Hg}_2\text{As}_2\text{S}_6$ . Ppt. $\text{Hg}(\text{AsS}_2)_2$ . Ppt. (Berzelius, Pogg. 7. 140.)	
Nickel sulpharsenite, $\text{Ni}_3(\text{AsS}_2)_2$ . Ppt. (Berzelius.)	

**Zinc sulpharsenite.**

Ppt (Berzelius, Pogg. 7. 145)

**Zirconium sulpharsenite,  $2\text{Zr}_2\text{S}_3, \text{As}_2\text{S}_3$ .**Ppt. Insol. in solutions of alkali sulpharsenites. Sl. sol. in  $\text{Na}_2\text{S}$  Aq Not decomp. by acids (Berzelius.)**"Sulphatammon,"  $2\text{NH}_3, \text{SO}_2$ .**

(Rose.)

Is ammonium imidosulphonate, which see. (Berglund.)

**"Parasulphatammon,"  $3\text{NH}_3, 2\text{SO}_2$ .**

(Rose)

Is basic ammonium imidosulphonate, which see. (Berglund.)

**Sulphatiodic acid.****Potassium sulphatiodate,  $\text{K}_2\text{HO}_2\text{SIO}_4$  or  $\text{KIO}_3, \text{KHSO}_4$ .**Decomp. by  $\text{H}_2\text{O}$ . (Blomstrand, J. pr. (2) 40. 317.)

See Iodate sulphate, potassium.

**Sulphatooctamine cobaltic carbonate**Sol. in  $\text{H}_2\text{C}$ . (Vortmann and Blasberg, B. 22. 2650.) $(\text{SO}_4)_2\text{Co}_2(\text{NH}_3)_2(\text{CO}_2)_2 + 8\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (V. and B.)

See Carbonatotetramine cobaltic sulphate. (Jørgensen.)

**Sulphatoplatinamine sulphate,**Easily sol. in  $\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ .**Sulphatoplatinamine sulphate,**Insol. in  $\text{H}_2\text{O}$ .**Sulphatopurplecobaltic bromide,**Sol. in  $\text{H}_2\text{O}$ , from which it is precipitated by conc.  $\text{HBr} + \text{Aq}$ . (Jørgensen, J. pr. (2) 25. 94.)— carbonate,  $[(\text{SO}_4)\text{Co}(\text{NH}_3)_2]_2\text{CO}_2 + 4\text{H}_2\text{O}$ .Sol. in  $\text{H}_2\text{O}$ . (Vortmann and Blasberg, B. 22. 2648.)— chloroplatinate,  $2\text{Co}(\text{SO}_4)(\text{NH}_3)_2\text{Cl}$ ,  $\text{PtCl}_4 + 2\text{H}_2\text{O}$ .Sl. sol. in cold  $\text{H}_2\text{O}$ . (Jørgensen.)— nitrate,  $\text{Co}(\text{SO}_4)(\text{NH}_3)_2(\text{NO}_3)$ .Somewhat sl. sol. in cold  $\text{H}_2\text{O}$ . (Jørgensen.)**Sulphatopurplecobaltic sulphate,**Very easily sol. in  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 25. 94.) $\text{Co}(\text{SO}_4)(\text{NH}_3)_2(\text{HSO}_4) + 2\text{H}_2\text{O}$  Sol. in about 25 pts. of cold  $\text{H}_2\text{O}$ . Sol. in dil., insol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . (Jørgensen.)**Sulphazic acid,  $\text{H}_2\text{S}_2\text{N}_2\text{O}_3 =$** 

Known only in its salts. (Raschig, A. 241. 161.)

**Potassium sulphazate,  $\text{K}_2\text{HS}_2\text{N}_2\text{O}_3 =$** Sol. in  $\text{H}_2\text{O}$ , but decomp. on standing. (Raschig, A. 241. 161.)**Sulphazidic acid.**

(Fremy)

See Hydroxylamine monosulphonic acid.

**Sulphazilinic acid.**

See Oxyulphazotic acid.

**Metasulphazilinic acid.**

See Trisulphoxyazotic acid.

**Sulphazinous acid.**

(Fremy.)

See Dihydroxylamine sulphonic acid.

**Sulphazotic acid,  $\text{H}_2\text{N}_2\text{S}_4\text{O}_{14} =$** 

Known only in its salts. (Claus, A. 158. 52 and 194.) Has the formula

(Raschig, A. 241. 161.)

**Lead potassium sulphazotate.**Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . Insol. in alcohol and ether. (Fremy, A. ch. (3) 15. 439.)**Potassium sulphazotate,  $\text{K}_2\text{HN}_2\text{S}_4\text{O}_{14} + \text{H}_2\text{O}$** Very sol. in hot, less in cold  $\text{H}_2\text{O}$ . (Raschig, A. 241. 161.) Decomp. gradually by boiling (Claus.) Insol. in alcohol or ether (Fremy, A. ch. (3) 15. 428.)True composition is  $\text{HON}(\text{SO}_2\text{K})_2, \text{KON}(\text{SO}_2\text{K})_2 + \text{H}_2\text{O}$ . Potassium hydroxylamine disulphonate. (Divers and Haga, Chem. Soc. 1900, 77. 432.)

Forms basic salt

 $(\text{SO}_2\text{K})_2\text{NK} < \text{O} > \text{NK}(\text{SO}_2\text{K})_2$ , which is easily sol and decomp. by  $\text{H}_2\text{O}$ . (Raschig.)**Potassium sodium sulphazotate,**Quite easily sol. in  $\text{H}_2\text{O}$ . (Raschig, A. 241. 161.)

**Disulphhydroxyazotic acid,  $\text{ONH}(\text{SO}_2\text{H})_2$ .**

Known only in its salts. (Claus, A. 158, 52 and 194.) Correct composition is hydroxylamine sulphonic acid  $\text{HON}(\text{SO}_2\text{H})_2$ , which see. (Raschig, A. 241. 101.)

**Sulphhydroxylamic acid.**

(Claus.)

See Hydroxylamine monosulphonic acid.

**Disulphhydroxyazotic acid.**

(Claus.)

See Hydroxylamine disulphonic acid.

**Sulphides.**

The sulphides of the alkali metals are sol. in  $\text{H}_2\text{O}$ ; those of the alkali-earth metals are much less sol., and are decomp. upon solution into hydrosulphide and hydroxide.

The other sulphides are insol. in  $\text{H}_2\text{O}$ . For each sulphide, see under the respective element.

**Sulphimide,  $\text{SO}_2\text{NH}$** 

See Imidosulphamide.

**Trisulphimide,  $\text{OHSO} \begin{smallmatrix} \text{NSO.OH} \\ \text{NSO.OH} \end{smallmatrix} \text{N}$**   
( $\text{SO}_2\text{NH}$ )<sub>2</sub>.

Sol. in methyl alcohol; sl. sol. in ether; insol. in chloroform and benzene. (Hantzsch B 1901, 34. 3440.)

**Ammonium sulphimide,  $\text{SO}_2\text{N}(\text{NH}_4)$ .**

Sol. in  $\text{H}_2\text{O}$ ; insol. in alcohol. (Traube.)

**Barium —,  $(\text{SO}_2\text{N})_2\text{Ba} + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Traube.)

**Potassium —,  $\text{SO}_2\text{NK}$ .**

Not very sol. in  $\text{H}_2\text{O}$ .

**Silver —,  $\text{SO}_2\text{NAg}$ .**

Sol. in 500–600 pts. cold, more easily in hot  $\text{H}_2\text{O}$ . Sol. in acids.

**Sodium —,  $\text{SO}_2\text{NNa}$ .**

Very sol. in  $\text{H}_2\text{O}$ .

**“Sulphitammion,”  $\text{NH}_4$ ,  $\text{SO}_2$** 

See Thionamic acid.

**Sulphobismuthous acid.****Cuprous sulphobismuthite,  $\text{AuBiS}_2$ .**

Min. *Emplectite*. Sol. in  $\text{HNO}_3 + \text{Aq}$ .

$\text{Cu}_2\text{Bi}_2\text{S}_5$  Min. *Klaprothite*. Completely

sol. in  $\text{HCl} + \text{Aq}$ .

$\text{Cu}_2\text{BiS}_4$  Min. *Wittichenite*. Sol. in  $\text{HCl} + \text{Aq}$  and in  $\text{HNO}_3 + \text{Aq}$ .

**Cuprous lead sulphobismuthite,  $\text{Cu}_2\text{S}$ ,  $2\text{PbS}$ ,  $\text{Bi}_2\text{S}_3$ .**

Min. *Patrinite*.

Sol. in  $\text{HNO}_3 + \text{Aq}$  with residue of S and  $\text{PbSO}_4$ .

**Lead —,  $2\text{PbS}$ ,  $\text{Bi}_2\text{S}_3$ .**

Min. *Cosinite*.

$2\text{PbS}$ ,  $3\text{Bi}_2\text{S}_3$  Min. *Chusovite*.

**Potassium —,  $\text{KBiS}$** 

Decomp. by  $\text{H}_2\text{O}$ .

Sol. in  $\text{HCl} + \text{Aq}$ . (Schneider, Pogg. 1869, 136. 404.)

**Metasulphoboric acid,  $\text{B}_2\text{S}_3\text{H}_2\text{S}$ .**

Decomp. by  $\text{H}_2\text{O}$  and alcohol.

1 pt. is sol. in 5 pts. benzene

1 pt. is “ “ 5 “  $\text{CS}_2$

Very sl. sol. in  $\text{CS}_2$  at  $-20^\circ$ . (Stock, B. 1901, 34. 401.)

**Sulphocarbonic acid.****Ammonium cuprous sulphocarbonate,  $\text{CS}_2\text{CuNH}_4$ .**

This salt was formerly described as cupric sulphocarbonate ammonia,  $\text{CS}_2\text{Cu}$ ,  $\text{NH}_3$ . (Hofmann, B. 1903, 36. 1146.)

**Cuprous potassium sulphocarbonate,  $\text{CS}_2\text{CuK}$ .**

Nearly insol. in cold  $\text{H}_2\text{O}$ .

Somewhat sol. in hot  $\text{H}_2\text{O}$ ,  $\text{NaOH}$  and  $\text{NH}_4\text{OH} + \text{Aq}$  (Hofmann.)

**Cupric sulphocarbonate ammonia,  $\text{CS}_2\text{Cu}$ ,  $\text{NH}_3$ .**

Very sl. sol. in strong  $\text{NH}_4\text{OH} + \text{Aq}$ ; insol. in cold  $\text{H}_2\text{O}$ , sl. sol. in hot  $\text{H}_2\text{O}$ . (Hofmann, Z. anorg. 1897, 14. 295.)

Is ammonium cuprous sulphocarbonate. (Hofmann, B. 1903, 36. 1146.)

**Cuprous sulphocarbonate potassium cyanide,  $\text{CS}_2\text{Cu}_2$ ,  $2\text{KCN} + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  and dil. alkalis on warming. (Hofmann, B. 1903, 36. 1148.)

**Zinc sulphocarbonate ammonia,  $\text{CS}_2\text{Zn}$ ,  $2\text{NH}_3$ .**

Ppt. (Hofmann, Z. anorg. 1897, 14. 277.)

**Sulphochromic acid,  $\text{H}_2\text{CrO}_4$ ,  $\text{SO}_2$ . (?)**

Sol. in  $\text{H}_2\text{O}$ . (Bolley, A. 56. 113.)

$(\text{SO}_2)_2\text{Cr}_2\text{O}_7(\text{OH})_2$ . Sol. in  $\text{H}_2\text{O}$ . All salts even alkali salts are insol. in  $\text{H}_2\text{O}$ . (Recours, Bull. Soc. 1896, (3) 16. 315.)

$[\text{Cr}_2\text{O}_7(\text{OH})_4(\text{SO}_2)_2\text{O}_2]$ ,  $\text{Cr}_2\text{O}_7(\text{OH})_2(\text{SO}_2)_2(\text{OH})_2(\text{OH})_2$ . Sol. in  $\text{H}_2\text{O}$ . (Wyrouboff, Bull. Soc. 1902, (3) 27. 721.)

**Chromium sulphochromate,**

Ppt; decomp by boiling  $\text{H}_2\text{O}$ . (Wyrsohoff, Bull. Soc. 1902, (3) 27. 720)

**Sulphochromous acid.****Ferrous sulphochromite,  $\text{FeCr}_2\text{S}_4$** 

Insol. in  $\text{H}_2\text{O}$ , and nearly so in  $\text{HCl} + \text{Aq}$ . (Gröger, W. A. B. 81, 2. 531.)

**Manganous —,  $\text{MnCr}_2\text{S}_4$ .**

Insol. in  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq}$ . (Gröger.)

**Potassium —,  $\text{K}_2\text{Cr}_2\text{S}_4$** 

Insol. in  $\text{H}_2\text{O}$  and in hot  $\text{HCl} + \text{Aq}$ .

Easily sol. in aqua regia. Slowly sol. in cold, rapidly sol. in hot dil.  $\text{HNO}_3 + \text{Aq}$ . (Milbauer, Z. anorg. 1904, 42. 443)

$\text{K}_2\text{Cr}_2\text{S}_7$ . Stable in the air, sol. in  $\text{HNO}_3$  and aqua regia with decomp. (Schneider, J. pr. 1897, (3) 56. 407.)

**Silver —,  $\text{Ag}_2\text{Cr}_2\text{S}_4$** 

Not attacked by  $\text{HCl} + \text{Aq}$  even on heating. Decomp. by conc.  $\text{HNO}_3$ . (Schneider, J. pr. 1897, (2) 56. 401.)

**Sodium —,  $\text{Na}_2\text{Cr}_2\text{S}_4$** 

Insol. in  $\text{H}_2\text{O}$ . Sl. attacked by dil.  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sol. in cold conc.  $\text{HNO}_3$  or aqua regia. Sol. in hot dil.  $\text{HNO}_3 + \text{Aq}$  (Gröger.)

Sol. in acids with decomp. (Schneider, J. pr. 1897, (3) 56. 415.)

**Zinc —,  $\text{ZnCr}_2\text{S}_4$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in traces in boiling conc.  $\text{HCl}$  or dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$ . (Gröger, W. A. B. 81, 2. 531)

**Sulphocyanhydric acid,  $\text{HSCN}$ .**

Sol. in  $\text{H}_2\text{O}$

Sat.  $\text{HSCN} + \text{Aq}$  has sp. gr. = 1.022. (Portt, 1814.)  $\text{HSCN} + \text{Aq}$  containing 12.7%  $\text{HSCN}$  has sp. gr. 1.040 at  $12.7^\circ$ . (Hermes, Z. Ch. 1866. 417.)

**Sulphocyanides**

Most sulphocyanides are sol. in  $\text{H}_2\text{O}$ , but  $\text{Cu}$ ,  $\text{Pb}$ ,  $\text{Hg}$ , and  $\text{Ag}$  sulphocyanides are insol.

**Aluminium sulphocyanide,  $\text{Al}(\text{SCN})_3$ .**

Known only in solution.

$\text{Al}(\text{SCN})_2(\text{OH})_4$ . Known only in solution (Suida.)

**Aluminium potassium sulphocyanide,**

Very hygroscopic.

Sol. in  $\text{H}_2\text{O}$  and alcohol. (Rosenheim, Z. anorg. 1901, 27. 302.)

**Ammonium sulphocyanide,  $\text{NH}_4\text{SCN}$ .**

Deliquescent, and very sol. in  $\text{H}_2\text{O}$ .

100 pts  $\text{H}_2\text{O}$  dissolve 128.1 pts. at  $0^\circ$  and 162.2 pts. at  $20^\circ$ .

$\text{NH}_4\text{SCN} + \text{Aq}$  sat. at ord. temp. has density of 1.138 and 100 cc. contains 69.16 g.  $\text{NH}_4\text{SCN}$ . (Klason, J. pr. 1887, (2) 36. 67)

By dissolving 90 g.  $\text{NH}_4\text{SCN}$  in 90 g.  $\text{H}_2\text{O}$  at  $17^\circ$ , the temp. falls to  $-12^\circ$  (Clowes, Z. Ch. 1866. 190.)

133 pts  $\text{NH}_4\text{SCN} + 100$  pts  $\text{H}_2\text{O}$  at  $13.2^\circ$  lower the temp.  $31.2^\circ$ . (Rüddorff, B. 2. 68.)

Sol. in liquid  $\text{SO}_2$ . (Walden, B. 1899, 32. 2864)

Difficultly sol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29. 374.)

Very easily sol. in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20. 826)

Easily sol. in alcohol

Easily sol. in acetone. (Krug and M'Elroy. Sl. sol. in benzonitrile. (Naumann, B. 1914, 47. 1369.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Difficultly sol. in ethyl acetate (Naumann, B. 1910, 43. 314.)

**Ammonium bismuth sulphocyanide,**

As K salt. (Rosenheim and Vogelgesang Z. anorg. 1906, 48. 215.)

**Ammonium cadmium sulphocyanide,**

Somewhat deliquescent.

Melts in crystal  $\text{H}_2\text{O}$  at  $25^\circ$ .

Insol. in alcohol. (Grossmann, B. 1902, 35. 2667.)

**Ammonium cadmium molybdenyl sulphocyanide,**

(Maas and Sand, B. 1908, 41. 1513.)

**Ammonium cobaltous sulphocyanide,**

Decomp. in moist air.

Cannot be recryst. from  $\text{H}_2\text{O}$ . (Treadwell, Z. anorg. 1901, 26. 109)

$+ 4\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ .

Sol. in methyl, ethyl and amyl alcohol, in acetone and in ether  $+ \text{Aq}$ .

Can be recryst. from  $\text{H}_2\text{O}$  or alcohol without decomp. (Rosenheim and Cohn, Z. anorg. 1901, 27. 289)

**Ammonium iron (ferric) sulphocyanide,**

Deliquescent, and sol. in  $\text{H}_2\text{O}$  (Krüss and Morait, A. 260, 207)

$3\text{NH}_4\text{SCN}, \text{Fe}(\text{SCN})_3$ . Extremely deliquescent.

**Ammonium mercuric sulphocyanide,**

Easily sol. in  $\text{H}_2\text{O}$ . (Fleischer, A. 179. 228.)

- $\text{NH}_4\text{Hg}(\text{SCN})_2$  Insol. in cold; sol. in hot  $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1901, 27. 284.)
- Ammonium molybdenyl sulphocyanide,**  
 $3\text{NH}_4\text{SCN}$ ,  $\text{Mo}(\text{OH})(\text{SCN})_2 + 3\text{H}_2\text{O}$ .  
 (Sand and Maas, B. 1907, 40. 4507.)
- Ammonium nickel sulphocyanide,**  
 $(\text{NH}_4)_2\text{Ni}(\text{SCN})_2 + 4\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$  with decomp.  
 Sl. sol. in cold; easily sol. in hot alcohol (Rosenheim, Z. anorg. 1901, 27. 292.)
- Ammonium silver sulphocyanide,**  $\text{NH}_4\text{SCN}$ ,  
 $\text{AgSCN}$ .  
 Decomp. by  $\text{H}_2\text{O}$ .
- Ammonium vanadium sulphocyanide,**  
 $\text{V}(\text{SCN})_3$ ,  $3\text{NH}_4\text{SCN} + 4\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ ; sol. in alcohol, sl. sol. in ether. (Croci, Z. anorg. 1898, 19. 311.)
- Ammonium vanadyl sulphocyanide,**  
 $(\text{NH}_4)_2\text{VO}(\text{SCN})_2 + 5\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ , alcohol, ether, acetone, amyl alcohol and ethyl acetate. (Koppel, Z. anorg. 1903, 38. 290.)
- Ammonium zinc sulphocyanide,**  
 $(\text{NH}_4)_2\text{Zn}(\text{SCN})_2 + 3\text{H}_2\text{O}$ .  
 Easily sol. in  $\text{H}_2\text{O}$  and in alcohol. (Walden, Z. anorg. 1900, 23. 374.)  
 $+ 3\text{H}_2\text{O}$  Easily sol. in cold  $\text{H}_2\text{O}$ , acetone, alcohols and ether. (Rosenheim and Huld-schinsky, B. 1901, 34. 3913.)
- Ammonium sulphocyanide mercuric bromide,**  
 $\text{NH}_4\text{SCN}$ ,  $\text{HgBr}_2$ .  
 Very sol. in  $\text{H}_2\text{O}$ .  
 Sol. in alcohol. (Grossmann, B. 1902, 35. 2945.)  
 $2\text{NH}_4\text{SCN}$ ,  $\text{HgBr}_2 + \text{H}_2\text{O}$ . Somewhat deliquescent.  
 Very sol. in  $\text{H}_2\text{O}$ .  
 Sol. in alcohol. (Grossmann.)
- Arsenic sulphocyanide,**  $\text{As}(\text{SCN})_3$ .  
 Decomp. by  $\text{H}_2\text{O}$ . Insol. in all ordinary solvents (Miguel, A. ch. (5) 11. 341.)
- Barium sulphocyanide,**  $\text{Ba}(\text{SCN})_2 + 2\text{H}_2\text{O}$ .  
 Deliquescent. Easily sol. in  $\text{H}_2\text{O}$  and alcohol. Boiling solution in alcohol contains 32.8% anhydrous salt. Solution sat. at  $20^\circ$  contains 30%. (Tscherniak, B. 16. 349.)  
 Cryst. with  $3\text{H}_2\text{O}$ . (Tscherniak, B. 25. 2627.)
- Barium cadmium sulphocyanide,**  
 $4\text{Ba}(\text{SCN})_2$ ,  $\text{Cd}(\text{SCN})_2 + 10\text{H}_2\text{O}$ .  
 Deliquescent. (Grossmann, B. 1902, 38. 2669.)
- Barium caesium cuprous sulphocyanide,**  
 $\text{Ba}(\text{SCN})_2$ ,  $3\text{CsSCN}$ ,  $2\text{CuSCN}$ .  
 Rapidly decomp. by  $\text{H}_2\text{O}$ . (Wells, Am. Ch. J. 1902, 28. 273.)
- Barium caesium silver sulphocyanide,**  
 $\text{Ba}(\text{SCN})_2$ ,  $3\text{CsSCN}$ ,  $2\text{AgSCN}$ .  
 100 pts  $\text{H}_2\text{O}$  dissolve 92 pts. at  $19^\circ$ .  
 Decomp. by much  $\text{H}_2\text{O}$ . (Wells, Am. Ch. J. 1902, 28. 272.)
- Barium cobaltous sulphocyanide,**  
 $\text{BaCo}(\text{SCN})_4 + 8\text{H}_2\text{O}$ .  
 Ppt. (Rosenheim, Z. anorg. 1901, 27. 290.)
- Barium mercuric sulphocyanide,**  
 $\text{BaHg}(\text{SCN})_4$ .  
 Very sol. in  $\text{H}_2\text{O}$  and in alcohol. (Rosenheim, Z. anorg. 1901, 27. 286.)  
 $\text{BaHg}(\text{SCN})_4 + 2\text{H}_2\text{O}$ . Ppt. Nearly insol. in cold, easily sol. in hot  $\text{H}_2\text{O}$ . (Rosenheim.)
- Barium potassium silver sulphocyanide,**  
 $\text{Ba}(\text{SCN})_2$ ,  $4\text{KSCN}$ ,  $2\text{AgSCN} + \text{H}_2\text{O}$ .  
 Very sol. in a little  $\text{H}_2\text{O}$ . Decomp. by much  $\text{H}_2\text{O}$  (Wells, Am. Ch. J. 1902, 28. 283.)
- Barium rubidium silver sulphocyanide,**  
 $\text{BaRb}_2\text{Ag}_2(\text{SCN})_6 + 2\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . (Wells, Am. Ch. J. 1903, 30. 186.)  
 $\text{BaRb}_4\text{Ag}_2(\text{SCN})_8 + \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Wells.)
- Barium silver sulphocyanide,**  $\text{Ba}(\text{SCN})_2$ ,  
 $2\text{AgSCN} + 2\text{H}_2\text{O}$ .  
 Stable in the air. (Wells, Am. Ch. J. 1902, 28. 269.)
- Barium zinc sulphocyanide,**  $\text{BaZn}(\text{SCN})_4$ .  
 $+ 3\text{H}_2\text{O}$ .  
 Easily sol. in alcohol. (Walden, Z. anorg. 1900, 23. 374.)
- Barium sulphocyanide mercuric bromide,**  
 $\text{Ba}(\text{SCN})_2$ ,  $2\text{HgBr}_2 + 5\text{H}_2\text{O}$ .  
 Very sol. in  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1903, 37. 420.)
- Bismuth sulphocyanide, basic,**  
 $\text{Bi}(\text{OH})(\text{SCN})_2 + 5\text{H}_2\text{O}$ .  
 (Rosenheim and Vogelgesang, Z. anorg. 1906, 48. 214.)  
 $\text{Bi}(\text{SCN})_3$ ,  $2\text{Bi}_2\text{O}_3$ . Insol. in  $\text{H}_2\text{O}$ , but when recently pptd. decomp. by boiling therewith. Insol. in  $\text{HSCN} + \text{Aq}$ . (Metzendorf.)
- Bismuth sulphocyanide,**  $\text{Bi}(\text{SCN})_3$ .  
 Insol. or sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ ,  $\text{HCl}$ , and  $\text{HSCN} + \text{Aq}$ . (Metzendorf, Pogg. 58. 53.)

Decomp. by cold  $H_2O$ . (Bender, B. 20 723.)  
 $+14H_2O$ . Extremely deliquescent.  
 Decomp. by  $H_2O$ . (Rosenheim and Vogelgesang, Z. anorg. 1906, 48. 214.)

**Bismuth potassium sulphocyanide,**  
 $K_3Bi(SCN)_4$ .

Decomp. by  $H_2O$ . (Rosenheim and Vogelgesang, Z. anorg. 1906, 48. 215.)

Not hygroscopic.

Decomp. by  $H_2O$ .

Easily sol. in alcohol. (Vanino, Z. anorg. 1901, 28. 220.)

$Bi(SCN)_3$ , 9KSCN. Very hygroscopic.

Decomp. by  $H_2O$ .

Sol. in alcohol. (Vanino, Z. anorg. 1901, 28. 221.)

**Bismuth sodium sulphocyanide,**  
 $Na_3Bi(SCN)_4$ .

As K salt. (Rosenheim and Vogelgesang, Z. anorg. 1906, 48. 215.)

**Boron sulphocyanide,  $B(SCN)_3$ .**

Sol. in benzene and ether. (Cooksedge, Chem. Soc. 1908, (2) 93. 217.)

**Cadmium sulphocyanide,  $Cd(SCN)_2$ .**

Sl. sol. in  $H_2O$ . Sol. in  $NH_4OH$  + Aq with combination.

**Cadmium caesium sulphocyanide,**  
 $CsCd(SCN)_2$ .

Recryst. from  $H_2O$ . (Wells, Am. Ch. J. 1903, 30. 148.)

$Cs_2Cd(SCN)_4 + 2H_2O$ . Very sol. in  $H_2O$ . Can be recryst. from conc. solution but decomp. on dilution to  $CsCd(SCN)_2$ . (Wells.)

**Cadmium caesium silver sulphocyanide,**  
 $Cs_2CdAg_2(SCN)_6$ .

(Wells.)

$+2H_2O$ . (Wells.)

$Cs_2CdAg_2(SCN)_6 + 2H_2O$ . (Wells.)

$Cs_2Cd_2Ag_{10}(SCN)_{20} + 6H_2O$  (Wells.)

**Cadmium mercuric sulphocyanide,  $Cd(SCN)_2$ ,  $Hg(SCN)_2$ .**

Very sol. in hot  $H_2O$ . (Grossmann, Z. anorg. 1903, 37. 414.)

**Cadmium molybdenum sulphocyanide,**  
 $Cd(SCN)_2$ ,  $Mo(SCN)_4 + 2H_2O$ .

(Maas and Sand, B. 1908, 41. 1513.)

$+3H_2O$ . (Maas and Sand.)

**Cadmium molybdenyl potassium sulphocyanide,  $KSCN$ ,  $4Cd(SCN)_2$ ,  $3Mo(OH)(SCN)_3 + 18H_2O$ .**

(Maas and Sand, B. 1908, 41. 1513.)

**Cadmium molybdenyl sulphocyanide ammonia,  $3Cd(SCN)_2$ ,  $2Mo(OH)(SCN)_3$ ,  $18NH_3$ .**

(Maas and Sand, B. 1908, 41. 1512.)

$+2H_2O$ . (Maas and Sand.)

**Cadmium potassium sulphocyanide,**  
 $K_2Cd(SCN)_4 + 2H_2O$ .

Very sol. in  $H_2O$ . (Grossmann, B. 1902, 35. 2668.)

**Cadmium rubidium sulphocyanide,**  
 $Rb_2Cd(SCN)_4 + 2H_2O$ .

Very sol. in  $H_2O$ . (Grossmann, B. 1902, 35. 2668.)

**Cadmium sodium sulphocyanide,**  
 $Na_2Cd(SCN)_4 + 3H_2O$ .

(Grossmann, B. 1902, 35. 2668.)

**Cadmium sulphocyanide ammonia,  $Cd(SCN)_2$ ,  $NH_3$ .**

Decomp. by  $H_2O$ . (Grossmann, B. 1902, 35. 2666.)

$Cd(SCN)_2$ ,  $2NH_3$ . Decomp. by pure  $H_2O$ . (Grossmann.)

**Cadmium sulphocyanide ammonium bromide,**  
 $Cd(SCN)_2$ ,  $NH_4Br + H_2O$ .

Can be recryst. from  $H_2O$ . Decomp. in dil. solution. (Grossmann, Z. anorg. 1903, 37. 425.)

$Cd(SCN)_2$ ,  $2NH_4Br$ . Easily splits off  $NH_4Br$  (Grossmann.)

**Cadmium sulphocyanide ammonium chloride,**  
 $Cd(SCN)_2$ ,  $2NH_4Cl$ .

Can be recryst. from  $H_2O$ . Decomp. in dil. solution. (Grossmann, Z. anorg. 1903, 37. 423.)

**Cadmium sulphocyanide potassium bromide,**  
 $Cd(SCN)_2$ ,  $KBr + H_2O$ .

Recryst. from  $H_2O$ . (Grossmann, Z. anorg. 1903, 37. 425.)

$Cd(SCN)_2$ ,  $2KBr$ . Recryst. from  $H_2O$ . (Grossmann.)

**Cadmium sulphocyanide potassium chloride,**  
 $Cd(SCN)_2$ ,  $2KCl$ .

Recryst. from  $H_2O$ . Decomp. in dil. solution. (Grossmann, Z. anorg. 1903, 37. 423.)

**Cadmium sulphocyanide potassium iodide,**  
 $Cd(SCN)_2$ ,  $2KI$ .

Recryst. from  $H_2O$ . (Grossmann.)

**Caesium calcium silver sulphocyanide,**  
 $2CsSCN$ ,  $Ca(SCN)_2$ ,  $2AgSCN + 2H_2O$ .

Recryst. from  $H_2O$ . (Wells, Am. Ch. J. 1902, 28. 275.)

**Cæsium chromium sulphocyanide.***See Chromisulphocyanide, cæsium.***Cæsium cobaltous sulphocyanide,**Stable in the air. (Shunn and Wells, *Am. Ch. J.* 1903, 29, 476.)**Cæsium cobaltous silver sulphocyanide,**Slowly attacked by  $\text{H}_2\text{O}$ ; decomp. by boiling  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{CsSCN}$  or  $\text{Co}(\text{SCN})_2 + \text{Ag}$ . (Shunn and Wells, *Am. Ch. J.* 1903, 29, 478.)**Cæsium cuprous sulphocyanide,  $\text{CsSCN}$ ,  $\text{CuSCN}$ .** $\text{H}_2\text{O}$  separates  $\text{CuSCN}$ . (Roberts, *Am. Ch. J.* 1902, 28, 262.)**Cæsium cuprous nickel sulphocyanide,**Sl. sol. in  $\text{H}_2\text{O}$ . (Roberts and Wells, *Am. Ch. J.* 1902, 28, 277.)**Cæsium cuprous strontium sulphocyanide,**As Ba salt. (Wells, *Am. Ch. J.* 1902, 28, 275.)**Cæsium magnesium silver sulphocyanide,**As Ca comp. (Wells, *Am. Ch. J.* 1902, 28, 275.)**Cæsium manganous silver sulphocyanide,**Rather sl. sol. in  $\text{H}_2\text{O}$ . (Wells.)**Cæsium mercuric sulphocyanide,  $\text{CsSCN}$ ,  $\text{Hg}(\text{SCN})_2.$** Sl. sol. in hot  $\text{H}_2\text{O}$ . (Bristol and Wells, *Am. Ch. J.* 1902, 28, 280.)**Cæsium mercuric sulphocyanide,  $2\text{CsSCN}$ ,  $\text{Hg}(\text{SCN})_2 + \text{H}_2\text{O}.$** Moderately sol. in  $\text{H}_2\text{O}$ , especially when warm. Recryst. without decomp. (Bristol and Wells, *Am. Ch. J.* 1902, 28, 260.)**Cæsium nickel silver sulphocyanide,**Slowly decomp. by hot  $\text{H}_2\text{O}$ . (Wells, *Am. Ch. J.* 1902, 28, 277.)**Cæsium silver sulphocyanide,  $\text{CsSCN}$ ,  $\text{AgSCN}.$** Easily forms supersat. solution. (Wells, *Am. Ch. J.* 1902, 28, 264.) $2\text{CsSCN}$ ,  $\text{AgSCN}$ . Stable in the air. (Wells.) $3\text{CsSCN}$ ,  $\text{AgSCN}$ . Stable in the air. (Wells.)**Cæsium silver strontium sulphocyanide,**

As Ba comp. (Wells.)

**Cæsium silver zinc sulphocyanide,**

(Wells.)

 $\text{Cs}_2\text{ZnAg}(\text{SCN})_3$ . Ppt. Stable in the air. (Wells.) $\text{CsZn}_2\text{Ag}_2(\text{SCN})_3$ . Decomp. by cold, more rapidly by hot  $\text{H}_2\text{O}$ . (Wells.) $\text{CsZn}_2\text{Ag}_2(\text{SCN})_3$ . Slowly decomp. by  $\text{H}_2\text{O}$ . (Wells.)**Cæsium zinc sulphocyanide,  $\text{Cs}_2\text{Zn}(\text{SCN})_4 + 2\text{H}_2\text{O}.$** Moderately sol. in  $\text{H}_2\text{O}$  and can be recryst. therefrom. (Wells.)**Calcium sulphocyanide,  $\text{Ca}(\text{SCN})_2 + 3\text{H}_2\text{O}.$** Deliquescent. Very sol. in  $\text{H}_2\text{O}$  and alcohol.**Calcium silver sulphocyanide,  $\text{Ca}(\text{SCN})_2$ ,  $2\text{AgSCN} + 2\text{H}_2\text{O}.$** 

(Wells.)

**Calcium stannic sulphocyanide,  $\text{CaSn}(\text{SCN})_2 + 7\text{H}_2\text{O}.$** Very sol. in  $\text{H}_2\text{O}$ . Can be recryst. therefrom. Sol. in alcohol and acetone. (Weinland and Barnes, *Z. anorg.* 1900, 62, 258.)**Cerous sulphocyanide,  $\text{Ce}(\text{SCN})_3 + 7\text{H}_2\text{O}.$** Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol (John, *Bull. Soc.* (2) 21, 534.)**Chromous sulphocyanide with  $\text{MSCN}.$** *See Chromosulphocyanide, M.***Chromic sulphocyanide,  $\text{Cr}(\text{SCN})_3.$** Deliquescent, and sol. in  $\text{H}_2\text{O}$ . Somewhat sol. in organic solvents. (Speransky, *C. C.* 1897, I, 141.)*See also Chromisulphocyanhydric acid.***Chromic sulphocyanide with  $\text{MSCN}.$** *See Chromisulphocyanide, M.***Cobaltous sulphocyanide,  $\text{Co}(\text{SCN})_2 + \frac{1}{2}\text{H}_2\text{O}.$** Sol. in  $\text{H}_2\text{O}$  and alcohol; also in ether. Sol. in liquid  $\text{SO}_2$ . (Walden, *B.* 1899, 82, 2864.)

Sol. in acetone. (Krug and M'Elroy.)

Sol. in methyl acetate. (Naumann, *B.* 1900, 42, 3790.) $+ 3\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Rosenheim and Cohn, *Z. anorg.* 1901, 27, 288.)**Cobaltous mercuric sulphocyanide,  $\text{Co}(\text{SCN})_2$ ,  $\text{Hg}(\text{SCN})_2.$** Very sl. sol. in  $\text{H}_2\text{O}$  and dil.  $\text{HCl} + \text{Ag}$ . Easily sol. in  $\text{HNO}_3 + \text{Ag}$ . (Cleve, *J. pr.* 91, 227.)

Cobaltous potassium sulphocyanide,  
 $\text{CoK}_2(\text{SCN})_4$ .

Decomp. by  $\text{H}_2\text{O}$ . (Treadwell, Z. anorg. 1901, 26, 109.)

+4 $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Sol. in methyl, ethyl and amyl alcohol, in acetone and in ether+Aq. Can be recryst. from  $\text{H}_2\text{O}$  or alcohol without decomp. (Rosenheim and Cohn, Z. anorg. 1901, 27, 289.)

Cobaltous silver sulphocyanide,  $\text{CoAg}(\text{SCN})_4$ ,  
 +2 $\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Shunn and Wells, Am. Ch. J. 1903, 29, 476.)

$\text{Ag}_2\text{Co}(\text{SCN})_4$ . Almost unsol. in  $\text{H}_2\text{O}$  and in alcohol. (Rosenheim, Z. anorg. 1901, 27, 291.)

Cobaltous sodium sulphocyanide,  
 $\text{Na}_2\text{Co}(\text{SCN})_4 \cdot 8\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  and in alcohol. (Rosenheim.)

Cobaltous sulphocyanideammonia,  $\text{Co}(\text{SCN})_2$ ,  
 2 $\text{NH}_3$  and  $\text{Co}(\text{SCN})_2$ , 6 $\text{NH}_3$ .

(Peters, B. 1903, 41, 3178.)

$\text{Co}(\text{SCN})_2$ , 4 $\text{NH}_3$ . Sol. in  $\text{H}_2\text{O}$  and alcohol (Sand, B. 1903, 36, 1439.)

Cobaltous sulphocyanide mercuric chloride,  
 $2\text{Co}(\text{SCN})_2$ , 2 $\text{HgCl}_2$ .

(Hantzsch and Shibata, Z. anorg. 1912, 73, 320.)

$2\text{Co}(\text{SCN})_2$ , 3 $\text{HgCl}_2$ . Easily decomp. (Hantzsch and Shibata.)

Cuprous sulphocyanide,  $\text{CuSCN}$

1 l.  $\text{H}_2\text{O}$  at 18° dissolves 0.004 mg. mols. or 0.5 mg.  $\text{CuSCN}$ . (Kohlrausch and Rose, Z. phys. Ch. 1893, 12, 241.)

Insol. in dil. acids. Sl. sol. in cold, easily in warm conc.  $\text{HCl}$ +Aq. Decomp. by conc.  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$ +Aq. Sol. with combination in  $\text{NH}_4\text{OH}$ +Aq. Insol. in  $\text{KSCN}$ +Aq.

Less sol. in  $\text{H}_2\text{SO}_4$  and  $\text{H}_2\text{SO}_4$ +Aq than in  $\text{HNO}_3$ . (Kuhn, Ch. Z. 1908, 32, 1056.)

Sol. in  $\text{Fe}_2(\text{SO}_4)_3$ +Aq. (Johnson, J. Soc. Chem. Ind 1889, 8, 603.)

$\text{KSCN}$ +Aq (85-90 g. in 50 g.  $\text{H}_2\text{O}$ ) dissolves 18 g.  $\text{CuSCN}$ . (Thurnauer, B. 1890, 23, 770.)

Sol. in ether. (Skey, C. N. 1867, 16, 201.)

Cupric sulphocyanide,  $\text{Cu}(\text{SCN})_2$ .

Decomp. by  $\text{H}_2\text{O}$  to cuprous salt. Sol. in warm  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3$ +Aq. Sol. in  $\text{MSCN}$ +Aq, but solutions decomp. by dilution. Sol. in  $\text{NH}_4\text{OH}$ +Aq.

Solubility in  $\text{NH}_4\text{OH}$ +Aq at 25° and at 40°

At 25°.

Sp. gr. 25°/25°	One gram of solution contains			1000 mols. $\text{H}_2\text{O}$ dissolve		Composition of solid salt in contact with solution

(Horn, Am. Ch. J. 1907, 37, 471.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Cuprocupric sulphocyanide,  $\text{Cu}(\text{SCN})_3$ ,  
 $\text{Cu}_2(\text{SCN})_5$ .

Not attacked by hot  $\text{HCl}$ +Aq. Insol. in  $\text{KSCN}$ +Aq.

- Cupric mercuric sulphocyanide,  $\text{CuHg(SCN)}_2$ .  
Almost insol. in cold  $\text{H}_2\text{O}$  and in alcohol;  
sl. sol. in boiling  $\text{H}_2\text{O}$  (Rosenheim, Z. anorg.  
1901, 27. 286.)
- Cuprous potassium sulphocyanide,  $\text{CuSCN}$ ,  
 $6\text{KSCN}$ .  
Deliquescent. Decomp. by  $\text{H}_2\text{O}$ . (Thurn-  
auer, B. 1890, 23. 770.)
- Cuprous sulphocyanide ammonia,  $\text{Cu}_2(\text{SCN})_2$ ,  
 $2\text{NH}_3$ .  
Decomp. in the air. (Richards, Z. anorg.  
1898, 17. 247.)  
 $\text{Cu}_2(\text{SCN})_2$ ,  $5\text{NH}_3$ . Very unstable in the  
air. (Richards.)
- Cupric sulphocyanide ammonia,  $\text{Cu(SCN)}_2$ ,  
 $2\text{NH}_3$ .  
Sol. in little  $\text{H}_2\text{O}$ , but decomp. by dilution  
with pptn. of basic salt. Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$   
By long standing a small amount dissolves  
in  $\text{H}_2\text{O}$  with separation of  $\text{CuSCN}$ . (Litter-  
scheid, Aich. Pharm. 1901, 239. 337.)  
Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  containing  
a small amount of ammonia (Horn, Am.  
Ch. J. 1907, 37. 477.)  
 $\text{Cu(SCN)}_2$ ,  $4\text{NH}_3$ . Very unstable in the  
air.  
Sol. in  $\text{H}_2\text{O}$ , but decomp. by much  $\text{H}_2\text{O}$   
with pptn. of a basic salt. (Horn.)  
100 pts.  $\text{N}/10 \text{ NH}_4\text{OH} + \text{Aq.}$  dissolve 10.4  
pts. anhydrous salt at  $25^\circ$ . (Pudschlies, Dis-  
sert.)  
Loses  $\text{NH}_3$  in the air.  
Sol. in  $\text{H}_2\text{O}$ . (Kohlschutter, B. 1904, 37.  
1156.)  
Decomp. in the air and by  $\text{H}_2\text{O}$  and dil.  
and conc. acids, sol. in cold conc.  $\text{HNO}_3$  and  
 $\text{NH}_4\text{OH} + \text{Aq.}$  Sol. in boiling conc.  $\text{HCl}$ .  
(Richards, Z. anorg. 1898, 17. 250.)
- Didymium sulphocyanide,  $\text{Dy(SCN)}_2 + 6\text{H}_2\text{O}$   
Deliquescent, and sol. in  $\text{H}_2\text{O}$ .
- Erbium sulphocyanide,  $\text{Er(SCN)}_2 + 6\text{H}_2\text{O}$ .  
Deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Höglund.)
- Glucinum sulphocyanide,  $\text{Gl(SCN)}_2$  (?).  
f Sol. in  $\text{H}_2\text{O}$  (Hermes, J. pr. 97. 465.)
- Gold (aurous) potassium sulphocyanide,  
 $\text{AuSCN}$ ,  $\text{KSCN}$ .  
Easily sol. in  $\text{H}_2\text{O}$ , less in absolute alcohol.  
(Cleve, J. pr. 94. 16.)
- Gold (aurous) potassium sulphocyanide  
ammonia,  $\text{KAu(SCN)}_2$ ,  $5\text{NH}_3$ .  
(Peters, B. 1908, 41. 3178.)
- Gold (auric) potassium sulphocyanide am-  
monia,  $\text{KAu(SCN)}_4$ ,  $4\text{NH}_3$ .  
(Peters.)
- Gold (aurous) silver sulphocyanide,  $\text{AuSCN}$ ,  
 $\text{AgSCN}$ .  
Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$
- Gold (auric) potassium sulphocyanide.  
Sol. in  $\text{H}_2\text{O}$ , alcohol, and ether. (Cleve.)
- Gold (aurous) sulphocyanide ammonia,  
 $\text{AuSCN}$ ,  $\text{NH}_3$ .  
Very sl. sol. in cold, decomp. by hot  $\text{H}_2\text{O}$ .
- Iron (ferrous) sulphocyanide,  $\text{Fe(SCN)}_2 + 3\text{H}_2\text{O}$ .  
Very sol. in  $\text{H}_2\text{O}$ , alcohol, or ether.  
Sol. in acetone. (Krug and M'Elroy.)
- Iron (ferric) sulphocyanide,  $\text{Fe(SCN)}_3 + 3\text{H}_2\text{O}$ .  
Deliquescent. Very sol. in  $\text{H}_2\text{O}$ , alcohol,  
or ether. Ether extracts the salt from  
 $\text{Fe(SCN)}_2 + \text{Aq.}$  Decomp. by much  $\text{H}_2\text{O}$   
if pure. Not decomp. by monobasic acids,  
but conc.  $\text{H}_2\text{SO}_4$  and  $\text{H}_3\text{PO}_4$ , also oxalic,  
tartaric, malic, etc., acids destroy the colour.
- Iron (ferric) lithium sulphocyanide,  $\text{Fe(SCN)}_3$ ,  
 $9\text{LiSCN} + 4\text{H}_2\text{O}$ .  
More deliquescent than the other ferric  
sulphocyanides (Krüss and Morahit.)
- Iron (ferrous) mercuric sulphocyanide,  
 $\text{Fe(SCN)}_2$ ,  $\text{Hg(SCN)}_2 + 2\text{H}_2\text{O}$ .  
Moderately sol. in hot  $\text{H}_2\text{O}$  (Cleve, J.  
pr. 91. 227.)
- Iron (ferric) potassium sulphocyanide,  
 $\text{Fe(SCN)}_3$ ,  $3\text{KSCN} + x\text{H}_2\text{O}$ .  
Extremely deliquescent, and sol. in  $\text{H}_2\text{O}$ .  
(Krüss and Morahit.)  
 $\text{Fe(SCN)}_3$ ,  $9\text{KSCN} + 4\text{H}_2\text{O}$ . Hygroscopic.  
Sol. in  $\text{H}_2\text{O}$  without decomp. Insol. in pure  
anhydrous ether, but decomp. by ether con-  
taining traces of  $\text{H}_2\text{O}$  into  $\text{Fe(SCN)}_2$  and  
 $\text{KSCN}$ . (Krüss and Morahit, A. 260. 204.)
- Iron (ferrous) sodium sulphocyanide,  
 $\text{Na}_2\text{Fe(SCN)}_6 + 12\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$  and alcohol. (Rosenheim, Z.  
anorg. 1901, 27. 299.)
- Iron (ferric) sodium sulphocyanide,  $\text{Fe(SCN)}_3$ ,  
 $9\text{NaSCN} + 4\text{H}_2\text{O}$ .  
Less deliquescent than the corresponding  
 $\text{NH}_4$  or  $\text{K}$  salt. (Krüss and Morahit.)  
 $\text{Na}_2\text{Fe(SCN)}_6 + 12\text{H}_2\text{O}$ . (Rosenheim, Z.  
anorg. 1901, 27. 297.)
- Lanthanum sulphocyanide,  $\text{La(SCN)}_3 + 7\text{H}_2\text{O}$ .  
Deliquescent, sol. in  $\text{H}_2\text{O}$ . (Cleve.)
- Lead sulphocyanide, basic,  
 $6\text{PbO}$ ,  $\text{Pb(SCN)}_2 + 2\text{H}_2\text{O}$ . Ppt.  
 $\text{Pb(SCN)}_2$ ,  $\text{PbO} + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ .  
(Stromholm, Z. anorg. 1904, 38. 440.)

**Lead sulphocyanide,  $\text{Pb}(\text{SCN})_2$ .**

Nearly insol. in cold, decomp. by boiling  $\text{H}_2\text{O}$ . (Liebig.)  
Sl. sol. in  $\text{H}_2\text{O}$ .

$4.5 \times 10^{-1}$  g. are dissolved in 1 liter of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46, 603.)

**Lead sulphocyanide bromide,  $\text{Pb}(\text{SCN})_2 \cdot 8\text{PbBr}_2$ .**

(Grissom and Thorp, Am. Ch. J. 10, 219.)

**Lead sulphocyanide chloride,  $\text{PbSCNCl}$** 

Sl. sol. in cold, easily sol. in hot  $\text{H}_2\text{O}$ . (Murtry, Chem. Soc. 55, 50.)

Sol. in  $\text{H}_2\text{O}$ . (Grissom and Thorp, Am. Ch. J. 10, 229.)

**Lead sulphocyanide iodide,  $3\text{Pb}(\text{SCN})_2 \cdot \text{PbI}_2$ .**

Sol. in  $\text{H}_2\text{O}$ . (Grissom and Thorp, Am. Ch. J. 10, 229.)

**Lithium sulphocyanide,  $\text{LiSCN}$ .**

Very deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol. (Hermes, Z. Ch. 1866, 417.)

Sol. in methyl acetate. (Naumann, B. 1909, 42, 3789.)

**Magnesium sulphocyanide,  $\text{Mg}(\text{SCN})_2 \cdot 4\text{H}_2\text{O}$ .**

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$  and alcohol.

**Magnesium stannic sulphocyanide,  $\text{MgSn}(\text{SCN})_2 \cdot 6\text{H}_2\text{O}$ .**

Hygroscopic. Sol. in  $\text{H}_2\text{O}$ , alcohol and acetone. (Weinland and Barnes, Z. anorg. 1909, 62, 258.)

**Manganese sulphocyanide,  $\text{Mn}(\text{SCN})_2 \cdot 8\text{H}_2\text{O}$** 

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$  and alcohol.

**Mercurous sulphocyanide,  $\text{Hg}_2(\text{SCN})_2$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in hot  $\text{HCl} + \text{Aq}$ . Slowly decomp. by hot aqua regia. Sol. in hot  $\text{KSCN} + \text{Aq}$ .

**Mercuric sulphocyanide, basic,  $\text{Hg}(\text{SCN})_2 \cdot 3\text{HgO}$ .**

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ . Insol. in  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3 + \text{Aq}$ . (Fiescher.)

$\text{Hg}(\text{SCN})_2 \cdot 2\text{HgO}$ . Insol. in  $\text{H}_2\text{O}$ . Sl. attacked by acids. (Claus, J. pr. 15, 401.)

**Mercuric sulphocyanide,  $\text{Hg}(\text{SCN})_2$ .**

Very sl. sol. in cold, much more easily in hot  $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{HCl} + \text{Aq}$ . (Crookes, Chem. Soc. 4, 18.)

Solubility in  $\text{H}_2\text{O} = 0.00218$  mol. in 1 l. (Grossmann, Z. anorg. 1904, 43, 358.)

More sol. in  $\text{H}_2\text{O}$  than in alcohol. (Peters, B. 1908, 41, 3180.)

Very sl. sol. in  $\text{H}_2\text{O}$  at  $25^\circ$ . Appreciably sol. only in boiling  $\text{H}_2\text{O}$ . (Jander, Dissert. 1902.)

Sol. in  $\text{Hg}(\text{NO}_3)_2$  or  $\text{KSCN} + \text{Aq}$ , also in  $\text{NH}_4\text{Cl} + \text{Aq}$ . Sol. in many sulphocyanides +  $\text{Aq}$ .

Easily sol. in cold  $\text{HCl}$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{KCl}$  or  $\text{BaCl}_2 + \text{Aq}$ . (Hermes, J. pr. 1866, (1) 97, 477.)

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 829.)

Sl. sol. in benzonitrile. (Naumann, B. 1914, 47, 1369.)

**Mercuric hydrogen sulphocyanide,**

$\text{Hg}(\text{SCN})_2 \cdot 2\text{HSCN}$ .

Easily decomp. (Hermes, Dissert. 1866.)

**Mercuric nickel sulphocyanide,  $\text{Hg}(\text{SCN})_2 \cdot \text{Ni}(\text{SCN})_2 \cdot 2\text{H}_2\text{O}$ .**

Moderately sol. in hot  $\text{H}_2\text{O}$ . (Cleve, J. pr. 91, 227.)

Very sol. in  $\text{MSCN} + \text{Aq}$ . (Orloff, C. C. 1906, I, 1411.)

**Mercuric potassium sulphocyanide,**

$\text{Hg}(\text{SCN})_2 \cdot \text{KSCN}$

Sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Sol. in alcohol and ether. Very sol. in  $\text{NH}_4\text{Cl}$  or  $\text{KCl} + \text{Aq}$ . (Claus.)

$\text{K}_2\text{Hg}(\text{SCN})_4$ . Very sol. in  $\text{H}_2\text{O}$ ; sol. in alcohol.

Insol. in anhydrous ether. (Rosenheim, Z. anorg. 1901, 27, 285.)

**Mercuric rubidium sulphocyanide,**

$\text{Hg}(\text{SCN})_2 \cdot \text{RbSCN}$ .

Sol. in alcohol without decomp. Decomp. by  $\text{H}_2\text{O}$ .

$\text{Hg}(\text{SCN})_2 \cdot 2\text{RbSCN} + \frac{1}{2}\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  without decomp. (Grossmann, B. 1904, 37, 1259.)

**Mercuric sodium sulphocyanide,**

$\text{Na}_2\text{Hg}(\text{SCN})_2$ .

Very hygroscopic. (Rosenheim, Z. anorg. 1901, 27, 286.)

**Mercuric zinc sulphocyanide,  $\text{Hg}(\text{SCN})_2 \cdot \text{Zn}(\text{SCN})_2$ .**

Scarcely sol. in cold  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ . (Cleve.)

**Mercuric sulphocyanide ammonia,**

$2\text{Hg}(\text{SCN})_2 \cdot 3\text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol.

$\text{Hg}(\text{SCN})_2 \cdot 4\text{NH}_3$ . (Peters, B. 1908, 41, 3178.)

**Mercuric sulphocyanide ammonium bromide,**

$\text{Hg}(\text{SCN})_2 \cdot \text{NH}_4\text{Br}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in alcohol. (Grossmann, Z. anorg. 1903, 37, 418.)

Mercuric sulphocyanide ammonium chloride,  $\text{Hg}(\text{SCN})_2, \text{NH}_4\text{Cl}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in warm alcohol from which it can be cryst. (Grossmann.)

Mercuric sulphocyanide bromide,  $\text{HgSCNBr}$ .

Insol. in cold  $\text{H}_2\text{O}$ ; sol. in hot  $\text{H}_2\text{O}$  and in alcohol. (Rosenheim, Z. anorg. 1901, 27, 282.)

Mercuric sulphocyanide chloride,  $\text{HgSCNCl}$ .

Insol. in cold  $\text{H}_2\text{O}$   
Sol. in hot  $\text{H}_2\text{O}$  and alcohol. (Rosenheim.)

Mercuric sulphocyanide potassium bromide,  $\text{Hg}(\text{SCN})_2, 2\text{KBr}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Grossmann, Z. anorg. 1903, 37, 418.)

Mercuric sulphocyanide potassium chloride,  $\text{Hg}(\text{SCN})_2, \text{KCl}$ .

Decomp. by  $\text{H}_2\text{O}$   
Not decomp. by recryst. from warm alcohol (Grossmann.)

Molybdenum sulphocyanide,  $\text{Mo}(\text{SCN})_4(?)$ .

Sol. in  $\text{H}_2\text{O}$  and ether. (Braun, Z. anal. 6, 86.)

Molybdenum potassium sulphocyanide,  $\text{K}_4\text{Mo}(\text{SCN})_4 + 4\text{H}_2\text{O}$

Cryst. from boiling  $\text{H}_2\text{O}$  and alcohol (Chilesotti, Gazz. ch. it 1904, 34, (2) 493.)

Molybdenum sodium sulphocyanide,

$\text{Na}_4\text{Mo}(\text{SCN})_4 + 12\text{H}_2\text{O}$ .  
(Rosenheim, B. 1909, 42, 154.)

Molybdenum thallos sulphocyanide,

$\text{MoTi}_2(\text{SCN})_4$ .  
(Rosenheim and Garfunkel, B. 1908, 41, 2388.)

Molybdenum sulphocyanide zinc amine,

$2\text{Mo}(\text{SCN})_4, 3\text{Zn}(\text{NH}_4)_4$ .  
(Rosenheim and Garfunkel, B. 1908, 41, 2390.)

$2\text{Mo}(\text{SCN})_4(\text{OH}), \text{Zn}_3(\text{NH}_4)_{11}$ . Can be cryst. from boiling  $\text{NH}_4\text{OH} + \text{Aq}$ . An-dried salt probably has the composition  $2\text{Mo}(\text{SCN})_4(\text{OH}), 3\text{Zn}(\text{NH}_4)_4 + 2\text{H}_2\text{O}$ . (Maas and Sand, B. 1908, 41, 1510.)  
 $2\text{Mo}(\text{SCN})_4(\text{OH}), \text{Zn}_3(\text{NH}_4)_{11}$ . (Maas and Sand.)

Nickel sulphocyanide,  $\text{Ni}(\text{SCN})_2$ .

Sol. in  $\text{H}_2\text{O}$ . (Grossmann, B. 1904, 37, 565.)

$+ \frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and alcohol. Insol. in acetone. (Krug and M'Elroy.)

$+ 1\frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Rosenheim and Cohn, Z. anorg. 1901, 27, 292.)

Nickel potassium sulphocyanide,

$\text{K}_4\text{Ni}(\text{SCN})_6 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp.

Sl. sol. in cold, easily sol. in hot alcohol. (Rosenheim, Z. anorg. 1901, 27, 292.)

Nickel sodium sulphocyanide,

$\text{NiNa}_2(\text{SCN})_4 + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp.

Sl. sol. cold, readily sol. hot alcohol. (Rosenheim, Z. anorg. 1901, 27, 292.)

Nickel sulphocyanide ammonia,  $\text{Ni}(\text{SCN})_2, 3\text{NH}_3$ .

(Peters, B. 1908, 41, 3178.)

$\text{Ni}(\text{SCN})_2, 4\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$ .

Platinous sulphocyanide,  $\text{Pt}(\text{SCN})_2(?)$ .

Insol. in  $\text{H}_2\text{O}$ .

See Platinosulphocyanides, and Platinosulphocyanides.

Potassium sulphocyanide,  $\text{KSCN}$ .

Deliquescent. Very sol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 177.2 pts. at  $0^\circ$ , and 217.0 pts. at  $20^\circ$ .

100 g. sat.  $\text{KSCN} + \text{Aq}$  contain 70.5 g.  $\text{KSCN}$  at  $25^\circ$ . (Foote, Z. phys. Ch. 1903, 46, 81.)

150 pts.  $\text{KSCN} + 100$  pts.  $\text{H}_2\text{O}$  at  $10.8^\circ$  lower the temp.  $34.5^\circ$ . (Rüdorff, B. 2, 68.)

Solubility of  $\text{KSCN} + \text{AgSCN}$  at  $25^\circ$ .

% $\text{KSCN}$	% $\text{AgSCN}$	Solid phase
70.53	0 00	$\text{KSCN}$
66.55	9 32	$\text{KSCN} + 2\text{KSCN}, \text{AgSCN}$
64.47	10 62	$2\text{KSCN}, \text{AgSCN}$
61.25	11 76	"
58.34	13 55	"
53.21	17 53	"
50 68	20 43	$2\text{KSCN}, \text{AgSCN} + \text{KSCN}, \text{AgSCN}$
49 43	20 32	$\text{KSCN}, \text{AgSCN}$
32 51	18 34	"
24 68	16 41	"
23.86	16 07	$\text{KSCN}, \text{AgSCN} + \text{AgSCN}$

(Foote, Z. phys. Ch. 1903, 46, 81.)

See also  $\text{AgSCN}$ .

Sol. in alcohol, especially easily if boiling.

Sol. in acetone. (Krug and M'Elroy.)

Sol. in liquid  $\text{SO}_2$ . (Walden, Z. anorg. 1902, 30, 160.)

100 g. acetone dissolve 20.75 g.  $\text{KSCN}$  at  $22^\circ$ , and 20.40 g. at  $58^\circ$ .

100 g. amyl alcohol dissolve 0.18 g.  $\text{KSCN}$  at  $13^\circ$ ; 1.34 g. at  $65^\circ$ ; 2.14 g. at  $100^\circ$ ; 3.15 g. at  $133.5^\circ$ .

100 g. ethyl acetate dissolve 0.44 g.  $\text{KSCN}$  at  $0^\circ$ ; 0.40 g. at  $14^\circ$ ; 0.20 g. at  $79^\circ$ .

100 g. pyridine dissolve 6.75 g.  $\text{KSCN}$  at  $0^\circ$ ; 6.15 g. at  $20^\circ$ ; 4.97 g. at  $58^\circ$ ; 3.88 g. at

97°; 3.21 g at 115°. (Lasceynski, B. 1894, 27. 2285.)

100 g. acetonitrile dissolve 11.31 g. KSCN at 18°. (Naumann and Schier, B. 1914, 47. 249.)

Sl. sol. in benzonitrile (Naumann, B. 1914, 47. 1369.)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3789.)

Potassium molybdenyl sulphocyanide,  $3\text{KSCN}, \text{Mo}(\text{OH})(\text{SCN})_3 + 4\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Sand and Maas, B. 1908, 41. 1506.)

Potassium silver sulphocyanide,  $\text{KSCN}, \text{AgSCN}$ .

Decomp. by  $\text{H}_2\text{O}$ .

See Donk under KSCN.

$2\text{KSCN}, \text{AgSCN}$ . Stable in the air. (Wells, Am. Ch. J. 1902, 28. 265.)

See Donk under KSCN.

$3\text{KSCN}, \text{AgSCN}$  (Wells.)

Potassium stannic sulphocyanide,

$\text{K}_2\text{Sn}(\text{SCN})_6 + 4\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ .

Sol. in alcohol and acetone. (Weinland and Barnes, Z. anorg. 1909, 62. 258.)

Potassium titanyl sulphocyanide,

$2\text{KSCN}, \text{TiO}(\text{SCN})_2 + \text{H}_2\text{O}$ .

Sol. in cold  $\text{H}_2\text{O}$  without immediate decomp. but slowly decomp. (Rosenheim and Cohn, Z. anorg. 1901, 28. 169.)

Potassium vanadium sulphocyanide,

$3\text{KSCN}, \text{V}(\text{SCN})_3 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Sol. in alcohol with a green color. Sl. sol. in ether. (Ciocci, Z. anorg. 1898, 19. 309.)

Sol. in  $\text{H}_2\text{O}$  with decomp; stable in aq. solution in the presence of an excess of KSCN; sol. in alcohol. (Locke, Am. Ch. J. 1898, 20. 604.)

Potassium vanadyl sulphocyanide,

$\text{K}_2\text{VO}(\text{SCN})_4 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ , alcohol, ether, amyl alcohol and ethyl acetate (Koppel, Z. anorg. 1903, 36. 292.)

Potassium zinc sulphocyanide,  $2\text{KSCN},$

$\text{Zn}(\text{SCN})_2 + 3\text{H}_2\text{O}$ .

Easily sol. in alcohol. (Walden, Z. anorg. 1900, 23. 374.)

Potassium sulphocyanide mercuric bromide,  $\text{KSCN}, \text{HgBr}_2$ .

Very sol. in  $\text{H}_2\text{O}$ .

Sol. in alcohol. (Grossmann, B. 1902, 35. 2945.)

$2\text{KSCN}, \text{HgBr}_2$ . Very sol. in  $\text{H}_2\text{O}$ . Sol. in alcohol. (Grossman.)

Potassium sulphocyanide mercuric iodide,  $2\text{KSCN}, \text{HgI}_2$

Undecomp. by solution in conc. alcohol, or in  $\text{KSCN} + \text{Aq}$  (Grossmann, Z. anorg. 1903, 37. 421.)

$+ 2\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (Philipp, Pogg, 1867, 131. 94.)

Silicon sulphocyanide,  $\text{Si}(\text{SCN})_4$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol.

Sol. in  $\text{CS}_2$ ,  $\text{CHCl}_3$  and ligroin. (Reynolds, Proc. Chem. Soc. 1906, 22. 17.)

Silver sulphocyanide,  $\text{AgSCN}$ .

1 l.  $\text{H}_2\text{O}$  dissolves  $1.08 \times 10^{-4}$  g. mols.  $\text{AgSCN}$  at 25°. (Kuster and Thiel, Z. anorg. 1902, 33. 139.)

1 l.  $\text{H}_2\text{O}$  dissolves  $1.25 \times 10^{-4}$  gram-atoms of silver at 25° (Abegg and Cox, Z. phys. Ch. 1903, 46. 11.)

Sl. sol. in  $\text{H}_2\text{O}$  1 liter of sat. solution at 19.96° contains  $1.37 \times 10^{-4}$  g. (Böttger, Z. phys. Ch. 1903, 46. 603.)

6.4 milligrams are dissolved in 1 liter of sat. solution at 100°. (Böttger, Z. phys. Ch. 1906, 56. 93.)

Solubility product of  $\text{AgSCN}$  is 0.49 and  $1.16 \times 10^{-12}$  mols. per l. at 18° and 25° respectively. (Kirschner, Z. phys. Ch. 1912, 79. 245.)

Solubility in  $\text{H}_2\text{O} = 1.2 \times 10^{-4}$  g. mol. per liter at 25°. (A. E. Hill, J. Am. Chem. Soc. 1908, 30. 74.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.00025 g.  $\text{AgSCN}$  at 21°. (Whitby, Z. anorg. 1910, 67. 108.)

Insol. in acids, excepting conc.  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$ . Insol. in dil. sol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$ . Sol. in  $\text{KSCN} + \text{Aq}$ . Insol. in  $\text{AgNO}_3$  or  $\text{NH}_4\text{SCN} + \text{Aq}$ . Sol. in  $\text{Hg}_2(\text{NO}_3)_2 + \text{Aq}$ .

Solubility in KSCN at 25°

Mol. KSCN in 1 litre	g. $\text{AgSCN}$ in 1 litre
1.25	22.34
1.20	19.93
1.12	16.18
1.066	14.10
0.626	2.80
0.573	2.06

(Hellwig, Z. anorg. 1900, 25. 184.)

Solubility in  $\text{N}/10$   $\text{KSCN} + \text{Aq}$  at 18° =  $2.5 \times 10^{-4}$ . (Kirschner, Z. phys. Ch. 1912, 79. 247.)

See also KSCN.

1 l. of a 3-N solution of  $\text{AgNO}_3$  dissolves 0.432 g.  $\text{AgSCN}$  at 25°. Nearly insol. in less dil. solution. (Hellwig, Z. anorg. 1900, 25. 179.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Hamers, Dissert. 1906; Naumann, B. 1910, 43. 314.)

Silver strontium sulphocyanide, $2\text{AgSCN}$ , $\text{Sr}(\text{SCN})_2 + 2\text{H}_2\text{O}$ . Stable in the air. (Wells, Am Ch. J. 1902, 28. 270.)	Zinc sulphocyanide, $\text{Zn}(\text{SCN})_2$ . Less sol. in $\text{H}_2\text{O}$ and alcohol than most other cyanides.
Silver zinc sulphocyanide, $2\text{AgSCN}$ , $\text{Zn}(\text{SCN})_2$ . Decomp. by hot $\text{H}_2\text{O}$ . (Wells)	Zinc sulphocyanide ammonia, $\text{Zn}(\text{SCN})_2$ , $12\text{NH}_3$ . Decomp. by $\text{H}_2\text{O}$ . Sol. in $\text{NH}_4\text{OH} + \text{Aq}$ .
Silver sulphocyanide ammonia, $\text{AgSCN}$ , $2\text{NH}_3$ . Decomp. by $\text{H}_2\text{O}$ .	Sulphocyanoplatinic acid. See Platinosulphocyanhydric acid.
Samarium sulphocyanide, $\text{Sm}(\text{SCN})_3 + 6\text{H}_2\text{O}$ . Very deliquescent. (Cleve.)	Sulphocyanoplatinous acid. See Platinosulphocyanhydric acid.
Sodium sulphocyanide, $\text{NaSCN}$ . Very deliquescent. Very sol. in $\text{H}_2\text{O}$ and alcohol. Sol. in benzonitrile. (Naumann, B 1914, 47. 1369) Sol. in methyl acetate (Naumann, B 1909, 42. 3789.)	Sulphohypophosphoric acid.
Sodium stannic sulphocyanide, $\text{Na}_2\text{Sn}(\text{SCN})_4 + 6\text{H}_2\text{O}$ . Very sol. in $\text{H}_2\text{O}$ . Sol. in alcohol and acetone (Weinland and Barnes, Z. anorg. 1909, 62. 257)	Aluminium sulphohypophosphate, $\text{Al}_3(\text{PS}_2)_3$ . Unstable in the air. Sol. in $\text{H}_2\text{O}$ with decomp. (Friedel, C. R. 1894, 119. 262.)
Sodium vanadium sulphocyanide, $3\text{NaSCN}$ , $\text{V}(\text{SCN})_3 + 12\text{H}_2\text{O}$ . Very hygroscopic. Sol. in $\text{H}_2\text{O}$ and alcohol. (Ciocci, Z. anorg. 1893, 19. 313.)	Cadmium —, $\text{Cd}_3\text{P}_2\text{S}_6$ . Partially decomp. in moist air. Decomp. by $\text{H}_2\text{O}$ , cold $\text{HNO}_3$ or alkalis + Aq. (Ferrand, A. ch. 1899, (7) 17. 423, Bull. Soc 1895, (3) 13. 116.)
Strontium sulphocyanide, $\text{Sr}(\text{SCN})_2 + 3\text{H}_2\text{O}$ . Very deliquescent, and sol. in $\text{H}_2\text{O}$ and alcohol.	Chromium —, $\text{Cr}_2\text{P}_2\text{S}_6$ . Insol. in $\text{HNO}_3$ . Very sl. attacked by aqua regia. (Ferrand)
Strontium stannic sulphocyanide, $\text{SrSn}(\text{SCN})_6 + 12\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ , alcohol and acetone. (Weinland and Barnes, Z. anorg. 1909, 62. 259.)	Cupric —, $\text{Cu}_2\text{P}_2\text{S}_6$ . Ppt. (Friedel, C. R. 1894, 119. 262.)
Thallium sulphocyanide, $\text{TlSCN}$ . Sl. sol. in $\text{H}_2\text{O}$ . 3.15 g. are contained in 1 liter of sat. solution at $20^\circ$ ; 3.905 g. at $25^\circ$ ; 7.269 g. at $39.75^\circ$ . Insol. in alcohol. (Böttger, Z. phys. Ch. 1903, 46. 603.)	Iron (ferrous) —, $\text{Fe}_2\text{P}_2\text{S}_6$ . Sol. in $\text{HNO}_3$ and in a mixture of $\text{HNO}_3$ with $\text{KClO}_3$ (Friedel.)
Titanyl sulphocyanide, $\text{TiO}(\text{SCN})_2 + 2\text{H}_2\text{O}$ . Sol. in cold $\text{H}_2\text{O}$ .	Lead —, $\text{Pb}_2\text{P}_2\text{S}_6$ . • Not decomp. by boiling $\text{H}_2\text{O}$ . (Friedel.)
Tin (stannous) sulphocyanide, $\text{Sn}(\text{SCN})_2$ . Sol. in $\text{H}_2\text{O}$ and alcohol. (Classen, J. pr. 96. 349.) Sol. in cold $\text{H}_2\text{O}$ . (Rosenheim, Z. anorg. 1901, 28. 168.)	Mercuric —, $\text{Hg}_2\text{P}_2\text{S}_6$ . Slowly decomp. by boiling $\text{H}_2\text{O}$ , more rapidly by $\text{KOH} + \text{Aq}$ . (Friedel)
Yttrium sulphocyanide, $\text{Y}(\text{SCN})_3 + 6\text{H}_2\text{O}$ . Not deliquescent. Very sol. in $\text{H}_2\text{O}$ , alcohol, or ether.	Nickel —, $\text{Ni}_2\text{P}_2\text{S}_6$ . Not attacked by boiling $\text{H}_2\text{O}$ or hot or cold acids. Sl. attacked by aqua regia (Ferrand, A. ch. 1899, (7) 17. 416.)
	Silver —, $\text{Ag}_4\text{P}_2\text{S}_6$ . Ppt. (Friedel, C. R. 1894, 119. 263.)
	Tin (stannous) hypophosphate —, $\text{SnPS}_4$ . Decomp. by boiling $\text{H}_2\text{O}$ . Sol. in dil. $\text{KOH} + \text{Aq}$ . (Friedel, C. R. 1894, 119. 264.)
	Tin (stannic) —, $\text{SnP}_2\text{S}_6$ . Easily decomp. by boiling $\text{H}_2\text{O}$ . Sol. in dil. $\text{KOH} + \text{Aq}$ . (Friedel)

**Zinc sulphohypophosphate,  $Zn_2P_2S_4$ .**

Decomp. in moist air. Insol. in  $H_2O$ . Partially decomp. by boiling  $H_2O$ . Violently attacked by  $HNO_3$ . Sol. in aqua regia. Not attacked by  $HCl$ . (Ferrand, A. ch. 1899, (7) 17. 421.)

**Zinc —,  $Zn_2P_2S_8$ .**

Insol. in  $H_2O$ . Partly decomp. by boiling  $H_2O$ . Not decomp. by  $HCl$  or  $HNO_3$ , but by aqua regia (Ferrand, Bull. Soc. 1895, (3) 13. 115.)

**Sulphomolybdic acid.****Ammonium sulphomolybdate,  $(NH_4)_2MoS_4$ .**

Easily sol. in  $H_2O$ ; very sl. sol. in alcohol (Berzelius, Pogg. 83. 261)

**Ammonium cupric sulphomolybdate.**

Sl. sol. in  $H_2O$ . (Debray, C. R. 96. 1616.)

**Barium sulphomolybdate,  $BaMoS_4$ .**

More sol. in  $H_2O$  than  $BaMo_3S_{12}$ . Known only in solution. (Berzelius.)

$BaS$ ,  $3MoS_2 = BaMo_3S_{12}$ . Sl. sol. in cold, easily sol. in hot  $H_2O$ . Not decomp. by conc. cold  $HNO_3 + Aq$ , but more easily by dil.  $HNO_3 + Aq$ . (Berzelius.)

**Cadmium sulphomolybdate.**

Insol. in  $H_2O$ . (Berzelius)

**Cæsium sulphomolybdate,  $Cs_2S$ ,  $3MoS_4 + 7H_2O$ .**

As Rb comp. (Herschfinkel, Dissert 1907.)  $3Cs_2S$ ,  $5MoS_2$  (Herschfinkel.)

**Calcium sulphomolybdate,  $CaS$ ,  $3MoS_2$ .**

Sl. in  $H_2O$ . (Berzelius.)

$CaMoS_4$ . More sol. in  $H_2O$  than  $CaS$ ,  $3MoS_2$ . Known only in solution. (Berzelius.)

**Cerium sulphomolybdate.**

Precipitate. (Berzelius.)

**Cobalt sulphomolybdate,  $CoMoS_4$ .**

Sol. in  $K_2MoS_4 + Aq$ . (Berzelius.)

**Cupric sulphomolybdate.**

(Debray, C. R. 96. 1616.)

**Ferrous sulphomolybdate,  $FeMoS_4$ .**

Sol. in  $H_2O$ . (Berzelius.)

**Ferric sulphomolybdate,  $Fe_2(MoS_4)_3$ .**

Sol. in  $K_2MoS_4 + Aq$ .

**Lead sulphomolybdate.**

Ppt. (Berzelius.)

**Lithium sulphomolybdate.**

Not deliquescent, but very easily sol. in  $H_2O$ . (Berzelius.)

**Magnesium sulphomolybdate,  $MgMoS_4$ .**

Sol. in  $K_2MoS_4 + Aq$  (Berzelius)

**Manganous sulphomolybdate,  $MnMoS_4$ .**

Sol. in  $H_2O$ . (Berzelius.)

**Mercurous sulphomolybdate,  $Hg_2MoS_4$  (?)**

Ppt

**Mercuric sulphomolybdate,  $HgMoS_4$ .**

Insol. in  $K_2MoS_4 + Aq$ .

**Nickel sulphomolybdate,  $NiMoS_4$ .**

Sol. in  $K_2MoO_4 + Aq$ . (Berzelius.)

**Potassium sulphomolybdate, basic,  $K_2Mo_3S_2$ .**

Easily sol. in  $H_2O$ . Insol. in alcohol and ether. (Kruess, B. 16. 2050.)

**Potassium sulphomolybdate,  $K_2MoS_4$ .**

Sol. in  $H_2O$ , from which it is precipitated by alcohol. (Berzelius)

**Rubidium sulphomolybdate,  $3Rb_2S$ ,  $8MoS_4 + 30H_2O$** 

Very sl. sol. in  $H_2O$ . Sol. by addition of  $NH_3$ . (Herschfinkel, Dissert. 1907.)  $5Rb_2S$ ,  $6MoS_2$ . (Herschfinkel)

**Silver sulphomolybdate,  $Ag_3MoS_4$ .**

Ppt.

**Sodium sulphomolybdate,  $Na_2MoS_4$ .**

Sol. in  $H_2O$ , and not precipitated by alcohol from aqueous solution. (Berzelius.)

**Strontium sulphomolybdates.**

Exactly analogous to the Ba salts, which see (Berzelius.)

**Zinc sulphomolybdate.**

Ppt. Insol. in  $H_2O$ . (Berzelius.)

***Monosulphomolybdic acid.*****Sodium monosulphomolybdate,  $Na_2MoO_3S$ .**

Rather hygroscopic. Sol. in  $H_2O$ ; forms deep blue solution with  $H_2SO_4$ . Sol. in  $HC_2H_3O_2 + Aq$ . (Kruess, A. 225. 1.)

**Disulphomolybdic acid.****Ammonium disulphomolybdate,**

$(NH_4)_2MoO_3S_2$ .

Sl. sol. in cold, easily in hot  $H_2O$ . Insol. in sat.  $NH_4Cl + Aq$  and absolute alcohol.

Aqueous solution is decomp. by boiling. (Bodenstab, J. pr. 78. 186.)

Potassium disulphomolybdate,  $K_2MoO_4S_2$ .

Very sol. in  $H_2O$  and alcohol. Sol. in  $HC_2H_3O_2 + Aq$  (Kruss, B. 16. 2046.)

Trisulphomolybdic acid.

Ammonium hydrogen trisulphopyromolybdate,  $NH_4HMoO_4O_3S_3$ .

Precipitate. Insol. in alcohol or  $CS_2$ . (Kruss, B. 16. 2047.)

Potassium hydrogen trisulphopyromolybdate,  $KHMoO_4O_3S_3$ .

Very easily sol. in  $H_2O$ . (Kruss, B. 16. 2048.)

Sodium hydrogen trisulphopyromolybdate,  $NaHMoO_4O_3S_3$ .

Precipitate. Much more sol. in  $H_2O$  than the  $NH_4$  compound. (Kruss, B. 16. 2047.)

Potassium sulphomolybdate,  $K_2MoO_4S_2O_7$ .

Sol in  $H_2O$ ,  $HC_2H_3O_2$ , and  $H_2SO_4$ . (Kruss, B. 17. 1771.)

Pentasulphomolybdic acid.

Potassium pentasulphomolybdate,  $KMoS_5$ .

Sol. in warm  $H_2O$  (Hofmann, Z. anorg. 1896, 12. 62.)

Persulphomolybdic acid,  $H_2MoS_5$ .

Precipitate. Insol. in  $H_2O$ , alcohol, ether,  $CS_2$ , and acetic acid.

Decomp. slowly by hot  $H_2SO_4$ . Sol. in warm  $KOH + Aq$ , and cold  $K_2S + Aq$ . Not attacked by cold  $KSH + Aq$ , but dissolves on warming. (Kruss, B. 17. 1773.)

Ammonium persulphomolybdate,  $(NH_4)_2MoS_5$ .

Very sl sol. in cold, more easily in hot  $H_2O$ . Insol. in  $NH_4OH + Aq$ . (Berzelius.)

Barium —,  $BaMoS_5$ .

Insol. in boiling  $H_2O$  or dil  $HCl + Aq$ . (Berzelius.)

Calcium —.

Difficultly sol. in  $H_2O$ . (Berzelius.)

Cerium —.

Precipitate. (Berzelius.)

Ferrous —.

Insol. in  $Fe$  salts  $+ Aq$ , but sol. in  $K_2MoS_4 + Aq$ . (Berzelius.)

Ferric —.

Ppt.

Lithium persulphomolybdate.

Sl. sol. in cold, easily sol. in hot  $H_2O$ . (Berzelius.)

Magnesium —.

Insol. precipitate. (Berzelius.)

Nickel —.

Ppt. Sol. in  $K_2MoS_4 + Aq$ , from which it separates in 24 hours (Berzelius.)

Potassium —,  $K_2MoS_4$ .

Almost insol. in cold, more sol. in hot  $H_2O$ . Insol. in cold  $KOH + Aq$ . (Berzelius.)

Potassium hydrogen —,  $KHMoS_5$ .

Sol. in  $H_2O$ . (Kruss.)

Sodium —,  $Na_2MoS_4$ .

Sl. sol. in cold, easily in hot  $H_2O$ . (Berzelius.)

Sodium hydrogen —,  $NaHMoS_5$ .

(Kruss.)

Persulphomolybdic acid,  $HMoS_5$ .

Sol. in  $H_2O$ . (Hofmann, Z. anorg. 1896, 12. 59.)

Ammonium —,  $NH_4MoS_4 + H_2O$ .

Sl. sol. in  $H_2O$  and in alcohol with decomp. (Hofmann.)

Cæsium —,  $CsMoS_4$ .

Almost insol. in  $H_2O$ . (Hofmann.)

Potassium —,  $KMoS_4$ .

Sol. in  $H_2O$ . (Hofmann.)

Thallium —,  $TlMoS_4$ .

Insol. in  $H_2O$ . (Hofmann.)

Sulphonosmic acid.

Potassium sulphonosmate,

$7K_2O, 40SO_3, 10SO_2$ .

Sol. in  $H_2O$ . (Rosenheim, Z. anorg. 1899, 21. 127.)

$+ 3H_2O$ . Sol. in  $H_2O$ . (Rosenheim.)

$+ 7H_2O$  Easily sol. in  $H_2O$ ; decomp. in aq. solution at  $70^\circ$ . (Rosenheim.)

$11K_2O, 40SO_3, 14SO_2 + 7H_2O$ . Sol. in  $H_2O$ . (Rosenheim.)

Sodium sulphonosmate,

$3Na_2O, OsO_3, 4SO_2 + 5H_2O$ .

Easily sol. in  $H_2O$ ; decomp. in aq. solution. (Rosenheim.)

**Sulphopalladic acid.**

Potassium palladious sulphopalladate,  $K_2S$ ,  $Pd_2S$ ,  $PdS_2 = K_2Pd_2S_4$ .

Insol. in  $H_2O$ . Moderately conc.  $HCl + Aq$  dissolves out K without evolution of  $H_2S$ . (Schneider, Pogg. 141. 526.)

Silver sulphopalladate,  $Ag_2PdS_2$ .

(Schneider.)

Silver palladious sulphopalladate,  $Ag_2S$ ,  $Pd_2S$ ,  $PdS_2 = Ag_2Pd_2S_4$ .

Extraordinarily stable. (Schneider.)

Sodium sulphopalladate,  $Na_2PdS_2$ .

Slowly sol. in  $H_2O$ . Insol. in alcohol. (Schneider, Pogg. 141. 520.)

Sulphophosphide of M.

See M phosphosulphide.

Sulphophosphamic acid,  $PS \begin{smallmatrix} (OH) \\ NH_2 \end{smallmatrix} (?)$ .

See Thiophosphamic acid.

Sulphophosphodiamic acid,  $PS \begin{smallmatrix} OH \\ (NH_2)_2 \end{smallmatrix} (?)$ .

See Thiophosphodiamic acid.

Sulphophosphotriamide,  $PS(NH_2)_3$

See Thiophosphoryl triamide.

Sulphophosphoric acid,  $H_4PSO_4$

See Thiophosphoric acid.

$H_2PS_4$ . Known only in its salts.

Ammonium sulphophosphate,  $(NH_4)_2PS_4$ .

Stable in the air. (Ephraim, B. 1911, 44. 3408.)

Antimony sulphophosphate,  $SbPS_4$ .

Insol. in  $H_2O$ , alcohol, ether,  $CS_2$ ,  $HCl + Aq$ , dil.  $H_2SO_4 + Aq$ ,  $C_2H_6$ , or  $HC_2H_3O_2$ . Decomp. by boiling with conc.  $HNO_3 + Aq$ ,  $H_2SO_4$ , aqua regia,  $KOH$ ,  $NaOH$  or  $NH_4OH + Aq$ . (Glatzel, B. 24. 3886.)

Arsenic sulphophosphate,  $AsPS_4$ .

Insol. in  $H_2O$ , alcohol,  $HCl + Aq$ , etc. Decomp. by warm  $HNO_3$ , aqua regia, dil.  $H_2SO_4$ ; also sol in  $KOH$  or  $NH_4OH + Aq$ . (Glatzel, Z. anorg. 4. 186.)

Barium sulphophosphate,  $Ba_3(PS_4)_2 + xH_2O$ .

(Ephraim, B. 1911, 44. 3409.)

Bismuth sulphophosphate,  $BiPS_4$ .

Insol. in  $H_2O$ , alcohol, ether,  $CS_2$ , benzene,  $HC_2H_3O_2$ , or dil.  $H_2SO_4 + Aq$ . Decomp. by boiling  $HCl + Aq$ , conc.  $H_2SO_4$ ,  $HNO_3$ , or aqua regia; also by  $NaOH$ ,  $KOH$ , or  $NH_4OH + Aq$ . (Glatzel, Z. anorg. 4. 186.)

Cadmium sulphophosphate,  $Cd_2(PS_4)_2$ .

Insol. in  $H_2O$ , alcohol, ether, benzene,  $CS_2$ , and  $HC_2H_3O_2$ . Decomp. by hot  $HCl + Aq$ . Very sl. attacked by dil.  $H_2SO_4 + Aq$ . Slowly sol. in hot  $HNO_3$ , rapidly in aqua regia or hot conc.  $H_2SO_4$ . (Glatzel, Z. anorg. 4. 186.)

Cuprous sulphophosphate,  $Cu_2PS_4$ .

Insol. in  $H_2O$ , alcohol, etc.; also in  $HCl$  or dil.  $H_2SO_4 + Aq$ . Decomp. by  $HNO_3$ , aqua regia, etc., not by  $KOH$  or  $NaOH + Aq$ . (Glatzel.)

Ferrous sulphophosphate,  $Fe_2(PS_4)_2$ .

Insol. in  $H_2O$ , alcohol, ether, etc.; insol. in  $HCl$  or hot dil.  $H_2SO_4 + Aq$ . Decomp. by  $HNO_3$ , aqua regia, or conc.  $H_2SO_4$ . Not attacked by  $KOH$  or  $NH_4OH + Aq$ . (Glatzel.)

Lead sulphophosphate,  $Pb_2(PS_4)_2$ .

Insol. in  $H_2O$ , alcohol, etc. Decomp. by warm  $HCl + Aq$ , conc.  $HNO_3 + Aq$ ; not attacked by  $NH_4OH + Aq$ ; sl. decomp. by  $KOH + Aq$ . (Glatzel.)

Manganous sulphophosphate,  $Mn_2(PS_4)_2$ .

Insol. in  $H_2O$ , alcohol, ether, benzene,  $CS_2$ , or  $HC_2H_3O_2$ . Not attacked by  $HCl + Aq$ . Sol. in  $HNO_3$  or aqua regia, with separation of S. Not attacked by dil.  $H_2SO_4 + Aq$ . (Glatzel, Z. anorg. 4. 186.)

Mercuric sulphophosphate,  $Hg_2(PS_4)_2$ .

Insol. in  $H_2O$ , alcohol, etc.; also in  $HCl$ , dil.  $HNO_3$ , or  $H_2SO_4 + Aq$ . Not attacked by conc.  $HNO_3$  or aqua regia; easily sol. in  $HNO_3 + Br_2 + Aq$ . (Glatzel.)

Nickel sulphophosphate,  $Ni_2(PS_4)_2$ .

As the ferrous salt. (Glatzel.)

Potassium sulphophosphate,  $K_2PS_4 + H_2O$

Easily sol. in  $H_2O$ . (Ephraim, B. 1911, 44. 3407.)

Silver sulphophosphate,  $Ag_2PS_4$ .

Insol. in  $H_2O$ , alcohol, etc.; also in  $HCl$ ,  $HNO_3$ , or dil.  $H_2SO_4 + Aq$ . Decomp. by conc.  $H_2SO_4$ , and aqua regia. (Glatzel.)

Sodium sulphophosphate,  $Na_2PS_4 + 8H_2O$ .

Decomp. by  $H_2O$ .

Sol. in  $Na_2S + Aq$ . (Glatzel, Z. anorg. 1905, 44. 65.)

Thallous sulphophosphate,  $Tl_2PS_4$ .

Insol. in  $H_2O$ , alcohol, etc. Sol. in  $HCl$ , dil.  $H_2SO_4 + Aq$ , etc. Not attacked by  $NH_4OH + Aq$ ; sl. decomp. by conc.  $KOH + Aq$ . (Glatzel.)

**Tin (stannous) sulphophosphate,  $\text{Sn}_2(\text{PS}_4)_2$ .**  
Insol. in  $\text{H}_2\text{O}$ , alcohol, etc. Insol. in dil.  $\text{H}_2\text{SO}_4$  or  $\text{HCl} + \text{Aq}$ . Decomp. by  $\text{HNO}_3 + \text{Aq}$ , aqua regia,  $\text{NH}_4\text{OH}$ , or  $\text{KOH} + \text{Aq}$ . (Glatzel)

**Zinc sulphophosphate,  $\text{Zn}_2(\text{PS}_4)_2$ .**  
Insol. in  $\text{H}_2\text{O}$ , alcohol, ether, etc. Sol. in  $\text{HCl} + \text{Aq}$  or dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Easily attacked by  $\text{KOH} + \text{Aq}$ ; sl. decomp. by  $\text{NH}_4\text{OH} + \text{Aq}$ . (Glatzel.)

### Sulphopyrophosphoric acid.

**Aluminum sulphopyrophosphate,  $\text{Al}_2\text{P}_2\text{S}_7$ .**

Decomp. in moist air.  
Violently decomp. by  $\text{H}_2\text{O}$  or acids. (Ferrand, A. ch. 1899, (7) 429.)

**Cadmium —,  $\text{Cd}_2\text{P}_2\text{S}_7$ .**

Decomp. in moist air.  
Not attacked by cold acids. (Ferrand)

**Chromium —,  $\text{Cr}_2\text{P}_2\text{S}_7$ .**

Decomp. in moist air.  
Not readily attacked by acids. (Ferrand.)

**Cuprous —,  $\text{Cu}_2\text{P}_2\text{S}_7$ .**

Not attacked by cold  $\text{H}_2\text{SO}_4$  or boiling  $\text{HCl}$ . (Ferrand)  
Sol. in hot conc.  $\text{HNO}_3$ . (Ferrand.)  
Sol. in alkalis, and in all acids except  $\text{HCl}$ . (Ferrand, C. R. 1896, 122. 886.)

**Ferrous —,  $\text{Fe}_2\text{P}_2\text{S}_7$ .**

Insol. in cold acids.  
Sl. attacked by boiling  $\text{HCl}$  or hot  $\text{KOH} + \text{Aq}$ .  
Decomp. by fused  $\text{KOH}$ . (Ferrand, A. ch. 1899, (7) 17. 410.)

**Lead —,  $\text{Pb}_2\text{P}_2\text{S}_7$ .**

Not attacked by cold  $\text{HNO}_3$ . (Ferrand.)

**Mercurous —,  $\text{Hg}_2\text{P}_2\text{S}_7$ .**

Decomp. by moist air or hot  $\text{HNO}_3$ . (Ferrand)  
Almost insol. in acids; decomp. by  $\text{H}_2\text{O}$  and moist air. (Ferrand, C. R. 1896, 122. 888)

**Nickel —,  $\text{Ni}_2\text{P}_2\text{S}_7$ .**

Decomp. by  $\text{H}_2\text{O}$  and by conc.  $\text{HNO}_3$  at  $150^\circ$  in a sealed tube. (Ferrand, A. ch. 1899, (7) 17. 418.)

**Silver —,  $\text{Ag}_2\text{P}_2\text{S}_7$ .**

Not decomp. by  $\text{H}_2\text{O}$ .  
Decomp. by aqua regia.  
Not attacked by  $\text{HNO}_3$ . (Ferrand.)

**Zinc —,  $\text{Zn}_2\text{P}_2\text{S}_7$ .**

Decomp. in moist air.  
Decomp. by  $\text{H}_2\text{O}$ .

Violently attacked by cold  $\text{HNO}_3$ . (Ferrand)

### Sulphophosphorous acid,

See Thiophosphorous acid.  
 $\text{H}_2\text{PS}_2$  Known only in its salts.

**Aluminum sulphophosphite,  $\text{Al}_2(\text{PS}_2)_2$ .**

Very unstable.  
Decomp. in the air. (Ferrand, C. R. 1896, 122. 622.)

**Barium sulphophosphite,  $\text{Ba}_2(\text{PS}_2)_2 + x\text{H}_2\text{O}$ .**

Sol. in dil. acids.  
Insol. in alcohol (Ephraïm, B. 1911, 44. 3412)

**Chromous sulphophosphite,  $\text{Cr}_2(\text{PS}_2)_2$ .**

Easily attacked by hot conc.  $\text{HNO}_3$  or aqua regia  
Decomp. by boiling  $\text{NaOH} + \text{Aq}$ . (Ferrand, A. ch. 1899, (7) 17. 419)  
Quite stable in moist air, very slowly attacked by acids (Ferrand, C. R. 1896, 122. 622)

**Cuprous sulphophosphite,  $\text{Cu}_2\text{PS}_2$ .**

Not attacked by  $\text{H}_2\text{O}$  or hot conc.  $\text{HCl}$ .  
Sl. attacked by cold fuming  $\text{HNO}_3$ .  
Violently attacked by  $\text{HNO}_3$ , aqua regia and boiling conc.  $\text{H}_2\text{SO}_4$ .  
Not attacked by boiling  $\text{NaOH} + \text{Aq}$ . (Ferrand, A. ch. 1899, (7) 17. 398.)  
Fairly stable. decomp. by damp air. (Ferrand, C. R. 1896, 122. 621)

**Iron (ferrous) sulphophosphite,  $\text{Fe}_2(\text{PS}_2)_2$ .**

Very stable and resists the action of alkalis and acids. (Ferrand, C. R. 1896, 122. 622.)  
Insol. in cold acids or hot  $\text{NCl}$ .  
Sol. in hot fuming  $\text{HNO}_3$ .  
Insol. in hot 40%  $\text{KOH} + \text{Aq}$  (Ferrand, A. ch. 1899, (7) 17. 412.)

**Mercuric sulphophosphite,  $\text{Hg}_2(\text{PS}_2)_2$ .**

Decomp. in moist air.  
Not attacked by cold  $\text{HNO}_3$ . Decomp. by hot  $\text{HNO}_3$ . (Ferrand.)  
Unstable in the air  
Very slowly attacked by acids. (Ferrand, C. R. 1896, 122. 622.)

**Nickel sulphophosphite,  $\text{Ni}_2(\text{PS}_2)_2$ .**

Unstable in the air.  
Attacked slowly by  $\text{HNO}_3$ . (Ferrand.)

**Silver sulphophosphite,  $\text{Ag}_2\text{PS}_2$ .**

Insol. in most reagents. (Ferrand, C. R. 1896, 122. 622.)  
Not decomp. by  $\text{H}_2\text{O}$ .  
Not easily attacked by acids. (Ferrand, A. ch. 1899, (7) 17. 414)

Sodium sulphophosphite,  $\text{Na}_2\text{PS}_2 + x\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ , probably with decomp. (Ephraim, B. 1911, 44. 3410)

Zinc sulphophosphite,  $\text{Zn}_2(\text{PS}_2)_2$ .

Decomp. in moist air

Sl attacked by  $\text{H}_2\text{O}$ .

Decomp. by  $\text{HNO}_3$ . (Ferrand, A. ch. 1899, (7) 17. 422.)

Very unstable in the air, and attacked violently by acids. (Ferrand, C. R. 1896, 122. 622.)

Sulphoplatinic acid,  $\text{H}_2\text{Pt}_2\text{S}_4$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. on air. (Schneider, Pogg. 138. 604.)

$\text{H}_2\text{Pt}_2\text{S}_6$  Insol. in  $\text{H}_2\text{O}$ , but decomp. very rapidly on air. (Schneider.)

Copper sulphoplatinate,  $2\text{CuS}$ ,  $2\text{PtS}$ ,  $\text{PtS}_2$ .

Insol. in  $\text{H}_2\text{O}$ .  $\text{HCl}$ ,  $\text{HNO}_3$ , or aqua regia dissolve out part of the Cu (Schneider, Pogg. 139. 661.)

Lead sulphoplatinate,  $2\text{PbS}$ ,  $2\text{PtS}$ ,  $\text{PtS}_2$ .

Insol. in hot or cold  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ .  $\text{HNO}_3 + \text{Aq}$  dissolves out Pb partly; aqua regia dissolves completely with difficulty. (Schneider, Pogg. 139. 662.)

Mercuric sulphoplatinate chloride,  $2\text{HgS}$ ,  $2\text{PtS}$ ,  $\text{PtS}_2$ ,  $2\text{HgCl}_2$

Insol. in  $\text{H}_2\text{O}$ ; not attacked by  $\text{HCl} + \text{Aq}$ , and only partially sol. in boiling aqua regia. (Schneider.)

Potassium sulphoplatinate,  $\text{K}_2\text{Pt}_2\text{S}_4$ .

Insol. in  $\text{H}_2\text{O}$ .  $\text{HCl} + \text{Aq}$  dissolves out K without evolution of  $\text{H}_2\text{S}$ .

Composition its potassium platinous sulphoplatinate,  $\text{K}_2\text{S}$ ,  $3\text{PtS}$ ,  $\text{PtS}_2$ . (Schneider, Pogg. 138. 604.)

$\text{K}_2\text{PtS}_2$ .

Silver sulphoplatinate,  $2\text{Ag}_2\text{S}$ ,  $2\text{PtS}$ ,  $\text{PtS}_2$

Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ .  $\text{HNO}_3 + \text{Aq}$  dissolves out Ag on warming. Aqua regia decomp. with formation of  $\text{AgCl}$ . (Schneider, Pogg. 138. 664.)

Sodium sulphoplatinate,  $\text{Na}_4\text{Pt}_2\text{S}_4 = 2\text{Na}_2\text{S}$ ,  $2\text{PtS}$ ,  $\text{PtS}_2$ .

Decomp. by hot  $\text{H}_2\text{O}$ , with residue of  $\text{PtS}_2$ . (Schneider.)

$\text{Na}_2\text{Pt}_2\text{S}_4 = \text{Na}_2\text{S}$ ,  $\text{PtS}$ ,  $2\text{PtS}_2$ . Insol. in  $\text{H}_2\text{O}$ . (Schneider, J. pr. (2) 48. 418.)

Thallium sulphoplatinate,  $2\text{Tl}_2\text{S}$ ,  $2\text{PtS}$ ,  $\text{PtS}_2$ .

Insol. in cold  $\text{H}_2\text{O}$ . Dil. acids dissolve out all the thallium. (Schneider, Pogg. 138. 626.)

Sulphoplatinous acid,  $\text{H}_2\text{PtS}_2$

Known only in solution in  $\text{H}_2\text{O}$ , which soon decomposes. (Schneider, J. pr. (2) 48. 424.)

Sodium sulphoplatinite,  $\text{Na}_2\text{PtS}_2$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Schneider, J. pr. (2) 48. 420)

$\text{H}_4\text{Na}_2(\text{PtS}_2)_2$ . Sol in  $\text{H}_2\text{O}$ , from which it is pptd. by alcohol. (Schneider.)

Sulphoselenantimonous acid.

See Selenosulphantimonous acid.

Sulphoselenarsenic acid.

See Selenosulpharsenic acid.

Sulphoselenostannic acid.

See Selenosulphostannic acid.

Sulphoselenoxyarsenic acid.

See Selenosulphoxyarsenic acid.

Sulphoselenyl chloride,  $\text{SSeO}_2\text{Cl}_2$

Deliquescent; decomposed by  $\text{H}_2\text{O}$ . (Clausnitzer, B. 11. 2007.)

Metasulphosilicic acid.

Sodium metasulphosilicate,  $\text{Na}_2\text{SiS}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Hempel, Z. anorg. 1900, 23. 41.)

Sulphostannic acid,  $\text{H}_2\text{SnS}_2$ .

Ppt (Kühn, A. 84. 110.)

Does not exist. (Storch, W. A. B. 98. 2b. 236)

Ammonium sulphostannate,  $(\text{NH}_4)_2\text{S}$ ,  $3\text{SnS}_2 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ , and easily decomp. (Ditte, C. R. 95. 641.)

$(\text{NH}_4)_2\text{SnS}_2 + 3\text{H}_2\text{O}$ , and  $+7\text{H}_2\text{O}$ . Decomp. by acid. (Stanek, Z. anorg. 1898, 17. 124)

Barium sulphostannate,  $\text{BaSnS}_2 + 8\text{H}_2\text{O}$ .

Sol. in cold  $\text{H}_2\text{O}$ . (Ditte, C. R. 95. 641.)

Calcium sulphostannate,  $2\text{CaS}$ ,  $\text{SnS}_2 + 14\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 95. 641.)

Tetraplatinous sulphostannate,  $4\text{PtS}$ ,  $\text{SnS}_2$ .

Not decomp. by acids. (Schneider, J. pr. (2) 7. 214.)

Platinum potassium sulphostannate,  $3\text{PtS}$ ,  $\text{K}_2\text{S}$ ,  $\text{SnS}_2$ .

Insol. in cold  $\text{H}_2\text{O}$ . Dil.  $\text{HCl}$  or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  dissolves out all the potassium. (Schneider, Pogg. 136. 109.)

Platinum sodium sulphostannate, $3\text{PtS}$ , $\text{Na}_2\text{S}$ , $\text{SnS}_2$ . Insol in cold $\text{H}_2\text{O}$ . (Schneider, Pogg. 136. 109.)	Cobalt sulphotellurite, $\text{Co}_3\text{TeS}_4$ . Ppt
Potassium sulphostannate, $\text{K}_2\text{SnS}_2$ . Sol in $\text{H}_2\text{O}$ . (Kühn, A. 84. 110.) + $3\text{H}_2\text{O}$ . (Ditte, C. R. 95. 641.) $\text{K}_2\text{SnS}_2 + 4\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ pptd by alcohol. (Weinland, Z anorg. 1898, 17. 419.)	Copper —, $\text{Cu}_2\text{TeS}_4$ . Ppt.
Sodium sulphostannate, $\text{Na}_2\text{SnS}_2 + 2\text{H}_2\text{O}$ . Sl. sol. in $\text{H}_2\text{O}$ . (Kühn, A. 84. 110.) + $3\text{H}_2\text{O}$ . (Ditte, C. R. 95. 641.) + $7\text{H}_2\text{O}$ . Sol. in $\text{H}_2\text{O}$ . (Hering, Zeitsch. Pharm. 1851. 120.) $\text{Na}_2\text{SnS}_2 + 12\text{H}_2\text{O}$ . Melts in crystal $\text{H}_2\text{O}$ on heating. Very sol. in $\text{H}_2\text{O}$ . (Kühn.)	Ferrous —. Ppt.
Strontium sulphostannate, $\text{SrSnS}_2 + 12\text{H}_2\text{O}$ . Sol in $\text{H}_2\text{O}$ . (Ditte, C. R. 95. 641.)	Ferric —. Ppt.
Thallium sulphostannate, $\text{Tl}_4\text{SnS}_4$ . Ppt. Practically insol. in $\text{H}_2\text{O}$ . (Hawley, J. Am. Chem Soc 1907, 29. 1011.)	Lead —. Ppt.
Disulphopersulphuric acid.	Lithium —. Sol. in $\text{H}_2\text{O}$ .
Sodium disulphopersulphate, $\text{Na}_2\text{S}_2\text{O}_8$ . Sol. in $\text{H}_2\text{O}$ . Cryst. in cold with $2\text{H}_2\text{O}$ . (Villiers, C. R. 106. 851, 1354.) Contains $4\text{H}$ more and is sodium tetrathionate, $\text{Na}_2\text{S}_4\text{O}_{10}$ , $2\text{H}_2\text{O}$ . (Villiers, C. R. 108. 402.)	Magnesium —. Sol. in $\text{H}_2\text{O}$ and alcohol.
Sulphotelluric acid.	Manganous —. Ppt.
Mercurous sulphotellurate, $3\text{Hg}_2\text{S}$ , $\text{TeS}_2$ . Ppt.	Potassium —, $3\text{K}_2\text{S}$ , $\text{TeS}_2$ . Sol. in $\text{H}_2\text{O}$
Mercuric —, $3\text{HgS}$ , $\text{TeS}_2$ . Ppt. (Berzelius.)	Silver —, $3\text{Ag}_2\text{S}$ , $\text{TeS}_2$ . (Berzelius.)
Potassium —, $\text{K}_2\text{TeS}_4$ . Sol. in $\text{H}_2\text{O}$ . (Oppenheim, J. pr 71. 279.)	Sodium —. Sol. in $\text{H}_2\text{O}$
Sodium —. Sol. in $\text{H}_2\text{O}$ . (Oppenheim.)	Strontium —. Sol. in $\text{H}_2\text{O}$ .
Sulphotellurous acid.	Zinc —, $3\text{ZnS}$ , $\text{TeS}_2$ . Ppt. (Berzelius.)
Ammonium sulphotellurite, $3(\text{NH}_4)_2\text{S}$ , $\text{TeS}_2$ . Decomp. on air. Sol. in $\text{H}_2\text{O}$ .	Sulphotungstic acid.
Barium —. Very slowly sol. in $\text{H}_2\text{O}$ .	Ammonium sulphotungstate, $(\text{NH}_4)_4\text{WS}_4$ . Very deliquescent. Easily sol. in $\text{H}_2\text{O}$ , and still more easily in $\text{NH}_4\text{OH} + \text{Aq}$ . (Corleis, A. 232. 244.) More sol. in pure $\text{H}_2\text{O}$ than in $\text{H}_2\text{O}$ acidified with $\text{HCl}$ . Decomp. slowly on air. (Berzelius.)
Calcium —. Somewhat sol. in $\text{H}_2\text{O}$ .	Barium —. Sol. in $\text{BaS} + \text{Aq}$ .
Cerium —. Insol ppt.	Cadmium —, $\text{CdWS}_4$ . Ppt. (Berzelius.)
	Calcium —. Sol. in $\text{H}_2\text{O}$ and alcohol (Berzelius.)
	Cobalt —, $\text{CoWS}_4$ . Sl. sol. in $\text{H}_2\text{O}$ .

Copper sulphotungstate,  $\text{CuWS}_4$ .

Ppt.

Glucinum —,  $\text{GlWS}_4$ .

Sol in  $\text{H}_2\text{O}$  (?).

Ferrous —,  $\text{FeWS}_4$ .

Sol in  $\text{H}_2\text{O}$ .

Ferric —.

Ppt.

Lead —,  $\text{PbWS}_4$ .

Ppt. (Berzelius.)

Magnesium —,  $\text{MgWS}_4$ .

Easily sol in  $\text{H}_2\text{O}$  or alcohol.

Manganous —,  $\text{MnWS}_4$ .

Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

Mercurous —.

Ppt (Berzelius)

Mercuric —,  $\text{HgWS}_4$ .

Ppt (Berzelius.)

Nickel —,  $\text{NiWS}_4$ .

Ppt. (Berzelius)

Potassium —,  $\text{K}_2\text{WS}_4$ .

Sol. in  $\text{H}_2\text{O}$  Alcohol precipitates from aqueous solutions, but is not entirely insol in alcohol (Berzelius.)

Very sol. in  $\text{H}_2\text{O}$ . (Corleis, A. 232. 264.)

Potassium — nitrate,  $\text{K}_2\text{WS}_4 \cdot \text{KNO}_3$ .

Very sol. in cold or hot  $\text{H}_2\text{O}$ , from which it is precipitated by alcohol. (Berzelius)

Potassium — tungstate,  $\text{K}_2\text{WO}_3\text{S}_2 = \text{K}_2\text{WS}_4 \cdot \text{K}_2\text{WO}_4$ .

Easily sol. in  $\text{H}_2\text{O}$ . Not precipitated by alcohol. (Berzelius.)

Is potassium trisulphotungstate,  $\text{K}_2\text{WOS}_3$ , which see (Corleis, A. 232. 244.)

Silver —,  $\text{Ag}_2\text{WS}_4$ .

Ppt. (Berzelius)

Sodium —,  $\text{Na}_2\text{WS}_4$ .

Very sol in  $\text{H}_2\text{O}$ ; less sol. in alcohol. (Berzelius.)

Very deliquescent (Corleis, A. 232. 264.)

Strontium —.

Sol. in  $\text{H}_2\text{O}$ , and in  $\text{SrS} + \text{Aq}$ .

Stannous —,  $\text{SnWS}_4$ .

Ppt. (Berzelius.)

Stannic —,  $\text{SnWS}_4$ .

Ppt. (Berzelius.)

Zinc sulphotungstate,  $\text{ZnWS}_4$ .

Sol in  $\text{H}_2\text{O}$  with subsequent pptn (Berzelius.)

*Monosulphotungstic acid.*

Potassium monosulphotungstate,

$\text{K}_2\text{WOS} + \text{H}_2\text{O}$ .

Deliquescent in moist air. Very sol. in  $\text{H}_2\text{O}$ . (Corleis, A. 232. 244.)

*Disulphotungstic acid.*

Ammonium disulphotungstate,  $(\text{NH}_4)_2\text{WO}_3\text{S}_2$ .

Sol in  $\text{H}_2\text{O}$  and alcohol (Berzelius.)

Decomp easily when moist (Corleis, A. 232. 264.)

*Trisulphotungstic acid.*

Potassium trisulphotungstate,  $\text{K}_2\text{WOS}_3 + \text{H}_2\text{O}$

Hygroscopic Effloresces on dry air and easily decomposed. Easily sol. in  $\text{H}_2\text{O}$  (Corleis, A. 232. 244.)

Sulphovanadic acid,  $\text{V}_2\text{O}_5 \cdot 3\text{SO}_3 + 3\text{H}_2\text{O}$ .

See Vanadiousulphuric acid, and Sulphate, vanadium.

*Sulphovanadates.*

Alkali sulphovanadates are sol. in  $\text{H}_2\text{O}$  Ca, Sr, and Ba sulphovanadates are sl. sol. in  $\text{H}_2\text{O}$ , and all other sulphovanadates are insol. in  $\text{H}_2\text{O}$  (Berzelius.)

Ammonium sulphovanadate,  $(\text{NH}_4)_2\text{VS}_4$

Easily sol. in  $\text{H}_2\text{O}$ . Very sl sol in conc.  $\text{NH}_4\text{SH} + \text{Aq}$ . Insol. in ether,  $\text{CS}_2$ , or  $\text{CHCl}_3$ . (Kriess and Ohnmaus, A. 263. 46.)

See also Sulphoxyvanadic acid.

Sodium pentasulphoxyvanadate,  $\text{Na}_4\text{V}_2\text{O}_5\text{S}_5$ .

Hydroscopic; sol. in  $\text{H}_2\text{O}$  with rapid decomp. (Locke, Am. Ch. J. 1898, 20. 375.)

*Sulphoxyantimonic acid.*

Potassium sulphonyantimonate,  $\text{K}_2\text{HSbO}_3\text{S}_2 + 2\text{H}_2\text{O}$ .

Sol. in hot, less sol in cold  $\text{H}_2\text{O}$ . Decomp. by cold  $\text{H}_2\text{O}$ . (Weinland and Gutmann, Z. anorg. 1898, 17. 414.)

*Sulphoxyarsenic acid,  $\text{H}_2\text{AsO}_3\text{S}$ .*

Known only in aqueous solution. (McCay, Am. Ch. J. 10. 459.)

Ammonium monosulphoxyarsenate,

$(\text{NH}_4)_2\text{AsSO}_3 + 3\text{H}_2\text{O}$ .

Decomp. in the air; sol in  $\text{H}_2\text{O}$ , decomp. on boiling. (Weinland, B. 1896, 29. 1009.)

Very sol. in  $H_2O$ ; insol. in alcohol; decomp in aq. solution and also in the air (Weinland, Z. anorg. 1897, 14. 53.)  
Decomp. in the air. (McLaughlan, B 1901, 34. 2166.)

Ammonium hydrogen monosulphoxyarsenate,  $(NH_4)_2HASO_4$ .

Ppt. (McLaughlan, B 1901, 34. 2168.)

Barium monosulphoxyarsenate,  $BaHASO_4 + 10H_2O$ .

(Preis, A. 257. 184.)

$Ba_3(AsSO_4)_2 + 6H_2O$ . Ppt. (Weinland, Z. anorg. 1897, 14. 54.)

Barium disulphoxyarsenate,  $Ba_2(AsS_2O_4)_2 + 4H_2O$ .

Ppt. (Preis, A. 257. 185.)

$+6H_2O$  (Weinland and Rumpf, Z. anorg. 1897, 14. 64.)

Barium potassium trisulphoxyarsenate,  $KBaAsS_3O + 7H_2O$ .

Ppt (McCay, Z. anorg. 1904, 41. 469.)

Barium sodium monosulphoxyarsenate,  $BaNaAsSO_4 + 9H_2O$ .

Ppt. (Weinland, Z. anorg. 1897, 14. 55.)

Barium sodium sulphoxyarsenate,  $Ba_2Na_2As_2O_7Si_4 + 12H_2O$ .

(McCay and Foster, Z. anorg. 1904, 41. 467.)

Calcium trisulphoxyarsenate,  $Ca_2(AsS_2O_4)_2 + 20H_2O$ .

Ppt. (McCay and Foster, Z. anorg. 1904, 41. 463.)

Potassium monosulphoxyarsenate,  $K_2AsSO_4$ .  
Hygroscopic (Weinland, B. 1896, 29. 109.)

Sol. in conc.  $KOH + Aq.$  free from carbonate; very hygroscopic. (Weinland, Z. anorg. 1897, 14. 51.)

Potassium hydrogen monosulphoxyarsenate,  $K_2HASO_4 + 2\frac{1}{2}H_2O$

Very hygroscopic. (Weinland and Rumpf, Z. anorg. 1897, 14. 59.)

$KH_2AsSO_4$ . Sol in  $H_2O$ ; solution slowly decomp on standing. (McCay, Am. Ch. J. 10. 459.)

Formula given by Bouquet and Cloez (A. ch. (3) 13. 44) is  $K_2H_4As_2S_4O_{11}$ .

Potassium disulphoxyarsenate,  $K_2AsS_2O_4 + 10H_2O$ .

Very hygroscopic; decomp. by  $H_2O$ . (Weinland, Z. anorg. 1897, 14. 63.)

Potassium trisulphoxyarsenate,  $K_3AsS_3O + 7H_2O$ .

Yellow oil which cryst. at  $-20^\circ$  (McCay and Foster, Z. anorg. 1904, 41. 468.)

Sodium monosulphoxyarsenate,  $Na_2AsSO_4 + 12H_2O$ .

Easily sol. in  $H_2O$ . (Preis, A. 257. 180.) (McLaughlan, B 1901, 34. 2170.)

Sol. in  $H_2O$ . (Weinland, B. 1896, 29. 1009.)

Sl efflorescent. Insol in alcohol. (McCay, Z. anorg. 1902, 29. 42.)

Sol. in  $NaOH + Aq.$ ; decomp. by boiling with conc.  $NaOH$  (Weinland, Z. anorg. 1897, 14. 49.)

Sodium hydrogen monosulphoxyarsenate,  $NaHASO_4$ .

Decomp. by  $H_2O$ ; insol. in alcohol. (Weinland, Z. anorg. 1897, 14. 58.)

$Na_2HASO_4 + 8H_2O$ . Easily sol. in  $H_2O$ . (Preis.)

Sodium disulphoxyarsenate,  $Na_2AsS_2O_4 + 10H_2O$ .

Easily sol. in  $H_2O$ . (Preis.)

Sol. in  $H_2O$ ; pptd. by alcohol. (McCay, B. 1899, 32. 2472.)

Not decomp. by boiling  $NaOH + Aq.$  (Weinland, Z. anorg. 1897, 14. 62.)

Insol. in alcohol (McCay, Z. anorg. 1900, 26. 461.)

$+11H_2O$ . (McLaughlan, B. 1901, 34. 2170.)

Insol. in alcohol. (McCay, Z. anorg. 1902, 29. 46.)

Sodium trisulphoxyarsenate,  $Na_3AsS_3O + 11H_2O$ .

Decomp. by  $H_2O$ . (McCay and Foster, Z. anorg. 1904, 41. 454.)

Sodium trisulphoxydiarsenate,  $As_2O_3S_3, 3Na_2O + 24H_2O$ .

Easily sol. in  $H_2O$ . (Geuther, A. 240. 208.)

$2As_2O_3S_3, Na_2O + 7H_2O$ . Sol. in  $H_2O$ . (Nilson, J. pr. (2) 14. 14.)

Correct composition is  $Na_4As_2S_3O_7 + 30H_2O$ . (Preis.)

Sodium sulphoxyarsenate,  $Na_3AsS_2O_7 + 30H_2O = 4Na_2O, 6As_2S_3, 3As_2S_4O_7 + 30H_2O$ .

Decomp. by  $H_2O$ . Sol in  $NH_4OH$  or  $KOH + Aq.$  (Preis, A. 257. 187.)

= Sodium oxytrisulpharsenate of Nilson.

Sodium pentasulphoxytetraarsenate,  $Na_{12}As_4S_4O_{11} + 48H_2O$ .

Less sol. in  $H_2O$  than other sulphoxyarsenates (Preis.)

Sodium strontium trisulphoxyarsenate,  $NaSrAsS_3O + 10H_2O$ .

Unstable. (McCay and Foster, Z. anorg. 1904, 41. 462.)

**Trisulphoxyazotic acid**,  $\text{ON}(\text{SO}_2\text{H})_3$

Known only in its salts. (Claus, A. 158. 52 and 194.)

Has the formula  $(\text{SO}_2\text{H})_3\text{N} < \overset{\text{O}}{\underset{\text{O}}{\text{O}}} > \text{N}(\text{SO}_2\text{H})_3$ .  
(Raschig, A. 241. 161.)

**Potassium trisulphoxyazotate**,  $\text{ON}(\text{SO}_2\text{K})_3 +$

Easily sol. in  $\text{H}_2\text{O}$  without decomp., even on boiling. (Claus, A. 157. 210.)

**Sulphoxyphosphorous acid**,

See Thiophosphorous acid.

**Sulphoxyvanadic acid**.

**Ammonium pyrohexasulphoxyvanadate**,  
 $(\text{NH}_4)_4\text{V}_6\text{S}_{12}\text{O}_{42}$

Sol. in  $\text{H}_2\text{O}$ . (Krüss and Ohnmais, A. 263. 53.)

**Potassium pyrohexasulphoxyvanadate**,  
 $\text{K}_4\text{V}_6\text{S}_{12}\text{O}_{42} + 3\text{H}_2\text{O}$ .

Melts in crystal  $\text{H}_2\text{O}$ . (Krüss and Ohnmais.)

$\text{K}_4\text{V}_6\text{S}_{12}\text{O}_{42} + 3\text{H}_2\text{O}$ . More sol. in  $\text{H}_2\text{O}$  than preceding comp. (K. and O.)

**Sodium orthotrisulphoxyvanadate**,  $\text{Na}_3\text{VS}_3\text{O}_{10} + 5\text{H}_2\text{O}$ .

Very deliquescent, and easily sol. in  $\text{H}_2\text{O}$ . Somewhat sol. in alcohol (Krüss and Ohnmais.)

**Sodium orthomonosulphoxyvanadate**,  
 $\text{Na}_3\text{VSO}_4 + 10\text{H}_2\text{O}$ .

Less sol. in  $\text{H}_2\text{O}$  than other sulphoxyvanadates. (K. and O.)

**Sulphur, S.**

The various modifications of sulphur have been classified in many different ways, and there is a difference of opinion as to whether certain forms are true allotropic modifications or not.

The data, as far as concerns the solubility, may be arranged as follows—

A. Sol. in  $\text{CS}_2$ . 1. Rhombic, octahedral, or alpha sulphur, ordinary sulphur. Easily sol. in  $\text{CS}_2$ , etc. See below for solubility in various solvents.

2. Prismatic, monoclinic, or beta sulphur. Sol. in  $\text{CS}_2$ , but is converted into A, 1. Prismatic sulphur obtained by melting brimstone is not wholly sol. in  $\text{CS}_2$  on account of admixture of gamma sulphur.

Monoclinic modification is more sol. than rhombic in  $\text{CHCl}_3$ , ether and benzene. (Meyer C. C. 1903, II. 481.)

3. Soft sulphur, milk of sulphur.

4. Amorphous sol. sulphur is also a separate modification, according to Berthollet.

B. Soft sulphur, obtained by strongly heating and quickly cooling, is sol. in  $\text{CS}_2$ , but becomes insol. therein by repeatedly dissolving and evaporating. More easily sol. in  $\text{CS}_2$  than A, 1.

C. Insol. in  $\text{CS}_2$ . 1. By action of strong light on S in  $\text{CS}_2$ .

2. By heating to b.-pt., cooling suddenly, and allowing to stand until hard. Has been called gamma sulphur, but is a mixture of  $\frac{2}{3}$  A, 4 and  $\frac{1}{3}$  insol. S.

3. Insol. S in flowers of sulphur. Converted into A, 1 by standing 3 days with alcohol.

According to Berthollet (A. ch. (3) 49. 430) there are only two varieties of S. I. "Octahedral," II. "Amorphous."

I. Octahedral. Sol. in  $\text{CS}_2$ . Scarcely acted upon by  $\text{KHSO}_4 + \text{Aq}$ . Converted by oxidising agents into II.

II. Amorphous. Insol. in neutral solvents, viz.  $\text{H}_2\text{O}$ , alcohol, ether,  $\text{CS}_2$ , etc.

Sol. with tolerable rapidity in  $\text{KHSO}_4 + \text{Aq}$ .

By long action of  $\text{Na}_2\text{S} + \text{Aq}$ , a portion is dissolved, and the remainder converted into I.

Less easily oxidised by  $\text{HNO}_3 + \text{Aq}$  than I. Some varieties of this modification are sol. to a certain extent in alcohol and ether,

and by boiling the rest of the sulphur is converted into I; also by long-continued contact with cold alcohol. Berthollet holds that the modification is changed before dissolving. Solutions of the alkalis, alkali salts, and alkali sulphides change insol. into sol. sulphur. (Berthollet.)

Elastic sulphur obtained by pouring molten sulphur at a temp. of over  $260^\circ$  into  $\text{H}_2\text{O}$  contains 35% or more of a modification of S which is insol. in  $\text{CS}_2$ , hot or cold, but sol. in absolute alcohol, this modification can be converted back into ord. sulphur by heating to  $100^\circ$ . (Pelouze and Fremy) (See C. 2.)

This modification can be obtained also by action of  $\text{HCl}$  on thiosulphates (Fordos and Gélis.)

The soft pasty sulphur obtained by decomposition of  $\text{H}_2\text{S}$  by  $\text{SO}_2$  forms an almost clear emulsion (pseudo-solution) with  $\text{H}_2\text{O}$ , from which it is pptd. by various salts and substances which have no chemical affinity for it. 23 pts S combine in this way with 100 pts  $\text{H}_2\text{O}$ . When pptd. by saline solutions, some of the S remains in solution. When solution is exposed to the light, S gradually separates out; also on boiling the same takes place. The above pseudo-solution is pptd. by mineral acids, and the pptd. S may still be dissolved in fresh water, if not left in contact for some time with the acid. Also pptd. by K salts, with loss of power of forming pseudo-solutions. Pptd. by  $\text{NH}_4$  and Na salts without losing that power.

Alkali hydrates, carbonates, or sulphides convert it into insol. S.

The solution may be mixed with alcohol without change. Decomp. by long shaking with naphtha or oil of turpentine. The pseudo-solution combines with  $\text{CS}_2$ , forming an emulsion which subsequently decomposes. The S itself is only partially sol. in  $\text{CS}_2$ . (Selmi, J. pr. 57. 49.)

By treatment of amorphous "insoluble" S with  $\text{CS}_2$  or  $\text{CCl}_4$ , a small part goes into solution, the amount being dependent on the time of contact with the temp., and nature of the solvent, but independent of the amount of the solvent. It is assumed that this is due to a partial change of the "insoluble" into soluble S. (Wigand, Z. phys. Ch. 1910, 75. 235.)

"Delta" sulphur. Partly sol. in  $\text{H}_2\text{O}$ . (Debus, Chem. Soc. 53. 18.)

A colloidal form wholly sol. in  $\text{H}_2\text{O}$  exists, which, however, decomposes very easily. (Engel, C. R. 112. 866.)

Black sulphur. Insol. in alcohol, ether,  $\text{CS}_2$ , fatty oils even at  $200^\circ$ , cold alkali hydroxides + Aq,  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ , or aqua regia. (Knapp, J. pr. (2) 43. 305.)

Green modification. Five times more sol. than ordinary sublimed sulphur in a mixture of salicylaldehyde and benzene. (Orloff, C. C. 1902, 1. 1264.)

The following data relate to octahedral or ordinary sulphur (A. 1).—

Sol. in warm liquid  $\text{H}_2\text{S}$  (Niemann); warm  $\text{P}_2\text{S}_5$ ,  $\text{SBr}_2$ ,  $\text{SCl}_2$ ,  $\text{Br}_2$ ,  $\text{NCl}_3$ ,  $\text{BaS}$  + Aq (Dumas); in alcoholic solution of  $\text{K}_2\text{S}_2$ , but is reprecipitated by addition of  $\text{H}_2\text{O}$  to sat. solution.

Sol. in liquid  $\text{SO}_2$ .

Sol. in aqueous solution of alkali sulphates, especially when hot. Sl. sol. in boiling conc  $\text{HSCN}$  + Aq, from which it mostly separates on cooling.

$\text{Na}_2\text{CO}_3$  + Aq (5.6%  $\text{Na}_2\text{CO}_3$ ) dissolves no S at  $20^\circ$ ; 0.06775% at  $100^\circ$ . (Pohl, Dingl. 197. 508.)

The solubility of S in  $\text{Na}_2\text{S}$  + Aq between  $0^\circ$  and  $50^\circ$  diminishes slightly with increase in temp., but increases with dilution of the solution, having its largest value in a N/16 solution of  $\text{Na}_2\text{S}$  + Aq when the relation of  $\text{Na}_2\text{S}$  to dissolved S equals about 1.4. (Kuster, Z. anorg. 1905, 43. 56.)

Sol. in  $\text{AlBr}_3$ . (Isbekow, Z. anorg. 1913, 84. 27.)

Insol. in liquid  $\text{CO}_2$ . (Büchner, Z. phys. Ch. 1906, 54. 874.)

Sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 822.)

Sol. in liquid  $\text{NH}_3$ . 1 gr S is sol. in 3-4 cc. liquid  $\text{NH}_3$ . (Hugot, A. ch. 1900, (7) 21. 32.)

The solubility of S in liquid  $\text{NH}_3$  is constant from  $-23^\circ$  to  $-84^\circ$  and equals 39%. (Ruff, Z. anorg. Ch. 1910, 23. 1830.)

Solubility in liquid  $\text{NH}_3$   
(g S in 100 g. solution.)

$t^\circ$	S <sup>1</sup>	$t^\circ$	S
-78	38.6	16.4	25.65
-20.5	38.1	30	21.0
0	32.34	40	18.5

(Ruff and Hecht, Z. anorg. 1913, 70. 62.)

Sl. sol. in liquid  $\text{NO}_2$ . (Frankland, Chem. Soc. 1901, 79. 1361.)

$\text{S}_2\text{Cl}_2$  dissolves 86.74% S at ord. temp. to form a liquid of 1.7 sp. gr. (Rose.)

Solubility of S in  $\text{S}_2\text{Cl}_2$  varies according to the variety of sulphur used. Aten has published an extended investigation on the subject, which see for details. (Z. phys. Ch. 1905-14, 54. 86, 124; 81. 268; 83. 443; 86. 1; 88. 321.)

Solubility in  $\text{SnCl}_4$ .

100 g.  $\text{SnCl}_4$  dissolve at.

$99^\circ$	$101^\circ$	$110^\circ$	
5.8	6.2	8.7	9.1 pts. solid S,
$112^\circ$	$112^\circ$	$121^\circ$	
9.4	9.9	17.0	pts. liquid S.

(Gerardin.)

Sol. in alkalis + Aq with decomp.

Sol. in 1926.7 pts. absolute alcohol at  $15^\circ$ . (Pohl, W. A. B. 6. 600.)

Sol. in 20 pts. hot nearly absolute alcohol, less sol. in weaker alcohol. (Laurigay.)

Sol. in 600 pts. boiling alcohol of  $40^\circ$  B. (Chevalier, J. ch. med. 2. 587); in 500 pts. alcohol (Meissner), 200 pts. alcohol (Pelouze and Fremy.)

100 pts. absolute alcohol dissolve 0.42 pt. at b.-pt., and 0.12 pt. S at  $16^\circ$ ; 100 pts. ether dissolve 0.54 pt. at b.-pt., and 0.19 pt. S at  $16^\circ$ ; 100 pts. benzene dissolve 17.04 pts. at b.-pt., and 1.79 pts. S at  $16^\circ$ ; 100 pts. oil of turpentine dissolve 16.16 pts. at b.-pt., and 1.35 pts. S at  $16^\circ$ ; 100 pts.  $\text{CS}_2$  dissolve 78.46 pts. at b.-pt., and 33.70 pts. S at  $16^\circ$ ; 100 pts. naphtha dissolve 10.56 pts. at b.-pt., and 2.77 pts. S at  $16^\circ$ ; 100 pts. tar-oil dissolve 26.68 pts. at b.-pt., and 1.51 pts. S at  $16^\circ$ . (Payen, C. R. 34. 456.)

100 pts. absolute methyl alcohol dissolve 0.028 pt. at  $18.5^\circ$ ; 100 pts. absolute ethyl alcohol dissolve 0.053 pt. at  $18.5^\circ$ . (de Bruyn, Z. phys. Ch. 10. 781.)

Solubility in amyl alcohol.

$95^\circ$	$110^\circ$	$110^\circ$	
1.5	2.1	2.3	pts. solid S,
$112^\circ$	$112^\circ$	$120^\circ$	$131^\circ$
2.6	2.7	3.0	5.3 pts. liquid S.

(Gerardin, A. ch. (4) 6. 134.)

Quickly sol. in 12.5 pts. ether. (Favre.)

100 pts. benzene dissolve 0.965 pt. S at  $26^\circ$ ; 100 pts. benzene dissolve 4.377 pts. S at  $71^\circ$ ; 100 pts. toluene dissolve 1.479 pts. S at  $23^\circ$ ; 100 pts. ethyl ether dissolve 0.972 pt. S at

23.5°; 100 pts. chloroform dissolve 1 205 pts. S at 22°; 100 pts. phenol dissolve 16 35 pts. S at 174°; 100 pts. aniline dissolve 85 27 pts. S at 130°. (Cossa, B. 1. 139.)

Solubility in benzene at t°.

t°	g S in 10 g. of solution
15.17	0 1480
19.29	0 1692

(Bronsted, Z. phys. Ch. 1906, 55. 377.)

A mixture of S and toluene separates into two layers, containing 33 and 92.5% S respectively. (Haywood, J. phys. Ch 1897, 1. 232.)

CS<sub>2</sub> dissolves 0 35 pt ordinary sulphur; some varieties of S, however, are not entirely sol in CS<sub>2</sub>, thus—

Variety of Sulphur	Pts sol in 1 pt CS <sub>2</sub>	Fraction of original wt. insol in CS <sub>2</sub>
Octahedral, from Sicily	0 335	0 000
Crystallised in dry way, recently prepared	0 415	0 029
Do., prepared 8 years	0 33	0 004
Do., prepared 9 years		0 020
Do., prepared 15 years		0.051
Red needles, recently prepared	0 382	0 023
Soft yellow, do		0 353
Do., prepared 2 years	0.315	0 157
Soft red, recently prepared	0.374	0 157
Do., prepared 5 years		0 181
Flowers of sulphur	0 351	0 113
Do., another sample		0 234
Roll brunstone, outside		0 029
Do., inside		0 073

(Deville, A. ch (3) 47. 99.)

The pt. insol in CS<sub>2</sub> is sol in hot absolute alcohol, crystallising on cooling; less sol. in chloroform or ether (Deville)

100 pts pure CS<sub>2</sub> dissolve pts S at t°

t°	Pts S	t°	Pts S
-11	16 54	22	46 05
-6	18 75	38	94 57
0	23 99	48 5	146 21
+15	37 15	55	181 34
18 5	41 65		

(Cossa, B. 1. 138.)

Neither ordinary stick S nor flowers of S is completely sol. in CS<sub>2</sub>. Pptd. S is completely sol. in 5 pts. CS<sub>2</sub>. (Tittenger, C. C. 1894, II. 287.)

2.99 g. S are sol in 100 grams CS<sub>2</sub> at -116°. (Arcetowski, C. R. 1895, 121. 124.)

Solubility in CS<sub>2</sub>.

100 g. of the sat. solution contain at.

-77°	-84.5°	-89°	-116°
4.84	4.46	4.29	2.99 g S.

(Arcetowski, Z. anorg. 1896, 11. 274.)

When 20 pts S dissolve in 50 pts. CS<sub>2</sub> at 22° the temp. is lowered 5°. (Cossa.)

Sat. solution of S in CS<sub>2</sub> boils at 55°. (Cossa.)

Sp. gr. of S dissolved in CS<sub>2</sub> at 15°.

(Pts S per 100 pts CS<sub>2</sub>.)

130.0	49.71	80.07
134.2	58.20	72 23

Above  $134.2^\circ$  sulphur is miscible with

benzyl chloride in all proportions, below this temp. two layers are formed

(Bogusky, J Russ Phys. Chem. Soc. 1905, 37. 92-99; C. C. 1906, I. 1207)

Easily sol. in boiling acetic anhydride. (Rosenfeld, B. 13. 1475.)

Sol. in considerable amount in warm conc.  $\text{HCl}$ ,  $\text{H}_2\text{O}_2$  + Aq, but very sl. sol. if dil. (Liebermann, B. 10. 866.)

Sol. in stearic acid + Aq. (Vulpius, Arch. Pharm. (3) 13. 38)

Acetic ether dissolves 6% S (Favre.)

Difficultly sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Sol. in ethyl acetate. (Naumann, B. 1904, 37. 3601)

Sl. sol. in benzonitrile at ord. temp., much more sol. at higher temp. (Naumann, B. 1914, 47. 1369.)

Sol. in 12 pts. hot petroleum from Amiano, but nearly insol. in cold. (de Saussure.)

100 pts. nicotine at  $100^\circ$  dissolve 10.58 pts. S, but this separates out as the solution cools. (Klever, C. C. 1872. 434.)

Sol. in warm aniline. (Barral, A. ch. (3) 20. 352)

Easily sol. in hot, less sol. in cold aniline. (Fritzsche)

Very sol. in aniline and quinoline, especially when warm. (Hofmann.)

Sol. in quinoline but reacts with the solvent with evolution of H. (Beckmann and Gabel, Z. anorg. 1906, 51. 238.)

 $\frac{1}{2}$  ccm. oleic acid dissolves 0.0335 g. S in 6 days. (Gates, J. phys. Chem. 1911, 15. 143.)

Sol. in 2.6 pts. of boiling, sl. sol. in cold creosote.

Sol. by digestion in 2 pts. oil of turpentine.

Sol. in hot oil of copaiba, crystallising on cooling

Sol. in hot oil of mandarin, crystallising on cooling

Sol. in hot oil of caraway, crystallising on cooling.

Somewhat sol. in hot, less in cold wood-spirit.

Sl. sol. in lignone, bromoform, cold benzene, but easily in hot benzene. (Mansfield, Chem. Soc. 1. 262.)

Sol. in ethyl sulphide, and carbon chloride (Rathke, A. 162. 187.)

Sol. in mercuric methyl.

Sol. in 20 pts. ethyl nitrate, from which is is not pptd. by  $\text{H}_2\text{O}$ .

Sol. in naphtha, aldehyde, iodol, bromal, chloroform, warm chloral, sinkaline + Aq, ethyl chloride, warm benzoyl chloride.

100 pts. methylene iodide dissolve 10 pts. S at  $10^\circ$ . Melted sulphur is miscible with hot methylene iodide. (Retgers, Z. anorg. 3. 343.)

S dissolves in 2000 pts. glycerine. (Cap and Garot, J. Pharm. (3) 26. 81.)

Glycerine dissolves 0.10% S (Klever, C. C. 1872. 434.)

100 g. glycerine dissolve 0.14 g. at 15.5° (Ossendowski, Pharm. J. 1907, 79, 575.)

Sol in butyl sulphhydrate, and warm retanole.

Sol in ethyl sulphhydrate.

Very sol. in conine, hexyl alcohol, warm allyl sulphocyanide, caecodyl oxide. Somewhat sol. in hot styrene, separating out on cooling.

Readily sol. in warm, less readily in cold toluene or rean-oil.

Sol. in olive oil at 115°, from which it mostly separates on cooling.

Sol. in hot oil of amber, crystallising upon cooling. Sol. in 2 pts. hot, sl. sol. in cold castor-oil.

Insol. in valerianic acid, amyl valerate, valeryl hydride.

Lancet oil dissolves % S at t°

t°	% S	t°	% S	t°	% S
25	0.630	95	2.587	160	9.129
60	1.852	130	4.935		

(Pohl.)

Solubility in olive oil (sp. gr. = 0.885)

(Pelouze, C. R. 69, 56.)

Sulphur bromide, S<sub>2</sub>Br<sub>2</sub>.

Decomp. gradually with H<sub>2</sub>O. Dissolves S on warming, which crystallises out on cooling. Sol. in CS<sub>2</sub>.

Decomp. by current of dry air into S and Br. (Hannay, Chem. Soc. 35, 18.)

Decomp. slowly by cold H<sub>2</sub>O, rapidly by hot H<sub>2</sub>O. Decomp. by dil. KOH + Aq. or NaHCO<sub>3</sub> + Aq. (Korndorfer, Arch. Pharm. 1904, 242, 154.)

A study of the mpt. curve of a series of mixtures of sulphur and bromine gave no evidence for the existence of the compounds SBr<sub>2</sub> and SBr<sub>4</sub>. (Ruff, B. 1903, 36, 2446.)

Sulphur monochloride, S<sub>2</sub>Cl<sub>2</sub>.

Slowly decomp. with H<sub>2</sub>O. Miscible with CS<sub>2</sub> and C<sub>2</sub>H<sub>4</sub>. Sol. in alcohol and ether with subsequent decomposition. Sol. in oil of turpentine.

Moderately sol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20, 830.)

Sol. in CCl<sub>4</sub> and C<sub>6</sub>H<sub>6</sub>. (Oddo, Gazz. ch. it. 1899, 29, (2) 318.)

Sulphur dichloride, SCl<sub>2</sub>.

Decomp. slowly with H<sub>2</sub>O, immediately by alcohol or ether.

Sulphur tetrachloride, SCl<sub>4</sub>.

Violently decomp. by H<sub>2</sub>O. Decomp. at temperatures above -22°. (Michaelis, A. 170, 1.)

Sulphur stannic chloride, 2SnCl<sub>4</sub>, SnCl<sub>2</sub>.

Decomp. by H<sub>2</sub>O. Sol. in dil. HNO<sub>3</sub> + Aq. Forms a mass with fuming HNO<sub>3</sub>, which is sol. in HNO<sub>3</sub> + Aq. Sol. in POCl<sub>3</sub>. (Casselmann.)

Very hygroscopic. Fumes in moist air. Very easily sol. in dry abs. ether and in benzene. Sol. in CHCl<sub>3</sub>, SO<sub>2</sub>Cl<sub>2</sub>, CS<sub>2</sub>, POCl<sub>3</sub>, ligrom and petroleum ether. (Ruff, B. 1904, 37, 4517.)

Sulphur titanium chloride, SCl<sub>4</sub>, 2TiCl<sub>4</sub>.

Very deliquescent. Easily sol. in dil. HNO<sub>3</sub> + Aq. (Weber, Pogg. 132, 454.)

SCl<sub>4</sub>, TiCl<sub>4</sub>. Sol. in SO<sub>2</sub>Cl<sub>2</sub>, CHCl<sub>3</sub>, CS<sub>2</sub>, and petroleum ether. (Ruff, B. 1904, 37, 4516.)

Sulphur chloride ammonia, S<sub>2</sub>Cl<sub>2</sub>, 4NH<sub>3</sub>.

Insol. in H<sub>2</sub>O, but gradually decomp. thereby; sol. without decomp. in absolute alcohol, from which it is pptd. by H<sub>2</sub>O. (Mertens.)

Does not exist. (Fordos and Gélis, C. R. 31, 702.)

SCl<sub>2</sub>, 2NH<sub>3</sub>. Decomp. by H<sub>2</sub>O. Sol. in alcohol or ether. (Soubeiran, A. ch. 67, 71.) Not a true chemical compound, but a mixture. (Fordos and Gélis, C. R. 31, 702.)

$\text{SCl}_2, 4\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in absolute alcohol and ether (Soubeiran, A. ch. 67. 71); mixture (Fardos and Gélis).

### Sulphur chloride nitrogen sulphide.

See Nitrogen sulphochloride.

### Sulphur perfluoride, $\text{SF}_6$ .

Very sl. sol. in  $\text{H}_2\text{O}$ ; sl. sol. in alcohol. (Moissan, C. R. 1900, 130. 868.)

### Sulphur moniodide, $\text{S}_2\text{I}_2$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by alcohol, which dissolves out  $\text{I}_2$ . Sl. sol. in cold caoutchou, the solution decomposing when boiled. Freely sol. in glycerine. Sol. in 60 pts. glycerine, and 82 pts. olive oil. (Cap and Garot, J. Pharm. (3) 26. 81.)

Very sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830.)

Sol. in  $\text{CS}_2$ . (Limebarger, Am. Ch. J. 1895, 17. 58.)

### Sulphur hexiodide, $\text{SI}_6$ .

Decomp. on air. Alcohol or alkalis dissolve out iodine. (vom Rath, Pogg. 110. 116.)

Does not exist. (M'Leod, Rep. Brit. Assn. Advn. Sci. 1892. 690.)

### Sulphur stannic iodide.

See Tin sulphur iodide.

### Sulphur sesquioxide, $\text{S}_2\text{O}_3$ .

Deliquescent. Violently decomp. by  $\text{H}_2\text{O}$  at ordinary temp. Sol. in fuming  $\text{H}_2\text{SO}_4$ . Insol. in  $\text{SO}_2$ . Decomp. by alcohol or ether. (Weber, Pogg. 156. 531.)

### Sulphur dioxide, $\text{SO}_2$ .

Liquid. Insol. in  $\text{H}_2\text{O}$  if brought in contact therewith below the b-pt of  $\text{SO}_2$ .

Sol. in 3 vols  $\text{CS}_2$  on warming, separating out on cooling. Dissolves some P, little S, and no sulphuric or phosphoric acids.

Dissolves ether, chloroform, P, Br, S, I,  $\text{CS}_2$ , colophonium, and other gums; also benzene when warmed. (Sestini, Bull. Soc. (2) 10. 226.)

Miscible with liquid  $\text{SO}_2$ , but not with  $\text{H}_2\text{SO}_4$ .

#### Gas

1 vol.  $\text{H}_2\text{O}$  absorbs 30 vols  $\text{SO}_2$  gas at  $18^\circ$  (Davy), 20 vols at ord temp. (Dalton), 43.78 vols at ord temp. (de Saussure), 50 vols at  $20^\circ$  and 760 mm (Pelouze and Fremy), 33 vols at ord temp (Thomson).

1 pt.  $\text{SO}_2$  (by weight) is sol in 0.1420 pt  $\text{H}_2\text{O}$  at  $5^\circ$ , and the solution has 1.020 sp. gr.

1 pt.  $\text{SO}_2$  is sol in 0.0400 pt.  $\text{H}_2\text{O}$  at ord. temp. (Priestley), in 0.0809 pt.  $\text{H}_2\text{O}$  at  $10^\circ$ , and sp. gr. of the solution = 1.0513 (Thomson).

Sol in 2 pts.  $\text{H}_2\text{O}$  at  $10^\circ$ . (Pierre, A. ch. (3) 23. 421.) 100 vols  $\text{H}_2\text{O}$  at  $18^\circ$  and 760 mm. absorb 4378 vols.  $\text{SO}_2$  gas, 100 vols alcohol of 0.84 sp. gr at 760 mm. absorb 11,577 vols. (de Saussure, 1814.)

Solubility of  $\text{SO}_2$  gas in  $\text{H}_2\text{O}$   $t^\circ$  = temp,  $V$  = vols.  $\text{SO}_2$  reduced to  $0^\circ$  and 760 mm. contained in 1 vol. sat.  $\text{SO}_2 + \text{Aq}$ ,  $V_1$  = vols.  $\text{SO}_2$  gas reduced to  $0^\circ$  and 760 mm. dissolved by 1 vol  $\text{H}_2\text{O}$  under 760 mm. pressure

(Sims, A. 118. 340)

Solubility of  $\text{SO}_2$  in  $\text{H}_2\text{O}$  at various pressures  
 $P$  = "partial pressure," i. e. the total pressure minus the tension of aqueous vapour at given temp.,  $G$  at  $P$  = weight  $\text{SO}_2$  in grammes, which is dissolved in 1 g  $\text{H}_2\text{O}$  at pressure  $P$ ,  $G$  at 760 = calculated weight  $\text{SO}_2$  that would be contained in 1 g.  $\text{H}_2\text{O}$  at 760 mm. if the absorption were proportional to the pressure;  $V$  = the volume of  $G$  grammes of  $\text{SO}_2$  at  $0^\circ$  and 760 mm.

4	0.201	10	0.154
6	0.184	12	0.142

(Roozeboom, R. t. c 1884, 3. 29)

From a gas containing 10% by vol. of SO<sub>2</sub> at 10°, 1.63% by wt. is dissolved by 1 litre of H<sub>2</sub>O; if the pressure is increased to 5 atmospheres, 8.14% by wt is dissolved. (Harpf, Chem. Zeitsch., 1905, 4. 136)

Solubility of SO<sub>2</sub> in H<sub>2</sub>O at t°.

C = g. SO<sub>2</sub> in 1 cc of the solution.

P = Pressure in mm of Hg

(McCrae, Z. anorg. 1903, 35, 14.)

Sulphur dioxide ammonia,  $\text{SO}_2, \text{NH}_3$ .

Very hygroscopic. Easily sol. in  $\text{H}_2\text{O}$  with decomp. (Schumann, Z. anorg. 1900, 23, 49.)

$\text{SO}_2, 2\text{NH}_3$ . Somewhat hygroscopic. Sol. in  $\text{H}_2\text{O}$  with evolution of  $\text{NH}_3$ . (Schumann, Z. anorg. 1900, 23, 50.)

$\text{SO}_2, 4\text{NH}_3$ . Very deliquescent. Very sol. in  $\text{H}_2\text{O}$ . (Divers and Ogawa, Chem. Soc. 1901, 79, 1103.)

Sulphur trioxide,  $\text{SO}_3$ .

Fumes on air. Miscible with  $\text{H}_2\text{O}$ , with evolution of much heat. Sol. in  $\text{H}_2\text{SO}_4$ . De-comp. by alcohol and ether.

Exists in two modifications, one of which is liquid and miscible with  $\text{H}_2\text{SO}_4$ , while the solid form is only slowly sol therein.

Miscible with  $\text{CS}_2$  at  $30^\circ$ , but at  $15^\circ$   $\text{CS}_2$  dissolves only  $\frac{1}{2}$  pt.  $\text{SO}_2$ , and  $\text{SO}_2$   $\frac{1}{2}$  pt.  $\text{CS}_2$ . (Schultz-Sellack, Pogg. 139, 480.)

There is only one modification, the liquid, which absorbs  $\text{H}_2\text{O}$  and becomes solid. (Rebs, A. 246, 356.)

Miscible with liquid  $\text{SO}_2$ . (Schultz-Sellack.)

See also Sulphuric acid.

### Sulphur heptoxide, $\text{S}_2\text{O}_7$

Fumes on air. Slowly decomp. at  $0^\circ$ , instantaneously on warming. Sol. in conc.  $\text{H}_2\text{SO}_4$ . (Berthelot, J. pr. (2) 17, 48.)

Forms compound  $\text{S}_2\text{O}_7 \cdot 2\text{H}_2\text{O}$ .

Formula is  $\text{SO}_3$  according to Traube (B. 24, 1784), and  $\text{S}_2\text{O}_7$  in  $\text{SO}_2 + \text{SO}_3$ .

See also Marshall (Chem. Soc. 69, 771).

Traube (B. 26, 148) denies the existence of  $\text{SO}_4$ .

### Sulphur oxybromide, $\text{SOBr}_2$ .

See Thionyl bromide.

### Sulphur oxychloride, $\text{SOCl}_2$ .

See Thionyl chloride.

$\text{SO}_2\text{Cl}_2$ . See Sulphuryl chloride.

$\text{S}_2\text{O}_2\text{Cl}_2$ . See Pyrosulphuryl chloride.

$\text{HSO}_2\text{Cl}$ . See Sulphuryl hydroxyl chloride.

$\text{S}_2\text{OCl}_2$ . Decomp. by  $\text{H}_2\text{O}$  and alcohol.

(Ogier, C. R. 94, 446.)

Mixture of about  $17\text{SOCl}_2 + 2\text{SOCl}_2$  and  $5\text{SO}_2\text{Cl}_2$ . (Knoll, B. 1898, 81, 2183.)

### Sulphur oxytetraachloride, $\text{S}_2\text{O}_4\text{Cl}_4$ .

Violently decomp. by  $\text{H}_2\text{O}$ , dil. acids, or alcohol. (Millon, A. ch. (3) 29, 327.)

Sol. in warm  $\text{S}_2\text{Cl}_2$ . (Carus, A. 106, 295.)

Decomp. violently with  $\text{CS}_2$ .

### Sulphur oxyfluoride, $\text{SO}_2\text{F}_2$ .

See Sulphuryl fluoride.

$\text{SOF}_2$ . See Thionyl fluoride.

### Sulphur diphosphide, $\text{P}_2\text{S}_2$ .

See Phosphorus monosulphide.

### Sulphur tetraphosphide, $\text{P}_4\text{S}_4$ .

See Phosphorus semisulphide.

### Sulphuretted hydrogen, $\text{H}_2\text{S}$ .

See Hydrogen sulphide.

### Sulphuric acid, $\text{H}_2\text{SO}_4$ .

Miscible with  $\text{H}_2\text{O}$  in all proportions.

(Lunge, B. 15. 2644.)

Effect of impurities on sp. gr. of  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

The figures show the increase in sp gr of  $\text{H}_2\text{SO}_4 + \text{Aq}$  caused by adding 0.1% of an impurity to acid of different strengths.

Salt	100 %	98 %	94 %	80 %	70 %

(Pictet, C. R. 1894, 119. 645)

Sulphuric acid, anhydrous, SO<sub>2</sub>

See Sulphur trioxide.

Disulphuric (Pyrosulphuric) acid, H<sub>2</sub>S<sub>2</sub>O<sub>7</sub>.

Very deliquescent. Miscible with H<sub>2</sub>O. Sol. in fuming H<sub>2</sub>SO<sub>4</sub>. Miscible in liquid SO<sub>2</sub>. (Schultz-Sellack)

H<sub>2</sub>S<sub>2</sub>O<sub>7</sub>, 2H<sub>2</sub>SO<sub>4</sub>. Fumes on air. (Jacquelin, A. ch. (3) 30. 343.)

Tetrasulphuric acid, H<sub>2</sub>S<sub>4</sub>O<sub>13</sub>

Fumes on air. (Weber, Pogg. 159. 313.)

Sulphates.

Most sulphates are easily sol. in H<sub>2</sub>O; but Ag<sub>2</sub>SO<sub>4</sub>, Hg<sub>2</sub>SO<sub>4</sub>, and CaSO<sub>4</sub> are only sl. sol., while BaSO<sub>4</sub>, SrSO<sub>4</sub>, and PbSO<sub>4</sub> are nearly insol. therein. All sulphates are sol. in conc. H<sub>2</sub>SO<sub>4</sub>. Basic sulphates are insol. in H<sub>2</sub>O. Most sulphates are insol. in alcohol.

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 823.)

Aluminum sulphate, basic, 2Al<sub>2</sub>O<sub>3</sub>.SO<sub>3</sub>+5H<sub>2</sub>O.

Slowly sol. in 10 mols. HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>. (Schlumberger, Bull. Soc. 1895, (3) 13. 41.) +7H<sub>2</sub>O. Easily sol. in 8 mols. dil. HCl + Aq. or in 10 mols. 10% acetic acid in 24 hours. (Schlumberger.)

+10H<sub>2</sub>O. Insol. in H<sub>2</sub>O; easily sol. in cold dil. mineral acids, and HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>+Aq. (Crum, A. 89. 174.)

Min. *Felsbanyite*.

+15H<sub>2</sub>O. Min. *Paraluminite*.

8Al<sub>2</sub>O<sub>3</sub>, 5SO<sub>3</sub>+25H<sub>2</sub>O. Insol. in H<sub>2</sub>O; sol. in dil. acids (Lowe, J. pr. 79. 428)

5Al<sub>2</sub>O<sub>3</sub>, 3SO<sub>3</sub>+20H<sub>2</sub>O. Easily sol. in acids. (Debray, Bull. Soc. (2) 7. 9)

3Al<sub>2</sub>O<sub>3</sub>, 2SO<sub>3</sub>+9H<sub>2</sub>O. Nearly insol. in conc. H<sub>2</sub>SO<sub>4</sub>. (Bayer, Dingl. 283. 211.)

+20H<sub>2</sub>O. Ppt.

4Al<sub>2</sub>O<sub>3</sub>, 3SO<sub>3</sub>+36H<sub>2</sub>O. Insol. in H<sub>2</sub>O. Easily sol. in dil. mineral acids, and hot HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>+Aq. (Debray, Bull. Soc. (2) 7. 1.)

Al<sub>2</sub>O<sub>3</sub>, SO<sub>3</sub>+6H<sub>2</sub>O = (AlO)<sub>2</sub>SO<sub>4</sub>+H<sub>2</sub>O. Insol. in H<sub>2</sub>O or HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>+Aq. Sl. sol. in hot HCl, easily sol. in warm KOH+Aq.

(Böttger, A. 244. 225)

+9H<sub>2</sub>O. (Athanasesco, C. R. 103. 27.)

Min. *Ahmanite*.

[Al<sub>2</sub>(OH)<sub>6</sub>]SO<sub>4</sub>+2H<sub>2</sub>O.

Sol. in HCl+Aq. in the cold with decomp. Very unstable. (Schlumberger, Bull. Soc. 1895, (3) 13. 60)

3Al<sub>2</sub>O<sub>3</sub>, 4SO<sub>3</sub>+9H<sub>2</sub>O. (Athanasesco, C. R. 103. 271)

+30H<sub>2</sub>O. Sol. in 144 pts. cold, and 30.8 pts. boiling H<sub>2</sub>O. Easily sol. in HCl, and HNO<sub>3</sub>+Aq. (Rammelsberg, Pogg. 43. 533.)

2Al<sub>2</sub>O<sub>3</sub>, 3SO<sub>3</sub>. Decomp. by H<sub>2</sub>O into 3Al<sub>2</sub>O<sub>3</sub>, SO<sub>3</sub> and Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>. (Maus.)

Al<sub>2</sub>O<sub>3</sub>, 2SO<sub>3</sub>=Al<sub>2</sub>O(SO<sub>4</sub>)<sub>2</sub>.

Min. *Ahmanite*.

+H<sub>2</sub>O. Sol. in small quantity of H<sub>2</sub>O, but decomp. by a large quantity into (AlO)<sub>2</sub>SO<sub>4</sub> and Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>. (Maus, Pogg. 11. 80.)

+12H<sub>2</sub>O. Easily sol. in hot or cold H<sub>2</sub>O. Sat. solution contains 45% salt at 15°, which crystallises unchanged on evaporating. (Marguerite, C. R. 90. 354.)

Above basic compounds are mixtures. (Pickering, C. N. 45. 121, 133, 146.)

Aluminum sulphate, Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.

100 pts. H<sub>2</sub>O dissolve (a) pts. Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, and (b) pts. Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>+18H<sub>2</sub>O at:

	0°	10°	20°	30°	40°	50°
a	31.3	33.5	36.15	40.36	45.78	52.18
b	86.85	95.8	107.35	127.6	167.6	201.4

20 cc. above solution + 4 g. $(NH_4)_2SO_4$	20 81	0 29

(Rüdorff, 1885, B. 18. 1160.)

Insol in alcohol. (Mulder.)

Solubility of  $Al(NH_4)(SO_4)_2 + 12H_2O$  in a mixture of 93.3 g.  $H_2O$  and 23.33 g. glycerine = 6 15 g. (Dunlop, Pharm. J. 1910, 85. 6.)

Solubility in 93.3 g.  $H_2O$  + 23.3 g. glycerine + 3.9 g. phenol = 5.59 g.  $Al(NH_4)(SO_4)_2 + 12H_2O$ . (Dunlop.)

Min. *Tschermakite*

Aluminum ammonium chromium sulphate,  
 $Al_2(SO_4)_3$ ,  $(NH_4)_2SO_4$ ,  $Cr_2(SO_4)_3 + 48H_2O$ .

Sol. in  $H_2O$ ; decomp. by boiling. (Vohl, A. 94. 71.)

Aluminum caesium sulphate,  $Al_2Cs_2(SO_4)_4 + 24H_2O$ .

100 pts.  $H_2O$  at  $17^\circ$  dissolve 0.619 pt. caesium alum. (Redtenbacher, J. pr. 94. 442.)

Solubility in 100 pts.  $H_2O$  at  $t^\circ$  (calculated for salt dried at  $130^\circ$ )

$t^\circ$	Pts alum	$t^\circ$	Pts alum	$t^\circ$	Pts alum

Values from 0-7° obtained by interpolation using Setterberg's values for 0° (A. 1882, 211. 100)

From 80-100° they were calculated by extrapolation.

(Hart and Huselson, J. Am. Chem. Soc. 1914, 36. 2084.)

Melts in crystal  $\text{H}_2\text{O}$  at 106° (Tilden, Chem. Soc. 45. 409); at 120.5° (Erdmann); at 122° (Locke.)

Aluminum calcium sulphate, basic,  $\text{Al}_2\text{O}_3$ ,  $6\text{CaO}$ ,  $8\text{SO}_4 + 32\text{H}_2\text{O}$ .

Min. *Etringite*. Mostly sol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl} + \text{Aq}$ .

Aluminum chromium sulphate,  $\text{Al}_2\text{Cr}_2(\text{SO}_4)_4$ .  
Insol. in  $\text{H}_2\text{O}$ .  
 $\text{Al}_2\text{Cr}_2(\text{SO}_4)_4 \cdot \text{H}_2\text{SO}_4$ . Insol. in  $\text{H}_2\text{O}$  (Étard C. R. 86. 1400.)

Aluminum chromium potassium sulphate,  $\text{Al}_2(\text{SO}_4)_3$ ,  $\text{Cr}_2(\text{SO}_4)_3$ ,  $2\text{K}_2\text{SO}_4 + 48\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ , but decompose on boiling. (Vohl.)

Aluminum copper sulphate,  $2\text{Al}_2\text{O}_3$ ,  $9\text{CuO}$ ,  $3\text{SO}_4 + 21\text{H}_2\text{O}$ .  
Min. *Cyanotrichite*. (Percy, Phil. Mag. (3) 36. 103.)

Aluminum hydroxylamine sulphate,  $\text{Al}_2(\text{SO}_4)_3$ ,  $(\text{NH}_2\text{OH})_2\text{SO}_4 + 24\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Meyeringh, B. 10. 1946.)

Aluminum iron (ferrous) sulphate,  $\text{Al}_2(\text{SO}_4)_3$ ,  $\text{FeSO}_4 + 24\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Klauser, A. 14. 261.)  
Min. *Halotrichite*.  
 $\text{Al}_2(\text{SO}_4)_3$ ,  $2\text{FeSO}_4 + 27\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Berthier)  
 $\text{Al}_2\text{O}_3$ ,  $2\text{SO}_3$ ,  $6\text{FeSO}_4$ . Easily sol. in  $\text{H}_2\text{O}$ . (Phillips.)  
 $\text{Al}_2(\text{SO}_4)_3$ ,  $2\text{FeSO}_4$ ,  $\text{H}_2\text{SO}_4$ . Insol. in  $\text{H}_2\text{O}$ . (Étard, C. R. 87. 602.)

Aluminum iron (ferric) sulphate,  $\text{Al}_2(\text{SO}_4)_3$ ,  $\text{Fe}_2(\text{SO}_4)_3$ .  
Insol. in  $\text{H}_2\text{O}$ . (Étard, C. R. 86. 1399.)  
 $\text{Al}_2(\text{SO}_4)_3$ ,  $\text{Fe}_2(\text{SO}_4)_3$ ,  $\text{H}_2\text{SO}_4$ . As above (Étard)  
See  $\text{Al}_2(\text{SO}_4)_3 + \text{Fe}_2(\text{SO}_4)_3$ , under  $\text{Al}_2(\text{SO}_4)_3$  and  $\text{Fe}_2(\text{SO}_4)_3$

Aluminum ferrous potassium sulphate,  $\text{Al}_2(\text{SO}_4)_3$ ,  $12\text{FeSO}_4$ ,  $2\text{K}_2\text{SO}_4 + 24\text{H}_2\text{O}$ .  
Permanent. Sol. in  $\text{H}_2\text{O}$ . (Dufrenoy.)

Aluminum lead sulphate,  $\text{Al}_2\text{Pb}_2(\text{SO}_4)_4 + 20\text{H}_2\text{O}$ .  
Permanent; insol. in  $\text{H}_2\text{O}$ . (G. H. Bailey J. Chem. Soc. Ind. 6. 415.)

Aluminum lithium sulphate,  $\text{Li}_2\text{Al}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

Sol. in 24 pts. cold, and 0.87 pt. hot  $\text{H}_2\text{O}$ . (Kralovansky, Schw. J. 54. 340)  
Does not exist. (Rammelsberg, J. B. 1847-48. 394; Arfvedson; Cmelin.)

Aluminum lithium potassium sulphate (?).  
Sol. in  $\text{H}_2\text{O}$ , from which it crystallises on cooling. (Joss, J. pr. 1. 142.)

Aluminum magnesium sulphate,  $\text{MgSO}_4$ ,  $\text{Al}_2(\text{SO}_4)_3 + 22\text{H}_2\text{O}$ .

Min. *Pickeringite*.  
 $2\text{MgSO}_4$ ,  $\text{Al}_2(\text{SO}_4)_3 + 22\text{H}_2\text{O}$ . Min. *Pickeringite*.  
 $3\text{MgSO}_4$ ,  $\text{Al}_2(\text{SO}_4)_3 + 36\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Klauser, A. 14. 264.)

Aluminum magnesium manganous sulphate,  $Al_2(SO_4)_3, MgSO_4, MnSO_4 + 25H_2O$ .

As sol. in  $H_2O$  as K alum. (Kane.) Very sol. in  $H_2O$ . (Smith, *Sill. Am. J.* (2) 18. 379.) Min. *Bojemanite*.

Aluminum manganous sulphate,  $Al_2(SO_4)_3, MnSO_4 + 25H_2O$ .

Sol. in  $H_2O$ . (Berzelius.) +24 $H_2O$ . Min. *Apjohnite*

Aluminum manganic sulphate,  $2Al_2(SO_4)_3, Mn_2(SO_4)_3$ .

Insol. in  $H_2O$ . (Étard, C. R. 86. 1399)

Aluminum nickel sulphate,  $Al_2(SO_4)_3, 2NiSO_4, H_2SO_4$ .

Insol. in  $H_2O$ , but gradually decomp thereby. (Étard, C. R. 87. 602.)

Aluminum potassium sulphate, basic,  $3(Al_2O_3, SO_3), K_2SO_4 + 6H_2O = K_2SO_4, 3Al_2(SO_4)_3(OH)_4$ .

Min. *Alunite*. Insol. in  $H_2O$ . Insol. in conc.  $HCl + Aq$ .

Sol. in boiling  $H_2SO_4$  of 1.845 sp. gr, but more easily in a mixture of 12 g.  $H_2SO_4$  and 1.5 g.  $H_2O$ , and also in weaker acids, if heated to 210°. (Mitscherlich, J. pr. 81. 108.)

+9 $H_2O$ . Min. *Lévigite* Sl. sol. in boiling  $HCl + Aq$ . (Mitscherlich, J. pr. 83. 455.)

Nearly insol. in  $HCl$  or conc.  $HNO_3 + Aq$ , but sol. in a mixture of 1 pt.  $H_2SO_4$  and 1 pt.  $H_2O$ . (Debray, *Bull. Soc.* (2) 7. 9)

$Al_2O(SO_4)_3, K_2SO_4$ . Sol. in  $H_2O$ , but decomp. by heating.

With varying composition. Precipitates. Insol. in  $H_2O$ . Very sl. sol. in cold, gradually in hot acids. (Bley, J. pr. 39. 17.) Very difficultly sol. in warm conc.  $HCl + Aq$ , but easily sol. in  $KOH + Aq$ . (Naumann, B. 8. 1630.)

Aluminum potassium sulphate (Potash alum),  $KAl(SO_4)_2 + 12H_2O$  or  $K_2Al_2(SO_4)_4 = K_2SO_4, Al_2(SO_4)_3 + 24H_2O$ .

Sol. in  $H_2O$  with absorption of heat.

When 100 pts.  $H_2O$  at 10.8° are mixed with 14 pts. alum, the temp. is lowered 1.4° (Rüdorff, B. 2. 68.)

Burnt alum is very slowly sol. in  $H_2O$ .

100 pts.  $H_2O$  at t° dissolve P pts.  $K_2Al_2(SO_4)_4 + 24H_2O$

t°	P	t°	P
12 5	7 6	50 0	46 7
21 25	10 4	62 5	230 0
25 0	22 0	75 0	920 0
37 5	44 1	87 5	1506 6

(Brandes, 1822.)

Sol in 18 pts. cold, and 1 6 pts. boiling  $H_2O$  (Fourcroy), in 14.12 pts. cold, and 0.75 pt. boiling  $H_2O$  (Bergmann), in 16 pts. cold, and 0.75 pt. boiling  $H_2O$  (Poggiale, A. ch. (3) 8. 467.)

5.50°, and 1 pts. alum

$K_2Al_2(SO_4)_4 + Aq$  sat. in cold contains 5.2% alum (Fourcroy), 6.7% (Boerhave)

100 pts.  $H_2O$  dissolve (a) pts. anhydrous alum, and (b) pts. crystallised at t°.

	0°	10°	20°	30°	40°	50°
a	2 62	4 50	6 57	9 05	12 35	15 9
b	5 22	9 16	13 66	19 29	27 3	36 5

	60°	70°	80°	90°	100°
a	21 1	26 95	35 2	50 3	70 83
b	51 3	71 97	103 1	187 8	421 9

(Poggiale, A. ch. (3) 8. 467.)

According to Loëke (*Am. Ch. J.* 1901, 28. 174), Poggiale's tables for  $NH_4$  and K alums are evidently transposed, and the above date are applied by Poggiale to  $NH_4$  alum.

100 pts.  $H_2O$  dissolve  $K_2Al_2(SO_4)_4 + 24H_2O$  corresponding to pts anhydrous  $K_2Al_2(SO_4)_4$

Temp	Pts $K_2Al_2(SO_4)_4$	Temp.	Pts $K_2Al_2(SO_4)_4$
0	3 0	80	25
5	3 5	70	40

(Foch, Z. Kryst. Min. 1897, 28. 397.)

Insol. in alcohol of 0.905 sp. gr. or less. (Anthon, J. pr. 14. 125.)

Insol. in acetone. (Naumann, B. 1904, 37. 4328.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Solubility in  $H_2O$  is increased by glycerine. (Dunlop, Pharm. J. 1910, 31. 6.)

Min. *Kalsmit*.

+ $8H_2O$ . Stable in dry air. (Marino, I. c.)

+ $14H_2O$ . Converted into ord. alum in air. (Marino.)

Aluminum rubidium sulphate,  $Al_2Rb_2(SO_4)_4 + 24H_2O$ .

100 pts.  $H_2O$  dissolve 2.27 pts at  $17^\circ$ ; very sol in hot  $H_2O$ . (Redtonbacher, J. pr. 94. 442.)

Solubility in 100 pts.  $H_2O$  at  $t^\circ$  (calculated for salt dried at  $130^\circ$ ).

$t^\circ$	Pts alum	$t^\circ$	Pts alum	$t^\circ$	Pts alum
0	0.71	25	1.85	65	9.63
10	1.09	35	2.67	80	21.60
17	1.42	50	4.98		

(Setterberg, A. 211. 104)

Solubility in  $H_2O$ .

$t^\circ$	Pts per litre	G mols anhydrous salt per litre
25	18.1	0.059
30	21.9	0.072
35	26.6	0.087
40	32.2	0.106

(Locke, Am. Ch. J. 1901, 26. 180.)

Melts in crystal  $H_2O$  at  $99^\circ$  (Tilden, Chem. Soc. 45. 409); at  $105^\circ$  (Erdmann); at  $109^\circ$  (Locke.)

Aluminum silver sulphate,  $Al_2Ag_2(SO_4)_4 + 24H_2O$ .

Decomp. by  $H_2O$  (Church and Northcote, C. N. 9. 155.)

Aluminum sodium sulphate,  $Al_2Na_2(SO_4)_4 + 24H_2O$ .

Very sl. efflorescent.

Sol in 2.14 pts  $H_2O$  at  $13^\circ$ , or 100 pts  $H_2O$  dissolve 46.7 pts soda alum. Sol in 1 pt boiling  $H_2O$  (Zellner, Schw. J. 86. 183.)

100 pts  $H_2O$  dissolve 110 pts. at  $15.5^\circ$ , and form a liquid of 1.296 sp. gr. (Ure)

100 pts.  $H_2O$  dissolve 51 pts. soda alum at  $16^\circ$ . (Augé, C. R. 110. 1139.)

100 pts.  $H_2O$  dissolve 110 pts. soda alum at  $0^\circ$  (Tilden, Chem. Soc. 45. 409.)

100 g  $H_2O$  dissolve at:

$10^\circ$   $15^\circ$   $20^\circ$   $25^\circ$   $30^\circ$

36.7 38.7 40.9 43.1 45.8 g. anhydrous salt. (Smith, J. Am. Chem. Soc. 1909, 31. 247.)

M.-pt. of  $Na_2Al_2(SO_4)_4 + 24H_2O = 61^\circ$ . (Tilden, Chem. Soc. 45. 409.);  $= 63^\circ$ . (Locke, Am. Ch. J. 1901, 26. 183.)

Insol. in absolute alcohol. (Zellner.)

Min *Mendozite*.

**Aluminum thallous sulphate,  $\text{TlAl}(\text{SO}_4)_2$ .**

0.177 g. mols. of anhydrous salt are sol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ ; or 1 l.  $\text{H}_2\text{O}$  dissolves 75 g. of the anhydrous, or 117.8 g. of the hydrated salt at  $25^\circ$ . (Locke, Am. Ch. J. 1901, 26, 175.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	G. $\text{Al}_2\text{Tl}_2(\text{SO}_4)_4$ in 100 g. $\text{H}_2\text{O}$	G. $\text{Al}_2\text{Tl}_2(\text{SO}_4)_4 \cdot 24\text{H}_2\text{O}$ in 100 g. $\text{H}_2\text{O}$

(Barre, A. ch. 1911, (8) 24. 239.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 826.)

Insol. in absolute alcohol. Sol. in 500 pts alcohol of 0.872 sp. gr., and in 62.5 pts of 0.906 sp. gr. (Anthon, J. pr 14. 125.)

Sol. in 217.4 pts of 0.88% alcohol (sp. gr. = 0.88) at 24.3° (Pohl, J. pr 56. 219.)

Tolerably sol. in alcohol, the sp. gr. of which is greater than 0.860. Insol. in alcohol of sp. gr. less than 0.850.

#### Solubility in dil alcohol

When  $(\text{NH}_4)_2\text{SO}_4$  is dissolved in dil. alcohol, two layers are formed, the compositions of which are as follows:

Sp. gr	Lower layer 100 ccm. contain in g		
	alcohol	water	salt
1.2240		71.43	74.16
1.1775	8.85	68.26	59.54
1.1661	10.62	67.70	56.56
1.1655	11.29	67.34	56.30
1.1735	11.42	66.54	59.20

Sp. gr	Upper layer 100 ccm. containing.		
	alcohol	water	salt
0.9530	41.37	48.47	5.45
0.9512	44.20	45.95	4.97
0.9440	44.27	45.61	4.51
0.9098	52.64	36.78	1.56
0.8750	62.61	24.60	0.30
0.8549	67.04	18.36	0.09
0.8308	77.55	5.53	0.00

(Bodlander, Z. phys. Ch. 7. 3, 8)

#### Solubility in ethyl alcohol + Aq

Upper layer			
Temp.	g $\text{H}_2\text{O}$	g. alcohol	g. salt
16.6°	52.80	40.21	6.99
33.0°	47.99	46.75	5.29
41.8°	47.34	47.07	4.99
55.7°	45.90	49.47	4.63

Lower layer			
16.6°	60.33	10.19	29.48
33.0°	61.02	9.80	29.18
41.8°	61.16	9.74	29.10
55.7°	61.59	9.46	28.95

(Traube, Z. phys. Ch. 1887, 1. 509.)

Solubility of  $(\text{NH}_4)_2\text{SO}_4$  in alcohol at 30°

Two liquid layers are formed between alcohol concentrations of 5.8 and 62%.

Composition of layers.

Upper layer			Lower layer		
$\% (\text{NH}_4)_2\text{SO}_4$	$\% \text{alcohol}$	$\% \text{H}_2\text{O}$	$\% (\text{NH}_4)_2\text{SO}_4$	$\% \text{alcohol}$	$\% \text{H}_2\text{O}$
2.2	56.6	41.2	37.1	5.8	57.1
2.6	54.5	42.9	35.7	6.3	58
3.4	52.3	44.3	33.8	7.4	58.8
13.2	31.8	55	21.7	18.4	59.9
17	25	58	17	25	58

At concentration of 62% alcohol, the liquid is homogeneous and contains 1.3%  $(\text{NH}_4)_2\text{SO}_4$ .

(Wibaut, Chem Weekbl. 1909, 6. 401.)

Solubility of  $(\text{NH}_4)_2\text{SO}_4$  in alcohol at 60°

$\% (\text{NH}_4)_2\text{SO}_4$	$\% \text{alcohol}$	$\% \text{H}_2\text{O}$
43.02	2.32	54.66
41.1	4.1	54.8
1.2	64.5	34.3
0.2	75.5	24.3

Between 4.1° and 64.5°, two liquid layers are formed

Composition of layers.

Upper layer			Lower layer		
$\% (\text{NH}_4)_2\text{SO}_4$	$\% \text{alcohol}$	$\% \text{H}_2\text{O}$	$\% (\text{NH}_4)_2\text{SO}_4$	$\% \text{alcohol}$	$\% \text{H}_2\text{O}$
1.2	64.5	34.3	41.1	4.1	54.8
1.6	60	38.4	36.8	6	57.2
3.8	50	46.2	30.8	9	60.2
7.4	40	52.6	26.6	12	61.4
10	34.4	55.6	23.6	15	61.4

(Schreinemakers, Z. phys. Ch. 1907, 59. 641.)

Solubility in alcohol + Aq at 0°.

$\% (\text{NH}_4)_2\text{SO}_4$	$\% \text{alcohol}$	$\% \text{H}_2\text{O}$
41.4	0	58.6
30.0	9.41	60.59
..	..	..
0.14	73.03	26.83

Two layers are formed between alcohol concentrations of 9.41 and 73.03%.

(de Waal, Dissert. 1910.)

Solubility in propyl alcohol + Aq at 20°.

$\% \text{propyl alcohol}$	$\% (\text{NH}_4)_2\text{SO}_4$
20	6.7
30	4.8
40	3.2
50	2.0
60	1.0
70	0.4

(Lanebarger, Am. Ch. J. 1892, 14. 380.)

100 g. 95% formic acid dissolve 25.4 g.  $(\text{NH}_4)_2\text{SO}_4$  at 16.5°. (Aschan, Ch. Ztg. 1913, 37. 1117.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329).

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314.)

Insol. in  $\text{CS}_2$  (Arcetowski, Z. anorg. 1894, 6. 257.)

Ammonium hydrogen sulphate,  $\text{NH}_4\text{HSO}_4$ .

Sl. deliquescent. Sol. in 1 pt. cold  $\text{H}_2\text{O}$ . (Lmk.)

Very sl. sol. in alcohol (Gerhardt, A. ch. (3) 20. 255.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329, Eidmann, C. C. 1899, II. 1014.)

$(\text{NH}_4)_2\text{H}(\text{SO}_4)_2$ . Not deliquescent. Sol. in  $\text{H}_2\text{O}$  (Mitscherlich, Pogg. 39. 198.)

$(\text{NH}_4)_2\text{SO}_4 \cdot 3\text{H}_2\text{SO}_4$ . D'Ans and Schreiner, Z. anorg. 1913, 80. 241.)

Ammonium pyrosulphate,  $(\text{NH}_4)_2\text{S}_2\text{O}_7$ .

Decomp. by  $\text{H}_2\text{O}$ . (Schulze.)

$\text{NH}_4\text{HS}_2\text{O}_7$ . (D'Ans and Schreiner, Z. anorg. 1913, 80. 241.)

Ammonium octosulphate,  $(\text{NH}_4)_8\text{S}_8\text{O}_{32}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Weber, B. 17. 2497.)

Ammonium antimony sulphate,

$(\text{NH}_4)_2\text{SO}_4 \cdot \text{Sb}_2(\text{SO}_4)_3$ .

Behaves toward  $\text{H}_2\text{O}$  and abs. alcohol as a mixture of the components (Metz, Z. anorg. 1905, 48. 152.)

Decomp. very slowly by  $\text{H}_2\text{O}$  (Gutmann, Arch. Pharm. 1898, 236. 479.)

Ammonium bismuth sulphate,  $\text{NH}_4\text{Bi}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O}$ .

Easily sol. in  $\text{HCl}$ , and  $\text{HNO}_3$  + Aq; less sol. in conc.  $\text{H}_2\text{SO}_4$ , and hot dil. acids. Slowly decomp. by cold  $\text{HC}_2\text{H}_3\text{O}_2$ , and dil.  $\text{H}_2\text{SO}_4$  + Aq. (Lüddecke, A. 140. 277.)

Ammonium cadmium sulphate,  $(\text{NH}_4)_2\text{SO}_4 \cdot \text{CdSO}_4 \cdot 6\text{H}_2\text{O}$ .

Can be recrystallised from a little  $\text{H}_2\text{O}$ . (v. Hauer.)

1 l.  $\text{H}_2\text{O}$  dissolves 723 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

$3(\text{NH}_4)_2\text{SO}_4, \text{CdSO}_4 + 10\text{H}_2\text{O}$  (André, C. R. 104. 987)

**Ammonium calcium sulphate,**  
 $(\text{NH}_4)_2\text{Ca}(\text{SO}_4)_2 + \text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  (Fassbender, B. 11. 1968)  
Sol in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  (Rose, Pogg. 110. 292.)

This double salt is stable between  $0^\circ$  and  $100^\circ$  in solutions containing an excess of  $(\text{NH}_4)_2\text{SO}_4$ . It is not formed if the solution contains less than 35%  $(\text{NH}_4)_2\text{SO}_4$  (Barre, C. R. 1909, 143. 1605.)

$(\text{SO}_4)_2\text{Ca}_2(\text{NH}_4)_2$ . Decomp. by  $\text{H}_2\text{O}$  (D'Ans, B. 1907, 40. 192)

This double salt is formed in the presence of an excess of  $\text{CaSO}_4$  and at temp. above  $80^\circ$ . (Barre, C. R. 1909, 143. 1605)

$\text{Ca}_2(\text{NH}_4)_2(\text{SO}_4)_4 + \text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (D'Ans, B. 1907, 40. 192.)

**Ammonium calcium cupric sulphate,**  
 $\text{Ca}_2\text{Cu}(\text{NH}_4)_2(\text{SO}_4)_4 + 2\text{H}_2\text{O}$ .

Very stable. (D'Ans, B. 1908, 41. 1778.)

**Ammonium calcium potassium sulphate,**  
 $\text{NH}_4\text{CaK}(\text{SO}_4)_3 + \text{H}_2\text{O}$ .

Decomp. by cold  $\text{H}_2\text{O}$ . (Fassbender, B. 11. 1968)

**Ammonium cerous sulphate,  $(\text{NH}_4)_2\text{Ce}_2(\text{SO}_4)_4 + 5\text{H}_2\text{O}$ .**

More sol. in cold than in hot  $\text{H}_2\text{O}$  (Czudnowicz).

100 g.  $\text{H}_2\text{O}$  dissolve at:

22  $3^\circ$  22 35  $35^\circ$  1  $45^\circ$  2  $^\circ$   
5 331 5 328 5 184 4 993 g. anhydrous salt,

45  $^\circ$  55  $3^\circ$  55  $2^\circ$

2 994 2 240 2 187 g. anhydrous salt,

75  $4^\circ$  85  $2^\circ$

1 482 1 184 g. anhydrous salt

(Wolff, Z. anorg. 1905, 45. 102.)

$5(\text{NH}_4)_2\text{SO}_4, \text{Ce}_2(\text{SO}_4)_3$ . (Barre, C. R. 1910, 151. 873.)

**Ammonium ceric sulphate,  $3(\text{NH}_4)_2\text{SO}_4, \text{Ce}(\text{SO}_4)_3 + 4\text{H}_2\text{O}$**

Slightly efflorescent. Easily sol. in  $\text{H}_2\text{O}$ . (Mendelejeff, A. 188. 50)

$3(\text{NH}_4)_2\text{SO}_4, 2\text{Ce}(\text{SO}_4)_3 + 3\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Mendelejeff.)

**Ammonium chromous sulphate,  $\text{NH}_4\text{Cr}(\text{SO}_4)_2$ .**

0.407 g. mol. anhydrous salt is sol in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ . (Locke, Am. Ch. J. 1901, 26. 175.)

$+6\text{H}_2\text{O}$ . 100 cem. of sat. aqueous solution contain 55 g. of the salt at  $20^\circ$ . Insol. in alcohol (Laurent, C. R. 1911, 131. 112.)

**Ammonium chromic sulphate,  $(\text{NH}_4)_2\text{SO}_4, \text{Cr}_2(\text{SO}_4)_3$**

Not attacked by boiling  $\text{H}_2\text{O}$  or conc.  $\text{HCl} + \text{Aq}$ . Very slowly attacked by boiling  $\text{KOH} + \text{Aq}$  (sp. gr. = 1.3). Insol. in  $\text{CrCl}_3 + \text{Aq}$  or  $\text{SnCl}_2 + \text{Aq}$  (Klobb, Bull. Soc. (3) 9. 664.)  $+5\text{H}_2\text{O}$ . Is ammonium chromosulphate, which see.

$+24\text{H}_2\text{O}$  **Chrome Alum.**

**Violet modification.** Efflorescent. Sol. in cold  $\text{H}_2\text{O}$ , but solution is decomp. on heating with formation of green modification. The dil. solution of green modification is gradually converted into violet modification by standing. Alcohol ppts it from aqueous solution (Schrotter, Pogg. 53. 526.)

100 cc  $\text{H}_2\text{O}$  dissolve 10.78 g. anhydrous, or 21.21 g. hydrate salt at  $25^\circ$ . Melts in crystal  $\text{H}_2\text{O}$  at  $45^\circ$  (Locke, Am. Ch. J. 1901 26. 174)

Solubility in  $\text{H}_2\text{O}$ .

Saturation is very slowly reached owing to transition between violet and green modifications. If time of saturation is taken at 2½ hours, 100 g. of the solution contain at:

$0^\circ$	$30^\circ$	$40^\circ$
3.77	10.6	15.5 g. $(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4$ .

This is assumed to be the solubility of the violet modification.

In 300 hours, 15.96 g. salt are dissolved at  $30^\circ$ , and 24.64 g. in 250 hours at  $40^\circ$  (Koppel, B. 1906, 39. 3741)

Calc from electrical conductivity measurements, a solution containing 3.8 g. of the sulphate in 100 g. contains 48% of the green compound at  $40^\circ$  and 61% at  $55^\circ$ . With solutions of 6-7 times the above concentration equilibrium is reached at  $40^\circ$  with 30-40% green alum. (Koppel)

Sp. gr. of aqueous solution of violet modification at  $15^\circ$ , containing:

4	8	12%	$(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .
1.020	1.0405	1.0610	

Sat. solution at  $15^\circ$  has sp. gr. = 1.070. (Gerlach.)

**Green modification.** Sol. in  $\text{H}_2\text{O}$  and alcohol. When in aqueous solution, it gradually changes to violet modification

Sp. gr. of aqueous solution of green modification at  $15^\circ$ , containing:

10	20	30%	$(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .
1.044	1.091	1.142	

40	50	60%	$(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .
1.197	1.255	1.317	

70	80	90%	$(\text{NH}_4)_2\text{Cr}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .
1.384	1.456	1.532	

(Gerlach, Z. anal. 28. 498.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

$3(\text{NH}_4)_2\text{SO}_4, \text{Cr}_2(\text{SO}_4)_3$ . Only sl. attacked by boiling  $\text{H}_2\text{O}$ . Not attacked by boiling conc.  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ . (Klobb, Bull. Soc. (3) 9. 663.)

**Ammonium cobaltous sulphate,**  
 $(\text{NH}_4)_2\text{Co}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve at:

0° 10° 18° 23° 35°  
 8.9 11.6 15.2 17.1 19.6 pts. anhydrous salt,

40° 45° 50° 60° 75°  
 22.3 25 28.7 34.5 43.3 pts. anhydrous salt.  
 (Tobler, A. 95. 193.)

100 pts. saturated solution contain at:

20° 40° 60° 80°  
 14.9 20.8 25.6 33 pts. anhydrous salt  
 (v Hauer, J. pr. 74. 433.)

1 l.  $\text{H}_2\text{O}$  dissolves 147.2 g. anhydrous salt  
 at 25°. Tobler's results are inaccurate.  
 (Locke, Am. Ch. J. 1902, 27. 459.)

Pptd. from aqueous solution by alcohol.

**Ammonium cobaltic sulphate,**  
 $(\text{NH}_4)_2\text{Co}_2(\text{SO}_4)_4 \cdot 24\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  with decomp (Marshall,  
 Chem. Soc. 59 760)

**Ammonium cobaltous cupric sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{CoSO}_4 \cdot \text{CuSO}_4 \cdot 12\text{H}_2\text{O}$ .

Quite easily sol in hot  $\text{H}_2\text{O}$ , but on long  
 boiling a basic salt is pptd. (Vohl, A. 94. 58)

**Ammonium cobaltous ferrous sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{CoSO}_4 \cdot \text{FeSO}_4 \cdot 12\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  (Vohl, A. 94. 57)

**Ammonium cobaltous magnesium sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{CoSO}_4 \cdot \text{MgSO}_4 \cdot 12\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$  (Vohl, A. 94. 57.)

**Ammonium cobaltous manganous sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{CoSO}_4 \cdot \text{MnSO}_4 \cdot 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57)

**Ammonium cobaltous nickel sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{CoSO}_4 \cdot \text{NiSO}_4 \cdot 12\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

**Ammonium cobaltous zinc sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{CoSO}_4 \cdot \text{ZnSO}_4 \cdot 12\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

**Ammonium cupric sulphate,  $(\text{NH}_4)_2\text{CuSO}_4$**

$\cdot 6\text{H}_2\text{O}$   
 Efflorescent in warm air.

Sol. in 1.5 pts. boiling  $\text{H}_2\text{O}$ , and separates almost  
 wholly on cooling (Vogel, J. pr. 2. 194)  
 Sol in 1.55 pts.  $\text{H}_2\text{O}$  at 18.75° (Abt)

100 pts.  $\text{H}_2\text{O}$  at 19° dissolve 26.6 pts., and  
 sat. solution has sp. gr. = 1.1337. (Schiff, A.  
 109. 426.)

100 g. sat. solution at 30° contain 30.36 g.  
 anhydrous salt (Schreinemakers, Arch. Néer.  
 Sci. 1910, (2) 15. 92.)

Solubility of  $(\text{NH}_4)_2\text{Cu}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$  +  
 $(\text{NH}_4)_2\text{Ni}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at 13–14°  
 Mols. per 100 mols.  $\text{H}_2\text{O}$ .

Cu salt	Ni salt	% Cu salt in solid phase
0	0.521	0
0.1476	0.295	10.29
0.2664	0.2089	30.59
0.4165	0.1449	52.23
0.4785	0.1202	78.80
1.0350	0	100

(Fock, Z. Kryst. Min. 1897, 28. 365.)

Solubility of  $(\text{NH}_4)_2\text{Cu}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$  +  
 $\text{K}_2\text{Cu}(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at 13–14°  
 Mols. per 100 mols.  $\text{H}_2\text{O}$ .

1.035	0	100.

(Fock.)

$(\text{NH}_4)_2\text{SO}_4 \cdot 2\text{CuSO}_4$  Very sol in  $\text{H}_2\text{O}$   
 (Klobb, C. R. 115. 220)

**Ammonium cupric ferrous sulphate.**

Sol in  $\text{H}_2\text{O}$  without decomposition. (Vohl,  
 A. 94. 61)

**Ammonium cupric magnesium sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{CuSO}_4 \cdot \text{MgSO}_4 \cdot 12\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57)

**Ammonium cupric magnesium potassium sul-**  
**phate,  $(\text{NH}_4)_2\text{SO}_4 \cdot \text{CuSO}_4 \cdot \text{MgSO}_4 \cdot \text{K}_2\text{SO}_4$**   
 $\cdot 12\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (Schiff.)  
 $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{CuSO}_4 \cdot 2\text{MgSO}_4 \cdot \text{K}_2\text{SO}_4 \cdot$   
 $18\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Schiff)

**Ammonium cupric manganous sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4, \text{CuSO}_4, \text{MnSO}_4 + 12\text{H}_2\text{O}$ .  
 Sol in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

**Ammonium cupric nickel sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4, \text{CuSO}_4, \text{NiSO}_4 + 12\text{H}_2\text{O}$   
 Sol in  $\text{H}_2\text{O}$  (Vohl)

**Ammonium cupric potassium sulphate,**  
 $\text{NH}_4\text{KSO}_4, \text{CuSO}_4 + 6\text{H}_2\text{O}$ .  
 Sol in  $\text{H}_2\text{O}$ . (Schiff.)

**Ammonium cupric zinc sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4, \text{CuSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$ .  
 Sol in  $\text{H}_2\text{O}$ . (Vohl)

**Ammonium cupric sulphate ammonia,**  
 $(\text{NH}_4)_2\text{SO}_4, \text{CuO}, 2\text{NH}_3$ .

Sol in 15 pts cold  $\text{H}_2\text{O}$ , but decomp on exposure to air or dilution. Insol in alcohol. (Kuhn)

**Ammonium didymium sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,**  
 $\text{D}_{12}(\text{SO}_4)_2 + 8\text{H}_2\text{O}$ .  
 Sol. in 18 pts  $\text{H}_2\text{O}$ , and less easily in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  (Manginac)  
 Moderately sol in  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 43. 362)

**Ammonium erbium sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,**  
 $\text{Er}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$   
 Sol. in  $\text{H}_2\text{O}$  (Cleve)

**Ammonium gallium sulphate,**  
 $(\text{NH}_4)_2\text{Ga}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

Sol in cold water and dilute alcohol. Conc solution clouds up on boiling, but clears on cooling. Dil solution separates out a basic salt, insol. in hot or cold  $\text{H}_2\text{O}$ . (Boisbaudran.)

**Ammonium glucinum sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,**  
 $\text{GlSO}_4 + 2\text{H}_2\text{O}$   
 Sol. in  $\text{H}_2\text{O}$ . (Atterberg)

**Ammonium indium sulphate,**  
 $(\text{NH}_4)_2\text{In}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 200 pts salt at  $16^\circ$ , and 400 pts at  $30^\circ$ .

Insol in alcohol

Melts in crystal  $\text{H}_2\text{O}$  at  $36^\circ$  (Rössler, J. pr. (2) 7. 14.)  
 $+ 8\text{H}_2\text{O}$ . (Rössler.)

**Ammonium iridium sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,**  
 $\text{Ir}_2(\text{SO}_4)_3 + 24\text{H}_2\text{O}$ .

Easily sol in  $\text{H}_2\text{O}$ . (Marino, Z. anorg. 1904, 42, 221)

**Ammonium iron (ferrous) sulphate,**  
 $(\text{NH}_4)_2\text{Fe}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$ .

Much less sol. in  $\text{H}_2\text{O}$  than  $\text{FeSO}_4 + 7\text{H}_2\text{O}$ . (Vogel, J. pr. 2. 192.)

100 pts  $\text{H}_2\text{O}$  dissolve at:

$0^\circ \quad 12^\circ \quad 20^\circ \quad 30^\circ \quad 36^\circ$

12.2 17.5 21.6 28.1 31.8 pts. anhydrous salt,

$45^\circ \quad 55^\circ \quad 60^\circ \quad 65^\circ \quad 75^\circ$   
 36.2 40.3 44.6 49.8 56.7 pts. anhydrous salt.  
 (Tobler, A. 95. 193.)

100 pts.  $\text{H}_2\text{O}$  at  $16.5^\circ$  dissolve 35.9 pts. hydrous salt.

1 l.  $\text{H}_2\text{O}$  dissolves 351 pts or 1.044 g. mol. anhydrous salt at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27. 459.)

Sol. in  $\text{H}_2\text{O}$  without decomp. Aq solution at  $30^\circ$  contains 13.13%  $\text{FeSO}_4$  and 11.45%  $(\text{NH}_4)_2\text{SO}_4$  (Schrenemakers, C. C. 1910, I. 801.)

Sp. gr. of  $(\text{NH}_4)_2\text{FeSO}_4 + \text{Aq}$  at  $19^\circ$

% = %  $(\text{NH}_4)_2\text{FeSO}_4 + 6\text{H}_2\text{O}$

%	Sp gr	%	Sp gr	%	Sp gr
1	1.006	11	1.066	21	1.130
2	1.013	12	1.073	22	1.136
3	1.018	13	1.080	23	1.143
4	1.024	14	1.085	24	1.150
5	1.030	15	1.092	25	1.156
6	1.036	16	1.097	26	1.164
7	1.042	17	1.104	27	1.171
8	1.047	18	1.110	28	1.179
9	1.054	19	1.116	29	1.185
10	1.060	20	1.124	30	1.193

(Schiff calculated by Gerlach, Z. anal. 8. 250.)

Insol. in acetone

**Ammonium ferric sulphate, basic.**

Extremely difficultly sol. in  $\text{HCl} + \text{Aq}$ . Not decomp. by  $\text{KOH} + \text{Aq}$ . (Berzelius.)

$5(\text{NH}_4)_2\text{O}, 3\text{Fe}_2\text{O}_3, 12\text{SO}_3 + 18\text{H}_2\text{O}$  or  $2(\text{NH}_4)_2\text{O}, \text{Fe}_2\text{O}_3, 4\text{SO}_3 + 4\text{H}_2\text{O}$ . Sol. in 2.4 pts. cold  $\text{H}_2\text{O}$ . (Maus, Pogg. 11. 79.)

**Ammonium iron (ferric) sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,**  
 $\text{Fe}_2(\text{SO}_4)_3$ .

Attacked slowly by cold  $\text{H}_2\text{O}$ . (Lachaud and Lepierre)

Nearly insol in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1913, 84. 363)

$+ 24\text{H}_2\text{O}$ . Iron alum. Sol in 3 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Forchhammer, Ann. Plur. 6. 406.)

100 cc.  $\text{H}_2\text{O}$  dissolve 44.15 g. anhydrous, or 124.40 g. hydrated salt at  $25^\circ$ , or 1.659 g. mols. anhydrous salt are sol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ . (Locke, Am. Ch. J. 1901, 26. 174.)

Sp. gr. of aqueous solution at  $15^\circ$  containing

5 10 15%  $(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ ,  
 1.023 1.047 1.071

20 25 30%  $(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ ,  
 1.066 1.122 1.148

35 40%  $(\text{NH}_4)_2\text{Fe}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .  
 1.175 1.203

40% solution is sat. at 15°. (Geilach, Z. anal. 28. 496.)

Melts in crystal  $\text{H}_2\text{O}$  at 40° (Locke.)

$3(\text{NH}_4)_2\text{SO}_4, \text{Fe}_2(\text{SO}_4)_3$ . Insol. in cold  $\text{H}_2\text{O}$ . (Lachaud and Lepierre.)

**Ammonium iron (ferroferrie) sulphate,**  
 $4(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{Fe}_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$

Sl sol. in cold  $\text{H}_2\text{O}$ ; decomp. into basic salt by hot  $\text{H}_2\text{O}$ ; insol in alcohol. (Lachaud and Lepierre, C. R. 114. 916.)

**Ammonium ferrous magnesium sulphate,**  
 $4(\text{NH}_4)_2\text{SO}_4, 3\text{FeSO}_4, \text{MgSO}_4 + 24\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Schiff, A. 107. 64.)

$2(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{MgSO}_4 + 12\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

**Ammonium ferrous manganous sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{MnSO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

**Ammonium ferrous nickel sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{NiSO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

**Ammonium ferrous zinc sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4, \text{FeSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Bette, A. 14. 286.)

**Ammonium lanthanum sulphate,  $(\text{NH}_4)_2\text{SO}_4, \text{La}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$**

Sl. sol. in  $\text{H}_2\text{O}$ . (Marignac.)

Quite sol. in  $\text{H}_2\text{O}$ . (Cleve.)

$+ 2\text{H}_2\text{O}$ . (Barre, C. R. 1910, 151. 872.)

$5(\text{NH}_4)_2\text{SO}_4, 2\text{La}_2(\text{SO}_4)_3$ . Sl. sol. in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$  of concentrations above 60% (Barre, A. ch 1911, (8) 24. 246.)

$5(\text{NH}_4)_2\text{SO}_4, \text{La}_2(\text{SO}_4)_3$ . (Barre)

**Ammonium lead sulphate,  $(\text{NH}_4)_2\text{SO}_4, \text{PbSO}_4$ .**

Decomp. by  $\text{H}_2\text{O}$  into its constituents.

(Wöhler and Litton, A. 43. 126.)

Decomp. by  $\text{H}_2\text{O}$ . Only stable in contact with solutions containing.

13.86 pts.  $(\text{NH}_4)_2\text{SO}_4$  per 100 pts.  $\text{H}_2\text{O}$  at 20°.

19.25 pts.  $(\text{NH}_4)_2\text{SO}_4$  per 100 pts.  $\text{H}_2\text{O}$  at 50°.

24.31 pts.  $(\text{NH}_4)_2\text{SO}_4$  per 100 pts.  $\text{H}_2\text{O}$  at 75°.

29.42 pts.  $(\text{NH}_4)_2\text{SO}_4$  per 100 pts.  $\text{H}_2\text{O}$  at 100°.

(Barre, C. R. 1909, 149. 294.)

**Ammonium lithium sulphate,  $\text{NH}_4\text{LiSO}_4$ .**

Solubility in  $\text{H}_2\text{O} = 35.25\%$  at  $-10^\circ$  and 36.18% at  $70^\circ$ . (Schreinemakers, C. C. 1906, I. 217.)

This is the only double salt which  $(\text{NH}_4)_2\text{SO}_4$  forms with  $\text{Li}_2\text{SO}_4$  below  $100^\circ$ .

(Spielrein, C. R. 1913, 157. 48.)

**Ammonium magnesium sulphate,**  
 $(\text{NH}_4)_2\text{Mg}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$ .

100 pts  $\text{H}_2\text{O}$  dissolve 15.9 pts. anhydrous double salt at  $13^\circ$ . (Mulder)

100 pts  $\text{H}_2\text{O}$  dissolve at.

0° 10° 15° 20° 30°  
9.0 14.2 15.7 17.9 19.1 pts anhydrous salt,

45° 50° 55° 60° 75°

25.6 30.0 31.9 36.1 45.3 pts. anhydrous salt.

(Tobler, A. 96. 193.)

More sol. in  $\text{H}_2\text{O}$  than  $(\text{NH}_4)_2\text{SO}_4$  or  $\text{MgSO}_4$  (Graham.)

1 l.  $\text{H}_2\text{O}$  dissolves 199 pts anhydrous salt at  $25^\circ$ . Tobler's results are inaccurate.

(Locke, Am. Ch. J. 1902, 27. 459.)

100 g.  $\text{H}_2\text{O}$  dissolve at:

34° 41° F  
18.22 20.72 g.  $(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, 6\text{H}_2\text{O}$ .

50° 59° F.  
22.48 24.08 g.  $(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, 6\text{H}_2\text{O}$ ,

60° 70° F.  
24.81 28.26 g.  $(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, 6\text{H}_2\text{O}$ ,

81° F  
33.33 g.  $(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, 6\text{H}_2\text{O}$

(Lothian, Pharm. J. 1910, (4) 30. 546.)

Lothian's results for solubility in  $\text{H}_2\text{O}$  probably incorrect because of inaccuracy of experimental method. (Seidell, Pharm. J. 1911, (4) 33. 846)

Solubility of  $(\text{NH}_4)_2\text{Mg}(\text{SO}_4)_2$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	g anhydrous salt per 100 g.	
	solution	$\text{H}_2\text{O}$
0	10.58	11.83
10	12.75	14.61
20	15.23	17.96
25	16.45	19.69
30	17.84	21.71
40	20.51	25.86
50	23.18	30.17
60	26.02	35.17
80	32.58	48.32
100	39.66	65.72

(Porlezza, Att. Acc. Linc. 1914, (5) 23. II, 509)

Min. *Cerbolets*.

**Ammonium magnesium nickel sulphate,**  
 $2(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, \text{NiSO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

**Ammonium magnesium potassium zinc sulphate,  $2(\text{NH}_4)_2\text{SO}_4, 3\text{MgSO}_4, 3\text{K}_2\text{SO}_4, 2\text{ZnSO}_4 + 30\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Schiff, A. 107. 64.)

$(\text{NH}_4)_2\text{SO}_4, 2\text{MgSO}_4, 2\text{K}_2\text{SO}_4, \text{ZnSO}_4 + 18\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Schiff.)

$(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, \text{K}_2\text{SO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Schiff.)

Ammonium magnesium zinc sulphate,  
 $2(\text{NH}_4)_2\text{SO}_4, \text{MgSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$   
 Sol in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

Ammonium manganous sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,  
 $\text{MnSO}_4 + 6\text{H}_2\text{O}$

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ . (Jahn.)  
 1 l.  $\text{H}_2\text{O}$  dissolves 372 g. anhydrous salt  
 at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27. 459.)  
 $(\text{NH}_4)_2\text{SO}_4, 2\text{MnSO}_4$ . Readily decomp. by  
 $\text{H}_2\text{O}$ . (Lepierre, C. R. 1895, 120. 924.)

Ammonium manganic sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,  
 $\text{Mn}_2(\text{SO}_4)_3$

Decomp. by  $\text{H}_2\text{O}$ . Insol. in ether,  $\text{C}_6\text{H}_6$ , and  
 conc.  $\text{H}_2\text{SO}_4$ . Sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (Le-  
 pierre, Bull. Soc. 1895, (3) 13. 596.)  
 $+ 24\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Mitscher-  
 lich.)

Ammonium manganous nickel sulphate,  
 $2(\text{NH}_4)_2\text{SO}_4, \text{MnSO}_4, \text{NiSO}_4 + 12\text{H}_2\text{O}$   
 Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

Ammonium manganous zinc sulphate,  
 $2(\text{NH}_4)_2\text{SO}_4, \text{MnSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$   
 Sol. in  $\text{H}_2\text{O}$ . (Vohl)

Ammonium mercuric sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,  
 $8\text{HgSO}_4 + 2\text{H}_2\text{O}$ .

(Hirzel, J. B. 1850. 333.)  
 $(\text{NH}_4)_2\text{SO}_4, \text{HgSO}_4$ . Difficultly sol. in  
 $\text{H}_2\text{O}$ . Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$

Ammonium mercurous sulphate ammonia,  
 $3\text{Hg}_2\text{O}, 2(\text{NH}_4)\text{HgSO}_4, 2\text{NH}_3$ .

Insol. in hot or cold, dil. or conc.  $\text{H}_2\text{SO}_4$ ,  
 and  $\text{HNO}_3$ . Sol. in  $\text{HCl}$ . (Tarugi, Gazz.  
 ch. it. 1903, 33. (1) 131.)

Ammonium nickel sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,  
 $\text{NiSO}_4 + 6\text{H}_2\text{O}$ .

Sol. in 4 pts. cold  $\text{H}_2\text{O}$  (Lank, 1796.)

100 pts.  $\text{H}_2\text{O}$  dissolve at:

$3.5^\circ$   $10^\circ$   $18^\circ$   $20^\circ$   $30^\circ$   
 1.8 3.2 5.8 5.9 8.3 pts. anhydrous salt,  
 $40^\circ$   $50^\circ$   $59^\circ$   $68^\circ$   $85^\circ$   
 11.5 14.4 16.7 18.8 28.6 pts. anhydrous salt.  
 (Tobler, A. 95. 193.)

100 pts. sat. solution contain at  $20^\circ$ , 9.4;  
 at  $40^\circ$ , 13.2; at  $60^\circ$ , 18.6; at  $80^\circ$ , 23.1 pts.  
 anhydrous salt. (v. Hauer, J. pr. 74. 433.)

1 l.  $\text{H}_2\text{O}$  dissolves 75.7 g. anhydrous salt  
 at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27. 459.)  
 Nearly insol. in a weak acid solution of  
 $(\text{NH}_4)_2\text{SO}_4$ . (Thompson, C. C. 1863. 957.)

Ammonium nickel zinc sulphate,  $2(\text{NH}_4)_2\text{SO}_4$ ,  
 $\text{NiSO}_4, \text{ZnSO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

Ammonium nickel sulphate ammonia,  
 $(\text{NH}_4)_2\text{SO}_4, \text{NiSO}_4, 6\text{NH}_3 + 3\text{H}_2\text{O}$ .  
 (André, C. R. 106. 936.)

Ammonium platonic sulphate,  $2(\text{NH}_4)_2\text{SO}_4$ ,  
 $\text{Pt}_2(\text{SO}_4)_3 + 25\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Prost, Bull. Soc. (2) 46. 156.)

Ammonium potassium sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,  
 $\text{K}_2\text{SO}_4 + 4\text{H}_2\text{O}$ .

Soluble in  $\text{H}_2\text{O}$  100 pts.  $\text{H}_2\text{O}$  at  $16^\circ$  dis-  
 solve 13.68 pts. salt. (Thomson, 1831.)

Min. *Taylorite*.

Ammonium praseodymium sulphate,  
 $(\text{NH}_4)_2\text{SO}_4, \text{Pr}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (von Scheele, Z. anorg.  
 1898, 18. 359.)

Ammonium rhodium sulphate,  
 $(\text{NH}_4)_2\text{SO}_4, \text{Rh}_2(\text{SO}_4)_3 + 24\text{H}_2\text{O}$

Very sol.  $\text{H}_2\text{O}$ ; melts in crystal  $\text{H}_2\text{O}$  at  
 $102-103^\circ$ . (Piccini, Z. anorg. 1901, 27. 67.)

Ammonium samarium sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,  
 $\text{Sm}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve, Bull. Soc. (2) 43.  
 166.)

Ammonium scandium sulphate,  $(\text{NH}_4)_2\text{SO}_4$ ,  
 $\text{Sc}_2(\text{SO}_4)_3$

Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

Sol. in  $\text{H}_2\text{O}$  and in dil.  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq.}$   
 (R. J. Meyer, Z. anorg. 1914, 86. 279.)

Ammonium sodium sulphate,  $\text{NH}_4\text{NaSO}_4 +$   
 $2\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 46.6 pts. of cryst. salt  
 at  $15^\circ$ , and the solution has a sp. gr. of 1.1749.

Sp. gr. of aqueous solution containing:

31.8 24.44 15.9%  $\text{NH}_4\text{NaSO}_4 + 2\text{H}_2\text{O}$ ,  
 1.1749 1.1380 1.0849  
 12.72 6.36 %  $\text{NH}_4\text{NaSO}_4 + 2\text{H}_2\text{O}$ .  
 1.0679 1.0337  
 (Schiff, A. 114. 68.)

Ammonium strontium sulphate.

Insol. in excess of  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq.}$  (Rose,  
 Pogg. 110. 296.)

$(\text{NH}_4)_2\text{SO}_4, \text{SrSO}_4$ . This double salt is  
 only stable in contact with nearly sat. solutions  
 of  $(\text{NH}_4)_2\text{SO}_4$ . (Barre, C. R. 1909, 149.  
 293.)

Ammonium tellurium sulphate,  
 $(\text{NH}_4)\text{HSO}_4, 2\text{TeO}_3, \text{SO}_3 + 2\text{H}_2\text{O}$ .

As K salt. (Metzner, A. ch. 1898, (7)  
 15. 203.)

Ammonium thallic sulphate,  $\text{NH}_4\text{TI}(\text{SO}_4)_2$ .

(Marshall, C. C. 1902, II. 1089.)

$+ 4\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . Easily sol.  
 in dil. acids. (Fortini, Gazz. ch. it. 1905, 35.  
 (2) 450.)

**Ammonium thorium sulphate,  $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{Th}(\text{SO}_4)_2$** 

Easily sol. in  $\text{H}_2\text{O}$  and sat.  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq.}$  (Cleve)  
 $+ 2\text{H}_2\text{O}$ . (Barre.)  
 $(\text{NH}_4)_2\text{SO}_4 \cdot \text{Th}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$ . (Barre, A. ch. 1911, (8) 24, 240.)  
 $3(\text{NH}_4)_2\text{SO}_4 \cdot \text{Th}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$ . (B)

**Ammonium titanium sulphate,  $(\text{NH}_4)_2\text{SO}_4 \cdot \text{TiO}_2 \cdot \text{SO}_4 + \text{H}_2\text{O}$** 

Very sol. in  $\text{H}_2\text{O}$  with decomp.  
 Insol. in conc.  $\text{H}_2\text{SO}_4$ . (Rosenheim, Z. anorg. 1901, 26, 252.)  
 $(\text{NH}_4)_2\text{O} \cdot 2\text{TiO}_2 \cdot 2\text{SO}_3 + 3\text{H}_2\text{O}$ . Slowly decomp. by  $\text{H}_2\text{O}$ . (Blondel, Bull. Soc. 1899, (3) 21, 262.)

**Ammonium titanium sesquisulphate,  $(\text{NH}_4)_2\text{SO}_4 \cdot 3\text{Ti}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$** 

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HCl}$ .  
 Insol. in  $\text{H}_2\text{SO}_4$ . Decomp. by boiling with conc.  $\text{H}_2\text{SO}_4$ . (Stahler, B. 1905, 38, 2623.)

**Ammonium uranous sulphate,  $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{U}(\text{SO}_4)_2$** 

Easily sol. in  $\text{H}_2\text{O}$  (Rammelsberg.)  
 Sol. in  $\text{H}_2\text{O}$  but solution rapidly decomp. (Kohlschutter, B. 1901, 34, 3630.)

**Ammonium uranyl sulphate,  $(\text{NH}_4)_2\text{SO}_4 \cdot (\text{UO}_2)_2\text{SO}_4 + 2\text{H}_2\text{O}$** 

Quite difficultly sol. in  $\text{H}_2\text{O}$  (Arfvedson)

**Ammonium vanadous sulphate,  $(\text{NH}_4)_2\text{SO}_4 \cdot \text{VSO}_4 + 6\text{H}_2\text{O}$** 

Decomp. in the air.  
 Sol. in  $\text{H}_2\text{O}$ . (Piccini, Z. anorg. 1899, 19, 205.)

Less sol. in  $\text{H}_2\text{O}$  than  $\text{VSO}_4 + 7\text{H}_2\text{O}$ . (Piccini and Marino, Z. anorg. 1902, 32, 60.)

**Ammonium vanadic sulphate,  $(\text{NH}_4)_2\text{SO}_4 \cdot \text{V}_2(\text{SO}_4)_3 + 12\text{H}_2\text{O}$** 

Insol. in  $\text{H}_2\text{O}$ .  
 Insol. in  $\text{H}_2\text{SO}_4$ . Decomp. by boiling with conc.  $\text{H}_2\text{SO}_4$ .  
 Sol. in  $\text{HCl}$ . (Stahler, B. 1905, 38, 3980.)  
 $+ 24\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ ; decomp. in the air. (Piccini, Z. anorg. 1896, 11, 108.)  
 100 pts  $\text{H}_2\text{O}$  dissolve 39.76 pts. salt at  $10^\circ$   
 Sp. gr. of sat. solution at  $4^\circ/20^\circ = 1.687$  (Piccini, Z. anorg. 1897, 13, 446.)  
 1 l.  $\text{H}_2\text{O}$  dissolves 31.69 g. anhydrous or 78.51 g. hydrated salt at  $25^\circ$ , or 1.210 g. mols. anhydrous salt are sol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ .  
 Mpt of crystals =  $45^\circ$ . (Locke, Am. Ch. J. 1901, 26, 175.)

**Ammonium vanadyl sulphate,  $(\text{NH}_4)_2\text{SO}_4 \cdot \text{VOSO}_4 + 3\frac{1}{2}\text{H}_2\text{O}$** 

Easily sol. in  $\text{H}_2\text{O}$  and in a mixture of alcohol and conc.  $\text{H}_2\text{SO}_4$ , but cannot be recryst. therefrom. (Koppel and Behrendt, Z. anorg. 1903, 35, 176.)

$(\text{NH}_4)_2\text{SO}_4 \cdot 2\text{VOSO}_4 + \text{H}_2\text{O}$  Deliquescent. Slowly but abundantly sol. in  $\text{H}_2\text{O}$ , but cannot be recryst. from it except by addition of  $\text{H}_2\text{SO}_4$ . (Koppel and Behrendt, Z. anorg. 1903, 35, 172.)

**Ammonium yttrium sulphate,  $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{Y}_2(\text{SO}_4)_3 + 9\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$ . (Cleve)

**Ammonium zinc sulphate,  $(\text{NH}_4)_2\text{SO}_4 \cdot \text{ZnSO}_4 + 6\text{H}_2\text{O}$** 

100 pts.  $\text{H}_2\text{O}$  dissolve pts.  $(\text{NH}_4)_2\text{SO}_4 \cdot \text{ZnSO}_4$  at:

$0^\circ$	$10^\circ$	$13^\circ$	$15^\circ$	$20^\circ$
7 3	8 8	10 0	12 5	12 6
pts. salt,				
$30^\circ$	$45^\circ$	$60^\circ$	$75^\circ$	$85^\circ$
16 5	21 7	29 7	37 8	46 2
pts. salt.				
(Tobler, A. 96, 193.)				

1 l.  $\text{H}_2\text{O}$  dissolves 140.8 g. anhydrous salt at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27, 469.)  
 $+ 7\text{H}_2\text{O}$  (André, C. R. 104, 987)

**Ammonium zirconium sulphate.**

Sol. in cold or hot  $\text{H}_2\text{O}$  or in acids. (Berzelius.)

**Ammonium sulphate antimony fluoride,  $(\text{NH}_4)_2\text{SO}_4 \cdot 2\text{SbF}_6$** 

Very sol. in  $\text{H}_2\text{O}$ . (Mayer, B. 1894, 27, R. 922.)

**Ammonium sulphate chromic chloride,  $2(\text{NH}_4)_2\text{SO}_4 \cdot \text{CrCl}_3 + 6\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$ . (Wernland, B. 1907, 40, 3768.)

**Ammonium sulphate hydrogen peroxide,  $(\text{NH}_4)_2\text{SO}_4 \cdot \text{H}_2\text{O}_2$** 

Efflorescent in air.  
 Easily sol. in  $\text{H}_2\text{O}$ . (Willstätter, B. 1903, 36, 1829.)

**Antimony sulphate basic,  $7\text{Sb}_2\text{O}_3 \cdot 2\text{SO}_3 + 3\text{H}_2\text{O}$** 

Insol. in, and not decomp. by hot or cold  $\text{H}_2\text{O}$  (Adie, Chem. Soc. 57, 540.)  
 $5\text{Sb}_2\text{O}_3 \cdot 2\text{SO}_3 + 7\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Hensgen, R. t. o. 4, 401.)  
 $2\text{Sb}_2\text{O}_3 \cdot \text{SO}_3 + x\text{H}_2\text{O}$ . Not decomp. by cold  $\text{H}_2\text{O}$ . (Adie.)  
 $\text{Sb}_2\text{O}_3 \cdot \text{SO}_3 = (\text{SbO})_2\text{SO}_4$ . Decomp. by hot  $\text{H}_2\text{O}$ . (Peligot, J. B. 1847, 426.)  
 $+ \text{H}_2\text{O}$ . As above. (Adie.)  
 $\text{Sb}_2\text{O}_3 \cdot 2\text{SO}_3$ , and  $+ \text{H}_2\text{O}$ , and  $+ 2\text{H}_2\text{O}$ . Scarcely decomp. by cold, slowly by boiling  $\text{H}_2\text{O}$ . Slowly sol. in dil.  $\text{HCl} + \text{Aq.}$  (Adie.)

**Antimony sulphate,  $\text{Sb}_2(\text{SO}_4)_3$** 

Very deliquescent. Combines with  $\text{H}_2\text{O}$  to a hard mass with evolution of heat; with more  $\text{H}_2\text{O}$  it becomes liquid, and by repeated treat-

ment with much boiling  $\text{H}_2\text{O}$  it is wholly decomp. into  $\text{H}_2\text{SO}_4$  and  $\text{Sb}_2\text{O}_3$  (Henagen, R. t. c. 4. 401)

Antimony sulphate, acid,  $\text{Sb}_2\text{O}_3$ ,  $4\text{SO}_3$ ,

Decomp by  $\text{H}_2\text{O}$  (Adie)  
 $\text{Sb}_2\text{O}_3 + 8$ , or  $9\text{SO}_3$  Decomp by  $\text{H}_2\text{O}$ . (Adie)

Antimony barium sulphate,  
 $\text{Sb}_2(\text{SO}_4)_3$ ,  $\text{BaSO}_4 + 6\text{H}_2\text{O}$ .

As Ca comp (Kühl, Z. anorg. 1907, 54. 257.)

Antimony caesium sulphate,  $\text{SbCs}(\text{SO}_4)_2$ .

Slowly decomp by cold  $\text{H}_2\text{O}$ . (Gutman, Arch. Pharm. 1908, 246. 188)

Antimony calcium sulphate,  
 $\text{Sb}_2(\text{SO}_4)_3$ ,  $\text{CaSO}_4 + 6\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Kühl, Z. anorg. 1907, 54. 257.)

Antimony lithium sulphate,  $\text{SbLi}(\text{SO}_4)_2$ .

Decomp by  $\text{H}_2\text{O}$  (Gutman, Arch. Pharm. 1908, 246. 187.)

Antimony potassium sulphate,  $\text{KSb}(\text{SO}_4)_2$ .

Decomp. by  $\text{H}_2\text{O}$  (Gutmann, Arch. Pharm. 1898, 236. 478)

Antimony rubidium sulphate,  $\text{SbRb}(\text{SO}_4)_2$ .

Slowly decomp by cold  $\text{H}_2\text{O}$ . (Gutman.)

Antimony silver sulphate,  $\text{SbAg}(\text{SO}_4)_2$ .

Slowly decomp. by  $\text{H}_2\text{O}$ . (Kühl, Z. anorg. 1907, 54. 258.)

Slowly decomp. by cold  $\text{H}_2\text{O}$  (Gutman Arch. Pharm. 1908, 246. 189.)

Antimony sodium sulphate,  $\text{NaSb}(\text{SO}_4)_2$ .

Easily decomp. by  $\text{H}_2\text{O}$  (Gutmann, Arch. Pharm. 1898, 236. 478.)

Antimony strontium sulphate,  $\text{Sb}_2(\text{SO}_4)_3$ ,  
 $\text{SrSO}_4 + 6\text{H}_2\text{O}$ .

As Ca comp. (Kühl, Z. anorg. 1907, 54. 257.)

Antimony thallium sulphate,  $\text{SbTl}(\text{SO}_4)_2$ .

Slowly decomp. by cold  $\text{H}_2\text{O}$ . Decomp. by conc.  $\text{H}_2\text{SO}_4$ . (Gutman, Arch. Pharm. 1908, 246. 189.)

Arsenic sulphate.

See Arsenic sulphur trioxide.

Barium sulphate,  $\text{BaSO}_4$ .

Sol. in 43,000 pts  $\text{H}_2\text{O}$  (Kurvan); in 200,000 pts.  $\text{H}_2\text{O}$  (Margueritte, C. R. 38. 308)  
 100 pts  $\text{H}_2\text{O}$  dissolve 0.002 pt.  $\text{BaSO}_4$ . (Ure's Dict)

$\text{BaCl}_2 + \text{Aq}$  containing 1 pt.  $\text{BaO}$  to 71,000 pts  $\text{H}_2\text{O}$ , when treated with  $\text{H}_2\text{SO}_4$ , becomes turbid in  $\frac{1}{2}$  hour (Hartung, J. pr. 22. 32)

$\text{Ba}(\text{NO}_3)_2 + \text{Aq}$  containing 1 pt.  $\text{BaO}$  to 25,000 pts  $\text{H}_2\text{O}$  gives a distinct cloud with  $\text{H}_2\text{SO}_4$  or  $\text{Na}_2\text{SO}_4 + \text{Aq}$ , with 50,000–100,000 pts  $\text{H}_2\text{O}$  a slight turbidity is produced, with 200,000–400,000 pts  $\text{H}_2\text{O}$  the mixture becomes turbid in a few minutes, while with 800,000 pts  $\text{H}_2\text{O}$  no action is visible (Lassaigne, J. Chim. Méd. 8. 526)

Sol. in 800,000 pts.  $\text{H}_2\text{O}$  (Calvert); in 400,000 pts. cold or hot  $\text{H}_2\text{O}$  (Fresenius).

Calculated from the electrical conductivity of the solution,  $\text{BaSO}_4$  is sol in 429,700 pts.  $\text{H}_2\text{O}$  at  $18.4^\circ$ , and 320,000 pts. at  $37.7^\circ$ . (Holleman, Z. phys. Ch. 12. 131)

1 l  $\text{H}_2\text{O}$  dissolves 1.72 mg at  $2^\circ$ ; 1.97 mg. at  $10^\circ$ ; 2.29 mg. at  $19.0^\circ$ ; 2.60 mg. at  $26^\circ$ ; 2.91 mg. at  $34^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12. 241)

Calculated from the electrical conductivity of the solution,  $\text{BaSO}_4$  is sol in 425,000 pts  $\text{H}_2\text{O}$  at  $18.3^\circ$ . Results of Fresenius and Hintz (Z. anal. 1896, 35. 170) are incorrect. (Küster, Z. anorg. 1896, 12. 207.)

Sat. aq. solution contains 2.29 mg.  $\text{BaSO}_4$  per liter at  $25^\circ$  when particles of salt are not less than  $1.8\mu$  in diameter.

Sat. aq. solution contains 4.15 mg.  $\text{BaSO}_4$  per liter at  $25^\circ$  when particles of salt are  $0.1\mu$  in diameter ( $\mu = 0.0001 \text{ cm}$ ) (Hulett, Z. phys. Ch. 1901, 37. 398–9.)

In general the influence of the size of the grain on the solubility of the substance is negligible when the solubility exceeds 2%. The increase of normal solubility by using finely divided solids, amounts to 80% in the case of  $\text{BaSO}_4$ . (Hulett, Z. phys. Ch. 1904, 47. 366)

1 l.  $\text{H}_2\text{O}$  dissolves 2.3 mg.  $\text{BaSO}_4$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

Calculated from electrical conductivity of  $\text{BaSO}_4 + \text{Aq}$ .

0.0190 milh-equivalents are sol. in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$  0.0212 at  $25^\circ$ , 0.0288 at  $50^\circ$ ; 0.0334 at  $100^\circ$ .

(Melcher, J. Am. Chem. Soc. 1910, 32. 55.)

Not attacked by cold  $\text{H}_2\text{O}$  or  $\text{HNO}_3 + \text{Aq}$  after several hours, and only in traces after several days. On boiling, traces of  $\text{BaSO}_4$  dissolve, and the liquid after cooling can be precipitated by  $\text{BaCl}_2$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ , but not by  $\text{H}_2\text{O}$  alone (Rose, Pogg. 95. 108)

By washing  $\text{BaSO}_4$  long enough with  $\text{H}_2\text{O}$  containing  $\text{HCl}$  or  $\text{HNO}_3$ ,  $[\text{HCl} \cdot \text{H}_2\text{O}_2]$  (Siegle), the filtrate can be precipitated by  $\text{H}_2\text{SO}_4$  or  $\text{BaCl}_2$ . (Piria, J. B. 1856. 334.)

1000 pts. 3%  $\text{HCl} + \text{Aq}$  dissolve 0.06 pt.  $\text{BaSO}_4$  in the cold, and still more on boiling.

230 ccm  $\text{HCl} + \text{Aq}$  of 1.02 sp. gr. dissolve 0.048 g.  $\text{BaSO}_4$  from 0.679 g.  $\text{BaSO}_4$  when boiled  $\frac{1}{4}$  hour

168 ccm  $\text{HCl} + \text{Aq}$  of 1.03 sp. gr. dissolve 0.0075 g.  $\text{BaSO}_4$  from 0.577 g.  $\text{BaSO}_4$  when boiled 5 minutes. (Siegle, J. pr. 69. 142)

Solubility of  $\text{BaSO}_4$  in  $\text{HCl} + \text{Aq}$ 

No cc $\text{HCl} + \text{Aq}$ containing 1 mg equiv $\text{HCl}$	Mg $\text{BaSO}_4$ per 1 mg equiv of $\text{HCl}$	g per 100 cc solution	
		$\text{HCl}$	$\text{BaSO}_4$
2.0	0.133	1.82	0.0067
1.0	0.089	3.65	0.0089
0.5	0.056	7.29	0.0101
0.2	0.017	18.23	0.0086

(Banthusch, J pr 1884, 29. 54)

100,000 pts  $\text{H}_2\text{O}$  dissolve 0.124 pt.  $\text{BaSO}_4$ ; 1000 pts.  $\text{HNO}_3 + \text{Aq}$  of 1.167 sp. gr. dissolve 2 pts.  $\text{BaSO}_4$ ; 1000 pts.  $\text{HNO}_3 + \text{Aq}$  of 1.032 sp. gr. dissolve 0.062 pt  $\text{BaSO}_4$ . (Calvert, Chem. Gaz. 1856. 55)

When 0.4 g.  $\text{BaSO}_4$  is heated  $\frac{1}{4}$  hour with 150 ccm.  $\text{HNO}_3 + \text{Aq}$  of 1.02 sp. gr., 0.165 g. is dissolved. (Siegle, J. pr. 69. 142.)

Solubility of  $\text{BaSO}_4$  in  $\text{HNO}_3 + \text{Aq}$ 

No cc $\text{HNO}_3 + \text{Aq}$ containing 1 mg equiv $\text{HNO}_3$	Mg $\text{BaSO}_4$ per 1 mg. equiv of $\text{BaSO}_4$	G per 100 cc. solution	
		$\text{HNO}_3$	$\text{BaSO}_4$
2.0	0.140	3.15	0.0070
1.0	0.107	6.31	0.0107
0.5	0.085	12.61	0.0170
0.2	0.048	31.52	0.0241

(Banthusch, J pr 1884, 29. 54.)

Acetic acid has less solvent power than other acids. 80 ccm.  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  of 1.02 sp. gr. boiled with 0.4 g.  $\text{BaSO}_4$   $\frac{1}{4}$  hour dissolve 0.002 g. (Siegle, J. pr. 69. 142.)

Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ . (See  $\text{BaH}_2(\text{SO}_4)_2$ .)

Sol. in fuming  $\text{H}_2\text{SO}_4$ . (See  $\text{BaS}_2\text{O}_7$ .)

Sol. in 2500 pts. boiling 40%  $\text{HBr} + \text{Aq}$ ; in 6000 pts. boiling 40%  $\text{HI} + \text{Aq}$ . (Haslam, C. N. 53. 87.)

Sol. in considerable amount in metaphosphoric acid +  $\text{Aq}$ . (Scheerer and Drechsel, J. pr. (2) 7. 68.)

Not attacked by boiling conc.  $\text{KOH} + \text{Aq}$  if  $\text{CO}_2$  is not present. (Rose, Pogg. 95. 104.)

Very sl. decomp. by standing a long time with cold conc. alkali carbonates +  $\text{Aq}$ .

Decomp. by boiling  $\text{Na}_2\text{CO}_3$  or  $\text{K}_2\text{CO}_3 + \text{Aq}$ , not by  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . (See Storer's Dict. for analytical data.)

Very sl. sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$ , 1 pt. dissolving in 230,000 pts sat.  $\text{NH}_4\text{Cl} + \text{Aq}$ .

500 ccm. sat.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  with 50 ccm. sat.  $\text{NH}_4\text{Cl} + \text{Aq}$  dissolve 2 g.  $\text{BaSO}_4$ . 100 ccm. sat.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  with 100 ccm. sat.  $\text{NH}_4\text{Cl} + \text{Aq}$  dissolve only 0.08 g.  $\text{BaSO}_4$ , therefore above solubility is due to free chlorine. (Mittentzwey, J. pr. 75. 214.)

$\text{BaSO}_4$  cannot be precipitated from solutions containing free  $\text{Cl}_2$ . (Erdmann, J. pr. 75. 215.)

Pptn is retarded sl. by tartaric and racemic acids. (Spiller.)

$\text{Na}$  metaphosphate prevents pptn of  $\text{BaSO}_4$ , but not ortho- or pyrophosphate. (Scheerer, J. pr. 75. 114.)

Not precipitated in presence of alkali citrates. (Spiller.)

Much less sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  than in  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . Insol. in warm conc.  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ . (Diehl, J. pr. 79. 431.)

Not appreciably sol. in  $\text{H}_2\text{O}$  containing ammonium or sodium chloride. (Brett, Wittstein, Wackenroder.)

Not appreciably sol. in  $\text{H}_2\text{O}$  at  $250^\circ$ , or in  $\text{H}_2\text{O}$  containing  $\text{Na}_2\text{S}$ . (Senarmont.)

Solubility is increased by alkali nitrates, but not appreciably by  $\text{NaCl}$ ,  $\text{KClO}_3$ , or  $\text{Ba}(\text{NO}_3)_2$ . (Fresenius, Z. anal. 9. 52.) Scarcely sol. in boiling conc.  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ . (Fresenius.)

Solubility in  $\text{H}_2\text{O}$  increased by presence of  $\text{MgCl}_2$  (Fresenius); cerium salts (Marignac).

Sol. in  $\text{Fe}_2\text{Cl}_6 + \text{Aq}$ . (Lunge, Z. anal. 19. 141.)

Solubility in various salts +  $\text{Aq}$  at  $20-25^\circ$ 

g salt per l.	Mg $\text{BaSO}_4$ dissolved per l. in		
	$\text{FeCl}_3$	$\text{AlCl}_3$	$\text{MgCl}_2$
1	58	33	30
2.5	72	43	30
5	115	60	33
10	123	94	33
25	150	116	50
50	160	170	50
100	170	175	50

(Fraps, Am. Ch. J. 1902, 27. 290.)

Solubility in sat. solution of various salts +  $\text{Aq}$ .

Salt	G. $\text{BaSO}_4$ sol. in 1 l. of the solvent
$\text{NaNO}_3$	0.2940
$\text{NaCl}$	0.00783
$\text{NH}_4\text{Cl}$	0.00827

(Ehlert, Z. Elektrochem. 1912, 18. 728.)

Conc.  $\text{CrCl}_3 + \text{Aq}$  dissolves 40-120 times as much  $\text{BaSO}_4$  as  $\text{H}_2\text{O}$ , when boiled therewith for 5 days; conc.  $\text{CrCl}_3 + \text{Aq}$  acidified with  $\text{HCl}$ , 450 times as much in 10 days. (Kuster, Z. anorg. 1905, 43. 348.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Sol. in  $\text{H}_2\text{O}_2 + \text{Aq}$ . (Gawalowski, C. C. 1906, II. 7.)

100 cc. 95% formic acid dissolve 0.01 g.  $\text{BaSO}_4$  at  $18.5^\circ$ . (Aschan, Ch. Ztg. 1913, 37. 1117.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); in ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Min. Barite.

**Barium hydrogen sulphate,  $\text{BaH}_2(\text{SO}_4)_2$ .**

100 pts.  $\text{H}_2\text{SO}_4$  dissolve 222 pts.  $\text{BaSO}_4$  (Lies-Bodart and Jacquemin, C. R. 46. 1206); 569 pts.  $\text{BaSO}_4$  (Struve, Z. anal. 9. 34).

Boiling  $\text{H}_2\text{SO}_4$  dissolves 10-12% freshly precipitated  $\text{BaSO}_4$  without separating crystals on cooling.  $\text{H}_2\text{SO}_4$  at  $100^\circ$  dissolves more than boiling  $\text{H}_2\text{SO}_4$  and becomes cloudy if heated to boiling. (Schultz, Pogg. 133. 146.)

1 g.  $\text{BaSO}_4$  pptd. from  $\text{BaCl}_2$  is sol. in 3153 g. 91%  $\text{H}_2\text{SO}_4$ , from  $\text{Ba}(\text{NO}_3)_2$  is sol. in 1519 g. 91%  $\text{H}_2\text{SO}_4$ . (Varenne and Pauleau, C. R. 93. 1016.)

100 pts hot conc.  $\text{H}_2\text{SO}_4$  dissolve approx. 6 pts  $\text{BaSO}_4$  (Rohland, Z. anorg. 1910, 66. 206.)

10 ccm of sat.  $\text{BaSO}_4$ +absolute  $\text{H}_2\text{SO}_4$  contain approx. 2.851 g.  $\text{BaSO}_4$ . (Bergius, Z. phys. Ch. 1910, 72. 355.)

**Equilibrium in the system  $\text{BaSO}_4$ + $\text{H}_2\text{SO}_4$ + $\text{H}_2\text{O}$  at  $25^\circ$ .**

Composition of the solution

% $\text{H}_2\text{SO}_4$	g $\text{BaSO}_4$ per l	Solid phase
73.83	0.030	$\text{BaSO}_4$
78.04	0.135	"
80.54	0.285	"
83.10	0.800	"
85.78	3.215	$\text{BaSO}_4$ , $2\text{H}_2\text{SO}_4$ , $\text{H}_2\text{O}$
88.08	12.200	"
93.17	49.665	$\text{BaSO}_4$ , $\text{H}_2\text{SO}_4$

(Volkhonski, C. C. 1910, I. 1954, C. A. 1911. 617.)

Decomp. by  $\text{H}_2\text{O}$ , alcohol, or ether.

+ $2\text{H}_2\text{O}$ . (Schultz.)

$\text{BaSO}_4$ ,  $2\text{H}_2\text{SO}_4$ + $\text{H}_2\text{O}$ . (Volkhonski.)

**Barium pyrosulphate,  $\text{Ba}_2\text{O}_7$ .**

100 pts. fuming  $\text{H}_2\text{SO}_4$  dissolve 15.89 pts.  $\text{Ba}_2\text{O}_7$  (Struve, Z. anal. 9. 34.)

Very deliquescent.

Decomp. with  $\text{H}_2\text{O}$  with hissing (Schultz-Sellack, B. 4. 111.)

**Barium calcium sulphate,  $3\text{BaSO}_4$ ,  $\text{CaSO}_4$ .**

Min. *Dreelite*

**Barium platnic sulphate (?).**

Insol. in  $\text{H}_2\text{O}$  or boiling  $\text{HCl}$  or  $\text{HNO}_3$ +Aq. Sol. in hot conc.  $\text{H}_2\text{SO}_4$  or aqua regia (E. Davy)

**Barium tin (stannic) sulphate,  $\text{BaSO}_4$ ,  $\text{Sn}(\text{SO}_4)_2$ + $3\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$  Insol. in  $\text{HCl}$  (Weinland and Kühl, Z. anorg. 1907, 54. 249.)

**Barium titanium sulphate,  $2\text{BaSO}_4$ ,  $3\text{Ti}(\text{SO}_4)_2$ .**

Ppt. Decomp. by  $\text{H}_2\text{O}$ , giving titanamic acid. (Weinland, Z. anorg. 1907, 54. 255.)

**Barium sulphate potassium chloride,  $3\text{BaSO}_4$ ,  $\text{KCl}$** 

Ppt (Silberberger, M. 1904, 25. 233.)

**Bismuth sulphate, basic,  $(\text{BiO})_2\text{SO}_4$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4$ +Aq.

+ $2\text{H}_2\text{O}$  (Heintz, Pogg. 63. 55.)

$4\text{Bi}_2\text{O}_3$ ,  $3\text{SO}_3$ + $15\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Leist.)

$(\text{BiO})\text{HSO}_4$ + $\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{H}_2\text{SO}_4$ +Aq.

+ $2\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$  with separation of  $(\text{BiO})_2\text{SO}_4$ + $2\text{H}_2\text{O}$ . (Heintz.)

$3\text{Bi}_2\text{O}_3$ ,  $2\text{SO}_3$ + $2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Athanasesco, C. R. 103. 271.)

$5\text{Bi}_2\text{O}_3$ ,  $11\text{SO}_3$ + $17\text{H}_2\text{O}$ . This sulphate crystallizes out from sulphuric acid of any strength between  $\text{H}_2\text{SO}_4$ ,  $6\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$ ,  $12\text{H}_2\text{O}$  (Adie, Proc. Chem. Soc. 1899, 16. 226.)

$\text{Bi}_2\text{O}_3$ ,  $2\text{SO}_3$ ,  $2\frac{1}{2}\text{H}_2\text{O}$  is in equilibrium at  $50^\circ$  with 5.4-51.4%  $\text{H}_2\text{SO}_4$ +Aq.

$\text{Bi}_2\text{O}_3$ ,  $\text{SO}_3$  is in equilibrium at  $50^\circ$  with acid solutions weaker than 5.4%  $\text{H}_2\text{SO}_4$ . (Allan, Am. Ch. J. 1902, 27. 287.)

**Bismuth sulphate,  $\text{Bi}_2(\text{SO}_4)_3$ .**

Very hygroscopic. Takes up  $\text{H}_2\text{O}$  with strong evolution of heat to form  $2\text{Bi}_2(\text{SO}_4)_3$ + $7\text{H}_2\text{O}$ , which becomes  $\text{Bi}_2(\text{SO}_4)_3$ + $3\text{H}_2\text{O}$  at  $100^\circ$ . Decomp. by boiling  $\text{H}_2\text{O}$  into  $\text{Bi}_2\text{O}_3$ ,  $\text{SO}_3$ + $\text{H}_2\text{O}$ . (Hengstenberg, J. B. 1885. 552.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790.)

**Bismuth sulphate, acid,  $\text{Bi}_2\text{O}_7$ ,  $4\text{SO}_3$ .**

$\text{Bi}_2\text{O}_7$ ,  $4\text{SO}_3$  is in equilibrium at  $50^\circ$  with 51.4-90%  $\text{H}_2\text{SO}_4$ +Aq. (Allan, Am. Ch. J. 1902, 27. 287.)

+ $\text{H}_2\text{O}$  Crystallizes out from sulphuric acid at temp. above  $170^\circ$ . (Adie, Proc. Chem. Soc. 1899, 16. 226.)

+ $3\text{H}_2\text{O}$ . Crystallizes from sulphuric acid of any strength between  $\text{H}_2\text{SO}_4$ ,  $\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$ ,  $2\text{H}_2\text{O}$ . (Adie.)

+7, or  $9\text{H}_2\text{O}$ = $\text{BiH}(\text{SO}_4)_2$ + $3\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids, especially  $\text{HCl}$ , and  $\text{HNO}_3$ +Aq. (Leist, A. 160. 29.)

+ $7\text{H}_2\text{O}$ . Crystallizes out from sulphuric acid of any strength between  $\text{H}_2\text{SO}_4$ ,  $3\text{H}_2\text{O}$  and  $\text{H}_2\text{SO}_4$ ,  $5\text{H}_2\text{O}$ .

+ $10\text{H}_2\text{O}$ . Crystallizes out from sulphuric acid at temp. below  $170^\circ$ . (Adie.)

**Bismuth potassium sulphate,  $\text{Bi}_2(\text{SO}_4)_3$ ,  $3\text{K}_2\text{SO}_4$  (?).**

Decomp. by  $\text{H}_2\text{O}$ ; insol. in sat.  $\text{K}_2\text{SO}_4$ +Aq. (Heintz.)

$\text{Bi}_2(\text{SO}_4)_3$ ,  $2\text{K}_2\text{SO}_4$ .

$\text{BiK}(\text{SO}_4)_2$ = $\text{Bi}_2(\text{SO}_4)_3$ ,  $\text{K}_2\text{SO}_4$ . Insol. in cold  $\text{H}_2\text{O}$ , decomp. by boiling. (Brigham, Am. Ch. J. 14. 170.)

Bismuth sodium sulphate,  $\text{Bi}_4\text{Na}_2(\text{SO}_4)_6$ .

(Lüdecke, A. 140. 277)

Boron sulphate.

See Borosulphuric acid.

Bromomolybdenum sulphate.

See under Bromomolybdenum compounds.

Cadmium sulphate, basic,  $2\text{CdO}$ ,  $\text{SO}_3$ , and  $+\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$ . (Stromeyer.) Sl. sol. in hot  $\text{H}_2\text{O}$ . (Habermann, M. 6. 432.)  
 $4\text{CdO}$ ,  $\text{SO}_3$ . (Pickering, Chem. Soc. 1907, 91. 1987.)

Cadmium sulphate,  $\text{CdSO}_4$ .Sat.  $\text{CdSO}_4 + \text{Aq}$  contains at.

Cadmium caesium sulphate,  $\text{CdSO}_4 \cdot \text{Cs}_2\text{SO}_4 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Tutton, Chem. Soc. 63. 337.)

1 l.  $\text{H}_2\text{O}$  dissolves 1399 g. anhydrous salt at 25° (Locke, Am. Ch. J. 1902, 27. 459.)

**Cadmium calcium potassium sulphate,**  
 $\text{Ca}_2\text{CdK}_2(\text{SO}_4)_4 + 2\text{H}_2\text{O}$ .  
 (D'Ans, B. 1908, 41. 1778.)

**Cadmium cerium sulphate,**  $\text{CdSO}_4 \cdot \text{Ce}_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (Wyrouboff.)

**Cadmium hydrazine sulphate,**  
 $\text{CdH}_2(\text{SO}_4)_2 \cdot 2\text{N}_2\text{H}_4$ .

1 pt. is sol. in 202.5 pts.  $\text{H}_2\text{O}$  at  $12^\circ$ .  
 Not attacked by dil acids Easily sol. in  
 $\text{NH}_4\text{OH} + \text{Aq}$ . (Curtius, J. pr 1894, (2) 50.  
 331.)

**Cadmium magnesium sulphate,**  $\text{CdSO}_4 \cdot \text{MgSO}_4 + 14\text{H}_2\text{O}$ .  
 Very efflorescent Sol. in  $\text{H}_2\text{O}$ . (Schiff, A.  
 104. 325)

**Cadmium potassium sulphate,**  $\text{K}_2\text{SO}_4 \cdot \text{CdSO}_4 + 13\frac{1}{2}\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$  (v. Hauer, Pogg 133. 176.)  
 100 pts  $\text{H}_2\text{O}$  dissolve 42.50 pts. anhydrous  
 salt at  $26^\circ$ ;

100 pts  $\text{H}_2\text{O}$  dissolves 42.80 pts anhydrous  
 salt at  $31^\circ$ ;

100 pts.  $\text{H}_2\text{O}$  dissolve 43.45 pts anhydrous  
 salt at  $40^\circ$ ;

100 pts  $\text{H}_2\text{O}$  dissolve 44.90 pts anhydrous  
 salt at  $64^\circ$  (Wyrouboff, Bull Soc. Min  
 1901, 24. 68.)

+  $2\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 42.89 pts  
 anhydrous salt at  $16^\circ$ ; 46.82 pts. at  $31^\circ$ ;  
 47.40 pts. at  $40^\circ$ . (Wyrouboff.)

+  $4\text{H}_2\text{O}$ . Efflorescent (Wyrouboff, Bull  
 Soc. Min 1891, 14. 235)

+  $6\text{H}_2\text{O}$ . Very efflorescent, and easily  
 decomp. (Schiff)

Does not exist (Wyrouboff.)

**Cadmium rubidium sulphate,**  $\text{CdSO}_4 \cdot \text{Rb}_2\text{SO}_4 + 6\text{H}_2\text{O}$ .

Efflorescent Sol. in  $\text{H}_2\text{O}$ . (Tutton.)  
 1 l  $\text{H}_2\text{O}$  dissolves 767 g. anhydrous salt  
 at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27. 459.)

**Cadmium sodium sulphate,**  $\text{CdSO}_4 \cdot \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .  
 Sol. in  $\text{H}_2\text{O}$ . (v. Hauer.)

Solubility of  $\text{CdNa}_2(\text{SO}_4)_2 + 2\text{H}_2\text{O}$  in 100 g

(Koppel.)

**Cadmium sulphate ammonia,**  $\text{CdSO}_4 \cdot 6\text{NH}_3$ .  
 Sol. in  $\text{H}_2\text{O}$  with separation of  $\text{CdO}$  (Rose,  
 Pogg. 20. 152)

$\text{CdSO}_4 \cdot 4\text{NH}_3 + 4\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ .  
 (Malaguti and Sarzeau, A. ch. (3) 9. 431.)

+  $2\text{H}_2\text{O}$  Ppt. (André, C. R. 104. 987.)

+  $2\frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with separation of  
 basic sulphate. (Müller, A. 149. 70)

$\text{CdSO}_4 \cdot 3\text{NH}_3$ . (Isambert, C. R. 1870, 70.

457.)

**Cadmium sulphate cupric oxide,**  $\text{CdSO}_4 \cdot 3\text{CuO} + x\text{H}_2\text{O}$ .

(Recoura, C. R. 1901, 132. 1415.)

$2\text{CdSO}_4 \cdot 3\text{CuO} + 8\text{H}_2\text{O}$ . (Mailhe, A. ch.  
 1902, (7) 27. 333.)

+  $12\text{H}_2\text{O}$ . (Mailhe)

$6\text{CdSO}_4 \cdot 20\text{CuO} + x\text{H}_2\text{O}$ . (Recoura, C. R.  
 1901, 132. 1415.)

**Cadmium sulphate hydrazine,**  $\text{CdSO}_4 \cdot 2\text{N}_2\text{H}_4$

Easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  but cannot be  
 cryst. therefrom. (Franzen, Z. anorg. 1908,  
 60. 282.)

Cadmium sulphate hydrogen chloride,  
 $3\text{CdSO}_4, 4\text{HCl} + 4\text{H}_2\text{O}$ .

Very deliquescent. (Baskerville and Harris,  
 J. Am. Chem. Soc. 1901, 23, 896.)

$3\text{CdSO}_4, 8\text{HCl}$  Very deliquescent. (Baskerville and Harris)

Caesium sulphate,  $\text{Cs}_2\text{SO}_4$ .

Not deliquescent.

100 pts.  $\text{H}_2\text{O}$  dissolve 158.7 pts.  $\text{Cs}_2\text{SO}_4$  at  $-2^\circ$ .

100 cc.  $\text{H}_2\text{O}$  at  $17-18^\circ$  dissolve 163.5 g.  $\text{Cs}_2\text{SO}_4$ . (Tutton, Chem. Soc. 1894, 65, 632)

(Bekeley, Trans Roy Soc. 1901, 203, A 210)

Solubility in  $\text{Na}_2\text{SO}_4 + \text{Aq}$

Sat. solution contains 54.7%  $\text{Cs}_2\text{SO}_4 + 11.45\% \text{Na}_2\text{SO}_4$  at  $25^\circ$ . (Foote, J. Am. Chem. Soc. 1911, 33, 467.)

Insol. in alcohol. (Bunsen.)

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790)

Insol. in acetone. (Naumann, B. 1904, 37, 4329); (Edmann, C. C. 1899, II, 1014.)

Solubility in glycol at ord. temp.  $-3.0-3.2\%$ . (de Coninck, Belg. Acad. Bul. 1905, 359.)

Caesium hydrogen sulphate,  $\text{CsHSO}_4$ .

Sol. in  $\text{H}_2\text{O}$ .

Caesium pyrosulphate,  $\text{Cs}_2\text{S}_2\text{O}_7$ .

Decomp. by  $\text{H}_2\text{O}$ .

Caesium octosulphate,  $\text{Cs}_8\text{S}_8\text{O}_{34}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Weber, B. 17, 2497)

Caesium calcium sulphate,  $\text{Ca}_2\text{Cs}_2(\text{SO}_4)_3$ .

Very stable. (D'Ans, B. 1908, 41, 1776.)

Caesium chromium sulphate,  $\text{Cs}_2\text{Cr}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

Melts in crystal  $\text{H}_2\text{O}$  at  $116^\circ$ . (Locke.)

#### Solubility in $\text{H}_2\text{O}$

Temp	G per litre	G mols anhydrous salt per l
$25^\circ$	5.7	0.015

(Locke, Am. Ch. J. 1901, 26, 180.)

Caesium cobaltous sulphate,  $\text{Cs}_2\text{SO}_4, \text{CoSO}_4 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Tutton, Chem. Soc. 63, 337.)

1 l.  $\text{H}_2\text{O}$  dissolves 418.8 g. anhydrous salt at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27, 459.)

Caesium cobaltic sulphate,  $\text{Cs}_2\text{Co}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

Melts in crystal  $\text{H}_2\text{O}$  at  $116^\circ$ . (Locke, Am. Ch. J. 1901, 26, 183.)

Caesium copper sulphate,  $\text{Cs}_2\text{SO}_4, \text{CuSO}_4 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Tutton.)

1 l.  $\text{H}_2\text{O}$  dissolves 460 g. anhydrous salt at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27, 459.)

Caesium gallium sulphate,  $\text{Cs}_2\text{Ga}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

(Soret, Arch. sc. phys. nat. 1888, (3) 20, 531.)

Caesium indium sulphate,  $\text{Cs}_2\text{In}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

75.7 g. anhydrous (117.39 hydrated) salt or 0.172 g. mols of anhydrous salt are sol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ . (Locke, Am. Ch. J. 1901, 26, 175)

100 pts.  $\text{H}_2\text{O}$  dissolve 3.04 pts. at  $16.5^\circ$ . (Chabrie and Rengade, C. R. 1900, 131, 1301.)

Caesium iridium sulphate,  $\text{Cs}_2\text{SO}_4, \text{Ir}_2(\text{SO}_4)_3 + 24\text{H}_2\text{O}$ .

Mpt.  $109-110^\circ$

Very sl. sol. in cold. More easily sol. in hot  $\text{H}_2\text{O}$ . (Marino, Z. anorg. 1904, 42, 218.)

Caesium iron (ferrous) sulphate,  $\text{Cs}_2\text{SO}_4, \text{FeSO}_4 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Tutton.)

1 l.  $\text{H}_2\text{O}$  dissolves 1011 g. anhydrous salt at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27, 459.)

Caesium iron (ferric) sulphate,  $\text{Cs}_2\text{Fe}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

Melts in crystal  $\text{H}_2\text{O}$  at  $71^\circ$ . (Locke.)

30	0 249				

(Poggiale, A. ch. (3) 8. 469)

Poggiale worked with supersat. solutions. (Droez, B. 10. 330.)

$H_2O$  dissolves  $CaSO_4$  most abundantly at 35° (Poggiale), at 32-41° (Maignac).

1 pt.  $CaSO_4 + 2H_2O$  dissolves at:

0° 18° 24° 32° 38°  
in 415 388 378 371 368 pts.  $H_2O$ ,

41° 53° 72° 86° 99°  
in 370 375 391 417 451 pts  $H_2O$ ,

or (by calculation) 1 pt anhydrous  $CaSO_4$  dissolves at.

0° 18° 24° 32° 38°  
in 525 458 479 470 466 pts.  $H_2O$ ,

41° 53° 72° 86° 99°  
in 468 474 495 528 571 pts.  $H_2O$ .

The above nonsat. solutions are obtained by using a large excess of  $CaSO_4 + 2H_2O$ . The undissolved part retains its water of crystallisation  $CaSO_4$ , dehydrated at 130-140°, forms a supersaturated solution with  $H_2O$  in 10 minutes, containing 1 pt.  $CaSO_4$  to 110 pts  $H_2O$ , which soon deposits crystals. The undissolved part takes up its water of crystallisation. Ignited  $CaSO_4$  dissolves very slowly in  $H_2O$ , so that in 24 hours the solution contains  $1/110$  to  $1/105$  anhydrous  $CaSO_4$ . By longer contact solution continues with formation of supersaturated solutions, which contain after 10-30 days  $1/172$  to  $1/222$   $CaSO_4$ , but these become normal as the anhydrous  $CaSO_4$  gradually takes up its water of crystallisation. The mineral anhydrite behaves similarly, water taking up  $1/132$   $CaSO_4$  in 1 day,  $1/131$  in 40 days, and  $1/137$  in 8 months.

Supersaturated solutions are also obtained

by evaporation of a saturated solution. By evaporation with heat, solutions are obtained containing  $1/200$   $CaSO_4$ , and in the cold with  $1/122$   $CaSO_4$ , in the solution over the separated  $CaSO_4 + 2H_2O$ . Neutralising dil.  $H_2SO_4 + Aq$  with  $CaCO_3$  gives a solution containing  $1/111$   $CaSO_4$ , which crystallises out partly in 24 hours, leaving  $1/111$   $CaSO_4$  dissolved.

Supersaturated solutions containing  $1/110$  to  $1/114$   $CaSO_4$  deposit crystals rapidly; those under  $1/200$  do not crystallise spontaneously. A solution containing  $1/133$  shows crystals in 14 days, and contains  $1/112$  in 1 month,  $1/111$  in 2 months,  $1/110$  in 3 months, in spite of repeated shaking.

Boiling diminishes the supersaturation without however removing it entirely. (Maignac, A. ch. (5) 1. 274.)

1 pt.  $CaSO_4 + 2H_2O$  is sol in 443 pts.  $H_2O$  at 13.7°, in 447 pts  $H_2O$  at 14.2°, in 421 pts.  $H_2O$  at 20.2°, in 419 pts.  $H_2O$  at 21.2°, and in 445 pts.  $H_2CO_3 + Aq$  sat. at 18.7°. (Church, J. B. 1867. 192.)

Church's solutions were not sat. (Droez, B. 10. 330.)

1000 pts.  $H_2O$  dissolve 2.19 pts.  $CaSO_4 + 2H_2O$  at 16.5°; 2.352 pts.  $CaSO_4 + 2H_2O$  at 22° (Cossa, Gazz. ch. it. 1873. 135.)

Cossa's solutions were not saturated. (Droez)

$CaSO_4 + 2H_2O$  is sol in 415 pts.  $H_2O$  at 0°; in 412 pts  $H_2O$  at 5°; in 407 pts.  $H_2O$  at 10°; in 398 pts  $H_2O$  at 15°; in 371 pts  $H_2O$  at 20°; in 365 pts  $H_2O$  at 25°; in 361 pts  $H_2O$  at 30°; in 359 pts.  $H_2O$  at 35°. (Droez, B. 10. 330.)

Sol. in 500 pts  $H_2O$  at 12.5°. (From Maignac's and his own results, de Bousbaudran, A. ch. (5) 3. 477.)

$CaSO_4$  is sol in 564.5 pts  $H_2O$  at 0.8°; 506.27 pts. at 14°; 472-3 pts. at 32.5-38.8°, 498.73 pts. at 64°; 533.92 pts. at 79.6°. (Raupenstrauch, M. 6. 563.)

According to Goldammer (C. C. 1888. 708)  $H_2O$  is fully saturated with  $CaSO_4$  by shaking the finely-powdered substance 5 minutes therewith.

The following results were obtained. Figures denote pts.  $H_2O$  in which 1 pt.  $CaSO_4$  was dissolved at  $t^\circ$  (a) from pptd.  $CaSO_4$ , "ipse fact.", (b) from pptd.  $CaSO_4$ , "gehe.", (c) from "glacies mariae pulv.", (d) from "glacies Mariae pulv.", containing less than  $2H_2O$

$t^\circ$	a	b	c	$t^\circ$	d
0	561.5	558	557.5	0	470.5

100	556	557	534.5		

Burnt gypsum easily forms supersat. solutions containing nearly 1%  $\text{CaSO}_4$ . It forms supersat. solutions more readily at  $0^\circ$ , and that tendency decreases with increase of temp., hence figures in (d) which contained burnt gypsum (Goldammer, C C 1888, 708.)

Calculated from electrical conductivity of  $\text{CaSO}_4 + \text{Aq}$ , 1 l.  $\text{H}_2\text{O}$  dissolves 2.07 g  $\text{CaSO}_4$  at  $18^\circ$ . (Kohlrausch and Rose, Z phys Ch 12, 241.)

The anhydrous salt varies in solubility. Solubility depends (1) upon temp. and time of drying, (2) upon the relative amount of salt, (3) upon time of shaking. Possibly a and b modifications. (Potilizin, C C 1894, II, 515.)

2.04 gr. are dissolved in 1 liter of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46, 603.)

At  $15^\circ$  and after 5 minutes shaking, the highest degree of supersaturation which can be obtained with pure sol. calcium sulphate = 9.47 g. of the anhydrous salt or 11.978 g.  $\text{CaSO}_4 + 2\text{H}_2\text{O}$  in 1 l. of  $\text{H}_2\text{O}$ . (Cavazzi, C. C. 1905, I, 1694.)

Solubility of  $\text{CaSO}_4$  in 100 pts  $\text{H}_2\text{O}$  at high temp

$t^\circ$	Pts $\text{CaSO}_4$	$t^\circ$	Pts $\text{CaSO}_4$	$t^\circ$	Pts $\text{CaSO}_4$
140	0.078	175-185	0.027	250	0.016
165	0.056	240	0.018		

(Tilden and Shenstone, Phil. Trans. 1884, 31.)

Ppts. of  $\text{CaSO}_4$  which has been started by heating solution to  $140-150^\circ$  continues even after solution has cooled. (Storer.)

$\text{CaSO}_4$  is completely insol. in sea water or pure  $\text{H}_2\text{O}$  at temperatures between  $140^\circ$  and  $150^\circ$ . (Cousté.)

Solubility of  $\text{CaSO}_4$  in sea water at temperatures over  $100^\circ$ .  $t^\circ$  = temp.; P = pressure in atmospheres; % = per cent  $\text{CaSO}_4$  in sat solution.

$t^\circ$	P	%	$t^\circ$	P	%

115.8	1.50	0.267			

(Cousté, Ann. Min. (5) 5, 80.)

Solubility of  $\text{CaSO}_4$  in  $\text{H}_2\text{O}$  at various pressures.

100 g. sat.  $\text{CaSO}_4 + \text{Aq}$  at 1 atm. pressure and  $15^\circ$  contain 0.206 g.  $\text{CaSO}_4$ , at 20 atm. pressure and  $15^\circ$  contain 0.227 g.  $\text{CaSO}_4$ , at 1 atm. pressure and  $16.2^\circ$  contain 0.213 g.  $\text{CaSO}_4$ . (Möller, Pogg. 117, 386.)

*Soluble anhydrite.*

1 l.  $\text{H}_2\text{O}$  dissolves 22.8 milliequivalents at  $100^\circ$ .

1 l.  $\text{H}_2\text{O}$  dissolves 6.4 milliequivalents at  $156^\circ$ .

*Anhydrite:*

1 l.  $\text{H}_2\text{O}$  dissolves 9.2 milliequivalents at  $100^\circ$ .

1 l.  $\text{H}_2\text{O}$  dissolves 2.7 milliequivalents at  $156^\circ$ .

1 l.  $\text{H}_2\text{O}$  dissolves 0.7 milliequivalents at  $218^\circ$ .

(Melcher, J. Am. Chem. Soc. 1910, 32, 63.)

See also under gypsum, p. 953.

Maximum solubility is at  $37.5^\circ$ . (Cameron, J. phys. Chem. 1901, 5, 572.)

Sp. gr. of sat.  $\text{CaSO}_4 + \text{Aq}$  at  $15^\circ = 1.0022$ . (Stolba, J. pr. 97, 503.)

Sp. gr. of sat.  $\text{CaSO}_4 + \text{Aq}$ . at  $31^\circ = 1.0031$ .

1 pt  $\text{CaSO}_4$  is sol. in 218 pts.  $\text{H}_2\text{O}$  containing  $\text{CO}_2$ . (Beyer, Arch. Pharm. (2) 150, 193.)

Sl. sol. in cold  $\text{HCl} + \text{Aq}$ ; completely sol. in boiling dil  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ . (Rose, Pogg. 95, 108.)

Solubility of  $\text{CaSO}_4$  in  $\text{HCl} + \text{Aq}$ .

## Solubility in NaCl + Aq at t°

When a sat. solution of NaCl is shaken with a mixture of solid NaCl and  $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$ , the calcium sulphate dissolved, calculated from the amount of CaO in solution, is always greater than that calculated from the sulphuric acid in solution. Similar results are obtained when solid calcium sulphate alone is shaken with a sat. solution of NaCl.

t°	In 100 g of the solution		
	Cl	$\text{CaSO}_4$ calc from CaO	$\text{CaSO}_4$ calc from $\text{SO}_4$

(Cameron and Breazeale, J. phys. Chem. 1904, 8 340)

1 l. sat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$  at  $25^\circ$  containing 254.06 g.  $\text{Na}_2\text{SO}_4$  dissolves 2.58 g.  $\text{CaSO}_4$ . (Cameron and Brown, J. phys. Ch. 1905, 9 214.)

Hydration is retarded by dil. solutions and accelerated by conc. solution of sodium, potassium, ammonium and magnesium sulphates. (Rohland, Z. Elektrochem. 1908, 14, 422.)

More than 10 times as much  $\text{CaSO}_4$  dissolves in sat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$  as in  $\text{H}_2\text{O}$ . (Diehl. Insol. in alcohol. of 0.905 sp. gr. or less. (Anthon, J. pr. 14, 125.)

Solubility in 10% alcohol = 0.0970 g.  $\text{CaSO}_4$  per 100 g. solution. (Magnanini, Gazz. Ch. it. 1901, 31, (2) 544.)

Sol. in dil. alcoholic solutions of  $\text{NH}_4\text{NO}_3$ ,  $\text{KNO}_3$ ,  $\text{NaNO}_3$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{KCl}$ , and  $\text{NaCl}$  (Margueritte, C. R. 38, 308.)

Sol. to considerable extent in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ , especially if freshly pptd. More sol. in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  than in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Weppen, J. pr. 11, 182.)

More sol. in  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  than in other  $\text{NH}_4$  salts (Cohn, J. pr. (2) 35, 43.)

More sol. in  $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$  or  $\text{KCl} + \text{Aq}$  than in  $\text{H}_2\text{O}$  (Mulder)

Solubility in N/200 potassium hydrogen tartrate +  $\text{Aq}$  = 0.2323 g.  $\text{CaSO}_4$  per 100 g. solution. (Magnanini, Gazz. ch. it. 1901, 31, (2) 544.)

72.61 millimols per l of  $\text{CaSO}_4 + 2\text{H}_2\text{O}$  are sol at  $25^\circ$  in ammonium citrate +  $\text{Aq}$  (concentration = 0.5 millimols. per l.)

38.39 millimols per l. of  $\text{CaSO}_4 + 2\text{H}_2\text{O}$  are sol. at  $25^\circ$  in sodium citrate +  $\text{Aq}$  (Concentration = 0.25 millimols per l. (Randell, Z. phys. Ch. 1910, 70, 452.)

100 pts. glycerine dissolve 0.957 pt.  $\text{CaSO}_4 + 2\text{H}_2\text{O}$ , and solubility increases with the temp. (Asselin, C. R. 76, 884.)

100 g. glycerine (sp gr. 1.256) dissolve 5.17 g.  $\text{CaSO}_4$  at  $15-18^\circ$ . (Ossendowski, Pharm. J 1907, 79, 575.)

Solubility in 10% alcoholic N/200  $\text{KHC}_2\text{H}_3\text{O}_2 + \text{Aq}$  = 0.0866 g.  $\text{CaSO}_4$  per 100 g. solution.

Solubility in N/200  $\text{KHC}_2\text{H}_3\text{O}_2 + \text{Aq}$  + 5% tartaric acid = 0.2556 g.  $\text{CaSO}_4$  per 100 g. solution.

Solubility in 10% alcoholic N/400  $\text{KHC}_2\text{H}_3\text{O}_2 + 5\%$  tartaric acid = 0.1086 g.  $\text{CaSO}_4$  in 100 g. solution. (Magnanini.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790); ethylacetate. (Naumann, B. 1910, 43, 314.)

Solubility in sugar +  $\text{Aq}$  at  $t^\circ$

(Cameron and Breazeale, J. phys. Chem 1903, 7, 574.)

100 pts. hot conc.  $\text{H}_2\text{SO}_4$  dissolve approx. 10 pts  $\text{CaSO}_4$ . (Rohland, Z. anorg. 1910, 66, 206.)

Decomp. by  $\text{H}_2\text{O}$ .

**Calcium hexahydrogen sulphate,  $\text{CaH}_6(\text{SO}_4)_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Schultz, Pogg. 133, 137.)

**Calcium cupric potassium sulphate,  $\text{Ca}_2\text{K}_2\text{Cu}(\text{SO}_4)_4 + 2\text{H}_2\text{O}$ .**

(D'Ans, B. 1908, 41, 1778.)

**Calcium magnesium potassium sulphate,  $2\text{CaSO}_4, \text{MgSO}_4, \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .**

Min. *Polyhalite*. Sol. in  $\text{H}_2\text{O}$  with residue of  $\text{CaSO}_4$ .

$4\text{CaSO}_4, \text{MgSO}_4, \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$ . Min. *Krugite*. Decomp. by  $\text{H}_2\text{O}$ .

**Calcium potassium sulphate,  $\text{CaK}_2(\text{SO}_4)_2 + \text{H}_2\text{O}$ .**

Min. *Syngenite*. Sol in 400 pts.  $\text{H}_2\text{O}$ . (Zepharovitch.) Less sol. than  $\text{K}_2\text{SO}_4$ . Decomp. by heating with separation of  $\text{CaSO}_4$ . Decomp. by  $\text{H}_2\text{O}$  until 25 g.  $\text{K}_2\text{SO}_4$  are dissolved in a litre, after which there is no decomposition. (Ditte, C. R. 84, 86.)

Easily sol. in dil. acids. (Phillips.)

Solubility of syngenite,  $\text{CaK}_2(\text{SO}_4)_2 + \text{H}_2\text{O}$  in  $\text{K}_2\text{SO}_4 + \text{Aq}$  at  $25^\circ$ .

Wt of 1000 cons of solution at $25^\circ$	g. $\text{K}_2\text{SO}_4$ per l.	g $\text{CaSO}_4$ per l
1013 08	16 31	*1 495
1015 78	19 87	1 529
1020.01	25.01	1 537
1021.54	30 83	1 565
1036 82	46.99	0 810
1058 10	75 45	0 451
1085 91	112 87	0 330

\*In first four determinations syngenite completely decomposed.

(Cameron and Breazeale, J. phys. Chem. 1904, 8 339.)

This double salt is stable between  $0^\circ$  and  $99^\circ$  in the presence of an excess of either  $\text{CaSO}_4$  or  $\text{K}_2\text{SO}_4$ . In this temp interval the double sulphate,  $2\text{CaSO}_4, \text{K}_2\text{SO}_4, 3\text{H}_2\text{O}$  described by Ditte (C. R. 84, 867) does not exist. (Barre, C. R. 1909, 148, 1607.)

$\text{Ca}_2\text{K}_2(\text{SO}_4)_2 + 3\text{H}_2\text{O}$ . Decomp. by cold  $\text{H}_2\text{O}$ . (Ditte, C. R. 84, 867.)

$5\text{CaSO}_4, \text{K}_2\text{SO}_4 + \text{H}_2\text{O}$ . Slowly decomp. by  $\text{H}_2\text{O}$ . (van't Hoff and Geiger, B. A. B. 1904, 935)

**Calcium potassium zinc sulphate,  $\text{Ca}_2\text{K}_2\text{Zn}(\text{SO}_4)_4 + 2\text{H}_2\text{O}$**

(D'Ans, B. 1908, 41, 1778.)

**Calcium rubidium sulphate,  $\text{Ca}_2\text{Rb}_2(\text{SO}_4)_4$ .**

(D'Ans, B. 1907, 40, 4913.)

+  $3\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Ditte, C. R. 84, 86.)

$\text{CaRb}_2(\text{SO}_4)_2 + \text{H}_2\text{O}$ . (D'Ans.)

Calcium sodium sulphate,  $\text{CaNa}_2(\text{SO}_4)_2$ .

Min. *Glauberite*. Gradually sol. in  $\text{H}_2\text{O}$ , but crystals of  $\text{CaSO}_4 + 2\text{H}_2\text{O}$  soon separate out. (Fritzsche.)

Insol. in alcohol, and conc.  $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$ ; decomp. by  $\text{H}_2\text{O}$  (Folkhard, C. N. 43. 6.)

$\text{CaNa}_2(\text{SO}_4)_2 + 2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Fritzsche.)

Calcium titanium sulphate,  $\text{CaSO}_4, \text{Ti}(\text{SO}_4)_2$ .

Ppt.; decomp. by  $\text{H}_2\text{O}$  giving titanic acid. (Weinland, Z. anorg. 1907, 54. 254.)

Calcium uranium sulphate.

Min. *Uranochalcite*

Min. *Medjideite*. Easily sol. in dil.  $\text{HCl} + \text{Aq}$ .

Cerous sulphate,  $\text{Ce}_2(\text{SO}_4)_3$ .

Anhydrous cerous sulphate is much more sol. in  $\text{H}_2\text{O}$  than the hydrated salt.

Easily sol. in cold  $\text{H}_2\text{O}$  if added thereto in small amounts. If large amount of  $\text{Ce}_2(\text{SO}_4)_3$  is treated with a little  $\text{H}_2\text{O}$  it hardens with evolution of heat, and becomes very difficultly soluble. 100 pts.  $\text{H}_2\text{O}$  dissolve 161 pts.  $\text{Ce}_2(\text{SO}_4)_3$  at  $0^\circ$  and 17.86 pts. at  $19^\circ$ .

$\text{Ce}_2(\text{SO}_4)_3 + \text{Aq}$  sat. in cold deposits  $\text{Ce}_2(\text{SO}_4)_3$  at  $75^\circ$ , and only 2.25 pts. remain in solution at  $100^\circ$ . (Jolin, Bull. Soc. (2) 21. 536.)

100 pts.  $\text{H}_2\text{O}$  dissolve 8.31 pts.  $\text{Ce}_2(\text{SO}_4)_3$  at  $20^\circ$ ; 8.08 pts. at  $45^\circ$ ; 4.95 pts. at  $60^\circ$ ; 0.504 pt. at  $100^\circ$ . (Bühlig, J. pr. (2) 12. 240.)

60 pts. anhydrous salt dissolve quickly at  $0-3^\circ$  in 100 pts.  $\text{H}_2\text{O}$ .

At  $15^\circ$  the solution solidifies, and the mother liquor contains only 27.88%  $\text{Ce}_2(\text{SO}_4)_3$ . At  $15^\circ$  the maximum attainable strength is 31.82%  $\text{Ce}_2(\text{SO}_4)_3$ . (Brauner, Chem. Soc. 53. 887.)

100 pts.  $\text{H}_2\text{O}$  dissolve 10.747 pts.  $\text{Ce}_2(\text{SO}_4)_3$  at  $18^\circ$ ; 9.648 pts. at  $19^\circ$ ; 6.949 pts. at  $33^\circ$ .

The solubility of  $\text{Ce}_2(\text{SO}_4)_3$  in  $\text{H}_2\text{O}$  is diminished by the addition of  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{K}_2\text{SO}_4$  or  $\text{Na}_2\text{SO}_4$ . (Barre, C. R. 1910, 161. 872.)

Sp. gr. of  $\text{Ce}_2(\text{SO}_4)_3 + \text{Aq}$  was found to be constant whether  $\text{Ce}_2(\text{SO}_4)_3$  or  $\text{Ce}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$  was used. The following results were obtained at  $15^\circ$ .

Pts. $\text{Ce}_2(\text{SO}_4)_3$ to 100 pts. $\text{H}_2\text{O}$	Sp. gr.	Pts. $\text{Ce}_2(\text{SO}_4)_3$ to 100 pts. $\text{H}_2\text{O}$	Sp. gr.

16.56 17.52 17.70 g. Ce<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.  
Previous determinations are inaccurate. (Koppel.)

Ceroceric sulphate, Ce<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, 2Ce(SO<sub>4</sub>)<sub>2</sub>+24H<sub>2</sub>O.

Decomp. by H<sub>2</sub>O. Sol. in HCl+Aq with decomp. (Mendeleeff, A. 168, 45.)  
Ce<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, 3Ce(SO<sub>4</sub>)<sub>2</sub>+31H<sub>2</sub>O. (John.)

Ceric sulphate, basic, CeO<sub>2</sub>, SO<sub>3</sub>+2H<sub>2</sub>O.

Very sl. sol. in H<sub>2</sub>O.  
Sol. in 2500 pts. H<sub>2</sub>O (Mosander.)  
Boiling H<sub>2</sub>O gradually dissolves out H<sub>2</sub>SO<sub>4</sub>. (Ert.)

Sol. in acids.  
8CeO<sub>2</sub>, 7SO<sub>3</sub>+12H<sub>2</sub>O; 8CeO<sub>2</sub>, 7SO<sub>3</sub>+15H<sub>2</sub>O; 6CeO<sub>2</sub>, 5SO<sub>3</sub>+5H<sub>2</sub>O; 4CeO<sub>2</sub>, 3SO<sub>3</sub>+7H<sub>2</sub>O; and 3Ce(SO<sub>4</sub>)<sub>2</sub>, 5Ce(OH)<sub>4</sub>. All are insol ppts.

Ceric sulphate, Ce(SO<sub>4</sub>)<sub>2</sub>.

Anhydrous. Very slowly sol. in cold, more rapidly in hot H<sub>2</sub>O. When solution has once begun, almost unlimited quantities may be dissolved. Insol. in conc. H<sub>2</sub>SO<sub>4</sub>. (Meyer, B. 1904, 37, 144.)

+4H<sub>2</sub>O Sol. in H<sub>2</sub>O with immediate decomp. (Rammelsberg.)

Decomp by H<sub>2</sub>O. (Muthmann, B. 1900, 33, 1764.)

Cerous hydrogen sulphate, Ce<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, 3H<sub>2</sub>SO<sub>4</sub>.

Decomp by H<sub>2</sub>O. (Wyruboff, Bull. Soc. (3) 2, 745; Brauner, Z. anorg. 1904, 38, 329.)

Ceroceric hydrogen sulphate, Ce<sub>2</sub>H(SO<sub>4</sub>)<sub>4</sub>+13H<sub>2</sub>O.

Sol. in H<sub>2</sub>O Forms very supersat solutions.

Solubility in H<sub>2</sub>SO<sub>4</sub> decreases with increase in concentration of the acid. (Meyer, B. 1904, 37, 146.)

Cerous potassium sulphate,  $\text{Ce}_2(\text{SO}_4)_3 \cdot \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$

Sl sol in  $\text{H}_2\text{O}$ , insol. in sat.  $\text{K}_2\text{SO}_4 + \text{Aq.}$  (Czudnowicz, J. pr. 80. 26.)  
 $2\text{Ce}_2(\text{SO}_4)_3 \cdot 3\text{K}_2\text{SO}_4$ . As above (Hermann, J. pr. 80. 188.)

+  $8\text{H}_2\text{O}$ . (Barre, A. ch. 1911, (8) 24. 249.)  
 $\text{Ce}_2(\text{SO}_4)_3 \cdot 2\text{K}_2\text{SO}_4 + 3\text{H}_2\text{O}$ . As above. (Jolin)

$\text{Ce}_2(\text{SO}_4)_3 \cdot 3\text{K}_2\text{SO}_4$ . Sol in about 56 pts.  $\text{H}_2\text{O}$  at  $9-20^\circ$ . Easily sol. in acidified  $\text{H}_2\text{O}$ . Nearly insol. in sat.  $\text{K}_2\text{SO}_4 + \text{Aq.}$  (Jolin.)  
 $\text{Ce}_2(\text{SO}_4)_3 \cdot 5\text{K}_2\text{SO}_4$ . Insol. in  $\text{K}_2\text{SO}_4 + \text{Aq.}$  (Barre, l.c.)

Ceric potassium sulphate,  $\text{Ce}(\text{SO}_4)_2 \cdot 2\text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  with decomp. Insol in sat  $\text{K}_2\text{SO}_4 + \text{Aq.}$

Ceric silver sulphate,  $10\text{Ce}(\text{SO}_4)_2 \cdot 6\text{Ag}_2\text{SO}_4$

Only sl. sol. in cold  $\text{H}_2\text{O}$ ; decomp. by hot  $\text{H}_2\text{O}$  in which it is readily sol (Pozzi-Escot, C. R. 1913, 156. 1074.)

Cerous sodium sulphate,  $\text{Ce}_2(\text{SO}_4)_3 \cdot \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ , and still less in  $\text{Na}_2\text{SO}_4 + \text{Aq.}$  100 cem. sat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$  dissolve an amount corresponding to 6.2 mg.  $\text{Ce}_2\text{O}_3$  (Jolin)

Sl. sol. in  $\text{HCl} + \text{Aq.}$  (Czudnowicz)

Cerous thallous sulphate,  $\text{Ce}_2(\text{SO}_4)_3 \cdot 3\text{Tl}_2\text{SO}_4$ .

Ppt.  
 $\text{Ce}_2(\text{SO}_4)_3 \cdot \text{Tl}_2\text{SO}_4 + 2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Zschiesche, J. pr. 107. 98.)

+  $4\text{H}_2\text{O}$ . Very sl. sol. in cold, somewhat more in warm  $\text{H}_2\text{O}$ . (Wyruboff, Bull. Soc. Min. 14. 83.)

Cerous tin (stannic) hydrogen sulphate,  $\text{CeHSn}(\text{SO}_4)_4$

Decomp. by  $\text{H}_2\text{O}$ . Sol. in very dil.  $\text{HCl}$ . (Weinland, Z. anorg. 1907, 54. 251.)

Chromous sulphate,  $\text{CrSO}_4 \cdot 7\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 12.35 pts.  $\text{CrSO}_4 + 7\text{H}_2\text{O}$ . Aqueous solution can be boiled without decomp. Sl. sol. in alcohol.

+  $\text{H}_2\text{O}$  (Moissan, Bull. Soc. 37. 296.)

Chromic sulphate, basic,  $3\text{Cr}_2\text{O}_3 \cdot 2\text{SO}_4 + 12\text{H}_2\text{O} = 2\text{Cr}_2(\text{SO}_4)(\text{OH})_4 \cdot \text{Cr}_2(\text{OH})_6 + 5\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. Slowly decomp. by  $\text{KOH} + \text{Aq}$  or  $\text{K}_2\text{CO}_3 + \text{Aq.}$

$5\text{Cr}_2\text{O}_3 \cdot 3\text{SO}_3$ . Sol. in  $\text{H}_2\text{O}$ . (Recoura, C. R. 112. 1439.)

$\text{Cr}_2\text{O}_3 \cdot \text{SO}_3 = \text{Cr}_2\text{O}_3(\text{SO}_4)$ . Ppt. (Schiff, A. 124. 167.)

+  $10\text{H}_2\text{O}$  or  $[\text{Cr}(\text{OH})_2(\text{OH})_2]_2\text{SO}_4$ . Nearly insol. in  $\text{H}_2\text{O}$ . (Werner, B. 1908, 41. 3451.)  
 $5\text{Cr}_2\text{O}_3 \cdot 8\text{SO}_3$  (?). (Siewert, A. 126. 97.)

$\text{Cr}_2\text{O}_3 \cdot 2\text{SO}_3 = \text{Cr}_2\text{O}_3(\text{SO}_4)_2$ . Easily sol. in a little  $\text{H}_2\text{O}$ , but a precipitate is thrown down

by further addition of  $\text{H}_2\text{O}$ , which redissolves on evaporation.

$5\text{Cr}_2\text{O}_3 \cdot 12\text{SO}_3$  (?). (Siewert.)

$2\text{Cr}_2\text{O}_3 \cdot 5\text{SO}_3 + 15\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ ; insol. in alcohol and acetone by which it is ppt. from aqueous solution. (Nicolardot, C. R. 1907, 145. 1338.)

Chromic sulphate,  $\text{Cr}_2(\text{SO}_4)_3$ .

Anhydrous. Insol. in  $\text{H}_2\text{O}$ ,  $\text{HNO}_3$ ,  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , aqua regia, and  $\text{NH}_4\text{OH} + \text{Aq.}$  Decomp. by boiling caustic alkalies, and slowly by alkali carbonates +  $\text{Aq.}$  (Schrotter.) According to Traube (A. 71. 92) and Siewert (A. 126. 94), Schrotter's salt is an acid sulphate,  $\text{Cr}_2(\text{SO}_4)_3(\text{OSO}_3\text{H})_2 = 2\text{Cr}_2(\text{SO}_4)_3 \cdot \text{H}_2\text{SO}_4$ . According to Etard (Bull. Soc. (2) 31. 200) both salts exist, and formula of above salt is  $\text{Cr}_2(\text{SO}_4)_3\text{Cr}_2$ . Formula is  $2[(\text{Cr}_2\text{O}_3)_2 \cdot (\text{SO}_4)_3]$ ,  $17\text{H}_2\text{SO}_4$  (?). (Cross and Higgins, Chem. Soc. 41. 113.)

Insol in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

+  $6\text{H}_2\text{O}$  (?). Green modification. Readily sol in  $\text{H}_2\text{O}$  or alcohol. Sol in conc  $\text{H}_2\text{SO}_4$ .  $\text{H}_2\text{O}$  solution is converted into the violet modification by standing 3-4 weeks. (Schrotter.)

+  $11\text{H}_2\text{O}$  (?). Extremely deliquescent; becomes liquid in moist air in 2 minutes. Not pptd. by  $\text{BaCl}_2 + \text{Aq.}$  (Recoura, C. R. 113. 857.)

+  $18\text{H}_2\text{O}$ . Violet modification. Sol. in 0.833 pt.  $\text{H}_2\text{O}$  at  $20^\circ$ . When the  $\text{H}_2\text{O}$  solution is heated to  $65-70^\circ$  it begins to be converted into the green modification. This conversion is also brought about by cold  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{PCl}_5$ . (Etard, C. R. 84. 1090.)

Sp. gr. of aqueous solution of violet modification of  $\text{Cr}_2(\text{SO}_4)_3$  containing:

5	10	20%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.0275	1.0560	1.1150	
30	40	50%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.1785	1.2480	1.3250	

Sp. gr. of aqueous solution of green modification of  $\text{Cr}_2(\text{SO}_4)_3$  containing:

10	20	30%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.0510	1.1070	1.1680	
40	50	60%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.2340	1.3055	1.3825	

70	80%	$\text{Cr}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$
1.4650	1.5535	

(Gerlach, Z. anal. 28. 404)

See also Chromosulphuric acid.

Chromic hydrogen sulphate,  $\text{Cr}_2(\text{SO}_4)_3 \cdot \text{H}_2\text{SO}_4 + 16\text{H}_2\text{O}$ .

Two modifications

a. Violet Decomp. by  $\text{H}_2\text{O}$ .

b. Green. Obtained from violet modification on heating. Sol. in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1906, 49. 157.)

+24H<sub>2</sub>O. Decomp. by alcohol, giving the normal sulphate. (Weinland.)

Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, 2H<sub>2</sub>SO<sub>4</sub>+18H<sub>2</sub>O. Hygroscopic. Decomp. by H<sub>2</sub>O. (Weinland.)

Correct composition of Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub> (Traube), which see.

See also Chromosulphuric acid.

Chromic cupric sulphate, Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, 2CuSO<sub>4</sub>, H<sub>2</sub>SO<sub>4</sub>.

Insol. in H<sub>2</sub>O, but gradually decomp. thereby. (Étard, C. R. 87. 602.)

Insol. in H<sub>2</sub>O. (Recoura, C. R. 1893, 117. 39.)

Chromous hydrazine sulphate, CrSO<sub>4</sub>, 2N<sub>2</sub>H<sub>4</sub>, H<sub>2</sub>SO<sub>4</sub>.

Only sl. sol. in H<sub>2</sub>O. Sol. in acids. (Traube B. 1913, 46. 1507.)

Chromic hydroxylamine sulphate, Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, (NH<sub>2</sub>OH)<sub>2</sub>SO<sub>4</sub>+24H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Meyerinhg.)

Chromic iron (ferrous) sulphate, Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, 2FeSO<sub>4</sub>, H<sub>2</sub>SO<sub>4</sub>+2H<sub>2</sub>O.

As above (Étard, l.c.)

Chromic iron (ferric) sulphate, Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, Fe<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.

Insol. in H<sub>2</sub>O. (Étard, C. R. 86. 1399.)

Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, Fe<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, H<sub>2</sub>SO<sub>4</sub>. Insol. in H<sub>2</sub>O (Étard.)

Chromic lithium sulphate, Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, 3Li<sub>2</sub>SO<sub>4</sub>.

Resembles the corresponding K salt. (Wernicke.)

Chromic manganous sulphate, Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, 3MnSO<sub>4</sub>.

(Étard, C. R. 86. 1402.)

Chromic manganic sulphate, Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, Mn<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.

Insol. in H<sub>2</sub>O. (Étard, C. R. 86. 1399.)

Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, Mn<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, 2H<sub>2</sub>SO<sub>4</sub>. Sl. deliquescent. Sol. in H<sub>2</sub>O with decomp. (Étard.)

Chromic nickel sulphate, Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, NiSO<sub>4</sub>, 2H<sub>2</sub>SO<sub>4</sub>+3H<sub>2</sub>O.

Insol. in H<sub>2</sub>O, but gradually decomp. thereby. (Étard, C. R. 87. 602.)

Chromous potassium sulphate, CrSO<sub>4</sub>, K<sub>2</sub>SO<sub>4</sub>, +6H<sub>2</sub>O.

Sol. in H<sub>2</sub>O; less sol. in alcohol. (Peligot, A. ch. (3) 12. 546.)

Chromic potassium sulphate, K<sub>2</sub>Cr<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub>.

Anhydrous. α. Sol. in H<sub>2</sub>O when not heated over 350°

β. Insol. in cold H<sub>2</sub>O and cold acids. When ignited is insol. in hot H<sub>2</sub>O and acids, except slightly in boiling conc. H<sub>2</sub>SO<sub>4</sub>. (Fischer.)

+2H<sub>2</sub>O (?). Insol. in cold H<sub>2</sub>O or dil. acids. Sol. by long boiling with H<sub>2</sub>O, and more quickly when HCl is added. (Hertwig.)

+4H<sub>2</sub>O. Is potassium chromosulphate, which see.

+24H<sub>2</sub>O. *Chrome-alum*. *Violet modification*. Efflorescent at 29°. Sol. in 6-7 pts. cold H<sub>2</sub>O. When the H<sub>2</sub>O solution is heated to 60-70° it is partially decomp. into a green modification, which is more sol. in H<sub>2</sub>O. The green modification on standing in H<sub>2</sub>O solution is very slowly converted back into violet modification. The green modification may also be formed by heating dry salt to 100°, at which temp. it melts in its crystal H<sub>2</sub>O. When all crystal H<sub>2</sub>O has been expelled at 300-350°, it still dissolves in hot H<sub>2</sub>O, but when heated above 350° it becomes insol. in H<sub>2</sub>O. (Löwel, A. ch. (3) 44. 313.)

125.1 g. anhydrous, or 243.9 g. hydrated salt, or 0.441 g. mols. anhydrous salt are sol. in 1 l. H<sub>2</sub>O at 25°. (Locke, Am. Ch. J. 1901, 28. 175.)

Melts in crystal H<sub>2</sub>O at 89°. (Tilden, Chem. Soc. 45. 409.)

Sp. gr. of aqueous solution of violet modification at 15° containing:

5	10	15%	K <sub>2</sub> Cr <sub>2</sub> (SO <sub>4</sub> ) <sub>4</sub> +24H <sub>2</sub> O.
1.02725	1.05500	1.08350	

Sp. gr. of sat. solution at 15° = 1.0985.

Sp. gr. of aqueous solution of green modification at 15° containing:

10	20	30%	K <sub>2</sub> Cr <sub>2</sub> (SO <sub>4</sub> ) <sub>4</sub> +24H <sub>2</sub> O,
1.050	1.103	1.161	
40	50	60%	K <sub>2</sub> Cr <sub>2</sub> (SO <sub>4</sub> ) <sub>4</sub> +24H <sub>2</sub> O,
1.225	1.295	1.371	

70	80	90%	K <sub>2</sub> Cr <sub>2</sub> (SO <sub>4</sub> ) <sub>4</sub> +24H <sub>2</sub> O.
1.453	1.541	1.635	

(Gerlach, Z. anal. 28. 497.)

Sp. gr. of chrome-alum solutions at 15° containing:

5	10	15	20	25	% salt,
1.0174	1.0342	1.0524	1.0746	1.1004	
30	35	40	45	50	% salt,
1.1274	1.1572	1.1896	1.2352	1.2594	

55	60	65	70	% salt.
1.3704	1.4566	1.5462	1.6362	

(Franz, J. pr. (2) 5. 298.)

Insol. in alcohol.

3K<sub>2</sub>SO<sub>4</sub>, Cr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>. Insol. in H<sub>2</sub>O, acids, or dil. alkalis. Decomp. by boiling with conc. KOH+Aq. (Wernicke, Pogg. 159. 576.)

Chromic rubidium sulphate, Rb<sub>2</sub>Cr<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub>+24H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Pettersson.)

Solubility in  $H_2O$ 

Temp.	G anhydrous salt per l	G mols of anhydrous salt per l
25°	25.7	0.079

35°	41.1	0.128
40°	59.7	0.181

Melts in crystal  $H_2O$  at 107°

(Loeche, *Am Ch J* 1901, 26. 180.)

Chromic sodium sulphate,  $Na_2Cr_2(SO_4)_4 + 10H_2O$

Is sodium chromosulphate, which see.  
+24 $H_2O$  More efflorescent than K or  $NH_4$  salt. Sol. in  $H_2O$ , and properties resemble the corresponding K salt.  
 $Cr_2(SO_4)_3, 3Na_2SO_4$ . Resembles the corresponding K salt.

Chromic thallos sulphate,  $Tl_2Cr_2(SO_4)_4 + 24H_2O$ .

0.212 mols. of anhydrous salt are sol. in 1 l.  $H_2O$  at 25°. 1 l.  $H_2O$  dissolves 104.8 g. of anhydrous or 163.8 g. hydrated salt at 25°. Melts in crystal  $H_2O$  at 92°. (Loeche, *Am. Ch J* 1901, 26. 175.)

Chromic sulphate chloride,  $Cr_2(SO_4)_2Cl_2 + 2H_2O$ .

Slightly hygroscopic. Sol. in  $H_2O$ . (Scheff, *A.* 124. 176.)

$[CrSO_4, 5H_2O]/Cl$ . Sol. in  $H_2O$ . (Weinland, *Z. anorg.* 1908, 58. 176.)

Chromyl sulphate,  $(CrO_3)_2SO_4$ .

Decomp. by  $H_2O$ . (Pictet and Karl, *Bull. Soc.* 1908, (4) 3. 1114.)

Cobaltous sulphate, basic.

Ppt. Insol. in  $H_2O$ . (Berzelius)  
 $6CoO, SO_3 + 10H_2O$ . (Athanasesco, *C. R.* 103 271.)

$5CoO, SO_3 + 4H_2O$ . Ppt. Very sl. sol. in  $H_2O$  (Habeimann, *M Ch* 5. 432.)

Cobaltous sulphate,  $CoSO_4$ .

100 pts.  $H_2O$  dissolve at:

3° 10° 20° 24° 29°  
26.2 30.5 36.4 38.9 40 pts. anhydrous salt,

35° 44° 50° 60° 70°  
46.3 60.4 55.2 60.4 65.7 pts. anhydrous salt.

(Tobler, *A.* 95. 193.)

100 pts.  $H_2O$  at 11–14° dissolve 23.88 pts. anhydrous salt (v. Hauer, *J pr* 103 114.)

Solubility in 100 pts.  $H_2O$  at  $t^\circ$ , using  $CoSO_4 + 7H_2O$ .

$t^\circ$	Pts $CoSO_4$	$t^\circ$	Pts $CoSO_4$	$t^\circ$	Pts $CoSO_4$
0	24.6	36	43.5	72	65.0

1.2099	0.141	1.0131

(Charpy, *A. ch.* (6) 29. 26.)

Sp. gr. of  $\text{CoSO}_4 + \text{Aq}$  at room temp. containing:

7.239 14.156 21.167%  $\text{CoSO}_4$   
1.0860 1.1591 1.2398

(Wagner, W. Ann. 1883, 18. 269.)

Sp. gr. of  $\text{CoSO}_4 + \text{Aq}$  at  $25^\circ$ .

Concentration of $\text{CoSO}_4$ +Aq	Sp. gr.
1-normal	1.0750
$\frac{1}{2}$ " "	1.0383
$\frac{1}{3}$ " "	1.0193
$\frac{1}{4}$ " "	1.0110

(Wagner, Z. phys. Ch. 1890, 5. 37.)

100 pts. sat. solution of  $\text{CoSO}_4$  and  $\text{CuSO}_4$  contain 22.70 pts. of the two salts

Solubility of  $\text{CoSO}_4 \cdot 7\text{H}_2\text{O} + \text{Na}_2\text{SO}_4$ , 10  $\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $t^\circ$  100 g.  $\text{H}_2\text{O}$  dissolve grams  $\text{CoSO}_4$  and grams  $\text{Na}_2\text{SO}_4$

$t^\circ$	grams $\text{CoSO}_4$	grams $\text{Na}_2\text{SO}_4$
0	21.855	10.07
5	23.94	13.155
10	25.41	16.665

(Koppel, Z. phys. Ch. 1905, 52. 396.)

See also under  $\text{CoNa}_2(\text{SO}_4)_2 + 4\text{H}_2\text{O}$ .

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

$\text{HCl} \cdot \text{H}_2\text{O}$  ppt. it completely from  $\text{CoSO}_4 + \text{Aq}$ . (Persoz.)

100 pts. absolute methyl alcohol dissolve 1.04 pts.  $\text{CoSO}_4$  at  $18^\circ$ . (de Bruyn, Z. phys. Ch. 10. 784.)

100 pts. absolute methyl alcohol dissolve 54.5 pts.  $\text{CoSO}_4 + 7\text{H}_2\text{O}$  at  $18^\circ$ ; 100 pts. abs. methyl alcohol dissolve 42.8 pts.  $\text{CoSO}_4 + 7\text{H}_2\text{O}$  at  $3^\circ$ ; 100 pts. 93.5% methyl alcohol dissolve 13.3 pts.  $\text{CoSO}_4 + 7\text{H}_2\text{O}$  at  $3^\circ$ ; 100 pts. 50% methyl alcohol dissolve 1.8 pts.  $\text{CoSO}_4 + 7\text{H}_2\text{O}$  at  $3^\circ$ .

100 pts. absolute ethyl alcohol dissolve 2.5 pts.  $\text{CoSO}_4 + 7\text{H}_2\text{O}$  at  $3^\circ$ . (de Bruyn, Z. phys. Ch. 10. 786.)

100 g. solution in glycol contain 2.5 g.  $\text{CoSO}_4$ . (de Coninck, Bull. Ac. Belg. 1905. 359.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370.)

Insol. in ethyl acetate. (Naumann, B. 1904, 37. 3602.)

+  $\text{H}_2\text{O}$  Sol. in cold, and only very slowly sol. in hot  $\text{H}_2\text{O}$ . (Vortmann, B. 15. 1888.)

+  $4\text{H}_2\text{O}$ . (Frohde, Arch. Pharm. (2) 127. 92.)

+  $6\text{H}_2\text{O}$  (Marignac.)

+  $7\text{H}_2\text{O}$ . Sol. in 24 pts. cold  $\text{H}_2\text{O}$  Insol. in alcohol. (Persoz.)

Solubility of  $\text{CoSO}_4 + 7\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $t^\circ$ . 100 g.  $\text{H}_2\text{O}$  dissolve grams  $\text{CoSO}_4$ .

$t^\circ$	g. $\text{CoSO}_4$	$t^\circ$	g. $\text{CoSO}_4$	$t^\circ$	g. $\text{CoSO}_4$
0	25.53	15	33.045	30	42.26
5	28.05	20	36.21	35	45.80
10	30.55	25	39.35	40	48.85

(Koppel, Z. phys. Ch. 1905, 52. 395.)

M-pt. of  $\text{CoSO}_4 + 7\text{H}_2\text{O} = 96-98^\circ$  (Tilden, Chem. Soc. 45. 409.)

Cobaltocobaltic sulphate,  $\text{Co}_2\text{O}_3$ ,  $6\text{CoO}$ ,  $\text{SO}_3 + 15\text{H}_2\text{O}$ .

Precipitate Insol. in boiling  $\text{CoSO}_4 + \text{Aq}$  or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Gentile, J. pr. 69. 130.)

Cobaltic sulphate,  $\text{Co}_2(\text{SO}_4)_3 + 18\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with immediate decomp. and liberation of O. Sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  without immediate decomp. Sol. in conc.  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Marshall, Chem. Soc. 59. 760.)

Cobaltous cupric sulphate,  $2\text{CoSO}_4$ ,  $\text{CuSO}_4 + 2\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (v. Hauer, Pogg. 125. 637.)

+  $36\text{H}_2\text{O}$ . (Liebig.)  
 $2\text{CoSO}_4$ ,  $2\text{CuSO}_4$ ,  $\text{H}_2\text{SO}_4$ . (Etard.)

Cobaltous cupric magnesium potassium zinc sulphate,  $\text{CoSO}_4$ ,  $\text{CuSO}_4$ ,  $\text{MgSO}_4$ ,  $4\text{K}_2\text{SO}_4$ ,  $\text{ZnSO}_4 + 24\text{H}_2\text{O}$  (?).

Sol. in  $\text{H}_2\text{O}$ . (Vohl.)

Cobaltous cupric potassium sulphate,  $\text{CoSO}_4$ ,  $\text{CuSO}_4$ ,  $2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$  (?).

Sol. in  $\text{H}_2\text{O}$ . (Vohl.)  
Does not exist. (Aston and Pickering, Chem. Soc. 49. 123.)

Cobaltous hydrazine sulphate,  $\text{CoH}_2(\text{SO}_4)_2$ ,  $2\text{N}_2\text{H}_4$ .

1 pt. is sol. in 305.16 pts.  $\text{H}_2\text{O}$  at  $12^\circ$ . Sol. in  $\text{HNO}_3$  with decomp. Insol. in  $\text{HCl}$ . (Curtius, J. pr. 1894, (2) 50. 331.)

Cobaltous iron (ferrous) potassium sulphate,  $\text{CoSO}_4$ ,  $\text{Fe}_2\text{SO}_4$ ,  $2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)  
 $2\text{CoSO}_4$ ,  $2\text{FeSO}_4$ ,  $\text{H}_2\text{SO}_4$ . (Etard.)

Cobaltous magnesium sulphate,  $3\text{CoSO}_4$ ,  $\text{MgSO}_4 + 28\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Winkelblech.)

Cobaltous magnesium potassium sulphate,  $\text{CoSO}_4 \cdot \text{MgSO}_4 \cdot \text{K}_2\text{SO}_4 \cdot 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

Does not exist. (Aston and Pickering, Chem. Soc. 49. 123.)

Cobaltous manganous potassium sulphate,  $\text{CoSO}_4 \cdot \text{MnSO}_4 \cdot 2\text{K}_2\text{SO}_4 \cdot 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

Cobaltous nickel potassium sulphate,  $\text{CoSO}_4 \cdot \text{NiSO}_4 \cdot 2\text{K}_2\text{SO}_4 \cdot 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

Does not exist. (Thomson, Rep. Brit. Assn. Adv. Sci. 1877. 209.)

Cobaltous potassium sulphate,  $\text{CoSO}_4 \cdot \text{K}_2\text{SO}_4 \cdot 6\text{H}_2\text{O}$ .

Less sol. in  $\text{H}_2\text{O}$  than  $\text{CoSO}_4$ .

100 pts.  $\text{H}_2\text{O}$  dissolve at.

0° 12° 15° 20° 25°  
19.1 30 32.5 39.4 45.3 pts. anhydrous salt,

30° 35° 40° 49°  
51.9 55.4 64.6 81.3 pts. anhydrous salt.

(Tobler, A. 96. 126.)

100 pts saturated solution contain at:

20° 40° 60° 80°  
14 19.5 24.4 31.8 pts. anhydrous salt  
(v. Hauer, J. pr. 74. 433.)

1 l.  $\text{H}_2\text{O}$  dissolves 128.8 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

Cobaltic potassium sulphate,  $\text{K}_2\text{Co}_2(\text{SO}_4)_4 \cdot 24\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Marshall, Chem. Soc. 59. 760.)

Cobaltous potassium zinc sulphate,  $\text{CoSO}_4 \cdot 2\text{K}_2\text{SO}_4 \cdot \text{ZnSO}_4 \cdot 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

Cobaltous rubidium sulphate,  $\text{CoSO}_4 \cdot \text{Rb}_2\text{SO}_4 \cdot 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Tutton.)

1 l.  $\text{H}_2\text{O}$  dissolves 92.8 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

Cobaltic rubidium sulphate,  $\text{Rb}_2\text{Co}_2(\text{SO}_4)_4 \cdot 24\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{HCl}$  and  $\text{H}_2\text{SO}_4$ . Decomp. by conc.  $\text{HCl}$  or  $\text{H}_2\text{SO}_4$ . (Howe and O'Neal, J. Am. Chem. Soc. 1898, 20. 762.)

Melts in crystal  $\text{H}_2\text{O}$  at 47°. (Locke, Am. Ch. J. 1901, 26. 183.)

Cobaltous sodium sulphate,  $\text{CoNa}_2(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O}$ .

Solubility of  $\text{CoNa}_2(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at t°. 100 g.  $\text{H}_2\text{O}$  dissolve grams  $\text{CoSO}_4$  and grams  $\text{Na}_2\text{SO}_4$ .

t°	g $\text{CoSO}_4$	g $\text{Na}_2\text{SO}_4$
20	26.65	24.91
25	25.365	23.325
30	23.13	21.61
35	22.55	20.85
40	20.975	20.055

(Koppel, Z. phys. Ch. 1905, 52. 397.)

Solubility of  $\text{CoNa}_2(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + \text{CoSO}_4 \cdot 7\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at t°. 100 g.  $\text{H}_2\text{O}$  dissolve grams  $\text{CoSO}_4$  and grams  $\text{Na}_2\text{SO}_4$ .

t°	g $\text{CoSO}_4$	g $\text{Na}_2\text{SO}_4$	t°	g $\text{CoSO}_4$	g $\text{Na}_2\text{SO}_4$
18.5	28.61	23.82	30	32.695	18.17

25	30.73	20.575	40	35.01	13.715

(Koppel, Z. phys. Ch. 1905, 52. 397.)

Solubility of  $\text{CoNa}_2(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + \text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at t°. 100 g.  $\text{H}_2\text{O}$  dissolve grams  $\text{CoSO}_4$  and grams  $\text{Na}_2\text{SO}_4$ .

t°	g $\text{CoSO}_4$	g. $\text{Na}_2\text{SO}_4$
18.5	25.50	25.65
20	23.18	27.20
25	16.07	35.18
30	9.20	43.74

(Koppel.)

Solubility of  $\text{CoNa}_2(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + \text{Na}_2\text{SO}_4$  (anhydrous) in  $\text{H}_2\text{O}$  at t°. 100 g.  $\text{H}_2\text{O}$  dissolve grams  $\text{CoSO}_4$  and grams  $\text{Na}_2\text{SO}_4$ .

t°	g $\text{CoSO}_4$	g $\text{Na}_2\text{SO}_4$
35	7.204	50.79
40	7.456	50.095

(Koppel.)

See also  $\text{CoSO}_4 + \text{Na}_2\text{SO}_4$  under  $\text{CoSO}_4$ .

Cobaltous zinc sulphate.

Efflorescent. Decomp. on air. (Link, Crell. Ann. 1790, 1. 32.)

Cobaltous sulphate ammonia,  $\text{CoSO}_4 \cdot 6\text{NH}_3$ .

Sol. in  $\text{H}_2\text{O}$  with separation of ppt. (Rose, Pogg. 20. 162.) Very easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Fremy.)

Decomp. by alcohol

Cobaltous sulphate hydrazine,  $\text{CoSO}_4 \cdot 3\text{N}_2\text{H}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$ . Very sol. in dil. acids and  $\text{NH}_4 + \text{Aq.}$  (Franzen, Z. anorg. 1908, 60. 272.)

Cobaltous sulphate hydroxylamine,  $\text{CoSO}_4 \cdot \text{NH}_2\text{OH} \cdot 2\text{H}_2\text{O}$ .

Insol. in cold; sol. in hot  $\text{H}_2\text{O}$  with decomp. (Feldt, B. 1894, 27. 403.)

Columbium sulphate.

Sol. in  $\text{H}_2\text{O}$ . (Blomstrand.)

Cuprous sulphate,  $\text{Cu}_2\text{SO}_4$ .

Decomp by  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{HCl}$ , in ammonia and sl. sol. in glacial acetic acid. (Recoura, C. R. 1909, 148. 1107)

Cupric sulphate, basic,  $10\text{CuO} \cdot \text{SO}_3$ .

(Pickering, Chem. Soc. 1907, 91. 1984.)

$8\text{CuO} \cdot \text{SO}_3 \cdot 12\text{H}_2\text{O}$ . Ppt. (Kane, A. ch. 72. 269.)

$5\text{CuO} \cdot \text{SO}_3 \cdot 6\text{H}_2\text{O}$ . Ppt. (Smith, Phil. Mag. J. 23. 196.)

$4\text{CuO} \cdot \text{SO}_3 \cdot 3\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$ . (Roucher, J. Pharm. (3) 37. 50.)

Min. *Brochantite*. Sol. in acids and  $\text{NH}_4\text{OH} + \text{Aq}$ .

$+3\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol. in dil. acids, even  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . Sl. sol. in  $\text{CuSO}_4 + \text{Aq}$ . Insol in  $\text{NaC}_2\text{H}_3\text{O}_2 + \text{Aq}$ . (Caselmann, Z. anal. 4. 24.)

$+4\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$  (Proust.) Sol. in  $(\text{NH}_4)_2\text{SO}_4 + \text{Aq}$ , and more easily in  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Lea.)

11 cold  $\text{H}_2\text{O}$  dissolves 0.017 g. (Pickering, C. N. 1883, 47. 182)

$+5\text{H}_2\text{O}$ . Min. *Langite*

$+16\text{H}_2\text{O}$ . (André, C. R. 100. 1138.)

$7\text{CuO} \cdot 2\text{SO}_3 \cdot 5\text{H}_2\text{O}$  (Reindel, J. pr. 100. 1)

$+6\text{H}_2\text{O}$ . Wholly insol. in cold or hot  $\text{H}_2\text{O}$ . (Habermann, M. ch. 5. 432.)

$+7\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids. Insol. in boiling  $\text{CuSO}_4 + \text{Aq}$  (Reindel.)

$8\text{CuO} \cdot \text{SO}_3 \cdot 11\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; easily sol. in acids. (Steinmann, B. 15. 1412.)

$+2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Shenstone, Chem. Soc. 47. 375.)

$+2\frac{1}{2}\text{H}_2\text{O}$ . (Reindel, J. pr. 102. 204.)

$+4\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Grimbert and Barré, J. Pharm. (6) 21. 414.)

$5\text{CuO} \cdot 2\text{SO}_3 \cdot 3\text{H}_2\text{O}$ . (Wibel, Dissert. 1864.)

$11\text{CuO} \cdot 4\text{SO}_3 \cdot 8\text{H}_2\text{O}$ . (Clowes, C. N. 1898, 78. 155.)

$8\text{CuO} \cdot 3\text{SO}_3 \cdot 10\text{H}_2\text{O}$ . (Marohlewski and Sachs, Z. anorg. 1892, 1. 405.)

$7\text{CuO} \cdot 3\text{SO}_3 \cdot 12\text{H}_2\text{O}$ . (Étard, C. R. 1887, 104. 1615.)

$5\text{CuO} \cdot 2\text{SO}_3 \cdot 5\text{H}_2\text{O}$ . (Sabatier, Gm. K. 5. 1. 839.)

$6\text{H}_2\text{O}$ . Min. *Arzmitte*. (Weisbach, J. B. 1886. 2253.)

$2\text{CuO} \cdot \text{SO}_3$ . Decomp. by cold  $\text{H}_2\text{O}$  into  $\text{CuSO}_4$  and  $4\text{CuO} \cdot \text{SO}_3$ . (Roucher.)

Insol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . Sol. in dil. acids. (Pozzi-Escot, Bull. Soc. 1913 (4) 13. 816.)

According to Pickering (C. N. 47. 181) only

$3\text{CuO} \cdot \text{SO}_3 \cdot 2\frac{1}{2}\text{H}_2\text{O}$  and  $4\text{CuO} \cdot \text{SO}_3 \cdot 4\text{H}_2\text{O}$  are true chemical compounds.

There is at  $25^\circ$  no definite basic sulphate of copper, all the basic sulphates being solid solutions. The solutions in contact with these basic sulphates contain  $\text{SO}_3$  and  $\text{CuO}$  in equivalent quantities and are all sl. acid in reaction. (Bell, J. phys. Chem. 1908, 12. 179.)

Cupric sulphate,  $\text{CuSO}_4$ .

*Anhydrous*. Absorbs  $\text{H}_2\text{O}$  from the air. Combines with, and dissolves in  $\text{H}_2\text{O}$  with great evolution of heat

$+ \text{H}_2\text{O}$  Permanent Sol. in  $\text{H}_2\text{O}$  (Étard, C. R. 87. 602)

$+ 2\text{H}_2\text{O}$  (?) (Storer's Dict.)

$+ 3\text{H}_2\text{O}$  (Étard, C. R. 104. 1614.)

Does not exist. (Cross, C. N. 49. 220)

See Foote, p. 965

$+ 5\text{H}_2\text{O}$ . Superficially efflorescent in dry air

Sol. in 234 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ , and sat. solution has sp. gr. 1.2147. (Schiff, A. 109. 326)

100 pts.  $\text{CuSO}_4 + \text{Aq}$  sat. at b. pt.  $102.2^\circ$ , contain 45 pts. of the dry salt, or 100 pts.  $\text{H}_2\text{O}$  at  $102.2^\circ$  dissolve 81.82 pts.  $\text{CuSO}_4$ . (Griffiths, Q. J. Sci. 18. 90.)

Sol. in less than 4 pts.  $\text{H}_2\text{O}$  at ord. temp., and much more sol. in boiling  $\text{H}_2\text{O}$ . (Bergmann.)

Sol. in 4 pts. cold, and 2 pts. hot  $\text{H}_2\text{O}$ . (Schubarth.)

100 pts.  $\text{H}_2\text{O}$  dissolve 33.103 pts.  $\text{CuSO}_4 + 5\text{H}_2\text{O}$  at  $15^\circ$ , and solution has sp. gr. = 1.1859 (Michel and Kraft, A. ch. (3) 41. 478)

$\text{CuSO}_4 + \text{Aq}$  sat. at  $8^\circ$  has 1.17 sp. gr. (Anthon, A. 24. 210)

1 pt.  $\text{CuSO}_4 + 6\text{H}_2\text{O}$  dissolves at

$4^\circ$	$19^\circ$	$31^\circ$	$37.5^\circ$	$50^\circ$

	240.9	747.8	24.46	23.32

(Fock, Z. Kryst. Min. 1897, 28, 387.)

More easily sol. in sat.  $\text{K}_2\text{SO}_4 + \text{Aq}$  than in  $\text{Na}_2\text{SO}_4$  or  $\text{MgSO}_4 + \text{Aq}$ , forming a double sulphate, which separates out. (Karsten.) $\text{K}_2\text{SO}_4$  and  $\text{CuSO}_4$  mutually displace each other in saturated solutions. (Rüdorff, Pogg. 148, 555.)When  $\text{K}_2\text{SO}_4$  and  $\text{CuSO}_4$  both in excess, are dissolved in  $\text{H}_2\text{O}$ , a maximum of solubility of 15.61 pts. of the two salts in 100 pts.  $\text{H}_2\text{O}$  at  $25^\circ$  is reached in 30 minutes, after which the solubility decreases. This result is obtained either by treating excess of the two salts with  $\text{H}_2\text{O}$  at  $25^\circ$ , or cooling solutions of the two salts sat. at higher temp. to  $25^\circ$ . The salts are in the proportion of 5.2 pts.  $\text{K}_2\text{SO}_4$  to 10.4 pts.  $\text{CuSO}_4$ . If present in the same proportion as in their saturated solutions, 5.41 pts.  $\text{K}_2\text{SO}_4$  to 10.13 pts.  $\text{CuSO}_4$ , would be required.

If sat. solution of one salt is added to sat. solution of the other,  $K_2Cu(SO_4)_2 \cdot 6H_2O$  separates, as it is less sol. than either simple salt, until a state of equilibrium is reached, after which there is no separation, contrary to Rüdorff (see above) (Trevor, Z. phys. Ch. 7. 486.)

### $CuSO_4 + Na_2SO_4$

Solubility of  $CuSO_4$  in presence of  $Na_2SO_4$  at 0° 100 pts  $H_2O$  dissolve—

No	$CuSO_4$	$Na_2SO_4$	No	$CuSO_4$	$Na_2SO_4$
1	0	4.53	5	15.84	3.55
2	6.01	5.34	6	15.33	1.98
3	9.81	5.73	7	14.99	0
4	16.67	6.48			

In 1, 2, and 3,  $Na_2SO_4$  was in excess and given amt.  $CuSO_4$  added; in 4, both  $CuSO_4$  and  $Na_2SO_4$  were in excess; in 5, 6, and 7,  $CuSO_4$  was in excess and  $Na_2SO_4$  added. (Dracon, J. B. 1866, 61.)

100 pts.  $H_2O$  dissolve 8.038 pts  $CuSO_4$  and 6.31 pts  $Na_2SO_4$  at 0° (Pfaff, A. 99. 224.)

100 pts.  $H_2O$  dissolve 20.7 pts.  $CuSO_4$  and 15.9 pts.  $Na_2SO_4$  at 15°. (Rüdorff, B. 6. 484.)

### Solubility of $CuSO_4 + Na_2SO_4$

1. Solid phase, 3 mol.  $CuSO_4 + 1$  mol.  $Na_2SO_4$ .

2. Solid phase, 1 mol  $CuSO_4 + 1$  mol.  $Na_2SO_4$ .

3. Solid phase, 1 mol  $CuSO_4 + 3$  mol.  $Na_2SO_4$ .

(G. in 100 g.  $H_2O$ .)

t°	1		2		3	
	$CuSO_4$	$Na_2SO_4$	$CuSO_4$	$Na_2SO_4$	$CuSO_4$	$Na_2SO_4$

1.22	4.45	0.51	5.59
1.01	4.72	0.267	5.77
		0.00	5.94

(Stortenbecker, Z. phys. Ch. 1897, 22. 62.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20. 827.)

Insol. in liquid  $CO_2$ . (Buchner, Z. phys. Ch. 1906, 54. 674.)

100 pts. of a sat. solution in 40% alcohol contains 0.25 pt.  $CuSO_4 + 5H_2O$ ; 20% alcohol, 3.1 pts.; 10% alcohol, 13.3 pts. (Schiff, A. 118. 362.)

Anhydrous  $CuSO_4$  is sol. in absolute methyl alcohol, but insol. in absolute ethyl alcohol.  $CuSO_4 + xH_2O$  is insol. in methyl or ethyl alcohol. (Kiepl, J. pr. (2) 26. 526.)

100 pts. absolute methyl alcohol dissolve 1.05 pts. anhydrous  $CuSO_4$  at 18°.

100 pts. absolute methyl alcohol dissolve 15.6 pts.  $CuSO_4 + 5H_2O$  at 18°, 100 pts. 93.5% methyl alcohol dissolve 0.93 pt.  $CuSO_4 + 5H_2O$  at 18°; 100 pts. 50% methyl alcohol dissolve 0.4 pt.  $CuSO_4 + 5H_2O$  at 18°; 100 pts. absolute ethyl alcohol dissolve 13.4 pts.  $CuSO_4 + 5H_2O$  at 3°.

100 pts. absolute ethyl alcohol dissolve 1.1 pts.  $CuSO_4 + 5H_2O$  at 3°. (de Bruyn, Z. phys. Ch. 10. 786.)

Methyl alcohol dissolves 11.5%  $CuSO_4 + 5H_2O$  at 0°. (Auger, C. R. 1906, 142. 1272.)

Glacial acetic acid precipitates  $CuSO_4$  completely from  $CuSO_4 + Aq$ .

100 g. 95% formic acid dissolve 0.05 g.  $CuSO_4 + 5H_2O$  at 18.5°. (Aschan, Ch. Ztg. 1913, 37. 1117.)

Sol. in glycerine (Pelouse), proline (Unverdorben)

100 g. glycerine dissolve 36.3 g.  $CuSO_4 + 5H_2O$  at 15–16°. (Ossendowski, Pharm. J. 1907, 79. 575.)

100 g. glycerine dissolve 30.0 g.  $CuSO_4$  at 15.5°.

100 g. solution of  $CuSO_4$  in glycol contain 7.6 g. at 14.6° (de Coninck, Bull. Ac. Belg. 1906. 257.)

Anhydrous  $CuSO_4$  is insol. in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

Insol. in acetone. (Eidmann, C. C. 1899, II. 1014); methyl acetate. (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1910, 43. 314); benzonitrile. (Naumann, B. 1914, 47. 1370.)

Mm. *Chalcantite*.

Cupric glucinum sulphate,  $\text{CuSO}_4 \cdot 4\text{GISO}_4 + 20\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Klatzo, J. B. 1868. 205.)

Does not exist. (Marignac, A. ch. (4) 30. 45.)

$9\text{CuSO}_4 \cdot \text{GISO}_4 + 50\text{H}_2\text{O}$ . As above.

Does not exist. (Marignac, l. c.)

Cupric hydrazine sulphate,  $\text{CuH}_4(\text{SO}_4)_2 \cdot 2\text{N}_2\text{H}_4$ .

1 pt. is sol. in 1148 pts.  $\text{H}_2\text{O}$  at  $10^\circ$ .

Decomp. by acids.

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  with decomp. (Curtaus, J. pr. 1894, (2) 50. 331.)

Cupric iron (ferrous) sulphate,  $\text{CuSO}_4 \cdot \text{FeSO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Étard, C. R. 87. 602.)

$+ 2\text{H}_2\text{O}$ . (Étard)

$\text{CuSO}_4 \cdot 2\text{FeSO}_4 + 21\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (v. Hauer.)

$\text{CuSO}_4 \cdot 3\text{FeSO}_4 + 28\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 75 pts. salt at  $7^\circ$  (Lefort)

$4\text{CuSO}_4 \cdot \text{FeSO}_4 + 34\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 75.91 pts. (Thomson)

Cupric iron (ferric) sulphate,  $\text{CuSO}_4 \cdot \text{Fe}_2(\text{SO}_4)_3 + 24\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Bastick.)

Cupric iron (ferrous) potassium sulphate,  $\text{CuSO}_4 \cdot \text{FeSO}_4 \cdot 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Vohl)

Cupric lead sulphate,  $\text{CuO} \cdot \text{PbO} \cdot \text{SO}_3 + \text{H}_2\text{O}$ .

Min. *Linarite*

$3\text{CuO} \cdot 7\text{PbO} \cdot 5\text{SO}_3 + 5\text{H}_2\text{O}$ . Min. *Caledontite* Sol. in  $\text{HNO}_3 + \text{Aq}$ .

Cupric magnesium sulphate,  $\text{CuSO}_4 \cdot \text{MgSO}_4 + 14\text{H}_2\text{O}$ .

Efflorescent. Sol. in  $\text{H}_2\text{O}$  (Vohl, A. 94. 57.)

$+ 2\text{H}_2\text{O}$ . (Arnot, 1834.)

$\text{CuSO}_4 \cdot 2\text{MgSO}_4 + 21\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (v. Hauer, Pogg. 125. 638.)

$\text{CuSO}_4 \cdot 7\text{MgSO}_4 + 56\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (Schiff, A. 107. 64)

Cupric magnesium manganous potassium sulphate,  $\text{CuSO}_4 \cdot \text{MgSO}_4 \cdot \text{MnSO}_4 \cdot 3\text{K}_2\text{SO}_4 + 18\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl.)

Cupric magnesium potassium sulphate,  $\text{CuSO}_4 \cdot \text{MgSO}_4 \cdot 2\text{K}_2\text{SO}_4 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94. 57.)

Does not exist. (Aston and Pickering, Chem. Soc. 49. 123.)

Cupric magnesium potassium zinc sulphate,  $\text{CuSO}_4 \cdot \text{MgO} \cdot 3\text{K}_2\text{SO}_4 \cdot \text{ZnSO}_4 + 18\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl.)

Cupric manganous sulphate,  $5\text{CuSO}_4 \cdot 2\text{MnSO}_4 + 35\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Schäuffele, J. B. 1852. 340.)

$2\text{CuSO}_4 \cdot 3\text{MnSO}_4 + 25\text{H}_2\text{O}$ . As above (S.)

$\text{CuSO}_4 \cdot \text{MnSO}_4 + \text{H}_2\text{O}$  (Étard, C. R. 87. 602.)

Cupric manganous potassium sulphate,  $\text{CuSO}_4 \cdot \text{MnSO}_4 \cdot 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl)

Cupric nickel sulphate,  $\text{CuSO}_4 \cdot \text{NiSO}_4 + 3\text{H}_2\text{O}$ . (Étard, C. R. 87. 602.)

$\text{CuSO}_4 \cdot 2\text{NiSO}_4 + 21\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$

(v. Hauer.)  $+ 18\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ . (Bonsbaudran, C. R. 66. 497)

$2\text{CuSO}_4 \cdot 2\text{NiSO}_4 \cdot 3\text{H}_2\text{SO}_4$ . (Étard)

Cupric nickel potassium sulphate,  $\text{CuSO}_4 \cdot \text{NiSO}_4 \cdot 2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Vohl.)

Sol in 4 pts.  $\text{H}_2\text{O}$ , insol. in alcohol (Bette)

$4\text{CuSO}_4 \cdot \text{K}_2\text{SO}_4 + 4\text{H}_2\text{O}$ . Very sl sol in  $\text{H}_2\text{O}$

$\text{K}_2\text{O}$ ,  $4\text{CuO}$ ,  $4\text{SO}_3 + 4\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$ , but decomp. by boiling  $\text{H}_2\text{O}$  into  $3\text{CuO}$ ,  $\text{SO}_3$

Cupric potassium sulphate,  $\text{K}_2\text{Cu}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$

100 pts  $\text{H}_2\text{O}$  dissolve 66.666 pts at  $102.8^\circ$  (Griffiths)

Much more sol. in hot than cold  $\text{H}_2\text{O}$ . (Pierre.)

Easily sol in  $\text{H}_2\text{O}$ , by boiling, de comp into basic salt (Persoz, A. ch. (3) 25. 272)

100 pts  $\text{H}_2\text{O}$  dissolve 11.14 pts anhydrous salt at  $25^\circ$  (Trevor, Z. phys. Ch. 7. 470)

1 l.  $\text{H}_2\text{O}$  dissolves 116.9 g. anhydrous salt at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27. 459.)

See also  $\text{CuSO}_4 + \text{K}_2\text{SO}_4$ .

\* Min. *Cyanochroite*.

Cupric potassium zinc sulphate,  $\text{CuSO}_4 \cdot 2\text{K}_2\text{SO}_4 \cdot \text{ZnSO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl.)

Cupric rubidium sulphate,  $\text{CuSO}_4 \cdot \text{Rb}_2\text{SO}_4 + 6\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Tutton.)

1 l.  $\text{H}_2\text{O}$  dissolves 102.8 g. anhydrous salt at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27. 459)

Cupric sodium sulphate, basic,  $\text{Na}_2\text{SO}_4 \cdot \text{Cu}(\text{OH})_2 \cdot 3\text{CuSO}_4 + 2\text{H}_2\text{O}$ .

Min. *Natrochalcite*.

Sl sol. in  $\text{H}_2\text{O}$ ; easily sol. in acids. (Pallache and Warren, Am. J. Sci. 1908, (4) 26. 346.)

**Cupric sodium sulphate,  $\text{CuSO}_4$ ,  $\text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$** Solubility of the pure double salt  $\text{CuSO}_4 \cdot \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$

(Koppel.)

Copper sulphate and sodium sulphate unite to form a double salt,  $\text{CuSO}_4 \cdot \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$ , which is stable in the presence of the solution above 16.7°. In the presence of copper sulphate the solubility of  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  is greater than that of the pure salt. (Koppel.)

**Cupric thallous sulphate,  $\text{CuSO}_4$ ,  $\text{Tl}_2\text{SO}_4 + 6\text{H}_2\text{O}$ .**Decomp. by recrystallising from  $\text{H}_2\text{O}$ . (Willm, A. ch. (4) 5. 55.)1 l.  $\text{H}_2\text{O}$  dissolves 81 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)**Cupric zinc sulphate,  $\text{CuSO}_4$ ,  $3\text{ZnSO}_4 + 28\text{H}_2\text{O}$** Efflorescent. 100 pts.  $\text{H}_2\text{O}$  dissolve 80 pts. salt at 8°. Sol. in all proportions in boiling  $\text{H}_2\text{O}$ . (Lefort.) $\text{CuSO}_4$ ,  $2\text{ZnSO}_4 + 21\text{H}_2\text{O}$ . (v. Hauer, Pogg. 125. 637.) $\text{CuSO}_4$ ,  $\text{ZnSO}_4 + 12\text{H}_2\text{O}$ . (Boisbaudran.) $2\text{CuSO}_4$ ,  $2\text{ZnSO}_4$ ,  $\text{H}_2\text{SO}_4$ . (Etard)**Cuprous sulphate ammonia,  $\text{Cu}_2\text{SO}_4$ ,  $4\text{NH}_3$ .**Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  decomp. by pure  $\text{H}_2\text{O}$ . (Péchar, C. R., 1903, 136. 504.) $+ \text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (Foerster and Blankenburg, B. 1906, 39. 4434.)**Cupric sulphate ammonia, basic,  $\text{CuSO}_4$ ,  $3\text{CuO}$ ,  $2\text{NH}_3 + 5\text{H}_2\text{O}$ .**Decomp. by hot  $\text{H}_2\text{O}$ . (Pickering, Chem. Soc. 43. 336.)**Cupric sulphate ammonia (Cuprammonium sulphate),  $\text{CuSO}_4$ ,  $\text{NH}_3$ .**Decomp. by  $\text{H}_2\text{O}$ . (Kane.)Decomp. by  $\text{H}_2\text{O}$  giving a basic sulphate. (Bouzat, C. R. 1902, 135. 535.) $\text{CuSO}_4$ ,  $2\text{NH}_3$  [ $\text{CuSO}_4$ ,  $2\text{NH}_3 + 3\text{H}_2\text{O}$ . (Mendelejeff, B. 3. 422.)]. Decomp. by excess of  $\text{H}_2\text{O}$  into— $\text{CuSO}_4$ ,  $4\text{NH}_3 + \text{H}_2\text{O}$ . Sol. in 15 pts.  $\text{H}_2\text{O}$ , but decomp. by much  $\text{H}_2\text{O}$ . Insol. in alcohol.Insol. in conc.  $\text{NH}_4\text{OH} + \text{Aq.}$  (André, C. R. 100. 1138.)Sol. in small quantity of  $\text{H}_2\text{O}$ ; decomp. in dil. solution. (Bouzat.)100 g.  $\text{H}_2\text{O}$  dissolve 44.56 g. anhydrous comp. at 25°. (Pudschies, Dissert.)100 g.  $\text{H}_2\text{O}$  dissolve 18.05 g. at 21–22°. (Horn and Taylor, Am. Ch. J. 1904, 32. 268.) $\text{CuSO}_4$ ,  $5\text{NH}_3$ . Completely sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 20. 150.)Sol. in small amt. of  $\text{H}_2\text{O}$ ; decomp. in dil. solution. Insol. in liquid  $\text{NH}_3$ . (Bouzat, C. R. 1902, 135. 535.)**Cuprous sulphate carbon monoxide,  $\text{Cu}_2\text{SO}_4$ ,  $2\text{CO} + \text{H}_2\text{O}$ .**

Very unstable. (Joannis, C. R. 1903, 136. 615.)

Cupric sulphate zinc oxide,  $\text{CuSO}_4 \cdot 2\text{ZnO} + 21\text{H}_2\text{O}$ .

(Laasen, Ch. Z. Repert. 1896, 20, 317.)

$2\text{CuSO}_4 \cdot 3\text{ZnO} + 12\text{H}_2\text{O}$ . (Mailhe, A. ch. 1902, (7) 27, 169.)

Didymium sulphate, basic,  $\text{Dy}_2\text{O}_3 \cdot \text{SO}_3 = (\text{DyO})_2\text{SO}_4$

Insol. in cold or boiling  $\text{H}_2\text{O}$ . (Marignac)  
Slowly sol. in hot dil.  $\text{HCl} + \text{Aq}$  Easily sol. in conc. acids.

$+8\text{H}_2\text{O}$ . Precipitate (Hermann).

Composition is  $2\text{Dy}_2\text{O}_3 \cdot 3\text{SO}_3 + 3\text{H}_2\text{O}$  or  $\text{Dy}_2(\text{SO}_4)_3 + \text{Dy}_2\text{O}_3 \cdot \text{H}_2\text{O}$ . (Friedrichs and Smith.)

Composition is  $5\text{Dy}_2\text{O}_3 \cdot 3\text{SO}_3 + 2\text{H}_2\text{O}$  (Cleve, B. 11, 910.)

Didymium sulphate,  $\text{Dy}_2(\text{SO}_4)_3$ .

Anhydrous. By saturating cold  $\text{H}_2\text{O}$  and warming the solution, the following results were obtained—100 pts  $\text{H}_2\text{O}$  dissolve at.

12° 18° 25° 38° 50°

43.1 25.8 20.6 13.0 11.0 pts.  $\text{Dy}_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$   $\text{H}_2\text{O}$  dissolves this salt very slowly; 100 pts  $\text{H}_2\text{O}$  dissolve 13 pts  $\text{Dy}_2(\text{SO}_4)_3$  in 24 hours, and 16.4 pts in 2 days. If solution is evap. in vacuo until  $\text{Dy}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$  separates out, 34 pts.  $\text{Dy}_2(\text{SO}_4)_3$  remain dissolved in 100 pts.  $\text{H}_2\text{O}$

$+5\text{H}_2\text{O}$  (Cleve.)

$+8\text{H}_2\text{O}$  Solutions of this salt contain at

19° 40° 50° 100°

11.7 8.8 6.5 1.6 pts.  $\text{Dy}_2(\text{SO}_4)_3$ .

(Marignac, A. ch. (3) 38, 170.)

$+9\text{H}_2\text{O}$ . (Zschiesche, J. Pr. 107, 75)

Didymium potassium sulphate,  $\text{K}_2\text{SO}_4 \cdot \text{Dy}_2(\text{SO}_4)_3 + 2\text{H}_2\text{O}$

Sol. in 63 pts  $\text{H}_2\text{O}$ . Insol. in sat.  $\text{K}_2\text{SO}_4 + \text{Aq}$ . (Marignac.)

$3\text{K}_2\text{SO}_4 \cdot \text{Dy}_2(\text{SO}_4)_3$  Sol. in 83 pts.  $\text{H}_2\text{O}$  at 18° Insol. in cold, sl. sol. in boiling sat.  $\text{K}_2\text{SO}_4 + \text{Aq}$ , 100 ccm. of which retain 55 mg.  $\text{Dy}_2\text{O}_3$  in solution. (Cleve.)

$4\text{K}_2\text{SO}_4 \cdot \text{Dy}_2(\text{SO}_4)_3$  (Cleve.)

$9\text{K}_2\text{SO}_4 \cdot 2\text{Dy}_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$  (Cleve)

Didymium sodium sulphate,  $\text{Dy}_2(\text{SO}_4)_3 \cdot \text{Na}_2\text{SO}_4$  and  $+2\text{H}_2\text{O}$

Sol. in 200 pts.  $\text{H}_2\text{O}$  (Marignac), and still less in sat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$ , 100 ccm. of which dissolve only 70 mg.  $\text{Dy}_2\text{O}_3$  at ord. temp (Cleve)

Didymium thallous sulphate,  $(\text{Dy}_2\text{SO}_4)_2 \cdot 3\text{Tl}_2\text{SO}_4$ .

Ppt.

$\text{Dy}_2(\text{SO}_4)_3 \cdot \text{Tl}_2\text{SO}_4 + 2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Zschiesche, J. pr. 107, 98)

Erbium sulphate,  $\text{Er}_2(\text{SO}_4)_3$ .

Anhydrous. Easily and rapidly sol. in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 43 pts. anhydrous salt at 0°.

$+8\text{H}_2\text{O}$ . Less sol. in  $\text{H}_2\text{O}$  than anhydrous salt. 100 pts  $\text{H}_2\text{O}$  dissolve 30 pts.  $\text{Er}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$  (=23 pts.  $\text{Er}_2(\text{SO}_4)_3$ ) at about 20°; at 100°, 100 pts.  $\text{Er}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$  remain dissolved. Sat. solution deposits crystals when heated to 55°. (Höglund)

100 g. of sat. solution of  $\text{Er}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$  at 25° in  $\text{H}_2\text{O}$  contains 11.94 g. anhyd.  $\text{Er}_2(\text{SO}_4)_3$ . (Wirth, Z. anorg. 1912, 76, 174.)

Solubility of  $\text{Er}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$  in  $\text{H}_2\text{SO}_4$  at 25°.

N = equiv g  $\text{H}_2\text{SO}_4$  in 1 l. of solvent.

C = g oxide in 100 g of solution.

C' = g anhyd. salt in 100 g of solution

(Wirth)

Sol in sat.  $\text{K}_2\text{SO}_4 + \text{Aq.}$

Gadolinium potassium sulphate,  $\text{Gd}_2(\text{SO}_4)_3 \cdot \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .

100 grams sat. solution in  $\text{K}_2\text{SO}_4 + \text{Aq}$  contains 0.87—0.77 grams  $\text{Gd}_2\text{O}_3$ . (Benedicks, Z. anorg 1900, 22. 410.)

Gallium sulphate,  $\text{Ga}_2(\text{SO}_4)_3$ .

Not deliquescent, but very sol in  $\text{H}_2\text{O}$ . Sol. in 60% alcohol; insol. in ether. (Boisbaudran.)

Aqueous solution decomp into basic salt by boiling, which redissolves, however, on cooling

Gallium potassium sulphate,  $\text{Ga}_2\text{K}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

(Soret, Arch. sc. phys. nat. 1885, 14. 96.)

Gallium rubidium sulphate,  $\text{Rb}_2\text{Ga}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

(Soret, Arch. sc. phys. nat. 1885, 14. 96.)

Glucinum sulphate, basic,  $3\text{GIO} \cdot \text{SO}_3 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ , but decomp. by heating or dilution. (Berzelius.)

$2\text{GIO} \cdot \text{SO}_3 + 3\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ .

$9\text{GIO} \cdot \text{SO}_3 + 14\text{H}_2\text{O}$  (?) Precipitate. Insol. in  $\text{H}_2\text{O}$ . (Berzelius.)

According to Debray, this salt when carefully washed is  $\text{GIO}_2\text{H}_2$ .

Glucinum sulphate,  $\text{GIO}_2$ .

Anhydrous.

Nearly insol in  $\text{H}_2\text{O}$ , but slowly attacked by cold, rapidly by hot  $\text{H}_2\text{O}$ , and is converted into  $\text{GIO}_2 + 4\text{H}_2\text{O}$  before dissolving. (Parrons, Z. anorg. 1904, 42. 253.)

Sp. gr. of  $\text{GIO}_2 + \text{Aq}$  at  $25^\circ$ .

Concentration of $\text{GIO}_2 + \text{Aq}$	Sp. gr.

t°	g. GISO <sub>4</sub> per 100 g.	
	H <sub>2</sub> O	solution
31	52 23	34 32
50	60 67	37 77
72 2	74 94	42 85
77 4	81 87	45 01

(Levi-Malvano.)

100 g. of the aqueous solution contain at 25°, 8.212 g. GISO<sub>4</sub>. (Whith, Z. anorg. 1913, 79. 358.)

Glucinum iron (ferrous) sulphate, GISO<sub>4</sub>, FeSO<sub>4</sub> + 17½H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Klatzo, J. B. 1868. 204.)  
3GISO<sub>4</sub>, FeSO<sub>4</sub> + 28H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Klatzo.)

Do not exist. (Marignac, A. ch. (4) 30. 45.)

Glucinum nickel sulphate, (Gl,Ni)SO<sub>4</sub> + 4H<sub>2</sub>O, or 7H<sub>2</sub>O.

(Klatzo, J. B. 1868. 205.)  
Does not exist. (Atterberg, Sv. V. A. F. 1873, 4. 81.)

Glucinum potassium sulphate, GISO<sub>4</sub>, K<sub>2</sub>SO<sub>4</sub> + 2H<sub>2</sub>O.

Sl. sol. in cold, slowly but more sol. in hot H<sub>2</sub>O. (Debray.)  
+ 3H<sub>2</sub>O. (Klatzo.)

Glucinum potassium hydrogen sulphate, GH<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>, 2K<sub>2</sub>SO<sub>4</sub> + 4H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O. Partly decomp. by recrystallisation. (Atterberg.)

Glucinum sodium sulphate, 2GISO<sub>4</sub>, 3Na<sub>2</sub>SO<sub>4</sub> + 18H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Atterberg.)

Glucinum zinc sulphate, 2GISO<sub>4</sub>, 3ZnSO<sub>4</sub> + 35H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Klatzo, J. B. 1868. 205.)  
Does not exist. (Atterberg.)

Gold (auroauric) sulphate, Au<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>.

Decomp. by moist air, H<sub>2</sub>O, glacial acetic acid, or HNO<sub>3</sub> + Aq. (1.42 sp. gr.) Insol. in conc. H<sub>2</sub>SO<sub>4</sub>. (Schottlander, A. 217. 375.)

Gold (auric) sulphate, Au<sub>2</sub>O<sub>3</sub>, 2SO<sub>3</sub> + H<sub>2</sub>O, or Auryl hydrogen sulphate, (AuO)HSO<sub>4</sub>.

Deliquescent. Decomp. by H<sub>2</sub>O. Sol. in HCl + Aq; not attacked by conc. HNO<sub>3</sub> + Aq. Sol. in 6 pts. conc. H<sub>2</sub>SO<sub>4</sub>. (Schottlander.)

Gold (auric) potassium sulphate, Au<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, K<sub>2</sub>SO<sub>4</sub>.

Not decomp. immediately by cold H<sub>2</sub>O. (Schottlander.)

Hydrazine mercuric sulphate hydrazine, (N<sub>2</sub>H<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>, 3HgSO<sub>4</sub>, 2N<sub>2</sub>H<sub>4</sub>.

Insol. in H<sub>2</sub>O. Sol. in H<sub>2</sub>O containing HCl. (Ferrati, Gazz. ch. it. 1912, 42. (1) 142.)

Hydroxylamine uranyl sulphate, (NH<sub>2</sub>OH)<sub>2</sub>, H<sub>2</sub>SO<sub>4</sub>, 2(UO<sub>2</sub>)SO<sub>4</sub> + 5H<sub>2</sub>O.

Extremely sol. in H<sub>2</sub>O from which it can be cryst. (Rambach, Dissert. 1904.)

Indium sulphate, In<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.

Easily sol. in H<sub>2</sub>O.

+ 9H<sub>2</sub>O. Easily sol. in H<sub>2</sub>O.

Indium hydrogen sulphate, InH(SO<sub>4</sub>)<sub>2</sub> + 4H<sub>2</sub>O.

Very deliquescent. (Meyer.)

Indium potassium sulphate, InK(SO<sub>4</sub>)<sub>2</sub> + 4H<sub>2</sub>O.

Sol. in H<sub>2</sub>O, but decomp. by boiling. (Rossler, J. pr. (2) 7. 14.)  
(InO)<sub>2</sub>K(SO<sub>4</sub>)<sub>2</sub> + 3H<sub>2</sub>O. Insol. in H<sub>2</sub>O. (Rossler.)

Indium rubidium sulphate,

In<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>, Rb<sub>2</sub>SO<sub>4</sub> + 24H<sub>2</sub>O.

44.28 pts. are sol. in 100 pts. H<sub>2</sub>O at 15°. (Chabrie, C. R. 1901, 132. 473.)

Melts in crystal H<sub>2</sub>O at 42°. (Locke, Am. Ch. J. 1901, 26. 183.)

Indium sodium sulphate, InNa(SO<sub>4</sub>)<sub>2</sub> + 4H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Rossler, J. pr. (2) 7. 14.)

Iodine sulphate, I<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>.

Ppt. Decomp. by H<sub>2</sub>O. (Fichter, Z. anorg. 1915, 91. 140.)

Iodyl sulphate, (IO)<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>.

Possible composition of Weber's (B. 20. 86) I<sub>2</sub>O<sub>5</sub>, 3SO<sub>3</sub>.

## Iridium sulphate.

Sol. in  $H_2O$  or alcohol. (Berzelius.)  
 $Ir(SO_4)_3$  Sol. in  $H_2O$ . (Rumbach, Z anorg. 1907, 52. 409)

Iridium potassium sulphate,  $Ir_2(SO_4)_3$ ,  
 $K_2SO_4 + 24H_2O$ .

Mpt. 102-103°.  
 Easily sol. in  $H_2O$ . (Marino, Z. anorg. 1904, 42. 220.)  
 $Ir_2(SO_4)_3 \cdot 3K_2SO_4$  Sol. in  $H_2O$  or dil  $H_2SO_4$  + Aq; nearly insol. in sat.  $K_2SO_4$  + Aq. (Boisbaudran, C. R. 96. 1406)

Iridium rubidium sulphate,  $Ir_2(SO_4)_3 \cdot Rb_3$ .

Sol. in cold; very sol. in hot  $H_2O$ . (Marino, Gazz. ch. it 1903, 32, (2) 511.)  
 Mpt. 108-109°. (Marino, Z. anorg. 1904, 42. 219.)

Iridium thallium sulphate,  $Ir_2(SO_4)_3 \cdot Tl_2SO_4 + 24H_2O$ .

Very sol. in  $H_2O$ . (Marino, Z. anorg. 1904, 42. 222.)

Iron (ferrous) sulphate,  $FeSO_4$ .

+ $H_2O$   
 + $2H_2O$  Not more sol. in  $H_2O$  than gypsum. (Mitscherlich)  
 + $3H_2O$  Sol. in  $H_2O$ . (Kane)  
 + $4H_2O$  Separates from conc  $FeSO_4$  + Aq at 80°  
 + $7H_2O$  Efflorescent at 33°.

1 pt  $FeSO_4 + 7H_2O$  dissolves in 16 pts cold, and 0.3 pt boiling  $H_2O$

1 pt  $FeSO_4 + 7H_2O$  dissolves at  
 10° 15° 25° 33° 46° 60° 84° 90° 100°  
 in 1.64 1.43 0.87 0.66 0.41 0.38 0.37 0.27 0.3 pts  $H_2O$   
 (Brandes and Fimhaber, Br Arch 7 83)

When boiled with insufficient  $H_2O$  for solution a white hydrate is formed which separates out. Solubility increases up to 87.5°, and then diminishes, owing to the above separation. (Brandes, Pogg 20 581)

Sol. in 2 pts cold, and 1 pt boiling  $H_2O$  (Fourcroy), sol. in 2 pts cold  $H_2O$  at 18.75° (Abt); sol. in 6 pts  $H_2O$  at moderate heat, and 0.75 pt at 100° (Bergmann)  
 100 pts  $H_2O$  at 15.5° dissolve 45-50 pts (Ure's Dict.)

100 pts  $H_2O$  dissolve pts  $FeSO_4$  at t°

t°	Pts $FeSO_4$	t°	Pts $FeSO_4$	t°	Pts $FeSO_4$
0	15 8	21	27 4	45	42 9
10	19 9	30	32 6	55	47 0
12	21 3	37	38 5	70	56 5
20	26 0				

(Tobler, A. 96 198)

100 pts  $FeSO_4$  + Aq sat. at 11-14° contain 17.02%  $FeSO_4$ . (v. Hauer, J pr 103. 114.)

100 pts  $FeSO_4$  + Aq sat at 15° contain 37.2%  $FeSO_4 + 7H_2O$ ; solution has sp. gr 1.2232. (Schiff, A. 118. 362.)

Solubility in 100 pts  $H_2O$  at t°.

t°	Pts $FeSO_4$	t°	Pts $FeSO_4$	t°	Pts $FeSO_4$

(Schreinemakers, Z. phys Ch 1910, 71, 110.)

Solubility of  $\text{FeSO}_4$ ,  $\text{H}_2\text{O} + \text{Na}_2\text{SO}_4$ ,  $10\text{H}_2\text{O}$ , in 100 g.  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Grams $\text{FeSO}_4$	Grams $\text{Na}_2\text{SO}_4$
0	18 06	6.13
15 5	25 05	15 97

(Koppel, Z. phys. Ch. 1905, 52, 405.)

See also under  $\text{FeNa}_2(\text{SO}_4)_2$

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20, 828.)

Insol. in liquid  $\text{CO}_2$ . (Buehner, Z. phys. Ch. 1906, 54, 674.)

100 pts. sat. solution of  $\text{FeSO}_4$  in 40% alcohol contains 0.3%  $\text{FeSO}_4$ . (Schiff.)

Insol. in alcohol of 0.905 sp. gr or less. (Anthon, J. pr. 14, 125.)

Alcohol and  $H_2SO_4$  precipitate  $FeSO_4$  from  $FeSO_4 + Aq$ , also glacial acetic acid.

Anhydrous  $FeSO_4$ , is insol. in acetone. (Krug and McElroy, 1893.)

Insol in acetone (Eidmann, C. C. 1899, II, 1014.)

100 g. sat. solution in glycol contain 60 g  $FeSO_4$  at ord. temp. (de Coninck)

Insol in methyl acetate. (Naumann, B. 1909, 42, 3790); ethyl acetate (Naumann, B. 1904, 37, 3601.)

Iron (ferrous) sulphate, acid,  $2FeO$ ,  $3SO_3$ ,  $2H_2O$ .

This salt exists in contact with solutions containing  $SO_3 + 1.637 H_2O$  to about  $SO_3 + 2.186 H_2O$  (Kenrick, J. phys. Chem. 1908, 12, 704.)

$FeO$ ,  $2SO_3 + H_2O$  This compd exists with solutions containing  $SO_3 + 1.342 H_2O$  to (about)  $SO_3 + 1.595 H_2O$ . (Kenrick)

$FeO$ ,  $4SO_3 + 3H_2O$ . This compd. is stable with solutions containing from  $SO_3 + 1.122 H_2O$  to (about)  $SO_3 + 1.342 H_2O$ . Rapidly sol in  $H_2O$  with ppt. of  $FeSO_4 + H_2O$ . (Kenrick)

Min. *Melanterite*.

Iron (ferrous) sulphate, basic,  $10Fe_2O_3$ ,  $SO_3 + H_2O$

(Athanasesco, C. R. 103, 27.)

$6Fe_2O_3$ ,  $SO_3 + 10H_2O$  Insol in  $H_2O$  Sl. sol. in warm  $HCl + Aq$  (Scheerer, Pogg. 45, 188.)

$4Fe_2O_3$ ,  $SO_3 + 11H_2O$ . (Anthon, Repert. 81, 237.)

$3Fe_2O_3$ ,  $SO_3 + 4H_2O$ . Insol. in  $H_2O$ . Rather easily sol. in acids. (Scheerer, Pogg. 44, 453; Meiser, B. 8, 771.)

$2Fe_2O_3$ ,  $SO_3 + 6H_2O$ . When pptd. from cold solutions, is sol. in  $Fe_2(SO_4)_3 + Aq$ , but insol. therein when pptd. from hot solutions (Maus.)

Only basic sulphate which is a true chemical compound. (Pickering, Chem. Soc. 37, 807.)

Min. *Glockerite*. Insol. in  $H_2O$ . Sol. in conc.  $H_2SO_4$ .

+  $7H_2O$ . (Meister.)

+  $8H_2O$ . (Mühlhauser.)

+  $15H_2O$ . Min. *Pisophanite*.

$Fe_2O_3$ ,  $SO_3 = (FeO)_2SO_4 + 3H_2O$  Insol in  $H_2O$ . (Soubeiran, A. ch. 44, 329.)

$3Fe_2O_3$ ,  $4SO_3 + 9H_2O$ . (Athanasesco.)

$2Fe_2O_3$ ,  $3SO_3 + 8H_2O$ . Insol in  $H_2O$ . (Wittstein.)

+  $18H_2O$ . Min. *Fibroferrite*. Sl. sol in cold, more easily in hot  $H_2O$ .

$Fe_2O_3$ ,  $2SO_3 + 10H_2O$ . Min. *Stypticite*.

+  $15H_2O$ . Sol. in  $H_2O$ ; decomp. by heat or evaporation. (Muck, J. pr. 99, 103.)

$2Fe_2O_3$ ,  $5SO_3 + 13H_2O$ . Min. *Coptapite*

$Fe_2SiO_4 + 18H_2O = 2Fe_2O_3$ ,  $5SO_3 + 18H_2O$   $\alpha$ -Coptapit. This salt is in equilibrium at 25°

with solutions in which the molecular ratio  $Fe_2O_3 : SO_3$  lies between 1.2889 and 1.2614. (Wirth, Z. anorg. 1914, 87, 37.)

$(OH)Fe_2(SO_4)_3 + 13H_2O$   $\beta$ -Coptapit. This salt is in equilibrium at 25° with solutions in which the molecular ratio  $Fe_2O_3 : SO_3$  lies between 1.3472 and 1.2889. (Wirth, Z. anorg. 1914, 87, 37.)

According to Pickering (Chem. Soc. 37, 807), all basic ferric sulphates are mixtures excepting  $2Fe_2O_3$ ,  $SO_3$ .

Iron (ferric) sulphate,  $Fe_2(SO_4)_3$ .

Anhydrous. Slowly deliquescent. Nearly insol in  $H_2O$ , and  $HCl + Aq$ . Insol. in conc.  $H_2SO_4$ . Very rapidly sol. in  $FeSO_4 + Aq$ , even when very dil. (Barreswil, C. R. 20, 1365.)

Sp. gr. of  $Fe_2(SO_4)_3 + Aq$ . According to F = Franz at 17.5° (J. pr. (2) 5, 280); G = Gerlach at 15° (Z. anal. 28, 494); H = Hager at 18° (Z. anal. 27, 280).

See also under  $Al_2(SO_4)_3$ .

Insol in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20, 828.)

Completely pptd from  $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq}$  by  $\text{HC}_2\text{H}_3\text{O}_2$ . Sol. to large extent in alcohol.

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790); ethyl acetate. (Naumann, B. 1910, 43, 314)

Insol in acetone

+  $2\text{H}_2\text{O}$  Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . Conc.  $\text{Fe}_2(\text{SO}_4)_3 + \text{Aq}$  may be boiled without decomp., but dil. solutions are decomp. on heating. A solution containing 1 pt. salt to 100 pts  $\text{H}_2\text{O}$  becomes turbid at  $76^\circ$ ; 1 pt. to 200 pts., at  $56^\circ$ ; 1 pt. to 400 pts., at  $47^\circ$ ; 1 pt. to 800 pts., at  $40^\circ$ ; 1 pt. to 1000 pts., at  $38^\circ$ ; 1 pt. to 10,000 pts., at  $14^\circ$ . (Scheerer.)

+  $9\text{H}_2\text{O}$ . Min. *Cogumbe*.

81.43 pts. are sol in 1857 pts  $\text{H}_2\text{O}$ . (Wirth, Z. anorg. 1914, 87, 23)

This salt is stable at  $25^\circ$  only in contact with solutions in which the molecular ratio  $\text{Fe}_2\text{O}_3 : \text{SO}_3$  lies between 1:3.472 and 1:6.699. (Wirth, Z. anorg. 1914, 87, 35.)

+  $10\text{H}_2\text{O}$  Slowly sol in  $\text{H}_2\text{O}$ . (Oudemans, R. t. c. 3, 331.)

Iron (ferroferric) sulphate,  $6\text{FeSO}_4$ ,  $\text{Fe}_2(\text{SO}_4)_3 + 6\text{H}_2\text{O}$ .

Sol in all proportions in  $\text{H}_2\text{O}$ . (Poumarède, C. R. 18, 854)

$3\text{FeSO}_4$ ,  $2\text{Fe}_2(\text{SO}_4)_3 + 12\text{H}_2\text{O}$  Decomp by  $\text{H}_2\text{O}$ . Easily sol in dil  $\text{HCl} + \text{Aq}$ . Insol in alcohol. (Abich, 1842.)

$\text{FeSO}_4$ ,  $\text{Fe}_2(\text{SO}_4)_3 + 12\text{H}_2\text{O}$ . Min. *Voltaite*. Difficulty sol in  $\text{H}_2\text{O}$ .

$\text{FeO}$ ,  $\text{Fe}_2\text{O}_3$ ,  $6\text{SO}_3 + 15\text{H}_2\text{O}$ . Deliquescent. (Lefort, J Pharm. (4) 10, 87)

Iron (ferrous) pyrosulphate,  $\text{FeS}_2\text{O}_7$ .

Deliquescent. Decomp by  $\text{H}_2\text{O}$ . (Bolas, Chem. Soc. (2) 12, 212.)

Iron (ferric) hydrogen sulphate,  $\text{Fe}_2(\text{SO}_4)_3$ ,  $\text{H}_2\text{SO}_4 + 8\text{H}_2\text{O}$ .

This salt is in equilibrium at  $25^\circ$  only with solutions where the molecular ratio  $\text{Fe}_2\text{O}_3 : \text{SO}_3$  is more acid than 1:6.699 (Wirth and Bakke, Z. anorg. 1914, 87, 34.)

Sat. solution of  $\text{Fe}_2(\text{SO}_4)_3$ ,  $\text{H}_2\text{SO}_4 + 8\text{H}_2\text{O}$  in abs. alcohol at  $25^\circ$  contains 8 g  $\text{Fe}_2\text{O}_3 + 17.18$  g.  $\text{SO}_3$  per 100 g. sat. solution. (Wirth and Bakke.)

Decomp. by  $\text{H}_2\text{O}$ . (Recouma, C. R. 1903, 137, 118.)

In contact with solutions containing 25% to 28%  $\text{SO}_3$  at  $25^\circ$ , the stable solid is  $\text{Fe}_2\text{O}_3$ ,  $3\text{SO}_3 + 10\text{H}_2\text{O}$ . In contact with solutions containing more than 28%, the stable solid is  $\text{Fe}_2\text{O}_3$ ,  $4\text{SO}_3 + 10\text{H}_2\text{O}$  (Cameron and Robinson, J. phys. Chem 1907, 11, 650.)

Iron (ferroferric) hydrogen sulphate,  $\text{Fe}_2(\text{SO}_4)_3$ ,  $\text{FeSO}_4$ ,  $2\text{H}_2\text{SO}_4$ .

Insol. in  $\text{H}_2\text{O}$ , but slowly decomp. thereby. Sol. in  $\text{H}_2\text{SO}_4$ . (Étard, C. R. 87, 602.)

Iron (ferrous) hydrazine sulphate,  $\text{FeH}_2(\text{SO}_4)_2$ ,  $2\text{N}_2\text{H}_4$ .

1 pt. is sol. in 325 pts  $\text{H}_2\text{O}$  at  $12^\circ$ . (Curtius, J. pr. 1894, (2) 50, 331.)

Iron (ferrous) magnesium sulphate,  $\text{FeSO}_4$ ,  $\text{MgSO}_4 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Schiff)

Iron (ferric) magnesium sulphate,  $\text{Fe}_2(\text{SO}_4)_3$ ,  $\text{MgSO}_4 + 24\text{H}_2\text{O}$ .

(Bastick)

Iron (ferrous) magnesium potassium sulphate,  $2\text{K}_2\text{SO}_4$ ,  $\text{FeSO}_4$ ,  $\text{MgSO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94, 57.)

Iron (ferric) manganous hydrogen sulphate,  $\text{Fe}_2(\text{SO}_4)_3$ ,  $2\text{MnSO}_4$ ,  $\text{H}_2\text{SO}_4$ .

Insol in cold  $\text{H}_2\text{O}$ . (Étard.)

$\text{Fe}_2(\text{SO}_4)_3$ ,  $2\text{MnSO}_4$ ,  $3\text{H}_2\text{SO}_4$ . Sol. in  $\text{H}_2\text{O}$ . (Étard, C. R. 86, 1399.)

Iron (ferric) manganic sulphate,  $\text{Fe}_2(\text{SO}_4)_3$ ,  $\text{Mn}_2(\text{SO}_4)_3$ .

Insol in cold  $\text{H}_2\text{O}$ ; decomp. by hot  $\text{H}_2\text{O}$  and  $\text{HCl} + \text{Aq}$  (Étard.)

Iron (ferrous) manganous potassium sulphate,  $\text{FeSO}_4$ ,  $\text{MnSO}_4$ ,  $2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94, 57)

Iron (ferrous) nickel sulphate,  $2\text{FeSO}_4$ ,  $2\text{NiSO}_4$ ,  $\text{H}_2\text{SO}_4$ .

(Étard, C. R. 87, 602.)

Iron (ferric) nickel sulphate,  $\text{Fe}_2(\text{SO}_4)_3$ ,  $\text{NiSO}_4$ ,  $2\text{H}_2\text{SO}_4$ .

Insol. in  $\text{H}_2\text{O}$ , but gradually decomp. thereby. (Étard, C. R. 87, 602.)

Iron (ferrous) nickel potassium sulphate,  $\text{FeSO}_4$ ,  $\text{NiSO}_4$ ,  $2\text{K}_2\text{SO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Vohl, A. 94, 57.)

Iron (ferrous) potassium sulphate,  $\text{FeSO}_4$ ,  $\text{K}_2\text{SO}_4$ .

+  $2\text{H}_2\text{O}$  (Marignac, Ann. Min. (5) 9, 19.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

Iron (ferric) potassium sulphate, basic, 4Fe<sub>2</sub>O<sub>3</sub>, K<sub>2</sub>O, 7SO<sub>3</sub>+9H<sub>2</sub>O=4(Fe<sub>2</sub>O<sub>3</sub>, 2H<sub>2</sub>O, SO<sub>3</sub>), K<sub>2</sub>SO<sub>4</sub>+7H<sub>2</sub>O.

Insol. in boiling H<sub>2</sub>O. Sl. sol. in HCl+aq. more readily in aqua regia. (Rammelsberg.) 3Fe<sub>2</sub>O<sub>3</sub>, K<sub>2</sub>O, 4SO<sub>3</sub>+6H<sub>2</sub>O=K(FeO)<sub>3</sub>(SO<sub>4</sub>)<sub>2</sub>+3H<sub>2</sub>O. Min. *Jarosite*.

Fe<sub>2</sub>O<sub>3</sub>, H<sub>2</sub>O, 3SO<sub>3</sub>, 2K<sub>2</sub>SO<sub>4</sub>+5H<sub>2</sub>O. Sol. in 6 pts. cold H<sub>2</sub>O. Solution soon decomposes. (Maus, Pogg. 11. 78.)

Sol. in 12.5 pts. H<sub>2</sub>O at 10°. (Anthon, Report. 76. 361.)

Formula is given as 3Fe<sub>2</sub>O<sub>3</sub>, 5K<sub>2</sub>O, 12SO<sub>3</sub>+18H<sub>2</sub>O by Marignac.

3Fe<sub>2</sub>O<sub>3</sub>, 6SO<sub>3</sub>, 2K<sub>2</sub>SO<sub>4</sub>+22H<sub>2</sub>O. Sol. when moist in H<sub>2</sub>O. Solution soon decomposes. Insol. in alcohol. (Soubeiran, A. ch. 44. 329.)

3Fe<sub>2</sub>O<sub>3</sub>, 7SO<sub>3</sub>, 5K<sub>2</sub>SO<sub>4</sub>+12H<sub>2</sub>O, and +17H<sub>2</sub>O. (Scheerer, Pogg. 87. 81.)

2Fe<sub>2</sub>O<sub>3</sub>, 5SO<sub>3</sub>, 3K<sub>2</sub>SO<sub>4</sub>+9H<sub>2</sub>O. (S.)

3Fe<sub>2</sub>O<sub>3</sub>, 8SO<sub>3</sub>, 4K<sub>2</sub>SO<sub>4</sub>+20H<sub>2</sub>O and 24H<sub>2</sub>O. (S.)

Iron (ferric) potassium sulphate, K<sub>2</sub>SO<sub>4</sub>, 2Fe<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.

Insol. in H<sub>2</sub>O, but is gradually decomp. thereby. (Grimm and Ramdohr, A. 98. 127.)

+2H<sub>2</sub>O. Nearly insol. in H<sub>2</sub>O. (Weinland, Z. anorg. 1913, 84. 364.)

K<sub>2</sub>Fe<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>+24H<sub>2</sub>O. *Iron alum*.

Sol. in 5 pts. H<sub>2</sub>O at 12.5°. (Anthon.)

Aqueous solution is decomp. by heating.

Insol. in alcohol.

Sp. gr. of aqueous solution. According to

G=Gerlach, at 16° (Z. anal. 28. 496); F=Franz, at 17.5° (J. pr. (2) 5. 288), containing:

Iron (ferric) sodium sulphate, basic,  $2\text{Na}_2\text{O} \cdot \text{Fe}_2\text{O}_3 \cdot 4\text{SO}_3 + 7\text{H}_2\text{O}$ .

Only sl. sol. in  $\text{H}_2\text{O}$  with decomp. (Skrabal, Z. anorg. 1904, 38, 319.)  
+  $8\text{H}_2\text{O}$ . Min *Ursubst.* Insol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl} + \text{Aq}$ .

$3\text{Na}_2\text{O} \cdot \text{Fe}_2\text{O}_3 \cdot 6\text{SO}_3 + 6\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp. (Skrabal.)

$4\text{Fe}_2\text{O}_3 \cdot \text{Na}_2\text{O} \cdot 5\text{SO}_3 + 9\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , difficultly sol. in  $\text{HCl} + \text{Aq}$ . (Scheerer, Pogg. 45, 190.)

Iron (ferric) sodium sulphate,  $[\text{Fe}(\text{SO}_4)_2]\text{Na}_2 + 3\text{H}_2\text{O}$ .

Ppt. Nearly insol. in  $\text{H}_2\text{O}$ . (Weinland, Z. anorg. 1913, 84, 365.)

Iron (ferrous) thallium sulphate,  $\text{FeSO}_4 \cdot \text{Tl}_2\text{SO}_4 + 6\text{H}_2\text{O}$ .

Easily decomp. by solution in  $\text{H}_2\text{O}$ . (Willm, A. ch. (4) 5, 56.)

Iron (ferric) thallium sulphate,  $\text{Tl}_2\text{Fe}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

Not efflorescent. Very easily sol. in  $\text{H}_2\text{O}$ , 361.5 g. anhydrous, or 646 g. hydrated salt are sol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ , or 0.799 mol. of the anhydrous salt is sol. in 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ . Melts in crystal  $\text{H}_2\text{O}$  at  $37^\circ$ . (Locke, Am. Ch. J. 1901, 26, 175.)

Iron (ferrous) zinc sulphate,  $\text{FeSO}_4 \cdot \text{ZnSO}_4 + 14\text{H}_2\text{O}$ .

$2\text{FeSO}_4 \cdot 2\text{ZnSO}_4 \cdot \text{H}_2\text{SO}_4$ . (Étard, C. R. 87, 602.)

Iron (ferric) zinc sulphate,  $\text{Fe}_2(\text{SO}_4)_3 \cdot \text{ZnSO}_4 + 24\text{H}_2\text{O}$ .

(Bastick.)

Iron (ferrous) sulphate nitric oxide,  $\text{FeSO}_4 \cdot \text{NO}$ .

The solubility of  $\text{NO}$  in  $\text{FeSO}_4 + \text{Aq}$  is diminished by the presence of  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ , phosphoric acid and by the presence of certain salts. (Manchot, A. 1910, 372, 157.)

$\text{Fe}(\text{NO})\text{SO}_4 \cdot \text{FeSO}_4 + 13\text{H}_2\text{O}$ . Decomp. in the air. Sol. in water. (Manchot.)

Lanthanum sulphate, basic,  $2\text{La}_2\text{O}_3 \cdot 3\text{SO}_3 + 3\text{H}_2\text{O}$ .

Precipitate. (Frerichs and Smith.)

Formula is  $3\text{La}_2\text{O}_3 \cdot \text{SO}_3 + x\text{H}_2\text{O}$ . (Cleve, B. 11, 910.)

Lanthanum sulphate,  $\text{La}_2(\text{SO}_4)_3$ .

Anhydrous. Much less sol. in warm than in cold  $\text{H}_2\text{O}$ . 1 pt. is sol. in less than 6 pts  $\text{H}_2\text{O}$ , if added in small portions thereto at  $2-3^\circ$ , and the temperature not allowed to rise to  $13^\circ$ ; but if heated to  $30^\circ$ ,  $\text{La}_2(\text{SO}_4)_3 + 9\text{H}_2\text{O}$  separates out until the solution is solid. (Mosander.)

100 pts.  $\text{H}_2\text{O}$  dissolve 2.208 pts.  $\text{La}_2(\text{SO}_4)_3$  at  $16.5^\circ$ , 2.130 pts. at  $18^\circ$ ; 1.641 pts. at  $34^\circ$ . See also under  $+9\text{H}_2\text{O}$ .

The solubility of  $\text{La}_2(\text{SO}_4)_3$  in  $\text{H}_2\text{O}$  is diminished by the presence of  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{K}_2\text{SO}_4$ , or  $\text{Na}_2\text{SO}_4$ . (Barre, C. R. 1910, 161, 871.)

(Wuth, Z anorg 1912, 76, 189)

Lanthanum hydrogen sulphate,  $\text{La}(\text{SO}_4\text{H})_3$ . (Brauner, Z. anorg. 1904, 38, 330.)

Lanthanum potassium sulphate,  $\text{La}_2(\text{SO}_4)_3, \text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .

$\text{La}_2(\text{SO}_4)_3, 5\text{K}_2\text{SO}_4$ . (Barre, C. R. 1910, 151, 872.)

$\text{La}_2(\text{SO}_4)_3, 3\text{K}_2\text{SO}_4$ . Sl. sol. in  $\text{H}_2\text{O}$ . Insol. in sat.  $\text{K}_2\text{SO}_4 + \text{Aq}$ . (Cleve.)

$\text{La}_2(\text{SO}_4)_3, 4\text{K}_2\text{SO}_4$ . As above. (Cleve.)

$2\text{La}_2(\text{SO}_4)_3, 9\text{K}_2\text{SO}_4$ . As above. (Cleve.)

## Lanthanum rubidium sulphate,

$\text{La}_2(\text{SO}_4)_3, \text{Rb}_2\text{SO}_4$ .

(Baskerville, J. Am. Chem. Soc. 1904, 26, 67.)

+  $2\text{H}_2\text{O}$ . (Baskerville.)

$3\text{La}_2(\text{SO}_4)_3, 2\text{Rb}_2\text{SO}_4$ . (Baskerville.)

Lanthanum sodium sulphate,  $\text{La}_2(\text{SO}_4)_3, \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.) (Barre, C. R. 1910, 151, 872.)

Lead sulphate, basic,  $2\text{PbO}, \text{SO}_3$ .

Not completely insol. in  $\text{H}_2\text{O}$ . Decomp. by acids, even dil.  $\text{HCl}, \text{H}_2\text{O}_2 + \text{Aq}$ , with formation of  $\text{PbSO}_4$ . (Barford, 1889.)

0.060 millimole calc. as  $\text{Pb}$  is sol. in 1 l.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Pleissner, C. C. 1907, II, 1056.)

$5\text{PbO}, 3\text{SO}_3$ . (Frankland, Proc Roy Soc 46, 364.)

$\text{Pb}_3\text{O}_4, 2\text{SO}_3$ . (Frankland.)

$3\text{PbO}, \text{PbSO}_4 + \text{H}_2\text{O}$ . Ppt. (Strömholm, Z. anorg. 1904, 38, 442.)

$\text{Pb}_2(\text{SO}_4)(\text{OH})_2$ . 0.106 millimole calc. as  $\text{Pb}$  is sol. in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$ . (Pleissner, C. C. 1907, II, 1056.)

Lead sulphate,  $\text{PbSO}_4$ .

Sol. in 22,816 pts.  $\text{H}_2\text{O}$  at  $11^\circ$ . (Fresenius, A. 59, 125.)

Sol. in 31,569 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Rodwell, C. N. 11, 50.)

Sol. in 13,000 pts.  $\text{H}_2\text{O}$ . (Kremers, Pogg. 85, 247.)

Calculated from electrical conductivity of  $\text{PbSO}_4 + \text{Aq}$ , 1 l.  $\text{H}_2\text{O}$  dissolves 46 mg.  $\text{PbSO}_4$  at  $18^\circ$ . (Kohlrausch and Rose, Z. phys. Ch. 12, 241.)

\*  $4.23 \times 10^{-3}$  gr. are dissolved in 1 liter of sat. solution at  $20^\circ$ ;  $4.41 \times 10^{-3}$  at  $25^\circ$ . (Böttger, Z. phys. Ch. 1903, 46, 604.)

1 l.  $\text{H}_2\text{O}$  dissolves 41 mg.  $\text{PbSO}_4$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50, 356.)

0.126 millimole  $\text{Pb}$  is sol. in 1 liter  $\text{H}_2\text{O}$  at  $18^\circ$ . (Pleissner C. C. 1907, II, 1056.)

40 mg. are dissolved in 1 l. of sat. solution at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1908, 64, 168.)

0.0824 g.  $\text{PbSO}_4$  is sol. in 1000 cc.  $\text{H}_2\text{O}$  at  $18^\circ$  and also at  $100^\circ$ . The fact that  $\text{PbSO}_4$  dissolves in  $\text{H}_2\text{O}$  is ascribed to hydrolysis, and in support of this it is shown that the solubility of hydrated oxide of lead,  $\text{PbO}, \text{H}_2\text{O}$ , in dil.  $\text{H}_2\text{SO}_4$  is the same as the solubility of  $\text{PbSO}_4$  in  $\text{H}_2\text{O}$ . (Schnal, C. R. 1909, 148, 1395.)

1 l.  $\text{H}_2\text{O}$  dissolves 26 mg. at  $18^\circ$ ; 30 mg. at  $25^\circ$ ; 38 mg. at  $37^\circ$ . (Beck and Stegmüller, Arb. K. Gesund. Amt. 1910, 34, 447.)

Solubility in  $H_2O$  at  $t^\circ$ .

0.0049	0.0333	0 0490	0 0130
0 0098	0.0306	0 4904	0.0052

(Plessner, Arb. K. Gesund. Amt. 1907, 26. 384.)

A trace of  $H_2SO_4$  has a considerable effect in reducing the solubility of  $PbSO_4$  in  $H_2O$ . (Sehnal, C. R. 1909, 148. 1395.)

Solubility in dil.  $H_2SO_4 + Aq$  at  $20^\circ$ .  
(G. per l.)

$H_2SO_4$	$PbSO_4$	$H_2SO_4$	$PbSO_4$
0	0.082	0 0980	0.013
0 0098	0.051	0 4900	0 006
0 0196	0 025	0 9800	0

(Sehnal.)

Pptd. from solution in  $H_2SO_4$  by  $HCl$ . (Bolley, A. 91. 113.)

Not more insol. in dil.  $HC_2H_3O_2 + Aq$  than in  $H_2O$ . (Bischof.)

Solubility in other acids is prevented by great excess of  $H_2SO_4$ . (Wackenroder)

Sol. in warm  $NH_4OH + Aq$ , separating on cooling. Completely sol in warm  $KOH$  or  $NaOH + Aq$ .

Decomp. by boiling with  $K_2CO_3$ ,  $Na_2CO_3$ , and  $(NH_4)_2CO_3 + Aq$ .

Sol in  $NH_4$  salts + Aq, but reprecip. by  $H_2SO_4 + Aq$ . (Fresenius, A. 59, 125)

The best solvents of the  $NH_4$  salts are the nitrate, citrate, and tartrate; the two latter should be strongly alkaline with  $NH_4OH + Aq$  (Wackenroder)

Sol. in  $NH_4Cl + Aq$  at 12.5–25°.

Sl. decomp. by  $NaCl + Aq$  (Bley)

1 l. sat.  $NaCl + Aq$  dissolves 0.66 g  $PbSO_4$ . (Bequerel.)

Sol. in 100 pts. cold conc.  $NaCl + Aq$ , and  $PbCl_2$  is deposited after a few hours (Field)

Solubility of  $PbSO_4$  in  $NaCl + Aq$  at 18°.  
(Millimols per l)

NaCl	$PbSO_4$
0.1N	0.546
0.2N	0.904
0.3N	1.28

414.1	10.10	3.06

(Noyes and Whitcomb, J. Am. Chem. Soc. 1905, 27, 756.)

Solubility in  $KC_2H_3O_2 + Aq$  at 25°.

Solid phase,  $PbSO_4 + PbK_2(SO_4)_2$ .

Composition of the solutions

$KC_2H_3O_2$	$Pb(C_2H_3O_2)_2$	$KC_2H_3O_2$	$Pb(C_2H_3O_2)_2$
4.33	2.54	26.58	9.83
9.03	3.55	28.82	11.40
17.81	5.43	28.93	19.41
22.07	5.95		

(Fox, Chem. Soc. 1909, 95, 887.)

100 pts  $H_2O$  containing a drop of  $HCl + H_2O_2$  and 2.05 pts  $NaC_2H_3O_2$  dissolve 0.054 pt  $PbSO_4$ , containing 8.2 pts  $NaC_2H_3O_2$  dissolve 0.900 pt.  $PbSO_4$ ; containing 41.0 pts  $NaC_2H_3O_2$  dissolve 11.200 pts  $PbSO_4$ . (Dibbitts, Z. anal. 1874, 13, 139)

Solubility in  $NaC_2H_3O_2 + Aq$  at 25°.

Composition of the solutions

% Na acetate	% Pb acetate	% $Na_2SO_4$	% $H_2O$
6.69	0.78	0.34	92.19
11.76	2.73	1.26	84.25
16.90	5.70	2.49	74.91
19.92	8.24	3.60	68.24
21.51	10.75	4.68	63.10
6.95	0.81	0.35	91.90

The proportion of sulphate in solution in each case corresponded with the amount of Pb present, but was calculated to sodium sulphate, since  $Na_2SO_4 + 10H_2O$  cryst. from the solutions on cooling. The solid phase in these solutions was  $PbSO_4$ .

(Fox, Chem. Soc. 1909, 95, 887.)

Sol. in  $Mn(C_2H_3O_2)_2$ ,  $Zn(C_2H_3O_2)_2$ ,  $Ni(C_2H_3O_2)_2$ , and  $Cu(C_2H_3O_2)_2$ , but not in  $Hg(C_2H_3O_2)_2$  or  $Ag(C_2H_3O_2)_2$

Solubility in  $KC_2H_3O_2 + Aq$  is not less than that in  $NaC_2H_3O_2 + Aq$ . (Dibbitts, Z. anal. 13, 137)

Insol in  $Pb(C_2H_3O_2)_2 + Aq$  (Smith.)

Sol. in basic lead acetate + Aq, but not in neutral  $Pb(C_2H_3O_2)_2 + Aq$ . (Stammer, Z. anal. 23, 67)

12.2 pts  $Ca(C_2H_3O_2)_2$  in very dil. solution dissolve 1 pt  $PbSO_4$ . (Stadel, Z. anal. 2, 180)

Sol in  $Al(C_2H_3O_2)_3 + Aq$  (Lennsen)

Very easily and abundantly sol in  $\text{NH}_4$  tartrate + Aq. (Wöhler, A 34. 235)

Even when native, easily sol. in  $\text{NH}_4$  citrate + Aq. (Smith.) •

Insol in alcohol (18%) and  $\text{H}_2\text{SO}_4$  when  $\text{NH}_4$  acetate, K tartrate, or  $\text{NH}_4$  succinate are present. Insol in alcohol (18%) and  $\text{H}_2\text{SO}_4$  or  $(\text{NH}_4)_2\text{SO}_4$  when Na acetate, Na or  $\text{NH}_4$  oxalate are present. Sol. in  $\text{NH}_4$  dicitrate and K tricitrate in presence of  $\text{H}_2\text{SO}_4$ , in  $\text{NH}_4$  succinate and  $\text{NH}_4$  acetate in presence of  $(\text{NH}_4)_2\text{SO}_4$ ; and in  $\text{NH}_4$  citrate in presence of  $\text{H}_2\text{SO}_4$  or  $(\text{NH}_4)_2\text{SO}_4$  (Storer, C. N. 21. 17)

Alcohol (59%) alone, or with ethylsulphuric acid or sugar, does not dissolve Pb by 3 months action. (Storer)

Insol. in acetone. (Naumann, B. 1904, 37. 4329), methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1910, 43. 314.)

Min. Anglesite Sol in cold citric acid + Aq. (Bolton, C. N. 37. 14)

Lead hydrogen sulphate,  $\text{PbSO}_4 \cdot \text{H}_2\text{SO}_4 + \text{H}_2\text{O}$ .

Decomp by  $\text{H}_2\text{O}$ .

Lead pyrosulphate,  $\text{Pb S}_2\text{O}_7$

Decomp. by  $\text{H}_2\text{O}$ . (Schultz.)

Lead potassium sulphate,  $\text{PbSO}_4 \cdot \text{K}_2\text{SO}_4$ .

When  $\text{PbSO}_4$  is added to potassium acetate + Aq at  $25^\circ$  a double salt,  $\text{PbK}_2(\text{SO}_4)_2$  is formed. This salt is insol. in the solution which contains only potassium acetate and lead acetate. (Fox, Chem. Soc 1909, 95. 882.)

Decomp. by  $\text{H}_2\text{O}$ . Stable only in solutions of  $\text{K}_2\text{SO}_4$  containing at least 0.56%  $\text{K}_2\text{SO}_4$  at  $7^\circ$ ; 0.62% at  $17^\circ$ ; 1.09% at  $50^\circ$ ; 1.37% at  $75^\circ$ ; 1.69% at  $100^\circ$ . (Barre, C R 1909, 149. 294)

Lead sulphate chloride,  $\text{PbSO}_4 \cdot 2\text{PbCl}_2 + \text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$  or  $\text{NaCl}$  + Aq (Becquerel, C. R 20. 1523)

Lead sulphate fluoride,  $\text{PbSO}_4 \cdot 2\text{PbF}_2$ .

Not decomp by  $\text{H}_2\text{SO}_4$ . (Lonyet, C. R 24. 434)

Lithium sulphate,  $\text{Li}_2\text{SO}_4$ .

More sol. in cold than in hot  $\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 34.6 pts  $\text{Li}_2\text{SO}_4$  at  $18^\circ$  (Wittstein.)

100 pts.  $\text{H}_2\text{O}$  dissolve pts  $\text{Li}_2\text{SO}_4$  at  $t^\circ$

$t^\circ$	Pts. $\text{Li}_2\text{SO}_4$	$t^\circ$	Pts. $\text{Li}_2\text{SO}_4$	$t^\circ$	Pts. $\text{Li}_2\text{SO}_4$
0	35.34	45	32.38	100	29.24
20	34.36	65	30.3		

(Kremers, Pogg. 95. 468)

Sat.  $\text{Li}_2\text{SO}_4$  + Aq contains at:

$-20^\circ$   $-16^\circ$   $-15^\circ$   $-12^\circ$   
18.4 22.5 22.6 24.4 %  $\text{Li}_2\text{SO}_4$ .

$-4^\circ$   $+15^\circ$   $+90^\circ$   
25.7 25.3 23.9 %  $\text{Li}_2\text{SO}_4$ .  
(Étard, A. ch. 1894, (7) 2. 547.)

Sat. solution boils at  $105^\circ$ . (Kremers.)

Sp. gr. of  $\text{Li}_2\text{SO}_4$  + Aq at  $19.5^\circ$  containing:

6.5 7.4 12.5 15.3 %  $\text{Li}_2\text{SO}_4$ ,  
1.05 1.06 1.098 1.118

33.31	6.66	94.11	0

(Schreinemakers and van Dorp, Chem. Weekbl. 1906, **3**, 557.)

Insol. in methyl acetate (Naumann, B. 1909, **42**, 3790), ethyl acetate (Naumann, B. 1904, **37**, 3801); acetone (Eidmann, C. C. 1893, II 1014, Naumann, B. 1904, **37**, 4329).  
+  $\text{H}_2\text{O}$  Very sl. efflorescent. (Rammelsberg.)

Aq. solution contains 25.1%  $\text{Li}_2\text{SO}_4$  at  $30^\circ$ . (Schreinemakers, C. C. 1910, I, 1801); 24.3 g. at  $50^\circ$ . (Schreinemakers and Cocheret, Chem. Weekbl. 1905, **2**, 771.)

Lithium hydrogen sulphate,  $\text{LiHSO}_4$ .

Decomp by  $\text{H}_2\text{O}$   
Cryst. from  $\text{H}_2\text{SO}_4$ . (Gmelin.)  
 $\text{Li}_2\text{H}_2(\text{SO}_4)_2$ . Cryst. from  $\text{H}_2\text{SO}_4$ . (Schultz, Pogg. 133, 137.)  
 $\text{Li}_2\text{SO}_4, 7\text{H}_2\text{SO}_4$ . (Bergius, Z. phys. Ch. 1910, **72**, 355.)

Lithium potassium sulphate,  $\text{Li}_2\text{SO}_4, \text{K}_2\text{SO}_4$ .

This is the only compd of  $\text{Li}_2\text{SO}_4$  and  $\text{K}_2\text{SO}_4$  which exists below  $100^\circ$ . (Spielrein, C. R. 1913, **157**, 48.)

$\text{K}_2\text{Li}_2(\text{SO}_4)_2$ . (Knobloch.) Has the formula  $\text{K}_2\text{Li}_2(\text{SO}_4)_2 + 8\text{H}_2\text{O}$ , according to Rammelsberg.

Lithium sodium sulphate,  $\text{Na}_2\text{Li}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$ 

$\text{Na}_2\text{Li}_2(\text{SO}_4)_2 + 9\text{H}_2\text{O}$ .  
 $\text{Na}_2\text{Li}_2(\text{SO}_4)_2 + 5\text{H}_2\text{O}$ . (Rammelsberg.)  
Do not exist. (Trost)  
 $\text{Li}_2\text{SO}_4, \text{Na}_2\text{SO}_4 + 5.5\text{H}_2\text{O}$ . Exists from  $0^\circ$ – $16^\circ$ .  
+  $3\text{H}_2\text{O}$ . Exists from  $32^\circ$ – $100^\circ$ .  
 $\text{Li}_2\text{SO}_4, 3\text{Na}_2\text{SO}_4 + 12\text{H}_2\text{O}$ . Exists from  $16^\circ$ – $24^\circ$ .  
 $4\text{Li}_2\text{SO}_4, \text{Na}_2\text{SO}_4 + 5\text{H}_2\text{O}$ . Exists from  $24^\circ$ – $32^\circ$ .

(Spielrein, C. R. 1913, **157**, 47.)Lithium thallic sulphate,  $\text{Li}_3\text{Th}(\text{SO}_4)_3 + 3\text{H}_2\text{O}$ .

(Meyer and Goldschmidt, C. C. 1903, I, 495.)

**Lithium titanium sulphate,**

Less hygroscopic than K compound.  
(Mazzuchelli and Pontanelli, C. C. 1909, II. 420.)

**Lithium uranyl sulphate,  $\text{Li}_2\text{SO}_4 \cdot \text{UO}_2\text{SO}_4 + 4\text{H}_2\text{O}.$** 

(de Coninck, Chem. Soc 1905, 88. (2) 530.)

**Magnesium sulphate basic,**

Sl. sol. in cold or hot  $\text{H}_2\text{O}$

Sol. in  $\text{HCl} + \text{Aq}$  (Thugutt, Z. anorg 1892, 2. 150)

**Magnesium sulphate,  $\text{MgSO}_4.$** 

*Anhydrous.* Very slowly sol. in  $\text{H}_2\text{O}$ , sol in hot conc.  $\text{H}_2\text{SO}_4$ , less in  $\text{HCl}$ , and  $\text{HNO}_3 + \text{Aq}$

$+ \text{H}_2\text{O}$ . Min *Kieserite* Easily sol. in warm, but slowly dissolved by cold  $\text{H}_2\text{O}$ .

100 g. sat. solution at  $83^\circ$  contain 40.2 g.  $\text{MgSO}_4$ . (Genger, Dissert 1904.)

$+ 6\text{H}_2\text{O}$ , and  $+ 7\text{H}_2\text{O}$ . The latter exists in two modifications; (a) hexagonal, and (b) the ordinary or rhombic salt.

$\text{MgSO}_4 + \text{Aq}$ , which on cooling or keeping in closed vessels has deposited  $\text{MgSO}_4 + 6\text{H}_2\text{O}$ , always contains for 100 pts  $\text{H}_2\text{O}$  at.

$0^\circ$	$10^\circ$	$20^\circ$
40.75	42.23	43.87 pts. $\text{MgSO}_4$ .

If only hexagonal  $\text{MgSO}_4 + 7\text{H}_2\text{O}$  has been deposited, then the mother liquor contains for 100 pts  $\text{H}_2\text{O}$  at:

$0^\circ$	$10^\circ$	$20^\circ$
34.67	38.71	42.84 pts. $\text{MgSO}_4$ .

Solutions prepared from rhombic  $\text{MgSO}_4 + 7\text{H}_2\text{O}$  contain for 100 pts  $\text{H}_2\text{O}$  at:

$0^\circ$	$10^\circ$	$20^\circ$
26.0	30.9	35.6 pts. $\text{MgSO}_4$ . (Löwel.)

These results may be given in tabular form as follows.

Temp.	A sat aqueous solution of $\text{MgSO}_4 + 7\text{H}_2\text{O}$ (b) contains for 100 pts $\text{H}_2\text{O}$	
	Anhydrous $\text{MgSO}_4$	$7\text{H}_2\text{O}$ (b) salt
$0^\circ$	26.0	73.31
$10^\circ$	30.9	93.75
$20^\circ$	35.6	116.54

Temp	A sat aqueous solution of $\text{MgSO}_4 + 7\text{H}_2\text{O}$ (a) contains for 100 pts $\text{H}_2\text{O}$	
	Anhydrous $\text{MgSO}_4$	$7\text{H}_2\text{O}$ (a) salt
$0^\circ$	34.67	111.74
$10^\circ$	38.71	133.67
$20^\circ$	42.84	159.61

Temp	A sat aqueous solution of $\text{MgSO}_4 + 6\text{H}_2\text{O}$ contains for 100 pts $\text{H}_2\text{O}$		
	Anhydrous $\text{MgSO}_4$	$6\text{H}_2\text{O}$ salt	$7\text{H}_2\text{O}$ salt
$0^\circ$	40.75	122.22	146.02
$10^\circ$	42.32	129.44	155.53
$20^\circ$	43.87	137.72	167.97

It is seen from table that at the same temp. the  $6\text{H}_2\text{O}$  salt is more sol than the  $7\text{H}_2\text{O}$  (b) salt, and the latter is more sol than  $7\text{H}_2\text{O}$  (a) salt; that the solubility of the  $7\text{H}_2\text{O}$  (b) salt increases rapidly from  $0^\circ$  to  $20^\circ$ ; that the  $6\text{H}_2\text{O}$  salt is not much more sol. at  $20^\circ$  than at  $0^\circ$ , and at  $20^\circ$  the  $7\text{H}_2\text{O}$  (b) salt is nearly as sol as the  $6\text{H}_2\text{O}$  salt (Löwel, A. ch. (3) 43. 405)

100 pts  $\text{H}_2\text{O}$  at  $t^\circ$  dissolve pts.  $\text{MgSO}_4$ . G L—according to Gay Lussac (A. ch. (2) 11 311), T—according to Tobler (A. 95. 198)

$t^\circ$	G L	T	$t^\circ$	G L	T
0	25.8	24.7	50	49.7	
10	30.5		55		52.8
20	35.0		60	55.9	
25		37.1	70	60.1	
30	39.8		80	65.1	
40	45.2		90	70.3	

100 pts  $\text{H}_2\text{O}$  at  $105.5^\circ$  dissolve 135.2 pts.  $\text{MgSO}_4$ . (Griffiths)

$\text{MgSO}_4 + \text{Aq}$  sat at  $17.5^\circ$  has sp. gr. = 1.2932, and contains 55.57 %  $\text{MgSO}_4 + 7\text{H}_2\text{O}$ , or 100 pts  $\text{H}_2\text{O}$  dissolve 125.00 pts.  $\text{MgSO}_4 + 7\text{H}_2\text{O}$ , or 60 pts.  $\text{MgSO}_4$  at  $17.5^\circ$  (Karsten)

100 pts  $\text{H}_2\text{O}$  at  $0^\circ$  dissolve 53.8 pts., and 125 pts at ord temp. (Otto-Graham)

Sol in 2 pts cold, and 0.5 pt boiling  $\text{H}_2\text{O}$  (Fourcroy.)

The aqueous solution contains for 100 pts.  $\text{H}_2\text{O}$  92.217 pts.  $\text{MgSO}_4 + 7\text{H}_2\text{O}$  at  $15^\circ$  (Michel and Kraft.)

1 pt  $\text{MgSO}_4 + 7\text{H}_2\text{O}$  is sol in 0.933 pt  $\text{H}_2\text{O}$  at  $15^\circ$  (Gerlach), in 0.82 pt  $\text{H}_2\text{O}$  at  $23^\circ$  (Schiff)

100 pts  $\text{H}_2\text{O}$  dissolve 28.087 pts.  $\text{MgSO}_4$  at  $0^\circ$ . (Pfaff, A. 99 224)

100 pts  $\text{H}_2\text{O}$  dissolve pts.  $\text{MgSO}_4$  at  $t^\circ$ .

$t^\circ$	Pts $\text{MgSO}_4$
0	26.37
17.9	33.28
24.1	35.98

(Dracon, J. B. 1886. 62.)

100 pts.  $\text{MgSO}_4 + \text{Aq}$  sat at  $18-20^\circ$  contain 25.67-26.38 pts.  $\text{MgSO}_4$ . (v. Hauer, J. pr. 98. 137.)

Solubility in 100 pts.  $H_2O$  at  $t^\circ$ , using  $MgSO_4 + 7H_2O$

$t^\circ$	Pts $MgSO_4$	$t^\circ$	Pts $MgSO_4$	$t^\circ$	Pts $MgSO_4$
0	26.9	37	44.2	74	61.4

36	43.7	73	61.0		

(Mulder, calculated from his own and other observations, Scheik Verhandel 1864. 52).

100 pts  $H_2O$  dissolve 72.4 pts.  $MgSO_4 + 7H_2O$  at  $0^\circ$ , 178 pts. at  $40^\circ$ , and 212.6 pts. at  $49^\circ$  (Tilden, Chem. Soc. 46, 409.)

Supersat.  $MgSO_4 + Aq$  is brought to crystallization by addition of crystal of  $MgSO_4 + 7H_2O$ , or an isomorphous substance as  $ZnSO_4 + 7H_2O$ ,  $NiSO_4 + 7H_2O$ ,  $FeSO_4 + 7H_2O$ , or  $CoSO_4 + 7H_2O$  (Thomson, Chem. Soc. 35. 199.)

Sat.  $MgSO_4 + Aq$  contains at:

$2^\circ$   $7^\circ$   $23^\circ$   $67^\circ$   $81^\circ$   
20.9 22.5 26.0 35.6 38.6%  $MgSO_4$ ,

$94^\circ$   $130^\circ$   $145^\circ$   $164^\circ$   $188^\circ$   
41.5 45.3 38.0 29.3 20.4%  $MgSO_4$ .

Readily forms supersat. solutions.

(Etard, A. ch. 1894, (7) 2. 551.)

M.-pt. of  $MgSO_4 + 7H_2O$  is  $70^\circ$ . (Tilden, Chem. Soc. 46. 409.)

$MgSO_4 + Aq$  with sp. gr. 1.30 contains 44.4%  $MgSO_4$ , sp. gr. 1.42, 39%, sp. gr. 1.30, 30%  $MgSO_4$  (Dalton)

Sp. gr. of  $MgSO_4 + Aq$  sat. at  $15^\circ = 1.275$  (Michel and Kraft), at  $8^\circ = 1.267$  (Anthon); at  $18.75^\circ = 1.293$  (Karsten.)

Sp. gr. of  $MgSO_4 + Aq$  at  $15^\circ$ .

(Lamb and Lee, J. Am. Chem. Soc 1913, 35. 1684.)

More sol in  $\text{HCl} + \text{Aq}$  than in  $\text{H}_2\text{O}$ . (Richter)

In sat.  $\text{HCl} + \text{Aq}$ , anhydrous  $\text{MgSO}_4$  is scarcely sol.;  $\text{MgSO}_4 + 7\text{H}_2\text{O}$  dissolves, but is precipitated by a current of  $\text{HCl}$  gas. (Hensgen, B. 10. 259.)

Marguerite (C R 43. 50) denies the precipitation.

For solubility in  $\text{H}_2\text{SO}_4$ , see  $\text{MgH}_2(\text{SO}_4)_2$ . Completely pptd from  $\text{MgSO}_4 + \text{Aq}$  by conc.  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$  (Persoz.)

Somewhat sol in sat.  $\text{NH}_4\text{Cl} + \text{Aq}$  with separation of a double sulphate.

Rapidly sol in  $\text{KCl} + \text{Aq}$  with separation of  $\text{K}_2\text{SO}_4$ .

Sol. in sat.  $\text{NaCl} + \text{Aq}$  without pptn. of the latter.

Easily sol. in sat.  $\text{KNO}_3 + \text{Aq}$  without causing any pptn.

Sol in sat.  $\text{NaNO}_3 + \text{Aq}$ . (Karsten)

Rapidly sol in sat.  $\text{CuSO}_4 + \text{Aq}$ ; when saturation is reached, a double salt separates out. (Karsten.)

100 pts sat.  $\text{MgSO}_4 + \text{NiSO}_4 + \text{Aq}$  at  $18-20^\circ$  contain 30.93 pts. of the two salts; 100 pts. sat.  $\text{MgSO}_4 + \text{ZnSO}_4 + \text{Aq}$  at  $18-20^\circ$  contain 35.45 pts., 100 pts. sat.  $\text{MgSO}_4 + \text{NiSO}_4 + \text{ZnSO}_4 + \text{Aq}$  at  $18-20^\circ$  contain 35.62 pts. (v. Hauer, J. pr. 98. 137.)

100 pts  $\text{H}_2\text{O}$  dissolve 14.1 pts.  $\text{MgSO}_4$  and 9.8 pts  $\text{K}_2\text{SO}_4$ , if sat.  $\text{MgSO}_4 + \text{Aq}$  is sat. with  $\text{K}_2\text{SO}_4$ , 32.4 pts  $\text{MgSO}_4$  and 8.2 pts.  $\text{K}_2\text{SO}_4$ , if sat.  $\text{K}_2\text{SO}_4 + \text{Aq}$  is sat. with  $\text{MgSO}_4$ , all at  $15^\circ$ . (Mulder, J. B. 1866.)

100 pts  $\text{H}_2\text{O}$  dissolve 25.95 pts.  $\text{MgSO}_4$  and 5.21 pts  $\text{Na}_2\text{SO}_4$  at  $0^\circ$ . (Diacon, J. B. 1866. 62)

100 pts.  $H_2O$  dissolve 15.306 pts.  $MgSO_4$  and 13.086 pts.  $Na_2SO_4$  at  $0^\circ$ . (Pfaff, A 99. 224.)

See also under  $MgNa_2(SO_4)_2 + 4H_2O$

Solubility of mixtures of  $MgSO_4$  and  $MgNa_2(SO_4)_2 + 4H_2O$  at  $t^\circ$ .

$t^\circ$	$\kappa$ per 100 g $H_2O$	
	$Na_2SO_4$	$MgSO_4$
22	23 3	31 4
24 5	27 2	24 2
30	36 1	19 1
35	33 9	18 4

(Roozeboom, 1888, Z. phys. Ch. 2. 518.)

See also under  $MgNa_2(SO_4)_2 + 4H_2O$ .

Slowly sol in sat  $ZnSO_4 + Aq$  without pptn until saturation, when a double salt separates out.

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1895, 20. 828.)

100 pts. dil. alcohol containing at  $15^\circ$ :

10 20 40 % alcohol  
contain 39.3 21.3 1.62%  $MgSO_4 + 7H_2O$ .  
(Schiff, A. 118. 365.)

At higher temp. the solubility increases proportional to the temp (Gerardin, A. ch. (4) 5. 145.)

100 pts absolute methyl alcohol dissolve 1.18 pts.  $MgSO_4$  at  $18^\circ$ . (de Bruyn, Z. phys. Ch. 10. 783.)

100 pts absolute methyl alcohol dissolve 41 pts.  $MgSO_4 + 7H_2O$  at  $17^\circ$ ; 100 pts absolute methyl alcohol dissolve 29 pts.  $MgSO_4 + 7H_2O$  at  $3-4^\circ$ , 100 pts. 93% methyl alcohol dissolve 9.7 pts  $MgSO_4 + 7H_2O$  at  $17^\circ$ ; 100 pts. 50% methyl alcohol dissolve 4.1 pts.  $MgSO_4 + 7H_2O$  at  $3-4^\circ$  (de Bruyn, R. t. c. 11. 112.)

100 pts. absolute ethyl alcohol dissolve 1 3 pts  $MgSO_4 + 7H_2O$  at  $3^\circ$  (de Bruyn)

Insol. in  $CS_2$  (Arcetowski, Z. anorg. 1894, 6. 257)

Insol. in methyl acetate (Naumann, B 1909, 42. 3790.), ethyl acetate (Naumann, B 1910, 43. 314.); acetone (Naumann, B 1904, 37. 4320)

100 g. 95% formic acid dissolve 0.34 g.  $MgSO_4$  at  $19^\circ$ . (Aschan, Ch. Ztg. 1913, 37. 1117.)

100 g. sat solution of  $MgSO_4$  and sugar in  $H_2O$  contains 46.52 g. sugar + 14.0 g.  $MgSO_4$ , or 100 g.  $H_2O$  dissolve 119.6 g. sugar + 36.0 g.  $MgSO_4$ . (Kohler, Z. Ver. Zuckerind, 1897, 47. 447.)

**Magnesium hydrogen sulphate,  $MgH_2(SO_4)_2$ .**

Decomp. by  $H_2O$ . Sol. in  $H_2SO_4$ . Insol. in methyl acetate (Naumann, B 1909, 42. 3790.)

$MgH_2(SO_4)_2$ . Boiling  $H_2SO_4$  dissolves about 2%  $MgSO_4$ , from which this compound crystallises. (Schultz, Pogg 133. 437.)

**Magnesium pyrosulphate,  $MgS_2O_7$ .**

Decomp. by  $H_2O$ .

**Magnesium manganous sulphate,  $MgSO_4$ ,  $2MnSO_4 + 15H_2O$ .**

Min. *Fauserite*.

**Magnesium manganous zinc sulphate,  $MgSO_4$ ,  $MnSO_4$ ,  $ZnSO_4 + 21H_2O$**

Sol. in  $H_2O$  (Vohl, A. 99. 124.)

**Magnesium nickel sulphate,  $MgSO_4$ ,  $3NiSO_4 + 28H_2O$ .**

Sol in  $H_2O$ . (Schuff)

**Magnesium nickel potassium sulphate,  $MgSO_4$ ,  $NiSO_4$ ,  $2K_2SO_4 + 12H_2O$ .**

Sol in  $H_2O$ . (Vohl, A. 94. 57.)

**Magnesium potassium sulphate,  $MgK_2(SO_4)_2 + 6H_2O$**

100 pts  $H_2O$  dissolve 22.7 pts. anhydrous salt at  $16.5^\circ$ . (Mulder)

100 pts.  $H_2O$  dissolve at:

$0^\circ$	$10^\circ$	$20^\circ$	$30^\circ$	$35^\circ$
14 1	19 6	25.0	30 4	33 3

pts. anhydrous salt,

$45^\circ$	$55^\circ$	$60^\circ$	$65^\circ$	$75^\circ$
40 5	47 0	50 2	53 0	59 8

pts. anhydrous salt.

(Tobler, A. 95. 193.)

100 g.  $H_2O$  dissolve 30.52 g.  $MgK_2(SO_4)_2 + 6H_2O$  at  $15^\circ$ . (Lothian, Pharm. J. 1909, 82. 292.)

Solubility in  $H_2O$  at  $t^\circ$ .

36 3 18 4 21 5 16.7 13 6 9.4%  $\text{MnSO}_4$ .

(Étard, A. ch. 1894, (7) 2. 553.)

Solubility in  $\text{H}_2\text{O}$  increases from  $0-55^\circ$ , and decreases from  $55-145^\circ$ . The increasing solubility is that of  $\text{MnSO}_4 \cdot 5\text{H}_2\text{O}$ , and  $\text{MnSO}_4 + 2\text{H}_2\text{O}$  separates out at  $35^\circ$ , and is completely insol at  $145^\circ$ . (Étard)

If solubility  $S = \text{pts}$  anhydrous  $\text{MnSO}_4$  in 100 pts. solution,  $S = 30.0 + 0.2828t$  from  $-8^\circ$  to  $57^\circ$ ;  $S = 48.0 - 0.4585t$  from  $57^\circ$  to  $150^\circ$ .

Practically insol in  $\text{H}_2\text{O}$  at  $180^\circ$  (Étard, C. R. 106, 208)

Solubility varies according to the hydrate used. Above results of Étard show the solubility of  $\text{MnSO}_4 \cdot 7\text{H}_2\text{O}$  at  $0^\circ$ , and  $\text{MnSO}_4 + 3\text{H}_2\text{O}$  at  $57^\circ$ . Anhydrous  $\text{MnSO}_4$  is stable only above  $117^\circ$  (Linebarger)

100 pts.  $\text{H}_2\text{O}$  dissolve pts anhydrous  $\text{MnSO}_4$  at  $t^\circ$

$t^\circ$	Pts. $\text{MnSO}_4$	$t^\circ$	Pts. $\text{MnSO}_4$	$t^\circ$	Pts. $\text{MnSO}_4$

(Schreinemakers and Provijn, Proc. Ak. Wet. Amsterdam, 1913, 15. 326.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 828.)

Anhydrous  $\text{MnSO}_4$  is insol. in absolute alcohol

1000 pts. alcohol of 0.872 sp. gr. dissolve 63 pts.  $\text{MnSO}_4$ .

Sol. in 50 pts. of 50% alcohol. Insol. in absolute alcohol (Brandes, Pogg. 20. 556.)

100 pts. solution saturated at  $15^\circ$  in dil. alcohol containing:

0 10 50 60 % alcohol, contain 56.25 51.4 2.0 0.66 pts.  $\text{MnSO}_4 + 5\text{H}_2\text{O}$ .

(Schiff, A. 118. 385.)

When  $\text{MnSO}_4 + 7\text{H}_2\text{O}$  is boiled with absolute alcohol none is dissolved, but  $\text{MnSO}_4 + 3\text{H}_2\text{O}$  is formed.

When  $\text{MnSO}_4 + 7\text{H}_2\text{O}$  is dissolved in 15–50% alcohol, the liquid separates into two layers, the lower containing less (12–14%) alcohol and more (47–49%) salt; the upper containing

more (50-55%) alcohol and less (1.3-2.2%) salt. If the alcohol has the above strength (15-50%) the separation takes place at ordinary temp., but with 13-14% or 60% or more alcohol, warming is necessary to effect the separation. (Schiff, A. 118. 363.)

Solubility of  $\text{MnSO}_4 + \text{H}_2\text{O}$  in alcohol + Aq at  $t^\circ$ .

Composition of two layers sat. with the solid salt at  $t^\circ$ .

\*Also sat with MnSO<sub>4</sub>, 5H<sub>2</sub>O.

(Schreinemakers and Deuss.)

Insol. in absolute ether between 5° and 7°, and no crystal H<sub>2</sub>O is removed thereby. Insol. in boiling oil of turpentine, but 1 mol. crystal H<sub>2</sub>O is removed from MnSO<sub>4</sub>+4H<sub>2</sub>O (Brandes, Pogg. 20, 568)

Insol. in benzonitrile (Naumann, B 1914, 47, 1370.), ethyl acetate. Naumann, B. 1910, 43, 314.; acetone. (Naumann, B. 1904, 37, 4329, Erdmann, C.C. 1899, II. 1014.)

100 g. sat. solution in glycol contain 0.5 g. MnSO<sub>4</sub> (de Coninck, Bull. Ac. roy. Belg. 1905, 359)

MnSO<sub>4</sub>+7H<sub>2</sub>O occurs as the min *Mallardite*.

**Manganomanganic sulphate**, MnO, MnO<sub>2</sub>, 4SO<sub>3</sub>+9H<sub>2</sub>O.

Deliquescent. Decomp. by H<sub>2</sub>O. Sol. in little dil. H<sub>2</sub>SO<sub>4</sub>+Aq (Fremy, C. R. 82, 475)

**Manganic sulphate**, Mn<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.

Extremely deliquescent. Sol. in H<sub>2</sub>O with evolution of heat, and decomposition into a basic sulphate. Behaves similarly with dilute acids. Sol. in traces in cold conc. H<sub>2</sub>SO<sub>4</sub>. Insol. in cold conc. HNO<sub>3</sub>+Aq. Sol. in conc. HCl+Aq. Decomp. by absolute alcohol. (Carius, A. 98, 53)

**Manganyl sulphate**, MnO<sub>2</sub>, SO<sub>3</sub>.

Sol. in H<sub>2</sub>SO<sub>4</sub> but solution decomp. if below 40–60° Baumé. Solubility in 40° Baumé acid = 15%; 55°, 4–5%. Solution can be heated to 60–80° without decomp. (Bad. Anilin u. Sodafabrik, C. C. 1905, II. 1398.)

**Manganous hydrogen sulphate**.

MnSO<sub>4</sub> is sol. in 20 pts. boiling conc. H<sub>2</sub>SO<sub>4</sub>, more sol. in boiling H<sub>2</sub>SO<sub>4</sub>+Aq of 1.6 sp. gr (Schultz.)

MnH<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>, and +H<sub>2</sub>O. Sol. in H<sub>2</sub>O with decomp. (Schultz.)

MnH<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub>. Sol. in H<sub>2</sub>O with decomp. (Schultz.)

**Manganic hydrogen sulphate**, Mn<sub>2</sub>H<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub>+8H<sub>2</sub>O.

Deliquescent. Decomp. by H<sub>2</sub>O. Sol. in dil. H<sub>2</sub>SO<sub>4</sub>+Aq. (Francke, J. pr. (2) 36, 251.)

**Manganous hydrazine sulphate**, MnH<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>.

1 pt. is sol. in 60 pts. H<sub>2</sub>O at 18°  
Stable in the air at 100°. (Curtius, J. pr. 1894, (2) 50, 331)

**Manganous nickel potassium sulphate**, MnSO<sub>4</sub>, NiSO<sub>4</sub>, 2K<sub>2</sub>SO<sub>4</sub>+12H<sub>2</sub>O Sol. in H<sub>2</sub>O (Vohl, A. 94, 57.)

**Manganous potassium sulphate**, K<sub>2</sub>SO<sub>4</sub>, MnSO<sub>4</sub>+2H<sub>2</sub>O.

+1H<sub>2</sub>O. Efflorescent. (Pierre, A. ch. (3) 16, 239.)

2MnSO<sub>4</sub>, K<sub>2</sub>SO<sub>4</sub> (Mallet, C. N. 1899, 80, 301)

**Manganic potassium sulphate**, K<sub>2</sub>Mn<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub>+24H<sub>2</sub>O.

Decomp. by dissolving in H<sub>2</sub>O. (Mitscherlich.)

**Manganomanganic potassium sulphate**, Mn<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>, 5K<sub>2</sub>SO<sub>4</sub>=3Mn(SO<sub>4</sub>)<sub>2</sub>, 2MnSO<sub>4</sub>, 5K<sub>2</sub>SO<sub>4</sub>.

Decomp. by much H<sub>2</sub>O. Sol. in dil. or conc. H<sub>2</sub>SO<sub>4</sub>. Insol. in alcohol or ether. (Francke, J. pr. (2) 36, 166)

**Manganous potassium zinc sulphate**, MnSO<sub>4</sub>, 2K<sub>2</sub>SO<sub>4</sub>, ZnSO<sub>4</sub>+12H<sub>2</sub>O  
Sol. in H<sub>2</sub>O. (Vohl)

**Manganous rubidium sulphate**, MnSO<sub>4</sub>, Rb<sub>2</sub>SO<sub>4</sub>+6H<sub>2</sub>O.

Sol. in H<sub>2</sub>O (Tutton, Chem. Soc. 63, 337.)  
1 l. H<sub>2</sub>O dissolves 357 g. anhydrous salt at 25° (Locke, Am. Ch. J. 1902, 27, 459)

+2H<sub>2</sub>O (Wyruboff, Bull. Soc. Min. 1891, 14, 242.)

2MnSO<sub>4</sub>, Rb<sub>2</sub>SO<sub>4</sub>. (Wyruboff.)

**Manganic rubidium sulphate**, Mn<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>, Rb<sub>2</sub>SO<sub>4</sub>+24H<sub>2</sub>O.

Deliquescent. (Christensen, Z. anorg. 1901, 27, 333)

**Manganous sodium sulphate**, MnSO<sub>4</sub>, Na<sub>2</sub>SO<sub>4</sub>, +2H<sub>2</sub>O. Deliquescent in moist air. (Geiger.)

+4H<sub>2</sub>O. Sol. in 12 pts. boiling H<sub>2</sub>O. (Geiger.)

**Manganous sulphate ammonia**, MnSO<sub>4</sub>, 4NH<sub>3</sub>, Decomp. by H<sub>2</sub>O. (Rose, Pogg. 20, 148.)

**Manganous sulphate cupric oxide**, MnSO<sub>4</sub>, 2CuO+3H<sub>2</sub>O.

(Mailhe, A. ch. 1902, (7) 27, 392.)  
MnSO<sub>4</sub>, 3CuO+2H<sub>2</sub>O (Recoura, C. R. 1901, 132, 1415.)

MnSO<sub>4</sub>, 24CuO+2H<sub>2</sub>O (Recoura.)

**Manganous sulphate hydrazine,  $\text{MnSO}_4 \cdot 2\text{N}_2\text{H}_4$ .**

Very unstable

Somewhat sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Franzen, Z. anorg. 1908, 60, 285.)

**Manganous sulphate hydroxylamine,  $\text{MnSO}_4 \cdot \text{NH}_2\text{OH} + 2\text{H}_2\text{O}$ .**

Insol in  $\text{H}_2\text{O}$ . (Feldt, B 1894, 27, 405)

**Mercurous sulphate, basic,  $2\text{Hg}_2\text{O} \cdot \text{SO}_3 + \text{H}_2\text{O}$ .**

Sol in 25,000 pts.  $\text{H}_2\text{O}$  at  $20^\circ$  (Gouy, C. R. 1900, 130, 1401.)

**Mercurous sulphate,  $\text{Hg}_2\text{SO}_4$ .**

Sol in 500 pts. cold, and 300 pts. hot  $\text{H}_2\text{O}$  (Wackeueroder, A. 41, 319.)

Solubility in  $\text{H}_2\text{O}$  at  $18^\circ = 7.8 \times 10^{-4}$  g. mol. per liter (Wilsmore, Z. phys. Ch 1900, 35, 305.)

1 l.  $\text{H}_2\text{O}$  dissolves  $11.71 \times 10^{-4}$  g.-mol.  $\text{Hg}_2\text{SO}_4$  at  $25^\circ$  (Drucker, Z. anorg. 1901, 28, 362.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	In 100 pts. of the solution	
	$\text{Hg}_2\text{SO}_4$	$\text{H}_2\text{SO}_4$
16.5	0.055	0.008
33	0.060	0.018
50	0.065	0.037
75	0.074	0.063
91	0.084	0.071
100	0.092	0.071

(Barre, A. ch. 1911, (8) 24, 203.)

Solubility in  $\text{H}_2\text{O}$  at  $25^\circ$  is 20% greater than at  $18^\circ$  and  $= 11.71 \times 10^{-4}$  g. mol. per l. By addition of increasing amts. of  $\text{H}_2\text{SO}_4$  the solubility is somewhat, but not regularly, decreased,  $\text{K}_2\text{SO}_4$  lowers solubility less than  $\text{H}_2\text{SO}_4$ . (Drucker, Z. anorg. 1901, 28, 362.)

Easily sol. in dil.  $\text{HNO}_3 + \text{Aq}$ , from which solution it is separated by dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Wackeueroder, A. 41, 319.)

Abundantly sol. in hot, less sol. in cold dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Berzelius.)

Solubility in  $\text{H}_2\text{SO}_4 + \text{Aq}$  at  $25^\circ$ .

$\text{H}_2\text{SO}_4$ normality	g.-mol. $\text{Hg}_2\text{SO}_4$ per litre
0.0400	$8.31 \times 10^{-4}$
0.1000	$8.78 \times 10^{-4}$
0.2000	$8.04 \times 10^{-4}$

(Drucker, Z. anorg. 1901, 28, 362.)

Partially decomp. by hot  $\text{NH}_4$  salts +  $\text{Aq}$  (Miahle, A. ch. (3) 5, 179.)

5 times more sol. in sat.  $\text{CdSO}_4 + \text{Aq}$  than in  $\text{H}_2\text{O}$  (Hulett, Phys. Rev. 1907, 25, 16.)

Sat.  $\text{ZnSO}_4$  or  $\text{CaSO}_4 + \text{Aq}$  attack much less

than pure  $\text{H}_2\text{O}$ , yet the solubility of  $\text{Hg}_2\text{SO}_4$  in these solutions is greater, i. e., 0.8 g. in 1 l.  $\text{ZnSO}_4 + \text{Aq}$  and 1.1 g. in 1 l.  $\text{CdSO}_4 + \text{Aq}$  at  $20^\circ$ . (Gouy, C. R. 1900, 130, 1402.)

Solubility in  $0.2\text{N } \text{K}_2\text{SO}_4 + \text{Aq} = 9.05 \times 10^{-4}$  g. mol. per l. at  $25^\circ$  (Drucker, Z. anorg. 1901, 28, 362.)

Solubility of  $\text{Hg}_2\text{SO}_4$  in  $\text{K}_2\text{SO}_4 + \text{Aq}$ .

$t^\circ$	g. per 100 g. sat. solution		
	$\text{K}_2\text{SO}_4$	$\text{Hg}_2\text{SO}_4$	free $\text{H}_2\text{SO}_4$
15	2.90	0.0475	0.0080
	5.70	0.0703	0.0093

75	3.10	0.1344	0.1681
	5.75	0.2120	0.2135
	8.50	0.2951	0.2514
	13.20	0.4610	0.2503
	17.30	0.6440	0.2225

(Barre, A. ch. 1911, (8) 24, 202.)

About 3 times as sol. in sat.  $\text{ZnSO}_4 + \text{Aq}$  as in distilled  $\text{H}_2\text{O}$ . (Wright, Phil. Mag (5) 1885, 19, 29.)

**Mercuric sulphate, basic,  $2\text{HgO} \cdot \text{SO}_3$ .**

(Mailhe, A. ch. 1902, (7) 27, 394.)

$3\text{HgO} \cdot \text{SO}_3$  (Meneval *in situ*)

Sol in 2000 pts. cold and 600 pts. boiling  $\text{H}_2\text{O}$ . (Fourcroy, A. ch. 10, 307.)

Sol in 43,478 pts.  $\text{H}_2\text{O}$  at  $16^\circ$  when pptd. cold, and in 32,258 pts. at  $16^\circ$  when pptd. at  $100^\circ$ . (Cameron, Z. anal. 19, 144.)

Sl. sol. in warm dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Rose.)

Solubility in  $\text{H}_2\text{O}$  is increased by addition of  $\text{H}_2\text{SO}_4$  up to an acid content of 4.3 mol  $\text{SO}_3$  to 93.7 mols.  $\text{H}_2\text{O}$ . (Hoitsema, Z. phys. Ch. 1895, 17, 665.)

Sol. in warm conc.  $\text{HCl}$  or  $\text{HBr} + \text{Aq}$ . (Ditte)

Sol. in alkali chlorides +  $\text{Aq}$  (Miahle)

Sol. in dil.  $\text{HNO}_3$  or in  $\text{HCl} + \text{Aq}$ . More easily sol. in the warm acids. (Ray, Chem. Soc. 1897, 71, 1099.)

$3\text{HgO} \cdot 2\text{SO}_3 + 2\text{H}_2\text{O}$ . (Hoitsema, Z. phys. Ch. 1895, 17, 659.)

$4\text{HgO} \cdot 3\text{SO}_3$ . (Hopkins, Sil. Am. J. 18, 364.)

**Mercuric sulphate,  $\text{HgSO}_4$ .**

Decomp. by  $\text{H}_2\text{O}$  into  $3\text{HgO} \cdot \text{SO}_3$ , and a sol. acid salt. Sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Decomp. by all acids. (Berzelius.)

Sol in warm conc HCl or HBr + Aq; very al. sol in boiling conc. HCl + Aq (Ditte, A. ch. (5) 17, 121.)

Very sl. sol in hot conc HF (Ditte, A. ch. 1879, (5) 17, 125.)

Sol in HCN + Aq (Mohr.)

Sol. with decomp. in NaCl + Aq (Miahle.)

Insol. in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20, 829.)

Insol. in conc. alcohol.

Insol. in acetone (Naumann, B. 1904, 37, 4329.), methyl acetate. (Naumann, B. 1909, 42, 3790.); ethyl acetate. (Naumann, B. 1910, 43, 314.)

Insol. in benzonitrile (Naumann, B. 1914, 47, 1370.)

Insol. in pyridine. (Schroeder, Dissert. 1901.)

+  $\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Eisfeldt, Pharm Centr 1863, 812.)

**Mercuriomercuric sulphate**,  $\text{Hg}_2\text{O}$ ,  $2\text{HgO}$ ,  $\text{SO}_2$ .

Insol. in cold  $\text{H}_2\text{O}$ ; not decomp. by boiling  $\text{H}_2\text{O}$ . Decomp. by HCl + Aq. (Brooke, Pogg 66, 63.)

$\text{Hg}_2\text{SO}_4$ ,  $\text{HgSO}_4$  (Baskerville, J. Am. Chem. Soc. 1897, 19, 875.)

**Mercuric hydrogen sulphate**,  $\text{HgH}_2(\text{SO}_4)_2$ .

(Braham, C. N. 42, 163.)

**Mercuric potassium sulphate**,  $3\text{HgSO}_4$ ,

$\text{K}_2\text{SO}_4 + 2\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Hirzel, J. B. 1850, 332.)

**Mercuric sulphate chloride ammonium chloride**,  $2\text{HgSO}_4$ ,  $\text{HgCl}_2$ ,  $2\text{NH}_4\text{Cl}$ .

Decomp. with  $\text{H}_2\text{O}$ . Ether dissolves out  $\text{HgCl}_2$ . (Kosmann, A. ch. (3) 27, 238.)

**Mercuric sulphate cyanide**,  $\text{HgSO}_4$ ,  $\text{Hg}(\text{CN})_2$ ,

+  $5\text{H}_2\text{O}$ .

Decomp. by conc. or warm acids. (Rupp, Arch Pharm. 1912, 250, 280.)

**Mercuric sulphate hydrazine**,  $\text{HgSO}_4$ ,  $\text{N}_2\text{H}_4$ .

Ppt. (Hofmann and Marburg, A. 1899, 306, 216.)

**Mercuric sulphate hydrobromide**,  $\text{HgSO}_4$ ,

$2\text{HBr}$ .

Sol. in  $\text{H}_2\text{O}$  without separation of basic sulphate. (Ditte, A. ch. (5) 17, 122.)

$3\text{HgO}$ ,  $\text{SO}_2$ ,  $6\text{HBr}$  Sol. in  $\text{H}_2\text{O}$ . (Ditte.)

**Mercuric sulphate hydrochloride**,  $\text{HgSO}_4$ ,

HCl.

Not attacked by HCl. Sl. sol in  $\text{HNO}_3$ . (Baskerville, J. Am. Chem. Soc. 1901, 23, 895.)

$\text{HgSO}_4$ ,  $2\text{HCl}$ . Sol. in  $\text{H}_2\text{O}$  without separation of a basic salt.

Very sol in warm  $\text{H}_2\text{SO}_4$ , solidifying on cooling if very conc., or crystallising if dil. (Ditte.)

Very deliquescent.

Very sol in  $\text{H}_2\text{O}$  (Baskerville, J. Am. Chem. Soc. 1901, 23, 895.)

+  $\text{H}_2\text{O}$ . (Baskerville, J. Am. Chem. Soc. 1901, 23, 895.)

$3\text{HgO}$ ,  $\text{SO}_2$ ,  $6\text{HCl}$  Sol in  $\text{H}_2\text{O}$ . (Ditte.)

**Mercuric sulphate hydroxylamine**,  $\text{HgSO}_4$ ,

$2\text{NH}_2\text{OH} + \text{H}_2\text{O}$ .

Decomp. by cold  $\text{H}_2\text{O}$ . (Adams, Am. Ch. J. 1902, 28, 209.)

**Mercuric sulphate iodate iodide**,  $6(3\text{HgO}$ ,

$2\text{SO}_2)$ ,  $6\text{HgI}_2$ ,  $\text{Hg}(\text{IO}_3)_2$ .

Decomp. by  $\text{H}_2\text{O}$  and acids. (Bruckner, M. 1907, 28, 961.)

**Mercuric sulphate iodide, basic**,  $3\text{HgO}$ ,  $2\text{SO}_2$ ,

$\text{HgI}_2$ .

$3(3\text{HgO}$ ,  $2\text{SO}_2)$ ,  $2\text{HgI}_2 + 10\text{H}_2\text{O}$ .

$2(3\text{HgO}$ ,  $2\text{SO}_2)$ ,  $\text{HgI}_2 + 10\text{H}_2\text{O}$  Very sol.

in hot conc  $\text{HNO}_3$ .

$3\text{HgO}$ ,  $2\text{SO}_2$ ,  $\text{HgSO}_4$ ,  $\text{HgI}_2 + 10\text{H}_2\text{O}$ .

(Ditte, C. R. 1905, 140, 1167.)

**Mercuric sulphate iodide**,  $\text{HgSO}_4$ ,  $\text{HgI}_2$ .

Decomp. by  $\text{H}_2\text{O}$ , not by alcohol or ether.

(Ruegel, J. B. pr. Pharm. 11, 393.)

$3\text{HgSO}_4$ ,  $\text{HgI}_2$ . Decomp. by cold or hot  $\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{SO}_4$  + Aq (Ditte, C. R. 1905, 140, 1165.)

$4\text{HgSO}_4$ ,  $\text{HgI}_2 + 15\text{H}_2\text{O}$ , and +  $18\text{H}_2\text{O}$  Decomp. by cold or hot  $\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{SO}_4$ . (Ditte.)

**Mercuric sulphate phosphide**.

See Dimercuriphosphonium mercuric sulphate.

**Mercuric sulphate sulphide, basic**,  $2\text{HgO}$ ,

$\text{SO}_2$ ,  $\text{HgS}$ .

Somewhat sol. in HCl,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$ .

(Jacobson, Pogg. 1846, 68, 412.)

$4\text{HgO}$ ,  $3\text{SO}_2$ ,  $2\text{HgS} + 4\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{SO}_4$ . (Estrup, Z. anorg. 1909, 62, 189.)

**Mercuric sulphate sulphide**,  $2\text{HgSO}_4$ ,  $\text{HgS}$ .

Sl. sol in hot HCl,  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3$  + Aq.

Easily sol. in hot aqua regia. (Jacobson, Pogg. 68, 410.)

$2\text{HgSO}_4$ ,  $\text{HgS}$ . (Palm, C. C. 1863, 122.)

$\text{HgSO}_4$ ,  $2\text{HgS}$ . (Barfoed, J. B. 1864, 282.)

Sol. in aqua regia. (Denigès, Bull. Soc. 1915, (4) 17, 355.)

$\text{HgSO}_4$ ,  $3\text{HgS}$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol in aqua regia, decomp. by  $\text{HNO}_3$  into—

$3\text{HgSO}_4$ ,  $\text{HgS}$ . Insol. in all acids except aqua regia (Spring, A. 199, 116.)

**Molybdenum sesquisulphate (?)**.

Basic Insol. in  $\text{H}_2\text{O}$ .

Neutral Decomp. by  $\text{H}_2\text{O}$  into acid and basic salts.

Acid Sol in  $\text{H}_2\text{O}$ . (Berzelius.)

**Molybdenum disulphate (?)**Sol. in  $H_2O$ .**Molybdenum sulphate,  $Mo_2O_3 \cdot 2SO_3$ .**

Very slowly sol. in cold, more quickly sol. in hot  $H_2O$ . (Bailhache, C. R. 1901, 132, 476.)  
 $7MoO_3 \cdot 2MoO_3 \cdot 7SO_3 + Aq$  (Péchar, C. R. 1901, 132, 630.)

**Molybdic sulphate,  $MoO_3 \cdot SO_3$ .**Deliquescent. Sol. in  $H_2O$ . (Schultz-Sellack, B. 4, 14.)

$MoO_3 \cdot 3SO_3 + 2H_2O$ . Deliquescent. Partially sol. in  $H_2O$  (Anderson, Berz. J. B. 22, 161.)

Does not exist (Schultz-Sellack.)

**Molybdenum sulphate ammonia,** $5NH_3 \cdot MoO_3SO_3 \cdot 7MoO_3 + 8H_2O$ . $3NH_3 \cdot MoO_3SO_3 \cdot 7MoO_3 + 10H_2O$ 

Both very sol. in water but less sol. in  $H_2O$  containing ammonium salts (Péchar, C. R. 1901, 132, 630.)

**Neodymium sulphate, basic,  $Nd_2O_3 \cdot SO_3$ .**Insol. in  $H_2O$ .

Nearly insol. in dil. acids. (Wöhler, B. 1913, 46, 1730.)

Insol. in  $H_2O$  (Matignon, C. R. 1902, 134, 658.)**Neodymium sulphate,  $Nd_2(SO_4)_3 + 8H_2O$ .**Solubility in 100 pts.  $H_2O$  at  $t^\circ$ .

$t^\circ$	pts. $Nd_2(SO_4)_3$
0	9.50
16	7.05
30	5.04
50	3.72
80	2.70
100	2.21

(Muthmann and Rohg, B. 1898, 31, 1728.)

**Neodymium hydrogen sulphate,  $Nd(SO_4H)_3$ .**

(Brauner, Z. anorg. 1904, 38, 331.)

**Neodymium potassium sulphate.**

Cryst. modification more sol. in cold than in hot  $H_2O$ . (Boudouard, C. R. 1898, 126, 901.)

**Nickel sulphate, basic.**Very sl. sol. in  $H_2O$ . (Berzelius.) $6NiO \cdot 5SO_3 + 4H_2O$ . (Athanasesco, C. R. 103, 271.) $7NiO \cdot 7H_2O \cdot SO_3 + 3H_2O$ . Nearly insol. in  $H_2O$ . (Habermann, M. 5, 432.) $5NiO \cdot SO_3 \cdot 5NiO \cdot 2SO_3$ ; and  $5NiO \cdot 3SO_3$ . (Pickering, Chem. Soc. 1907, 91, 1985.) $6NiO \cdot SO_3$ . (Strömholm, C. C. 1906, 1, 1222.)**Nickel sulphate,  $NiSO_4$ .**100 pts.  $H_2O$  dissolve pts.  $NiSO_4$  at  $t^\circ$ 

20°	16°	20°	23°	31°
30.4	37.4	39.7	41	45.3 pts $NiSO_4$

41°	50°	53°	60°	70°
49.1	52	54.4	57.2	61.9 pts $NiSO_4$

(Tobler, A. 95, 193.)

100 pts. of sat. solution contain: at 11-14°, 28.84; at 18-20°, 30.77 pts anhydrous salt. (v. Hauer, W. A. B. 63, 2, 221.)

100 pts.  $H_2O$  at 112.5° dissolve 185.71 pts  $NiSO_4$ . (Griffiths.) $NiSO_4 \cdot 7H_2O$  is sol. in 3 pts.  $H_2O$  at 12.5° (Tupputi.)100 pts.  $H_2O$  at 15.5° dissolve 75.8 pts  $NiSO_4 + 7H_2O$ Sat.  $NiSO_4 + Aq$  contains at:

—3° +2° 5° 11° 17° 54°

21.7 22.7 23.1 25.2 26.6 33.6%  $NiSO_4$ .

68° 74° 92° 97° 110° 117° 119°

38.2 38.7 42.4 44.2 46.5 48.8 49.4%  $NiSO_4$ .

(Étard, A. ch. 1894, (7) 2, 552.)

See also below under hydrated salts.

Sp. gr. of  $NiSO_4 + Aq$  containing g.  $NiSO_4 + 7H_2O$  in 1000 g.  $H_2O$  at 23.5°

140.5 g. (= 1/2 mol.)	281	421.5	562

85	1.93	3.6	755	241

(de Bruyn, R. t. c. 1903, 22, 418.)

This salt is more sol. in ethyl alcohol than in methyl alcohol.

See also under hydrated salts

For solubility of  $\text{NiSO}_4$  in ethyl alcohol, see under hydrated salts.

100 g. sat. solution in glycol contain 9.7 g.  $\text{NiSO}_4$  at ord. temp. (de Coninck, Bull. Ac. Roy. Belg. 1906, 359.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790); ethyl acetate, (Naumann, B. 1904, 37, 3602.)

Very sl. sol. in acetone. (Krug and McElroy.)

Insol. in acetone. (Naumann, B. 1904, 37, 4329; Eidmann, C. C. 1899, II, 1014).

+ $\text{H}_2\text{O}$ . Very sl. sol. in abs. methyl alcohol. After standing in contact with it for 8–9 months, the solution contains 1.34%  $\text{NiSO}_4$ . (de Bruyn, R. t. c. 1903, 22, 414.)

+ $2\text{H}_2\text{O}$ . Cryst. from sat.  $\text{NiSO}_4 + \text{Aq}$  at 131°. (Steele and Johnson.)

+ $4\text{H}_2\text{O}$ . Solubility in methyl alcohol +  $\text{Aq}$  at 10°. Time = 24 hrs. P = % anhydrous salt in the sat. solutions.

Alcohol of 100% 80% 50% 20% water  
P 7.38 0.66 1.43 14.8 25.1

(de Bruyn, R. t. c. 1903, 22, 414.)

+ $6\text{H}_2\text{O}$ . Two modifications.  $\alpha$ -blue, tetragonal;  $\beta$ -green, monoclinic.

Solubility of  $\alpha$ - $\text{NiSO}_4 \cdot 6\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at t°.

Salt used	t°	% $\text{NiSO}_4$ in 100 g $\text{H}_2\text{O}$	Salt remaining

100 g. absolute ethyl alcohol dissolves 1.3 g. NiSO<sub>4</sub> + 7H<sub>2</sub>O at 4°, and 2.2 g. at 17°. (de Bruyn, Z. phys. Ch. 10, 788)  
Min. *Morenoensis*

**Nickel hydrazine sulphate**, NiH<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>, 2N<sub>2</sub>H<sub>4</sub>.

1 pt. is sol in 275.5 pts. H<sub>2</sub>O at 18°. Sol in hot H<sub>2</sub>O. Sol in HNO<sub>3</sub> with decomp.; insol. in HCl. Sol. in NH<sub>4</sub>OH + Aq. (Curcius, J. pr. 1894, (2) 50, 331.)

**Nickel potassium sulphate**, NiSO<sub>4</sub>, K<sub>2</sub>SO<sub>4</sub> + 6H<sub>2</sub>O.

Sol. in 8-9 pts. H<sub>2</sub>O (Tuppen.)

100 pts. H<sub>2</sub>O dissolve at:

0° 10° 14° 20° 30°  
5.3 8.9 10.5 13.8 18.6 pts. anhydrous salt,

36° 40° 55° 60° 75°

20.4 27.7 32.4 35.4 45.6 pts. anhydrous salt.

(Tobler, A. 95, 193.)

Saturated solution contains at:

20° 40° 60° 80°

8.7 12.3 17.6 22.0% anhydrous salt.

(v. Hauer, J. pr. 74, 433.)

1 l. H<sub>2</sub>O dissolves 68.8 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27, 459.)

**Nickel potassium zinc sulphate**, NiSO<sub>4</sub>, 2K<sub>2</sub>SO<sub>4</sub>, ZnSO<sub>4</sub> + 12H<sub>2</sub>O.

Sol in H<sub>2</sub>O. (Vohl, A. 94, 51.)

**Nickel rubidium sulphate**, NiSO<sub>4</sub>, Rb<sub>2</sub>SO<sub>4</sub> + 6H<sub>2</sub>O.

Sol in H<sub>2</sub>O. (Tutton, Chem. Soc. 63, 337)  
1 l. H<sub>2</sub>O dissolves 90.8 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27, 459.)

**Nickel sodium sulphate**, NiNa<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub> + 4H<sub>2</sub>O.

Solubility of NiNa<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub> · 4H<sub>2</sub>O in 100 g. H<sub>2</sub>O at t°.

40	7 245	49 03

(Koppel.)

**Nickel thallium sulphate**, NiSO<sub>4</sub>, Tl<sub>2</sub>SO<sub>4</sub> + 6H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O. Can be recryst. from little H<sub>2</sub>O without decomp. (Werther, J. pr. 92, 132.)

1 l. H<sub>2</sub>O dissolves 46.1 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27, 459.)

**Nickel zinc sulphate**, NiSO<sub>4</sub>, ZnSO<sub>4</sub> + 13H<sub>2</sub>O.

Sol. in 3-4 pts. cold H<sub>2</sub>O. Insol. in alcohol. (Tuppen, 1811.)

Completely sol. in NH<sub>4</sub>OH + Aq.  
2NiSO<sub>4</sub>, 2ZnSO<sub>4</sub>, H<sub>2</sub>SO<sub>4</sub>. (Étard, C. R. 87, 602.)

**Nickel sulphate ammonia,  $\text{NiSO}_4 \cdot 6\text{NH}_3$ .**

Sol. in  $\text{H}_2\text{O}$  with separation of hydroxide (Rose, Pogg. 20. 151.)

$\text{NiSO}_4 \cdot 5\text{NH}_3 + 3\frac{1}{2}\text{H}_2\text{O}$ . Deliquescent.

(André, C. R. 106. 936.)

$\text{NiSO}_4 \cdot 4\text{NH}_3 + 2\text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$ . Can be recrystallized out of little  $\text{H}_2\text{O}$ . Insol. even in dil. alcohol. (Erdmann.)

**Nickel sulphate cupric oxide,  $\text{NiSO}_4 \cdot 2\text{CuO} + 6\text{H}_2\text{O}$ .**

(Mailhe, Bull. Soc. 1902, (3) 27. 172.)

$2\text{NiSO}_4 \cdot 3\text{CuO} + 10\text{H}_2\text{O}$ , and  $+12\text{H}_2\text{O}$

(Mailhe.)

$5\text{NiSO}_4 \cdot 16\text{CuO} + x\text{H}_2\text{O}$  (Recoura, C. R. 1901, 132. 1415.)

$\text{NiSO}_4 \cdot 20\text{CuO} + x\text{H}_2\text{O}$  (Recoura.)

**Nickel sulphate, hydrazine,  $\text{NiSO}_4 \cdot 3\text{N}_2\text{H}_4$ .**

Ppt. (Curtius, J. pr. 1894, (2) 50. 343.)

**Nickel sulphate hydroxylamine,  $\text{NiSO}_4 \cdot 6\text{NH}_2\text{OH}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Uhlenhut, A. 1899, 307. 334.)

**Nitrosyl sulphate,  $\text{H}(\text{NO})\text{SO}_4$ .**

See Nitrosulphonic acid.

**Osmious sulphate.**

Easily sol. in  $\text{H}_2\text{O}$  and alcohol.

**Osmic sulphate.**

Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Palladous sulphate, basic,  $\text{PdSO}_4 \cdot 7\text{PdO} + 6\text{H}_2\text{O}$ , and  $10\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ . (Kane.)

**Palladous sulphate,  $\text{PdSO}_4 + 2\text{H}_2\text{O}$ .**

Deliquescent in moist air; very sol. in  $\text{H}_2\text{O}$ , but decomp. by much  $\text{H}_2\text{O}$ , with separation of a basic salt. (Kane.)

**Phosphoryl sulphate,  $(\text{PO})_2(\text{SO}_4)_2$  (?).**

Possible composition of Weber's (B. 20. 86)  $\text{P}_2\text{O}_5 \cdot 3\text{SO}_3$  (?).

$3\text{P}_2\text{O}_5 \cdot 2\text{SO}_3$ . Immediately decomp. by  $\text{H}_2\text{O}$ . (Adie, C. N. 1891, 63. 102.)

**Platinic sulphate,  $\text{Pt}(\text{SO}_4)_2$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohol, or ether; also in  $\text{H}_3\text{PO}_4$ ,  $\text{HCl}$ , and  $\text{HNO}_3 + \text{Aq}$ . (Berzelius.)

$\text{H}_2\text{PtO}_4 \cdot 8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Blondel, A. ch. 1905, (8) 6. 109.)

$\text{PtO}_3 \cdot 8\text{H}_2\text{O} + 4\text{H}_2\text{O}$ . Ppt. Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{SO}_4$ .

$\text{PtSO}_4(\text{OH})_2 \cdot 4\text{Pt}(\text{OH})_4 + 3\text{H}_2\text{O}$ . Ppt (Prost, Bull. Soc. (2) 46. 156.)

$\text{Pt}_2\text{SO}_{10} + 16\text{H}_2\text{O}$ . As above. (Prost.)

**Platinum hydroxylamine sulphate,  $\text{Pt}(\text{NH}_2\text{OH})_2\text{SO}_4$ .**

Only sl. sol. in  $\text{H}_2\text{O}$ , sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Uhlenhut, A. 1900, 311. 123.)

**Platinic potassium sulphate, basic.**

Insol. in boiling  $\text{H}_2\text{O}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{H}_3\text{PO}_4$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . Easily sol. in boiling  $\text{HCl} + \text{Aq}$ . Sl. decomp. by aqua regia (B. Davy.)

$\text{Pt}_{10}(\text{SO}_4)_2\text{O}_{19} \cdot 3\text{K}_2\text{SO}_4 + 34\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  (Prost, Bull. Soc. (2) 46. 156.)

$\text{Pt}_{18}(\text{SO}_4)_3\text{O}_{23} \cdot 5\text{K}_2\text{SO}_4 + 34\text{H}_2\text{O}$ . As above. (Prost.)

**Platinum rubidium sulphate,  $\text{Pt}_4\text{Rb}_6(\text{SO}_4)_4 + 17\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Prost, Bull. Soc. (2) 46. 156.)

**Platinum sulphate sulphocarbamide,  $\text{PtSO}_4 \cdot 4\text{CS}(\text{NH}_2)_2$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in conc.  $\text{H}_2\text{SO}_4$  without decomp. (Kurnakow. J. pr. 1894, (2) 50. 489.)

**Potassium sulphate,  $\text{K}_2\text{SO}_4$ .**

Not hygroscopic in the ordinary sense of the word. 100 pts  $\text{K}_2\text{SO}_4$  over  $\text{H}_2\text{O}$  at  $14-20^\circ$  absorb 58 pts  $\text{H}_2\text{O}$  in 22 days, and finally deliquesce completely (Mulder.)

12 pts  $\text{K}_2\text{SO}_4$  mixed with 100 pts.  $\text{H}_2\text{O}$  lower the temp.  $3.3^\circ$  (Rüdorff, B. 2. 68.)

100 pts  $\text{H}_2\text{O}$  dissolve with absorption of heat at  $0^\circ$ .

8.36 pts.  $\text{K}_2\text{SO}_4$ . (Gay-Lussac.)

8.46 " (Mulder.)

8.5 " (Gerardin.)

7.31 " (Möller, Pogg. 117. 386.)

7.3-7.9 " (Nordenskiöld, Pogg. 136. 314.)

100 pts  $\text{H}_2\text{O}$  at  $0^\circ$  dissolve 8.36 pts.  $\text{K}_2\text{SO}_4$ , at  $12.72^\circ$ , 10.57 pts., at  $49.08^\circ$ , 16.91 pts., at  $63.90^\circ$ , 19.29 pts., at  $101.50^\circ$ , 26.33 pts. (Gay Lussac, A. ch. (2) 11. 311.)

Solubility in 100 pts  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Pts. $\text{K}_2\text{SO}_4$	$t^\circ$	Pts. $\text{K}_2\text{SO}_4$
0	7.8	47.0	16.0
15.65	10.3	70.2	20.3
28.1	12.8	98.0	23.9

(Nordenskiöld, Pogg. 136. 341.)

100 pts. sat.  $\text{K}_2\text{SO}_4$  at  $101.7^\circ$  contain 17.5 pts.  $\text{K}_2\text{SO}_4$ , or 100 pts  $\text{H}_2\text{O}$  at  $101.25^\circ$  dissolve 21.212 pts.  $\text{K}_2\text{SO}_4$ . (Griffiths.)

100 pts  $\text{H}_2\text{O}$  at  $102.8^\circ$  dissolves 29 pts.  $\text{K}_2\text{SO}_4$  (Penny); at  $15^\circ$ , 7.3-8.23 pts. (Ure's Diet.), at  $100^\circ$ , 20 pts (Ure's Diet.); at  $100^\circ$ , 24.2 pts. (Weasel)

Sol. in 9.081 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Gerlach); in 16 pts. at  $15^\circ$ , and 5 pts. at  $100^\circ$  (Bergmann); in 18 pts. cold, and 5 pts. boiling  $\text{H}_2\text{O}$  (Fourcroy); in 15 pts. cold, and 5 pts. boiling  $\text{H}_2\text{O}$  (Reid); in 12 pts.  $\text{H}_2\text{O}$  at  $0^\circ$ , and 4 pts. boiling  $\text{H}_2\text{O}$  (M. R. and P.), in 12 pts  $\text{H}_2\text{O}$  at  $18.75^\circ$  (Abl.)

$\text{K}_2\text{SO}_4$  sat. at  $16^\circ$  has sp. gr. = 1.0774, and contains 10.055 pts  $\text{K}_2\text{SO}_4$  in 100 pts  $\text{H}_2\text{O}$  (Michel and Krafft, A. ch. (3) 41. 478.)

100 pts.  $\text{H}_2\text{O}$  dissolve 9.26 pts.  $\text{K}_2\text{SO}_4$  at  $15.6^\circ$ , and sat. solution has sp. gr. = 1.177. (Page and Keightley, Chem. Soc. (2) 10. 566.)

(D'Ans and Schreiner, Z. anorg. 1910, 67. 438.)

Sol. in sat.  $NH_4Cl + Aq$  without pptn. (See  $NH_4Cl$ .)

Sl. sol. in sat.  $KCl + Aq$  without pptn. 100 g. sat  $KCl + Aq$  at  $25^\circ$  dissolve 0.0167 g. equiv.  $K_2SO_4$  at  $25^\circ$  (Van't Hoff and Meyerhoffer Z. phys. Ch. 1904 49. 315.)

Sl. sol. in sat.  $KNO_3 + Aq$  without causing pptn.

1 l. of the solution contains 50.7 g.  $K_2SO_4 + 216.5$  g.  $KNO_3 = 267.2$  g. mixed salts at  $15^\circ$  Sp. gr.  $K_2SO_4 + KNO_3 + Aq = 1.165$ .

1 l. of the solution contains 47.66 g.  $K_2SO_4 + 308.5$  g.  $KNO_3 = 356.2$  g. mixed salts at  $25^\circ$ . Sp. gr.  $(NH_4)_2SO_4 + KNO_3 + Aq = 1.210$ . (Euler, Z. phys. Ch. 1904, 49. 313.)

See also under  $KNO_3$ .

Sol. in sat.  $NaNO_3 + Aq$  without causing pptn. at first, but soon  $KNO_3$  is pptd. (Karsten.) (See  $NaNO_3$ .)

Sol. in  $(NH_4)_2SO_4 + Aq$  with pptn. of  $(NH_4)_2SO_4$ . (Rüdorff, B. 6. 485) (See  $(NH_4)_2SO_4$ .)

More sol. in aqueous solutions of other salts, as  $Na_2SO_4$ ,  $MgSO_4$ ,  $CuSO_4$ , etc., than in pure  $H_2O$ . (Pfaff, A. 99. 227.)

Sol. in sat.  $Na_2SO_4 + Aq$ ,  $MgSO_4 + Aq$ ,  $NaCl + Aq$ . (See  $MgSO_4$  and  $NaCl$ .)

Solubility of  $K_2SO_4$  in  $Na_2SO_4 + Aq$ .

Temp $-34^\circ$		Temp $-60^\circ$	
% $Na_2SO_4$	% $K_2SO_4$	% $Na_2SO_4$	% $K_2SO_4$
0	11.9	0	15.3
7.1	10.7	6.6	13.9
31.4	4.3	27.1	8.2
33.1	0	31.3	0

(Nacken, B. A. B. 1910. 1016.)

100 g.  $H_2O$  sat. with both  $K_2SO_4$  and  $Th_2SO_4$  dissolve.

4.74 g.  $Th_2SO_4 + 10.3$  g.  $K_2SO_4$  at  $15^\circ$ .

11.5 g. " + 16.4 g. " "  $62^\circ$ .

18.52 g. " + 26.2 g. " "  $100^\circ$ .

(Rabe, Z. anorg. 1902, 31. 156.)

Sl. sol. in sat.  $ZnSO_4$  or  $CuSO_4 + Aq$  with separation of double salt.

100 pts.  $H_2O$  dissolve 8.5 + 0.12 pts  $K_2SO_4$ . On addition of a K salt,  $K_2SO_4$  is pptd. The amount of  $K_2SO_4$  remaining in solution plus the amt of K in the salt added is a constant (Blarez, C. R. 112. 939.)

Solubility of  $K_2SO_4 + Th(SO_4)_2$  at  $16^\circ$ .Solid phase,  $Th(SO_4)_2$

(Barre, C. R. 1911, 150. 1555.)

Difficultly sol. in 20%  $KC_2H_3O_2 + Aq$ . (Stromeyer)

Solubility in K acetate + Aq at  $25^\circ$ .

Composition of the solutions		
% K acetate	% $K_2SO_4$	% $H_2O$
6.11	6.65	87.24
8.68	5.09	86.23
11.29	3.99	84.72
15.59	2.35	82.06
20.12	1.23	78.65
29.95	0.39	69.66

The solid phase in these solutions is  $K_2SO_4$ .

(Fox, Chem. Soc. 1909, 95. 885.)

100 g. hydroxylamine dissolve 3.5 g.  $K_2SO_4$  at  $17-18^\circ$ . (de Bruyn, Z. phys. Ch. 1892, 10. 782.)

Easily sol. in liquid HF. (Franklin, Z anorg 1905, 46, 2)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am Ch. J. 1898, 20, 829)

Neither dissolved nor attacked by liquid  $\text{NO}_2$ . (Frankland, Chem. Soc 1901, 79, 1361)

Insol. in absolute alcohol.

Insol. in alcohol, the sp gr. of which is 0.905 (Anthon)

Solubility in dil. alcohol increases with the temp

100 pts. alcohol of 0.039 sp. gr. (53% by vol., 45% by weight) dissolve at:

4° 8° 60°  
0.16 0.21 0.92 pts.  $\text{K}_2\text{SO}_4$ .

(Gerardin, A. ch. (4) 5, 147.)

100 pts. of the sat. solution at 15° in alcohol of:

10 20 30 40% by weight,  
contain 3.9 1.40 0.56 0.21 pts.  $\text{K}_2\text{SO}_4$ .

(Schiff, A. 118, 362.)

(Fox and Gage, Chem Soc. 1910, 97. 381.)

Sol. in 76 pts glycerine of 1.225 sp. gr. at ordinary temp. (Vogel, N. Repert. 16. 557.)

Insol. in acetone. (Krug and M'Elroy; Eidman, C. C. 1899, II. 1014.)

Insol. in CS<sub>2</sub> (Arclovski, Z. anorg. 1894, 6. 257); benzonitrile (Naumann, B. 1914, 47. 1370); methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate (Naumann, B. 1904, 37. 3802.)

100 g H<sub>2</sub>O dissolve 104 g. K<sub>2</sub>SO<sub>4</sub> + 219.0 g. sugar at 31.25°, or 100 g sat solution contain 3.8 g. K<sub>2</sub>SO<sub>4</sub> + 66.74 g. sugar (Köhler, Z. Ver. Zuckerind. 1897, 47. 447.)

Min. *Glauberite*  
+ 1½ H<sub>2</sub>O. 100 pts H<sub>2</sub>O dissolve 9.82 pts (Omer, C. R. 82. 1055.)

**Tripotassium hydrogen sulphate, K<sub>3</sub>H(SO<sub>4</sub>)<sub>2</sub>.**  
Sol. in H<sub>2</sub>O.

**Potassium hydrogen sulphate, KHSO<sub>4</sub>.**

1.07 pts. KHSO<sub>4</sub> (= 1 pt. K<sub>2</sub>S<sub>2</sub>O<sub>7</sub>) dissolve:

at 0° in 2.95 pts. H<sub>2</sub>O.

" 20° " 2.08 "

" 40° " 1.59 "

" 100° " 0.88 "

(Kremers, Pogg. 92. 497.)

Sp. gr. of KHSO<sub>4</sub> + Aq at 15° containing:

5 10 15 % KHSO<sub>4</sub>

1.0354 1.0726 1.1116

20 25 27% KHSO<sub>4</sub>

1.1516 1.1920 1.2110

(Kohlrausch, W. Ann. 1879. 1.)

Sat. solution boils at 105.5° (Griffiths); 108° (Kremers).

Alcohol dissolves out H<sub>2</sub>SO<sub>4</sub>.

K<sub>2</sub>SO<sub>4</sub> crystallises from dilute solutions.

100 g. 95% formic acid dissolve 14.6 g. KHSO<sub>4</sub> at 19.3° (Aschan, Ch. Ztg. 1913, 37. 1117.)

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Min. *Misinate*.

+ 5½ H<sub>2</sub>O. Deliquescent. (Senderens, Bull. Soc. (3) 2. 278.)

**Potassium dihydrogen sulphate, K<sub>2</sub>H<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>.**

Sol. in H<sub>2</sub>O. (Phillips, Phil. Mag. 1. 429.)

Composition is 4K<sub>2</sub>O, 7SO<sub>3</sub> + 3H<sub>2</sub>O, according to Beithelot (A. ch. (4) 80. 442.)

**Potassium trihydrogen sulphate, KH<sub>3</sub>(SO<sub>4</sub>)<sub>2</sub>.**

Sol. in H<sub>2</sub>O with rise of temperature. (Schultz, Pogg. 133. 137.)

+ 1½ H<sub>2</sub>O. (Lescœur, C. R. 78. 1044.)

**Potassium disulphate (pyrosulphate), K<sub>2</sub>S<sub>2</sub>O<sub>7</sub>.**

When dissolved in exactly the necessary amount of hot H<sub>2</sub>O for solution, it crystallises on cooling without decomp. Decomp. by excess of H<sub>2</sub>O. (Jacquelin, A. ch. 70. 311.)

Insol. in methyl acetate. (Naumann, B. 1909. 42. 3790.)

**Potassium hydrogen disulphate, KHS<sub>2</sub>O<sub>7</sub>.**

Sol. in fuming H<sub>2</sub>SO<sub>4</sub> without decomposition

**Potassium octosulphate, K<sub>2</sub>S<sub>8</sub>O<sub>22</sub>.**

Decomp. by H<sub>2</sub>O (Weber.)

**Potassium praseodymium sulphate, 3K<sub>2</sub>SO<sub>4</sub>,**

Pr<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub> + H<sub>2</sub>O

Sl. sol. in H<sub>2</sub>O.

Sol. in conc. HCl and HNO<sub>3</sub> (Von Scheele, Z. anorg. 1898, 18. 358.)

**Potassium rhodium sulphate, 3K<sub>2</sub>SO<sub>4</sub>,**

Rh<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.

Does not exist (Leidie, C. R. 107. 234.)

K<sub>2</sub>SO<sub>4</sub>, Rh<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub> + 24H<sub>2</sub>O. Very sol. in H<sub>2</sub>O. (Piccini, Z. anorg. 1901, 27. 66.)

**Potassium samarium sulphate, 9K<sub>2</sub>SO<sub>4</sub>,**

2Sm<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub> + 3H<sub>2</sub>O.

Sl. sol. in H<sub>2</sub>O.

Sl. sol. in sat. K<sub>2</sub>SO<sub>4</sub> + Aq.

1 l. sat. K<sub>2</sub>SO<sub>4</sub> + Aq. dissolves 0.5 g. Sm<sub>2</sub>O<sub>3</sub>. (Cleve, Bull. Soc. (2) 43. 166.)

**Potassium scandium sulphate, 3K<sub>2</sub>SO<sub>4</sub>,**

Sc<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>.

Very slowly sol. in cold, more easily sol. in warm H<sub>2</sub>O. Insol. in sat. K<sub>2</sub>SO<sub>4</sub> + Aq.

Sol. in H<sub>2</sub>O and in dil. K<sub>2</sub>SO<sub>4</sub> + Aq. (Meyer, Z. anorg. 1914, 86. 279.)

2K<sub>2</sub>SO<sub>4</sub>, Sc<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>. Sol. in K<sub>2</sub>SO<sub>4</sub> + Aq. (Cleve.)

Does not exist. (Nilson.)

**Potassium sodium sulphate, 3K<sub>2</sub>SO<sub>4</sub>, Na<sub>2</sub>SO<sub>4</sub>.**

100 pts. H<sub>2</sub>O dissolve 40.8 pts. at 103.5°. (Penny, Phil. Mag. (4) 10. 401.)

5K<sub>2</sub>SO<sub>4</sub>, Na<sub>2</sub>SO<sub>4</sub>. 100 pts. H<sub>2</sub>O at 100° dissolve 25 pts.; at 12.7°, 10.1 pts.; at 4.4°, 9.2 pts. (Gladstone, Chem. Soc. 6. 111.)

**Potassium strontium sulphate,  $K_2Sr_2(SO_4)_2$ .**

Decomp. by  $(NH_4)_2CO_3 + Aq.$  (Rose. Pogg. 33. 604.)

$K_2SO_4, SrSO_4$ . This is the only double salt formed from these two components between  $0^\circ$  and  $100^\circ$

100 pts of the sat. solution in equilibrium with  $SrSO_4$  and the double salt contain at.

17.5° 50° 75° 100°

1.27 1.88 2.71 3.9 pts.  $K_2SO_4$ .

(Barre, C. R. 1909, 149. 292.)

**Potassium tellurium sulphate,  $KHSO_4, 2TeO_3, SO_3 + 2H_2O$ .**

(Metzner, A. ch. 1898, (7) 15. 203.)

**Potassium terbium sulphate.**

Easily sol. in  $H_2O$ . Sl. sol. in  $K_2SO_4 + Aq$  (Delafontaine, Zent. Chem. (2) 2. 230.)

**Potassium thallic sulphate,  $KTI(SO_4)_2 + 4H_2O$ .**

Decomp. by  $H_2O$ . (Fortini, Gazz. ch. it. 1905, 35. (2) 453.)

$2K_2O, TI_2O_3, 4SO_3$ . Insol. in  $H_2O$ . Very difficultly sol. in warm dil.  $H_2SO_4 + Aq$  (Strecker, A. 135. 207.)

**Potassium thorium sulphate,  $K_2SO_4, Th(SO_4)_2 + 4H_2O$ .**

Sol. in hot  $H_2O$  containing a few drops  $HCl$  (Barre, A. ch. 1911, (8) 24. 227.)

$2K_2SO_4, Th(SO_4)_2 + 2H_2O$ . Slowly sol. in cold, easily and abundantly in hot  $H_2O$ , and is gradually decomp. by boiling. Easily sol. in acids. Insol. in alcohol (Berzelius.)

$3K_2SO_4, Th(SO_4)_2$ . Insol. in  $K_2SO_4 + Aq$  of concentrations above 4.5%. (Barre.)

$4K_2SO_4, Th(SO_4)_2 + 2H_2O$  (Chydenius.)

**Potassium tin (stannous) sulphate,  $K_2SO_4, SnSO_4$ .**

(Marignac.)

**Potassium tin (stannic) sulphate,  $K_2Sn(SO_4)_2$ .**

Easily sol. in  $H_2O$  with decomp. Sol. in  $HCl$ . (Weinland, Z. anorg. 1907, 54. 250.)

**Potassium tin (stannous) sulphate chloride,  $4K_2SO_4, 4SnSO_4, SnCl_2$ .**

Can be recrystallised from  $H_2O$ . (Marignac, Ann. Min. (5) 12. 62.)

**Potassium titanium sulphate,  $K_2SO_4, Ti(SO_4)_2 + 3H_2O$ .**

Difficultly sol. in  $H_2O$  or  $HCl + Aq$ . Decomp. by much  $H_2O$ . (Wallace, Pogg. 102. 453.)

**Potassium titanyl sulphate,  $2K_2SO_4, 3TiO, SO_3 + 10H_2O$ .**

Very sol. in  $H_2O$  with decomp. Insol. in conc.  $H_2SO_4$ . (Rosenheim, Z. anorg. 1901, 28. 251.)

$K_2SO_4, TiO_2SO_4 + 7H_2O$ . Very hygroscopic and sol. in  $H_2O$ . (Mazzuchelli and Pontanelli, C. C. 1909, II. 420.)

$K_2SO_4, (ThO)_2SO_4$  (Spence, C. C. 1901, II. 747.)

**Potassium uranous sulphate,  $K_2SO_4, U(SO_4)_2 + H_2O$ .**

Very al. sol. in  $H_2O$ . (Rammelsberg.)

**Potassium uranyl sulphate,  $K_2SO_4, (UO_2)_2SO_4 + 2H_2O$ .**

Sol. in 9 pts.  $H_2O$  at  $22^\circ$  and in 0.51 pt. at  $100^\circ$ . Insol. in alcohol. (Ebelmen, A. ch. (3) 5. 211.)

100 pts of aqueous solution sat. at  $25^\circ$  contain 10.5 pts. salt, at  $70^\circ$  contain 23.93 pts. salt. (Rumbach, B. 1904, 37. 478.)

$+ 3H_2O$ . (de Coninck, Chem. Soc. 1905, 88. (2) 394.)

$2K_2SO_4, (UO_2)_2SO_4 + 2H_2O$ . Decomp. by  $H_2O$ .

Cannot be cryst. from rather conc.  $H_2SO_4$ , as it is completely decomp. by it. (Rimbach, B. 1905, 38. 1572.)

$K_2O, 2UO_2, 3SO_3$ . Ppt. Identical with  $UO_2, OK, SO_3H$  of Scheller, (A. 1867, 144. 238.) (Kohlschütter, A., 1900, 311. 11.)

$2K_2SO_4, 3(UO_2)_2SO_4 + H_2O$ . Sol. in  $H_2O$  Insol. in alcohol (Berzelius.)

Does not exist. (Ebelmen.)

**Potassium vanadium sulphate,  $K_2O, V_2O_5, 2SO_3 + 6H_2O = K(VO)_2SO_4 + 3H_2O$ .**

(Friedheim, B. 24. 1183.)

$= KVO_3, K_2SO_4, V_2O_5, 2SO_3 + 9H_2O$  of Münzing (Berlin, Dissert. 1889).

$K_2SO_4, VSO_4 + 6H_2O$ . Sol. in  $H_2O$ . (Piccini, Z. anorg. 1902, 32. 61.)

$K_2V_2(SO_4)_3 + 24H_2O$ . 100 pts.  $H_2O$  dissolve 198.4 pts. salt. at  $10^\circ$ . Sp. gr. of sat. solution at  $4^\circ/20^\circ = 1.782$ . (Piccini, Z. anorg. 1897, 13. 446.)

**Potassium vanadyl sulphate,  $K_2SO_4, (VO)_2(SO_4)_2$ .**

Very slowly sol. in  $H_2O$ , still less sol. in dil. alcohol. (Gerland.)

$K_2SO_4, VOSO_4 + 3H_2O$ . Easily sol. in  $H_2O$ . Sol. in alcohol + conc.  $H_2SO_4$ . (Koppel, Z. anorg. 1903, 35. 178.)

$K_2SO_4, 2VOSO_4$ . Very hygroscopic. Very sol. in  $H_2O$  but goes into solution slowly.

(Koppel and Behrendt, B. 1901, 34. 3935.)

Easily sol. in  $H_2O$ . (Koppel, Z. anorg. 1903, 35. 174.)

**Potassium yttrium sulphate,  $4K_2SO_4, Y_2(SO_4)_3$ .**

Sol. in 16 pts. cold  $H_2O$ , and in 10 pts. sat.  $K_2SO_4 + Aq$ , and more abundantly if the latter solution contains ammonium salts or free acid (Berlin.)

$3K_2SO_4, 2Y_2(SO_4)_3$ . 100 ccm. cold sat.

$K_2SO_4 + Aq$  dissolve an amount of this salt corresponding to 4.685 g.  $K_2O_3$ . (Cleve)

**Potassium zinc sulphate,  $K_2SO_4, ZnSO_4 + 6H_2O$ .**

Sol. in 5 pts. cold  $H_2O$ . (Bucholz, N. J. Pharm. 9 2. 26.)

100 pts.  $H_2O$  dissolve at:

0° 10° 15° 25° 36°  
12.6 18.7 22.5 28.8 39.9 pts. hydrous salt,

45° 50° 58° 65° 70°  
51.2 54.0 67.6 81.3 87.9 pts. hydrous salt.  
(Tobler, A. 95. 193.)

100 pts.  $H_2O$  at 15° dissolve 14.8 pts.  $K_2SO_4, ZnSO_4 + 6H_2O$ ; sp. gr of sat.  $H_2O$  solution at 15° = 1.0939. (Schuff, A. 109. 326.)

1 l.  $H_2O$  dissolves 131.9 g. anhydrous salt at 25°. (Locke, Am. Ch. J. 1902, 27. 459.)

**Potassium zirconium sulphate,  $2K_2O, 6ZrO_2, 7SO_3 + 9H_2O$ .**

Decomp. by  $H_2O$ .

$8K_2O, 3ZrO_2, 7SO_3 + 9H_2O$  Insol. in  $H_2O$ .  
 $Zr_3O_5(KSO_4)_3 + 8H_2O$  Ppt (Rosenheim, B. 1905, 38. 815.)

**Potassium sulphate vanadate.**

Very difficultly sol. in  $H_2O$ . Insol. in alcohol (Berzelius)

**Potassium sulphate antimony trifluoride.**

See Antimony trifluoride potassium sulphate.

**Praseodymium sulphate, basic,  $(PrO)_2SO_4$ .**

Insol. in  $H_2O$  (Matignon, C. R. 1902, 134. 660.)

Insol. in  $H_2O$ . Nearly insol. in dil. acids. (Wöhler, B. 1913, 46. 1730.)

**Praseodymium sulphate,  $Pr_2(SO_4)_3$ .**

Sol. in  $H_2O$ , very hygroscopic. 23.64 pts are sol. in 100 pts  $H_2O$  at 0° and 17.7 pts. at 20°. (von Scheele, Z. anorg. 1898, 18. 357-358.)

+5 $H_2O$  Sol. in  $H_2O$  (von Scheele, Z. anorg. 1898, 18. 357)

Difficultly sol. in  $H_2O$ . (Kraus, Zeit. Kryst. 1901, 34. 400.)

1.50 pts.  $Pr_2(SO_4)_3$  are sol. in 100 pts.  $H_2O$  at 85°; 1.45 pts. at 90°; and 1.02 pts. at 95° (Muthmann and Röllig, B. 1898, 31. 1729.)

+8 $H_2O$ . (Kraus, Zeit. Kryst. 1901, 34. 406.)

Sol. in  $H_2O$ . (von Scheele, Z. anorg. 1898, 18. 357.)

Solubility in  $H_2O$  at t°.

t°	Pts. $Pr_2(SO_4)_3$
0	19.79
18	14.10
35	10.31
55	7.09
75	4.13

(Muthmann and Röllig, B. 1898, 31. 1727.)

+15½ $H_2O$  Sol. in  $H_2O$ . (von Scheele, Z. anorg. 1898, 18. 357)

**Praseodymium hydrogen sulphate,  $Pr(SO_3H)_3$ .**

(Brauner, Z. anorg. 1904, 38. 330.)

Solubility in boiling conc.  $H_2SO_4$  100 g. of the solution contain 1.02 g. of the acid sulphate. (Matignon, C. R. 1902, 134. 659.)

**Radium sulphate.**

Less sol. in  $H_2O$  than corresponding Ba comp. (Curie, Dissert. 1903.)

**Rhodium sulphate,  $Rh_2(SO_4)_3 + 12H_2O$ .**

Easily sol. in  $H_2O$ . (Berzelius.)

Sl sol. in, but not decomp. by  $H_2O$  when not more than 16 pts  $H_2O$  are present to 1 pt. salt. Decomp. by hot  $H_2O$  to—

$Rh_2(SO_4)_3, Rh_2O_3$ . Insol. in  $H_2O$ . (Laidié, C. R. 107. 234.)

**Rhodium rubidium sulphate,  $Rh_2(SO_4)_3, Rb_2SO_4 + 24H_2O$ .**

Sol. in  $H_2O$ ; m-pt., 108-109° (Piccini, Z. anorg. 1901, 37. 65)

**Rhodium thallium sulphate,  $Rh_2(SO_4)_3, Tl_2SO_4 + 24H_2O$ .**

Very sol.  $H_2O$ . (Piccini, Z. anorg. 1901, 37. 69.)

**Rhodium sodium sulphate,  $Rh_2Na_2(SO_4)_4$ .**

Insol. in  $H_2SO_4$  or aqua regia (Seubert and Kobbe, B. 23. 2560)

**Rubidium sulphate,  $Rb_2SO_4$ .**

100 pts.  $H_2O$  dissolve 42.4 pts. at 10°. (Bunsen.)

100 cc.  $H_2O$  at 17-18° dissolve 44.7 g.  $Rb_2SO_4$  (Tutton, Chem. Soc. 1894, 65. 632.)

Sat.  $Rb_2SO_4 + Aq$  contains at:

3° 20°  
27.4 32.5%  $Rb_2SO_4$ ,

37° 97° 170°  
37.3 43.9 49.2%  $Rb_2SO_4$ .

(Étard, A. ch. 1894, (7) 2. 550.)

Solubility of  $\text{Rb}_2\text{SO}_4$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .

These results seem to indicate that there is only one double salt formed by the union of  $\text{Sm}_2(\text{SO}_4)_3$  with  $\text{Na}_2\text{SO}_4$ . Formula of this salt is  $2\text{Sm}_2(\text{SO}_4)_3, 3\text{Na}_2\text{SO}_4, 6\text{H}_2\text{O}$ .

(Keyes and James, J. Am. Chem. Soc. 1914, 36, 635.)

Samarium hydrogen sulphate,  $\text{Sm}(\text{HSO}_4)_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Matignon, C. R. 1905, 141, 1230.)

Ppt (Brauner, Z. anorg. 1904, 38, 331.)

Samarium sodium sulphate,  $\text{Sm}_2(\text{SO}_4)_3, \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$ 

Sl. sol. in sat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$ . (Cleve, Bull. Soc. (2) 43, 166.)

$2\text{Sm}_2(\text{SO}_4)_3, 3\text{Na}_2\text{SO}_4 + 6\text{H}_2\text{O}$  Only double salt formed at 25°. (Keyes and James, J. Am. Chem. Soc. 1914, 36, 385.)

Scandium sulphate, basic,  $\text{Sc}_2\text{O}(\text{SO}_4)_2$ .

(Crookes, Roy. Soc. Proc. 1908, 80, A, 518.)

Scandium sulphate,  $\text{Sc}_2(\text{SO}_4)_3$ .

Anhydrous Easily sol. in  $\text{H}_2\text{O}$ .

+  $2\text{H}_2\text{O}$ .

+  $5\text{H}_2\text{O}$ , 54.61 g. of pentahydrate are sol. in 100 cc  $\text{H}_2\text{O}$  at 25°. (Wirth, Z. anorg. 1914, 87, 10.)

Solubility in  $\text{H}_2\text{SO}_4 + \text{Aq}$  at 25°.

$\text{H}_2\text{SO}_4 + \text{Aq}$	g. $\text{Sc}_2(\text{SO}_4)_3$ in 100 g. of the solution
0.00	28.52
0.5-n	29.29
1.0-n	19.87
4.86-n	8.363
9.73-n	1.315

In 22.35-n  $\text{H}_2\text{SO}_4$  the solid phase is  $\text{Sc}_2(\text{SO}_4)_3, 3\text{H}_2\text{SO}_4$  and 100 g. sat. solution contain 0.484 g.  $\text{Sc}_2(\text{SO}_4)_3$ .

(Wirth, Z. anorg. 1914, 87, 10.)

+  $6\text{H}_2\text{O}$ . Extremely sol. in  $\text{H}_2\text{O}$ , but not deliquescent

Scandium hydrogen sulphate,  $\text{Sc}_2(\text{SO}_4)_3 + 3\text{H}_2\text{O}$ .

(Wirth.)

Scandium sodium sulphate,  $\text{Sc}_2(\text{SO}_4)_3, 3\text{Na}_2\text{SO}_4 + 12\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Cleve.)

+  $10\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and in excess of  $\text{Na}_2\text{SO}_4 + \text{Aq}$ . (Meyers, Z. anorg. 1914, 86, 279.)

Silver (argentoargentic) sulphate,  $\text{Ag}_2\text{SO}_4, \text{Ag}_2\text{SO}_4 + \text{H}_2\text{O}$ .

Gradually sol. in conc., but not attacked by dil.  $\text{HNO}_3 + \text{Aq}$ . Not attacked by hot conc.  $\text{H}_2\text{SO}_4$ . (Lea, Sil. Am. J. 144, 322.)

Silver sulphate,  $\text{Ag}_2\text{SO}_4$ .

Sol. in 200 pts. cold, and less than 100 pts. boiling  $\text{H}_2\text{O}$ . (Wittstein.)

Sol. in 88 pts. boiling  $\text{H}_2\text{O}$  (Schnaubart); in 87.25 pts. boiling  $\text{H}_2\text{O}$  (Wenzel); in 68.85 pts.  $\text{H}_2\text{O}$  at 100° (Kremer).

100 pts.  $\text{H}_2\text{O}$  at 15.5° dissolve 1.15 pts.  $\text{Ag}_2\text{SO}_4$ . (Ure's Dict.)

Sol. in 160 pts.  $\text{H}_2\text{O}$  at 18.75°. (Abl.)

1 l.  $\text{H}_2\text{O}$  dissolves  $2.57 \times 10^{-2}$  g.-mol.  $\text{Ag}_2\text{SO}_4$  at 25°. (Drucker, Z. anorg. 1901, 28, 362.)

1 l.  $\text{H}_2\text{O}$  dissolves 7.707 g.  $\text{Ag}_2\text{SO}_4$  at 17°. (Euler, Z. phys. Ch. 1904, 49, 314.)

1 l.  $\text{H}_2\text{O}$  dissolves 0.0267 mol.  $\text{Ag}_2\text{SO}_4$  at 25°. (Rothmund, Z. phys. Ch. 1909, 69, 539.)

1 l.  $\text{H}_2\text{O}$  dissolves 8.35 g.  $\text{Ag}_2\text{SO}_4$  at 25°.

(Hill and Simmons, Z. phys. Ch. 1909, 67, 803.)

1 l  $H_2O$  dissolves 8.344 g.  $Ag_2SO_4$  at 25°  
Sp. gr of solution = 1.0052. (Harkins, J  
Am. Chem. Soc 1911, 33, 1812.)

#### Solubility in $H_2O$ at t°.

t°	Pts $Ag_2SO_4$ in 100 pts of the solution
14.5	0.730
33	0.909
51.5	1.062
75	1.237
100	1.393

(Barre, A. ch. 1911, (8) 24, 211.)

More sol in  $H_2SO_4 + Aq$  than in pure  $H_2O$ .  
Still more sol in  $HNO_3 + Aq$  and still more in conc  $H_2SO_4$ , from which it is pptd. by  $H_2O$  (Schnaubart)

#### Solubility in $H_2SO_4 + Aq$ at 25°.

$\frac{1}{2}H_2SO_4 + Aq$ . Normality	Solubility of $Ag_2SO_4$ g.-mol per litre
0.02	$2.60 \times 10^{-2}$
0.04	$2.64 \times 10^{-2}$
0.10	$2.71 \times 10^{-2}$
0.20	$2.75 \times 10^{-2}$

(Drucker, Z. anorg. 1901, 28, 362.)

Solubility of  $Ag_2SO_4$  in acids + Aq at 25°.  
C = concentration of acid in acid + Aq in milliequivalents per l.

S = Solubility of  $Ag_2SO_4$  in acid + Aq in milliequivalents per l.

Acid	C	S
$HNO_3$	0.0	53.98
	15.89	59.86
	31.78	65.32
	63.57	75.90
$H_2SO_4$	0.0	53.98
	29.02	54.88
	58.02	55.04
	105.26	56.82

(Swan, J. Am. Chem. Soc. 1911, 33, 1814)

#### Solubility in $HNO_3 + Aq$ at 25°.

Normality $HNO_3$	Sp gr of the solution	g $Ag_2SO_4$ dissolved per l
0.000	1.0054	8.350
1.0046	1.061	34.086
2.0452	1.1069	49.010

	1.156	40.160

Up to  $33^\circ$ , the solubility of  $Ag_2SO_4$  in  $Na_2SO_4 + Aq$  increases with the concentration of  $Na_2SO_4$ ; above  $33^\circ$  the solubility of  $Ag_2SO_4$  rises to a maximum at a certain concentration of  $Na_2SO_4$  dependent on the temp. The

solubility curves for various temp. all end at a concentration of 40%  $Na_2SO_4$ , that is, the mixed crystals formed at this concentration are equally sol. at all temp.

(Barre, C. R. 1910, 150. 1323.)

(Rothmund, Z. phys. Ch. 1909, 69, 539.)

Insol in methyl acetate (Bezdol, Dissert. 1906; Naumann, B. 1909, 42, 3790); ethylacetate (Naumann, B. 1904, 37, 3601); liquid methylamine (Franklin, J. Am. Chem. Soc. 1906, 28, 1420); acetone. (Naumann, B. 1904, 37, 4329; Erdmann, C. C. 1899, II, 1014.)

Very sol. in a hot mixture of  $\text{H}_2\text{SO}_4$  and monobromobenzene, less sol. in cold. (Couper, A. ch. (3) 52, 311.)

Silver hydrogen sulphate,  $\text{AgHSO}_4$ .

Decomp. by  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_2\text{SO}_4$ . (Stas.)  
 $\text{Ag}_2\text{O}, 3\text{H}_2\text{O}, 4\text{SO}_3 + 2\text{H}_2\text{O} = \text{Ag}_4\text{H}_4(\text{SO}_4)_2 + \text{H}_2\text{O}$  As above. (Schultz, Pogg. 133, 137.)  
 $2\text{Ag}_2\text{O}, 3\text{H}_2\text{O}, 5\text{SO}_3 + 2\text{H}_2\text{O} = \text{Ag}_4\text{H}_4(\text{SO}_4)_2 + 2\text{H}_2\text{O}$ . As above (Schultz.)

Silver pyrosulphate,  $\text{Ag}_2\text{S}_2\text{O}_7$ .

Decomp. by  $\text{H}_2\text{O}$ . (Weber, B. 17, 2497.)

Silver thallic sulphate,  $\text{AgTi}(\text{SO}_4)_2$ .

(Lepsius, Chem. Ztg. 1890, 1827.)

Silver tin (stannic) sulphate,  $\text{Ag}_2\text{Sn}(\text{SO}_4)_2 + 8\text{H}_2\text{O}$ .

Ppt. Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ . (Weinland, Z. anorg. 1907, 54, 250.)

Silver sulphate acetylde,  $\text{Ag}_2\text{SO}_4, 2\text{Ag}_2\text{C}_2$ .

(Phampton, Proc. Chem. Soc. 1892, 8, 109.)

**Silver sulphate ammonia,  $\text{Ag}_2\text{SO}_4 \cdot 2\text{NH}_3$ .**

Completely sol. in  $\text{H}_2\text{O}$  (Rose, Pogg 20. 153.)

$\text{Ag}_2\text{SO}_4 \cdot 4\text{NH}_3$ . Easily sol. in  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq}$  without decomp. (Mitscherlich.)

**Silver sulphate mercuric oxide,  $\text{Ag}_2\text{SO}_4 \cdot \text{HgO}$ .**

Insol. in  $\text{H}_2\text{O}$ , but decomp even in the cold. Sol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4$  (Finci, Gazz. ch. it. 1911, 41. (2) 648.)

**Silver sulphate sulphide,  $\text{Ag}_2\text{SO}_4 \cdot \text{Ag}_2\text{S}$ .**

Decomp. by hot  $\text{H}_2\text{O}$  or cold  $\text{HCl} + \text{Aq}$ . Sol. in boiling  $\text{HNO}_3 + \text{Aq}$  (Poleck and Thümmel, B. 16. 2435.)

**Sodium sulphate,  $\text{Na}_2\text{SO}_4$ .***Anhydrous.*

1 pt.  $\text{Na}_2\text{SO}_4$  is sol. in 7.387 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  (Gerlach), in 8.52 pts.  $\text{H}_2\text{O}$  at  $13.3^\circ$  (Poggendorf); in 10 pts.  $\text{H}_2\text{O}$  at  $13^\circ$ , and in 8.3 pts.  $\text{H}_2\text{O}$  at  $02.2^\circ$  (Wenzel).

100 pts.  $\text{H}_2\text{O}$  at  $0^\circ$  dissolve 5.155 pts.  $\text{Na}_2\text{SO}_4$  (Pfaff, A. 99 220), at  $100^\circ$  dissolve 46.985 pts.  $\text{Na}_2\text{SO}_4$  (Griffiths).

See below for further data.

+  $7\text{H}_2\text{O}$ . Efflorescent. Insol. in alcohol

See below for further data.

+  $10\text{H}_2\text{O}$

$\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  is sol. in  $\text{H}_2\text{O}$  with absorption of heat; 20 pts.  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  mixed with 100 pts.  $\text{H}_2\text{O}$  at  $12.5^\circ$  lower the temperature  $6.8^\circ$ . (Rüdorff, B. 2. 88)

Sol in 2.33 pts.  $\text{H}_2\text{O}$  at  $19^\circ$ , or 100 pts.  $\text{H}_2\text{O}$  at  $19^\circ$  dissolve 42.8 pts.  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  (Schiff, A. 109 323)

100 pts.  $\text{H}_2\text{O}$  dissolve a pts.  $\text{Na}_2\text{SO}_4$  and b pts.  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  at  $t^\circ$

17.9	16.28	33	50.81

(Diachon, J. B. 1866. 61.)

Solubility of  $\text{Na}_2\text{SO}_4$  in  $\text{H}_2\text{O}$  at various pressures and temp. Pts.  $\text{Na}_2\text{SO}_4$  contained in 100 pts. sat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$  at A pressure in atmos and  $t^\circ$  are given

A	$0^\circ$	$10^\circ$	$15.4^\circ$	A	$15^\circ$
1	4.40	11.32	11.4	30	10.05
20	4.53	10.78	10.74	40	10.33

(Möller, Pogg 117. 386.)

The solubility of  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  increases with the temperature from  $0$  to  $34^\circ$ . At  $34^\circ$  and above, it is converted into the anhydrous salt, the solubility of which is least at  $103.17^\circ$ , which is the boiling point of the saturated solution, and increases by cooling from that temp. down to  $18-17^\circ$ . Below the latter temperature the anhydrous salt cannot exist in the presence of  $\text{H}_2\text{O}$ , but is converted into  $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$ , or  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ . The solubility of  $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$  increases with the temperature from  $0-26^\circ$ , and at  $27^\circ$  it is converted into the anhydrous salt.

Thus there are two different rates of solubility for  $\text{Na}_2\text{SO}_4$  for temperatures from  $0-18^\circ$ , three different rates from  $18-26^\circ$ , two from  $26-34^\circ$ , and only one above  $34^\circ$ .

1. By heating  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  to fusion and raising the heat until the liquid boils, placing in a closed vessel and cooling, the greater part of the anhydrous salt, which separates out on heating, redissolves on cooling, and the amount increases as the temp falls until  $18^\circ$  is reached. Below  $18^\circ$   $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$  is formed. Saturated  $\text{Na}_2\text{SO}_4 + \text{Aq}$  thus obtained contains for 100 pts.  $\text{H}_2\text{O}$  at:

18° 20° 25° 26°  
53.25 52.76 51.53 51.31 pts.  $\text{Na}_2\text{SO}_4$

30° 33° 34° 36°  
50.37 49.71 49.53 49.27 pts.  $\text{Na}_2\text{SO}_4$

2. By allowing the boiling saturated solution free from undissolved salt to cool to  $0^\circ$

with exclusion of air until crystals of  $\text{Na}_2\text{SO}_4 \cdot 7\text{H}_2\text{O}$  are formed, then removing the greater part of the mother liquor with a warm pipette, and warming the rest of the mother liquor with the excess of crystals, the crystals dissolve in increasing quantity between  $0^\circ$  and  $26-27^\circ$ , so that at  $27^\circ$  the solution contains 56 pts  $\text{Na}_2\text{SO}_4$  to 100 pts  $\text{H}_2\text{O}$ . The remaining undissolved crystals of  $\text{Na}_2\text{SO}_4 \cdot 7\text{H}_2\text{O}$  begin to melt very slowly at  $27^\circ$ , more quickly at higher temperatures, and cause the separation of anhydrous crusts, and thus the strength of the solution is gradually lowered to the normal. Saturated solutions prepared in this way contain for 100 pts  $\text{H}_2\text{O}$  at:

$0^\circ$	$10^\circ$	$13^\circ$
19.62	30.49	34.27 pts. $\text{Na}_2\text{SO}_4$ ,
or 44.89	78.9	92.9 pts. $\text{Na}_2\text{SO}_4 \cdot 7\text{H}_2\text{O}$ .
$16^\circ$	$18^\circ$	$17^\circ$
37.43	38.73	39.99 pts. $\text{Na}_2\text{SO}_4$ ,
or 106.8	117.4	111.0 pts. $\text{Na}_2\text{SO}_4 \cdot 7\text{H}_2\text{O}$ ,
$18^\circ$	$19^\circ$	$20^\circ$
41.63	43.35	44.73 pts. $\text{Na}_2\text{SO}_4$ ,
or 124.6	133.0	140.0 pts. $\text{Na}_2\text{SO}_4 \cdot 7\text{H}_2\text{O}$ ,
$25^\circ$	$26^\circ$	
52.94	54.97 pts. $\text{Na}_2\text{SO}_4$ ,	
or 188.5	202.6 pts. $\text{Na}_2\text{SO}_4 \cdot 7\text{H}_2\text{O}$ .	

3. Solutions obtained by shaking  $\text{H}_2\text{O}$  with  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  contain for 100 pts.  $\text{H}_2\text{O}$  at:

$0^\circ$	$10^\circ$	$15^\circ$
5.02	9.00	13.20 pts. $\text{Na}_2\text{SO}_4$ ,
or 12.16	23.04	35.96 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ ,
$18^\circ$	$20^\circ$	$25^\circ$
16.80	19.40	28.00 pts. $\text{Na}_2\text{SO}_4$ ,
or 48.41	58.85	98.48 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ ,
$26^\circ$	$30^\circ$	
30.00	40.00 pts. $\text{Na}_2\text{SO}_4$ ,	
or 109.81	184.1 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ ,	
$33^\circ$	$34^\circ$	
50.76	55.0 pts. $\text{Na}_2\text{SO}_4$ ,	
or 223.1	412.2 pts. $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ .	

At  $34^\circ$ ,  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  begins to melt in its crystal  $\text{H}_2\text{O}$ . As long as there is a considerable quantity of unchanged crystals present, the solution contains 55 pts  $\text{Na}_2\text{SO}_4$  for 100 pts  $\text{H}_2\text{O}$ , but as the hydrous salt decreases in amount and becomes converted into the anhydrous salt, the solution becomes weaker and contains only 49.53 pts  $\text{Na}_2\text{SO}_4$  for 100 pts.  $\text{H}_2\text{O}$  after warming for 8 or 8 hours at  $34^\circ$ . In the same way temporary solutions can be obtained at  $38-40^\circ$  with 55-56 pts  $\text{Na}_2\text{SO}_4$  to 100 pts.  $\text{H}_2\text{O}$ , but this amount sinks to the normal even more quickly than at  $34^\circ$ .

\*  $\text{Na}_2\text{SO}_4$  dehydrated at  $100-150^\circ$ , after the addition of  $1\frac{1}{2}-1\frac{1}{4}$  pts  $\text{H}_2\text{O}$ , gives a solution between  $0^\circ$  and  $32^\circ$  of the same strength as  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ , but at  $34^\circ$  a solution with

55 pts  $\text{Na}_2\text{SO}_4$  to 100 pts.  $\text{H}_2\text{O}$  cannot be obtained, but one with 49.53 pts. is formed (Löwel, A. ch. (3) 49. 32)

4 Solubility of anhydrous salt. Above  $34^\circ$ , 100 pts.  $\text{H}_2\text{O}$  dissolve at:

$35^\circ$	$40^\circ$	$45^\circ$	$50^\circ$	$55^\circ$
50.2	48.8	47.7	46.7	45.9 pts. $\text{Na}_2\text{SO}_4$ ,
$60^\circ$	$65^\circ$	$70^\circ$	$75^\circ$	$80^\circ$
45.3	44.8	44.4	44.0	43.7 pts. $\text{Na}_2\text{SO}_4$ ,
$85^\circ$	$90^\circ$	$95^\circ$	$100^\circ$	$103.5^\circ$
43.3	43.1	42.8	42.5	42.2 pts. $\text{Na}_2\text{SO}_4$ .

(Mulder.)

(White, Z. phys. Ch. 1913, 86. 364.)

Supersaturated solutions of  $\text{Na}_2\text{SO}_4$  are easily formed; when  $\text{Na}_2\text{SO}_4 + \text{Aq}$  sat. at its b.-pt. is hermetically sealed, no crystals are deposited on cooling (Lowell). Supersat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$  may also be obtained by cooling hot sat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$  in flasks loosely stoppered with cotton wool (Schroeder, A. 109. 45), or by covering the containing vessel with a glass plate, watch-glass, card, etc., or by covering the liquid itself with a layer of oil, and then allowing to cool.

Hot  $\text{Na}_2\text{SO}_4 + \text{Aq}$  containing 1 pt.  $\text{H}_2\text{O}$  to 1 pt.  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  does not crystallise on slowly cooling or on being quickly cooled by immersion in cold water, if it is contained in a barometer tube freed from air by boiling, or in an exhausted well-closed vessel, or in an open vessel with a layer of oil of turpentine on it (Gay-Lussac); or in a vessel containing air, either well stoppered or furnished with a loose cover (Schweigger); or in an open vessel under a bell jar full of air and closed at the bottom with a water joint; or in open bottles placed in a quiet situation; or in an open glass enclosed in a stoppered vessel, containing air and some KOH for drying; in this case  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  effloresces from the solution, and when washed down again does not cause instant crystallisation, but redissolves.

The crystallisation of a solution cooled in this way may often be brought about instantaneously, or often again after a short time; (1) by agitation, when the solution has been cooled in an open vessel; (2) by access of air caused by opening the vessel, the crystallisation taking place the more rapidly the larger the opening. In this case the crystallisation begins at the top, where the solution, the vessel, and the air come in contact; when a particle of dust falls in the liquid the crystallisation begins a little under the surface. When the solution has been cooled in vacuo, a bubble of air, hydrogen, carbonic acid, or nitrous oxide is sufficient to set up the crystallisation; (3) by contact with a solid body. The latter do not cause crystallisation when cooled in contact with the liquid, nor (excepting a crystal of  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ ) when they are moistened or warmed before contact with the solution.

Supersat.  $\text{Na}_2\text{SO}_4 + \text{Aq}$  is brought to crystallisation by addition of a crystal of  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ , or an isomorphous substance as  $\text{Na}_2\text{SeO}_4 + 10\text{H}_2\text{O}$ , or  $\text{Na}_2\text{CrO}_4 + 10\text{H}_2\text{O}$ . Other crystals, as  $\text{MgSO}_4 + 7\text{H}_2\text{O}$ , etc., have no action. (Thomson, Chem. Soc. 35. 199.)

See also Hardley, Jones and Hutchinson, Chem. Soc. 1908, 93. 825, on "Spontaneous crystallisation of sodium sulphate solutions," and de Coppet (A. ch. 1907, (8) 10. 457) on same subject.

A more extended discussion of the phenomena and causes of supersaturation is not considered to be within the scope of this work.

$\text{Na}_2\text{SO}_4 + \text{Aq}$  sat. at  $15^\circ$  has sp. gr. 1.10847 (Mitschell and Kraitsir); at  $15^\circ$  has sp. gr. 1.119 (Steibba); at  $16^\circ$

has sp. gr. 1.1162 (Stolba), at 10° contains 29 pts  $\text{Na}_2\text{SO}_4$  to 100 pts  $\text{H}_2\text{O}$  (supersaturated?), and has sp. gr. 1.1250 (Karsten)

At  $33^\circ$  and above the values represent the solubility of  $\text{Na}_2\text{SO}_4$  in  $\text{NaCl} + \text{Aq}$ . At  $10^\circ$  the solid phase in contact with the solution is probably  $\text{Na}_2\text{SO}_4 \cdot 7\text{H}_2\text{O}$ . Between  $17^\circ$  and  $33^\circ$  the solid phase is either  $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$  or  $\text{Na}_2\text{SO}_4$ . An inversion of  $\text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$  to  $\text{Na}_2\text{SO}_4$  takes place at various temp. below  $33^\circ$ , depending on the amount of  $\text{NaCl}$  contained in the solution in contact with the solid sodium sulphate.

2.26	25 21	$\text{NaCl}$
0	26 3	"

(Schreinemakers and de Baat, Z. phys. Ch. 1909, 67. 554.)

Sol in sat.  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Margueritte, C. R. 38. 307.)Sol. in sat.  $\text{KNO}_3 + \text{Aq}$  with pptn. after several hours (Karsten.)

$\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  is sol. in sat.  $\text{NaNO}_3 + \text{Aq}$  without pptn., but if effloresced  $\text{Na}_2\text{SO}_4$  is used,  $\text{NaNO}_3$  is pptd. at first, and subsequently  $\text{Na}_2\text{SO}_4 + 7\text{H}_2\text{O}$ .

The presence of  $\text{CaSO}_4$  does not affect the solubility of  $\text{Na}_2\text{SO}_4$  in  $\text{H}_2\text{O}$  to any great extent. (Barre, A. ch. 1911, (8) 24. 160.)

More sol. in  $\text{K}_2\text{SO}_4, \text{CuSO}_4, \text{MgSO}_4 + \text{Aq}$ . than in  $\text{H}_2\text{O}$ . (Pfaff, A. 99. 226.)

100 pts.  $\text{H}_2\text{O}$  dissolve 20.7 pts.  $\text{CuSO}_4$  and 15.9 pts.  $\text{Na}_2\text{SO}_4$ . (Rüdorff, B. 6. 484.)

Sol. in sat.  $\text{MgSO}_4, \text{K}_2\text{SO}_4, \text{CuSO}_4 + \text{Aq}$ , but if more  $\text{Na}_2\text{SO}_4$  than can be dissolved is added to the  $\text{CuSO}_4 + \text{Aq}$ , a large quantity of a double sulphate separates out. (Karsten.)

The solubility of  $\text{Na}_2\text{SO}_4$  in  $\text{K}_2\text{SO}_4 + \text{Aq}$  has been determined at  $15^\circ, 25^\circ, 40^\circ, 50^\circ, 60^\circ, 70^\circ$  and  $80^\circ$ . From the results the conclusion is drawn that sodium and potassium sulphates form a double salt of the formula  $\text{K}_2\text{Na}(\text{SO}_4)_2$ . (Okada, Chem. Soc. 1915, 108. (2) 344.)

See also under  $\text{CuSO}_4, \text{MgSO}_4$ , and  $\text{K}_2\text{SO}_4$ .

Slowly but abundantly sol. in sat.  $\text{ZnSO}_4 + \text{Aq}$ , with separation of a double salt after a few days

Solubility of  $\text{ZnSO}_4 \cdot 7\text{H}_2\text{O} + \text{Na}_2\text{SO}_4 \cdot 10\text{H}_2\text{O}$  in 100 g.  $\text{H}_2\text{O}$  at  $t^\circ$ .

12.58	13.50	73.92
16.26	11.50	72.24
20.63	8.10	71.27

(Fox, Chem. Soc 1909, 95. 888.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Alcohol precipitates  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$  from the solid saturated aqueous solution. (Brandes and Pirnhaber.)

Insol. in alcohol of from 0.817 to 0.90 sp. gr. (Kirwan.)

1000 pts. alcohol of 0.872 sp. gr. dissolve 0.7 pt  $\text{Na}_2\text{SO}_4$  at  $12.5-15^\circ$ , of 0.905 sp. gr. dissolve 3.8 pts  $\text{Na}_2\text{SO}_4$  at  $12.5-15^\circ$ .

Insol. in alcohol of 0.83-0.85 sp. gr. (Anthony.)

From supersaturated solution in alcohol, crystals with  $7\text{H}_2\text{O}$  are formed. (Schiff, A. 106. 11.)

100 pts 10% alcohol at  $15^\circ$  contain 14.35 pts.  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ ; 20% alcohol at  $15^\circ$  contain 5.6 pts  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ ; 40% alcohol at  $15^\circ$  contain 1.3%  $\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ . (Schiff, A. 118. 365.)

Very sl sol in abs. alcohol at ord. temp.;

somewhat more, though still exceedingly sparingly, sol. in abs. alcohol acidulated with  $\text{H}_2\text{SO}_4$ . (Fresenius.)

Alcohol does not affect crystal  $\text{H}_2\text{O}$  of

$\text{Na}_2\text{SO}_4 + 10\text{H}_2\text{O}$ .

(Schreinemakers, Z. phys. Ch. 1909, 67, 552)

Solubility data for solution of NaCl in ethyl alcohol + Aq at 15°, 25°, and 30° are given by Schreinemakers (Z. phys. Ch. 1909, 67, 556)

## Solubility in propyl alcohol + Aq at 20°.

% propyl alcohol	g Na <sub>2</sub> SO <sub>4</sub> per 100 g solution	% propyl alcohol	g Na <sub>2</sub> SO <sub>4</sub> per 100 g solution
42.20	1.99	56.57	0.55
49.77	1.15	60.64	0.44
55.65	0.72	62.81	0.38

(Linebarger, Am. Ch. J. 1892, 14, 380)

Sol in glycerine.

Insol in acetone. (Naumann, B. 1904 37, 4329; Eidmann, C. C. 1899, II, 1014.); benzonitrile. (Naumann, B. 1914, 47, 1370) methyl acetate (Naumann, B. 1909, 42, 7790); ethyl acetate. (Naumann, B. 1910, 43, 314.)

100 g. H<sub>2</sub>O dissolve 183.7 g sugar + 30.5 g. Na<sub>2</sub>SO<sub>4</sub> at 31.25°, or 100 g sat. solution contain 52.2 g. sugar + 9.6 g. Na<sub>2</sub>SO<sub>4</sub> (Köhler, Z. Ver. Zuckerind., 1897, 47, 447)

Min. Anhydrous, *Thenardite*. +10H<sub>2</sub>O, *Merrillite*.

Sodium hydrogen sulphate, NaHSO<sub>4</sub>.

Not deliquescent. Very sol. in H<sub>2</sub>O with decomposition.

Sol. in 2 pts. H<sub>2</sub>O at 0° (Lank); 1 pt. H<sub>2</sub>O at 100° (Schubarth) 100 pts. H<sub>2</sub>O at 15.5° dissolve 92.72 pts. Sol. in 2 pts. H<sub>2</sub>O at 18.75° (Abl); decomp. by alcohol.

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20, 829)

+H<sub>2</sub>O. Deliquescent, and decomp. by the H<sub>2</sub>O which it takes up.

NaH<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>. Decomp. by H<sub>2</sub>O. (Schultz.)

Trisodium hydrogen sulphate, Na<sub>3</sub>H(SO<sub>4</sub>)<sub>2</sub>.

Sol. in H<sub>2</sub>O with decomp.

+H<sub>2</sub>O. (Rose)

Sodium pyrosulphate, Na<sub>2</sub>S<sub>2</sub>O<sub>7</sub>.

Sol. in fuming H<sub>2</sub>SO<sub>4</sub> without decomp.

Sodium thallic sulphate, Na<sub>2</sub>SO<sub>4</sub>, Tl<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>.

Sol. in H<sub>2</sub>O. (Strecker, A. 135, 207.)

Sodium thorium sulphate, Na<sub>2</sub>SO<sub>4</sub>, Th(SO<sub>4</sub>)<sub>2</sub> + 6H<sub>2</sub>O.

Sol. in H<sub>2</sub>O 100 pts cold sat. Na<sub>2</sub>SO<sub>4</sub> + Aq dissolve 4 pts of this salt. (Cleve)

See also under Na<sub>2</sub>SO<sub>4</sub> + ThSO<sub>4</sub>.

Sodium titanium sesquisulphate, Na<sub>2</sub>Ti<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub> + 5H<sub>2</sub>O.

Sol. in H<sub>2</sub>O (Spence, Chem. Soc. 1904, 86, (2) 412.)

Insol in alcohol (Knecht, B. 1903, 36, 169.)

Sodium titanyl sulphate, Na<sub>2</sub>TiO<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub> + 10H<sub>2</sub>O.

Hygroscopic (Mazzuchelli and Pantanelli, C. C. 1909, II, 420.)

Sodium uranyl sulphate, Na<sub>2</sub>(UO<sub>2</sub>)(SO<sub>4</sub>)<sub>2</sub> + 3H<sub>2</sub>O.

(de Coninck, C. C. 1905, I, 919)

Sodium vanadium sulphate, Na<sub>3</sub>V<sub>2</sub>(SO<sub>4</sub>)<sub>4</sub> + 24H<sub>2</sub>O.

Very sol. in H<sub>2</sub>O (Piccini, Z. anorg 1897, 13, 444.)

Sodium vanadyl sulphate, Na<sub>2</sub>SO<sub>4</sub>, VOSO<sub>4</sub> + 4H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O and alcohol + conc. H<sub>2</sub>SO<sub>4</sub>. (Koppel, Z. anorg 1903, 35, 177.) Na<sub>2</sub>SO<sub>4</sub>, 2VOSO<sub>4</sub> + 2½H<sub>2</sub>O Slowly sol. in H<sub>2</sub>O.

Can be cryst. from H<sub>2</sub>SO<sub>4</sub> at 100°. (Koppel.)

Sodium yttrium sulphate, Na<sub>2</sub>SO<sub>4</sub>, Y<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub> + 2H<sub>2</sub>O.

Quite sol. in H<sub>2</sub>O. (Cleve)

The only double salt capable of existing at 25°. (James and Holden, J. Am. Chem. Soc. 1913, 35, 562.)

Sodium zinc sulphate, Na<sub>2</sub>SO<sub>4</sub>, ZnSO<sub>4</sub> + 4H<sub>2</sub>O.

Deliquescent in moist air.

Decomp. into constituents on dissolving in H<sub>2</sub>O. (Graham, Phil. Mag. 18, 417.)

Solubility of Na<sub>2</sub>Zn(SO<sub>4</sub>)<sub>2</sub> + 4H<sub>2</sub>O in 100 g. H<sub>2</sub>O at t°.

Sodium sulphate fluoride,  $\text{Na}_2\text{SO}_4 \cdot \text{NaF}$ .

Cryst. from H<sub>2</sub>O without decomp. (Marignac, Ann. Min. (5) 15. 236.)

Sodium sulphate antimony trifluoride.

See Antimony trifluoride sodium sulphate.

Strontium sulphate,  $\text{SrSO}_4$ .

Very sl. sol. in cold, and still less in boiling H<sub>2</sub>O.

1 l. H<sub>2</sub>O at 11–15° dissolves 0.066 g.  $\text{SrSO}_4$  (Brandes and Silber); 0.145 g.  $\text{SrSO}_4$  (Fresenius); 0.154–0.167 g.  $\text{SrSO}_4$  (Marignac); 0.187 g.  $\text{SrSO}_4$  (Kremers); 0.278 g.  $\text{SrSO}_4$  (Andrews).

1 l. boiling H<sub>2</sub>O dissolves 0.104 g.  $\text{SrSO}_4$  (Fresenius); 0.232 g.  $\text{SrSO}_4$  (Brandes and Silber).

When a Sr salt is precipitated by H<sub>2</sub>SO<sub>4</sub>, 1 pt.  $\text{SrSO}_4$  remains dissolved in 700 pts. H<sub>2</sub>O. (Marignac.)

Sol. in about 8000 pts. H<sub>2</sub>O (Schweitzer, J. B. 1877. 1054.).

Calculated from electrical conductivity of the solution,  $\text{SrSO}_4$  is sol. in 10,070 pts. H<sub>2</sub>O at 16.1° and 10,090 pts. at 20.1° (Holleman, Z. phys. Ch. 12. 131.)

1 l. H<sub>2</sub>O dissolves 107 mg.  $\text{SrSO}_4$  at 18° and not much more at higher temp. (Kohlrausch and Rose, Z. phys. Ch. 12. 241.)

100 g. H<sub>2</sub>O dissolve

at t°      0°–5°      10°–12°      20°      30°  
g.  $\text{SrSO}_4$     0.0983    0.0994    0.1479    1.0600

at t°      50°      80°      90°      95–98°  
g.  $\text{SrSO}_4$     0.1629    0.1688    0.1727    0.1789

(Wolfmann, C. C. 1897, I. 632.)

1 l. H<sub>2</sub>O dissolves 114 mg.  $\text{SrSO}_4$  at 18°. (Kohlrausch, Z. phys. Ch. 1904, 50. 356.); 114.3 mg. at 18°. (Kohlrausch, Z. phys. Ch. 1908, 64. 163.)

Sol. in 6895 pts. cold, and 9638 pts. boiling H<sub>2</sub>O, in 11,000–12,000 pts. H<sub>2</sub>O containing H<sub>2</sub>SO<sub>4</sub>; in 474 HCl+aq containing 8.5% HCl; in 432 pts. HNO<sub>3</sub>+aq containing 4.8% N<sub>2</sub>O<sub>5</sub>; in 7843 pts. HCl+aq containing 15.6% HCl+H<sub>2</sub>O<sub>2</sub>. (Fresenius.)

Or, 1 l. cold HCl+aq of 8.5% dissolves 2.11 g.  $\text{SrSO}_4$ ; 1 l. cold HNO<sub>3</sub>+aq of 4.8% N<sub>2</sub>O<sub>5</sub> dissolves 2.31 g.  $\text{SrSO}_4$ ; 1 l. cold HCl+aq of 15.6% HCl+H<sub>2</sub>O<sub>2</sub> dissolves 0.1275 g.  $\text{SrSO}_4$ . (Fresenius.)

Solubility of  $\text{SrSO}_4$  in HCl+aq.

No. cc. HCl+ aq containing 1 mg. equiv. HCl	g. per 100 cc. solution	
	HCl	$\text{SrSO}_4$
0.2	18.23	0.161
0.5	7.29	0.207

1.0	6.30	0.217
2.0	3.15	0.138
10.0	0.63	0.049

(Banthisch, J. pr. 1884, (2) 29. 54.)

Sol. in conc. H<sub>2</sub>SO<sub>4</sub>. See under  $\text{SrH}_2(\text{SO}_4)_2$ . Insol. in NH<sub>4</sub>Cl+aq or conc. (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub>+aq. (Rose.)

Slowly but completely sol. in NaCl+aq. (Wackenroder.)

H<sub>2</sub>O containing Na<sub>2</sub>SO<sub>4</sub> dissolves less  $\text{SrSO}_4$ .

than pure  $H_2O$ ;  $H_2O$  containing  $H_2SO_4$  still less. (Andrews, Phil Mag. Ann 7. 406.)

Insol. in  $Na_2S_2O_3 + Aq$

Insol. in boiling, conc.  $(NH_4)_2SO_4 + Aq$  (Rose, Pogg 110. 292)

Sol. in 16.949 pts  $(NH_4)_2SO_4 + Aq$  (1.4) (Fresenius, Z anal. 32. 195.)

Pptn. is hindered by alkali metaphosphates and citrates, but not by citric acid.

Decomp. at ord. temp., and more rapidly on boiling by alkali carbonates +  $Aq$ .

Sol. in  $MgCl_2$  or  $KCl + Aq$ , solubility increasing with strength of solution; sol. in  $NaCl$  or  $CaCl_2 + Aq$ , maximum solubility occurring when the solutions are of a medium concentration. The numerical results are as follows.

100 pts. of the salt solutions containing given pts. salt dissolve pts  $SrSO_4$ .

Salt	Pts salt	Pts. $SrSO_4$
NaCl	22.17	0.1811
	15.54	0.2186
	8.44	0.1653
KCl	18.08	0.2513
	12.54	0.1933
	8.22	0.1925

	4.03	0.2057
	1.59	0.1986
$CaCl_2$	33.70	0.1706
	16.51	0.1863
	8.67	0.1756

(Virek, C. C. 1862. 402.)

Solubility in  $H_2O$ , and in solutions of the sulphates chlorides and nitrates of the alkalies and alkaline earths and in solutions of salts of the alkalies with strong organic acids has been determined. No data in abstract (Wolfmann, Chem Soc. 1898, (2) 74. 220.)

Solubility in  $H_2O$  is considerably decreased by the presence of  $K_2SO_4$ . (Barre, A. ch. 1911, (8) 24. 175.)

Solubility of  $SrSO_4$  in  $Ca(NO_3)_2 + Aq$  at ord. temp.

G. per 100 cc. sat. solution

$Ca(NO_3)_2$	$SrSO_4$	$Ca(NO_3)_2$	$SrSO_4$
0.5	0.0483	4	0.1489
1	0.0619	5	0.1689
2	0.1081	6	0.1955
3	0.1275	...	...

(Raffo and Rossi, Gazz. ch. it. 1915, 45. (1) 45.)

Insol. in liquid  $NH_3$ . (Franklin, Am Ch J. 1898, 20. 829)

100 g. 95% formic acid dissolve 0.02 g.  $SrSO_4$  at 18.5°. (Aschan, Chem. Ztg. 1913, 37. 1117.)

Insol. in absolute alcohol; scarcely sol. in dil. alcohol.

Insol. in methyl acetate. (Naumann, B. 1909, 42. 3790); acetone (Naumann, B. 1904, 37. 4329, Eidmann, C. C. 1899, II. 1014)

Min. Celestite

Strontium hydrogen sulphate,  $SrH_2(SO_4)_2$ .

100 pts  $H_2SO_4$  dissolve 2.2 pts.  $SrSO_4$  (Lieb-Bodart and Jacquemin); 100 pts.  $H_2SO_4$  dissolve 5.68 pts (Struve, Z anal 9. 34), 100 pts fuming  $H_2SO_4$  dissolve 9.77 pts (Struve).

1 g  $SrSO_4$  dissolves in 1256 g 91%  $H_2SO_4 + Aq$  (Varenne and Pauleau, C. R 93. 1016); boiling  $H_2SO_4$  dissolves about 15%  $SrSO_4$ , and still more at 100° (Schultz, Pogg. 133. 147)

Sol. in 1519 pts 91%  $H_2SO_4$  (Varenne and Pauleau, C. R 93. 1016.)

100 pts.  $H_2SO_4$  (sp. gr. 1.843) dissolve 14 pts  $SrSO_4$  at 70°. (Garside, C N 31. 245)

Decomp by  $H_2O$ .

100 pts hot conc.  $H_2SO_4$  dissolve about 9.0 pts  $SrSO_4$ . (Rohland, Z. anorg. 1910, 66. 208)

10 cc of sat  $SrSO_4$  + absolute  $H_2SO_4$  contain approx 2.17 g  $SrSO_4$ . (Bergius, Z phys. Ch. 1910, 72. 355)

+  $H_2O$  Decomp by  $H_2O$

Strontium tin (stannic) sulphate,  $SrSO_4$ ,  $Sn(SO_4)_2 + 3H_2O$ .

Decomp. by  $H_2O$  Sol in  $HCl$  (Weinland and Kühl, Z. anorg. 1907, 54. 249.)

Strontium titanium sulphate,  $SrSO_4$ ,  $Ti(SO_4)_2$ .

Ppt; decomp by  $H_2O$  giving titanic acid. (Weinland and Kühl, Z. anorg. 1907, 54. 254.)

Tantalum sulphate,  $3Ta_2O_5$ ,  $SO_3 + 9H_2O$ .

(Hermann, J. pr. 70. 201)

Tellurium sulphate, basic,  $TeO_2$ ,  $SO_3$ .

Sol. in cold dil  $H_2SO_4$ . Decomp. by hot  $H_2O$ . (Klein, C R 99. 326)

Terbium sulphate,  $Tr_2(SO_4)_3 + 8H_2O$ .

Sol. in  $H_2O$

Sol. in  $H_2O$ , pptd. by alcohol. (Urban, C. R 1908, 146. 127.)

Thallos sulphate,  $Th_2SO_4$ .

1 pt. dissolves at t° in pts.  $H_2O$ , according to C=Crookes; L=Lamy:

15°	18°	32°	100°	101.2°
21.1	20.8	8.7	5.4	5.22 pts. $H_2O$ .
C	L	L	C	L

Solubility of  $\text{Th}_2\text{SO}_4$  in  $\text{H}_2\text{O}$

(Noyes)

Thallous hydrogen sulphate,  $\text{ThHSO}_4$ .

Sl. hygroscopic.

Solubility in  $\text{H}_2\text{SO}_4 + \text{Aq}$  at  $25^\circ$ .

1000 g. of the solution contain:

Mols. $\text{H}_2\text{SO}_4$	Mols. $\text{Th}_2\text{SO}_4$
4.55	0.56
4.79	0.55
4.89	0.59
4.92	0.66
4.78	0.75
4.26	1.01
4.03	1.08

(D'Ans, Z. anorg. 1910, 65. 232.)

$\text{Th}_2\text{SO}_4$ ,  $\text{ThHSO}_4$ . Sol. in  $\text{H}_2\text{O}$ . (Storten-  
 becker, R. t. c. 1902, 21. 90.)

Thallous pyrosulphate,  $\text{Th}_2\text{S}_2\text{O}_7$ .

Decomp. by  $\text{H}_2\text{O}$  (Weber, B. 17. 2502.)

Thallous octosulphate,  $\text{Th}_2\text{S}_8\text{O}_{22}$ .

Decomp. by  $\text{H}_2\text{O}$  (Weber, B. 17. 2502.)

Thallic sulphate, basic,  $\text{Th}_2\text{O}_3 \cdot 2\text{SO}_3 + 3\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ .

+5 $\text{H}_2\text{O}$  As above (Willm, A. ch. (4) 5.  
 5.)

Thallic sulphate,  $\text{Th}_2(\text{SO}_4)_3 + 7\text{H}_2\text{O}$ .

Decomp. by cold  $\text{H}_2\text{O}$  with separation of  
 $\text{TiO}(\text{OH})$  (Crookes.)

Thallothallic sulphate,  $2\text{Th}_2\text{O}_3 \cdot 3\text{Th}_2\text{O}_3 \cdot 12\text{SO}_3 + 25\text{H}_2\text{O}$ 

Gradually efflorescent. (Willm.)

$\text{Th}_2(\text{SO}_4)_3$ . (Lepsius, Chem. Ztg. 1890.  
 1327.)

$\text{TiH}(\text{SO}_4)_3$ . (Lepsius.)

Thallous uranyl sulphate,  $\text{Th}_2(\text{UO}_2)(\text{SO}_4)_2 + 3\text{H}_2\text{O}$ .

Sl. sol in cold  $\text{H}_2\text{O}$ .

Easily forms supersat. solutions. (Kohn,  
 Z. anorg. 1908, 59. 112.)

Thallium vanadium sulphate,  $\text{Th}_2\text{V}_2(\text{SO}_4)_4 + 24\text{H}_2\text{O}$ .

100 pts  $\text{H}_2\text{O}$  dissolve 11.06 pts salt at  $10^\circ$ .

Sp. gr. of solution at  $4^\circ/20^\circ = 2.342$

Very sol in hot  $\text{H}_2\text{O}$  (Pecqin, Z. anorg.  
 1897, 13. 446.)

256 g. anhydrous, or 433 g. hydrated salt,  
 or 0.573 g. mols. of anhydrous salt are sol. in  
 1 l.  $\text{H}_2\text{O}$  at  $25^\circ$ .

Melts in crystal  $\text{H}_2\text{O}$  at  $48^\circ$ . (Locke, Am.  
 Ch. J. 1901, 26. 175.)

Thallous zinc sulphate,  $\text{Th}_2\text{Zn}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$ .

1 l.  $\text{H}_2\text{O}$  dissolves 86 g. anhydrous salt  
 at  $25^\circ$ . (Locke, Am. Ch. J. 1902, 27. 459.)

Thallothallic sulphate bromide,  $\text{Th}_2\text{Br}_2\text{SO}_4$ .

Very sol in cold  $\text{H}_2\text{O}$ . Decomp. by much  
 $\text{H}_2\text{O}$ . (Meyer and Goldschmidt, B. 1903, 36.  
 242.)

Thorium sulphate, basic,  $3(\text{Th}(\text{SO}_4)_2 + 2\text{H}_2\text{O})$ ,  
 $\text{Th}(\text{SO}_4)_3 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; very slowly attacked by dil.  
 acids. (Demarcay.)

$\text{ThO}(\text{SO}_4) + 2\text{H}_2\text{O}$ . Stable in aq. solution  
 at  $100^\circ$ . (Hauser, B. 1910, 43. 2776.)

+5 $\text{H}_2\text{O}$ . Somewhat sol in hot conc.  
 $\text{MgSO}_4 + \text{Aq}$  (Halla, Z. anorg. 1912, 79. 260.)

Thorium sulphate,  $\text{Th}(\text{SO}_4)_2$ .

Anhydrous. Easily sol. if brought into a  
 large amount of  $\text{H}_2\text{O}$ , but very slowly sol. if  
 only a little  $\text{H}_2\text{O}$  is added to the salt.

100 pts  $\text{H}_2\text{O}$  dissolve about 4.86 pts.  $\text{Th}(\text{SO}_4)_2$  at  $0^\circ$  (Cleve)

When heated, anhydrous salt separates out, which redissolves on cooling. (Cleve.)

Solubility of anhydrous salt cannot be determined, as it begins to separate out  $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$  before a saturated solution is reached. At  $0^\circ$ , 100 pts.  $\text{H}_2\text{O}$  dissolved 22.97 pts  $\text{Th}(\text{SO}_4)_2$  in 15 minutes; at  $25^\circ$ , 27.00 pts  $\text{Th}(\text{SO}_4)_2$  were dissolved in 5 minutes (Roozeboom, Z. phys. Ch. 5. 198)

+  $2\text{H}_2\text{O}$ . Shows same behaviour as anhydrous salt. 100 pts.  $\text{H}_2\text{O}$  dissolved 35.50 pts.  $\text{Th}(\text{SO}_4)_2$  from this salt at  $1^\circ$ , but this is not the maximum solubility (Roozeboom)

+  $4\text{H}_2\text{O}$  Pptd by alcohol from hot aqueous solution; also formed by heating  $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$  in aqueous solution above  $60^\circ$ .

100 pts  $\text{H}_2\text{O}$  dissolve pts.  $\text{Th}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$ , calculated as  $\text{Th}(\text{SO}_4)_2$ , at  $t^\circ$ . D = according to Demarcay (C. R. 96. 1860); R = according to Roozeboom (Z. phys. Ch. 5. 202).

$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$	$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$	$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$
17	9.41 D	50	2.54 R	70	1.09 R
35	4.50 D	55	1.94 D	75	1.32 D
40	4.04 R	60	1.634 R	95	0.71 D

+  $6\text{H}_2\text{O}$  Behaves as the anhydrous salt, but action is much slower.

100 pts  $\text{H}_2\text{O}$  dissolve pts.  $\text{Th}(\text{SO}_4)_2 + 6\text{H}_2\text{O}$ , calculated as  $\text{Th}(\text{SO}_4)_2$ , at  $t^\circ$ .

$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$	$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$
0	1.50	45	3.85
15	1.63	60	6.64
30	2.45	.	.

(Roozeboom)

This determination gives too low figures, especially at the higher temperatures (Roozeboom)

+  $8\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve pts  $\text{Th}(\text{SO}_4)_2 + 8\text{H}_2\text{O}$ , calculated as  $\text{Th}(\text{SO}_4)_2$ , at  $t^\circ$

$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$	$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$
0	1.00	25	1.85
15	1.38	44	3.71

(Roozeboom.)

100 g.  $\text{Th}(\text{SO}_4)_2 + \text{Aq}$  sat. with  $\text{Th}(\text{SO}_4)_2 + 8\text{H}_2\text{O}$  at  $30^\circ$  contain 2.152 g. anhydrous  $\text{Th}(\text{SO}_4)_2$ . (Koppel and Holzkampf, Z. anorg. 1910, 87. 274.)

100 g.  $\text{H}_2\text{O}$  dissolve 1.722 g. at  $25^\circ$ . (Barre, Bull. Soc. 1912, (4) 11.)

+  $9\text{H}_2\text{O}$ . Pptd. by alcohol from cold

aqueous solution Sol in about 88 pts  $\text{H}_2\text{O}$  at  $0^\circ$ . (Cleve) Extremely slowly sol in  $\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve pts.  $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$ , calculated as  $\text{Th}(\text{SO}_4)_2$ , at  $t^\circ$

$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$	$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$	$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$
0	0.88	30	1.85	50	4.86
10	1.02	40	2.83	55	6.5 =
20	1.25	..	..		

Above  $55^\circ$ ,  $\text{Th}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$  separates out. (Demarcay C. R. 96. 1860, calculated by Roozeboom.)

100 pts  $\text{H}_2\text{O}$  dissolve pts.  $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$ , calculated as  $\text{Th}(\text{SO}_4)_2$ , at  $t^\circ$ .

$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$	$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$	$t^\circ$	Pts. $\text{Th}(\text{SO}_4)_2$
0	0.74	30	1.995	51	5.22
10	0.98	40	2.998	55	6.76
20	1.38				

Above  $60^\circ$ ,  $\text{Th}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$  separates out. (Roozeboom, Z. phys. Ch. 5. 201.)

For further data, see Roozeboom (Z. phys. Ch. 5. 198), where there is a full discussion of the subject.

100 g sat. solution of  $\text{Th}(\text{SO}_4)_2 + 9\text{H}_2\text{O}$  in  $\text{H}_2\text{O}$  at  $25^\circ$  contain 1.593 g. anhyd. salt (Wirth, Z. anorg 1912, 76. 174.)

Solubility of  $\text{Th}(\text{SO}_4)_2$  in  $\text{H}_2\text{SO}_4 + \text{Aq}$  at  $t^\circ$ .

(Koppel and Holzkampf, Z. anorg. 1910, 67. 274.)

The presence of phosphoric acid increases the solubility of thorium sulphate in  $\text{HCl}$  and  $\text{HNO}_3$ . (Koppel and Holzkampf, Z. anorg. 1910, 67. 280.)

For solubility of  $\text{Th}(\text{SO}_4)_2$  in  $(\text{NH}_4)_2\text{SO}_4$ ,  $\text{Li}_2\text{SO}_4$  and  $\text{K}_2\text{SO}_4$ , see respective sulphates.

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

Thorium hydrogen sulphate,  $\text{ThH}_2(\text{SO}_4)_2$ .

Hydroscopic.

Sol. in excess of hot  $\text{H}_2\text{SO}_4$ ; insol. in cold  $\text{H}_2\text{SO}_4$ . (Brauner, Z. anorg. 1904, 38. 333.)

Thulium sulphate,  $\text{Tm}_2(\text{SO}_4)_3 + 8\text{H}_2\text{O}$ .

Insol. in alcohol. (James, J. Am. Chem. Soc. 1911, 33. 1343.)

Tin (stannic) sulphate, basic,  $(\text{SnO})\text{SO}_4 + \text{H}_2\text{O}$ .

Easily sol. in cold  $\text{H}_2\text{O}$ , but quickly decomp. with separation of stannic hydroxide. (Ditte, C. R. 104. 178.)

$3\text{SnO}$ ,  $\text{SO}_2$ . Easily sol. in dil. acids. (Ditte, A. ch. 1882, (5) 27. 159.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . Not decomp. by cold  $\text{H}_2\text{O}$ . (Ditte)

Tin (stannous) sulphate,  $\text{SnSO}_4$ .

Sol. in 5.3 pts.  $\text{H}_2\text{O}$  at  $19^\circ$ , and 5.5 pts. at  $100^\circ$ . (Marignac) Solution soon decomposes with separation of a basic salt. Sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Bouquet.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329)

Tin (stannic) sulphate,  $\text{Sn}(\text{SO}_4)_2 + 2\text{H}_2\text{O}$ .

Deliquescent. Easily sol. in  $\text{H}_2\text{O}$ ; decomp. by much  $\text{H}_2\text{O}$ . Sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Slowly sol. in  $\text{HCl} + \text{Aq}$ . Decomp. by absolute alcohol. (Ditte, C. R. 104. 178.)

Titanium sulphate,  $\text{Ti}(\text{SO}_4)_2 + 3\text{H}_2\text{O}$ .

Deliquescent, and sol. in  $\text{H}_2\text{O}$ . The aqueous solution is decomp. on boiling. (Glatzel, B. 9. 1833)

Titanium sesquisulphate,  $\text{Ti}_2(\text{SO}_4)_3$ .

Very deliquescent, and easily sol. in  $\text{H}_2\text{O}$ . Aqueous solution is decomp. by boiling. (Ebelmen.)

Insol. in  $\text{H}_2\text{O}$ , alcohol, ether and conc.  $\text{H}_2\text{SO}_4$ . Slowly sol. in dil.  $\text{H}_2\text{SO}_4$  and  $\text{HCl}$ . (Stahler, B. 1905, 38. 2624)

Not sol. in alcohol. (Knecht, B. 1903, 36. 169.)

+  $8\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Glatzel, B. 9. 1833)

Titanium hydrogen sesquisulphate,  $3\text{Ti}_2(\text{SO}_4)_3 + \text{H}_2\text{SO}_4 + 25\text{H}_2\text{O}$ .Gradually sol. in  $\text{H}_2\text{O}$ 

Insol. in 60%  $\text{H}_2\text{SO}_4$ , alcohol, ether and glacial acetic acid. (Stahler, B. 1905, 38. 2621)

**Titanyl sulphate, (TiO)SO<sub>4</sub>.**

Decomp. by H<sub>2</sub>O. Slowly sol. in cold, rapidly in warm HCl+Ag (Merz, J pr. 99. 157.)

+2H<sub>2</sub>O. Sol in H<sub>2</sub>O. (Blondel, Bull. Soc. 1899, (3) 21. 262.)

2TiO<sub>2</sub>, 3SO<sub>3</sub>+3H<sub>2</sub>O. Sol. in H<sub>2</sub>O acidified with HCl. (Blondel, Bull. Soc. 1899, (3) 21. 262.)

5TiO<sub>2</sub>, SO<sub>3</sub>+5H<sub>2</sub>O. (Blondel)

7TiO<sub>2</sub>, 28SO<sub>3</sub>+7H<sub>2</sub>O (Blondel.)

2TiO<sub>2</sub>, SO<sub>3</sub>+2H<sub>2</sub>O (Blondel.)

**Uranous sulphate, basic, U(OH)<sub>2</sub>SO<sub>4</sub>+H<sub>2</sub>O.**

Insol. in H<sub>2</sub>O. H<sub>2</sub>O dissolves out H<sub>2</sub>SO<sub>4</sub>, (Ebelmen, A. ch. (3) 5. 217.)

+5H<sub>2</sub>O Sol in alcohol.

Pptd. by ether. (Rosenheim, Z. anorg. 1901, 26. 251)

**Uranous sulphate, U(SO<sub>4</sub>)<sub>2</sub>+4H<sub>2</sub>O.**

Sol in H<sub>2</sub>O with immediate decomp. Easily sol. in dil. H<sub>2</sub>SO<sub>4</sub>+Ag. (Kohlschutter, B. 1901, 34. 3629.)

Decomp by H<sub>2</sub>O into insol. basic, and sol. acid salt. Sol in dil. H<sub>2</sub>SO<sub>4</sub> or HCl+Ag. Difficultly sol in conc. acids (Ebelmen, A. ch. (3) 5. 215)

**Solubility of U(SO<sub>4</sub>)<sub>2</sub>+4H<sub>2</sub>O in H<sub>2</sub>O at t°.**

t°	% U(SO <sub>4</sub> ) <sub>2</sub>	t°	% U(SO <sub>4</sub> ) <sub>2</sub>
29	9.8	48.2	8.1
37	8.3	63	7.3

(Giollitti and Bucci, Gazz. ch. it. 1905, 35. (2) 162.)

1 pt. is sol. in 4.23 pts. H<sub>2</sub>O at 13°; 4.3 pts. at 11.3°; 4.4 pts. at 9.1°. (de Coninck, A. ch. 1903, (7) 28. 12.)

+8H<sub>2</sub>O.

**Solubility of U(SO<sub>4</sub>)<sub>2</sub>+8H<sub>2</sub>O in H<sub>2</sub>O at t°.**

18.1	5	1.1626	1.0204

(de Coninck, A. ch. 1903, (7) 28. 11.)

1 pt. is sol. in 8 pts. alcohol (94°)+Ag. (1.4) at 10.4°. (de Coninck.)

Solubility in glycol at 14.8°=3.15% (de Coninck, C. C. 1905, II. 883.)

Min. *Johannite*. Sl. sol. in H<sub>2</sub>O

**Uranous hydrogen sulphate, U(SO<sub>4</sub>)<sub>2</sub>, H<sub>2</sub>SO<sub>4</sub>+10H<sub>2</sub>O.**

(Giollitti, C. C. 1905, II. 1226.)

**Uranyl sulphate, basic,  $3\text{UO}_3 \cdot \text{SO}_3 + 2\text{H}_2\text{O}$ .**

(Athanasesco)  
 $+14\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Ordway, Sil Am. J. (2) 26, 208)  
 $4\text{UO}_3 \cdot \text{SO}_3 + 7\text{H}_2\text{O}$  (Athanasesco, C R 103, 271.)

$\text{UO}_3 \cdot 4\text{UOSO}_4 + 8\text{H}_2\text{O}$ . Less sol. in min. acids, especially dil  $\text{H}_2\text{SO}_4 + \text{Aq}$ , than  $\text{UOSO}_4 + 2\text{H}_2\text{O}$ . (de Coninck, C C 1901, II 1038.)

**Uranyl sulphate,  $(\text{UO}_2)\text{SO}_4$ .**

$+ \text{H}_2\text{O}$ . (de Coninck.)  
 $+ 3\text{H}_2\text{O}$ . Efflorescent. Very sol. in  $\text{H}_2\text{O}$  and alcohol

1 pt. is sol. in 0.6 pt. cold  $\text{H}_2\text{O}$ ; in 0.45 pt. boiling  $\text{H}_2\text{O}$ ; in 25 pts cold absolute alcohol; in 20 pts boiling absolute alcohol. (Bueholz.)

Sol. in 0.47 pt.  $\text{H}_2\text{O}$  at  $21^\circ$ , and 0.28 pt. boiling  $\text{H}_2\text{O}$  (Ebelmen.)  
 100 pts.  $\text{H}_2\text{O}$  at  $15.5^\circ$  dissolve 160 pts., and at  $100^\circ$ , 220 pts. (Ure's Diet)

1 pt is sol. in 5.3 pts  $\text{H}_2\text{O}$  at  $13.2^\circ$ ; 5.16 pts at  $14.1^\circ$ ; 4.96 pts. at  $15.1^\circ$ ; 4.88 pts at  $15.5^\circ$  (de Coninck, A. ch 1903, (7) 28. 8.)

Sp. gr. of  $(\text{UO}_2)\text{SO}_4 + \text{Aq}$  at  $t^\circ$

$t^\circ$	% $(\text{UO}_2)\text{SO}_4$	Sp. gr.
14	1	1.0062
15.5	2	1.0113

20.6	1	1.1738	1.0050
22.2	2	1.1775	1.0082
21.1	3	1.1880	1.0129
22.7	4	1.1872	1.0165
22.3	5	1.1918	1.0204

(de Coninck, A. ch. 1903, (7) 28. 7.) \*

1 pt is sol. in 37.9 pts. alcohol ( $85^\circ$ ) at  $16.7^\circ$ , 38.6 pts at  $15.8^\circ$  (de Coninck, A. ch 1903, (7) 28. 8.)

Very sl. sol. in formic and glacial acetic acids. (de Coninck, A. ch 1903, (7) 28. 9.)

Completely pptd from  $(\text{UO}_2)\text{SO}_4 + \text{Aq}$  by  $\text{HC}_2\text{H}_3\text{O}_2$ . (Persoz)

**Uranyl hydrogen sulphate,  $(\text{UO}_2)\text{SO}_4 \cdot \text{H}_2\text{SO}_4$ .**

Very deliquescent. (Schultz-Sellack.)

$2(\text{UO}_2)\text{SO}_4 \cdot \text{H}_2\text{SO}_4 + 5\text{H}_2\text{O}$ . Very deliquescent. (Wyruboff, Bull. Soc Min 1909, 22. 351)

**Uranyl pyrosulphate,  $(\text{UO}_2)_2\text{S}_2\text{O}_7$ .**

Very deliquescent. Fuses with  $\text{H}_2\text{O}$ . (Schultz-Sellack.)

**Uranouranyl sulphate,  $\text{USO}_4 \cdot (\text{UO}_2)\text{SO}_4$ .**

Sol. in  $\text{H}_2\text{O}$ . (Ebelmen.) Decomp. by boiling. (Berzelius)

Mm *Voghanate*.

**Uranyl sulphate ammoniac,  $(\text{UO}_2)\text{SO}_4 \cdot 2\text{NH}_3$ .**

(v. Unruh, Dissert. 1903.)

$(\text{UO}_2)\text{SO}_4 \cdot 3\text{NH}_3$ . (v. Unruh)

$(\text{UO}_2)\text{SO}_4 \cdot 4\text{NH}_3$ . (v. Unruh)

**Vanadous sulphate,  $\text{V}_2\text{O}_3 \cdot 4\text{SO}_3 + 9\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Brierley, Chem. Soc. 49. 882)

**Vanadium sulphate,  $\text{V}_2\text{O}_5 \cdot 2\text{SO}_3 = (\text{VO}_2)_2\text{S}_2\text{O}_7$ .**

Deliquescent. Easily sol in  $\text{H}_2\text{O}$ .

$\text{V}_2\text{O}_5 \cdot 3\text{SO}_3$ . Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol.

$+ 3\text{H}_2\text{O}$ . Deliquescent. Very sol. in  $\text{H}_2\text{O}$ , but decomp. by boiling. Sol. in alcohol. (Ditte, C. R. 102, 757.)

$\text{VSO}_4 + 7\text{H}_2\text{O}$ . Decomp. by air; very unstable; sol. in  $\text{H}_2\text{O}$ . (Piccini, Z. anorg. 1899, 19. 204.)

**Vanadium sesquisulphate,  $\text{V}_2(\text{SO}_4)_3$ .**

*Anhydrous*.

Insol. in  $\text{H}_2\text{O}$ .

Insol. in conc.  $\text{H}_2\text{SO}_4$ , but slowly sol. in boiling dil  $\text{H}_2\text{SO}_4$ . Sol. in  $\text{HCl}$ .

Insol. in alcohol and ether. (Stähler, B. 1905, 38. 3979)

**Vanadium hydrogen sulphate,**Sol. in  $H_2O$ .Sol. in HCl. Insol. in 60%  $H_2SO_4$  + Aq, alcohol, ether and acetic acid. (Stähler, B 1905, 38. 3978.)**Divanadyl sulphate,  $V_2O_5(SO_4)_2$ .**Insol. in  $H_2O$ , HCl, or  $H_2SO_4$  + Aq, but on heating to 400° becomes sol. in  $H_2O$  if heated to 130° therewith (Gerland.)+  $4H_2O$ . Very slowly sol. in  $H_2O$  at 10°, quickly at 60°, and still more rapidly at 100°.Deliquesces in warm moist air more quickly than it dissolves in  $H_2O$  at 10°. Insol. in absolute alcohol. Very sol. in alcohol of 0.833 sp. gr. (Berzelius.)+  $5H_2O$ . (Koppell and Behrendt, Z. anorg. 1903, 35. 168.)+  $7H_2O$ , and  $10H_2O$ .+  $13H_2O$ . Efflorescent (Gerland.) $2V_2O_5, 5SO_3 + 18H_2O$ . (Gain, C. R. 1906, 143. 1154.) $V_2O_5, 3SO_3 + 10H_2O$ . (G.) $2V_2O_5, 7SO_3 + 20H_2O$ . (G.) $2V_2O_5, 9SO_3 + 22H_2O$ . (G.) $V_2O_5, 5SO_3 + 12H_2O$ . (G.)**Divanadyl hydrogen sulphate,**+  $2H_2O$ .+  $3H_2O$ . Deliquescent. Very slowly sol. in cold  $H_2O$  or alcohol. Easily sol. in hot  $H_2O$ . (Gerland.)+  $5H_2O$ . Deliquescent. Insol. in ether. Scarcely sol. in alcohol. Slowly sol. in cold, easily in hot  $H_2O$ . (Crow.)+  $14H_2O$ . Easily sol. in cold  $H_2O$  or dil. alcohol. (Gerland.) $2V_2O_5, 3SO_3$ . Sl. sol. in  $H_2O$ . (Koppell and Behrendt, Z. anorg. 1903, 35. 163.) $2VOSO_4, H_2SO_4 + H_2O$ . Very slowly sol. in  $H_2O$ . (Koppell and Behrendt, Z. anorg. 1903, 35. 163.) $2VOSO_4, 3H_2SO_4 + 15H_2O$ . (Gain, C. R. 1906, 143. 1156.) $2VOSO_4, 4H_2SO_4 + 16H_2O$ . (G.) $2VOSO_4, 5H_2SO_4 + 15H_2O$ . (G.) $2VOSO_4, 7H_2SO_4 + 15H_2O$ . (G.) $2VOSO_4, 8H_2SO_4 + 16H_2O$ . (G.)**Ytterbium sulphate,  $Yb_2(SO_4)_3 + 8H_2O$ .**Quite slowly sol. in  $H_2O$  even at 100°. Anhydrous salt is easily sol. in much  $H_2O$ , but if little  $H_2O$  is used the hydrous salt is formed, which only slowly dissolves. Sol. in  $K_2SO_4$  + Aq.100 pts.  $H_2O$  dissolve at:0° 15.5° 35° 55° 60°  
44.2 34.8 19.1 11.5 10.4 pts.  $Yb_2(SO_4)_3$ .70° 80° 90° 100°  
7.22 6.93 5.83 4.67 pts.  $Yb_2(SO_4)_3$ .

(Cleve, Z. anorg. 1902, 32. 143.)

**Yttrium sulphate, basic,  $Y_2O_3, SO_3 = (YO)_2SO_4$ .**Insol. in  $H_2O$  (Berzelius.) $2Y_2O_3, SO_3 + 10H_2O$  (Cleve)**Yttrium sulphate,  $Y_2(SO_4)_3$ .***Anhydrous* More sol. in  $H_2O$  than the hydrous salt, and more sol. in cold than hot  $H_2O$ . Solution sat at 0° separates  $Y_2(SO_4)_3 + 8H_2O$  at 50°. 100 pts.  $H_2O$  dissolve 15.2 pts. anhydrous salt at ord. temp.5.38 pts. are sol. in 100 pts.  $H_2O$  at 25°. (James and Holden, J. Am. Chem. Soc. 1913, 35. 561.)Easily sol. in large amount of sat.  $K_2SO_4$  + Aq, from which  $3K_2SO_4, 2Y(SO_4)_3$  is pptd on warming (Cleve and Höglund, Sv. V. A. H. Bib. 1. No. 8.)Solubility of  $Y_2(SO_4)_3$  in  $Na_2SO_4$  + Aq at 25°.

Pts. $Y_2(SO_4)_3$ per 100 pts. $H_2O$	Pts. $Na_2SO_4$ per 100 pts. $H_2O$	Solid phase

		$Na_2SO_4 + 10H_2O$

(James and Holden, J. Am. Chem. Soc. 1913, 35. 560.)

+  $8H_2O$ . 100 pts.  $H_2O$  dissolve 9.3 pts. of cryst. salt at ord. temp., and 4.8 pts. at 100°. (Cleve, Bull. Soc. (2) 21. 344.)Less sol. in  $H_2O$  containing  $H_2SO_4$  than in pure  $H_2O$  (Berzelius.)Completely pptd. by  $HCl + H_2O_2$  + Aq. Insol. in alcohol.**Yttrium hydrogen sulphate,  $Y_2(SO_4)_3$ .**

(Brauner, Z. anorg. 1904, 38. 332.)

**Zinc sulphate, basic,  $8ZnO, SO_3 + 2H_2O$ .**Insol. in  $H_2O$ . (Schindler, Mag. Pharm. 31. 181.) $6ZnO, SO_3 + 10H_2O$ . Insol. in  $H_2O$ . (Kane, A. ch. 72. 310.) $4ZnO, SO_3 + 2H_2O$ . Scarcely sol. in hot or cold  $H_2O$ . Sol. in  $ZnSO_4$  + Aq. (Kühn, Schw. J. 60. 337.)

+3H<sub>2</sub>O. (Werner, B. 1907, 40. 4443.)  
 +5H<sub>2</sub>O. Nearly insol. in H<sub>2</sub>O (Habermann, M 5. 432.)  
 +6H<sub>2</sub>O (Kraut, Z. anorg. 1897, 13. 5.)  
 +7H<sub>2</sub>O (Athanasesco, C. R. 103. 271.)  
 +8H<sub>2</sub>O. Extremely slowly decomp. by H<sub>2</sub>O. (Remdel, J. pr. 1869, (1) 106. 373.)  
 +10H<sub>2</sub>O. (Schindler)  
 3ZnO, SO<sub>3</sub>. Insol. in cold, sl. sol. in hot H<sub>2</sub>O (Vogel.)  
 2ZnO, SO<sub>3</sub>. (Athanasesco.)  
 5ZnO, SO<sub>3</sub>. (Piekering, Chem. Soc. 1907, 91. 1886.)  
 +4H<sub>2</sub>O (Moody, Am. J. Sci. 1906, [4] 22. 184.)  
 9ZnO, 2SO<sub>3</sub>+12H<sub>2</sub>O (Remdel, J. pr. 1869, (1) 106. 374.)

Zinc sulphate, ZnSO<sub>4</sub>.

Sol. in H<sub>2</sub>O with evolution of heat.  
 Sol. in HCl+Aq.  
 +H<sub>2</sub>O. (Etard.)  
 +2H<sub>2</sub>O. Insol. in alcohol. (Kuhn.)  
 +3½H<sub>2</sub>O. (Anthon)  
 +5H<sub>2</sub>O. Insol. in boiling alcohol of 0.86 sp. gr. (Kuhn.)  
 +8H<sub>2</sub>O. (Marignac)  
 +7H<sub>2</sub>O. Slowly efflorescent.  
 M.pt. of ZnSO<sub>4</sub>+7H<sub>2</sub>O=50° (Tilden, Chem. Soc. 45. 409)  
 For solubility data on hydrated salts, see below

Sol. in 2+ pts. H<sub>2</sub>O at ord. temp., and in less at 100° (Bergmann)  
 100 pts. H<sub>2</sub>O at 104° dissolve 81.81 pts. ZnSO<sub>4</sub>. (Griffiths.)  
 100 pts. H<sub>2</sub>O at ord. temp. dissolve 140 pts. ZnSO<sub>4</sub>+7H<sub>2</sub>O. (Dumas.)  
 Sol. in 2.29 pts. H<sub>2</sub>O at 18.75° (Abl.)  
 100 pts. H<sub>2</sub>O at 15.56° dissolve 140 pts. ZnSO<sub>4</sub>+7H<sub>2</sub>O (Ure's Diss.)  
 100 pts. H<sub>2</sub>O at 18° dissolve 140.53 pts. ZnSO<sub>4</sub>+7H<sub>2</sub>O, and has sp. gr. = 1.4442 (Münch and Kraft.)  
 1 pt. of the crystals dissolves in 0.923 pt. H<sub>2</sub>O at 17.5°, and forms a solution of 1.4353 sp. gr. (Karsten)

100 pts. ZnSO<sub>4</sub>+Aq. sat. at 18-20° contain 35.36 pts. ZnSO<sub>4</sub>. (v. Hauer, J. B. 1866. 59.)  
 100 pts. H<sub>2</sub>O dissolve at:  
 0° 20° 50° 75°  
 41.8 53.0 66.9 80.4 pts. ZnSO<sub>4</sub>. (Tobler, J. B. 1855. 309.)

100 pts. H<sub>2</sub>O at 20.5° dissolve 163.2 pts. ZnSO<sub>4</sub>+7H<sub>2</sub>O. (Schiff, A. 109. 336.)

100 pts. H<sub>2</sub>O at t° dissolve pts. anhydrous ZnSO<sub>4</sub>, and pts. ZnSO<sub>4</sub>+7H<sub>2</sub>O.

t°	Pts. ZnSO <sub>4</sub>	Pts. ZnSO <sub>4</sub> +7H <sub>2</sub> O	t°	Pts. ZnSO <sub>4</sub>	Pts. ZnSO <sub>4</sub> +7H <sub>2</sub> O

(Linebarger, J. Am. Chem. Soc. 1895, 17. 380.)

Difficultly and slowly sol. in sat.  $\text{NH}_4\text{Cl} + \text{Aq}$ , with separation of a double sulphate

Sol. in considerable quantity in sat.  $\text{NaCl} + \text{Aq}$ , without pptn at first, but finally  $\text{Na}_2\text{SO}_4$  separates out. See under  $\text{NaCl}$

Sol. in sat.  $\text{NaNO}_3 + \text{Aq}$  as in  $\text{NaCl} + \text{Aq}$ . See under  $\text{NaNO}_3$

Sol. in sat.  $\text{KNO}_3 + \text{Aq}$  with immediate pptn. of double sulphate. (Karsten.) See under  $\text{KNO}_3$

Very rapidly sol. in sat.  $\text{K}_2\text{SO}_4 + \text{Aq}$ , with separation of a double salt. (Karsten.) See under  $\text{K}_2\text{SO}_4$

Abundantly. in sat.  $\text{CuSO}_4 + \text{Aq}$ .

Slowly sol. in sat.  $\text{MgSO}_4 + \text{Aq}$

Very rapidly and abundantly sol. in sat.  $\text{NaSO}_4 + \text{Aq}$

For solubility of  $\text{ZnSO}_4 + \text{Na}_2\text{SO}_4$ , see under  $\text{Na}_2\text{SO}_4$  and  $\text{Na}_2\text{Zn}(\text{SO}_4)_2 + 4\text{H}_2\text{O}$ .

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830.)

Insol. in alcohol of 0.88 sp. gr.; 1000 pts. alcohol of 0.905 sp. gr. dissolve 2 pts (Anthon.)

100 pts. of a saturated solution in 40% alcohol contain 3.48 pts.  $\text{ZnSO}_4 + 7\text{H}_2\text{O}$ ; 20%, 39 pts., 10%, 51.1 pts. (Schiff, J. B. 1861. 87.)

100 pts. absolute methyl alcohol dissolve 0.65 pt.  $\text{ZnSO}_4$  at  $18^\circ$ . (de Bruyn, Z. phys. Ch. 10. 783.)

100 pts. absolute methyl alcohol dissolve 59 pts.  $\text{ZnSO}_4 + 7\text{H}_2\text{O}$  at  $17^\circ$

100 pts 50% methyl alcohol dissolve 15.7 pts  $\text{ZnSO}_4 + 7\text{H}_2\text{O}$  at  $17^\circ$ . (de Bruyn.)

Insol. in acetone (Eidmann, C. C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

100 pts glycerine dissolve 35 pts  $\text{ZnSO}_4$  at ord. temp (Klever, Bull. Soc. 1872, (2) 18. 372.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601.)

Min. Gosslarite.

Zinc hydrogen sulphate,  $\text{ZnH}_2(\text{SO}_4)_2 + 8\text{H}_2\text{O}$ .

Somewhat difficultly sol. in cold, easily in hot  $\text{H}_2\text{O}$  (v. Kobell, J. pr. 28. 492.)

Zinc sulphate ammonia, basic,  $4\text{NH}_3$ ,  $4\text{ZnO}$ ,  $\text{SO}_3 + 4\text{H}_2\text{O}$ .

Ppt. (Schindler)

Zinc sulphate ammonia,  $\text{ZnSO}_4$ ,  $2\text{NH}_3$ .

$+ \text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  into basic zinc sulphate

$\text{ZnSO}_4$ ,  $4\text{NH}_3$ ,  $+ 4\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Kane, A. ch. 72. 304.)

$+ 3\text{H}_2\text{O}$ . (André, C. R. 100. 241.)

$\text{ZnSO}_4$ ,  $5\text{NH}_3$  Sol. in  $\text{H}_2\text{O}$  with partial decomp (Rose, Pogg. 20. 149.)

Zinc sulphate cupric oxide,  $\text{ZnSO}_4$ ,  $2\text{CuO} + 5\text{H}_2\text{O}$ .

(Mailhe, A. ch. 1902, (7) 27. 169.)

$\text{ZnSO}_4$ ,  $3\text{CuO} + x\text{H}_2\text{O}$ . (Recours, C. R. 1901, 132. 1415.)

+5H<sub>2</sub>O  
 2ZnSO<sub>4</sub>, 3CuO+12H<sub>2</sub>O. (Mailhe, A. ch. 1902, (7) 27, 189.)  
 7ZnSO<sub>4</sub>, 24CuO+ $\pi$ H<sub>2</sub>O. (Reccour, C. R. 1901, 132, 1415.)

**Zinc sulphate hydrazine, ZnSO<sub>4</sub>, 2N<sub>2</sub>H<sub>4</sub>.**

Sol in NH<sub>4</sub>OH+Ag (Franzen, Z. anorg 1908, 60, 278.)

Sol in NH<sub>4</sub>OH+Ag without decomp. (Curtius, J. pr 1894, (2) 50, 345.)

ZnH<sub>2</sub>(SO<sub>4</sub>)<sub>2</sub>, N<sub>2</sub>H<sub>4</sub>. 1 pt. is sol in 185 pts. H<sub>2</sub>O at 12°. Sl. sol. in chl. acids. Decomp. by conc. HNO<sub>3</sub> and by hot conc. H<sub>2</sub>SO<sub>4</sub>. Very sol. in NH<sub>4</sub>OH+Ag. (Curtius, J. pr. 1894, (2) 50, 331.)

**Zirconium sulphate, basic, 3ZrO<sub>2</sub>, 2SO<sub>3</sub>.**

Insol in H<sub>2</sub>O. Sol. in HCl+Ag. (Paykull, B 12, 1719.)

4ZrO<sub>2</sub>, 3SO<sub>3</sub>+14H<sub>2</sub>O. Ppt. Difficulty sol. in H<sub>2</sub>O. (Hauser, B. 1904, 37, 2024.)

3ZrO<sub>2</sub>, SO<sub>3</sub>. Insol. in boiling H<sub>2</sub>O. (Franz, B. 3, 58.)

7ZrO<sub>2</sub>, 6SO<sub>3</sub>. Insol. in H<sub>2</sub>O. (Endemann, J. pr (2) 11, 219.)

ZrO<sub>2</sub>, SO<sub>3</sub>. Sol. in very little H<sub>2</sub>O. More H<sub>2</sub>O decomp. into 3ZrO<sub>2</sub>, 2SO<sub>3</sub> and Zr(SO<sub>4</sub>)<sub>2</sub>. (Berzelius.)

3ZrO<sub>2</sub>, 4SO<sub>3</sub>+15H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Paykull)

6ZrO<sub>2</sub>, 7SO<sub>3</sub>+19H<sub>2</sub>O Sol in H<sub>2</sub>O. (Paykull)

**Zirconium sulphate, Zr(SO<sub>4</sub>)<sub>2</sub>.**

*Anhydrous.* Slowly but completely sol. in cold, quickly in hot H<sub>2</sub>O

Sol. in warm H<sub>2</sub>SO<sub>4</sub>, but separates on cooling. Precipitated from aqueous solution by alcohol.

+4H<sub>2</sub>O. Easily sol. in H<sub>2</sub>O.  
 100 pts. of the solution contain 59.3 pts. of the hydrated salt at 39.5°. (Hauser, B. 1904, 37, 2025.)

**Solubility of Zr(SO<sub>4</sub>)<sub>2</sub>+4H<sub>2</sub>O in H<sub>2</sub>SO<sub>4</sub>+Aq at t°.**

100 g of the solution contain:

t°	g. ZrO <sub>2</sub>	g. SO <sub>3</sub>
39.5	19.5	25.46
	19.3	25.6
	19.6	25.99
	19.3	26.5
	18.8	27.0
	18.15	27.6
	17.3	28.3
	16.2	29.1
	9.6	32.3
	5.3	34.7
	3.51	36.01
	1.03	38.2
	0.46	39.8
	0.31	42.0

**Solubility of Zr(SO<sub>4</sub>)<sub>2</sub>+4H<sub>2</sub>O in H<sub>2</sub>SO<sub>4</sub>+Aq at t°.—Continued.**

t°	g. ZrO <sub>2</sub>	g. SO <sub>3</sub>
	0.33	42.1
	0.14	46.8
	0.13	47.1
	0.15	56.7
	0.20	56.8
	0.27	57.1
	0.50	57.5
	0.60	57.8
	2.00	59.5
	3.25	60.4
	4.40	61.4
22	0.10	56.1
	0.13	46.5
	0.21	57.2

(Hauser, Z. anorg 1907, 54, 197)

**Zirconium hydrogen sulphate, Zr(SO<sub>4</sub>)<sub>2</sub>, H<sub>2</sub>SO<sub>4</sub>+H<sub>2</sub>O.**

Solubility in H<sub>2</sub>SO<sub>4</sub>+Aq. at 39.5°. 100 g. of the solution contain:

0.11	0.10	0.10	g. ZrO <sub>2</sub>
81.4	81.6	81.5	g. SO <sub>3</sub>

(Hauser, Z. anorg. 1907, 54, 200.)

**+3H<sub>2</sub>O.**

Solubility in H<sub>2</sub>SO<sub>4</sub>+Aq at t°.

100 g of the solution contain:

t°	g. ZrO <sub>2</sub>	g. SO <sub>3</sub>
39.5	4.55	61.5
	3.25	62.5
	3.33	63.8

22	0.80	66.4
	0.65	67.5
	0.60	68.1

(Hauser, Z. anorg. 1907, 54, 200)

**Persulphuric acid, HSO<sub>4</sub>.**

*See Persulphuric acid.*

**Pyrosulphuric acid and pyrosulphates.**

*See under Sulphuric acid and sulphates.*

**Sulphuric boric acid.**

*See Borosulphuric acid.*

**Sulphuric vanadic acid, V<sub>2</sub>O<sub>5</sub>, 3SO<sub>3</sub>+3H<sub>2</sub>O.**

*See Sulphate, vanadium.*

**Sulphurous acid, anhydrous,  $\text{SO}_2$ .**

See Sulphur dioxide.

**Sulphurous acid,  $\text{H}_2\text{SO}_3$ .**

Known only in aqueous solution, from which  $\text{SO}_2$  is given off upon heating. Crystallizes in cold, with various amounts of water, forming compounds which approximate  $\text{H}_2\text{SO}_3 + 8\text{H}_2\text{O}$  (Pierre, A. 68. 228);  $\text{H}_2\text{SO}_3 + 10\text{H}_2\text{O}$  (Döpping, Bull. Ac. St. Pétersb. 7. 100);  $\text{H}_2\text{SO}_3 + 14\text{H}_2\text{O}$  (Schonfeld, A. 95. 22);  $\text{H}_2\text{SO}_3 + 6\text{H}_2\text{O}$  (Roozeboom, R. t. c. 3. 29, 59, 75, 84; Geuther, A. 224. 218). Crystals are sol in 2 pts  $\text{H}_2\text{O}$  at  $10^\circ$ . (Pierre.)

For sp. gr. of solutions, etc., see sulphur dioxide

**Sulphites.**

*Normal.* Only the alkali sulphites are sol. in  $\text{H}_2\text{O}$ , and they are insol or only sl sol in alcohol.

Insol. in liquid  $\text{NH}_3$  (Franklin, Am. ch. J. 1898, 20. 824.)

*Acid.* All the acid sulphites are sol. in  $\text{H}_2\text{O}$ .

In general it is rarely possible to determine whether the compd described is a pure chemical compound or not. It is probable that many substances described by Svenssen and others are isomorphous mixtures whose composition depends upon the temp and conc. of the solution in which it was pptd (Rosenheim, Z. anorg. 1900, 25. 72.)

**Aluminum sulphite, basic,  $\text{Al}_2\text{O}_3, \text{SO}_2 + 4\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ . (Fourcroy and Vauquelin.)

$6\text{Al}(\text{OH})_3, \text{Al}_2(\text{SO}_3)_3 + 9\text{H}_2\text{O}$  Ppt. (Seubert, Z. anorg. 1893, 4. 56.)

**Ammonium sulphite, basic,  $(\text{NH}_4)_2\text{SO}_3, \text{NH}_3 + \frac{1}{2}\text{H}_2\text{O}$ .**

Sol in  $\text{H}_2\text{O}$ . Pptd. from aqueous solution by alcohol. (Muspratt.)

Does not exist (Maignac.)

**Ammonium sulphite,  $(\text{NH}_4)_2\text{SO}_3$ .**

Very hygroscopic (Divers, Chem. Soc. 1900, 77. 336.)

Insol. in acetone. (Eidmann, C.C. 1899, II. 1014.)

$+\text{H}_2\text{O}$ . Slowly sol. in  $\text{H}_2\text{O}$ . (Muspratt, A. 50. 268.)

Sol. in 1 pt.  $\text{H}_2\text{O}$  at  $12^\circ$ . (Fourcroy and Vauquelin, Crell. Ann. 1800, 2. 415.)

Mbrs sol. in hot  $\text{H}_2\text{O}$  with evolution of  $\text{NH}_3$ . Sl sol. in absolute alcohol. (Muspratt.)

Much more sol. in alcohol than  $\text{K}_2\text{SO}_3$ . (Pierre.)

Loses  $\text{NH}_3$  in the air.

Sol. in  $\text{H}_2\text{O}$ . Conc solution charged with  $\text{NH}_3$  will deposit salt on evaporation over  $\text{KOH}$ . Dil. solution decomp. on evaporation (Divers, Chem. Soc. 1900, 77. 335.)

Insol in acetone (Naumann, B. 1904, 37. 4329.)

**Ammonium hydrogen sulphite,  $\text{NH}_4\text{HSO}_3$ .**

Insol. in acetone. (Eidmann, C.C. 1899, II. 1014; Naumann, B. 1904, 37. 4329.)

**Ammonium pyrosulphite,  $(\text{NH}_4)_2\text{S}_2\text{O}_5$ .**

Deliquescent. Very sol. in  $\text{H}_2\text{O}$  and alcohol. Insol in ether (Fock and Kluss, B. 23. 3149.)

Very sol. in  $\text{H}_2\text{O}$ ; very hygroscopic. Aq solution is sl decomp. on evaporation. (Divers, Chem. Soc. 1900, 77. 336.)

**Ammonium cadmium sulphite,  $(\text{NH}_4)_2\text{SO}_3, \text{CdSO}_3$ .**

Nearly insol in  $\text{H}_2\text{O}$ . Partly sol in excess of  $\text{H}_2\text{SO}_3 + \text{Aq}$ , but separates out on boiling. (Schuler, A. 87. 34.)

**Ammonium cobaltous sulphite,  $(\text{NH}_4)_2\text{SO}_3, \text{CoSO}_3 + x\text{H}_2\text{O}$ .**

Decomp. on air. (Berglund, B. 7. 469.)

**Ammonium cobaltocobaltic sulphite.**

See Cobaltisulphite, ammonium cobalt.

**Ammonium cuprous sulphite,  $(\text{NH}_4)_2\text{SO}_3, 2\text{Cu}_2\text{SO}_3 + 2\text{H}_2\text{O}$ .**

(Bottlinger, A. 51. 411.)  
 $(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3$  Insol in cold, decomp. by boiling  $\text{H}_2\text{O}$  (Rogojaski, J. B. 1851. 366.)

Decomp. by warming with  $\text{H}_2\text{O}$ , in which it is insol. Sol. in acids with evolution of  $\text{SO}_2$ . (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 99.)

$+2\text{H}_2\text{O}$  (Commaile, J. B. 1867. 300.)  
 $2(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3 + 3\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . Solution decomp. on standing. Decomp by acids. (Rosenheim and Steinhäuser.)

$5(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3 + 2\text{H}_2\text{O}$ . Decomp. on air. Sol in  $\text{H}_2\text{O}$  with decomp. (Svensson.)

$6(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3 + 4\text{H}_2\text{O}$ . Easily decomp. (Rosenheim and Steinhäuser.)

$7(\text{NH}_4)_2\text{SO}_3, \text{Cu}_2\text{SO}_3 + 4\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . Solution soon decomp. (Rosenheim and Steinhäuser.)

$+10\text{H}_2\text{O}$ . Decomp. on air. Sl. sol in warm, less sol in cold  $\text{H}_2\text{O}$  (de Saint-Gilles.)

$+14\text{H}_2\text{O}$ . Decomp. on air. Sol. in  $\text{H}_2\text{O}$ , but solution decomp.

Very easily sol in mother liquor. (Svensson, Acta Lund 1899. 13.)

**Ammonium cuproscopic sulphite,  $(\text{NH}_4)_2\text{SO}_3, 2\text{Cu}_2\text{SO}_3, \text{CuSC}_2 + 5\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  and weak acids. Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (de Saint-Gilles, A. ch. (3) 42. 31.)

$+6\frac{1}{2}\text{H}_2\text{O}$ . Ppt. (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 98.)

**Ammonium glucinum sulphite,**  
 $(\text{NH}_4)_2\text{O}, 2\text{GIO}, 3\text{SO}_3 + 4\text{H}_2\text{O}.$

Ppt Very unstable in the air (Rosen-  
 haem, Z anorg 1897, 15. 310)

**Ammonium gold (aurous) sulphite,**  
 $3(\text{NH}_4)_2\text{SO}_3 \cdot \text{Au}_2\text{SO}_3$

Very easily sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol.  
 (Haase, Z Ch 1869, 535)

**Ammonium gold (aurous) sulphite ammonia,**  
 $(\text{NH}_4)_2\text{SO}_3, 3\text{Au}_2\text{SO}_3, 6\text{NH}_3 + \text{H}_2\text{O}.$

Decomp. by  $\text{H}_2\text{O}$  Sol. in warm  $\text{NH}_4\text{OH} +$   
 Aq, but decomp. by boiling  
 $(\text{NH}_4)_2\text{Au}_2(\text{SO}_3)_3, 3\text{NH}_3 + 4\text{H}_2\text{O}.$  Decomp.  
 by  $\text{H}_2\text{O}$ . (Rosenheim, Z anorg. 1908, 59.  
 201.)

**Ammonium iridium sulphite.**

See Iridosulphite, ammonium.

**Ammonium iron (ferrous) sulphite,**  
 $(\text{NH}_4)_2\text{SO}_3, \text{FeSO}_3 + x\text{H}_2\text{O}.$

(Berglund.)

**Ammonium iron (ferric) sulphite sulphate,**  
 $\text{FeSO}_3 \cdot \text{SO}_3 \cdot \text{NH}_4 + \text{H}_2\text{O}$

Sl. sol. in cold  $\text{H}_2\text{O}$  Decomp. by cold  
 dil HCl (Hofmann, Z. anorg 1897, 14.  
 287)

**Ammonium magnesium sulphite,**  
 $(\text{NH}_4)_2\text{Mg}_3(\text{SO}_3)_4 + 18\text{H}_2\text{O}$

Very al sol in  $\text{H}_2\text{O}$ . (Fourcroy and Vau-  
 quelin)  
 Sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}.$   
 $+ 5\text{H}_2\text{O}.$  Much more sol in  $\text{H}_2\text{O}$  than  
 $\text{MgSO}_3$ . (Rammelsberg.)

**Ammonium manganous sulphite,  $(\text{NH}_4)_2\text{SO}_3,$**   
 $\text{MnSO}_3.$

Relatively easily decomp by  $\text{H}_2\text{O}$ . (Berg-  
 lund, Bull Soc. (2) 21. 213)  
 Not easily decomp. (Gorgeu, C R. 96.  
 376.)

**Ammonium mercuric sulphite,  $(\text{NH}_4)_2\text{SO}_3,$**   
 $\text{HgSO}_3.$

Very easily sol in  $\text{H}_2\text{O}$ , but  $\text{H}_2\text{O}$  solution  
 gradually decomp, even in the cold.

**Ammonium nickel sulphite,  $(\text{NH}_4)_2\text{SO}_3,$**   
 $3\text{NiSO}_3 + 18\text{H}_2\text{O}.$

Sol in  $\text{H}_2\text{O}$ . (Berglund, B 7. 469)

**Ammonium platinous sulphite.**

See Platousulphite, ammonium.

**Ammonium potassium sulphite,  $10(\text{NH}_4)_2\text{SO}_3,$**   
 $\text{K}_2\text{SO}_3 + 11\text{H}_2\text{O}.$

Decomp. by  $\text{H}_2\text{O}$ , etc. (Hartog, C. R.  
 109. 221)

**Ammonium scandium sulphate,**  
 $(\text{NH}_4)_2\text{SO}_3, \text{Sc}_2(\text{SO}_4)_3 + 7\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$ . Difficulty sol in  $\text{H}_2\text{SO}_3 +$   
 Aq. (Meyer, Z anorg 1914, 88. 281)

**Ammonium silver sulphite,  $(\text{NH}_4)_2\text{SO}_3,$**   
 $\text{Ag}_2\text{SO}_3.$

Insol. in  $\text{H}_2\text{O}$ , but gradually decomp.  
 thereby. (Svensson, B 4. 714)  
 $6(\text{NH}_4)_2\text{SO}_3, \text{Ag}_2\text{SO}_3 + 19\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$   
 without decomp (Svensson.)  
 $3(\text{NH}_4)_2\text{SO}_3, 4\text{NH}_4\text{HSO}_3, \text{Ag}_2\text{SO}_3 + 18\text{H}_2\text{O}.$   
 Easily sol in  $\text{H}_2\text{O}$ , but decomp. by warming.

**Ammonium sodium hydrogen sulphite,**  
 $\text{NH}_4\text{Na}_2\text{H}(\text{SO}_3)_2 + 4\text{H}_2\text{O}$

Not deliquescent (Marignac, Ann. Min.  
 (5) 12. 29.)

100 pts  $\text{H}_2\text{O}$  dissolve 42.3 pts salt at  $12.4^\circ$ ,  
 and 45.5 pts. at  $15^\circ$  (Schwicker, B 22. 1732)  
 $+ 5\text{H}_2\text{O} = 2\text{Na}_2\text{SO}_3, (\text{NH}_4)_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}.$   
 (Tauber, Techn. J. B 1888. 444)

**Ammonium tellurium sulphite,  $(\text{NH}_4)_2\text{SO}_3,$**   
 $\text{TeSO}_3 + x\text{H}_2\text{O}$

Sol. in  $\text{H}_2\text{O}$ . (Berglund, B. 7. 469.)

**Ammonium uranyl sulphite,**  
 $\text{NH}_4(\text{UO}_2)(\text{OH})\text{SO}_3.$

Insol in pure  $\text{H}_2\text{O}$  More sol. in  $\text{H}_2\text{SO}_3 +$   
 Aq than the K salt, and less than the Na  
 salt (Scheller, A. 144. 240)

$(\text{NH}_4)_2\text{O}, 2\text{UO}_3, 3\text{SO}_3$   
 $(\text{NH}_4)_2\text{O}, 4\text{UO}_3, 5\text{SO}_3$   
 $(\text{NH}_4)_2\text{O}, 3\text{UO}_3, 2\text{SO}_3$   
 $(\text{NH}_4)_2\text{O}, \text{UO}_3, 2\text{SO}_3$  (Kohlschütter, A.  
 1900, 311. 10)

**Ammonium vanadium sulphite.**

See Vanadiousulphite, ammonium.

**Ammonium vanadyl sulphite,**  
 $(\text{NH}_4)_2\text{SO}_3, \text{VOSO}_3 + 2\text{H}_2\text{O}.$

Sol. in  $\text{H}_2\text{O}$  with decomp. (Koppel, Z.  
 anorg. 1903, 35. 184.)

$(\text{NH}_4)_2\text{O}, 3\text{VO}_3, 2\text{SO}_3 + \text{H}_2\text{O}$  Sol. in cold  
 $\text{H}_2\text{O}$  without decomp.  
 Easily sol in mineral acids and alkalies  
 Sl. sol in alcohol and ether. (Koppel  
 Z anorg 1903, 35. 182)

**Ammonium zinc sulphite,  $(\text{NH}_4)_2\text{SO}_3, \text{ZnSO}_3.$**

Sol. in  $\text{H}_2\text{O}$ . (Berglund, B 7. 469)

**Ammonium sulphite mercuric chloride,**  
 $2(\text{NH}_4)_2\text{SO}_3, \text{HgCl}_2.$

Sl. sol. in cold, decomp. by boiling  $\text{H}_2\text{O}$ .  
 (de St-Giles, A. ch (3) 35. 95)

**Antimony sulphite,  $\text{Sb}_2\text{O}_3, 3\text{SO}_3(?)$ .**

Insol. in  $\text{H}_2\text{O}$  (Berzelius.)  
 Could not be obtained. (Röhrig, J pr  
 (2) 37. 241.)

**Barium sulphite, BaSO<sub>3</sub>**

Very sl. sol. in H<sub>2</sub>O (Fourcroy and Vauquelin, A. ch. 24. 301.)

Sol. in about 46,000 pts H<sub>2</sub>O at 16° (Autenrieth, Z. anst. 1898, 37. 294.)

Sol. in H<sub>2</sub>SO<sub>3</sub>+Aq.

Insol. in acetone. (Naumann B 1904, 37. 4329); methyl acetate (Naumann, B 1909, 42. 3790)

Solubility in sugar+Aq at t°.

Solvent	t°	100 ccm of solution contain g BaSO <sub>3</sub>
water	20	0.01974
sucrose+Aq 10° Brix		0.01040
" " 20° "		0.00968

(Rogowicz, C. C. 1905, II 1223.)

**Barium cobaltic sulphite.**

See Cobaltisulphate, barium.

**Barium gold (aurous) sulphite, 3BaSO<sub>3</sub>,**

Au<sub>2</sub>SO<sub>3</sub>+xH<sub>2</sub>O.

Ppt. (Haase)

**Barium mercuric sulphite, BaSO<sub>3</sub>, HgSO<sub>3</sub>+H<sub>2</sub>O.**

Ppt. (Barth, Z. phys. Ch. 9. 196)

**Barium mercuric sulphite chloride,**

BaSO<sub>3</sub>, BaCl<sub>2</sub>, 2HgSO<sub>3</sub>+3½H<sub>2</sub>O.

(Barth, Z. phys. Ch 1892, 9. 208.)

**Bismuth sulphite, basic, Bi<sub>2</sub>O<sub>3</sub>, 3SO<sub>3</sub>+5H<sub>2</sub>O.**

Insol. in H<sub>2</sub>O, alcohol, or ether. Sl. sol. in H<sub>2</sub>SO<sub>3</sub>+Aq. (Rohrig, J. pr. (2) 37. 241.)

(BiO)<sub>2</sub>SO<sub>3</sub>, 3(BiOH)SO<sub>3</sub>+H<sub>2</sub>O (Seubert and Elten, Z. anorg. 1893, 4. 72-5.)

2(BiO)<sub>2</sub>SO<sub>3</sub>, 3(BiOH)SO<sub>3</sub>+2H<sub>2</sub>O (S and E.)

3(BiO)<sub>2</sub>SO<sub>3</sub>, 7(BiOH)SO<sub>3</sub>+10H<sub>2</sub>O. (S. and E.)

4(BiO)<sub>2</sub>SO<sub>3</sub>, (BiOH)SO<sub>3</sub>+5H<sub>2</sub>O. (S. and E.)

9(BiO)<sub>2</sub>SO<sub>3</sub>, (BiOH)SO<sub>3</sub>+2H<sub>2</sub>O. (S. and E.)

**Bismuth cobaltic sulphite.**

See Cobaltisulphite, bismuth.

**Cadmium sulphite, CdSO<sub>3</sub>.**

Difficultly sol. in H<sub>2</sub>O. Easily sol. in dil. acids. (Rammelsberg, Pogg 67. 256.)

+2H<sub>2</sub>O. Difficultly sol. in H<sub>2</sub>O Sol. in H<sub>2</sub>SO<sub>3</sub>+Aq Sol. in NH<sub>4</sub>OH+Aq Insol in alcohol. (Muspratt, Phil. Mag. (3) 30. 414)

Insol in acetone. (Naumann, B 1904, 37. 4329.)

Contains 2½H<sub>2</sub>O (Deniges, Bull. Soc. (3) 7. 569.)

**Cadmium sodium sulphite, 3CdSO<sub>3</sub>, Na<sub>2</sub>SO<sub>3</sub>.**

Sol. in H<sub>2</sub>O. (Berglund, B. 7. 469)

**Cadmium sulphite, ammonia, CdSO<sub>3</sub>, NH<sub>3</sub>.**

Decomp. by H<sub>2</sub>O Sol without decomp. in hot NH<sub>4</sub>OH+Aq (Rammelsberg, Pogg 67. 256)

**Cæsium sulphite, Cs<sub>2</sub>SO<sub>3</sub>.**

Easily sol. in H<sub>2</sub>O. Sl. sol. in alcohol. (Chabré, C. R. 1901, 133. 297.)

**Cæsium hydrogen sulphite, CaHSO<sub>3</sub>.**

Easily sol. in H<sub>2</sub>O. Sl. sol. in alcohol. (Chabré, C. R. 1901, 133. 297.)

**Calcium sulphite, basic, Ca<sub>3</sub>S<sub>2</sub>O<sub>7</sub>=6CaO, 5SO<sub>3</sub>.**

(Schott, Dingl. 202. 52.)

**Calcium sulphite, CaSO<sub>3</sub>+2H<sub>2</sub>O**

Slowly effloresces. Sol in 800 pts. cold H<sub>2</sub>O. (Berzelius)

Insol. in H<sub>2</sub>O (Rohrig, J. pr. (2) 37. 230)

0.043 g is sol. in 1 l H<sub>2</sub>O at 18°. (Weisberg, Bull. Soc. 1896, (3) 15. 1249)

CaSO<sub>3</sub> equiv. to 78 mg CaO is sol. in 1 l. H<sub>2</sub>O at 100°. (Robart, C. A. 1913. 2500.)

Very sol. in H<sub>2</sub>SO<sub>3</sub>+Aq. See CaH<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub>.

Insol. in liquid NH<sub>3</sub>. (Franklin, Am. Ch. J. 1898, 20. 827.)

CaSO<sub>3</sub> equiv. to 37 mg. CaO is sol. in 1 l 12% cane sugar+Aq at 100°. (Robart, C. A. 1913. 2500.)

0.0825 g. is sol. in 1 l. 10% sugar +Aq at 18°, 0.0800 g. is sol. in 1 l. 30% sugar +Aq. at 18°. (Weisberg, Bull. Soc 1896, (3) 15. 1249.)

Insol in acetone. (Krug and M'Elroy)

Insol. in methyl acetate. (Naumann, B 1909, 42. 3790; ethyl acetate. (Naumann, B 1904, 37. 3601.)

+½H<sub>2</sub>O. (Rammelsberg.)

**Calcium hydrogen sulphite, CaH<sub>2</sub>(SO<sub>3</sub>)<sub>2</sub>.**

Know only in solution.

100 ccm. H<sub>2</sub>O containing 9 g. SO<sub>2</sub> dissolve 0.553 g. CaSO<sub>3</sub> to form a solution of 1.06 sp. gr. (Gerland, J. pr. (2) 4. 119.)

**Calcium cobaltic sulphite.**

See Cobaltisulphite, calcium.

Cerous sulphite,  $\text{Ce}_2(\text{SO}_3)_3 + 3\text{H}_2\text{O}$ .

More sol. in cold than hot  $\text{H}_2\text{O}$ .  
Solution gradually decomposes (Berthier, A. ch. (3) 7. 77.)

Chromous sulphite,  $\text{CrSO}_3$ .

Precipitate. Insol. in  $\text{H}_2\text{O}$ . (Moberg.)

Chromium sulphite, basic,  $\text{Cr}_2\text{O}_3, \text{SO}_3$ .

Colloidal modification. Sol. in  $\text{H}_2\text{O}$ .  
 $2\text{Cr}_2\text{O}_3, 3\text{SO}_3 + 16\text{H}_2\text{O}$ . Ppt. (Recoura, Bull. Soc. 1898, (3) 19. 169)

Chromic sulphite.

Known only in aqueous solution, which precipitates a basic salt on boiling.

$2\text{Cr}_2\text{O}_3, 3\text{SO}_3 + 16\text{H}_2\text{O}$ . Precipitate. (Danson, Chem. Soc. 2. 205.)

Chromic potassium sulphite,  $\text{K}_2\text{O}, \text{Cr}_2\text{O}_3, 2\text{SO}_3 + x\text{H}_2\text{O}$ .

Precipitate. (Berglund, B. 7. 470.)

Cobaltous sulphite, basic.

Ppt. Decomp. by  $\text{H}_2\text{O}$ . (Berthier)  
 $\text{Co}(\text{OH})_2, 5\text{CoSO}_3 + 10\text{H}_2\text{O}$  Ppt (Seubert and Elten, Z. anorg. 1893, 4. 89.)  
 $\text{Co}(\text{OH})_2, 10\text{CoSO}_3 + 15\text{H}_2\text{O}$ . (Seubert and Elten)

Cobaltous sulphite,  $\text{CoSO}_3$ .

+  $3\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ . (Rammelsberg.)  
Partly sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
+  $5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ . (Muspratt, A. 30. 282.)

Cobaltocobaltic sulphite.

See Cobaltisulphite, cobaltous.

Cobaltic sulphite with  $\frac{3}{2}\text{M}_2\text{SO}_3$ .

See Cobaltisulphite, M.

Cobaltous potassium sulphite,  $\text{CoSO}_3, \text{K}_2\text{SO}_3 + x\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{HCl} + \text{Aq}$ . (Schultze, J. B. 1864 270.)

Cobaltic potassium sulphite,  $\text{Co}_2(\text{SO}_3)_3, \text{K}_2\text{SO}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$  or  $\text{HCl} + \text{Aq}$ . (Schultze.)

Cobaltous sodium sulphite,  $3\text{CoO}, \text{Na}_2\text{O}, 3\text{SO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq}$ . (Schultze.)

Cobaltic sodium sulphite,  $\text{Co}_2\text{O}_3, \text{Na}_2\text{O}, 3\text{SO}_3$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Schultze.)

Cuprous sulphite,  $\text{Cu}_2\text{SO}_3 + \text{H}_2\text{O}$ .

(a) Red. Sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$  or  $\text{HCl} + \text{Aq}$ . (Rogowski, J. B. 1864. 366.)  
Could not be obtained by St. Gilles or Svensson (B. 4. 713)

Insol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Étard, C. R. 95. 38.)

Composition is  $(\text{Cu}_2)_2\text{H}_{12}(\text{SO}_3)_3$ , "Cuprous isosulphite," according to Étard.

+  $\frac{1}{2}\text{H}_2\text{O}$ . Étard's formula,  $\text{Cu}_2\text{SO}_3 + \text{H}_2\text{O}$  is incorrect.

The salt is almost colorless. (Ramberg Z. phys. Ch. 1909, 69. 512)

(8) White Normal salt. Insol. in  $\text{H}_2\text{O}$ , alcohol, or ether. (Étard.)

Cupric sulphite, basic,  $4\text{CuO}, \text{SO}_3 + 7\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , and decomp. by washing therewith. (Millon and Commaille.)

$7\text{CuO}, 4\text{SO}_3 + 8\text{H}_2\text{O}$ . Sol. in dil.  $\text{H}_2\text{SO}_4$ . (Seubert and Elten, Z. anorg. 1893, 4. 48.)

$3\text{CuO}, 2\text{SO}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Newbury, Am. Ch. J. 14. 232)

$7\text{CuO}, 4\text{SO}_3 + 8\text{H}_2\text{O}$ , or  $4\text{CuSO}_3, 3\text{Cu}(\text{OH})_2 + 5\text{H}_2\text{O}$ . Sol. in dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Seubert and Elten, Z. anorg. 1893, 4. 50.)

Cuprocupric sulphite,  $\text{CuSO}_3, \text{Cu}_2\text{SO}_3 + 2\text{H}_2\text{O}$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling

Sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ ,  $\text{HCl}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Berthier.)

Sol. in very dil.  $\text{HNO}_3 + \text{Aq}$  (Döpping, J. B. 1851. 365.)

Insol. in  $\text{H}_2\text{SO}_3, \text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{Cu}$  salts +  $\text{Aq}$ . (de St Gilles)

+  $5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ ,  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ , in cupric salts +  $\text{Aq}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ , or  $\text{HCl} + \text{Aq}$ . (de St. Gilles, A. ch. (3) 42. 34.)

Composition is  $(\text{Cu})\text{Cu}_2\text{H}_{10}(\text{SO}_3)_3 + 21\text{H}_2\text{O}$ , "acid cuprocupric octosulphite." (Étard, C. R. 96. 1475)

Cuprous ferroferric sodium sulphite,  $\text{Cu}_2\text{O}, 2\text{FeO}, \text{Fe}_2\text{O}_3, \text{Na}_2\text{O}, 6\text{SO}_3 + 16\text{H}_2\text{O}$ .

Sol. in about 1000 pts.  $\text{H}_2\text{O}$ .

Sol. in cold dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ ; sol. in cold dil.  $\text{HCl} + \text{Aq}$  with a residue of  $\text{Cu}_2\text{Cl}_2$ . (Stromeyer, A. 109. 237.)

Cuprous lithium sulphite,  $\text{Cu}_2\text{SO}_3, \text{Li}_2\text{SO}_3 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , but gradually decomp. thereby. (Étard, C. R. 95. 138.)

Cupric mercuric sulphite,  $\text{CuSO}_3, \text{HgSO}_3$ .

Sol. in  $\text{H}_2\text{O}$  in all proportions, but decomp. on boiling.

Cuprous potassium sulphite,  $\text{Cu}_2\text{SO}_3$ ,

$\text{K}_2\text{SO}_3$  (?).

(Vohl, J. pr. 95. 219.)

+  $2\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  with decomp.

(Rosenheim and Steinhäuser, Z. anorg. 1890, 25. 96.)

$\text{Cu}_2\text{SO}_3 \cdot 2\text{K}_2\text{SO}_4$ . (Chevreul, Graham, etc.)

Does not exist (Svensson.)

$\text{Cu}_2\text{O}$ ,  $3\text{K}_2\text{O}$ ,  $6\text{SO}_2 + 7\text{H}_2\text{O} = 4\text{KHSO}_3$ ,  $\text{K}_2\text{SO}_3$ ,  $\text{Cu}_2\text{SO}_3 + 5\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (Svensson, B. 4. 713.)

Could not be obtained. (Rosenheim and Steinhäuser.)

$\text{Cu}_2\text{O}$ ,  $4\text{K}_2\text{O}$ ,  $8\text{SO}_2 + 3\text{H}_2\text{O} = 6\text{KH}_2\text{SO}_3$ ,  $\text{K}_2\text{SO}_3$ ,  $\text{Cu}_2\text{SO}_3$  Decomp. by  $\text{H}_2\text{O}$ . (Svensson.)

Could not be obtained. (Rosenheim and Steinhäuser.)

$\text{Cu}_2\text{SO}_3$ ,  $8\text{K}_2\text{SO}_3 + 16\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  with decomp. (Rammelsberg, Pogg. 57. 391.)

Does not exist, according to Svensson

**Cuprocupric potassium sulphite**,  $3\text{Cu}_2\text{SO}_3$ ,  $3\text{CuSO}_3$ ,  $\text{K}_2\text{SO}_3$

Properties as cuprous potassium sulphite (Rogojski, J. B. 1851. 367.)

$2\text{Cu}_2\text{SO}_3$ ,  $\text{CuSO}_3$ ,  $\text{K}_2\text{SO}_3 + 5\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  and weak acids (de St-Gilles.)

$\text{Cu}_2\text{SO}_3$ ,  $4\text{CuSO}_3$ ,  $\text{K}_2\text{SO}_3 + 16\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (Rosenheim and Steinhäuser)

**Cuprous sodium sulphite**,  $\text{Cu}_2\text{SO}_3$ ,  $\text{Na}_2\text{SO}_3$ ,  $+2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Svensson, 1870.)

$\text{Cu}_2\text{SO}_3 + 11\text{H}_2\text{O}$  Insol. in cold  $\text{H}_2\text{O}$ , but decomp. by excess. (Étard, C. R. 95. 138.)

$2\text{Cu}_2\text{SO}_3$ ,  $3\text{Na}_2\text{SO}_3 + 29\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . (Rosenheim and Steinhäuser, Z. anorg 1900, 25. 94.)

$\text{Cu}_2\text{SO}_3$ ,  $5\text{Na}_2\text{SO}_3 + 38\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Svensson.)

$\text{Cu}_2\text{SO}_3$ ,  $7\text{Na}_2\text{SO}_3 + 19\text{H}_2\text{O}$  Completely sol. in  $\text{H}_2\text{O}$ , but solutions decomp. on standing (Svensson.)

**"Cuprous sodium octosulphite,"**  
( $\text{Cu}_2$ ),  $\text{H}_{10}\text{Na}_{18}\text{S}_8\text{O}_{22} + 43\text{H}_2\text{O}$ . (Étard)  
 $5\text{Cu}_2\text{SO}_3$ ,  $2\text{Na}_2\text{SO}_3 + 30\text{H}_2\text{O}$  Easily decomp. (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 94.)

**Cuprocupric sodium sulphite**,

$\text{Cu}_2\text{SO}_3$ ,  $2\text{CuSO}_3$ ,  $2\text{Na}_2\text{SO}_3 + 6\text{H}_2\text{O}$

Nearly insol. in cold, decomp. by hot  $\text{H}_2\text{O}$ . (Rosenheim and Steinhäuser, Z. anorg 1900, 25. 95.)

$+8\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Rosenheim and Steinhäuser.)

**Cuprocupric sodium hydrogen sulphite**,

$\text{Na}_5\text{Cu}_2^{\text{II}}(\text{Cu}_2^{\text{I}})\text{H}_4(\text{SO}_3)_3, 6\text{H}_4(\text{SO}_3) + 5\text{H}_2\text{O}$

Insol. in  $\text{H}_2\text{O}$ . (Étard, C. R. 94. 1422.)

( $\text{Cu}_2^{\text{I}}\text{Cu}_2^{\text{II}}\text{Na}_5\text{H}_{18}(\text{SO}_3)_8$ . (Étard.)

**Copper sodium sulphites.**

Doubtless many of the compds. described in this class are in reality isomorphous mixtures whose composition depends upon the temp and conc. of the solution in which pptd.

(Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 92-95.)

**Dydymium sulphite**,  $\text{Dy}_2(\text{SO}_3)_3 + 3\text{H}_2\text{O}$ , or  $6\text{H}_2\text{O}$ .

Precipitate. Insol. in  $\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{SO}_4$  + Aq, from which it is reprecipitated by heating, redissolving on cooling. (Marignac, A. ch. (3) 38. 167.)

**Erbium sulphite**,  $\text{Er}_2(\text{SO}_3)_3 + 3\text{H}_2\text{O}$ .

Precipitate

**Glucinum sulphite**, basic,  $2\text{GISO}_3$ ,  $9\text{Gl}(\text{OH})_2 + 6\text{H}_2\text{O}$

Ppt (Seubert, Z. anorg 1893, 4. 52.)

$\text{GlSO}_3$ ,  $\text{GlO}$  Decomp. by  $\text{H}_2\text{O}$  or alcohol (K and M)

$3\text{GISO}_3$ ,  $\text{GlC}$  Sol. in alcohol (K and M)

**Glucinum sulphite**,  $\text{GlSO}_3$ .

Decomp. by  $\text{H}_2\text{O}$  or alcohol (Krtiss and Morant, B. 23. 734.)

**Glucinum potassium sulphite**,

$2\text{GISO}_3$ ,  $\text{K}_2\text{SO}_3 + 9\text{H}_2\text{O}$

Unstable in the air. (Rosenheim, Z. anorg. 1897, 15. 310.)

**Gold (aurous) potassium sulphite**,  $\text{Au}_2\text{SO}_3$ ,  $3\text{K}_2\text{SO}_3$ .

Very sol. in  $\text{H}_2\text{O}$ , insol. in alcohol (Haase.)

**Gold (auric) potassium sulphite**,  $\text{Au}_2\text{O}_3$ ,  $5\text{K}_2\text{O}$ ,  $8\text{SO}_2 + 5\text{H}_2\text{O} = 5\text{K}_2\text{SO}_3$ ,  $\text{Au}_2(\text{SO}_3)_3 + 5\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp.

Decomp. by acids; insol. in alkalies. (Fremy, A. 79. 46.)

**Gold (auric) potassium sulphite**,

$\text{Au}_2(\text{SO}_3)_3$ ,  $5\text{K}_2\text{SO}_3 + 10\text{H}_2\text{O}$

(Rosenheim and Hertmann, Z. anorg. 1908, 59. 199.)

**Gold (auric) potassium sulphite ammonia**,

$\text{Au}_2(\text{SO}_3)_3$ ,  $3\text{K}_2\text{SO}_3$ ,  $4\text{NH}_3 + 4\text{H}_2\text{O}$ .

As the corresponding  $\text{NH}_4$  salt. (Rosenheim and Hertmann, Z. anorg 1908, 59. 202.)

**Gold (aurous) sodium sulphite**,  $\text{Au}_2\text{SO}_3$ ,  $3\text{Na}_2\text{SO}_3 + 3\text{H}_2\text{O}$ .

Sol. in less than 1 pt.  $\text{H}_2\text{O}$ . Insol. in alcohol (Haase.)

$+5\text{H}_2\text{O}$ . (Himly.)

**Gold (auric) sodium sulphite**,

$\text{Au}_2(\text{SO}_3)_3$ ,  $5\text{Na}_2\text{SO}_3 + 28\text{H}_2\text{O}$

As K salt. (Rosenheim and Hertmann, anorg 1908, 59. 199.)

Gold (aurous) sulphite ammonia,  $3\text{Au}_2\text{O}$ ,  $4\text{SO}_2$ ,  $8\text{NH}_3 + 4\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$  with decomp. Decomp. by acids

Sl sol. in cold, more easily in hot  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp. by boiling. (Hasse, *Zeit Ch* 1869. 535.)

Gold (auric) sulphite ammonia,

Ppt Decomp. in moist air and in neutral solution (Herzmann, *Z. anorg* 1908, 59. 198.)

Indium sulphite,  $2\text{In}_2\text{O}_3$ ,  $3\text{SO}_2 + 8\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$  (Bayer, A. 158. 372.)

Iridium sulphite,  $\text{Ir}_2(\text{SO}_3)_3 + 6\text{H}_2\text{O}$ .

Scarcely sol. in  $\text{H}_2\text{O}$ ; easily sol  $\text{HCl} + \text{Aq}$ . (Birnbbaum, A 186 179)

Iridyl sulphite,  $(\text{IrO})\text{SO}_3 + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Birnbbaum)

Iridous potassium sulphite,  $\text{IrO}$ ,  $3\text{K}_2\text{O}$ ,  $5\text{SO}_2(?)$

Sl. sol. in  $\text{H}_2\text{O}$ , more sol. in  $\text{KOH} + \text{Aq}$ . Easily sol in  $\text{HCl} + \text{Aq}$  (Claus, *J pr.* 42. 359)

Iridous sulphite potassium chloride.

See Iridosulphite, potassium.

Iridium sulphite with  $\text{M}_2\text{SO}_3$ .

See Iridosulphite, M.

Iron (ferrous) sulphite,  $\text{FeSO}_3 + 2\frac{1}{2}\text{H}_2\text{O}$ .

Very sl sol in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Insol in alcohol, but sol. therein in presence of  $\text{SO}_2$ . (Muspratt.)

Iron (ferric) sulphite,  $\text{Fe}_2\text{O}_3$ ,  $\text{SO}_2 + 6\text{H}_2\text{O}$ .

Very sl sol. in  $\text{H}_2\text{O}$ . Sol. in acids. (Koene.)  $2\text{Fe}_2\text{O}_3$ ,  $3\text{SO}_2$  Deliquescent; decomp. by  $\text{H}_2\text{O}$  into  $\text{SO}_2$  and above comp  $3\text{Fe}_2\text{O}_3$ ,  $\text{SO}_2 + 7\text{H}_2\text{O}$  Ppt

Iron (ferroferric) potassium sulphite,  $\text{FeSO}_3$ ,  $(\text{FeO})_2\text{SO}_3$ ,  $2\text{K}_2\text{SO}_3$

Ppt. (Berglund)

Iron (ferric) potassium sulphite,  $\text{K}_2\text{O}$ ,  $\text{Fe}_2\text{O}_3$ ,  $3\text{SO}_2 + 2\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Koene, *Pogg.* 63. 453.)

$\text{Fe}_2\text{O}_3$ ,  $2\text{K}_2\text{O}$ ,  $3\text{SO}_2 + 5\text{H}_2\text{O}$ . Ppt. (Muepratt, *Phil. Mag* (3) 30. 414.)

Iron (ferric) potassium sulphite sulphate,  $\text{FeSO}_4\text{SO}_3\text{K}$ .

Sl. sol. in cold  $\text{H}_2\text{O}$ .

Sol. in 20%  $\text{HCl}$ ; decomp. on boiling. (Hofmann, *Z anorg.* 1897, 14. 286.)

$\text{Fe}(\text{SO}_3)_2\text{SO}_4\text{K}_2$  Almost insol. in cold  $\text{H}_2\text{O}$ . Decomp. by boiling with dil. acids. (Hofmann)

$\text{Fe}_2(\text{SO}_3)_2\text{SO}_4\text{K}_4 + 5\text{H}_2\text{O}$ . Insol in cold  $\text{H}_2\text{O}$ ; sol. in cold 20%  $\text{HCl} + \text{Aq}$ ; decomp. on boiling with  $\text{H}_2\text{O}$ . (Hofmann)

Iron (ferric) sodium sulphite sulphate,

Almost insol. in  $\text{H}_2\text{O}$

Decomp. by boiling with dil. acids. (Hofmann, *Z. anorg.* 1897, 14. 289.)

Iron (ferric) sodium hydrogen sulphite sulphate,  $\text{FeSO}_4(\text{SO}_3)_2\text{H}_2\text{Na}_2 + 2\text{H}_2\text{O}$ .

Only very sl. sol. in  $\text{H}_2\text{O}$ . (Hofmann)

Lanthanum sulphite,  $\text{La}_2(\text{SO}_3)_3 + 4\text{H}_2\text{O}$ .

Precipitate (Cleve)

Lead sulphite,  $\text{PbSO}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by acids. Sl sol in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Röhrig, *J pr.* (2) 37. 233.)

Lithium sulphite,  $\text{Li}_2\text{SO}_3 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; precipitated from aqueous solution by abs alcohol. (Danson, *Chem. Soc.* 2. 205.) Sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

$+ \text{H}_2\text{O}$  Sl. sol. in alcohol, and still less sol in ether (Röhrig, *J pr* (2) 37. 225.)  $+ 2\text{H}_2\text{O}$ . (Röhrig)

Lithium potassium sulphite,  $\text{LiKSO}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Easily sol in  $\text{H}_2\text{O}$ . (Röhrig, *J pr* (2) 37. 251.)

Lithium sodium sulphite,  $6\text{Li}_2\text{SO}_3$ ,  $\text{Na}_2\text{SO}_3 + 8\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (Röhrig)

Magnesium sulphite,  $\text{MgSO}_3 + 6\text{H}_2\text{O}$ .

Sol. in 20 pts. cold, and in less hot  $\text{H}_2\text{O}$ . (Fourcroy and Vauquelin.)

Sol. in 80 pts. cold, and in 120 pts. boiling  $\text{H}_2\text{O}$ . (Hager, *C. C.* 1875. 135.)

More easily sol in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Insol in liquid  $\text{NH}_3$ . (Franklin, *Am. Ch. J.* 1898, 20. 828.)

Precipitated from aqueous solution by alcohol

$+ 3\text{H}_2\text{O}$ . (Röhrig, *J pr.* (2) 37. 234.)

Manganous sulphite,  $\text{MnSO}_3 + 2\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ , alcohol, or ether. Easily sol. in acids, also in  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

Insol in acetone. (Naumann, *B.* 1904, 37. 4329)

$+ 2\frac{1}{2}\text{H}_2\text{O}$ . (Rammelsberg.)

$+ 3\text{H}_2\text{O}$ . Sol. in 10,000 pts. cold, and 5000 pts. hot  $\text{H}_2\text{O}$ ; more sol. in conc.  $\text{Mn}$  salts  $+ \text{Aq}$ , sol in 1000 pts.  $\text{H}_2\text{CO}_3 + \text{Aq}$ . 100 pts.  $\text{H}_2\text{SO}_4 + \text{Aq}$  dissolve 15-17 pts (Gorgeu, *C. R.* 96. 341)

Salt with  $2\frac{1}{2}\text{H}_2\text{O}$  is the only one which exists. (Röhrig, J. pr. (2) 37. 2)

**Manganous potassium sulphite,  $2\text{MnSO}_3 \cdot \text{K}_2\text{SO}_3$ .**

Insol in  $\text{H}_2\text{O}$ , even when boiling. (Gorgeu, C. R. 96. 376.)

$\text{MnSO}_3 \cdot \text{K}_2\text{SO}_3$  Sol. in  $\text{H}_2\text{O}$ . (Gorgeu.)

**Manganous sodium sulphite,  $\text{MnSO}_3 \cdot \text{Na}_2\text{SO}_3 + \text{H}_2\text{O}$ .**

Insol. in hot  $\text{H}_2\text{O}$ , but decomp. by cold  $\text{H}_2\text{O}$ . (Gorgeu.)

$4\text{MnSO}_3 \cdot \text{Na}_2\text{SO}_3$  Insol. in  $\text{H}_2\text{O}$ . (Gorgeu.)

**Mercuric sulphite,  $2\text{HgO} \cdot \text{SO}_2$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$ , alkali sulphites with subsequent decomp., and in  $\text{KCN} + \text{Aq}$  (de St-Gilles, A. ch. (3) 36. 80.)

$\text{HgSO}_3$ . Decomp. by cold  $\text{H}_2\text{O}$  (de St-Gilles)

Does not exist (Divers and Shimidzu, Chem. Soc. 49. 553)

$\text{HgO} \cdot 2\text{SO}_2 + \text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ , but decomp. by boiling (de St-Gilles) Exists only in aqueous solution. (Divers and Shimidzu.)

**Mercuriomercuric sulphite,  $\text{Hg}_2(\text{SO}_3)_2 + 2\text{H}_2\text{O} = \text{Hg}_2\text{SO}_3 \cdot \text{HgSO}_3$ .**

Very efflorescent. Insol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . Insol. in dil.  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

$+4\text{H}_2\text{O}$  Very efflorescent.

**Hypomercurosic sulphite,  $\text{Hg}_4(\text{SO}_3)_3 + \text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ , but easily decomp. on standing therewith. Almost absolutely insol in dil.  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Divers and Shimidzu.)

**Mercuric oxysulphite,  $\text{Hg}(\text{SO}_2\text{OHgO})_2 \cdot \text{Hg} + \text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . Insol. in dil.  $\text{HNO}_3$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Divers and Shimidzu.)

**Mercuric potassium sulphite, basic,  $\text{K}_2\text{O} \cdot 2\text{HgO} \cdot 2\text{SO}_3$ .**

(Barth, Z. phys. Ch. 1892, 9. 210.)

$\text{K}_2\text{O} \cdot 3\text{HgO} \cdot 3\text{SO}_3$  Insol. in  $\text{H}_2\text{O}$  Partly sol in  $\text{KOH} + \text{Aq}$ . (Barth)

**Mercuric potassium sulphite,  $\text{HgSO}_3 \cdot \text{K}_2\text{SO}_3 + \text{H}_2\text{O}$ .**

Sl sol. in cold  $\text{H}_2\text{O}$ . Decomp. on boiling (de St-Gilles, A. ch. (3) 36. 90.)

**Mercuric potassium sulphite mercuric chloride,  $\text{K}_2\text{Hg}(\text{SO}_3)_2 \cdot \text{HgCl}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Barth, Z. phys. Ch. 1892, 9. 206.)

**Mercuric silver sulphite,  $\text{HgSO}_3 \cdot \text{Ag}_2\text{SO}_3 + 2\text{H}_2\text{O}$ .**

Decomp. rapidly, insol. in  $\text{H}_2\text{O}$ . (Barth, Z. phys. Ch. 9. 195.)

**Mercuric sodium sulphite,  $\text{HgSO}_3 \cdot \text{Na}_2\text{SO}_3 + \text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (de St-Gilles.)

Sol. in 25 pts cold  $\text{H}_2\text{O}$ , and decomp. on heating (Divers and Shimidzu.)

$+2\text{H}_2\text{O} = \text{Na}_2(\text{SO}_3)_2 \cdot \text{Hg} + 2\text{H}_2\text{O}$ . (Barth, Z. phys. Ch. 9. 193.)

$2\text{HgSO}_3 \cdot \text{Na}_2\text{SO}_3 + \text{H}_2\text{O}$ . Much more sol. in  $\text{H}_2\text{O}$  than the above comp. especially on heating. (de St-Gilles)

Does not exist. (Divers and Shimidzu)

**Mercuric strontium sulphite,  $\text{HgSO}_3 \cdot \text{SrSO}_3 + 2\text{H}_2\text{O}$ .**

Ppt. (Barth.)

**Mercuric sulphite ammonium bromide,  $\text{HgSO}_3 \cdot \text{NH}_4\text{Br}$ .**

As  $\text{NH}_4\text{Cl}$  comp. (Barth, Z. phys. Ch. 1892, 9. 215.)

**Mercuric sulphite ammonium chloride,  $\text{HgSO}_3 \cdot \text{NH}_4\text{Cl}$ .**

As K salt. (Barth)

**Mercuric sulphite potassium chloride,  $\text{HgSO}_3 \cdot \text{KCl}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Barth.)

**Mercuric sulphite sodium chloride,  $\text{HgSO}_3 \cdot \text{NaCl} + \text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Barth.)

**Nickel sulphite, basic,  $2\text{NiSO}_3 \cdot \text{Ni}(\text{OH})_2 + 6\text{H}_2\text{O}$ .**

Ppt. (Seubert and Elten, Z. anorg. 1893, 4. 91.)

**Nickel sulphite,  $\text{NiSO}_3 + 4\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl} + \text{Aq}$ . with evolution of  $\text{SO}_2$  (Muspratt, A. 50. 259.)

$+6\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{SO}_4 + \text{Aq}$  (Rammelsberg, Pogg. 87. 391)

**Nickel sulphite ammonia,  $\text{NiSO}_3 \cdot 3\text{NH}_3 + 3\text{H}_2\text{O}$ .**

Sol. in little  $\text{H}_2\text{O}$ . Decomp. by much  $\text{H}_2\text{O}$  or heat (Rammelsberg, Pogg. 67. 245.)

**Osmious sulphite,  $\text{OsSO}_3$ .**

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HCl} + \text{Aq}$  without evolution of  $\text{SO}_2$ . Very slowly decomp. by  $\text{KOH} + \text{Aq}$  (Claus.)

**Osmious potassium sulphite,  $\text{OsSO}_3 \cdot 2\text{K}_2\text{SO}_3 \cdot 2\text{KHSO}_3 + 4\text{H}_2\text{O}$ .**

Nearly insol. in  $\text{H}_2\text{O}$ .

Osmious potassium sulphite chloride,  $\text{OsO}_2 \cdot 2\text{SO}_2 \cdot 8\text{KCl}$ .

Easily sol. in  $\text{H}_2\text{O}$ .

Palladium sodium sulphite,  $\text{PdSO}_3 \cdot 3\text{Na}_2\text{SO}_3 + 2\text{H}_2\text{O} = \text{Na}_2\text{Pd}(\text{SO}_3)_4 + 2\text{H}_2\text{O}$ .

Sol. in hot  $\text{H}_2\text{O}$ . Sol. in  $\text{NaOH} + \text{Aq}$  or  $\text{H}_2\text{SO}_3 + \text{Aq}$ . (Wohler and Frerichs, A. 174. 199.)

Platinous sulphite,  $\text{PtO}_2 \cdot 2\text{SO}_2$ .

Easily sol. in  $\text{H}_2\text{O}$  or alcohol (Döbereiner, J. p. 16. 315).

Formula is  $\text{PtSO}_3$ . (Gmelin.)

$\text{PtSO}_3$ ,  $\text{H}_2\text{SO}_3$ . (Birnbäum, A. 139. 172.)

Platinic potassium sulphite,  $\text{PtO}_2 \cdot \text{SO}_3$ ,  $\text{K}_2\text{SO}_3 + \text{H}_2\text{O}$ .

Sol. in  $\text{KOH} + \text{Aq}$ . (Birnbäum, A. 139. 173.)

Platinic sodium sulphite,  $\text{PtO}_2 \cdot \text{SO}_3$ ,  $2\text{Na}_2\text{SO}_3 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Birnbäum.)

Platinous sulphite with  $\text{M}_2\text{SO}_3$ .

See Platosulphite, M.

Platinum sulphite ammonium chloride.

See Chloroplatosulphite, ammonium.

Potassium sulphite,  $\text{K}_2\text{SO}_3 + 2\text{H}_2\text{O}$ .

Somewhat deliquescent. Sol. in 1 pt. cold, and still less hot  $\text{H}_2\text{O}$ . (Fourcroy and Vauquelin, A. ch. 24. 254.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Very slightly soluble in alcohol. Insol. in ethyl acetate (Casaseca, C. R. 30. 821.)

Potassium hydrogen sulphite,  $\text{KHSO}_3$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in absolute alcohol.

Potassium pyrosulphite,  $\text{K}_2\text{S}_2\text{O}_5$ .

Slowly sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in alcohol; insol. in ether. (Muspratt, A. 60. 269.)

Potassium rhodium sulphite,  $3\text{K}_2\text{SO}_3$ ,

$\text{Rh}_2(\text{SO}_3)_2 + 6\text{H}_2\text{O}$ .

See Rhodosulphite, potassium.

Potassium ruthenium sulphite,

$\text{O}(\text{Ru}(\text{SO}_3)_4\text{K}_6)_2 + 2\text{H}_2\text{O}$ .

Ppt. (Miolati, C. C. 1901, I. 501.)

Potassium sodium sulphite,  $\text{KNaSO}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Spring, B. 7. 1161.)

+1, and  $2\text{H}_2\text{O}$ . (Schwicker, B. 22. 1731.)

Isomeric salts,  $\text{KSO}_3\text{Na}$  and  $\text{NaSO}_3\text{K}$ . (Barth, Z. phys. Ch. 9. 176.)

Potassium sodium hydrogen sulphite,  $\text{KNa}_2\text{H}(\text{SO}_3)_2 + 4\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ ; 100 pts  $\text{H}_2\text{O}$  dissolve 60 pts. salt at  $15^\circ$ . (Schwicker, B. 22. 1731.)

$\text{K}_2\text{NaH}(\text{SO}_3)_2 + 3\text{H}_2\text{O}$  (Schwicker.)

Potassium uranyl sulphite,  $\text{K}(\text{UO}_2)(\text{OH})\text{SO}_3$ .

Insol. in  $\text{H}_2\text{O}$ , but sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ . (Scheller.)

$\text{K}_2\text{O}$ ,  $2\text{UO}_3$ ,  $3\text{SO}_2$  (Kohlshütter, A. 1900, 311. 10 *et seq.*)

$\text{K}_2\text{O}$ ,  $4\text{UO}_3$ ,  $5\text{SO}_2$  (K.)

$\text{K}_2\text{O}$ ,  $3\text{UO}_3$ ,  $2\text{SO}_2$  (K.)

$\text{K}_2\text{O}$ ,  $\text{UO}_3$ ,  $2\text{SO}_2$  (K.)

Potassium vanadium sulphite.

See Vanadosulphite, potassium.

Potassium vanadyl sulphite,  $\text{K}_2\text{SO}_3$ ,  $\text{VO}_2\text{SO}_3 + 5\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  without decomp. and can be recryst. therefrom. (Koppel and Behndt, B. 1901, 34. 3932.)

$\text{K}_2\text{O}$ ,  $3\text{VO}_3$ ,  $2\text{SO}_2$ . Sol. without decomp. in cold and hot  $\text{H}_2\text{O}$ .

Insol. in alcohol and ether (Koppel, Z. anorg. 1903, 35. 182.)

Potassium zinc sulphite,  $\text{K}_2\text{SO}_3$ ,  $3\text{ZnSO}_3 + 7\frac{1}{2}\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Berglund, Acta Lund. 1872.)

Rhodium sulphite,  $\text{Rh}_2(\text{SO}_3)_2 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Claus.)

Rhodium sodium sulphite.

See Rhodosulphite, sodium.

Ruthenium sulphite,  $\text{Ru}_2(\text{SO}_3)_2$ .

Colloidal substance, sol. in a large quantity of  $\text{H}_2\text{O}$ . (Lucchesi, Gazz. ch. it. 1900, 30. (2) 71.)

Ruthenium sodium sulphite,  $\text{Na}_2\text{Ru}(\text{SO}_3)_2 + 2\text{H}_2\text{O}$ .

Ppt. (Miolati, C. C. 1901, I. 501.)

Samarium sulphite,  $\text{Sm}_2(\text{SO}_3)_2$ .

Amorphous precipitate. (Cleve.)

Scandium sulphite,  $\text{Sc}_2(\text{SO}_3)_2$ .

Insol. in cold  $\text{H}_2\text{O}$ . Sl. sol. in hot  $\text{H}_2\text{O}$ . Sol. in excess of sodium sulphite when heated (Crookes, Phil. Trans. 1910, 210. A. 363.)

+ $6\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$ . Decomp. by boiling with  $\text{H}_2\text{O}$  with separation of  $\text{H}_2\text{SO}_3$ . (R. J. Meyer, Z. anorg. 1914, 86. 281.)

**Selenium sulphite,  $\text{SeSO}_3$ .**

Correct composition for "selenium sulphoxide." (Divers, Chem. Soc. 49. 583.)

**Silver sulphite,  $\text{Ag}_2\text{SO}_3$ .**

Very sl sol in cold  $\text{H}_2\text{O}$ . Decomp. on heating.

Solubility in  $\text{H}_2\text{O}$  is <1:20,000 (Bauhin, C. R. 1909, 149. 858.)

Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  and alkali sulphites +  $\text{Aq.}$  Insol. in  $\text{H}_2\text{SO}_3 + \text{Aq.}$  Decomp. by strong acids, but not by acetic acid. (Berthier, A. ch. (3) 7. 82.)

Easily sol. in alkali thiosulphates +  $\text{Aq.}$  (Herschel.)

Cold  $\text{NaHSO}_3 + \text{Aq.}$  dissolves a considerable amount of  $\text{Ag}_2\text{SO}_3$ . (Rosenheim and Stenhausser, Z. anorg. 1900, 26. 78.)

Practically insol. in  $\text{HNO}_3 + \text{Aq.}$  or dil.  $\text{AgNO}_3 + \text{Aq.}$  also in  $\text{H}_2\text{SO}_3 + \text{Aq.}$  (Divers, Chem. Soc. 49. 579.)

**Silver sodium sulphite,  $\text{Ag}_2\text{SO}_3$ ,  $\text{Na}_2\text{SO}_3 + \text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Svensson, B. 4. 714.)

**Sodium sulphite,  $\text{Na}_2\text{SO}_3$ .**

100 pts. dissolve at  $0^\circ$ , 14.1 pts.; at  $20^\circ$ , 25.8 pts., at  $40^\circ$ , 49.5 pts.  $\text{Na}_2\text{SO}_3$ . (Kremers, Pogg. 99. 50.) Maximum solubility is at  $33^\circ$ . (Mitscherlich.)

Solubility in 100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Pts $\text{Na}_2\text{SO}_3$
60 4	28 29
59 8	28 29
59 8	28 65
59 8	28 75
37 0	28 01
37 0	28 07
47 0	28 19
47 0	28 07
55 6	28 21
84 0	28 26

The temp. at which  $\text{Na}_2\text{SO}_3 + 7\text{H}_2\text{O}$  changes into  $\text{Na}_2\text{SO}_3$  is about  $21.6^\circ$ .

(Hartley and Barrett, Chem. Soc. 1909, 95. 1183)

See also  $+7\text{H}_2\text{O}$ .

Sp. gr. of sat. solution at  $15^\circ = 1.21$ . (Greenish and Smith, Pharm. J. 1901, 66. 774.)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 829.)

Insol. in alcohol.

Insol. in ethyl acetate. (Casaseca, C. R. 30. 821.); methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in benzonitrile. (Naumann, B. 1914, 47. 1370)

$+7\text{H}_2\text{O}$  Decomp slowly on air.

Sol in 4 pts  $\text{H}_2\text{O}$  at  $15^\circ$  with absorption of heat (Dumas), and in 1 pt. boiling  $\text{H}_2\text{O}$  (Fourcroy)

Solubility in 100 pts.  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	Pts $\text{Na}_2\text{SO}_3$
37 2	44.08
33 5	39 04
29 0	34 99
23 5	29 92
18.2	25 31
10 6	20 01
5 9	17 61
2 0	14 82
-1 9	13 09

Supersolubility curves have also been plotted for ice and  $\text{Na}_2\text{SO}_3 + 7\text{H}_2\text{O}$

(Hartley and Barrett, Chem. Soc. 1909, 95. 1181)

$+10\text{H}_2\text{O}$  Efflorescent. Somewhat less sol than above salt (Muspratt.)

**Sodium hydrogen sulphite,  $\text{NaHSO}_3$ .**

More difficultly sol in  $\text{H}_2\text{O}$  than  $\text{NaHCO}_3$ , and is precipitated by alcohol from aqueous solution (Muspratt)

Insol. in acetone. (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37. 4329) methyl acetate (Naumann, B. 1909, 42. 3790)

$+4\text{H}_2\text{O}$ . (Clark)

**Sodium pyrosulphite,  $\text{Na}_2\text{S}_2\text{O}_3$ .**

Decomp. gradually on the air

**Sodium uranyl sulphite,  $\text{Na}(\text{UO}_2)(\text{OH})\text{SO}_3$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . More sol. in  $\text{H}_2\text{SO}_3 + \text{Aq.}$  than the K salt (Scheller)

$\text{Na}_2\text{O}$ ,  $2\text{UO}_3$ ,  $3\text{SO}_2$

$\text{Na}_2\text{O}$ ,  $3\text{UO}_3$ ,  $2\text{SO}_2$  (Kohlschütter, A. 1900, 311. 10 at seq)

**Sodium vanadyl sulphite,  $\text{Na}_2\text{O}$ ,  $2\text{SO}_3$ ,  $\text{VO}_2 + 5\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$  with decomp.

$\text{Na}_2\text{O}$ ,  $2\text{SO}_3$ ,  $3\text{VO}_2 + 4\text{H}_2\text{O}$ . Sol. in cold  $\text{H}_2\text{O}$ ; decomp. on heating (Koppel, B. 1901, 34. 3933.)

**Sodium zinc sulphite,  $\text{Na}_2\text{SO}_3$ ,  $3\text{ZnSO}_3 + 7\frac{1}{2}\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  with decomp. (Berglund, Acta Lund, 1872.)

**Sodium sulphite silver chloride,  $3\text{Na}_2\text{SO}_3$ ,  $\text{AgCl} + 21\text{H}_2\text{O}$** 

Sol. in  $\text{H}_2\text{O}$ . (Svensson.)

**Strontium sulphite,  $\text{SrSO}_3$ .**

Precipitate. Almost insol in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ . (Muspratt)

Sol. in about 30,000 pts.  $\text{H}_2\text{O}$  at  $16-18^\circ$  (Antenrieth, Z anal 1898, 37. 293.)

Abundantly sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$  (Röhrig)

**Tellurium sulphite,  $\text{TeSO}_3$ .**

Correct composition of "tellurium sulphoxide" (Divers, Chem. Soc 49. 583)

**Thallous sulphite,  $\text{Tl}_2\text{SO}_3$ .**

Sl. sol. in cold, easily in hot  $\text{H}_2\text{SO}_3 + \text{Aq}$ . (Röhrig, J. pr (2) 37. 229.)

100 pts.  $\text{H}_2\text{O}$  dissolve 3.34 pts. at  $15.5^\circ$ . Easily sol. in hot  $\text{H}_2\text{O}$ ; insol. in alcohol. (Seubert and Eiten, Z. anorg 2. 434)

**Thallous vanadyl sulphite,  $2\text{Tl}_2\text{SO}_3$ ,**

$\text{V}_2\text{O}_5\text{SO}_3 + 4\text{H}_2\text{O}$ .

(Gain, A. ch 1908, (8) 14. 278.)

$\text{Tl}_2\text{SO}_3, 3\text{V}_2\text{O}_5\text{SO}_3 + 8\text{H}_2\text{O}$  (Gain)

**Thorium sulphite,  $\text{Th}(\text{SO}_3)_2 + \text{H}_2\text{O}$ .**

Precipitate. (Cleve.)

**Tin (stannous) sulphite,  $5\text{SnO}, 2\text{SO}_2 + x\text{H}_2\text{O}$ .**

Ppt. Partly sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$  (Röhrig, J. pr (2) 37. 249)

$+ 20\text{H}_2\text{O}$ . (Röhrig.)

$8\text{SnO}, 2\text{SO}_2 + 20\text{H}_2\text{O}$

$11\text{SnO}, 2\text{SO}_2 + 20\text{H}_2\text{O}$ . (Röhrig)

**Uranous sulphite, basic,  $\text{U}(\text{OH})_2\text{SO}_3 + \text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Easily sol. in acids. Sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ , but is soon decomp. (Rammelsberg)

**Uranyl sulphite, basic,  $3\text{UO}_2(\text{OH})_2$ ,**

$5(\text{UO}_2)\text{SO}_3 + 10\text{H}_2\text{O}$ .

(Seubert and Eiten, Z. anorg. 1893, 4. 80)

**Uranyl sulphite,  $(\text{UO}_2)_2\text{SO}_3 + 4\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$  or alcoholic solution of  $\text{SO}_2$  (Röhrig, J. pr (2) 37. 240)

**Vanadyl sulphite,  $3\text{VO}_2, 2\text{SO}_3 + 4\frac{1}{2}\text{H}_2\text{O}$ .**

Decomp. slowly on standing

Sol. in  $\text{H}_2\text{O}$  without apparent decomp (Koppel, Z. anorg. 1903, 35. 183.)

$2\text{V}_2\text{O}_5, 3\text{SO}_2 + 10\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ ; aq. sol decomp. on boiling giving off  $\text{SO}_2$  and forming  $\text{V}_2\text{O}_5, 2\text{H}_2\text{O}$ . (Gain, C. R. 1906, 143. 824.)

**Vanadyl zinc sulphite,  $\text{ZnO}, 3\text{VO}_2, 2\text{SO}_3$** 

Decomp. slowly in the air.

Sol. in  $\text{H}_2\text{O}$  without decomp. (Koppel, Z. anorg. 1903, 35. 183)

**Ytterbium sulphite,  $\text{Yb}_2(\text{SO}_3)_3 + 9\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ . (Cleve, Z. anorg. 1902, 32. 143.)

**Yttrium sulphite,  $\text{Y}_2(\text{SO}_3)_3 + 3\text{H}_2\text{O}$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Zinc sulphite, basic,  $2\text{ZnSO}_3, 3\text{Zn}(\text{OH})_2$ .**

(Seubert, Arch. Pharm. 229. 321.)

$\text{ZnSO}_3, \text{Zn}(\text{OH})_2 + \text{H}_2\text{O}$ . (Seubert.)

**Zinc sulphite,  $\text{ZnSO}_3 + 2$ , and  $2\frac{1}{2}\text{H}_2\text{O}$ .**

Very sl. sol. in  $\text{H}_2\text{O}$ . 100 pts  $\text{H}_2\text{O}$  dissolve 0.16 pt  $\text{ZnSO}_3 + 2\text{H}_2\text{O}$  (Henston and Tieb-borne, Brit. Med. J. 1890. 1063)

Easily sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ . (Koene.)

Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .

Insol. in alcohol.

Decomp. into basic salt by boiling  $\text{H}_2\text{O}$ . (Seubert, Arch. Pharm. 229. 1)

**Zinc sulphite ammonia,  $\text{ZnSO}_3, \text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rammelsberg, Pogg. 67. 255.)

**Zirconium sulphite.**

Insol. in  $\text{H}_2\text{O}$ . Somewhat sol. in  $\text{H}_2\text{SO}_3 + \text{Aq}$ , from which it is pptd. on boiling. Sol. in  $(\text{NH}_4)_2\text{SO}_3 + \text{Aq}$ , from which Zr hydroxide is pptd. on boiling. (Berzelius)

$\text{Zr}(\text{SO}_3)_2 + 7\text{H}_2\text{O}$  Ppt. (Venable, J. Am. Chem. Soc. 1895, 17. 449.)

**Sulphuryl bromide,  $\text{SO}_2\text{Br}_2$ .**

(Odling, Chem Soc. 7. 2.)

Does not exist. (Sestini, Bull. Soc. 10. 226, Melsens, C. R. 76. 92; Michaelis.)

**Sulphuryl chloride,  $\text{SO}_2\text{Cl}_2$ .**

Decomp. by  $\text{H}_2\text{O}$  and alcohol

Decomp. by moist air, water, or abs. alcohol; more rapidly by alkalies,  $\text{HCl}$ ,  $\text{SO}_2$ , etc. (Schiff, A. 102. 111)

$+ \text{H}_2\text{O}$ . Only sl. sol. in  $\text{H}_2\text{O}$  at  $0^\circ$  with slow decomp. (Baeyer, B. 1901, 34. 737.)

$+ 15\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$  at  $0^\circ$  and stable therein for several hours. (Baeyer.)

**Disulphuryl chloride (Pyrosulphuryl chloride),  $\text{S}_2\text{O}_2\text{Cl}_2$ .**

Decomp. slowly with  $\text{H}_2\text{O}$ . (Rose, Pogg 44. 291)

Sol. in  $\text{CCl}_4$  and  $\text{CHCl}_3$ ; miscible with liquid  $\text{SO}_2$ .

**Sulphuryl hydroxyl chloride,**

$\text{SO}_2\text{HCl} = \frac{\text{HO}}{\text{Cl}}\text{SO}_2$ .

Decomp. on moist air, and violently with  $\text{H}_2\text{O}$ . Not miscible with  $\text{CS}_2$ . Decomp. with alcohol.

**Sulphuryl titanium chloride,  $\text{SO}_3, \text{TiCl}_4 = \text{TiCl}_4\text{OSO}_2\text{Cl}$ .**

Slowly deliquescent (Clausnitzer, B. 11. 2011.)

**Disulphuryl chloride stannic oxychloride,**  
 $5\text{S}_2\text{O}_5\text{Cl}_2, 4\text{SnOCl}_2$ .Sol. in a little  $\text{H}_2\text{O}$ , but decomp. by more  $\text{H}_2\text{O}$ . (Rose, Pogg. 44. 320.)**Sulphuryl fluoride,  $\text{SO}_2\text{F}_2$ .**1 pt. is sol. in 10 pts.  $\text{H}_2\text{O}$  at  $9^\circ$ . 3 vol. are sol. in 1 vol. alcohol at  $9^\circ$ ; insol. in conc.  $\text{H}_2\text{SO}_4$  at  $66^\circ$ ; sol. in aq. solution of  $\text{KOH}$ ,  $\text{Ca}(\text{OH})_2$ ,  $\text{Ba}(\text{OH})_2$ , and in alcoholic solution of alkalies. (Moissan, C. R. 1901, 132. 377.)**Sulphuryl hydroxyl fluoride,  $\text{HSO}_4\text{F}$ .**Violently decomp. by  $\text{H}_2\text{O}$ . (Thorpe and Kirwan, Z. anorg. 3. 63.)**Sulphuryl peroxide,  $\text{SO}_4$ .**

See Sulphur heptoxide.

**Sulphydric acid.**

See Hydrogen Sulphide.

**Sulphydroxyl.**

See Sulphhydroxyl.

**Tantalalic acid,  $\text{H}_4\text{Ta}_2\text{O}_7$  (?).**Sol. in  $\text{HF}$  (Rose), and  $\text{KH}_2(\text{C}_2\text{O}_4)_2 + \text{Aq}$  (Gahn, Schw. J. 16. 437). At the instant of precipitation is sol. in various acids. (Rose.)**Aluminum tantalate.**Insol. in  $\text{H}_2\text{O}$ . (Berzelius.)**Ammonium hexatantalate,  $(\text{NH}_4)_3\text{H}_7\text{Ta}_2\text{O}_{13} + \text{H}_2\text{O}$ .**Somewhat sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 102. 57.)**Barium hexatantalate,  $\text{Ba}_4\text{Ta}_6\text{O}_{28} + 6\text{H}_2\text{O}$ .**Sl sol. in  $\text{H}_2\text{O}$ . (Rose.)**Cæsium tantalate,  $4\text{Cs}_2\text{O}, 3\text{Ta}_2\text{O}_5 + 14\text{H}_2\text{O}$ .**Completely sol. in a small amount of hot  $\text{H}_2\text{O}$  (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1866.) $7\text{Cs}_2\text{O}, 6\text{Ta}_2\text{O}_5 + 38\text{H}_2\text{O}$ . Pptd. from its aqueous solution by alcohol. (Smith.)**Ferrous tantalate,  $\text{Fe}(\text{TaO}_3)_2$ .**Min. *Tantalite*. $5\text{FeO}, 4\text{Ta}_2\text{O}_5$ . Min. *Tapolite*.**Magnesium hexatantalate,  $\text{Mg}_4\text{Ta}_6\text{O}_{28} + 9\text{H}_2\text{O}$ .**

Ppt. (Rose, Pogg. 102. 61.)

 $4\text{MgO}, \text{Ta}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ . (Joly, C. R. 81. 266.)**Mercurous tantalate,  $5\text{Hg}_2\text{O}, 4\text{Ta}_2\text{O}_5 + 5\text{H}_2\text{O}$ .**Decomp. by warm  $\text{HNO}_3 + \text{Aq}$  (1.21 sp. gr.) with separation of  $\text{Ta}_2\text{O}_5$ . (Rose, Pogg. 102. 64.)**Potassium tantalate,  $\text{KTaO}_4$ .**Insol. in  $\text{H}_2\text{O}$  Sol. in  $\text{KOH} + \text{Aq}$ . (Marignac, A. ch. (4) 9. 249.)**Potassium hexatantalate,  $\text{K}_4\text{Ta}_6\text{O}_{28} + 16\text{H}_2\text{O}$ .**Sol. without decomp. in moderately warm  $\text{H}_2\text{O}$ . Decomp. by boiling (Marignac, A. ch. (4) 9. 259.)**Rubidium tantalate,  $4\text{Rb}_2\text{O}, 3\text{Ta}_2\text{O}_5 + 14\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$ . (E. F. Smith, J. Am. Chem. Soc. 1908, 30. 1668.)**Silver tantalate,  $4\text{Ag}_2\text{O}, 3\text{Ta}_2\text{O}_5$ .**Completely sol. in  $\text{NH}_4\text{OH} + \text{Aq}$   $\text{HNO}_3 + \text{Aq}$  dissolves  $\text{Ag}_2\text{O}$ , and  $\text{Ta}_2\text{O}_5$  separates out. (Rose, Pogg. 102. 64.)**Sodium tantalate,  $\text{NaTaO}_4$ .**Insol. in  $\text{H}_2\text{O}$ . (Rose.)**Sodium hexatantalate,  $\text{Na}_4\text{Ta}_6\text{O}_{28} + 25\text{H}_2\text{O}$ .**1 pt. salt dissolves in 493 pts.  $\text{H}_2\text{O}$  at  $13.5^\circ$ , and in 162 pts. at  $100^\circ$ . Very slightly sol. in alcohol Insol. in alkaline solutions. (Rose.)**Pertantalalic acid.**

See Pertantallic acid.

**Tantalum,  $\text{Ta}$ .**Not attacked by  $\text{HCl}$ ,  $\text{HNO}_3$ , aqua regia, or hot conc.  $\text{H}_2\text{SO}_4$ . Easily sol. in a mixture of  $\text{HNO}_3$  and  $\text{HF}$  (Berzelius, Pogg. 4. 6, Rose). Also sol. in  $\text{HF}$  alone (Berzelius.)Not attacked by alkali hydrates +  $\text{Aq}$ .Insol. in single acids and in aqua regia. Oxidized by a mixture of  $\text{HF}$  and aqua regia. (Moissan, C. R. 1902, 134. 211.)Pure  $\text{Ta}$  is insol. in boiling  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$ ,  $\text{HCl}$ , aqua regia or mixtures of these acids; slowly sol. in  $\text{HF} + \text{Aq}$ . (v. Bolton, Zeit. Elektrochem. 1905, 11. 45.)**Tantalum bromide,  $\text{TaBr}_5$ .**Decomp. by  $\text{H}_2\text{O}$ . (Rose.)**Tantalum dichloride,  $\text{TaCl}_5 + 2\text{H}_2\text{O}$ .**Sol. in  $\text{H}_2\text{O}$  when freshly prepared. (Charbié, C. R. 1907, 144. 805.)**Tantalum pentachloride,  $\text{TaCl}_5$ .**Takes up  $\text{H}_2\text{O}$  from the air without deliquescing. Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{SO}_4$ . Sol. in cold  $\text{HCl} + \text{Aq}$  to a cloudy liquid, which gelatinises after a time. Not completely sol. in boiling  $\text{HCl} + \text{Aq}$ , and the solution does not gelatinise by the subsequent addition of water, but all goes into solution. Partly sol. in  $\text{KOH} + \text{Aq}$ . Insol. in  $\text{K}_2\text{SO}_4 + \text{Aq}$ . Sol. in absolute alcohol.

**Tantalum pentafluoride, TaF<sub>5</sub>.**

Very hygroscopic; sol in H<sub>2</sub>O. (Ruff, B. 1909, 42, 494.)

**Tantalum fluoride with MF.**

See Fluotantalate, M.

**Tantalum hydroxide, Ta<sub>2</sub>O<sub>5</sub>, xH<sub>2</sub>O.**

See Tantalic acid.

**Tantalum nitride, TaN.**

Not sol. in any acids, except a mixture of HF and HNO<sub>3</sub>. (Rose, Pogg. 100, 146.)  
Ta<sub>2</sub>N<sub>4</sub>. (Joly, Bull. Soc. (2) 25, 506.)

**Tantalum dioxide, Ta<sub>2</sub>O<sub>5</sub>(?).**

Sol. in HF with evolution of hydrogen. (Hermann, J. pr. (2) 5, 69.)

**Tantalum tetroxide, Ta<sub>2</sub>O<sub>4</sub>.**

Not attacked by any acid, not even a mixture of HNO<sub>3</sub> and HF. (Berzelius, Pogg. 4, 20.)

Decomp. by HCl. (Smith, Z. anorg. 1894, 7, 98.)

**Tantalum pentoxide, Ta<sub>2</sub>O<sub>5</sub>.**

Insol. in any acid, even boiling H<sub>2</sub>SO<sub>4</sub> or in HF. (Berzelius.)

Sol. in fused KHSO<sub>4</sub>, 10 pts. being necessary to dissolve 1 pt. Ta<sub>2</sub>O<sub>5</sub>.

**Tantalum silicide, TaSi<sub>2</sub>.**

Insol. in most inorganic acids. Sol. in HF and in HF+HNO<sub>3</sub>.

Decomp. by fused alkali hydroxides. (Höngschmid, M. 1907, 28, 1027.)

**Tantalum sulphide, Ta<sub>2</sub>S<sub>4</sub>.**

Not attacked by HCl+Aq. Oxidised by boiling with HNO<sub>3</sub>+Aq, more rapidly with aqua regia. Attacked by H<sub>2</sub>SO<sub>4</sub> on heating. Not completely sol. in HF or a mixture of HF and HNO<sub>3</sub>.

**Telluretted hydrogen, TeH<sub>2</sub>.**

See Hydrogen telluride.

**Telluric acid, H<sub>2</sub>TeO<sub>4</sub>.**

Insol. in H<sub>2</sub>O, cold conc. HCl, hot HNO<sub>3</sub>, or boiling KOH+Aq, but when heated with H<sub>2</sub>O is gradually converted into H<sub>2</sub>TeO<sub>4</sub>+2H<sub>2</sub>O and dissolved.

+2H<sub>2</sub>O. Very slowly sol. in cold H<sub>2</sub>O, but sol. in hot H<sub>2</sub>O in every proportion. Insol. in absolute alcohol; sol. in dil alcohol according to the amount of H<sub>2</sub>O present. Sol. in acids and alkalis. Insol. in alcohol or ether.

Insol. in alcohol; sol. in NaOH+Aq. (Mylius, B. 1901, 34, 2216.)

Stable in the air.

Sol. in H<sub>2</sub>O; pptd by HNO<sub>3</sub>. (Staudenmaier, Z. anorg. 1895, 10, 191.)

**Solubility in H<sub>2</sub>O**

Solid phase	Temp.	% H <sub>2</sub> TeO <sub>4</sub>	Mols H <sub>2</sub> O to 1 mol H <sub>2</sub> TeO <sub>4</sub>	Mols H <sub>2</sub> TeO <sub>4</sub> to 100 mole H <sub>2</sub> O

"	100°	60.84	6.89	14.52

(Mylius, B. 1901, 34, 2211.)

+6H<sub>2</sub>O. Obtained from solutions at 0°. (Staudenmaier, Z. anorg. 1895, 10, 191.)

**Allotelluric acid, H<sub>2</sub>TeO<sub>4</sub>.**

Miscible with H<sub>2</sub>O.

Sol. in alcohol, pptd. by NaOH+Aq but sol. in excess. (Mylius, B. 1901, 34, 2218.)

**Tellurates.**

Neutral alkali salts are sol. in H<sub>2</sub>O; the acid salts are only sl. sol. therein, but dissolve in HCl+Aq.

**Aluminum tellurate.**

Ppt. Sol. in excess of aluminum salts+Aq. (Berzelius.)

**Ammonium tellurate, (NH<sub>4</sub>)<sub>2</sub>TeO<sub>4</sub>.**

Slowly but completely sol. in H<sub>2</sub>O. Sl. sol. in NH<sub>4</sub>OH+Aq or NH<sub>4</sub>Cl+Aq. Sl. sol. in alcohol. (Berzelius.)

(NH<sub>4</sub>)<sub>2</sub>O, 2TeO<sub>3</sub>. Sl. sol. in H<sub>2</sub>O, but more sol. than the corresponding K salt.

(NH<sub>4</sub>)<sub>2</sub>O, 4TeO<sub>3</sub>. Very sl. sol. in H<sub>2</sub>O. Insol. in alcohol. (Berzelius.)

**Barium tellurate, BaTeO<sub>4</sub>+3H<sub>2</sub>O.**

Sl. sol. in cold, more in boiling H<sub>2</sub>O. Easily sol. in HNO<sub>3</sub>+Aq. (Berzelius.)

BaH<sub>2</sub>(TeO<sub>4</sub>)<sub>2</sub>+2H<sub>2</sub>O. More sol. in H<sub>2</sub>O than BaTeO<sub>4</sub>. Decomp. by H<sub>2</sub>O. (Berzelius.)

BaO, 4TeO<sub>3</sub>. More sol. in H<sub>2</sub>O than either BaTeO<sub>4</sub> or BaH<sub>2</sub>(TeO<sub>4</sub>)<sub>2</sub>. (Berzelius.)

**Bismuth tellurate, Bi<sub>2</sub>TeO<sub>6</sub>+2H<sub>2</sub>O.**

Mn. Montanite. Sol. in HCl+Aq with evolution of Cl.

**Cadmium tellurate, CdTeO<sub>4</sub>.**

Ppt. Sol. in HCl+Aq. (Oppenheim.)

**Cæsium hydrogen tellurate, CsHTeO<sub>4</sub>+½H<sub>2</sub>O.**

1 pt. is sol. in 30 pts. H<sub>2</sub>O. (Norris, Am. Ch. J. 1901, 26, 321.)

**Calcium tellurate,  $\text{CaTeO}_4$ .**Ppt. Sol. in hot  $\text{H}_2\text{O}$ . (Berzelius)**Chromic tellurate,  $\text{Cr}_2(\text{TeO}_4)_3$ .**

Ppt. Sol. in excess of Ca salts + Aq

**Cobaltous tellurate.**

Ppt. (Berzelius.)

**Cupric tellurate,  $\text{CuTeO}_4$ .**

Ppt. (Berzelius)

 $\text{CuO}$ ,  $2\text{TeO}_3$ . Ppt. (B.) $\text{Cu}_2\text{TeO}_6$ . Insol in  $\text{H}_2\text{O}$ .Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{NH}_4\text{OH}$ ,  $\text{KCN}$  and acetic acid (Hutchins, J. Am. Chem. Soc. 1905, 27, 1181)**Glucinum tellurate,  $\text{GtTeO}_4$ .**Insol. in  $\text{H}_2\text{O}$ .**Iron (ferrous) tellurate,  $\text{FeTeO}_4$ .**Ppt. Min. *Ferrotellurate***Iron (ferric) tellurate,  $\text{Fe}_2(\text{TeO}_4)_3$ .**

Ppt. Sol. in ferric salts + Aq. (Berzelius)

**Lead tellurate, basic.**Not completely insol. in  $\text{H}_2\text{O}$ **Lead tellurate,  $\text{PbTeO}_4$ .**Somewhat sol in  $\text{H}_2\text{O}$  $\text{PbO}$ ,  $2\text{TeO}_3$ . More sol. than  $\text{PbTeO}_4$ . $\text{PbO}$ ,  $4\text{TeO}_3$ . Sl sol in  $\text{H}_2\text{O}$ . Sol in  $\text{HNO}_3$  + Aq, less sol in  $\text{HCl}$  + Aq. (Berzelius.)**Lithium tellurate,  $\text{Li}_4\text{TeO}_6 + x\text{H}_2\text{O}$ .**Sl sol in  $\text{H}_2\text{O}$  with decomp. (Mylius, B. 1901, 34, 2209.)**Magnesium tellurate,  $\text{MgTeO}_4$ .**Ppt. More sol. in  $\text{H}_2\text{O}$  than the Ba, Sr or Ca salts. $\text{MgTeO}_4$ . More sol. in  $\text{H}_2\text{O}$  than  $\text{MgTeO}_4$ .**Manganous tellurate.**

Ppt

**Mercurous tellurate, basic,  $3\text{Hg}_2\text{O}$ ,  $2\text{TeO}_3$ .**

Ppt (Hutchins, J. Am. Chem. Soc. 1905, 27, 1178)

**Mercurous tellurate,  $\text{Hg}_2\text{TeO}_4$ .**Ppt. Min. *Magnolite***Mercuric tellurate,  $\text{HgTeO}_4$ .**Ppt. Very easily decomp. by  $\text{H}_2\text{O}$  (Hutchins, J. Am. Chem. Soc. 1905, 27, 1179.) $+2\text{H}_2\text{O}$ . Slowly decomp by cold  $\text{H}_2\text{O}$ .Rapidly decomp by boiling  $\text{H}_2\text{O}$ . (Hutchins.) $\text{Hg}_2\text{TeO}_6$ . Insol. in  $\text{H}_2\text{O}$  Unchanged by boiling with  $\text{H}_2\text{O}$ Sol in  $\text{HNO}_3$ , but more readily sol in  $\text{HCl}$ . (Hutchins)**Mercuric tellurate.**

Ppt (Berzelius.)

**Mercurous hydrogen tellurate,  $\text{HgHTeO}_4 + 3\text{H}_2\text{O}$ .**Stable in the air if protected from the light  
Insol in  $\text{H}_2\text{O}$ . Decomp by boiling  $\text{H}_2\text{O}$  or by an excess of cold conc.  $\text{HNO}_3$  + Aq  
Sol in dil.  $\text{HNO}_3$  or dil. acetic acid (Hutchins, J. Am. Chem. Soc. 1905, 27, 1177.)**Nickel tellurate.**

Ppt.

**Potassium tellurate,  $\text{K}_2\text{TeO}_4 + 5\text{H}_2\text{O}$ .**Deliquesces. Sol. in  $\text{H}_2\text{O}$ . Very sl. sol. in  $\text{H}_2\text{O}$  containing  $\text{KOH}$ .100 g.  $\text{H}_2\text{O}$  dissolve at:

0°	20°	30°
8.82	27.53	50.42 g. $\text{K}_2\text{TeO}_4$ .

(Rosenheim and Weinheber, Z. anorg. 1911, 69, 264.)

Insol in alcohol. (Berzelius.)

 $\text{K}_2\text{O}$ ,  $2\text{TeO}_3$ . Insol in  $\text{H}_2\text{O}$ , acids, or alkalies. (B.) $\text{KHTeO}_4 + \frac{1}{2}\text{H}_2\text{O}$ . Sl sol. in cold, more sol in hot  $\text{H}_2\text{O}$  (Berzelius) $\text{K}_2\text{O}$ ,  $3\text{TeO}_3 + 5\text{H}_2\text{O}$ . Much more sol in hot than in cold  $\text{H}_2\text{O}$  (Hutchins, J. Am. Chem. Soc. 1905, 27, 1174.) $\text{K}_2\text{O}$ ,  $4\text{TeO}_3$ . Insol in  $\text{H}_2\text{O}$ ,  $\text{HCl}$  or  $\text{HNO}_3$  + Aq. Sol by long heating with conc.  $\text{HNO}_3$  + Aq $\text{KHTeO}_4$ ,  $\text{H}_2\text{TeO}_4 + \frac{1}{2}\text{H}_2\text{O}$ . Sl sol in  $\text{H}_2\text{O}$ **Rubidium tellurate,  $\text{Rb}_2\text{TeO}_4 + 3\text{H}_2\text{O}$ .**Sol in about 10 pts.  $\text{H}_2\text{O}$  (Norris, Am. Ch. J. 1901, 26, 322.)**Rubidium hydrogen tellurate,  $\text{RbHTeO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .**Sol. in about 20 pts. cold  $\text{H}_2\text{O}$ . Sl. more sol in hot  $\text{H}_2\text{O}$ . (Norris, Am. Ch. J. 1901, 26, 320.)**Silver tellurate,  $3\text{Ag}_2\text{O}$ ,  $\text{TeO}_3$ .**Sol. in  $\text{NH}_4\text{OH}$  + Aq. $3\text{Ag}_2\text{O}$ ,  $2\text{TeO}_3$ . Insol. in boiling  $\text{H}_2\text{O}$ .  $+3\text{H}_2\text{O}$ . Ppt. Unchanged by cold  $\text{H}_2\text{O}$ .Gradually decomp. by boiling  $\text{H}_2\text{O}$ . (Hutchins, J. Am. Chem. Soc. 1905, 27, 1189) $\text{Ag}_2\text{TeO}_4$ . Decomp. by  $\text{H}_2\text{O}$  into  $3\text{Ag}_2\text{O}$ ,  $\text{TeO}_3$ . Sol. in  $\text{NH}_4\text{OH}$  + Aq. $+2\text{H}_2\text{O}$ . Insol. in hot and cold  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$ ,  $\text{KCN}$ ,  $\text{Na}_2\text{S}_2\text{O}_3$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ and  $\text{HCl}$  + Aq. Decomp. by conc.  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$  or acetic acid. (Hutchins, J. Am. Chem. Soc. 1905, 27, 1165.)

$\text{Ag}_2\text{TeO}_7$ . Ppt.  
 $\text{Ag}_2\text{O}$ ,  $4\text{TeO}_3$ . Ppt.  
 Could not be obtained. (Hutchins, J  
 Am Chem. Soc 1905, 27. 1168)

#### Sodium tellurate, $\text{Na}_2\text{TeO}_4 \cdot 2\text{H}_2\text{O}$ .

Very sl. sol. in hot or cold  $\text{H}_2\text{O}$ . When heated to drive off  $2\text{H}_2\text{O}$  becomes insol. in  $\text{H}_2\text{O}$ , but sol. in dil.  $\text{HNO}_3 + \text{Aq}$  (Berzelius.)  
 1 pt. is sol. in about 130 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ ;  
 50 pts.  $\text{H}_2\text{O}$  at  $100^\circ$ .

$+4\text{H}_2\text{O}$ . 1 pt. is sol. in about 70 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ ; 40 pts.  $\text{H}_2\text{O}$  at  $50^\circ$ . (Mylus, B. 1901, 34. 2209.)

$\text{Na}_2\text{TeO}_4 + 4\text{H}_2\text{O} = \text{NaHTeO}_4 + \frac{1}{2}\text{H}_2\text{O}$ .  
 Slowly but completely sol. in  $\text{H}_2\text{O}$ . Sl. sol. in  $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2 + \text{Aq}$  Insol. in alcohol (Berzelius.)

$\text{Na}_2\text{O}$ ,  $4\text{TeO}_3$ . Insol. in  $\text{H}_2\text{O}$ , acids, or alkalies, except by long boiling with  $\text{HNO}_3 + \text{Aq}$ .

$+x\text{H}_2\text{O}$  (a) Slowly sol. in  $\text{H}_2\text{O}$ . ( $\beta$ ) Insol. even in boiling  $\text{H}_2\text{O}$

$\text{Na}_4\text{TeO}_6 + 8\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  but with decomp (Mylus)

#### Strontium tellurates.

Resemble Ca salts.

#### Thallous tellurate, $\text{Te}_2\text{TeO}_4$ .

Sl. sol. in  $\text{H}_2\text{O}$  (Dennis, J Am Chem Soc 1898, 18. 975.)

#### Thorium tellurate.

Ppt. Insol. in excess of thorium salts  $+ \text{Aq}$

#### Uranium tellurate, $\text{U}_3(\text{TeO}_4)_2(?)$ .

Ppt Insol. in  $\text{H}_2\text{O}$  or  $\text{UO}_2(\text{NO}_3)_2 + \text{Aq}$ .

#### Yttrium tellurate.

Ppt Insol. in  $\text{H}_2\text{O}$  or Yt salts  $+ \text{Aq}$

#### Zinc tellurate, $\text{Zn}_3\text{TeO}_4$ .

Insol. in  $\text{H}_2\text{O}$ .

Sol. in  $\text{HNO}_3$ ,  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  and acetic acid. (Hutchins, J Am Chem Soc 1905, 27. 1181)

#### Zirconium tellurate.

Ppt (Berzelius.)

#### Tellurium, Te

Insol in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$  Sl. sol in hot conc.  $\text{H}_2\text{SO}_4$ , but separates out on cooling. Sol. in boiling conc.  $\text{H}_2\text{SO}_4$ . Easily oxidised by  $\text{HNO}_3$  or aqua regia. Sol. in boiling very conc.  $\text{KOH} + \text{Aq}$ , separating out again on cooling.

Not attacked by boiling conc.  $\text{HNO}_3 + \text{Aq}$ , according to Hartung-Schwartzkoff (Ann. Min. (4) 19. 345).

Sol. in warm conc.  $\text{KCN} + \text{Aq}$

Insol. in liq.  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830.)

100 pts. methylene iodide dissolve 0.1 pt. Te at  $12^\circ$  (Retgers, Z anorg. 3. 343.)

$\frac{1}{2}$  com oleic acid dissolves 0.0014 g. Te in 6 days (Gates, J. phys. Ch. 1911, 15. 143)

A colloidal solution of Te in  $\text{H}_2\text{O}$  can be obtained. It exists in two modifications, a brown and a blue-gray. Both can be diluted with  $\text{H}_2\text{O}$  or concentrated by boiling without decomp. They are, however, decomp. by electrolytes, especially  $\text{NH}_4\text{Cl}$ . (Gutbier, Z. anorg. 1902, 32. 53.)

#### Tellurium dibromide, $\text{TeBr}_2$ .

Decomp on air or by  $\text{H}_2\text{O}$  (Rose, Pogg. 21. 443)

Conc tartaric acid dissolves partly without decomp. (Brauner, M 1891, 12. 34)

#### Tellurium tetrabromide, $\text{TeBr}_4$ .

Sol in a little, but decomp by much  $\text{H}_2\text{O}$ . Completely sol. in tartaric acid  $+ \text{Aq}$  (1.1). (Brauner, M. 1891, 12. 34.)

#### Tellurium hydrogen bromide, $\text{TeBr}_4$ , $\text{HBr} + 5\text{H}_2\text{O}$ .

Fumes in the air. Deliquescent. Stable in an atmos. of  $\text{HBr}$  (Metzner, C. R. 1897, 124. 1951.)

#### Tellurium dichloride, $\text{TeCl}_2$

Decomp on air, or by  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ . (Rose, Pogg. 21. 443)

#### Tellurium tetrachloride, $\text{TeCl}_4$ .

Extremely deliquescent. Decomp. by cold  $\text{H}_2\text{O}$ , with separation of oxychloride and tellurous acid. Sol. in hot  $\text{H}_2\text{O}$  with decomp. Sol. in dil.  $\text{HCl} + \text{Aq}$  without decomp. (Rose, Pogg. 21. 443)

Insol. in sulphur chloride and in  $\text{CS}_2$ . (Lenhei, J. Am. Chem. Soc 1902, 24. 188.)

#### Tellurium hydrogen chloride, $\text{TeCl}_4$ , $\text{HCl} + 5\text{H}_2\text{O}$ .

Easily decomp. (Metzner, C. R. 1897, 125. 24.)

#### Tellurium chloride with $\text{MCl}$ .

See Chlorotellurate, M.

#### Tellurium tetrachloride ammonia,

$\text{TeCl}_4 \cdot 3\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . (Metzner, C. R. 1897, 124. 33.)

$\text{TeCl}_4 \cdot 4\text{NH}_3$ . Not deliquescent. Decomp by  $\text{H}_2\text{O}$ . (Espenschied, J. pr. 80. 480.)

#### Tellurium tetrachloride sulphur trioxide,

$\text{TeCl}_4 \cdot \text{SO}_3$ .

Ppt. ((Prandtl, Z. anorg. 1909, 62. 247.)  
 $\text{TeCl}_4 \cdot 2\text{SO}_3$ . Decomp by moisture. Or heating at  $120^\circ$ , it gives  $\text{TeCl}_4 \cdot \text{SO}_3$ . (Prandtl

- Tellurium tetrafluoride,  $\text{TeF}_4$ .**  
(Metzner, C. R. 1897, 125. 25.)  
+  $\text{H}_2\text{O}$  (Hägbom, Bull. Soc. (2) 35. 60.)
- Tellurium hexafluoride,  $\text{TeF}_6$ .**  
Decomp. by  $\text{H}_2\text{O}$  slowly but completely.  
(Prideaux, Chem. Soc. 1908, 39. 322.)
- Tellurium zirconium fluoride,**  
See Fluozirconate, tellurium.
- Tellurium dioxide,  $\text{TeO}_2$ .**  
Insol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 21. 443.)
- Tellurium tetraiodide,  $\text{TeI}_4$ .**  
Insol. in cold, decomp. by hot  $\text{H}_2\text{O}$  or alcohol. Sol. in  $\text{HI}$ , but only sol. in  $\text{MI} + \text{Aq}$ . (Berzelius.)  
Data on solubility of  $\text{TeI}_4$  in  $\text{HI} + \text{I} + \text{Aq}$  are given by Menke (Z. anorg. 1912, 77. 283.)
- Tellurium hydrogen iodide,  $\text{TeI}_4$ ,  $\text{HI} + 8\text{H}_2\text{O}$ , and  $+9\text{H}_2\text{O}$ .**  
Deliquescent. (Metzner, A. ch. 1898, (7) 15. 203.)
- Tellurium nitride,**  
Two forms.  
a. Stable at ord. temp.  
b. Unstable at ord. temp.  
(Frantz Fischer, B. 1910, 43. 1472.)  
 $\text{TeN}$ . Not attacked by  $\text{H}_2\text{O}$  or dil. acetic acid.  
Insol. in liquid  $\text{NH}_3$ . Decomp. by  $\text{KOH} + \text{Aq}$ . (Metzner, A. ch. 1898, (7) 15. 203.)
- Tellurium monoxide,  $\text{TeO}$ .**  
Sl. sol. in cold dil.  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Easily oxidised by  $\text{HNO}_3 + \text{Aq}$  or aqua regia. Decomp. immediately by boiling conc.  $\text{HCl} + \text{Aq}$ . Slowly decomp. by  $\text{KOH} + \text{Aq}$  (Divers and Shimosé, Chem. Soc. 35. 563.)
- Tellurium dioxide,  $\text{TeO}_2$ .**  
Very sl. sol. in  $\text{H}_2\text{O}$ . Sl. attacked by acids. Sl. sol. in  $\text{NH}_4\text{OH}$  or alkali carbonates  $+ \text{Aq}$ . Easily sol. in  $\text{NaOH}$  or  $\text{KOH} + \text{Aq}$ . Not sol. in less than 150,000 pts.  $\text{H}_2\text{O}$ . Easily sol. in warm dil.  $\text{HNO}_3 + \text{Aq}$ . Sol. in warm  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Klein and Morel, Bull. Soc. (2) 43. 203.)  
20%  $\text{H}_2\text{SO}_4 + \text{Aq}$ . dissolves on warming about 0.7%; 30%  $\text{H}_2\text{SO}_4 + \text{Aq}$ . about 0.86%; 50%  $\text{H}_2\text{SO}_4 + \text{Aq}$ . about 4.4%.  
These solutions are supersat. and  $\text{TeO}_2$  separates from the more dil. acids on standing. (Brauner, M. 1891, 12. 34.)  
Min. Tellurite.
- Tellurium dioxide hydrobromic acid,  $\text{TeO}_2$ ,  $3\text{HBr}$ .**  
(Ditte, C. R. 83. 336.)
- Tellurium dioxide hydrochloric acid,  $\text{TeO}_2$ ,  $2\text{HCl}$ .**  
(Ditte, C. R. 83. 336.)  
 $\text{TeO}_2$ ,  $3\text{HCl}$  (Ditte.)
- Tellurium trioxide,  $\text{TeO}_3$ .**  
Insol. in cold or hot  $\text{H}_2\text{O}$ , cold  $\text{HCl} + \text{Aq}$ , or cold or hot  $\text{HNO}_3 + \text{Aq}$ . Insol. in moderately conc.  $\text{KOH} + \text{Aq}$ , but, when the  $\text{KOH} + \text{Aq}$  is very conc., is sol. if boiling.
- Tellurium oxide,  $2\text{TeO}_2$ ,  $\text{TeO}_3$ .**  
"Tellurium tellurate."  
(Metzner, A. ch. 1898, (7) 15. 203.)
- Tellurium oxybromide.**  
Insol. in  $\text{H}_2\text{O}$ . (Ditte, A. ch. (5) 10. 82.)
- Tellurium oxybromide sulphur trioxide,  $\text{TeOBr}_2$ ,  $2\text{SO}_3$ .**  
Deliquescent. (Prandtl, Z. anorg. 1909, 62. 247.)
- Tellurium oxychloride,  $\text{TeOCl}_2$ .**  
Insol. in  $\text{H}_2\text{O}$ . (Ditte.)
- Tellurium oxyfluoride,  $\text{TeF}_4$ ,  $\text{TeO}_2 + 2\text{H}_2\text{O}$ .**  
Sol. in  $\text{H}_2\text{O}$  containing  $\text{HNO}_3$ . Decomp. by  $\text{H}_2\text{O}$ .  
 $2\text{TeF}_4$ ,  $3\text{TeO}_2 + 6\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$ . (Metzner, C. R. 1897, 125. 25.)
- Tellurium sulphide,  $\text{TeS}$ .**  
Insol. in  $\text{CS}_2$ ; very unstable. (Snelling, J. Am. Chem. Soc. 1912, 34. 802.)
- Tellurium disulphide,  $\text{TeS}_2$ .**  
Insol. in  $\text{H}_2\text{O}$  or dil. acids. Sol. in alkali hydrates or sulphides  $+ \text{Aq}$ .  
 $\text{CS}_2$  dissolves out  $\text{S}$ , so that the substance is probably a mixture. (Becker, A. 180. 257.)
- Tellurium trisulphide,  $\text{TeS}_3$ .**  
Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{K}_2\text{S} + \text{Aq}$ .
- Tellurium sulphoxide,  $\text{TeSO}_3$ .**  
Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{SO}_4$ . (Weber, J. pr. (2) 25. 218.)  
Is tellurium sulphite. (Divers, Chem. Soc. 49. 583.)
- Tellurous acid,  $\text{H}_2\text{TeO}_3$ .**  
Appreciably sol. in  $\text{H}_2\text{O}$  and acids. Sol. in alkali hydrates or carbonates  $+ \text{Aq}$ .
- Tellurites.**  
The neutral and acid tellurites of the alkali metals are sol. in  $\text{H}_2\text{O}$ . Ba, Sr, Ca, and Mg tellurites are sl. sol., and the other salts insol. in  $\text{H}_2\text{O}$ . Most tellurites are sol. in  $\text{HCl} + \text{Aq}$ .

**Aluminum tellurite.**

Ppt. Insol. in Al salts + Aq. (Berzelius)

**Ammonium tellurite,  $(\text{NH}_4)\text{HTeO}_3$ ,  $\text{H}_3\text{TeO}_3$  +  $3\frac{1}{2}\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ , from which it is precipitated by  $\text{NH}_4\text{Cl}$  + Aq or alcohol (Berzelius)

**Barium tellurite,  $\text{BaTeO}_3$ .**

Sl. sol. in  $\text{H}_2\text{O}$  when prepared in the moist way. (Berzelius.)

$\text{BaO}$ ,  $4\text{TeO}_3$

**Cadmium tellurite.**

Ppt. Sol. in  $\text{HNO}_3$ , and  $\text{HCl}$  + Aq. (Oppenheim)

**Calcium tellurite,  $\text{CaTeO}_3$ .**

Sl. sol. in cold, more sol. in hot  $\text{H}_2\text{O}$ . (Berzelius.)

$\text{CaO}$ ,  $4\text{TeO}_3$

**Chromium tellurite.**

Ppt. Sol. in excess of chromic salts + Aq.

**Cobaltous tellurite.**

Ppt.

**Cupric tellurite.**

Insol. in  $\text{H}_2\text{O}$  (Berzelius.)

**Glucinum tellurite.**

Insol. in  $\text{H}_2\text{O}$ .

**Indium tellurite,  $\text{In}_2(\text{TeO}_3)_2$ ,  $2\text{In}(\text{OH})_3$ .**

Ppt. (Renz, Dissert. 1902.)

**Ferrous tellurite.**

Ppt.

**Ferric tellurite.**

Ppt.

**Lead tellurite,  $\text{PbTeO}_3$ .**

Ppt. Easily sol. in acids. (Berzelius)

**Lithium tellurite,  $\text{Li}_2\text{TeO}_3$ .**

Sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

$\text{Li}_2\text{O}$ ,  $2\text{TeO}_3$ . Decomp. by cold  $\text{H}_2\text{O}$  into  $\text{Li}_2\text{TeO}_4$  and  $\text{Li}_2\text{O}$ ,  $4\text{TeO}_3$ . (B.)

$\text{Li}_2\text{O}$ ,  $4\text{TeO}_3$ . Sol. in hot, much less in cold  $\text{H}_2\text{O}$  (B.)

**Magnesium tellurite,  $\text{MgTeO}_3$ .**

Precipitate. Much more sol. in  $\text{H}_2\text{O}$  than the Ba, Sr, or Ca salt (Berzelius)

**Manganous tellurite.**

Ppt.

**Mercurous tellurite.**

Ppt.

**Mercuric tellurite.**

Ppt

**Nickel tellurite.**

Ppt.

**Potassium tellurite,  $\text{K}_2\text{TeO}_3$ .**

Not deliquescent. Slowly sol. in cold, more quickly in boiling  $\text{H}_2\text{O}$ . (Berzelius.)  $\text{K}_2\text{O}$ ,  $2\text{TeO}_3$ . Completely sol. in boiling  $\text{H}_2\text{O}$ , from which  $\text{K}_2\text{O}$ ,  $4\text{TeO}_3$  crystallises. (B.)  $\text{K}_2\text{O}$ ,  $4\text{TeO}_3$  +  $4\text{H}_2\text{O}$ . Decomp. by cold  $\text{H}_2\text{O}$  into  $\text{K}_2\text{O}$ ,  $\text{TeO}_3$ , and  $\text{K}_2\text{O}$ ,  $2\text{TeO}_3$ , which dissolve, and  $\text{H}_2\text{TeO}_3$ , which is insol. (B.)

**Potassium hexatellurite,  $\text{K}_2\text{O}$ ,  $6\text{TeO}_3$  +  $2\text{H}_2\text{O}$ .**

Not decomp. by, but sl. sol. in  $\text{H}_2\text{O}$ . (Klein and Morel, C. R. 100, 1140.)

**Silver tellurite,  $\text{Ag}_2\text{TeO}_3$ .**

Ppt. Sol. in  $\text{NH}_4\text{OH}$  + Aq. (Berzelius) The freshly pptd. salt is insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ , acetic and tartaric acid; decomp. by  $\text{HCl}$ . (Lenher, J. Am. Chem. Soc. 1913, 35, 727.)

$\text{AgHTeO}_3$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$  + Aq. (Rose, Pogg. 18, 60)

**Sodium tellurite,  $\text{Na}_2\text{TeO}_3$ .**

Slowly sol. in cold, more quickly in hot  $\text{H}_2\text{O}$ . Precipitated from aqueous solution by alcohol. (Berzelius)  $\text{Na}_2\text{O}$ ,  $2\text{TeO}_3$ . Decomp. by  $\text{H}_2\text{O}$  as K salt (B.)

$\text{Na}_2\text{O}$ ,  $4\text{TeO}_3$  +  $5\text{H}_2\text{O}$ . As above. (B.)

**Strontium tellurite,  $\text{SrTeO}_3$ .**

Resembles Ba salt.

$\text{SrH}_2\text{TeO}_6$ . Very sl. sol. in  $\text{H}_2\text{O}$ , more easily in  $\text{HNO}_3$  + Aq.

**Thorium tellurite.**

Precipitate. Insol. in  $\text{H}_2\text{O}$  or Th salts + Aq

**Stannous tellurite.**

Pptd. in presence of 60,000 pts  $\text{H}_2\text{O}$ . (Fischer.)

**Uranium tellurite,  $\text{U}_3(\text{TeO}_3)_8$ .**

Ppt. Insol. in U salts + Aq

**Yttrium tellurite.**

Precipitate.

**Zinc tellurite,  $\text{ZnTeO}_3$ .**

Ppt.

**Zirconium tellurite.**

Ppt.

**Terbium, Tb.**

Metal has not been isolated.

Has been decomp. into two or more elements by Krüss (Z. anorg. 4, 27)

**Terbium chloride,  $TbCl_3 \cdot 6H_2O$ .**

Sol. in  $H_2O$ , very hygroscopic; sol. in alcohol. (Urban, C. R. 1903, 146. 128)

**Terbium hydroxide.**

Sol. in dilute acids. Decomposes  $NH_4$  salts + Aq.

**Terbium oxide,  $Tb_2O_3$ .**

Sol. in dil. acids, even after ignition

**Terbium peroxide,  $Tb_2O_5$ .**

Sol. in  $HNO_3$  and in hot  $HCl$  (Urban, C. R. 1907, 146. 127)

**Tetramine chromium compounds.**

See—

Bromotetramine chromium compounds.

Chlorotetramine chromium compounds.

Iodotetramine chromium compounds.

**Tetramine cobaltic compounds,**

$Co(NH_4)_4X_6$ .

See—

Bromotetramine cobaltic compounds.

Carbonatotetramine cobaltic compounds.

Chlorotetramine cobaltic compounds.

Croceocobaltic compounds.

Fuscocobaltic compounds.

Flavocobaltic compounds.

Iodotetramine cobaltic compounds.

Nitratotetramine cobaltic compounds.

Praseocobaltic compounds.

Roseotetramine cobaltic compounds.

Sulphatotetramine cobaltic compounds.

See also under octamine cobaltic salts for many tetramine salts as yet unclassified.

**Tetramine cobaltic nitrite with  $MNO_2$ ,**

$Co_2(NH_4)_4(NO_2)_4, 2MNO_2$

See Diamine cobaltic nitrite.

**Tetrathionic acid,  $H_2S_4O_6$ .**

Known only in aqueous solution

Dil. solution can be boiled without decomp.

Conc. solution decomp. by boiling

Addition of  $H_2SO_4$  or  $HCl$  makes solution more stable. (Fordos and Gélis, C. R. 15. 920.)

**Tetrathionates.**

Tetrathionates are all easily sol. in  $H_2O$ , but insol. in alcohol

**Barium tetrathionate,  $BaS_4O_6 \cdot 2H_2O$ .**

Very sol. in  $H_2O$ , but precipitated by addition of alcohol

**Cadmium tetrathionate.**

Deliquescent. Solution in  $H_2O$  gradually decomposes. (Kessler, Pogg. 74. 249.)

**Cæsium tetrathionate,  $Cs_2S_4O_6$ .**

(J. Meyer, B. 1907, 40. 1361.)

**Cuprous tetrathionate,  $Cu_2S_4O_6$ .**

Decomp. by  $H_2O$  (Chancel and Diacon, C. R. 1863, 56. 711.)

**Cupric tetrathionate,  $CuS_4O_6$ .**

Sol. in  $H_2O$

Decomp. by long boiling. (Curtius and Henkel, J. pr. 1888, (2) 37. 148.)

**Lead tetrathionate,  $PbS_4O_6 \cdot 2H_2O$ .**

Sol. in  $H_2O$

**Manganous hydrogen tetrathionate,**

$MnH_2(S_4O_6)_2$ .

Deliquescent. Very sol. in  $H_2O$  and alcohol (Curtius and Henkel, J. pr. (2) 37. 148)

**Nickel tetrathionate ammonia,  $NiS_4O_6, 6NH_3$ .**

Ppt. Decomp. by  $H_2O$ . Insol. in alcohol. (Ephraim, B. 1913, 46. 3109.)

**Potassium tetrathionate,  $K_2S_4O_6$ .**

Soluble in  $H_2O$ . Insol. in alcohol.

Difficultly sol. in  $H_2O$  (Kessler, Pogg. 1847, 74. 254)

**Rubidium tetrathionate,  $Rb_2S_4O_6$ .**

Not hygroscopic (J. Meyer, B. 1907, 40. 1356.)

**Sodium tetrathionate,  $Na_2S_4O_6$ .**

Sol. in  $H_2O$ . Precipitated therefrom by a great excess of alcohol. (Kessler, J. pr. 95. 13.)

+  $2H_2O$ . (Berthelot, A. ch. (6) 17. 450.)

**Strontium tetrathionate,  $SrS_4O_6 \cdot 6H_2O$ .**

Sol. in  $H_2O$ . (Kessler, Pogg. 74. 255.)

More sol. in  $H_2O$  than Ba salt.

**Zinc tetrathionate.**

Sol. in  $H_2O$ . (Fordos and Gélis.)

**Zinc hydrogen tetrathionate,  $ZnH_2(S_4O_6)_2$ .**

Extremely sol. in  $H_2O$  and alcohol. (Curtius and Henkel, J. pr. (2) 37. 147)

**Zinc tetrathionate ammonia,  $ZnS_4O_6, 3NH_3$ .**

Ppt. (Ephraim, B. 1915, 48. 641.)

**Thallic acid.****Potassium thallate.**

Known only in aqueous solution. (Carstanjen, J. pr. 101. 55.)

Does not exist. (Lepsius, Chem. Ztg. 1890, 1327)

**Thallium, Tl.**

Not attacked by pure  $H_2O$ . Easily sol. in dil.  $H_2SO_4$  or  $HNO_3$  + Aq. Difficultly sol. in  $HCl$  + Aq. Absolute alcohol dissolves considerable quantity in a short time, also methyl alcohol, and acetic ether (Böttger).  
Not easily attacked by  $HF$  + Aq (Kuhlmann.)

Insol. in liquid  $NH_3$ . (Franklin, Am. Ch. J. 1898, 20, 830.)

$\frac{1}{2}$  ccm oleic acid dissolves 0.0424 g. Tl in 6 days (Gates, J. phys. Chem. 1911, 15, 143.)

**Thallium arsenide,  $TlAs$ .**

Decomp. by  $H_2SO_4$ . (Carstanjen.)

**Thallous azoimide,  $TlN_3$ .**

Sl. sol. in  $H_2O$ .

0.1712 pt. is sol. in 100 pts.  $H_2O$  at  $0^\circ$ , 0.1965 pt. is sol. in 100 pts.  $H_2O$  at  $5^\circ$ ;

0.3 pt. is sol. in 100 pts.  $H_2O$  at  $16^\circ$ .

Insol. in abs. alcohol and ether.

(Curtius, J. pr. 1898, (2) 53, 284.)

**Thallothallic azoimide,  $TlN_3$ ,  $TlN_3$ .**

Explosive. Decomp. by hot  $H_2O$  and by acids (Dennis, J. Am. Chem. Soc. 1896, 18, 973.)

**Thallous bromide,  $TlBr$ .**

Nearly insol. in cold, sl. sol. in boiling  $H_2O$ . (Willm, Bull. Soc. (2) 2, 89.)

1 l.  $H_2O$  dissolves 0.00869 g. mol.  $TlBr$  at  $68.5^\circ$ . (Noyes, Z. phys. Ch. 6, 248.)

Sl. sol. in  $H_2O$ .  $0.45 \times 10^{-3}$  g. is dissolved in a liter of sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46, 603.)

1 l.  $H_2O$  dissolves 420 mg.  $TlBr$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50, 356.)

238 mg.  $TlBr$  are contained in 1 l. sat. solution at  $0.13^\circ$ ; 289 mg. at  $8.37^\circ$ ; 423 mg. at  $18^\circ$ ; 579 mg. at  $25.68^\circ$ . (Kohlrausch, Z. phys. Ch. 1908, 64, 169.)

Solubility of  $TlBr$  in  $Tl(NO_3)$  + Aq at  $68.5^\circ$ .

g. mole per l.		g. mole per l.	
$TlNO_3$	$TlBr$	$TlNO_3$	$TlBr$
0	0.00869	0	2.469
0.0163	0.00410	4.336	1.164
0.0294	0.00289	7.820	0.821
0.0955	0.00148	25.400	0.420

(Noyes, Z. phys. Ch. 1890, 6, 248.)

Insol. in acetone (Naumann, B. 1904, 37, 4329); pyridine (Naumann, B. 1904, 37, 4610); acetone (Eidmann, C. C. 1899, II, 1014).

**Thallic bromide,  $TlBr_3$ .**

Deliquescent. Easily sol. in  $H_2O$  and alcohol. (Willm.)

Insol. in methyl acetate (Naumann, B. 1909, 42, 3790.)

+  $H_2O$ . Very unstable. Sol. in  $H_2O$ ,

alcohol and ether (Meyer, Z. anorg. 1900, 24, 353.)

+  $4H_2O$ . Very sol. in  $H_2O$ . (Thomas, C. R. 1902, 134, 546.)

**Thallothallic bromide,  $TlBr$ ,  $TlBr_3$ .**

Decomp. by  $H_2O$ . (Meyer, Z. anorg. 1900, 24, 354.)

$3TlBr$ ,  $TlBr_3$ . Decomp. by  $H_2O$  into  $TlBr$  and  $TlBr_3$ .

**Thallic hydrogen bromide,  $TlBr_3$ ,  $HBr$ .**

Very sol. in  $H_2O$ . (Thomas, C. R. 1902, 134, 546.)

**Thallic bromide ammonia,  $TlBr_3$ ,  $3NH_3$ .**

Decomp. by  $H_2O$ .

**Thallium bromochloride,  $TlClBr$ .**

Decomp. by  $H_2O$  (Thomas, C. R. 1901, 132, 1489.)

$TlClBr_3$  +  $4H_2O$ . Ppt.

$TlCl_2Br$  +  $4H_2O$ . Ppt. Decomp. by  $H_2O$  (Thomas, C. R. 1902, 134, 546.)

$Tl_2Cl_2Br_4$ . Decomp. by  $H_2O$ ,  $H_2SO_4$  or  $HNO_3$ . (Thomas, C. R. 1900, 131, 894; C. R. 1901, 132, 1489.)

$Tl_4Cl_2Br_8$ . Sol. in  $H_2O$ . (Thomas, C. R. 1901, 132, 82.)

$TlClBr_3$ ,  $3TlCl$ . Cryst. from  $H_2O$  containing  $HNO_3$ . (Cushmann, Am. Ch. J. 1900, 24, 222.)

$TlCl$ ,  $3TlBr$ . Sol. in  $H_2O$  without decomp. (Cushmann.)

$TlBr_3$ ,  $3TlCl$ . Decomp. by  $H_2O$ . (Cushmann.)

$TlBr_3$ ,  $TlCl$ . Sol. in  $H_2O$  with decomp. (Cushmann.)

$TlCl_2$ ,  $2TlBr$ ,  $TlCl$ . Sol. in  $H_2O$ . (Meyer, Z. anorg. 1900, 24, 355-360.)

$TlBr_3$ ,  $2TlCl$ ,  $TlBr$ . Ppt. Decomp. by  $H_2O$  (Meyer.)

$(TlCl_2, TlCl)$ ,  $2(TlBr_3, TlBr)$ . Ppt. (Meyer.)

$2(TlCl_2, TlCl)$ ,  $(TlBr_3, TlBr)$ . Ppt. Decomp. by hot  $H_2O$  (Meyer.)

**Thallium bromofluoride,  $TlFBr_2$ .**

Decomp. in moist air.

Sol. in abs. alcohol (Gewecke, A. 1909, 366, 233.)

**Thallium bromofluoride ammonia,**

$TlFBr_3$ ,  $4NH_3$ .

Decomp. by moisture.

Difficultly sol. in abs. alcohol. (Gewecke, A. 1909, 366, 234.)

**Thallic chloride,  $TlCl$ .**

Solubility in pts.  $H_2O$  at  $t^\circ$ , according to H = Heberberg; C = Crookes; L = Lamy.

16.01	0.0005

(Hill, J. Am. Chem. Soc. 1910, 32, 1189.)

Insol. in pyridine. (Naumann, B. 1904, 37, 4610); acetone. (Naumann, B. 1904, 37, 4329.)

Thallic chloride,  $\text{TiCl}_3$ .*Anhydrous.*Easily sol. in  $\text{H}_2\text{O}$  and in most ord. solvents.

In contact with moist air, it rapidly becomes hydrated (Thomas, C. R. 1902, 135, 1053.)

Difficultly sol. in methyl acetate (Naumann, B. 1909, 42, 3790.)

Very sol. in acetone (Renz, B. 1902, 35, 1110.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37, 4328.)

+  $\text{H}_2\text{O}$ . Deliquescent, and very easily sol. in  $\text{H}_2\text{O}$ . (Werther.)Deliquescent, and very easily sol. in  $\text{H}_2\text{O}$ . (Werther.)+  $4\text{H}_2\text{O}$ . 86.2 pts. are sol. in 100 pts.  $\text{H}_2\text{O}$  at  $17^\circ$ . Sp. gr. of sat. aq. solution at  $17^\circ = 1.85$ . (Thomas, C. R. 1902, 135, 1052.)

Very hygroscopic. (Meyer, Z. anorg. 1900, 24, 336.)

Very sol. in alcohol and ether. (Meyer, Z. anorg. 1900, 24, 338.)

+  $7\frac{1}{2}\text{H}_2\text{O}$ . Deliquescent. (Werther.)Thallothallic chloride,  $3\text{TiCl}_3 \cdot \text{TiCl}_3$ .1 pt. dissolves in pts.  $\text{H}_2\text{O}$  at  $t^\circ$ , according to C=Crookes, H=Hebberling; L=Lamy.

15°	17°	100°	100°
-----	-----	------	------

380.1	346	52.9	20-25 pts. $\text{H}_2\text{O}$ .
-------	-----	------	-----------------------------------

C	H	C	L
---	---	---	---

Sl. decomp. by dissolving. (Lamy.)

Thallic hydrogen chloride,  $\text{TiCl}_3 \cdot \text{HCl}$  +  $3\text{H}_2\text{O}$ .

Very hygroscopic.

Decomp. by  $\text{H}_2\text{O}$ . (Meyer, Z. anorg. 1900, 24, 337.)Thallium tungsten chloride,  $\text{Ti}_2\text{W}_7\text{Cl}_8$ .Nearly insol. in  $\text{H}_2\text{O}$ .Sol. in a hot mixture of equal pts.  $\text{H}_2\text{O}$  and conc.  $\text{HCl}$ .

Sl. sol. in conc HCl.  
Nearly insol. in most organic solvents.  
(Olsson, B 1913, 46. 575.)

**Thallic zinc chloride,  $2\text{TiCl}_3, \text{ZnCl}_2 + 6\text{H}_2\text{O}$ .**

Can be cryst from  $\text{H}_2\text{O}$  (Gewecke, A. 1909, 366. 224.)

**Thallic chloride ammonia,  $\text{TiCl}_3, 3\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ . Sol. in HCl + Aq (Willm.)

**Thallium chlorofluoride,  $\text{TlFCl}_2$ .**

Very hygroscopic.  
Decomp. by moist air.  
Easily sol in abs alcohol (Gewecke, A. 1909, 366. 230.)  
+  $3\text{H}_2\text{O}$ . Not hygroscopic.  
Decomp. by  $\text{H}_2\text{O}$ , alcohol and ether (Gewecke.)

**Thallium chlorofluoride ammonia,  $\text{TlFCl}_2, 4\text{NH}_3$ .**

Decomp. by  $\text{H}_2\text{O}$ .  
Difficultly sol in abs. alcohol and in ether (Gewecke, A. 1909, 366. 232.)

**Thallium chlorofluoride potassium chloride,  $2\text{TlFCl}_2, \text{KCl}$ .**

Ppt. (Gewecke, A. 1909, 366. 231.)

**Thalious fluoride,  $\text{TlF}$ .**

Sol. in  $1\frac{1}{2}$  pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , and in much less hot  $\text{H}_2\text{O}$ . Difficultly sol in alcohol. (Buchner, W. A. B. 52. 2. 644.)  
+  $\frac{1}{2}\text{H}_2\text{O}$  Deliquescent. (Willm.)

**Thallic fluoride,  $\text{TlF}_3$ .**

Insol. in  $\text{H}_2\text{O}$  and cold HCl + Aq (Willm.)  
Cannot be obtained in pure state (Gewecke, A. 1909, 366. 218.)

**Thalious hydrogen fluoride,  $\text{TlF}, \text{HF}$ .**

Sol. in 1 pt.  $\text{H}_2\text{O}$ . (Buchner.)

**Thalious tungstyl fluoride,**

See Fluoxytungstate, thalious.

**Thalious vanadium fluoride.**

See Fluovanadate, thalious.

**Thalious vanadyl fluoride.**

See Fluoxyvanadate, thalious.

**Thalious hydroxide,  $\text{TlOH}$ .**

Sol. in  $\text{H}_2\text{O}$  and alcohol.

Solubility of  $\text{TlOH}$  in  $\text{H}_2\text{O}$  at  $t^\circ$

$t^\circ$	g equiv. $\text{TlOH}$ per l	Sp gr $15^\circ/4^\circ$
0	1.151	1.231
18.5	1.551	1.317
19.5	1.582	1.322
29	1.803	1.342
23.1	1.861	1.377
33.1	1.967	1.400
36	2.075	1.417
40	2.240	1.446
44.5	2.442	
54.1	2.940	
59.4	3.281	
64.6	3.601	
78.5	4.673	
90.0	5.705	
99.2	6.708	

(Bahr, Z. anorg 1911, 71. 87.)

The solubility of  $\text{Ti}_2\text{O}_3$  in  $\text{H}_2\text{O}$  at these temperatures is the same as that of  $\text{TlOH}$ .  
+  $\text{H}_2\text{O}$  (Willm, Bull. Soc (2) 5. 354.)

**Thallic hydroxide,  $\text{Ti}_2\text{O}_3, \text{H}_2\text{O} = \text{TlO}(\text{OH})$ .**

Insol. in  $\text{H}_2\text{O}$ . Sol in dil. acids and ammonium salts + Aq. Insol in caustic alkali solutions

$\text{Ti}(\text{OH})_3$  Easily sol. in dil. HCl or  $\text{H}_2\text{SO}_4$  + Aq. (Carnegie, C. N. 60. 113.)

**Thalious iodide,  $\text{TlI}$ .**

Very sl. sol. in  $\text{H}_2\text{O}$

1 pt  $\text{TlI}$  is sol in pts.  $\text{H}_2\text{O}$  at  $t^\circ$ . C=according to Crookes; H=according to Hebbeling; L=according to Lamy; W=according to Werther

35°	15°	16°	16-17°	19.4°
20,000	4450	16,000	11,676	14,654 pts. $\text{H}_2\text{O}$ .
W	C	L	H	W
20°	23.4°	45°	100°	100°
11,954	10,482	5407	842	804 pts. $\text{H}_2\text{O}$ .
W	W	W	C	H

Sol. in 17,000 pts.  $\text{H}_2\text{O}$  at  $20^\circ$ . (Long, Z. anal. 30. 342.)

Sat. solution at  $20.15^\circ$  contains 63.6 mg. or  $1.92 \times 10^{-4}$  g. mol  $\text{TlI}$  per l (Böttger, Z. phys. Ch. 1903, 46. 603.)

1 l.  $\text{H}_2\text{O}$  dissolves 56 mg.  $\text{TlI}$  at  $18^\circ$ . (Kohlrausch, Z. phys. Ch. 1904, 50. 356.)

36.2 mg are dissolved in 1 l. of sat. solution at  $9.90^\circ$ ; 56 mg. at  $18.1^\circ$ ; 84.7 mg. at  $26^\circ$ . (Kohlrausch, Z. phys. Ch. 1908, 64. 168.)

Solubility in  $\text{H}_2\text{O}$  at  $25^\circ = 1.76 \times 10^{-4}$  mol per litre. (Spencer, Z. phys. Ch. 1912, 80. 708.)

Not decomp. by dil  $\text{H}_2\text{SO}_4$ , HCl, or alkalis + Aq. Decomp. by hot dil  $\text{HNO}_3$  + Aq, and cold conc  $\text{HNO}_3$ . Sol in aqua regia.

Also less sol in acetic acid than in  $\text{H}_2\text{O}$ . (Carstanjen.)

Insol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Werther.) Not wholly insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , and solubility is increased by presence of  $(\text{NH}_4)_2\text{SO}_4$  or  $\text{NH}_4\text{Cl}$  (Baubigny, C. R. 113 544)

Sol in 13,000 pts  $\text{NH}_4\text{OH} + \text{Aq}$  ( $6\frac{1}{2}\%$  or  $2\frac{1}{4}\%$   $\text{NH}_3$ ). Sol. in 17,000 pts  $\text{NH}_4\text{OH} + \text{Aq}$  ( $1\frac{1}{4}\%$   $\text{NH}_3$ ). (Long.)

Insol in dil  $\text{KI} + \text{Aq}$  (1%  $\text{KI}$ ) (Baubigny)

Much more insol in  $\text{KI} + \text{Aq}$  than in  $\text{H}_2\text{O}$ ; 1 pt dissolves in 75,000 pts dil.  $\text{KI} + \text{Aq}$  (Lamy)

Nearly insol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$ , and absolutely insol therein in presence of  $\text{Pb}$  salts (Werner, C. N. 53. 51.)

Sol in 56,336 pts. 85% alcohol at  $13^\circ$  (Werther.) Sol. in 18,934 pts. 98% alcohol at  $19^\circ$ . (Hebborn.)

When  $\text{TlI}$  is shaken with alcohol of  $78^\circ\text{B}$  (1 vol.  $\text{H}_2\text{O} + 3$  vols. 98% alcohol) at  $22^\circ$ , and let stand with  $\text{TlI}$  for 24 hours, and then evaporated to  $\frac{1}{2}$  vol., there is shown no ppt by  $\text{NH}_4\text{SH} + \text{Aq}$  (Baubigny)

Sol. in 260,000 pts. 90% alcohol, and 37,000 pts 50% alcohol at  $20^\circ$ . (Long.)

Insol in methylene iodide (Retgers, Z anorg. 3. 343)

Insol. in acetone. (Naumann, B. 1904, 37. 4329; Eidmann, C. C., 1899, II. 1014.)

Insol. in pyridine. (Naumann, B. 1904, 37. 4501.)

#### Thallic iodide, $\text{TlI}_3$ .

Sol. in alcohol.  
Decomp. slowly in the air. (Wells, Z anorg 1884, 6. 813)

Sol. in ether

#### Thallothallic iodide, $\text{Tl}_3\text{I}_4 = 5\text{TlI}, \text{TlI}_3$ .

Sol. in  $\text{H}_2\text{O}$ . (Jørgensen, J. pr. (2) 6. 82.)

#### Thallium nitride.

Very unstable. (Franz Fischer, B. 1901, 43. 1470.)

#### Thallous oxide, $\text{Tl}_2\text{O}$ .

Deliquescent. Sol. in  $\text{H}_2\text{O}$ .

See Thallous hydroxide.

#### Thallic oxide, $\text{Tl}_2\text{O}_3$ .

Insol. in  $\text{H}_2\text{O}$ . Not attacked by cold  $\text{H}_2\text{SO}_4$ . Sol. in hot  $\text{H}_2\text{SO}_4$ . Sol. in cold  $\text{HCl} + \text{Aq}$ .

Insol. in alkalis +  $\text{Aq}$ . (Werther, J. pr. 91. 385)

#### Black modification.

Less sol. in dil. acids than the brown modification. Solution is accompanied by a slight reduction to thallous salt.

More sol. in 10%  $\text{HCl}$  than in 10%  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$ .

More sol. in conc. than in dil. acids. (Rabe, Z. anorg 1906, 48. 431.)

#### Brown modification

Easily sol. in dil. mineral acids on warming, with slight reduction to thallous salt.

More sol. in conc. acid, (Rabe.)

#### Thallium dioxide, $\text{Tl}_2\text{O}_2$ .

Insol. in  $\text{H}_2\text{O}$  (Picconi, Gazz. ch. it. 17. 450.)

#### Thallic oxide ammonia, $\text{Tl}_2\text{O}_3, 6\text{NH}_3$ .

Decomp. by much  $\text{H}_2\text{O}$ . Insol. in alcohol. (Carstanjen)

#### Thallic oxyfluoride, $\text{TlOF}$ .

Insol. in  $\text{H}_2\text{O}$ . Slowly decomp. by boiling with  $\text{H}_2\text{O}$ .

Sol. in mineral acids. Almost insol. in  $\text{HF}$ . (Gewecke, A. 1909, 386. 226.)

#### Thallium phosphide (?)

Ppt. (Crookes)

#### Thallous selenide, $\text{Tl}_2\text{Se}$ .

Insol. in  $\text{H}_2\text{O}$ . Scarcely attacked by cold dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , but dissolves when heated. (Carstanjen)

#### Thallothallic selenide.

Not attacked by cold conc. or boiling dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  Conc.  $\text{H}_2\text{SO}_4$  decomposes. (Carstanjen)

#### Thallous sulphide, $\text{Tl}_2\text{S}$ .

Insol. in  $\text{H}_2\text{O}$ ,  $(\text{NH}_4)_2\text{S} + \text{Aq}$ ,  $\text{NH}_4\text{OH} + \text{Aq}$ ,  $\text{KCN} + \text{Aq}$ , and in alkali carbonates, and hydrates +  $\text{Aq}$ . Difficultly sol. in a solution of oxalic acid or acetic acid. (Crookes.) Easily sol. in  $\text{HNO}_3$  and  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Difficultly sol. in  $\text{HCl} + \text{Aq}$ . (Willm.)

Sol. in  $\text{H}_2\text{O}$ .

$0.21 \times 10^{-4}$  g. is dissolved in 1 l. sat. solution at  $20^\circ$ . (Böttger, Z. phys. Ch. 1903, 46. 603.)

Insol. in acetone. (Naumann, B. 1904, 37. 4329.)

#### Thallic sulphide, $\text{Tl}_2\text{S}_3$ .

Insol. in  $\text{H}_2\text{O}$  Insol. in cold, sol. in warm dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  without separation of  $\text{S}$ . Sol. in other dilute acids with separation of  $\text{S}$ . (Carstanjen.)

#### Thallium pentasulphide, $\text{Tl}_2\text{S}_5$ .

Ppt. (Hofmann, B. 1903, 36. 3092.)

#### Thallothallic sulphide, $5\text{Tl}_2\text{S}, 3\text{Tl}_2\text{S}_3$ .

Very slowly decomp. by cold dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$

$\text{Tl}_2\text{S}, \text{Tl}_2\text{S}_3$ . (Carstanjen.)

$\text{Tl}_2\text{S}, 2\text{Tl}_2\text{S}_3$ . Decomp. by dil. acids. (Schneider, J. pr. (2) 10. 55.)

#### Thallium telluride, $\text{Tl}_2\text{Te}$ .

(Fabre, C. R. 105. 073.)

**Thio-**

For compounds with prefix thio-, see also under sulpho-.

**Thioantimonic acid.**

See Sulphantimonic acid.

**Thioarsenic acid.**

See Sulpharsenic acid.

**Thiomolybdic acid.**

See Sulphomolybdic acid.

**Thionamic acid,  $\text{NH}_2\text{SO}_2 = \text{NH}_2\text{SO}(\text{OH})$ .**

Very deliquescent, and sol in  $\text{H}_2\text{O}$ .

$\text{H}_2\text{O}$  solution decomp gradually. (Rose, Pogg. 33. 275; 42. 425.)

**Ammonium thionamate,  $\text{NH}_2\text{SO}(\text{ONH}_2)$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$ ; easily decomp. when in solution. (Rose.)

Very sol. in alcohol with decomp. Sl. sol. in dry ether. (Drivers and Ogawa, C. C. 1900, I. 1259.)

**Dithionic acid.**

See Dithionic acid.

**Trithionic acid.**

See Trithionic acid.

**Tetrathionic acid.**

See Tetrathionic acid.

**Pentathionic acid.**

See Pentathionic acid.

**Thionyl bromide,  $\text{SOBr}_2$ .**

Unstable.

Decomp. by  $\text{H}_2\text{O}$ . (Besson, C. R. 1896, 122. 322.)

**Thionyl bromochloride,  $\text{SOClBr}$ .**

Decomp. slowly in the cold, rapidly at  $115^\circ$ .

Decomp. by  $\text{H}_2\text{O}$ . (Besson C. R. 1896, 122. 321.)

**Thionyl chloride,  $\text{SOCl}_2$ .**

Sol. in  $\text{CHCl}_3$  and  $\text{C}_6\text{H}_6$ . (Oddo, Gazz. ch. it. 1899, 29. (2) 318.)

**Thionyl fluoride,  $\text{SOF}_2$ .**

Decomp. by  $\text{H}_2\text{O}$ .

Sol. in  $\text{AsCl}_3$ ,  $\text{C}_6\text{H}_6$ , ether and oil of turpentine. (Moissan, C. R. 1900, 130. 1439.)

**Thiophosphamic acid;  $\text{H}_2\text{PNH}_2\text{O}_2\text{S}$  (?).**

Known only in its salts. (Gladstone and Holmes, Chem. Soc. (2) 3. 1.)

**Cadmium thiophosphamate,  $\text{CdPNH}_2\text{O}_2\text{S}$ .**

Sol. in dil. acids, and  $\text{NH}_4\text{OH} + \text{Aq.}$  (G. and H.)

**Lead —,  $\text{PbPNH}_2\text{O}_2\text{S}$ .**

Ppt. Sol. in dil.  $\text{HNO}_3 + \text{Aq.}$  (Gladstone and Holmes, Chem. Soc. (2) 3. 1.)

**Thiophosphodiamic acid,  $\text{H}_2\text{PN}_2\text{H}_4\text{OS}$ .**

Known only in solution, which soon decomposes. (G. and H.)

**Cadmium thiophosphodiamate,  $\text{Cd}(\text{PN}_2\text{H}_4\text{OS})_2$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids, and  $\text{NH}_4\text{OH} + \text{Aq.}$  (G. and H.)

**Cupric —,  $\text{Cu}(\text{PN}_2\text{H}_4\text{OS})_2$ .**

Insol. in  $\text{H}_2\text{O}$ , dil.  $\text{HCl}$ , or  $\text{NH}_4\text{OH} + \text{Aq.}$  Sol. in  $\text{KCN} + \text{Aq.}$  (Gladstone and Holmes, Chem. Soc. (2) 3. 1.)

**Lead —,  $\text{Pb}(\text{PN}_2\text{H}_4\text{OS})_2$ .**

Insol. in  $\text{H}_2\text{O}$  Sol. in dil.  $\text{HNO}_3 + \text{Aq.}$

**Nickel —,  $\text{Ni}(\text{PN}_2\text{H}_4\text{OS})_2$ .**

Sol. in dil. acids, and  $\text{NH}_4\text{OH} + \text{Aq.}$  (Gladstone and Holmes, Chem. Soc. (2) 3. 1.)

**Zinc —,  $\text{Zn}(\text{PN}_2\text{H}_4\text{OS})_2$ .**

Ppt. Sol. in dil. acids, and  $\text{NH}_4\text{OH} + \text{Aq.}$  (Gladstone and Holmes)

**Thiophosphonitride,  $\text{PSN}$ .**

Not decomp. by cold  $\text{H}_2\text{O}$ . Slowly decomp. by boiling  $\text{H}_2\text{O}$  Easily decomp. by boiling dil  $\text{HCl}$ . (Stock, B. 1906, 39. 1974.)

**Thiophosphoric acid,  $\text{H}_2\text{PSO}_3 = \text{PS}(\text{OH})_2$ .**

Known only in its salts.

**Ammonium magnesium thiophosphate,  $\text{NH}_4\text{MgPSO}_3 + 9\text{H}_2\text{O}$** 

Sl. sol. in cold  $\text{H}_2\text{O}$ . (Kubierschky, J. pr. (2) 31. 100.)

**Barium —,  $\text{Ba}_3(\text{PSO}_3)_2$ .**

Insol. in  $\text{H}_2\text{O}$ . (Wurtz, A. ch. (3) 20. 473.)

**Cobalt —.**

Insol. in  $\text{H}_2\text{O}$ , but partially decomp. when boiled therewith. (Wurtz.)

**Cupric —.**

Insol. in  $\text{H}_2\text{O}$ ; very easily decomp. (Wurtz.)

**Ferric —.**

Insol. in  $\text{H}_2\text{O}$ . (Wurtz.)

**Magnesium —,  $\text{Mg}_2(\text{PSO}_3)_2 + 20\text{H}_2\text{O}$ .**

Sl. sol. in cold  $\text{H}_2\text{O}$ . (Kubierschky, J. pr. (2) 31. 99.)

**Nickel thiophosphate.**

Insol. in  $H_2O$ , but decomp. when boiled therewith. (Wurtz.)

**Potassium —,  $K_2PSO_4$ .**

Very sol. in  $H_2O$ . Known only in aqueous solution. (Wurtz.)

**Sodium —,  $Na_2PSO_4 + 12H_2O$ .**

Easily sol. in boiling  $H_2O$ . Cryst. out on cooling. (Wurtz, A. ch. (3) 20. 472.)

Insol. in alcohol.

**Strontium —.**

Insol. in  $H_2O$ . (Wurtz.)

**Dithiometaphosphoric acid.****Ammonium dithiometaphosphate,  $NH_4PS_2O$** 

Decomp. by  $H_2O$ . (Stock, B. 1906, 39. 1990.)

**Monothioorthophosphoric acid.****Monoammonium monothioorthophosphate,  $O=P(SNH_4)(OH)_2$ .**

Sol. in  $H_2O$ .

Insol. in alcohol. (Stock, B. 1906, 39. 1990.)

**Triammonium monothioorthophosphate,  $SNH_4PO(OH)_2$** 

(Stock.)

**Dithioorthophosphoric acid.****Ammonium dithiophosphate,  $(NH_4)_2PS_2O_4 + 2H_2O$ .**

Sl. efflorescent. Sol. in  $H_2O$ . (Kubierschky, J. pr. (2) 31. 93.)

**Ammonium magnesium —,  $NH_4MgPS_2O_4 + 6H_2O$** 

Sl. sol. in cold,  $H_2O$ . (Kubierschky.)

**Barium —,  $Ba_3(PS_2O)_2 + 8H_2O$ .**

Precipitate. (Kubierschky, J. pr. (2) 31. 103.)

+18 $H_2O$ . As the trithio compound. (Ephraim, B. 1910, 43. 287.)

**Calcium —.**

Very easily decomposed. (Kubierschky.)

**Sodium —,  $Na_3PS_2O_4 + 11H_2O$ .**

Very sol. in  $H_2O$ . (Kubierschky, J. pr. (2) 31. 93.)

**Trithioorthophosphoric acid.****Ammonium trithioorthophosphate,  $(NH_4)_3PS_3O + H_2O$ .**

(Stock, B. 1906, 39. 1985.)

**Barium trithioorthophosphate,  $Ba_2(PS_3O)_2 + 20H_2O$ .**

Decomp. by  $H_2O$  and dil. acids.

Sol. in conc.  $HNO_3$ , with oxidation of the sulphur to  $H_2SO_4$ . (Ephraim, B. 1910, 43. 286.)

**Magnesium —,  $Mg_3(PS_3O)_2 + 20H_2O$ .**

Decomp. by  $H_2O$  and dil. acids. (Ephraim.)

**Thiophosphorous acid.****Ammonium thiophosphite (?),  $(NH_4)_2P_2S_2O_4 + 3H_2O$ .**

Sol. in  $H_2O$ . (Lemoine, C. R. 98. 45.) +6 $H_2O$ .

**Sodium thiophosphite (?),  $Na_4P_2S_2O_4 + 5H_2O = P_2O_5, 2Na_2S + 5H_2O$ .**

Sol. in  $H_2O$ . (Lemoine, C. R. 98. 45.)  
 $Na_4P_2S_2O_4 + 4H_2O = P_2O_5, 3Na_2O, 2H_2S + 2H_2O$ . Sol. in  $H_2O$ . (Lemoine, l. c.)

**Thiophosphoryl triamide,  $PS(NH_2)_3$ .**

Rapidly decomp. by  $H_2O$ . Scarcely sol. in alcohol, ether, or  $CS_2$ . (Chevriér, C. R. 66. 748.)

**Metathiophosphoryl bromide,  $PS_2Br$ .**

Decomp. by  $H_2O$ . Insol. in ether. (Michaelis, A. 164. 9.)

**Orthothiophosphoryl bromide,  $PSBr_2$ .**

Slowly decomp. by cold, rapidly by hot  $H_2O$  but volatile with only partial decomp. with steam. Easily sol. in ether,  $CS_2$ ,  $PCl_3$ ,  $PBr_3$ . Decomp. by cold alcohol. Forms hydrate  $PSBr_2 + H_2O$ . (Michaelis, A. 164. 9.)

**Pyrothiophosphoryl bromide,  $P_2S_2Br_4$ .**

Decomp. by  $H_2O$  and alcohol. Sol. in  $CS_2$  and ether. (Michaelis.)

**Thiophosphoryl phosphorus bromide,  $PSBr_3, PBr_4$ .**

Decomp. by  $H_2O$  into  $PSBr_2$ . (Michaelis.)

**Thiophosphoryl dibromochloride,  $PSClBr_2$ .**

Decomp. by  $H_2O$  and alkalis.  
Fumes in the air. (Besson, C. R. 1896, 122. 1059.)

**Thiophosphoryl bromodichloride,  $PSCl_2Br$ .**

Decomp. by  $H_2O$  and alkalis. Reacts violently with  $HNO_3$ . (Besson, C. R. 1896, 120. 1058.)

**Thiophosphoryl chloride,  $PSCl_3$ .**

Very slowly decomp. by  $H_2O$ , and may be distilled with steam without much decomp. Decomp. by alcohol. Miscible with  $CS_2$ . (Baudrimont, J. pr. 87. 301.)

Sol. in  $CCl_4$  and  $C_6H_6$ . (Oddo, Gazz. ch. it. 1899, 29. (2) 318.)

Thiophosphoryl pentachloride,  $\text{PS}_2\text{Cl}_5$  (?).

Decomp. by  $\text{H}_2\text{O}$ . Sol. in alkalis with residue of S. Attacked violently by  $\text{HNO}_3$ , alcohol, ether, oil of turpentine. Miscible with  $\text{CS}_2$ . (Gladstone, Chem. Soc. 3. 5.)

Thiophosphoryl fluoride,  $\text{PSF}_3$ .

Slowly sol. in  $\text{H}_2\text{O}$  with decomp. Sl. sol. in ether.

Insol. in  $\text{H}_2\text{SO}_4$ ,  $\text{CS}_2$ , or benzene. (Thorpe and Rodger, Chem. Soc. 55. 306.)

More sol. in  $\text{KOH}$  or  $\text{NaOH} + \text{Aq}$  than in  $\text{H}_2\text{O}$ .

Thiophosphoryl iodide,  $\text{PSI}_3$ .

Very sol. in  $\text{CS}_2$ . Unstable when heated. Fumes in the air. (Besson, C. R. 1896, 122. 1201.)

Thiosulphuric (formerly Hyposulphurous) acid,  $\text{H}_2\text{S}_2\text{O}_3$ .

Known only in aqueous solution, which is extremely unstable, and decomposes very quickly after its formation. The time before decomposition is exactly proportional to the ratio of the weight of  $\text{H}_2\text{O}$  to the weight of  $\text{H}_2\text{S}_2\text{O}_3$  present; i. e., if one solution contains twice as much  $\text{H}_2\text{O}$  for a given amt. of  $\text{H}_2\text{S}_2\text{O}_3$  as a second solution, the first solution will decompose in twice the length of time. The length of time is about 20 secs. at  $10^\circ$ , and 2 secs. at  $50^\circ$  for conc. solutions, to 120 secs. at  $10^\circ$  and 12 secs. at  $50^\circ$  for very dilute solutions. (See Landolt (B. 18. 2958) for further figures; also Winkelmann (B. 18. 406).)

Thiosulphates.

The thiosulphates of the alkalis and of Ca and Sr are easily sol. in  $\text{H}_2\text{O}$ ; Ba and Sr salts are sl. sol. and the other salts insol. The salts of the metals dissolve in alkali thiosulphates + Aq. All are insol. in alcohol.

Double Salts of Thiosulphuric acid. It is impossible to determine whether substances of this class are true chem. individuals. Many described by Svensson and others are doubtless isomorphic mixtures, whose comp. depends on the temp. and conc. of the solution in which pptd. (Rosenheim, Z. anorg. 1900, 25. 72.)

Ammonium thiosulphate,  $(\text{NH}_4)_2\text{S}_2\text{O}_3$ .

Very deliquescent. Very sol. in  $\text{H}_2\text{O}$ . Not deliquescent. (Fock and Klüss, B. 1889, 22. 3099.)

Crystallises with  $\frac{1}{2}\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 56. 298.) Anhydrous. (Arppe, A. 96. 113.)

Insol. in alcohol. (Arppe.)

Sol. in acetone. (Eidmann, C. C. 1899, II. 1014.)

Difficultly sol. in acetone. (Naumann, B. 1904, 37. 4328.)

Ammonium cadmium thiosulphate,  $3(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{CdS}_2\text{O}_3 + 3\text{H}_2\text{O}$

Can be recryst. from warm  $\text{H}_2\text{O}$  (Fock and Klüss, B. 23. 1758.)

+  $\text{H}_2\text{O}$  (F. and K.)  
 $(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{CdS}_2\text{O}_3$  (F. and K.)

Ammonium cuprous thiosulphate,

$(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$

Less sol. in  $\text{H}_2\text{O}$  than  $2(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ . (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 91.)

$2(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3 + 1\frac{1}{2}\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Rosenheim and Steinhäuser.)

Ammonium cuprous thiosulphate cuprous iodide,  $7(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Cu}_2\text{S}_2\text{O}_3, 8\text{CuI} + 4\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Brun, C. R. 1892, 114. 668.) Could not be obtained (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 107.)

Ammonium cuprous sodium thiosulphate ammonia,  $3\text{Cu}_2\text{S}_2\text{O}_3, 4\text{Na}_2\text{S}_2\text{O}_3, (\text{NH}_4)_2\text{S}_2\text{O}_3, 6\text{NH}_3$ .

Ppt. When dry is fairly stable in the air. Partially decomp. by  $\text{H}_2\text{O}$ .

Sol. in dil.  $\text{H}_2\text{SO}_4$  or acetic acid. (Shunn, J. Am. Chem. Soc. 1904, 26. 948.)

Ammonium lead thiosulphate,  $2(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{PbS}_2\text{O}_3 + 3\text{H}_2\text{O}$ .

Easily and completely sol. in cold  $\text{H}_2\text{O}$ , but deposits  $\text{PbS}_2\text{O}_3$  by standing or warming. (Rammelsberg, Pogg. 56. 312.)

Ammonium magnesium thiosulphate,  $(\text{NH}_4)_2\text{Mg}(\text{S}_2\text{O}_3)_2 + 6\text{H}_2\text{O}$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Kessler, Pogg. 74. 283.)

Not deliquescent. (Fock and Klüss, B. 23. 540.)

Ammonium mercuric thiosulphate,  $4(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{HgS}_2\text{O}_3 + 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ , from which it is precipitated by alcohol. Extremely easily decomp. (Rammelsberg, Pogg. 56. 318.)

Ammonium potassium thiosulphate,  $\text{NH}_4\text{KS}_2\text{O}_3$ .

Sol. in  $\text{H}_2\text{O}$  (Fock and Klüss, B. 23. 536.)

Ammonium silver thiosulphate,  $2(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Somewhat sol. in alcohol. (Herschel, Edinb. Phil. J. 1. 398.)

$(\text{NH}_4)_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + x\text{H}_2\text{O}$  Nearly insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , from which it is reprecip. by an acid. (Herschel.)

**Ammonium zinc thiosulphate,**  
 $(\text{NH}_4)_2\text{S}_2\text{O}_3 \cdot \text{ZnS}_2\text{O}_3 + \text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$ . (Rosenheim and Davidsohn, Z anorg. 1904, 41. 238)

**Ammonium thiosulphate ammonium cuprous bromide,**  $\text{CuBr} \cdot \text{NH}_4\text{Br} \cdot 4(\text{NH}_4)_2\text{S}_2\text{O}_3$ .

Sol in  $\text{H}_2\text{O}$  (Rosenheim, Z anorg. 1900, 25. 107.)

The double salts of ammonium thiosulphate with silver and copper haloids are true chemical compounds and may be recryst. from  $\text{H}_2\text{O}$  without decomp. (Rosenheim, Z. anorg. 1900, 25. 100.)

**Ammonium thiosulphate ammonium silver bromide,**  $\text{AgBr} \cdot \text{NH}_4\text{Br} \cdot 4(\text{NH}_4)_2\text{S}_2\text{O}_3$ .

Sol in  $\text{H}_2\text{O}$ . (Rosenheim)

**Ammonium thiosulphate ammonium cuprous chloride,**  $\text{CuCl} \cdot \text{NH}_4\text{Cl} \cdot 4(\text{NH}_4)_2\text{S}_2\text{O}_3$ .

Sol in  $\text{H}_2\text{O}$  and in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rosenheim.)

**Ammonium thiosulphate ammonium silver chloride,**  $\text{AgCl} \cdot \text{NH}_4\text{Cl} \cdot 4(\text{NH}_4)_2\text{S}_2\text{O}_3$ .

Sol. in cold  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$ .

Decomp. by boiling with  $\text{H}_2\text{O}$  and by dil. acids (Rosenheim)

**Ammonium thiosulphate ammonium cuprous cyanide.**

Composition not constant (Rosenheim.)

**Ammonium thiosulphate ammonium silver cyanide.**

Composition not constant (Rosenheim)

**Ammonium thiosulphate ammonium cuprous iodide,**  $\text{CuI} \cdot \text{NH}_4\text{I} \cdot 4(\text{NH}_4)_2\text{S}_2\text{O}_3$ .

Sol in  $\text{H}_2\text{O}$ . (Rosenheim.)

**Ammonium thiosulphate ammonium cuprous iodide,**  $4(\text{NH}_4)_2\text{S}_2\text{O}_3 \cdot \text{NH}_4\text{I} \cdot \text{CuI}$ .

Very sol. in  $\text{H}_2\text{O}$  Decomp. by boiling. (Brun, C R. 1892, 114. 668.)

**Ammonium thiosulphate ammonium silver iodide,**  $\text{AgI} \cdot \text{NH}_4\text{I} \cdot 4(\text{NH}_4)_2\text{S}_2\text{O}_3$ .

Sol. in  $\text{H}_2\text{O}$  (Rosenheim.)

**Ammonium thiosulphate ammonium cuprous sulphocyanide,**  $\text{CuSCN} \cdot \text{NH}_4\text{SCN} \cdot 4(\text{NH}_4)_2\text{S}_2\text{O}_3$ .

Sol. in  $\text{H}_2\text{O}$  (Rosenheim.)

**Ammonium thiosulphate ammonium silver sulphocyanide,**  $\text{AgSCN} \cdot \text{NH}_4\text{SCN} \cdot 4(\text{NH}_4)_2\text{S}_2\text{O}_3$ .

Sol. in  $\text{H}_2\text{O}$  (Rosenheim.)

**Ammonium thiosulphate cuprous iodide,**  
 $(\text{NH}_4)_2\text{S}_2\text{O}_3 \cdot 2\text{CuI} + \text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ . (Brun, C. R. 1892, 114. 668.)

Could not be obtained (Rosenheim and Stenhausser)

**Barium thiosulphate,**  $\text{BaS}_2\text{O}_3 + \text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Rose, Pogg. 21. 437.)

Insol in alcohol.

1 pt cannot be dissolved in 2000 pts.  $\text{H}_2\text{O}$ .

Sol. in dil  $\text{HCl} + \text{Aq}$  without decomposition.

(Herschel, 1819.)

Pptd from  $\text{BaS}_2\text{O}_3 + \text{Aq}$  by dil. alcohol. (Sobrero and Selmi, A. ch. (3) 28. 211.)

Insol in acetone (Naumann, B. 1904, 47. 4329)

**Barium bismuth thiosulphate,**  $\text{Ba}_4\text{Bi}(\text{S}_2\text{O}_3)_4$ .

Sol. in  $\text{H}_2\text{O}$  with decomp. (Hauser, Z. anorg. 1903, 35. 9)

**Barium cadmium thiosulphate,**  $2\text{BaS}_2\text{O}_3 \cdot \text{CdS}_2\text{O}_3 + 8\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Fock and Klüss, B. 23. 1761.)

$3\text{BaS}_2\text{O}_3 \cdot \text{CdS}_2\text{O}_3 + 8\text{H}_2\text{O}$  Sl. sol. in  $\text{H}_2\text{O}$ .

**Barium cuprous thiosulphate.**

Easily sol. in hot, difficultly sol. in cold  $\text{H}_2\text{O}$  (Cohen, Chem. Soc. 51. 38)

$2\text{BaS}_2\text{O}_3 \cdot \text{Cu}_2\text{S}_2\text{O}_3 + 7\text{H}_2\text{O}$  Nearly insol. in  $\text{H}_2\text{O}$  (Vortmann, M. 9. 165)

**Barium gold thiosulphate.**

Sl. sol. in  $\text{H}_2\text{O}$ . Insol in alcohol. (Fordos and Gélus.)

**Barium lead thiosulphate.**

Difficultly sol in  $\text{H}_2\text{O}$ . (Rammelsberg, Pogg. 66. 313)

**Barium thiosulphate chloride,**  $\text{BaS}_2\text{O}_3 \cdot \text{BaCl}_2 + 2\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Fock and Klüss, B. 23. 3001.)

**Bismuth caesium thiosulphate,**  $\text{Cs}_3\text{Bi}(\text{S}_2\text{O}_3)_3$ .

Sol. in  $\text{H}_2\text{O}$ .

Insol. in alcohol. (Hauser, Z. anorg. 1903, 35. 8)

**Bismuth potassium thiosulphate,**  $\text{K}_3\text{Bi}(\text{S}_2\text{O}_3)_3 \cdot \frac{1}{2}\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$ .

100 cc of the sat. solution contain 3.5 g. at  $2^\circ$ , 7.0 g. at  $18^\circ$ . At  $18^\circ$  the solution decomposes.

More sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  than in pure  $\text{H}_2\text{O}$

Insol. in alcohol (Hauser, Z. anorg. 1903, 35. 5)

$+ \text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ . Insol in alcohol. (Carnot, C R. 83. 390.)

**Bismuth rubidium thiosulphate,**Sol. in  $\text{H}_2\text{O}$ .

Insol. in acid alcohol (Hauser, Z. anorg. 1903, 35. 7.)  
 +  $\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Hauser, Z. anorg. 1903, 35. 8.)

**Bismuth sodium thiosulphate,**

Very sol. in  $\text{H}_2\text{O}$ , and also in alcohol. (Carnot, C. R. 83. 338.)

$\text{Na}_2\text{Bi}(\text{S}_2\text{O}_3)_2$ . Decomp. by  $\text{H}_2\text{O}$ . Easily sol. in 50% alcohol. (Hauser, Z. anorg. 1903, 35. 3.)

**Cadmium thiosulphate,  $\text{CdS}_2\text{O}_3 + 2\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Vortmann and Padberg, B. 22. 2638)

**Cadmium potassium thiosulphate,  $3\text{CdS}_2\text{O}_3, 5\text{K}_2\text{S}_2\text{O}_8$ .**

Cannot be recryst without decomp (Fock and Klüss, B. 23. 1753.)

$\text{CdS}_2\text{O}_3, 3\text{K}_2\text{S}_2\text{O}_8 + 2\text{H}_2\text{O}$ . Can be crystallised from  $\text{H}_2\text{O}$  without decomp (F. and K.)

**Cadmium sodium thiosulphate,  $\text{CdS}_2\text{O}_3, 3\text{Na}_2\text{S}_2\text{O}_8 + 16\text{H}_2\text{O}$ .**

Not deliquescent. Sol. in  $\text{H}_2\text{O}$ . (Jochem, C. C. 1885, 642)

+  $9\text{H}_2\text{O}$ . (Vortmann and Padberg, B. 22. 2639.)

+  $3\text{H}_2\text{O}$ . Deliquescent (Fock and Klüss, B. 23. 1757)

$2\text{CdS}_2\text{O}_3, \text{Na}_2\text{S}_2\text{O}_8 + 7\text{H}_2\text{O}$  (V. and P.)  
 $3\text{CdS}_2\text{O}_3, \text{Na}_2\text{S}_2\text{O}_8 + 9\text{H}_2\text{O}$  (V. and P.)

**Cadmium strontium thiosulphate,  $\text{CdS}_2\text{O}_3, 3\text{SrS}_2\text{O}_8 + 10\text{H}_2\text{O}$ .**

(Fock and Klüss, B. 23. 1763)

**Cæsium thiosulphate,  $\text{Cs}_2\text{S}_2\text{O}_3$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Chabré, C. R. 1901, 133. 297.)

+  $2\text{H}_2\text{O}$ . Very hygroscopic. (J. Meyer, B. 1907, 40. 1360.)

**Cæsium cuprous thiosulphate,  $\text{Cs}_2\text{S}_2\text{O}_3$ ,**

Easily sol. in  $\text{H}_2\text{O}$  with decomp. (J. Meyer, B. 1907, 40. 1361.)

**Cæsium lead thiosulphate,  $\text{Cs}_2\text{S}_2\text{O}_3, \text{PbS}_2\text{O}_3 + 2\text{H}_2\text{O}$ .**

Not hygroscopic.

$2\text{Cs}_2\text{S}_2\text{O}_3, \text{PbS}_2\text{O}_3 + 3\text{H}_2\text{O}$ . Hygroscopic. (J. Meyer.)

**Cæsium magnesium thiosulphate,  $\text{Cs}_2\text{S}_2\text{O}_3, \text{MgS}_2\text{O}_3 + 6\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ . (Meyer.)

**Cæsium silver thiosulphate,  $2\text{Cs}_2\text{S}_2\text{O}_3,$** 

Not hygroscopic

Decomp by hot  $\text{H}_2\text{O}$  (J. Meyer)

**Calcium thiosulphate,  $\text{CaS}_2\text{O}_3 + 6\text{H}_2\text{O}$ .**

Sol. in 1 pt  $\text{H}_2\text{O}$  at  $3^\circ$ .

Aqueous solution saturated at  $10^\circ$  has sp. gr. 1.300. Solution with sp. gr. 1.11437 at  $15.5^\circ$  contains 0.2081 of its weight in  $\text{CaS}_2\text{O}_3$ .

Decomp on heating. Insol. in alcohol (sp. gr. 0.8234). (Herschel, A. ch. 14. 355.)  
 100 g. sat. solution contains 29.4 g.  $\text{CaS}_2\text{O}_3$  at  $9^\circ$ , and 34.7 g.  $\text{CaS}_2\text{O}_3$  at  $25^\circ$ . (Kremann and Rodemund, M. 1914, 35. 1065.)

**Solubility of  $\text{CaS}_2\text{O}_3 + \text{Na}_2\text{SO}_3$  in  $\text{H}_2\text{O}$** 

$^\circ$	$\text{Na}_2\text{S}_2\text{O}_3$	$\text{CaS}_2\text{O}_3$	Solid phase
9	0	29.4	$\text{CaS}_2\text{O}_3, 6\text{H}_2\text{O}$
	11.04	22.64	" + $\text{Na}_2\text{S}_2\text{O}_3, 5\text{H}_2\text{O}$
	25.21	15.84	
	31.01	7.70	
25	0	34.7	$\text{CaS}_2\text{O}_3, 6\text{H}_2\text{O}$
	9.24	29.69	"
	15.67	21.41	
	18.34	25.18	
	28.24	21.14	" + $\text{Na}_2\text{S}_2\text{O}_3, 5\text{H}_2\text{O}$
	30.19	20.33	
	31.24	18.43	
	35.04	11.61	

(Kremann and Rodemund, M. 1914, 35. 1065.)

**Calcium lead thiosulphate,  $2\text{CaS}_2\text{O}_3, \text{PbS}_2\text{O}_3 + 4\text{H}_2\text{O}$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Rammelsberg.)

**Calcium potassium thiosulphate,  $\text{CaS}_2\text{O}_3, 3\text{K}_2\text{S}_2\text{O}_8 + 5\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$  (Fock and Klüss, B. 24. 3016.)

**Calcium silver thiosulphate,  $2\text{CaS}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + x\text{H}_2\text{O}$ .**

Easily sol. in  $\text{H}_2\text{O}$ ; less sol. in alcohol.

$\text{CaS}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + x\text{H}_2\text{O}$  Sl. sol. in  $\text{H}_2\text{O}$ , abundantly in  $\text{NH}_4\text{OH} + \text{Aq}$  (Herschel, 1819.)

**Calcium sodium thiosulphate nitrate,**

(Kremann and Rodemund, M. 1914, 35. 1065.)

**Cobaltous thiosulphate,  $\text{CoS}_2\text{O}_3 + 6\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg.)

**Cobaltous sodium thiosulphate,  $2\text{CoS}_2\text{O}_3, 5\text{Na}_2\text{S}_2\text{O}_8 + 25\text{H}_2\text{O}$ .**

Efflorescent. Sol. in  $\text{H}_2\text{O}$ . (Jochem.)

Could not be obtained by Vortmann and Padberg.

$\text{CoS}_2\text{O}_3$ ,  $3\text{Na}_2\text{S}_2\text{O}_3 + 15\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Vortmann and Padberg, B. 22. 2641)

**Cuprous thiosulphate**,  $\text{Cu}_2\text{O}$ ,  $3\text{S}_2\text{O}_3 + 2\text{H}_2\text{O} = \text{Cu}_2\text{H}_4(\text{S}_2\text{O}_3)_2$ .

Sl. sol. in  $\text{H}_2\text{O}$ . Abundantly sol. in  $\text{Na}_2\text{S}_2\text{O}_3$  + Aq.,  $\text{NH}_4\text{Cl}$  + Aq.,  $\text{NH}_4\text{OH}$  + Aq., or  $(\text{NH}_4)_2\text{CO}_3$  + Aq. Sol. in  $\text{HCl}$  or  $\text{HNO}_3$  + Aq. (v. Hauer, W. A. B. 13. 443)

**Cuprous hydrazine thiosulphate**,  $\text{Cu}_2\text{S}_2\text{O}_3$ ,  $(\text{N}_2\text{H}_4)_2\text{H}_4\text{S}_2\text{O}_3 + \frac{1}{2}\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{NH}_4\text{OH}$  + Aq. and in dil. acids. (Ferrattini, C. C. 1912, I. 1281.)

**Cupric lead thiosulphate**,  $\text{Pb}(\text{CuS}_2\text{O}_3)_2 + 3\text{H}_2\text{O}$ . (?)

Very sol. in  $\text{H}_2\text{O}$  and quickly decomp. (Gerard, C. C. 1904, I. 253)

**Cuprous mercurous thiosulphate**,  $5\text{Cu}_2\text{S}_2\text{O}_3$ ,  $3\text{Hg}_2\text{S}_2\text{O}_3$ .

Insol. or sl. sol. in cold, decomp. by boiling  $\text{H}_2\text{O}$ .  $\text{HNO}_3$  + Aq. dissolves out Cu. (Rammelsberg, Pogg. 56. 319)

**Cuprous potassium thiosulphate**,  $\text{Cu}_2\text{S}_2\text{O}_3$ ,  $\text{K}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; decomp. on heating with pptn. of  $\text{CuS}$ . Easily sol. in  $\text{K}_2\text{S}_2\text{O}_3$  + Aq. (Rammelsberg, Pogg. 56. 321.)

$\text{Cu}_2\text{S}_2\text{O}_3$ ,  $2\text{K}_2\text{S}_2\text{O}_3$ . Very sol. in cold  $\text{H}_2\text{O}$ ; insol. in  $\text{K}_2\text{S}_2\text{O}_3$  + Aq. (Cohen, Chem. Soc. 51. 39)

+  $3\text{H}_2\text{O}$ . Scarcely sol. in cold, sol. with sl. decomp. in hot  $\text{H}_2\text{O}$ . Sol. in  $\text{HCl}$  + Aq. with evolution of  $\text{SO}_2$ .

$\text{Cu}_2\text{S}_2\text{O}_3$ ,  $3\text{K}_2\text{S}_2\text{O}_3 + 3\text{H}_2\text{O}$  More sol. in  $\text{H}_2\text{O}$  than  $\text{Cu}_2\text{S}_2\text{O}_3$ ,  $\text{K}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$  Solution is not decomp. by boiling. Sol. in excess of  $\text{NH}_4\text{OH}$  + Aq. (Rammelsberg.)

**Cuprous rubidium thiosulphate**,  $\text{Rb}_2\text{S}_2\text{O}_3$ ,  $\text{Cu}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$ .

Ppt. (J. Meyer, B. 1907, 40. 1357)  $2\text{Rb}_2\text{S}_2\text{O}_3$ ,  $\text{Cu}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$ . Ppt. (J. Meyer.)

$3\text{Rb}_2\text{S}_2\text{O}_3$ ,  $\text{Cu}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$ . Ppt. (J. Meyer.)

**Cuprous silver sodium thiosulphate ammonia**,  $\text{Cu}_2\text{S}_2\text{O}_3$ ,  $2\text{Ag}_2\text{S}_2\text{O}_3$ ,  $5\text{Na}_2\text{S}_2\text{O}_3$ ,  $6\text{NH}_3$ .

Ppt. Becomes dark when exposed to light. Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$  + Aq. (Shunn, J. Am. Chem. Soc. 1904, 26. 949.)

**Cuprous sodium thiosulphate**,  $2\text{Cu}_2\text{S}_2\text{O}_3$ ,  $7\text{Na}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$ .

Ppt. from aqueous solution by alcohol. (Jochem, C. C. 1885. 642.)

+  $12\text{H}_2\text{O}$ . Sol. in very dil.  $\text{HCl}$  + Aq. (Jochem)

$\text{Cu}_2\text{S}_2\text{O}_3$ ,  $3\text{Na}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ , insol. in alcohol. (Rammelsberg.)

+  $6\text{H}_2\text{O}$  (Jochem)

$3\text{Cu}_2\text{S}_2\text{O}_3$ ,  $2\text{Na}_2\text{S}_2\text{O}_3 + 8\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{C}$  (Vortmann)

+  $5\text{H}_2\text{O}$ . (Lenz, A. 40. 99.) Formula according to Jochem is—

$5\text{Cu}_2\text{S}_2\text{O}_3$ ,  $4\text{Na}_2\text{S}_2\text{O}_3 + 8\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  or alcohol. Sol. in  $\text{HCl}$  + Aq. without evolution of  $\text{SO}_2$ , also in dil.  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$  + Aq. Sol. in  $\text{NH}_4\text{OH}$  + Aq. (Jochem.)

+  $6\text{H}_2\text{O}$ . As above. (Jochem.)

$\text{Cu}_2\text{S}_2\text{O}_3$ ,  $\text{Na}_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{Na}_2\text{S}_2\text{O}_3$  + Aq. (Russell, Ch. Ztg. 9. 233.)

+  $2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  and alcohol

Decomp. by dil. acids. (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 84.)

+  $2\frac{1}{2}\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Pptd. by alcohol. (Bhaduri, Z. anorg. 1898, 17. 1.)

+  $2\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Vortmann, M. 1883, 9. 188.)

$3\text{Cu}_2\text{S}_2\text{O}_3$ ,  $2\text{Na}_2\text{S}_2\text{O}_3$ . (Gerard, C. C. 1904, I. 253.)

+  $5\text{H}_2\text{O}$ . Sol. in 352 pts.  $\text{H}_2\text{O}$ . (Russell, Ch. Z. 1885, 9. 223)

100 cc. 5%  $\text{Na}_2\text{S}_2\text{O}_3$  + Aq. dissolve 12.28 g.

" " 7.5% " " 17.46 g.

" " 10% " " 22.54 g.

(Russell, Ch. Z. 1885, 9. 223.)

$4\text{Cu}_2\text{S}_2\text{O}_3$ ,  $8\text{Na}_2\text{S}_2\text{O}_3 + 6\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  and alcohol.

Decomp. by dil. acids (Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 84.)

+  $6\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Pptd. by alcohol. (Bhaduri, Z. anorg. 1898, 17. 1.)

$7\text{Cu}_2\text{S}_2\text{O}_3$ ,  $5\text{Na}_2\text{S}_2\text{O}_3 + 16\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  and by alcohol (Bhaduri, Z. anorg. 1898, 17. 1.)

It is impossible to determine whether any of these compds. are complex or double salts.

As a class they are not easily sol. and decomp. in solution. They may therefore be mixtures

whose comp. depended upon the temp. and conc. of the solution in which they were pptd. (Rosenheim, Z. anorg. 1900, 25. 81)

**Cuprocupric sodium thiosulphate ammonia**,  $\text{Cu}_2\text{S}_2\text{O}_3$ ,  $\text{CuS}_2\text{O}_3$ ,  $2\text{Na}_2\text{S}_2\text{O}_3$ ,  $4\text{NH}_3$ .

Insol. in, but decomp. by hot  $\text{H}_2\text{O}$ . Sol. in  $\text{HC}_2\text{H}_3\text{O}_2$  + Aq. Sol. in  $\text{NH}_4\text{OH}$  + Aq. or  $\text{Na}_2\text{S}_2\text{O}_3$  + Aq. (Schutte, C. R. 42. 1267)

**Cuprous sodium thiosulphate cuprous chloride**,  $\text{Cu}_2\text{S}_2\text{O}_3$ ,  $2\text{Na}_2\text{S}_2\text{O}_3$ ,  $2\text{CuCl}$ .

(Rosenheim and Steinhäuser, Z. anorg. 1900, 25. 86.)

**Cupric sodium thiosulphate cupric sulphide**,  $\text{Cu}_2\text{S}_2\text{O}_3$ ,  $\text{Na}_2\text{S}_2\text{O}_3$ ,  $\text{CuS} + 4\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ ; easily sol. in  $\text{Na}_2\text{S}_2\text{O}_3$  + Aq. and  $\text{NH}_4\text{OH}$  + Aq; insol. in alcohol. (Lenz, A. 40. 99.)

$\text{Cu}_2\text{S}_2\text{O}_3$ ,  $\text{Na}_2\text{S}_2\text{O}_3$ ,  $2\text{CuS}$  Sol. in  $\text{H}_2\text{O}$  or dil.  $\text{HCl}$  + Aq. (Kessel, B. 11. 1585.)

**Cuprous sodium thiosulphate sodium chloride**,  $3\text{Cu}_2\text{S}_2\text{O}_3, 2\text{Na}_2\text{S}_2\text{O}_3, 4\text{NaCl}+8\text{H}_2\text{O}$ .

Sol in  $\text{Na}_2\text{S}_2\text{O}_3+\text{Aq}$ . (Siewert, *Zeit ges Naturwiss.* 26. 486.)  
Ppt. (Bhaduri, *Z. anorg.* 1898, 17. 3.)

**Cupric thiosulphate ammonia**,  $\text{CuS}_2\text{O}_3, 4\text{NH}_3$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 21.79 pts at  $25^\circ$  (Pudachies, *Dissert*).

**Cuprocupric thiosulphate ammonium chloride**,  $\text{Cu}_2\text{O}, \text{CuO}, 38\text{S}_2\text{O}_3, 2\text{NH}_4\text{Cl}$ .

Sol in  $\text{HNO}_3+\text{Aq}$  with separation of S (v. Hauer, *W A B* 13. 447.)

**Glucinum thiosulphate**,  $\text{GlS}_2\text{O}_3+11\text{H}_2\text{O}$ .

(Faktor, *C C.* 1901, II 878)

**Gold (aurous) hydrogen thiosulphate**,  $\text{Au}_2\text{S}_2\text{O}_3, 3\text{H}_2\text{S}_2\text{O}_3$ .

Known only in solution. (Fordos and Géhu, *A. ch.* (3) 13. 394.)

**Gold (aurous) sodium thiosulphate**,  $\text{Au}_2\text{S}_2\text{O}_3, 3\text{Na}_2\text{S}_2\text{O}_3+4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; solution decomp. on heating. Insol in absolute, al. sol. in dil. alcohol. (Fordos and Géhu)

$\text{Au}_2\text{S}_2\text{O}_3, 6\text{Na}_2\text{S}_2\text{O}_3+10\text{H}_2\text{O}$  Very sol. in  $\text{H}_2\text{O}$ , but decomp by boiling (Jochum, *C C.* 1885. 642.)

**Iron (ferrous) thiosulphate**,  $\text{FeS}_2\text{O}_3+5\text{H}_2\text{O}$ .

Deliquescent. Very sol in  $\text{H}_2\text{O}$  or alcohol. (Koene, *Pogg.* 63. 241.)

**Iron (ferrous) sodium thiosulphate**,  $\text{FeS}_2\text{O}_3, 3\text{Na}_2\text{S}_2\text{O}_3+8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ , and easily decomp (Vortmann and Padberg, *B* 22. 2641)

**Lead thiosulphate**,  $\text{PbS}_2\text{O}_3$ .

Sol. in 3266 pts.  $\text{H}_2\text{O}$ . Sol in alkali thiosulphates +Aq (Rammelsberg, *Pogg.* 56. 308.)

**Lead lithium thiosulphate**,  $\text{PbS}_2\text{O}_3, \text{Li}_2\text{S}_2\text{O}_3$ .

Very hygroscopic.

Decomp. by  $\text{H}_2\text{O}$  with separation of  $\text{PbS}$ . (J. Meyer, *B.* 1907, 40. 1355)

**Lead potassium thiosulphate**,  $\text{PbS}_2\text{O}_3, 3\text{K}_2\text{S}_2\text{O}_3+2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  with partial separation of  $\text{PbS}_2\text{O}_3$ . Sol. in  $\text{K}_2\text{S}_2\text{O}_3+\text{Aq}$ . (Rammelsberg, *Pogg.* 56. 310.)

**Lead rubidium thiosulphate**,  $2\text{Rb}_2\text{S}_2\text{O}_3, \text{PbS}_2\text{O}_3+2\text{H}_2\text{O}$ .

Difficultly sol. in cold  $\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (J. Meyer, *B.* 1907, 40. 1358.)

**Lead sodium thiosulphate**,  $\text{PbS}_2\text{O}_3, 2\text{Na}_2\text{S}_2\text{O}_3$ .

Sl sol in  $\text{H}_2\text{O}$ . Very easily sol in  $\text{Na}_2\text{C}_2\text{H}_3\text{O}_2$  and  $\text{Na}_2\text{S}_2\text{O}_3+\text{Aq}$  (Lenz, *A* 40. 98)

Insol in alcohol

$2\text{PbS}_2\text{O}_3, 5\text{Na}_2\text{S}_2\text{O}_3+60\text{H}_2\text{O}$ . Easily decomp. (Jochum, *C C.* 1885. 642.)

$\text{PbS}_2\text{O}_3, 3\text{Na}_2\text{S}_2\text{O}_3+12\text{H}_2\text{O}$  Decomp in boiling aqueous solution. (Vortmann and Padberg, *B* 22. 2637)

**Lead strontium thiosulphate**.

Sol. in  $\text{H}_2\text{O}$  Precipitated as a syrup by alcohol. (Rammelsberg.)

**Lithium thiosulphate**,  $\text{Li}_2\text{S}_2\text{O}_3+3\text{H}_2\text{O}$ .

Very deliquescent, and sol in  $\text{H}_2\text{O}$  and absolute alcohol. (Fock and Klüss, *B.* 22. 3099.)

**Lithium silver thiosulphate**,  $\text{Li}_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3+4\text{H}_2\text{O}$ .

Hygroscopic.

Decomp by boiling  $\text{H}_2\text{O}$  and by acids. (Meyer and Eggeling, *B.* 1907, 40. 1355)

**Magnesium thiosulphate**,  $\text{MgS}_2\text{O}_3+6\text{H}_2\text{O}$ .

Very easily sol in  $\text{H}_2\text{O}$  Precipitated from conc. solution by alcohol. (Rammelsberg, *Pogg.* 56. 303.)

**Magnesium potassium thiosulphate**,

$\text{MgK}_2(\text{S}_2\text{O}_3)_2+6\text{H}_2\text{O}$ .

Deliquescent, and sol. in  $\text{H}_2\text{O}$  Less sol. than  $\text{K}_2\text{S}_2\text{O}_3$  (Rammelsberg, *Pogg.* 56. 304.)

Not deliquescent (Fock and Klüss, *B.* 23. 539)

**Magnesium rubidium thiosulphate**,  $\text{MgS}_2\text{O}_3, \text{Rb}_2\text{S}_2\text{O}_3+6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Meyer, *B.* 1907, 40. 1358)

**Manganous thiosulphate**,  $\text{MnS}_2\text{O}_3$ .

Sol in  $\text{H}_2\text{O}$ , from which it is pptd. by alcohol (Rammelsberg, *Pogg.* 56. 305.)

+ $5\text{H}_2\text{O}$ . Decomp very easily. (Vortmann and Padberg, *B.* 322. 2641.)

**Manganous sodium thiosulphate**,  $\text{MnS}_2\text{O}_3, 2\text{Na}_2\text{S}_2\text{O}_3+16\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  Insol or but sl sol in alcohol. (Jochum, *C C.* 1885. 642)

**Mercuric potassium thiosulphate**,  $3\text{HgS}_2\text{O}_3, 5\text{K}_2\text{S}_2\text{O}_3$ .

Sol in 10 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , and  $\frac{1}{2}$  pt at  $100^\circ$  Aqueous solution decomp on standing or heating

Insol. in alcohol (Kirchhoff, *Scher J.* 2. 30.)

$\text{HgS}_2\text{O}_3, 3\text{K}_2\text{S}_2\text{O}_3+3\text{H}_2\text{O}$  (Fock and Klüss, *B.* 24. 1353.)

$\text{HgS}_2\text{O}_3, 5\text{K}_2\text{S}_2\text{O}_3+\text{H}_2\text{O}$ . (F. and K)

**Nickel thiosulphate,  $\text{NiS}_2\text{O}_3 \cdot 6\text{H}_2\text{O}$ .**

Permanent. Sol. in  $\text{H}_2\text{O}$  (Rammelsberg, Pogg. 56. 306)

**Nickel sodium thiosulphate,  $2\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{Na}_2\text{S}_2\text{O}_3 \cdot 25\text{H}_2\text{O}$ .**

Efflorescent Sol in  $\text{H}_2\text{O}$ . (Jochum)

**Nickel thiosulphate ammonia,  $\text{NiS}_2\text{O}_3 \cdot 4\text{NH}_3 \cdot 6\text{H}_2\text{O}$ .**

Decomp. on air Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rammelsberg, Pogg. 56. 306)

$\text{NiS}_2\text{O}_3 \cdot 5\text{NH}_3 + \text{H}_2\text{O}$ . (Ephraim, B 1913, 46. 3108.)

$\text{NiS}_2\text{O}_3 \cdot 6\text{NH}_3 + 3\text{H}_2\text{O}$  (Voitmann and Padberg, B. 22. 2641.)

**Platinous sodium thiosulphate.**

See Plathiosulphate, sodium.

**Potassium thiosulphate,  $\text{K}_2\text{S}_2\text{O}_3 \cdot 1/3, 1, 1\frac{1}{2}\text{H}_2\text{O}$ , and  $2\text{H}_2\text{O}$ .**

Very deliquescent Very sol. in  $\text{H}_2\text{O}$  with absorption of heat Solution is stable on the air. Insol in alcohol

100 pts.  $\text{H}_2\text{O}$  dissolve pts  $\text{K}_2\text{S}_2\text{O}_3$  at  $t^\circ$ .

$t^\circ$	Pts $\text{K}_2\text{S}_2\text{O}_3$	Solid phase
0	96.1	$\text{K}_2\text{S}_2\text{O}_3 \cdot 2\text{H}_2\text{O}$

80	293.1	$\text{K}_2\text{S}_2\text{O}_3$
85	298.5	"
90	312.0	"

(Inohiko Io, Mem Coll Sc Kyoto, 1911, 3. 212.)

Sol. in dil.  $\text{HCl} \cdot \text{H}_2\text{O} + \text{Aq}$  without decomp (Mathieu-Plessy, C. R. 101. 59)

Insol in ethyl acetate (Casasaca, C. R. 80. 821.)

**Potassium silver thiosulphate,  $2\text{K}_2\text{S}_2\text{O}_3 \cdot \text{Ag}_2\text{S}_2\text{O}_3$ .**

Sol. in  $\text{H}_2\text{O}$  (Cohen.)  
 $\text{K}_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3$ . Sl sol. in  $\text{H}_2\text{O}$  (Herschel.)

$3\text{K}_2\text{S}_2\text{O}_3, \text{Ag}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$  Rather sl. sol. in  $\text{H}_2\text{O}$ . (Rosenheim and Sternhäuser, Z. anorg. 1900, 25. 76)

Sl. sol. in  $\text{H}_2\text{O}$ . (Rosenheim.)

**Potassium silver thiosulphate ammonia,  $\text{KAgS}_2\text{O}_3 \cdot 2\text{NH}_3$ .**

Very sl sol in  $\text{H}_2\text{O}$ . Easily sol in hot  $\text{NH}_4\text{OH} + \text{Aq}$ . (Schwieker, B. 22. 1735)  
 $5\text{K}_2\text{S}_2\text{O}_3, 3\text{Ag}_2\text{S}_2\text{O}_3, \text{NH}_3$  Difficultly sol. in  $\text{H}_2\text{O}$  with decomp.

Sol. in hot  $\text{NH}_4\text{OH} + \text{Aq}$  with partial decomp. (J. Meyer, B. 1907, 40. 1359.)

**Potassium sodium thiosulphate.**

(a)  $\text{KNaS}_2\text{O}_3 + 2\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 213.7 pts salt at  $15^\circ$ . (Schwieker, B. 22. 1733)

(b)  $\text{NaKS}_2\text{O}_3 + 2\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 205.3 pts salt at  $15^\circ$  (Schwieker.)

**Potassium strontium thiosulphate,  $\text{K}_2\text{S}_2\text{O}_3 \cdot \text{SrS}_2\text{O}_3 + 5\text{H}_2\text{O}$ .**

Sol in  $\text{H}_2\text{O}$ . (Fock and Kluss, B. 24. 3017.)

**Potassium zinc thiosulphate,  $\text{K}_2\text{S}_2\text{O}_3 \cdot \text{ZnS}_2\text{O}_3 + \text{H}_2\text{O}$ .**

Very sol in  $\text{H}_2\text{O}$ . (Rosenheim and Davidsohn, Z. anorg. 1904, 41. 238)

**Potassium thiosulphate sodium chloride,  $\text{K}_2\text{S}_2\text{O}_3 \cdot \text{NaCl}$ .**

Sol in  $\text{H}_2\text{O}$  (Pape, Pogg. 139. 238.)

**Rubidium thiosulphate,  $\text{Rb}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$ .**

Very hygroscopic; easily sol. in  $\text{H}_2\text{O}$  (J. Meyer, B. 1907, 40. 1356)

**Rubidium silver thiosulphate,  $2\text{Rb}_2\text{S}_2\text{O}_3 \cdot \text{Ag}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$ .**

Ppt Not hygroscopic. Difficultly sol. in cold  $\text{H}_2\text{O}$ . Decomp. by warm  $\text{H}_2\text{O}$ . (J. Meyer.)

**Rubidium silver thiosulphate ammonia,  $\text{Rb}_2\text{S}_2\text{O}_3 \cdot \text{Ag}_2\text{S}_2\text{O}_3 \cdot \text{NH}_3$ .**

Ppt (J. Meyer.)  
 $3\text{Rb}_2\text{S}_2\text{O}_3, 4\text{Ag}_2\text{S}_2\text{O}_3, \text{NH}_3$ . Ppt Decomp. in the air. (J. Meyer.)

**Samarium thiosulphate.**

(Cleve)

**Scandium thiosulphate, basic,  $\text{Sc}(\text{OH})\text{S}_2\text{O}_3$ .**

Ppt. (R. J. Meyer, Z. anorg. 1914, 86. 282.)

**Silver thiosulphate,  $\text{Ag}_2\text{S}_2\text{O}_3$ .**

Sl. sol. in  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH}$  or alkali thiosulphates +  $\text{Aq}$ . (Herschel, Edinb. Phil. J. 1. 26)

**Silver sodium thiosulphate,  $\text{Ag}_2\text{S}_2\text{O}_3 \cdot \text{Na}_2\text{S}_2\text{O}_3 + \text{H}_2\text{O}$ .**

Sl sol. in  $\text{H}_2\text{O}$ . Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , also in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  to form—

$\text{Ag}_2\text{S}_2\text{O}_3, 2\text{Na}_2\text{S}_2\text{O}_3 + 2\text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq}$ , somewhat sol. in al-

cohol, especially if warm or dilute (Lenz, A. 40. 94.)

$\text{Ag}_2\text{S}_2\text{O}_3 \cdot 6\text{Na}_2\text{S}_2\text{O}_3 + 21\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ . (Jochum, C. C. 1885. 642.)

Silver sodium thiosulphate acetylde acetylene,  $2\text{Na}_2\text{S}_2\text{O}_3 \cdot 7\text{Ag}_2\text{S}_2\text{O}_3 \cdot 18\text{Ag}_2\text{C}_2\text{S}_2 \cdot 32\text{C}_2\text{H}_2$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ .

Insol in alkalis. (Bhaduri, Z anorg 1913, 79. 356.)

$7\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{Ag}_2\text{S}_2\text{O}_3 \cdot 86\text{Ag}_2\text{C}_2\text{S}_2 \cdot 13\text{C}_2\text{H}_2$ . (Bhaduri.)

Silver sodium thiosulphate ammonia,

$\text{NaAgS}_2\text{O}_3 \cdot \text{NH}_3$ .

Very unstable (Schwicker, B. 22. 1736.)

Silver strontium thiosulphate,  $\text{Ag}_2\text{S}_2\text{O}_3 \cdot \text{SrS}_2\text{O}_3$ .

Nearly insol. in  $\text{H}_2\text{O}$  Very sl. sol. in  $\text{SrS}_2\text{O}_3 + \text{Aq}$ , easily sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Herschel.)

Sodium thiosulphate,  $\text{Na}_2\text{S}_2\text{O}_3$  and +1, 2 and  $5\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve.

At  $18^\circ$ , 65 pts.  $\text{Na}_2\text{S}_2\text{O}_3$ .

"  $20^\circ$ , 69 " "

"  $25^\circ$ , 75 " "

"  $30^\circ$ , 82 " "

"  $35^\circ$ , 89 " "

"  $40^\circ$ , 98 " "

"  $45^\circ$ , 109 " "

"  $47^\circ$ , 114 " "

(Mulder.)

100 pts.  $\text{H}_2\text{O}$  dissolve at  $0^\circ$ , 47.6 pts.  $\text{Na}_2\text{S}_2\text{O}_3$ ; at  $20^\circ$ , 69.5 pts.; at  $40^\circ$ , 104 pts.; at  $60^\circ$ , 192.3 pts. (Kremers, Pogg. 99. 50.)

100 pts  $\text{H}_2\text{O}$  dissolve 171 pts. cryst. (= 108.9 pts. anhydrous) salt at  $19.5^\circ$  to form a solution of 1.3875 sp. gr. (Schiff, A. 113. 350.)

By supersaturation 100 pts.  $\text{H}_2\text{O}$  may dissolve 217.4 pts.  $\text{Na}_2\text{S}_2\text{O}_3$  at  $0^\circ$ . (Kremers)

(Young and Burke, J. Am. Chem. Soc. 1906, 28. 327.)

The solubility of the hydrates of  $\text{Na}_2\text{S}_2\text{O}_3$  are exceedingly complicated. There are five groups of hydrates, (I) primary, (II) secondary, (III) tertiary, (IV) quaternary, and (V), quintary, and transitions occur between members of the same and different groups.  $\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$  (I) is the commercial thiosulphate. The relations and solubility of the various hydrates is shown in the following table.

Solubility of  $\text{Na}_2\text{S}_2\text{O}_3$  in  $\text{H}_2\text{O}$  at  $t^\circ$ .

I. Primary hydrates.

$t^\circ$	g. $\text{Na}_2\text{S}_2\text{O}_3$ per 100 g.		Solid phase
	Solution	$\text{H}_2\text{O}$

+8H<sub>2</sub>O (Jochum)  
2Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>, Tl<sub>2</sub>S<sub>2</sub>O<sub>3</sub> + 8H<sub>2</sub>O (Vortmann and Padberg, B. 22. 2638)

**Sodium zinc thiosulphate**, Na<sub>2</sub>S<sub>4</sub>O<sub>6</sub>, 2ZnS<sub>2</sub>O<sub>3</sub> + 23H<sub>2</sub>O.

Sol in H<sub>2</sub>O (Jochum, C. C. 1885. 642)  
3Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>, 2ZnS<sub>2</sub>O<sub>3</sub> + 10H<sub>2</sub>O. Deliquescent. (Vortmann and Padberg, B. 22. 2640.)

**Sodium thiosulphate mercuric iodide**, 2Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub>, HgI<sub>2</sub>.

Decomp by H<sub>2</sub>O and by alcohol. (Eder and Uhm, M. 1882, 3. 197)

**Strontium thiosulphate**, SrS<sub>2</sub>O<sub>3</sub> + 5H<sub>2</sub>O.

Permanent. Sol in 6 pts. cold H<sub>2</sub>O (Gay-Lussac), in 4 pts H<sub>2</sub>O at 13°, and 1.75 pts. boiling H<sub>2</sub>O (Herschel, 1819)

1 g is sol. in 3.7 cc. H<sub>2</sub>O at room temp. (Antenrieth, Z. anal. 1898, 37. 293.)

Gradually efflorescent. Insol in alcohol. (Herschel)

**Thalious thiosulphate**.

Ppt. Sl. sol. in cold, easily sol. in hot H<sub>2</sub>O. (Crookes.)

Easily sol. in Na<sub>2</sub>S<sub>2</sub>O<sub>3</sub> + Aq (Jochum.)

**Tin thiosulphate (?)**.

Sol. in H<sub>2</sub>O.

**Uranyl thiosulphate**, (UO<sub>2</sub>)S<sub>2</sub>O<sub>3</sub>.

Ppt. (Faktor, C. C. 1901, II. 878.)

**Zinc thiosulphate**, ZnS<sub>2</sub>O<sub>3</sub> + xH<sub>2</sub>O.

Very deliquescent, and very sol. in H<sub>2</sub>O and alcohol. (Rammelsberg)

**Zinc thiosulphate ammonia**, ZnS<sub>2</sub>O<sub>3</sub>, 2NH<sub>3</sub>.

Decomp by H<sub>2</sub>O. Sol. in NH<sub>4</sub>OH + Aq, from which it is pptd. by alcohol (Rammelsberg, Pogg. 56. 62.)

**Thiothiazyl bromide**, N<sub>2</sub>S<sub>4</sub>Br.

Decomp. H<sub>2</sub>O and alkalis.

Stable in the air (Muthmann, B. 1897, 30. 630.)

**Thiodithiazyl dichloride**, S<sub>2</sub>N<sub>2</sub>Cl<sub>2</sub>.

See Nitrogen sulphochloride.

**Thiothiazyl chloride**, S<sub>2</sub>N<sub>2</sub>Cl.

See Nitrogen sulphochloride.

**Thiothiazyl iodide**, N<sub>2</sub>S<sub>4</sub>I.

Decomp spontaneously in the air. Very unstable. (Muthmann, B. 1897, 30. 631)

**Thiothiazyl nitrate,  $S_4N_4NO_3$ .**

Sol in  $H_2O$  with decomp Sol in  $HNO_3 + Aq.$  (Demargay, C. R. 91. 1066)  
Sol. in cold  $H_2O$  with decomp  
Completely insol in organic solvents, as  $CS_2$ ,  $CHCl_3$ , acetone, and acetic ether. (Muthmann and Seitter, B. 1897, 30. 629.)

**Thiothiazyl sulphate  $(S_4N_4)HSO_4$ .**

Stable on air Sol in  $H_2O$  with decomp (Demargay, C. R. 91 854. 1066.)

**Thiothiazyl sulphocyanide,  $N_4S_4CNS$ .**

Stable in the air.  
Sol in benzene and chloroform. (Muthmann and Seitter, B. 1897, 30. 631.)

**Dithioetetrathiazyl dichloride,  $S_8N_4Cl_2$ .**

See Nitrogen sulphochloride.

**Thorium, Th.**

Not oxidised by boiling  $H_2O$   
Quickly sol (Chydenus, Pogg 119. 43), very slowly sol. by long boiling (Berzelius, Pogg. 16. 385) in  $HNO_3 + Aq.$  Insol. in cold, easily sol. in warm dil.  $H_2SO_4 + Aq.$  Slowly sol. in cold, rapidly in hot  $HCl + Aq.$  Easily oxidised by aqua regia. Insol. in  $KOH + Aq.$  or  $HF + Aq.$   
Sl. sol in dil.  $H_2SO_4 + Aq.$ ; decomp. by conc.  $H_2SO_4$ . Very sl. sol in dil., and less in conc.  $HNO_3 + Aq.$  Easily sol. in conc.  $HCl + Aq.$  and aqua regia. (Nilson, B. 15. 2521.)

**Thorium B.**

Somewhat sol in hot  $H_2O$ , which dissolves 70% in an hour. More rapidly sol. in dil. acids or hot  $KI + Aq.$  Somewhat sol. in organic solvents. Insol. in  $CS_2$  and in methylene iodide (Hogley, Phil. Mag. 1913, (6) 25. 331.)

**Thorium C.**

Somewhat sol in hot  $H_2O$ . More rapidly sol. in hot  $KI + Aq.$  and in dil. acids. More sol. in organic solvents than thorium B. 20% sol. in  $CS_2$  or methylene iodide in 10 minutes (Hogley, Phil. Mag. 1913, (6) 25. 331.)

**Thorium tetraboride,  $ThB_4$ .**

Sol. in cold conc.  $HNO_3$  and  $HCl$  and in hot conc.  $H_2SO_4$ . (Jassonneux, C. R. 1905, 141. 192.)

**Thorium hexaboride,  $ThB_6$ .**

Sol. in hot dil. or conc.  $HNO_3$ ; insol in  $H_2SO_4$ ,  $HCl$ ,  $HF$  and aq. alkalis. (Jassonneux, C. R. 1905, 141. 193.)

**Thorium dibromide,  $ThBr_2$ .**

Sol. in  $H_2O$  with partial decomp (Troost and Ouvrard, A. ch. (6) 17. 227.)

**Thorium tetrabromide,  $ThBr_4$ .**

Sol in  $H_2O$ . (Berzelius.)  
Very hygroscopic, and sol. in  $H_2O$  with partial decomp (Troost and Ouvrard, A. ch. (6) 17. 229.)  
Sl. sol. in organic solvents (Matthews, J. Am. Chem. Soc. 1898, 20. 840.)  
 $+7H_2O$ . Sol. in alcohol. (Rosenheim, B. 1900, 33. 979.)  
 $+8H_2O$ . Very sol. in alcohol and  $H_2O$ . Insol. in chloroform and light petroleum (Lesmsky, Z. anorg. 1897, 15. 82.)

**Thorium tetrabromide ammonia,  $ThBr_4 \cdot 3NH_3$ .**

Insol. in organic solvents. (Matthews, J. Am. Chem. Soc. 1898, 20. 840.)

**Thorium carbide,  $ThC_2$ .**

Almost insol. in conc. acids; decomp. by  $H_2O$  and by dil. acids (Moissan, C. R. 1896, 122. 577.)

**Thorium tetrachloride,  $ThCl_4$ .**

Anhydrous Extremely deliquescent, and sol. in  $H_2O$  with evolution of heat. Sol. in alcohol.  
Sol. in ether (Matthews, J. Am. Chem. Soc. 1898, 20. 824.)  
 $+7H_2O$ . Deliquesces in the air. Very sol. in  $H_2O$  and alcohol. Insol. in ether. (Krüss, Z. anorg. 1897, 14. 368.)  
 $+8H_2O$ . Hygroscopic. Easily sol. in  $H_2O$  and absolute alcohol. Not pptd. from solution in alcohol by ether.  
 $+9H_2O$ . As above (Rosenheim, Z. anorg. 1903, 35. 426.)

**Thorium tetrachloride ammonia,  $ThCl_4 \cdot 6NH_3$ .**

Insol. in ether. Decomp. by  $H_2O$ .  
 $ThCl_4 \cdot 8NH_3$ . Fumes in moist air. Decomp. by  $H_2O$  (Matthews, J. Am. Chem. Soc. 1898, 20. 824.)  
The compds. of  $ThCl_4$  with  $NH_3$  are of the type  $ThCl_4 \cdot nNH_3$ , and may be classified into three groups  
(1)  $n=4, 6, 7, 12, 18$ . Compds. are decomp. by  $H_2O$   
(2)  $n=4, 6, 7$  Compds. are not decomp. by  $H_2O$   
(3)  $n=6, 7, 12, 18$  The first two compds. of this series are identical with the last two of group (2).  
 $ThCl_4 \cdot 4NH_3$  of group (2) is the only one in the whole series stable above  $120^\circ$ . (Chauvenet, C. R. 1910, 151. 387.)

**Thorium fluoride,  $ThF_4 \cdot 4H_2O$ .**

Insol. in  $H_2O$  or  $HF + Aq.$

**Thorium hydride,  $ThH_2$ .**

Decomp. by dil.  $HCl + Aq.$  (Winkler, B. 24. 873.)

**Thorium hydroxide,  $\text{Th}(\text{OH})_4$ .**

Insol in  $\text{H}_2\text{O}$ .

Sol in acids, except oxalic, molybdic, and hydrofluoric acids

Insol in alkali hydroxides, but easily sol in alkali carbonates + Aq. More sol in  $\text{NH}_4\text{OH} + (\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  than in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  alone. (Berzelius.) Not pptd. in presence of tartaric and citric acids (Chydenius, Pogg 119. 43.)

$4\text{ThO}_2, \text{H}_2\text{O}$ . Insol. in water and acids at boiling temp.

**Thorium hydroxybromide,  $\text{Th}(\text{OH})_2\text{Br}_2 + 11\text{H}_2\text{O}$ .**

Sol. in alcohol. (Rosenheim, B 1900, 33. 979.)

**Thorium hydroxychloride;  $(\text{OH})\text{ThCl}_2 + 11\text{H}_2\text{O}$ .**

Sol. in alcohol. (Rosenheim, B. 1900, 33. 978.)

$\text{Th}(\text{OH})_2\text{Cl}_2 + 5\text{H}_2\text{O}$ . Slowly takes up  $\text{H}_2\text{O}$  from the air.

Sol. in  $\text{H}_2\text{O}$  without decomp

Sol in alcohol. Pptd from solution in alcohol by ether (Rosenheim, Z. anorg 1903, 35. 425)

+  $8\text{H}_2\text{O}$ . Hydrosopic, sol. in alcohol (Rosenheim, B 1900, 33. 978)

**Thorium hydroxyiodide,  $\text{Th}(\text{OH})\text{I}_2 + 10\text{H}_2\text{O}$** 

Evolves iodine in the light (Rosenheim, Z. anorg 1903, 35. 430.)

**Thorium iodide.**

Sol. in  $\text{H}_2\text{O}$ .

**Thorium nitride,  $\text{Th}_3\text{N}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Matignon, C. R 1901, 132. 37.)

**Thorium oxide,  $\text{ThO}_2$ .**

When ignited is insol. in  $\text{HCl}$  and  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{H}_2\text{SO}_4$  by heating to boiling and subsequent addition of  $\text{H}_2\text{O}$ . Insol in alkali hydrates or carbonates + Aq

**Thorium metoxide,  $\text{Th}_2\text{O}_3 + \text{H}_2\text{O}$ .**

Sl. sol. in  $\text{HCl}$ . (Locke, Z. anorg 1894, 7. 348.)

+  $2\text{H}_2\text{O}$ . Loses 1  $\text{H}_2\text{O}$  at  $100^\circ$ . Sol in  $\text{H}_2\text{O}$ ; insol. in  $\text{NH}_4\text{OH} + \text{Aq}$  (Locke.)

**Metathorium oxide.**

Sol. in  $\text{H}_2\text{O}$  after having been treated with conc.  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq}$ , even if previously ignited.

$\text{ThO}_2, x\text{Th}(\text{OH})_4$ . Compare  $\text{Th}_2\text{O}_3$ . (Locke) (Stevens, Z. anorg. 1901, 27. 42.)

**Thorium peroxide,  $\text{Th}_2\text{O}_4$ .**

Precipitate. (Cleve, C. R. 100. 605.)

**Thorium oxychloride.**

Decomp. by  $\text{H}_2\text{O}$  into  $\text{ThCl}_4$  and  $\text{ThO}_2$ .

$\text{ThOCl}_2$ . Sol in  $\text{H}_2\text{O}$ .

Insol in abs alcohol (Matignon, A. ch. 1907, (8) 10. 133)

+  $3\text{H}_2\text{O}$ .

+  $5\text{H}_2\text{O}$ . (Matignon, A. ch. 1907, (8) 10. 135)

**Metathorium oxychloride,  $\text{ThO}_2, x\text{ThCl}_4$ .**

Hydrosopic; sol in  $\text{H}_2\text{O}$ ; insol in abs. alcohol. (Stevens, Z. anorg. 1901, 27. 47.)

**Thorium oxyfluoride,  $\text{ThOF}_2$ .**

Insol. in  $\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{SO}_4$  with decomp. (Chauvenet, C. R. 1908, 146. 974)

**Thorium oxysulphide,  $\text{ThS}_2, 2\text{ThO}_2$ .**

(Chydenius)

**Thorium phosphide.**

Insol. in  $\text{H}_2\text{O}$  (Berzelius)

**Thorium silicide,  $\text{ThSi}_2$ .**

Sol. in aq. min. acids; insol. in aq. alkalies

Decomp. by fusion with  $\text{NaOH}$  or  $\text{KOH}$  (Höngschmid, C. R. 1906, 142. 158.)

**Thorium sulphide,  $\text{ThS}_2$ .**

Insol in warm  $\text{H}_2\text{SO}_4$ . Very slightly attacked by  $\text{HNO}_3$  or  $\text{HCl} + \text{Aq}$ . Sol. in hot aqua regia (Berzelius)

**Thoromolybdic acid.****Ammonium thoromolybdate,**

$(\text{NH}_4)_3\text{Th}(\text{Mo}_2\text{O}_7)_2 + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Barbieri, C. A. 1913. 3724.)

$(\text{NH}_4)_2\text{H}_2\text{Th}(\text{Mo}_2\text{O}_7)_2 + 11\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids (Barbieri.)

**Silver thoromolybdate,  $\text{Ag}_3\text{Th}(\text{Mo}_2\text{O}_7)_2$ .**

Insol. in  $\text{H}_2\text{O}$ ; sl. sol. in  $\text{HNO}_3 + \text{Aq}$ , but nearly insol. in presence of  $\text{AgNO}_3$ . (Barbieri)

**Sodium thoromolybdate,  $\text{Na}_3\text{Th}(\text{Mo}_2\text{O}_7)_2 + 15\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Barbieri.)

$\text{Na}_2\text{H}_2\text{Th}(\text{Mo}_2\text{O}_7)_2 + 17\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Barbieri.)

**Thulium, Tm.****Thulium chloride,  $\text{Tm}_2\text{Cl}_3 + 14\text{H}_2\text{O}$ .**

Very sol. in  $\text{H}_2\text{O}$  and in alcohol (James, J. Am. Chem. Soc. 1911, 33. 1342.)

**Thulium hydroxide.**

Easily sol. in dil. acids. (James, J. Am. Chem. Soc. 1911, 33. 1342.)

**Thulium oxide,  $Tm_2O_3$** 

Slowly sol. in hot conc. acids. (James, J. Am. Chem. Soc. 1911, **33**, 1342.)

**Tin, Sn.**

Insol. in  $H_2O$ . Tin is not attacked by distilled  $H_2O$  when air is passed through it for a week.

Slowly sol. in dil. cold  $HCl + \Delta$ , but rapidly sol. if hot and conc. Slowly sol. in hot dil.  $H_2SO_4 + \Delta$ , but decomp. by hot conc.  $H_2SO_4$ .

Readily sol. in cold aqua regia. Attacked violently by conc.  $HNO_3 + \Delta$  with pptn. of  $SnO_2$ . Completely sol. in dil. cold  $HNO_3 + \Delta$  (1 pt.  $HNO_3$ : 1 pt.  $H_2O$ ) at 22°. (Hay, C. N. **22**, 298.) Not attacked by pure conc.  $HNO_3 + \Delta$  of 1.512–1.419 sp. gr., but violently attacked by less conc. acid. Also attacked by most conc. acid if it contains  $NO_2$ . (Millon, A. ch. (3) **6**, 95.)

If Sn is placed in dil.  $HNO_3 + \Delta$  of 1.15 sp. gr. it is sol. dissolved, but soon pptd. again as  $SnO_2$ . If a small amt. of  $NH_4Cl$  is added, the Sn remains permanently in solution,  $HCl + \Delta$  has a similar action. (Ordway, Am. J. Sci. (2) **23**, 220.) Easily sol. in the cold in mixture of 1 vol.  $H_2SO_4$ , 2 vols.  $HNO_3$ , and 3 vols.  $H_2O$ . (Basset, C. N. **53**, 172.)

$HNO_3 + \Delta$  containing less than 12%  $HNO_2$  attacks Sn and forms a stannous salt, which decomposes, giving a turbid solution.  $HNO_3 + \Delta$  (12–45%  $HNO_2$ ) completely dissolves Sn, but solution becomes turbid on standing.  $HNO_3 + \Delta$  containing more than 45%  $HNO_2$  does not dissolve Sn, but forms a white substance, which is sol. in  $H_2O$  if over 70% acid is used, this solution soon becomes turbid. (Montemartini, Gazz. ch. it. **22**, 384.)

Sn dissolves in  $HNO_3 + \Delta$  at low temps. (0–21°). When very dil.  $HNO_3 + \Delta$  (14%  $HNO_2$ ) is used, the amount of stannous salt formed decreases only slightly with increase of temp. while with 30–40% acid it falls to zero at 21°. (Walker, J. Soc. Chem. Ind. 1893, 845.)

In presence of Fe, Cr or Al,  $HNO_3 + \Delta$  acts on Sn to form soluble products, from which conc.  $HNO_3$  ppt. all Sn as metastannic acid. (van Leent, C. C. 1899, I. 101.)

Much more sol. in acids when small quantities of metallic salts have been added. This is most noticeable when  $PtCl_4$  or tartar emetic is added to  $HCl + \Delta$ .  $HCl + \Delta$  with tartar emetic exerts 11 times, and with  $PtCl_4$ , 13 times the action exhibited by pure acid. (Millon, C. R. **21**, 37.)

Sol. in 2N  $HClO_4 + \Delta$ . (Hendrixson, J. Am. Chem. Soc. 1904, **26**, 755.)

Pyrosulphuric acid dissolves Sn on warming. (Divers, Chem. Soc. 1885, **47**, 639.)

Hot telluric acid attacks Sn. (Hutchins, J. Am. Chem. Soc. 1905, **27**, 1183.)

Sn is attacked by 17%  $HN_3 + \Delta$ . (Curtius and Russom, J. pr. 1898, (2) **58**, 299.)

Sol. in a solution of Na in liquid  $NH_3$ .

(Kraus, J. Am. Chem. Soc. 1907, **29**, 1562.)

Insol. in liquid  $NH_3$ . (Core, Am. Ch. J. 1898, **20**, 830.)

Sol. in boiling alum +  $\Delta$  (1 pt. alum to 4 pts.  $H_2O$ ).

Sol. in  $KHSO_4$ ,  $NH_4Cl$  (1.4), and  $K_2C_2H_3O_6 + \Delta$ . Sol. in  $K_2C_2H_3O_6 + \Delta$ , but not attacked by  $MgSO_4$ ,  $K_2SO_4$ ,  $KNO_3$ , or  $Na_2SO_4 + \Delta$ . (Cludius, J. pr. **9**, 161.)

Sol. in alkalis +  $\Delta$ .

Attacked easily by conc.  $NaCl$ ,  $KCl$ , or  $NH_4NO_3 + \Delta$ ; not attacked by  $NH_4Cl + \Delta$ . (Hallock, Am. Ch. J. **6**, 52.)

Sol. in  $Fe(NO_3)_3 + \Delta$  in presence of  $HNO_3$ , +  $\Delta$  in proportion of 1 atom Sn to 1 atom Fe. (Lopez and Storeh, W. A. B. **98**, 2b, 268.)

Solubility in dil. saline solutions

100 cem  $H_2O$  containing 0.5 g.  $NaCl$  or  $KCl$  dissolve 6 mg. Sn from 11.8 sq. cm. in one week when air without  $CO_2$  is passed through the solution, but none at all when the air contains  $CO_2$ .

100 cem  $H_2O$  containing 1 g.  $NH_4Cl$  dissolve 5 mg. Sn under above conditions without  $CO_2$ , and none with  $CO_2$ .

With 1 g.  $MgCl_2$ , 1 mg. Sn was dissolved without  $CO_2$ , and none with  $CO_2$ .

With 1 g.  $K_2SO_4$ , 2 mg. Sn were dissolved without  $CO_2$ , and none with  $CO_2$ .

With 1 g.  $KNO_3$ , 3 mg. Sn were dissolved without  $CO_2$ , and 1 mg. with  $CO_2$ .

With 1 g.  $Na_2CO_3$ , 7 mg. Sn were dissolved without  $CO_2$ .

With 1 g.  $NaOH$ , 220 mg. Sn were dissolved without  $CO_2$ .

$CaO, H_2 + \Delta$  did not dissolve. (Wagner, Dmgl. **221**, 280.)

Not attacked by sugar +  $\Delta$ . (Klein, C. R. **102**, 1170.)

$\frac{1}{2}$  cem oleic acid dissolves 0.0134 g. Sn in 6 days. (Gates, J. phys. Chem. 1911, **15**, 143.)

**Tin antimonide,  $SnSb$ .**

(Stead, J. Soc. Chem. Ind. 1897, **16**, 205.)

**Tin arsenide,  $Sn_3As_2$ .**

(Stead, J. Soc. Chem. Ind. 1897, **16**, 206.)

**Tin (stannous) bromide,  $SnBr_2$** 

Sol. in  $H_2O$

Sol. in pyridine. (Naumann, B. 1904, **37**, 4609.)

Mol. weight determined in pyridine and ethyl sulphide. (Werner, Z. anorg. 1897, **15**, 23.)

**Tin (stannic) bromide, basic,  $SrBr_2OH + 3H_2O$ .**

Sol. in  $H_2O$ . Decomp. in aq. solution when warmed.

Sol. in ether, methyl alcohol, ethyl alcohol, acetone, acetic acid and esters of organic acids. Nearly insol. in benzene, ligroin and  $CHCl_3$ . (Pfeffer, Z. anorg. 1914, **87**, 242.)

**Tin (stannic) bromide,  $\text{SnBr}_4$ .**

Deliquescent. Sol in  $\text{H}_2\text{O}$  without evolution of heat. (Balard)

Decomp. by  $\text{H}_2\text{O}$  much more quickly than  $\text{SnCl}_4$  (Lorenz, Z. anorg. 1895, 9, 378.)

Easily sol. in  $\text{AsBr}_3$ . (Walden, Z. anorg. 1902, 29, 374.);  $\text{PCl}_3$ ,  $\text{PBr}_3$  and  $\text{S}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, 25, 217.)

Sol in acetone. (Naumann, B. 1904, 37, 4328.)

+4 $\text{H}_2\text{O}$  (Preis and Raymann, C. C. 1882, 773)

**Stannic hydrogen bromide,  $\text{SnBr}_4 \cdot 2\text{HBr}$ .**

See Bromostannic acid.

**Stannic bromide with MBr.**

See Bromostannate, M.

**Tin (stannic) bromochloride,  $\text{SnClBr}_3$ .**

Fumes in moist air; decomp by  $\text{H}_2\text{O}$ . (Besson, C. R. 1897, 124, 685)

$\text{SnCl}_2\text{Br}_2$  Fumes in moist air. Decomp by  $\text{H}_2\text{O}$ . (Besson.)

$\text{SnCl}_3\text{Br}$  Fumes in moist air. Decomp. by  $\text{H}_2\text{O}$  (Besson.)

**Tin (stannic) bromotelluride,  $\text{SnBr}_3\text{Te}$ .**

Sol in cold  $\text{H}_2\text{O}$ . Decomp. in aq. solution at 80°.

$\text{SnBr}_3\text{I}$ .

$\text{SnBr}_3\text{I}_2$ . (Lenormand, C. C. 1899, II, 521, J. Pharm. 1899, 10, 114)

**Tin (stannous) chloride,  $\text{SnCl}_2$ , and +2 $\text{H}_2\text{O}$** 

Not deliquescent. 100 pts.  $\text{H}_2\text{O}$  dissolve 83.9 pts.  $\text{SnCl}_2$  at 0° (Engel, A. ch. (6) 17, 347) 100 pts.  $\text{H}_2\text{O}$  dissolve 269.8 pts.  $\text{SnCl}_2$  at 15°, and sat. solution has sp. gr. 1.827 (Michel and Krafft, A. ch. (3) 41, 478.) Sol. in a certain amount of  $\text{H}_2\text{O}$  without decomp., but more  $\text{H}_2\text{O}$  causes pptn. of  $\text{SnO}$ ,  $\text{SnCl}_4$ .

$\text{SnCl}_2 + \text{Aq}$  absorbs O from air

Melts in crystal  $\text{H}_2\text{O}$  at 46°. (Ordway)

Sat. solution boils at 121.7°.

Sp. gr. of  $\text{SnCl}_2 + \text{Aq}$  at 15° containing:

5 10 15 20 %  $\text{SnCl}_2 + 2\text{H}_2\text{O}$ ,  
1.0331 1.0684 1.1050 1.1442

25 30 35 40 %  $\text{SnCl}_2 + 2\text{H}_2\text{O}$ ,  
1.1855 1.2300 1.2779 1.3298

45 50 55 60 %  $\text{SnCl}_2 + 2\text{H}_2\text{O}$ ,  
1.3850 1.4451 1.5106 1.5823

65 70 75 %  $\text{SnCl}_2 + 2\text{H}_2\text{O}$ .  
1.6598 1.7452 1.8399

(Gerlach, Dingl. 186, 131.)

Solubility of  $\text{SnCl}_2$  in  $\text{HCl} + \text{Aq.}$   $\frac{\text{SnCl}_2}{2} =$

$\frac{1}{2}$  molecules  $\text{SnCl}_2$  in milligrammes in 10 cc solution,  $\text{HCl} =$  molecules  $\text{HCl}$  in milligrammes in ditto,  $\text{H}_2\text{O} =$  amt.  $\text{H}_2\text{O}$  present in grammes.

$\frac{\text{SnCl}_2}{2}$	HCl	Sum of equiv	Sp. gr. of solution	$\text{H}_2\text{O}$
74	0	74	1.532	8 33

157	78	235	2.199	4.309

(Engel, A. ch. (6) 17, 347.)

Solubility is thus diminished by  $\text{HCl} + \text{Aq.}$ , while there are less than 8-10 mols.  $\text{HCl}$  for 1 mol.  $\text{SnCl}_2$ . When that limit is passed the solubility rapidly increases. (Engel.)

Sol. in very dil.  $\text{HCl}$  or tartaric acid +  $\text{Aq.}$  Sol. in  $\text{KOH} + \text{Aq.}$  Sol. in conc.  $\text{SnOCl}_2 + \text{Aq.}$  (Gerlach.) Sol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$

Anhydrous  $\text{SnCl}_2$  is partially sol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20, 830.)

Sol. in absolute alcohol. Insol in oil of turpentine.

11 41 pts.  $\text{SnCl}_2$  are sol. in 100 pts. ether at 0°.

11.38 pts.  $\text{SnCl}_2$  are sol. in 100 pts. ether at 16°.

11.38 pts.  $\text{SnCl}_2$  are sol. in 100 pts. ether at 35.5°. (Laszczyński, B. 1894, 27, 2286.)

Anhydrous  $\text{SnCl}_2$  is sol. in ether. (de Jong, Z. anal. 1902, 41, 596.)

1 g. anhydrous  $\text{SnCl}_2$  is sol. in 1.8 g. acetone at 18°. Sp. gr. of sat. solution 18°/4° = 1.6. (Naumann, B. 1904, 37, 4336.)

Sol. in acetone and in methylal. (Eidmann, C. C. 1899, II, 1014)

Anhydrous  $\text{SnCl}_2$  is sol. in methyl acetate to the extent of 15.7% (Schröder and Steiner, J. pr. 1909, (2) 79, 63.)

31.20 pts.  $\text{SnCl}_2 + 2\text{H}_2\text{O}$  are sol. in 100 pts. ethyl acetate at -2°.

35.53 pts.  $\text{SnCl}_2 + 2\text{H}_2\text{O}$  are sol. in 100 pts. ethyl acetate at +22°

73.44 pts.  $\text{SnCl}_2 + 2\text{H}_2\text{O}$  are sol. in 100 pts. ethyl acetate at 82°. (Laszczyński, B. 1894, 27, 2286.)

1 pt. anhydrous  $\text{SnCl}_2$  is sol. in 22.40 pts. ethyl acetate at 18°. D18°/4° = 0.9215. (Naumann, B. 1910, 43, 319.)

Insol in ethyl amine (Shinn, J. phys. Ch. 1907, 11, 538); pyridine (Naumann, B. 1904, 37, 4600); benzonitrile (Naumann, B. 1914, 47, 1369)

Insol. in  $\text{CS}_2$ . (Aretowski, Z. anorg. 1894, 6, 257.)  
Sol in urethane (Castoro, Z. anorg. 1899, 20, 61.)  
Mol weight determined in pyridine and ethyl sulphide. (Werner, Z. anorg. 1897, 15, 22.)

**Tin (stannic) chloride, basic,  $\text{SnCl}_4\text{OH} + 3\text{H}_2\text{O}$ .**

Hygroscopic.

Sol. in  $\text{H}_2\text{O}$ .

Sol in ether, alcohol, acetone, acetic acid.  
Nearly insol. in ligrom and benzene (Pfeuffer Z. anorg. 1914, 87, 241.)

**Tin (stannic) chloride,  $\text{SnCl}_4$ .**

(a) *Ordinary modification.*—Deliquescent. Sol. in  $\text{H}_2\text{O}$ . On diluting  $\text{SnCl}_4 + \text{Aq}$  and boiling,  $\text{SnO}_2$  separates out.  $\text{SnCl}_4 + \text{Aq}$  is not pptd by  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4 + \text{Aq}$ ;  $\text{H}_3\text{PO}_4 + \text{Aq}$  ppts. in a few days, and  $\text{H}_4\text{AsO}_4 + \text{Aq}$  in a short time. No ppt is formed by  $\text{K}_2\text{SO}_4$ ,  $\text{Na}_2\text{SO}_4$ ,  $\text{KCl}$ ,  $\text{NaCl}$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{KNO}_3$ , etc. +  $\text{Aq}$ .

+  $2\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ .  
+  $3\text{H}_2\text{O}$ . Tr. pt.  $83^\circ$ . (Meyerhoffer, Bull. Soc. 1891 (3) 6, 85.)

+  $4\text{H}_2\text{O}$ . Tr. pt.  $63^\circ$ . (Meyerhoffer.)

+  $5\text{H}_2\text{O}$ . Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . Decomp. by alcohol. Sol in  $\text{HCl} + \text{Aq}$ . Tr. pt.  $56^\circ$ . (Meyerhoffer.)

+  $8\text{H}_2\text{O}$ . More deliquescent than the  $5\text{H}_2\text{O}$  salt. Tr. pt.  $19^\circ$ . (Meyerhoffer.)

+  $9\text{H}_2\text{O}$ . (Nollner, Z. Ch. 1866, 45.)

(b) *Metastannic chloride*—Sol. in cold  $H_2O$ ; solution coagulates on boiling. Conc.  $HCl$ +Aq ppts. from  $SnCl_4$ +Aq. When solution does not contain  $HCl$ , the addition of  $HCl$ +Aq causes a ppt., which dissolves in  $H_2O$ ,  $HNO_3$ , and  $H_2SO_4$ +Aq also ppt.  $K_2SO_4$ ,  $Na_2SO_4$ , and  $NaCl$ +Aq produce ppts. insol. in  $H_2O$ , but sol. in  $HCl$ +Aq.  $NH_4Cl$  or  $KCl$ +Aq do not ppt.  $KNO_3$ +Aq ppts. slowly. (Rose)

Tin (stannous) hydrogen chloride,  $SnCl_2$ ,  $HCl$ + $3H_2O$

Decomp. by  $H_2O$ .

Melts at  $-25^\circ$ . (Engel, C R 106, 1398.)

Tin (stannic) hydrogen chloride.

See Chlorostannic acid.

Tin (stannous) hydrazine chloride,  $SnCl_2$ ,  $2N_2H_4$ ,  $HCl$

Very hygroscopic.

Sol. in  $H_2O$  and abs. alcohol (Curtius J. pr 1894, (2) 50, 341)

Tin (stannic) chloride with  $MCl$ .

See Chlorostannate, M.

Tin (stannous) chloride ammonia,  $SnCl_2$ ,  $NH_3$ .

(Berzelius)

$SnCl_2$ ,  $4NH_3$  Ppt. (Naumann. B. 1904, 37, 4326)

Tin (stannic) chloride ammonia,  $SnCl_4$ ,  $2NH_3$ .

Sol. in cold  $H_2O$  without decomp., but decomposes by heating

Tin (stannous) chloride arsenate.

See Arsenate chloride, stannous.

Tin (stannic) chloride cyanhydric acid,  $SnCl_4$ ,  $2HCN$ .

Decomp. on moist air or with  $H_2O$ . (Klein, A. 74, 85)

Tin (stannous) chloride hydrazine,  $SnCl_2$ ,  $2N_2H_4$ .

Decomp. by  $H_2O$ .

Insol. in  $NH_4OH$ +Aq. (Franzen, Z. anorg. 1908, 60, 286.)

Tin (stannic) chloride nitrogen sulphide,  $SnCl_4$ ,  $2N_2S_4$ .

Insol. in most solvents.

Decomp. by warm  $NH_4OH$ +Aq

Decomposes in the air (Wölsblling, Z. anorg. 1908, 57, 284.)

Decomp. by  $H_2O$ . (Davis, Chem. Soc, 1906, 89, 1576)

Tin (stannic) chloride phosphine,  $3SnCl_4$ ,  $2PH_3$ .

Decomp. by  $H_2O$  (Rose, Pogg. 24, 159)

Tin (stannous) chloride potassium stannous sulphate.

See Sulphate, potassium stannous stannous chloride.

Tin (stannic) chloride sulphur tetrachloride,  $SnCl_4$ ,  $2SCl_4$ .

Very hygroscopic

Sol. in  $CHCl_3$ , ligrom, petroleum ether,  $CS_2$ ,  $POCl_3$ ; very sol. in completely dry absolute ether, in benzene, acetic acid ester and in  $SCl_2$  (Ruff, B. 1904, 37, 4517.)

Tin (stannic) chloride sulphide,  $2SnCl_4$ ,  $SnS_2$ .

See Stannic sulphochloride.

Tin (stannic) chlorobromide,  $SnClBr_3$ .

Decomp. by  $H_2O$ . (Ladenburg, A. suppl 8, 60.)

$SnCl_2Br_2$  Decomp. by  $H_2O$ . (Ladenburg)

Tin (stannous) chloriodide,  $SnClI_3$ .

Decomp. immediately by  $H_2O$  (Henry, Phil. Trans. 1845, 363.)

Tin (stannic) chloriodide,  $SrCl_2I_4$ .

Fumes in the air

Decomp. by  $H_2O$  (Lenormand, J. Pharm 1898, 8)

$SnClI_3$  (Lenormand, J. Pharm. 1899, 10, 114)

Tin (stannous) fluoride,  $SnF_2$ .

Easily sol. in  $H_2O$ . (Berzelius, Pogg. 1, 34.)

Tin (stannic) fluoride,  $SnF_4$ .

Very hygroscopic.

Sol. in  $H_2O$ . Slowly decomp. in aq. solution with separation of  $SnO_2$ . (Ruff, B. 1904, 37, 681.)

Tin (stannic) fluoride with MF.

See Fluostannate, M.

Tin (stannous) hydroxide,  $2SnO$ ,  $H_2O$ .

Decomp. to  $SnO$  when boiled with  $H_2O$ . More easily sol. in acids than  $Sn$  or  $SnO$ . Sol. in  $NaOH$ , and  $KOH$ +Aq, even when dil. Insol. or very sl. sol. in  $NH_4OH$ ,  $(NH_4)_2CO_3$ , and  $K_2CO_3$ +Aq; sol. in cold  $CaO_2H_2$ , and  $BaO_2H_2$  with decomposition on boiling (Freymy, A. ch. (3) 12, 460.) Only sl. sol. in  $NH_4Cl$ +Aq hot or cold. (Brett.) Sl. sol. in  $Na_2CO_3$ +Aq. (Mercer.)

## Solubility in NaOH + Aq.

(Ruhensbauer, Z. anorg. 1902, 30. 335.)

Not pptd in presence of Na citrate (Spiller)

Sol in water-glass + Aq (Ordway.)

$\text{SnO}_2 \cdot \text{H}_2\text{O}$ . Solubility in 1 l.  $\text{H}_2\text{O}$  = 0.000135 g. mol at 25° (Goldschmidt, Z. phys. Ch. 1906, 66. 389)

**Tin hydroxide,  $\text{SnO}$ ,  $6\text{SnO}_2 + 5\text{H}_2\text{O}$ .**

+  $9\text{H}_2\text{O}$  (Schiff, A. 120. 153.)

**Tin sesquihydroxide,  $\text{Sn}_2\text{O}_3 \cdot x\text{H}_2\text{O}$ .**

Insol in  $\text{H}_2\text{O}$  Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Fuchs, J. pr. 5. 318)

**Tin (stannic) hydroxide.**

" $\alpha$ " modification.

Obtained by pptn by alkali in stannic chloride solution.

Freshly pptd. substance when air dried contains 73.5%  $\text{H}_2\text{O}$ ; when dried over  $\text{H}_2\text{SO}_4$  or in a vacuum for 1 month 12.6%  $\text{H}_2\text{O}$ . Heated to glowing loses all  $\text{H}_2\text{O}$  and passes into the anhydride. The " $\alpha$ " form is capable of existing in all degrees of hydration. (Loefer, Z. anorg. 1895, 9. 372-375.)

" $\alpha$ " stannic hydrate is a white amorphous substance which is very sol. in  $\text{HNO}_3$  when moist, sol. in  $\text{H}_2\text{SO}_4$  even dil., sol. in  $\text{HCl}$  and not pptd by an excess. Very sol. in  $\text{NaOH} + \text{Aq}$  and is not pptd by an excess.

A solution of  $\alpha$  stannic acid in  $\text{HCl}$  is identical with a solution of freshly prepared aqueous stannic chloride and gives no ppt with dil  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HNO}_3$  or arsenic acid even on long standing.

" $\beta$ " modification.

Obtained by oxidizing and dissolving Sn in  $\text{HNO}_3$ , and from solution of sodium stannate by pptn. Freshly pptd. from  $\text{HNO}_3$  when air dried contains 21.3%  $\text{H}_2\text{O}$ , and when dried over  $\text{H}_2\text{SO}_4$  or in a vacuum 11.3%,—corresponding to  $\text{Sn}(\text{OH})_4$  and  $\text{SnO}(\text{OH})_2$  respectively.

Freshly pptd. from sodium stannate solution and air dried contains 22.5%  $\text{H}_2\text{O}$  and when dried over  $\text{H}_2\text{SO}_4$  or in a vacuum contains 12.1%,—corresponding to  $\text{Sn}(\text{OH})_4$  and  $\text{SnO}(\text{OH})_2$ . Passes into the anhydride when heated to glowing.

The " $\beta$ " form is capable of existing in all degrees of hydration. It is a white amorphous substance which is insol in  $\text{HNO}_3$ ; in-

sol in  $\text{H}_2\text{SO}_4$  even when conc.; insol in  $\text{HCl}$  but changed by contact with the acid in that when the acid has been removed the ppt. is readily sol. in  $\text{H}_2\text{O}$ , though pptd. again from solution by addition of  $\text{HCl}$ . When freshly prepared the " $\beta$ " form is sol. in  $\text{NaOH} + \text{Aq}$ . but is pptd. by an excess of  $\text{NaOH}$ .

A solution of " $\beta$ " stannic acid in  $\text{HCl}$  behaves quite differently from an aq. solution of stannic chloride in that it ppts metastannic sulphate when treated with  $\text{H}_2\text{SO}_4$ .

This ppt. dissolves when heated with dilute  $\text{HNO}_3$  or  $\text{HCl}$ , but the solution on standing spontaneously forms another ppt. A solution of " $\beta$ " stannic acid in  $\text{HCl}$  gives a ppt. when treated with arsenic acid (Loefer, Z. anorg. 1895, 9. 372.)

See also Stannic acid.

**Tin hydroxyl chloride,  $\text{SnO}(\text{OH})\text{Cl}$ .**

See Chlorostannic acid.

**Tin (stannous) iodide,  $\text{SnI}_2$ , and  $+2\text{H}_2\text{O}$ .**

Sl sol. in cold, more abundantly in hot  $\text{H}_2\text{O}$ , without decomp.

Solubility in  $\text{H}_2\text{O}$ .

100	4.03	2.23	3.63	5.82	9.60	...	34.05

(Young, J. Am. Chem. Soc. 1897, 19. 851.)

Solubility of  $\text{SnI}_2$  at low temp. in 29.95% HI+Aq.

Temp	Pts in 100 pts solution	Pts. in 100 pts solvent
1.5	12.96	14.89
1.5	13.15	15.14
6.0	12.35	14.09
10.5	11.01	12.36
15.2	10.48	11.70
24.8	9.36	10.33
30.7	8.78	9.62
34.8	8.70	9.50
40.3	9.51	10.50

(Young, J. Am. Chem. Soc. 1897, **19**, 854.)Solubility of  $\text{SnI}_2$  at low temp. in 39.6% HI+Aq.

Temp	Pts in 100 pts of solution		Pts in 100 pts. of solvent
	I	II	
0°	13.52	13.56	15.66
5.7°	16.44	16.37	19.71
10.5°	19.47	19.60	24.27
15.7°	23.56	23.68	30.92
20.3°	25.50	25.60	34.30

(Young, J. Am. Chem. Soc. 1897, **19**, 852-853.)

Sol. in  $\text{SnCl}_2$ +Aq. Sol in warm alkali chlorides or iodides + Aq, also in dil.  $\text{HCl}$ +Aq. Very sl. sol. in  $\text{CHCl}_3$ ,  $\text{CS}_2$ , or  $\text{C}_6\text{H}_6$ . (Personne, C. R. **54**, 216.)

Sol. in  $\text{KOH}$ +Aq. (Rose.)Sol. in acetone. (Naumann, B. 1904, **37**, 4328.)Tin (stannic) iodide,  $\text{SnI}_4$ .Decomp. by  $\text{H}_2\text{O}$  into  $\text{SnO}_2$  and  $\text{HI}$ .Very sol in  $\text{PCl}_5$ . (Beckmann, Z. anorg. 1906, **51**, 110.)Sol. in  $\text{POCl}_3$ . (Walden, Z. anorg. 1900, **25**, 212.)Easily sol. in  $\text{PCl}_5$  and  $\text{PBr}_5$ . (Walden, Z. anorg. 1900, **25**, 211.)Sol. in liquid  $\text{AsBr}_3$  forming a solution with sp. gr. = 3.731 at 15°. (Retgers, Z. phys. Ch. 1893, **11**, 342.)Sol. in  $\text{SOCl}_2$ ,  $\text{S}_2\text{Cl}_2$  and  $\text{SO}_2\text{Cl}_2$ . (Walden, Z. anorg. 1900, **25**, 215.)Sol. in  $\text{SnCl}_4$ . (Walden.)Sol. in anhydrous alcohol, ether, and benzene. 1 pt.  $\text{CS}_2$  dissolves 1.45 pts.  $\text{SnI}_4$  at ordinary temp. (Schneider, Pogg. **127**, 624.)100 pts. methylene iodide,  $\text{CH}_2\text{I}_2$ , dissolve 22.9 pts.  $\text{SnI}_4$  at 10°. Sp. gr. of solution = 3.481. (Retgers, Z. anorg. **3**, 343.)

## Solubility in organic solvents at t°.

Solvent	t°	G $\text{SnI}_4$ in 100 g. of the sat. solution	Sp. gr. of the sat. solution
$\text{OCl}_4$	22.4	5.25	1.59
$\text{OCl}_4$	50.0	12.50	1.63
$\text{CHCl}_3$	28.0	8.21	1.50
$\text{C}_6\text{H}_6$	20.2	12.65	0.95

(McDermott, J. Am. Chem. Soc. 1911, **33**, 1964.)Sol. in methyl acetate. (Naumann, B. 1909, **42**, 3700.)

Sol. in acetone. (Eidman, C. C. 1899, II, 1014.)

Solubility in  $\text{CS}_2$ .

100 g. of the sat. solution contain at:

-58° -84° -89° -94° -114.5°  
16.27 10.22 9.68 10.65 9.41 g.  $\text{SnI}_4$ .(Arcotowski, Z. anorg. 1896, **11**, 274.)Sol. in allyl mustard oil (Mathews, J. phys. Ch. 1905, **9**, 647.)Tin (stannous) hydrogen iodide,  $\text{SnI}_2$ ,  $\text{HI}$ .Not obtained in pure state. (Young, J. Am. Chem. Soc. 1897, **19**, 856.)Tin (stannous) iodide ammonia,  $\text{SnI}_2 \cdot 2\text{NH}_3$ .(Ephraim and Schmidt, B. 1909, **42**, 3857.) $\text{SnI}_2 \cdot 8\text{NH}_3$ . (Ephraim and Schmidt.)Tin (stannic) iodide ammonia,  $\text{SnI}_4 \cdot 8\text{NH}_3$ .(Personne, C. R. **54**, 218.) $\text{SnI}_4 \cdot 4\text{NH}_3$ . (Personne.) $\text{SnI}_4 \cdot 8\text{NH}_3$ . (Rammelsberg, Pogg. **48**, 169.)

## Tin iodosulphide,

See Tin sulphoidide.

Tin monoxide (Stannous oxide),  $\text{SnO}$ .Insol. in  $\text{H}_2\text{O}$ . Sol. in acids. Very sl. sol. in boiling  $\text{NH}_4\text{Cl}$ +Aq. (Rose.) Insol. in  $\text{NaOH}$  or  $\text{KOH}$ +Aq.Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, **20**, 830.)Insol. in acetone. (Naumann, B. 1904, **37**, 4329.)Tin dioxide (Stannic oxide),  $\text{SnO}_2$ .Insol. in  $\text{H}_2\text{O}$  or conc. acids except conc.  $\text{H}_2\text{SO}_4$ . Insol. in conc. alkalis or  $\text{NH}_4\text{OH}$ +Aq.Not absolutely insol. in dil.  $\text{HNO}_3$ +Aq. (Mulder.)Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, **20**, 830.)Min. *Cassiterite* (Tin stone). Not attacked by acids.

**Tin sesquioxide,  $\text{Sn}_2\text{O}_3$ .**

While moist, easily sol in  $\text{NH}_4\text{OH} + \text{Aq.}$   
Sl sol. in dil., more easily in conc  $\text{HCl} + \text{Aq}$   
(Berzelius)

**Tin (stannic) oxybromide,  $\text{Sn}_2\text{Br}_2\text{O} + 12\text{H}_2\text{O}$ .**

Decomp by  $\text{H}_2\text{O}$  into  $\text{SnBr}_2$  and  $\text{H}_2\text{SnO}_3$ ,  
 $\text{Sn}_2\text{Br}_2\text{O}_3$ . As above (Preis and Ray-  
mann, C. C. 1882. 773.)

**Tin (stannic) oxybromide nitrogen pent-  
oxide,  $\text{SnO}_2, 3\text{Br}_2, \text{N}_2\text{O}_5$ .**

Decomp by  $\text{H}_2\text{O}$  (Thomas, C. R. 1896,  
122. 33)

**Tin (stannous) oxychloride,  $\text{SnO}, \text{SnCl}_2 + 3\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  Sol in  $\text{HCl}, \text{HClO}_2, \text{H}_2\text{O}_2$ , and  
dil  $\text{HNO}_3$ , or  $\text{H}_2\text{SO}_4 + \text{Aq.}$  (J. Davy, Schw.  
J. 10. 325.)

$\text{Sn}_2\text{Cl}_4\text{O}_3 + 10\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  or  
alcohol.

Can be recrystallized from alcohol but  
not from  $\text{H}_2\text{O}$  (Tschermak, W. A. B. 44.  
2. 736)

$3\text{SnO}_2, 2\text{SnCl}_2 + 6\text{H}_2\text{O}$ . Very sl. sol. in  
 $\text{H}_2\text{O}$ . Sol. in dil. acids (Ditte, A. ch. 1882,  
(5) 27. 146.)

$4\text{SnO}, \text{SnCl}_2 + 6\text{H}_2\text{O}$ . (Ditte)

**Tin (stannic) oxychloride,  $\text{SnO}_2, \text{SnCl}_4$ .**

Sol. in  $\text{H}_2\text{O}$  (Scheurer-Kestner, A. ch.  
(3) 47. 6.)

**Tin (metastannic) oxychloride,  $3\text{SnO}_2, \text{SnCl}_4 + 3\text{H}_2\text{O}$ .**

Sol. in little, decomp by much  $\text{H}_2\text{O}$ .  
(Weber, Pogg. 122. 338.)

$4\text{SnO}_2, \text{SnCl}_4 + 7\text{H}_2\text{O}$ . (Weber)

"Metastannyl chloride  $\beta$ ,"  $\text{Sn}_2\text{O}_3\text{Cl}_2$ . De-  
liquescant. Sol. without decomp. in a small  
amount of  $\text{H}_2\text{O}$  or in a large amount of  $\text{H}_2\text{O}$   
containing a few drops  $\text{HCl}$ .

Sol. in abs. alcohol. (Engel, C. R. 1897,  
124. 767.)

$+4\text{H}_2\text{O}$  and  $+9\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  acidified  
with one drop of  $\text{HCl}$ . Pptd. by excess  $\text{HCl}$ .  
(Engel, C. R. 1897, 124. 768)

"Parastannyl chloride,"  $\text{Sn}_2\text{O}_3\text{Cl}_2 + 2\text{H}_2\text{O}$ .

Decomp. by excess  $\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ ; pptd. by  $\text{HCl}$  (Engel, C. R.  
1897, 125. 465.)

**Tin (stannic) oxychloride nitrogen pent-  
oxide,  $\text{SnOCl}_2, 3\text{SnCl}_4, \text{N}_2\text{O}_5$ .**

Hydroscopic; sol. in  $\text{H}_2\text{O}$ .

Decomp. by heat. (Thomas, C. R. 1896,  
122. 32.)

**Tin (stannous) oxyiodide,  $\text{SnO}, 3\text{SnI}_2$ ;  
 $2\text{SnO}, 3\text{SnI}_2$ ;  $\text{SnO}, \text{SnI}_2$ ; and  $2\text{SnO}, \text{SnI}_2$ .**

Decomp. by much  $\text{H}_2\text{O}$  (Personne, C. R.  
54. 216)

**Tin oxysulphide,  $\text{Sn}_2\text{S}_2\text{O} + 11\text{H}_2\text{O}$ .**

Very sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ ; slowly sol.  
in  $\text{H}_2\text{O}$ . (Schmidt, B. 1894, 27. 2739.)

**Tin phosphide,  $\text{Sn}_2\text{P}$ .**

(Ragg, C. C. 1898, II 170.)

$\text{SnP}$ . Sol. in  $\text{HCl} + \text{Aq}$ . Insol. in  $\text{HNO}_3$   
 $+ \text{Aq}$

$\text{SnP}_2$ . Not attacked by  $\text{HCl}$ . Easily at-  
tacked by aqua regia. (Emmerling, B. 1879,  
12. 155.)

$\text{SnP}_2$ . Insol. in  $\text{HCl}$ . Slowly attacked by  
dil.  $\text{HNO}_3$  at  $50^\circ$ . Oxidized by fuming  $\text{HNO}_3$   
with ignition. (Johbois, C. R. 1909, 148.  
638)

$\text{Sn}_2\text{P}_2$ . Insol. in mercury.

Decomp. by  $\text{HCl}$  (Stead, J. Soc. Chem.  
Ind 1897, 16. 206)

$\text{Sn}_2\text{P}_2$ . Attacked by  $\text{HCl}, \text{HNO}_3$ , and al-  
kalies. (Johbois, C. R. 1909, 148. 637.)

The only true compounds are  $\text{Sn}_2\text{P}_2$  and  
 $\text{SnP}_2$  (Johbois, C. R. 1909, 148. 637.)

**Tin phosphochloride,  $\text{Sn}_2\text{P}_2\text{Cl}_4$ .**

(Mahn, Jena. Zeit. 5. 1680.)

**Tin (stannous) selenide,  $\text{SnSe}$ .**

Decomp. by boiling  $\text{HCl} + \text{Aq}$ . Slowly  
oxidised by boiling  $\text{HNO}_3 + \text{Aq}$ , and easily  
dissolved in aqua regia (Schneider, Pogg.  
127. 624) Easily sol. in alkalies  $+ \text{Aq}$   
(Uelsmann, A. 116. 122), or scarcely even on  
boiling (Schneider), according to method  
of preparation. Sol. in alkali sulphides or  
selenides  $+ \text{Aq}$ .

**Tin (stannic) selenide,  $\text{SnSe}_2$ .**

Not attacked by  $\text{H}_2\text{O}$  or dil. acids; scarcely  
attacked by boiling conc.  $\text{HCl} + \text{Aq}$ ; gradu-  
ally decomp by hot  $\text{HNO}_3 + \text{Aq}$ ; easily dis-  
solved by warm aqua regia, and hot conc.  
 $\text{H}_2\text{SO}_4$ .

Sol. in cold, more easily in warm  $\text{KOH}$ ,  
 $\text{NaOH}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Uelsmann, A.  
116. 122)

**Tin (stannous) sulphide,  $\text{SnS}$ .**

1 l.  $\text{H}_2\text{O}$  dissolves  $0.14 \times 10^{-6}$  mols.  $\text{SnS}$   
at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294.)

Insol. in dil., sol. in conc  $\text{HCl} + \text{Aq}$ . Sl.  
sol. in hot conc  $\text{HNO}_3 + \text{Aq}$  Insol. in  $\text{KOH}$   
 $+ \text{Aq}$

$+ \text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}, \text{H}_2\text{S} + \text{Aq}$ , or dil.  
acids; sol. with decomp. in conc. acids;  
easily sol. in hot conc.  $\text{HCl} + \text{Aq}$ . Insol.  
in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{OH} + \text{Aq}$ .  
Insol. in  $\text{NH}_4\text{Cl}$ , or  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . Scarcely  
sol. in  $(\text{NH}_4)_2\text{S} + \text{Aq}$ , but easily sol. in the  
same on addition of  $\text{S}$ . (Rose.)

10%  $\text{NaOH} + \text{Aq}$  dissolves  $\text{SnS}$  by violent  
boiling.

Insol. in cold, sl. sol. in hot  $\text{Na}_2\text{SO}_3 + \text{Aq}$ .  
(Materne, C. C. 1908, II. 557.)

Sol. in alkali polysulphides  $+ \text{Aq}$ .

Insol. in acetone. (Eidmann, C. C. 1899,

II. 1014); (Naumann, B. 1904, 37. 4329.), ethyl acetate. (Naumann, B. 1910, 43. 314.)

### Tin (stannic) sulphide, $\text{SnS}_2$ .

*Anhydrous (Morass gold.)* Insol. in HCl or  $\text{HNO}_3 + \text{Aq}$ , but decomp. by aqua regia. Sol. in hot  $\text{KOH} + \text{Aq}$  or  $\text{K}_2\text{CO}_3 + \text{Aq}$ ; also in hot  $\text{K}_2\text{S}$ ,  $\text{Na}_2\text{S} + \text{Aq}$ , and  $(\text{NH}_4)_2\text{S} + \text{Aq}$ .

1 l.  $\text{H}_2\text{O}$  dissolves  $1.13 \times 10^{-4}$  mole.  $\text{SnS}_2$  at  $18^\circ$ . (Weigel, Z. phys. Ch. 1907, 58. 294.)  $+x\text{H}_2\text{O}$  Sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ , but readily in  $\text{KOH}$ ,  $\text{K}_2\text{S}$ , or  $\text{Na}_2\text{S} + \text{Aq}$ , also in hot conc.  $\text{HCl} + \text{Aq}$ . Decomp. by hot  $\text{HNO}_3 + \text{Aq}$ . Insol. in  $\text{KHSO}_4 + \text{Aq}$ . Sol. in  $\text{K}_2\text{CO}_3 + \text{Aq}$ . Insol. in  $\text{NH}_4\text{Cl}$ , and  $\text{NH}_4\text{NO}_3 + \text{Aq}$  (Brett.)

Pptd.  $\text{SnS}_2$  is insol. in cold, sol. in hot  $\text{Na}_2\text{B}_4\text{O}_7 + \text{Aq}$ . Sol. in  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . Very sol. in  $\text{NaOH} + \text{Aq}$  (Materne, C. C. 1906, II. 557.)

Sol. in boiling conc.  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$  (Clarke, C. N. 21. 124.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790), ethyl acetate (Naumann, B. 1910, 43. 314.); acetone (Naumann, B. 1904, 37. 4329, Eidmann, C. C. 1899, II. 1014.)

### Tin sesquisulphide, $\text{Sn}_2\text{S}_3$ .

Sol. in moderately conc. HCl (Antony and Niccoli, Gazz. ch. it. 1892, 22. (2) 408.)

### Tin sulphochloride, $\text{SnS}_2 \cdot 2\text{SnCl}_4$ .

$\text{H}_2\text{O}$  dissolves out  $\text{SnCl}_4$ . (Dumas, Schw. J. 66. 409.)

$\text{SnS}_2 \cdot \text{Cl}_{11} = \text{SnCl}_4 \cdot 2\text{SnCl}_4$ . Sol. in  $\text{H}_2\text{O}$  with separation of S.

Gradually sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . Sol. in  $\text{POCl}_3$  (Casselmann, A. 83. 267.)

### Tin sulphiodide, $\text{Sn}_2\text{S}_2\text{I}_4$ .

Decomp. by  $\text{H}_2\text{O}$  into  $\text{SnO}_2$ , S, and HI, by cold conc.  $\text{HCl} + \text{Aq}$  with separation of S, also by aqua regia, and  $\text{HNO}_3 + \text{Aq}$ .

Cold  $\text{KOH} + \text{Aq}$  separates S and  $\text{SnO}_2$ .

Completely sol. in hot  $\text{KOH} + \text{Aq}$ .

Sol. in cold, more easily in hot  $\text{CS}_2$  or  $\text{CHCl}_3$ .

Decomp. by alcohol. (Schneider, Pogg. 111. 249.)

### Tin sulphophosphide, $\text{Sn}_3\text{P}_2\text{S}_5$ .

Insol. in HCl,  $\text{HNO}_3$ , and aqua regia.

Sol. in aq. alkali hydroxides, containing  $\text{Cl}_2$  or  $\text{Br}_2$  in solution. (Granger, C. R. 1896, 122. 322.)

### Tin (stannous) telluride, $\text{SnTe}$ .

Not attacked by conc.  $\text{HCl} + \text{Aq}$ . (Ditte, C. R. 97. 42.)

### Titanic acid, $\text{TiO}_2 \cdot x\text{H}_2\text{O}$ .

*$\alpha$ -Titanic acid*—Insol. in  $\text{H}_2\text{O}$  or alcohol. When dried in the cold, is completely sol. in

acids, especially HCl, or dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , but when the solution in acids is boiled, it is converted into  $\beta$ -titanic acid. Very sl. sol. even when moist in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Berthier.) Sl. sol. in alkali carbonates  $+ \text{Aq}$ . A complete solution in an alkali carbonate  $+ \text{Aq}$  can only be obtained by adding a Ti salt drop by drop to the alkaline solution, and allowing the ppt. to dissolve entirely before adding more Ti salt. On boiling the solution in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (or in  $\text{K}_2\text{CO}_3$  or  $\text{Na}_2\text{CO}_3 + \text{Aq}$  with  $\text{NH}_4\text{Cl}$ ) the titanic acid is pptd.

Relatively easily sol. in mineral acids, decreasing in the following order HCl,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ . Insol. in perchloric acid (Landecker, Z. anorg. 1909, 64. 67.)

Sol. in dil.  $\text{H}_2\text{SO}_4$ . 40 g.  $\text{H}_2\text{O} + 70$  g.  $\text{H}_2\text{SO}_4$  (sp. gr. 1.145) dissolves 0.33 g.  $\text{TiO}_2$  in 15 min. (Hall and Smith, Proc. Am. Phil. Soc. 1906, 44. 193.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

*$\beta$ -Titanic acid, Melasthanic acid*—Insol. in  $\text{H}_2\text{O}$ , acids except HF, or alkali hydrates or carbonates  $+ \text{Aq}$ . When digested with conc.  $\text{H}_2\text{SO}_4$  until acid is evaporated, the residue is sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

*$\gamma$ -Titanic acid*—Sol. in pure  $\text{H}_2\text{O}$ , but  $\beta$ -acid is pptd. by boiling (Knop, A. 123 351.)

Colloidal  $\text{TiO}_2 \cdot x\text{H}_2\text{O} + \text{Aq}$  has been prepared by Graham (Chem. Soc. 17. 325.)

### Barium titanate, $2\text{BaO} \cdot 3\text{TiO}_2$ .

(Bourgeois, C. R. 103. 141.)

### Barium pertitanate peroxide.

See Pertitanate, barium peroxide.

### Calcium titanate, $\text{CaTiO}_3$ .

(Ebelmen, C. R. 32. 711.)

Min. *Perofskite*. Scarcely attacked by HCl  $+ \text{Aq}$  or other acids, except hot  $\text{H}_2\text{SO}_4$ , which decomposes it.

$\text{CaO} \cdot 2\text{TiO}_2$ . Min. *Titanomorphite*. Partially decomp. by  $\text{HCl} + \text{Aq}$ , completely by  $\text{H}_2\text{SO}_4$ .

### Cobaltous titanate, $\text{CoTiO}_3$ .

(Bourgeois, C. C. 1893, I. 228.)

### Ferrous orthotitanate, $\text{Fe}_2\text{TiO}_4$ .

(Hautefeuille, C. R. 59. 733.)

### Ferroferric titanate, $\text{FeTiO}_3 \cdot x\text{Fe}_2\text{O}_3$ .

Min. *Menaccanite*. Very sl. sol. in HCl or aqua regia with separation of  $\text{TiO}_2$ .

### Ferric titanate.

Not attacked by boiling  $\text{H}_2\text{SO}_4$  or conc.  $\text{HCl} + \text{Aq}$ . (Wöhler and Liebig, Pogg. 21. 578.)

**Magnesium titanate,  $MgTiO_3$ .**

Insol in  $H_2O$  and acids (Hautefeuille, A. ch. (4) 4. 169.)

Min. *Géologie*

When finely powdered, is easily sol in hot  $HCl$ , or in cold  $HF$  in a few hours (Dick, Miner, Mag 1894, 10. 146.)

$Mg_2TiO_4$ . Slowly decomp by boiling with  $HNO_3$ +Aq (Hautefeuille, A. ch. (4) 4. 169.)

**Potassium titanate,  $K_2TiO_3$ .**

Anhydrous. Decomp with  $H_2O$

+4 $H_2O$ . Deliquescent. Very sol. in  $H_2O$ .

Precipitated from aqueous solution by alcohol. (Demoly, Compt. chim. 1849. 325.)

**Potassium titanate, acid,  $K_2O, 3TiO_2+2H_2O$** 

Insol. in  $H_2O$  (Demoly)

$K_2O, 6TiO_2+2H_2O$  (Demoly)

$K_2O, 3TiO_2+3H_2O$ . Insol in  $H_2O$ . Completely sol in  $HCl$ +Aq if only cold  $H_2O$  is used for washing. When heated to  $100^\circ$ , no longer completely sol in  $HCl$ +Aq. (Rose, Fogg. 74. 583.)

$K_2O, 12TiO_2$  (Rose, Gilb. Ann. 73. 78)

**Sodium titanate,  $Na_2TiO_3$ .**

Anhydrous. Decomp. by  $H_2O$  into  $NaOH$ , and an acid titanate, insol in  $H_2O$

+4 $H_2O$ . Deliquescent. Very sol. in  $H_2O$ .

Precipitated from aqueous solution by alcohol (Demoly.)

**Sodium titanate, acid,  $2Na_2O, 9TiO_2+5H_2O$ .**

If not heated to  $100^\circ$ , is sol. in cold  $HCl$ +Aq (Rose, Gilb. Ann. 73. 78)

$2Na_2O, 3TiO_2$ . Insol. in  $H_2O$ ; slowly sol in cold, easily in hot  $HCl$ +Aq (Cormmuns, C. R. 115. 823.)

$Na_2O, 2TiO_2$ . As above (C)

$Na_2O, 3TiO_2$ . Insol in  $H_2O$ , and nearly so in boiling  $HCl$ +Aq. (C.)

**Strontium titanate,  $2SrO, 3TiO_2$ .**

(Bourgeois, C. R. 103. 141.)

**Zinc titanate,  $ZnO, TiO_2(?)$ .**

(Lévy, A. ch. (6) 24. 456.)

$2ZnO, TiO_2(?)$ . (Lévy)

$3ZnO, 2TiO_2$ . Slowly attacked by warm  $H_2SO_4$  or  $HNO_3$ +Aq, and by  $H_2SO_4$ +HF. Wholly sol in cold  $HCl$ +Aq (Lévy)

$4ZnO, 5TiO_2$ . Not attacked by cold conc. acids, but sol. by boiling except in  $HCl$ +Aq. (Lévy)

$ZnO, 3TiO_2$ . Insol in  $H_2O$ , alcohol, or ether. Dil.  $HNO_3$ ,  $H_2SO_4$ , or  $HCl$ +Aq do not attack even on boiling; boiling  $H_2SO_4$  dissolves with difficulty; not attacked by conc. boiling alkalis+Aq (Lévy, A. ch. (6) 25. 471)

**Pertitanic acid.**

See Pertitanic acid.

**Titanium,  $Ti$ .**

Decomp.  $H_2O$  even under  $100^\circ$  (Wbhler); not attacked by  $H_2O$  under  $500^\circ$ . (Kern, C. N. 33. 57.)

Does not decomp<sup>2</sup>  $H_2O$  at  $100^\circ$ . (Schneider, Z. anorg. 1894, 8. 85)

Sol. in  $HCl$ +Aq if warmed. Rapidly sol. in  $HF$ +Aq. Sol. in cold dil.  $H_2SO_4$ +Aq,  $HNO_3$ +Aq, or  $HClH_2O_2$ +Aq. Dissolves almost instantaneously in  $HF$ +Aq. (Merz.)

Sol. in molten lead and iron; sol. in  $HCl$ ,  $HNO_3$ , and aqua regia (Moissan, C. R. 1895, 120. 293.)

Amorphous. Loses its spontaneous inflammability when left for a time in contact with  $H_2O$ . (Schneider, Z. anorg. 1895, 8. 85.)

**Titanium amide,  $Ti(NH_2)_4$ .**

Violently attacked by  $H_2O$ . (Stahler, B. 1905, 38. 2029.)

**Titanium tribromide,  $TiBr_3+6H_2O$ .**

Very hygroscopic. (Stahler, B. 1904, 37. 4409.)

**Titanium tetrabromide,  $TiBr_4$ .**

Deliquescent. Decomp. by  $H_2O$ . (Duppa, C. R. 42. 352)

Sol. in absolute alcohol and in dry ether (Rosenheim and Schutte, Z. anorg. 1900, 24. 238.)

**Titanium bromonitride,  $TiNBr$ .**

Decomp. by a small amount of  $H_2O$ . On addition of more  $H_2O$ , a part dissolves forming a solution which decomp on warming with separation of titanate acid. It behaves similarly toward dil.  $HNO_3$ , dil.  $HCl$  and dil.  $H_2SO_4$ . Completely sol. in warm dil.  $H_2SO_4$ . (Ruff, B. 1908, 41. 2262.)

**Titanium carbide,  $TiC$ .**

Sol in  $HNO_3$ +Aq (Shumer, C. N. 55. 71.) Insol in  $HCl$ . Slowly sol. in aqua regia. (Moissan, C. R. 1895, 120. 295.)

**Titanium carbide nitride,  $Ti_3C_2N_2=Ti(CN)_2, 3Ti_3N_4$ .**

Insol. in, and not attacked by boiling  $HNO_3$  or  $H_2SO_4$  (Wollaston), but sol. in  $HNO_3$ +HF (Berzelius)

**Titanium dichloride,  $TiCl_3$ .**

Very deliquescent. Decomposes  $H_2O$  with violence. Insol in ether,  $CS_2$ , or  $CHCl_3$ . Decomp by 99.5% alcohol.

**Titanium trichloride,  $TiCl_3$ .**

Deliquescent. Sol in  $H_2O$  with evolution of heat.

+4 $H_2O$  (Glatzel, B. 9. 1829.)

+6 $H_2O$ . Very sol in  $H_2O$ . (Pohdori, Z. anorg. 1898, 19. 307.)

**Titanium tetrachloride,  $\text{TiCl}_4$ .**

Anhydrous. Sol. in  $\text{H}_2\text{O}$  with evolution of much heat,  
 $+5\text{H}_2\text{O}$  Deliquescent

**Titanium sulphuryl chloride,  $\text{TiCl}_2\text{SO}_2 = \text{TiCl}_2\text{OSO}_2\text{Cl}$** 

Deliquesces gradually in moist air (Clausnitzer, B. 11. 2011.)

**Titanium chloride ammonia,  $\text{TiCl}_4 \cdot 4\text{NH}_3$ .**

Deliquescent. Solution in  $\text{H}_2\text{O}$  is not quite clear. (Rose)

According to Persoz (A. ch. 46. 315), is  $\text{TiCl}_4 \cdot 6\text{NH}_3$ .

$\text{TiCl}_4 \cdot 6\text{NH}_3$  and  $\text{TiCl}_4 \cdot 4\text{NH}_3$ . Both compds. are unstable in moist air, insol. in ether. (Rosenheim, Z. anorg. 1901, 28. 245.)

$\text{TiCl}_4 \cdot 8\text{NH}_3$ . Violently decomp. by  $\text{H}_2\text{O}$ . (Stahler, B. 1905, 38. 2627.)

**Titanium tetrachloride cyanobromide,  $\text{TiCl}_4 \cdot \text{NCClBr}$** 

(Schneider, Z. anorg. 1894, 8. 92.)

**Titanium chloride cyanhydric acid,  $\text{TiCl}_4 \cdot 2\text{HCN}$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$  with evolution of heat (Wohler, A. 73. 226.)

**Titanium trichloride nitrogen sulphide,  $2\text{TiCl}_3 \cdot \text{N}_2\text{S}_4$ .**

Decomp. rapidly in air (Davis, Chem. Soc. 1906, 89. (2) 1576.)

**Titanium tetrachloride nitrogen sulphide,  $\text{TiCl}_4 \cdot \text{N}_2\text{S}_4$** 

Hydroscopic

Decomp. by  $\text{H}_2\text{O}$ ,  $\text{HNO}_3$ ,  $\text{HCl}$ ,  $\text{KOH}$  and alcohol. (Wölbling, Z. anorg. 1908, 57. 282.)

**Titanium chloride phosphine.**

Decomp. by  $\text{H}_2\text{O}$ ,  $\text{HCl} + \text{Aq}$ ,  $\text{KOH} + \text{Aq}$ ,  $\text{K}_2\text{CO}_3 + \text{Aq}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Rose)

**Titanium tetrachloride phosphoryl chloride,  $\text{TiCl}_4 \cdot 2\text{POCl}_3$ .**

(Ruff, B. 1903, 36. 1783.)

**Titanium chloronitride,  $\text{TiNCl}$ .**

Decomp. by small amount cold  $\text{H}_2\text{O}$ . On the addition of more  $\text{H}_2\text{O}$  it is only partially decomp. For complete solution, the addition of dil.  $\text{HCl}$  or a mixture of warm dil.  $\text{H}_2\text{SO}_4$  and  $\text{HF}$  is necessary. Easily sol in conc.  $\text{HNO}_3$  and in conc.  $\text{H}_2\text{SO}_4$ . (Ruff, B. 1903, 41. 2259.)

**Titanium difluoride.**

(Hautefeuille, C. R. 57. 151.)

Probably sesquifluoride.

**Titanium sesquifluoride,  $\text{Ti}_2\text{F}_3$ .**

Appears to be two modifications, one sol in  $\text{H}_2\text{O}$ , and the other insol. in  $\text{H}_2\text{O}$  (Hautefeuille, C. R. 59. 189.)

Insol. in  $\text{H}_2\text{O}$  (Weber, Pogg. 120. 292.)

**Titanium tetrafluoride,  $\text{TiF}_4$ .**

Decomp. by  $\text{H}_2\text{O}$ . (Unverdorben.)

Sol. in  $\text{H}_2\text{O}$ , but solution decomp. upon evaporation (Marignac, Ann. Min. (5) 15. 258.)

Sol in  $\text{H}_2\text{O}$  (Emich, M. 1904, 25. 910.)

Very hygroscopic

Sol in  $\text{H}_2\text{O}$ . Sl. sol in conc.  $\text{HF} + \text{Aq}$ .

Sol in cold  $\text{POCl}_3$  without decomp. Decomp. in warm  $\text{POCl}_3$ .

Sol in alcohol and dry pyridine.

Insol. in ether,  $\text{CS}_2$ ,  $\text{CCl}_4$ ,  $\text{SiCl}_4$ ,  $\text{SbBr}_3$ ,  $\text{SO}_2\text{Cl}_2$ ,  $\text{SOCl}_2$ ,  $\text{SCl}_2$ ,  $\text{AsCl}_3$ ,  $\text{SO}_3$ ,  $\text{CrO}_3$ ,  $\text{PCl}_3$  (Ruff, B. 1903, 36. 1780.)

$+2\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (Ruff, B. 1903, 36. 1780.)

**Titanium hydrogen fluoride,  $2\text{HF}$ ,  $\text{TiF}_4 = \text{H}_2\text{TiF}_6$ .**

Sol in  $\text{H}_2\text{O}$  with decomposition and separation of a basic salt. Corresponds to fluosilicic acid, and may be considered as fluotitanic acid  $\text{H}_2\text{TiF}_6$ .

**Titanium fluoride with MF.**

See Fluotitanate, M.

**Titanium tetrafluoride ammonia,  $\text{TiF}_4 \cdot 2\text{NH}_3$ .**

Sol. in  $\text{H}_2\text{O}$ ; decomp. in aq. solution on boiling. (Ruff, B. 1903, 36. 1781.)

**Titanium monohydroxide,  $\text{TiO}_2\text{H}_2$ .**

Ppt. (Wohler, A. 73. 49.)

$\text{Ti}_2\text{O}_3\text{H}_2$ . Not attacked by cold conc. acids; sl. attacked on warming. Insol. in cold or hot  $\text{KOH} + \text{Aq}$ . (Winkler, B. 1890, 23. 2859.)

**Titanium sesquihydroxide,  $\text{Ti}_2\text{O}_3 \cdot x\text{H}_2\text{O}$ .**

\* Decomposes very quickly with  $\text{H}_2\text{O}$ , forming titanium dihydroxide

$\text{TiO}_2\text{H}_2$ . (Polidori, Z. anorg. 1899, 19. 306.)

**Titanium dihydroxide.**

See Titanic acid.

**Titanium hydroxychloride,  $\text{TiCl}_3(\text{OH})$ .**

Deliquescent. Easily sol in  $\text{H}_2\text{O}$  and alcohol. Sol. in ether.

$\text{TiCl}_3(\text{OH})_2 + 1\frac{1}{2}\text{H}_2\text{O}$ . Deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohol, and ether. Aqueous solution decomp. by boiling.

$\text{TiCl}(\text{OH})_2 + \text{H}_2\text{O}$ . Nearly insol in  $\text{H}_2\text{O}$ . Insol in alcohol and ether. (Konig and v. der Pfordten, B. 21. 1708.)

See also Titanium oxychloride.

**Titanium diiodide,  $\text{TiI}_2$ .**

Very hygroscopic; insol. in organic solvents; sol in conc.  $\text{HF}$  and boiling  $\text{HCl}$ , decomp. by

$\text{H}_2\text{O}$ , alkalis,  $\text{H}_2\text{SO}_4$  and  $\text{HNO}_3$ . (Defacqz, C. R. 1908, 147. 66.)

**Titanium trioxide**,  $\text{Ti}_2\text{O}_3 + 6\text{H}_2\text{O}$ .

Very hygroscopic. (Stahler, B. 1904, 37. 4410.)

**Titanium tetraoxide**,  $\text{Ti}_4\text{O}_7$ .

Fumes on air, and dissolves rapidly in  $\text{H}_2\text{O}$  with evolution of heat. Solution decomposes on standing. (Weber)

**Titanium nitride**,  $\text{Ti}_3\text{N}_4$ .

Difficultly sol. in warm  $\text{HNO}_3 + \text{Aq}$ . More easily sol. in aqua regia. (Rose.)

Insol. in dil. acids. Decomp. by hot conc.  $\text{H}_2\text{SO}_4$  and by conc.  $\text{HNO}_3$ , especially when  $\text{HF}$  is added, and by boiling  $\text{KOH} + \text{Aq}$ . (Ruff and Eisner, B. 1908, 41. 2252.)

Decomp. by  $\text{H}_2\text{O}$  and dil. acids

Insol. in all ordinary indifferent organic solvents (Ruff, B. 1912, 45. 1309.)

$\text{Ti}_3\text{N}_4$ . Insol. in  $\text{H}_2\text{O}$ . (Wohler.)

Is  $\text{TiN}$ , according to Guerin (C. R. 82. 972.)

**Titanium monoxide**,  $\text{TiO}$ .

(Moissan, C. R. 1895, 120. 290.)

**Titanium sesquioxide**,  $\text{Ti}_2\text{O}_3$ .

Insol. in  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ . Difficultly sol. in  $\text{H}_2\text{SO}_4$ . (Ebelmen, A. ch. (3) 20. 392.)

When moist, insol. in  $\text{H}_2\text{O}$  or  $\text{NH}_4\text{OH} + \text{Aq}$ , but quickly decomp. to  $\text{TiO}_2$ . Sol. in oxygen acids, but quickly decomp. (Berzelius.)

**Titanium dioxide**,  $\text{TiO}_2$ .

*Amorphous*. Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ , or dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ , even when heated for a long time

Sol. in conc.  $\text{H}_2\text{SO}_4$  by long digestion.

$\text{TiO}_2$ , strongly ignited at  $1000^\circ$ , is practically insol. in conc.  $\text{H}_2\text{SO}_4$  and  $\text{HF}$ .

When less strongly ignited (by heating ortho or metatitanic acid to  $700^\circ$ ) it is easily sol. therein. (Bornemann and Schürmeister, C. C. 1910, II. 1870.)

Ignited  $\text{TiO}_2$  is very difficultly sol. in  $\text{HF}$ . (Pennington, J. Am. Chem. Soc. 1896, 18. 56.)

The solubility of ignited  $\text{TiO}_2$  in  $\text{H}_2\text{SO}_4$  is helped by  $\text{H}_2\text{O}_2$ . (Weiss and Landecker, Z. anorg. 1909, 64. 71.)

The solubility in  $\text{H}_2\text{SO}_4$  is increased by addition of  $\text{H}_2\text{O}_2$ .  $\text{H}_2\text{O}_2$  brings  $\text{TiO}_2$  quickly and completely into solution in the presence of  $\text{NH}_4\text{OH}$ ,  $\text{NH}_4\text{Cl}$ ,  $\text{NaOH}$ ,  $\text{Na}_2\text{CO}_3$ , and  $\text{Na}_2\text{HPO}_4$ . (Weiss and Landecker, Z. anorg. 1909, 64. 71.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

*Crystalline*. Min. *Rutile*, *Brookite*, and *Anatase*? Solubility as above

See also Titanic acid.

**Titanium oxide**,  $\text{Ti}_2\text{O}_3$ .

(Deville, C. R. 53. 163.)

True formula is  $\text{Ti}_2\text{O}_{12}$  (v. der Pfordten, A. 237. 201.)

**Titanium peroxide**,  $\text{TiO}_2$ .

Sol. in acids. Solution in  $\text{H}_2\text{SO}_4$  is very stable, but the  $\text{HCl}$  solution decomposes very easily. (Weber, B. 15. 2599; Piccini, B. 15. 2221; Classen, B. 24. 370.)

**Titanium oxychloride**,  $\text{TiO}_2$ ,  $\text{TiOCl}_2 + 8\text{H}_2\text{O}$ .

Sol. in much  $\text{H}_2\text{O}$  (Merz, Bull. Soc. 1867. 401.)

$\text{Ti}_2\text{O}_3\text{Cl}_2$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  with separation of  $\text{TiO}_2$

See also Titanium hydroxychloride.

**Titanium oxyfluoride**.

Insol. in  $\text{H}_2\text{O}$  (Berzelius)

**Titanium oxyfluoride with MF**.

See Fluoxyperytitanate, M.

**Titanium phosphide**,  $\text{TiP}$ .

Sl. sol. in boiling aqua regia

Insol. in dil. or conc. acids and alkalis.

Sl. attacked by fuming  $\text{HNO}_3$  in sealed tube at  $250^\circ$ – $300^\circ$ . (Gewecke, A. 1908, 361. 84.)

**Titanium phosphochloride**.

See Phosphorus titanium chloride.

**Titanium silicide**,  $\text{TiSi}_2$ .

Sol. in  $\text{HF}$ ; insol. in other min. acids

Slowly sol. in 10%  $\text{KOH} + \text{Aq}$ . (Hönigschmid, C. R. 1906, 143. 226.)

**Titanium monosulphide**,  $\text{TiS}$ .

Insol. in alkalis. Difficultly sol. in nitric acid and aqua regia

Insol. in  $\text{HF}$ . (v. der Pfordten, A. 234. 257.)

**Titanium disulphide**,  $\text{TiS}_2$ .

Decomp. slowly on moist air. Insol. in  $\text{HCl}$  or dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Ebelmen.)

Sol. in aqua regia or  $\text{HNO}_3 + \text{Aq}$ . Decomp. by  $\text{KOH} + \text{Aq}$  or  $\text{NaOH} + \text{Aq}$ . Insol. in  $\text{KSH} + \text{Aq}$ . (Rose.)

Sol. in  $\text{HF}$  at  $100^\circ$ . (v. der Pfordten, A. 234. 257.)

**Titanium sesquisulphide**,  $\text{Ti}_2\text{S}_3$ .

Insol. in caustic alkalis +  $\text{Aq}$ . Sol. in  $\text{HF}$  at a high temp. Insol. in aqua regia. (v. der Pfordten, A. 234. 257.)

**Titanomolybdic acid**,  $\text{TiO}_3$ ,  $12\text{MoO}_3 + 22\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$

Sol. in ether. (Péchar, C. R. 1893, 117. 790.)

**Ammonium titanomolybdate,**

Sol in  $\text{H}_2\text{O}$  and acids; completely insol in solutions of ammonium salts (Pécharde.)

**Potassium titanomolybdate,**

Efflorescent.

Sol in  $\text{H}_2\text{O}$ . (Pécharde.)

**Titanodectungstic acid,**  $\text{H}_5\text{TiW}_{10}\text{O}_{48} + x\text{H}_2\text{O}.$ 

(Lecarme, Bull. Soc. (2) 36. 17.)

**Titanotungstic acid or Titanoduodecitungstic acid,**  $\text{H}_5\text{TiW}_{12}\text{O}_{48} + x\text{H}_2\text{O}$ 

(Lecarme, Bull. Soc. (2) 36. 17.)

**Titanous acid.****Sodium titanite,**  $\text{Na}_2\text{TiO}_3 = 3\text{Na}_2\text{O} \cdot \text{Ti}_2\text{O}_3.$ 

Sol in dil acids (Koenig and v. der Pfordten, B 22. 2075.)

**Titanyl compounds.**

See Titanium oxy-compounds.

**Triamine cobaltic compounds.**

See Dichrocoaltic compounds.

**Trithionic acid,**  $\text{H}_2\text{S}_3\text{O}_6$ 

Known only in aqueous solution

Solution in  $\text{H}_2\text{O}$  gradually decomposes in the cold rapidly at  $80^\circ$ . Not decomp. if very dilute or in presence of acids, except  $\text{HNO}_3$ ,  $\text{HClO}_4$ , and  $\text{HIO}_3$ . (Fordos and Gélas, A. ch. (3) 28. 451.)

**Trithionates.**

The trithionates are all sol in  $\text{H}_2\text{O}$ , and very easily decomposed.

**Ammonium trithionate,**  $(\text{NH}_4)_2\text{S}_3\text{O}_6$ 

Very deliquescent and unstable.

Very sol. in  $\text{H}_2\text{O}$

Insol. in abs alcohol (Divers and Ogawa, Chem. Soc. 1900, 77. 337.)

**Barium trithionate,**  $\text{BaS}_3\text{O}_6 + 2\text{H}_2\text{O}.$ 

Very sol. in  $\text{H}_2\text{O}$ . Precipitated from aqueous solution by large excess of alcohol. Aqueous solution is very unstable. (Kessler, Pogg 74. 250.)

**Lead trithionate,**  $\text{PbS}_3\text{O}_6.$ 

Very sl. sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{Na}_2\text{S}_2\text{O}_3 + \text{Aq}$  (Fogh, C. R. 110. 524.)

**Potassium trithionate,**  $\text{K}_2\text{S}_3\text{O}_6.$ 

Sol. in  $\text{H}_2\text{O}$ . Insol. in alcohol. (Kessler, Pogg 74. 270.)

Sol in  $\text{H}_2\text{O}$  with decomp.

Insol. in alcohol. (Langlois, A. 1841, 40. 102.)

**Sodium trithionate,**  $\text{Na}_2\text{S}_3\text{O}_6.$ 

Very sol. in  $\text{H}_2\text{O}$

+  $3\text{H}_2\text{O}$ . (Vilhers, C. R. 106. 1356.)

**Thalious trithionate,**  $\text{Th}_2\text{S}_3\text{O}_6.$ 

Sol in  $\text{H}_2\text{O}$ . (Bevan, C. N. 38. 294.)

**Zinc trithionate.**

Sol in  $\text{H}_2\text{O}$ , but decomposes upon warming the solution. (Fordos and Gélas, C. R. 16. 1070.)

**Tungsten, W.**

*Metallic* Not attacked by heating with fuming  $\text{HNO}_3$ , aqua regia, or other acids, or by boiling  $\text{KOH} + \text{Aq}$ . Sol. in  $\text{KOH} + \text{Aq}$  and  $\text{NaClO} + \text{Aq}$  (v. Uslar, A. 94. 255.)

Not easily acted upon by moist air, if no  $\text{CO}_2$  present. Sol. in a mixture of  $\text{HF}$  and  $\text{HNO}_3$ . Very slowly sol. in  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and  $\text{HF}$ . (Moissan, C. R. 1896, 123. 15.)

Very slowly attacked by  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and even  $\text{CrO}_3$ . A mixture of  $\text{CrO}_3$  and  $\text{H}_2\text{SO}_4$  dissolved 1.67 g. in 16 hrs. from a fine wire and 1.36 g. in 14 hours (Fink, Met. Chem. Eng. 1910, 8. 341.)

Compact tungsten is not attacked by dil., and only sl. dissolved by conc.  $\text{H}_2\text{SO}_4$ . Not attacked by dil. or conc.  $\text{HCl}$ ,  $\text{HNO}_3$  and  $\text{HNO}_3 + \text{HCl}$  attack slowly by long heating, forming thin layer of  $\text{WO}_3$ . Slowly sol. in  $\text{HNO}_3 + \text{HF}$ . (Weiss, Z. anorg. 1910, 65. 339.)

*Aluminothemic tungsten* is insol in acids and in aqua regia. Sol. in fused  $\text{KOH}$  (Stavenhagen, B 1899, 32. 1515.)

Insol. in  $\text{HCl}$  of any concentration at room temp. and only very sl. sol. at  $110^\circ$ . After being in contact with hot conc.  $\text{HCl}$  (sp. gr. 1.15) for 175 hrs. the metal lost 0.5% of its weight. Sl. sol. in dil.  $\text{HCl}$  at  $110^\circ$ .

Insol. in conc.  $\text{H}_2\text{SO}_4$  at room temp. and in dil.  $\text{H}_2\text{SO}_4$  at  $110^\circ$ . Somewhat sol. in conc.  $\text{H}_2\text{SO}_4$  at high temp.

Insol. in conc.  $\text{HNO}_3$ , and hot or cold  $\text{HF}$ .

Sl. sol. in aqua regia.

Very sol. in  $\text{HF} + \text{HNO}_3$ . (Ruder, J. Am. Chem. Soc. 1912, 34. 387.)

Insol. in aqua regia and acids; sol. in fused  $\text{KOH}$ . (Stavenhagen, B 1899, 32. 1514.)

Insol. in  $\text{KOH} + \text{Aq}$

Sol in fused  $\text{KOH}$

Slowly sol. in fused  $\text{Na}_2\text{CO}_3$ ,  $\text{K}_2\text{CO}_3$  or mixture of the two.

Somewhat sol. in  $\text{NaOCl} + \text{Aq}$ . (Ruder, J. Am. Chem. Soc. 1912, 34. 388.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

*Crystalline*. Insol. in  $\text{H}_2\text{O}$ ,  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4$ . Oxidised by  $\text{HNO}_3$  or aqua regia (D'Elhujar.)

Sol. in boiling  $\text{KOH} + \text{Aq}$ . (Ruche, A. ch. (3) 50. 5.)

*Amorphous*. Easily oxidised by  $\text{HNO}_3 + \text{Aq}$ . (Zettnow.)

**Tungsten amide.**

See Tungsten nitride.

**Tungsten arsenide,  $WAs_2$ .**

Insol in  $H_2O$  and other solvents. Not attacked by boiling  $HF$  or  $HNO_3$ . Sol in cold  $HF + HNO_3$ , and in hot aqua regia. Not attacked by hot  $KOH + Aq$  or  $NaOH + Aq$ . Decomp. by fused  $KOH$  or  $NaOH$ . (Defacqz, C. R. 1901, 132, 139.)

**Tungsten boride,  $WB_2$ .**

Slowly attacked by conc. acids; vigorously attacked by aqua regia. (Tucker and Moody, Chem. Soc. 1902, 81, 16.)

**Tungsten dibromide,  $WBr_2$ .**

Partly sol in  $H_2O$ , the rest decomposing to  $WO_3$  and  $HBr$ .

**Tungsten pentabromide,  $WBr_5$ .**

Decomp. by moist air or  $H_2O$ . Sol. in caustic alkalis +  $Aq$ .

Very hygroscopic. Fumes in the air.

Decomp. by  $H_2O$ .

Sol in  $HF$ , or conc.  $HCl$ . Sl. sol. in fuming  $HBr$ . Decomp. by dil.  $HCl$ , conc.  $HNO_3$ , or dil.  $H_2SO_4$ . Readily attacked by fused alkalis or alkalis +  $Aq$ . Sol in  $CCl_4$ ,  $CHCl_3$ ,  $CHBr_3$ , abs. alcohol, ether, essence of terebenthine and benzene. (Defacqz, C. R. 1899, 128, 1232.)

**Tungsten hexabromide,  $WBr_6$ .**

Decomp. by  $H_2O$  and in the air.

Sol in  $NH_4OH + Aq$ . (Smith, J. Am. Chem. Soc. 1897, 18, 1100.)

**Tungsten bromochloride,  $WCl_5$ ,  $WBr_5$ .**

Decomp. by  $H_2O$ . Sol in  $HF$ . Decomp. by  $HNO_3$  or  $H_2SO_4$ . Violently attacked by fused alkali or alkali +  $Aq$ . Sol. in most organic solvents.

$WCl_5$ ,  $3WBr_5$ . Properties like those of  $WCl_5$ ,  $WBr_5$ . (Defacqz, C. R. 1899, 129, 516.)

Decomp. by  $H_2O$ . Sol. in 40%  $HF + Aq$ . 22° B.  $HCl + Aq$  gives a sl. ppt. of  $WO_3$ . Decomp. by  $HNO_3$  and by  $H_2SO_4$ . Sol. in abs. alcohol, ether,  $CS_2$ ,  $C_6H_6$  and glycerine. Sol. in  $CCl_4$  only on warming. Nearly insol. in oil of turpentine. (Defacqz.)

**Tungsten bronze.**

See—

Tungstate tungsten oxide, barium.

Tungstate tungsten oxide, barium potassium.

Tungstate tungsten oxide, barium sodium.

Tungstate tungsten oxide, calcium potassium.

Tungstate tungsten oxide, calcium sodium.

Tungstate tungsten oxide, lithium.

Tungstate tungsten oxide, lithium potassium.

Tungstate tungsten oxide, potassium.

Tungstate tungsten oxide, potassium sodium.

Tungstate tungsten oxide, potassium strontium.

Tungstate tungsten oxide, sodium.

Tungstate tungsten oxide, sodium strontium.

**Tungsten carbide,  $W_2C$ .**

Sol in boiling  $HNO_3$ , very slowly acted upon by other acids. (Moussan, C. R. 1896, 123, 16.)

WC. Insol. in  $HCl$  acids, only sl. sol. in  $H_2SO_4$ , and conc.  $HNO_3$ ; sol. in fused  $KClO_3$  and  $KNO_3$ . (Williams, C. R. 198, 126, 1724.)

**Tungsten dichloride,  $WCl_2$ .**

Decomp. on the air or with  $H_2O$ . (Roscoe.)

**Tungsten tetrachloride,  $WCl_4$ .**

Deliquescent. Partly sol in  $H_2O$ , with subsequent decomposition. (Roscoe.)

**Tungsten pentachloride,  $WCl_5$ .**

Very deliquescent. Decomp. with  $H_2O$  with hissing and evolution of heat and separation of  $W_2O_5$ .

Very sl. sol. in  $CS_2$ . (Roscoe.)

**Tungsten hexachloride,  $WCl_6$ .**

Not decomp. by moist air or  $H_2O$ . Decomp. by alcohol. Very sol. in  $CS_2$ . (Roscoe.)

Easily sol. in  $POCl_3$ . (Teclu, A. 187, 255.)

**Tungsten chloride nitrogen sulphide,  $WCl_4$ ,  $N_4S_4$ .**

(Davis, Chem. Soc. 1906, 89, (2) 1575.)

**Tungsten chloroarsenide,  $W_2AsCl_5$ .**

Hygroscopic, decomp. by  $H_2O$  and acids; sol. in aq. solution of alkalis; insol. in anhydrous organic solvents. (Defacqz, C. R. 1901, 132, 139.)

**Tungsten chlorosulphide,  $W_2S_2Cl_4$ .**

Decomp. by  $H_2O$ .

Sol. in  $S_2Cl_2$ . (Smith and Oberholtzer, Z. anorg. 1894, 5, 68.)

$WCl_5$ ,  $3WS_2$ . Decomp. by  $H_2O$ . Insol. in  $CS_2$ , alcohol and  $C_6H_6$ . (Defacqz, A. ch. 1901, (7) 22, 266.)

**Tungsten hexafluoride,  $WF_6$ .**

Fumes in the air.

Decomp. by  $H_2O$ . Easily sol. in aq. alkalis. (Ruff, B. 1905, 38, 747.)

**Tungsten diiodide,  $WI_2$ .**

Not decomp. by  $H_2O$ . (Roscoe, A. 162, 366.)

Insol. in  $H_2O$ ,  $CS_2$  and alcohol. Decomp. by boiling  $H_2O$ ,  $HNO_3$ ,  $H_2SO_4$  and aqua regia; sol. in fused  $KOH$ , and alkali carbonates. (Defacqz, C. R. 1898, 126, 936.)

**Tungsten tetraiodide,  $WI_4$ .**

Insol. in  $H_2O$ , ether, chloroform and turpentine, sol. in abs. alcohol, decomp. when boiled with  $H_2O$ ; sol. with decomp. in dil.  $HCl$  and  $H_2SO_4$ , in  $HNO_3$  and aqua regia, and in alkali hydroxides and carbonates fused or in aq. solution. (Defacqz, C. R. 1898, 127. 511.)

**Tungsten nitride,  $W_2N_2$ .**

(Uhrlaub)

$W_2N_2$ . Insol. in  $HNO_3$ , dil.  $H_2SO_4$  and  $NaOH + Aq$  (Rideal, Chem. Soc. 1889, 55. 44.)

**Tungsten nitride amide,  $W_2N_2H_4 = 2WN_2, W(NH_2)_2$ .**

Not attacked by acids or caustic alkalis +  $Aq$ . (Wöhler, A. 73. 191.)

**Tungsten nitride amide oxide,  $W_2N_2H_4O_4 = 3WN_2, W_2(NH_2)_2, 2WO_3$ .**

Not attacked by acids or alkalis (Wöhler.)

**Tungsten monoxide,  $WO$ .**

Insol. in  $H_2O$ . Not attacked by  $HCl$ ,  $HF$ ,  $H_2SO_4$ , or  $KOH + Aq$ .  $HNO_3 + Aq$  or aqua regia convert it into  $WO_3$  (Headen, Sil. Am. J. 145. 280.)

**Tungsten dioxide,  $WO_2$ .**

(a) When prepared in the dry way, is attacked only by aqua regia, which oxidises to  $WO_3$ .

(b) When moist, is sol. in  $HCl$  or  $H_2SO_4 + Aq$ , also in  $KOH + Aq$ . Insol. in  $NH_4OH + Aq$ . (Riche, A. ch. (3) 50. 5.)

*Cryst.* Insol. in  $HCl$ ,  $H_2SO_4$  and conc. aq. alkalis; sol. in  $HNO_3$ . (Hallopeau, C. R. 1898, 127. 135.)

**Tungsten oxide, blue.**

$W_2O_5$  (Riche, A. ch. (3) 50. 33);  $W_2O_6$  (v. Uslar),  $W_2O_{11}$  (Gmelin).

All are probably the same substance. Not attacked by boiling  $HNO_3$  or aqua regia. Slowly sol. in boiling  $KOH + Aq$ .

**Tungsten trioxide,  $WO_3$ .**

Insol. in  $H_2O$  or acids. Sl. sol. in dil.  $KOH + Aq$ ,  $NaOH + Aq$ ,  $Na_2CO_3 + Aq$ , or  $H_2CO_3 + Aq$ , but easily sol. in conc. boiling solutions of same.  $NH_4OH + Aq$  when boiling has a solvent action.

Insol. in conc. and dil.  $H_2SO_4$ . (Desi, J. Am. Chem. Soc. 1897, 19. 214.)

Min. *Tungstite*. Insol. in acids. Sol. in  $NH_4OH + Aq$ .

**Tungsten oxide,  $W_2O_5$ .**

Sol. in alkalis (Desi, J. Am. Chem. Soc. 1897, 19. 214.)

$W_2O_5$ . Insol. in acids and alkalis (Desi, J. Am. Chem. Soc. 1897, 19. 228.)

+  $H_2O$ . Like  $W_2O_4 + H_2O$ . (Allon and Gottschalk, Am. Ch. J. 1902, 27. 336.)

$W_2O_5$ . (Desi, J. Am. Chem. Soc. 1897, 19. 219.)

$W_2O_5$ . (Desi.)

$W_2O_4 + H_2O$ . Insol. in  $H_2O$  containing a little  $HCl$ .

Slowly attacked by cold, conc.  $MOH + Aq$ . (Allen and Gottschalk, Am. Ch. J. 1902, 27. 333.)

**Tungsten trioxide ammonia,  $WO_3, 3NH_3$ .**

(Rosenheim and Jacobssohn, Z. anorg. 1906, 50. 306.)

**Tungsten oxybromide, etc.**

See Tungstyl bromide, etc.

**Tungsten monophosphide,  $WP$ .**

Not attacked by  $HF$  or  $HCl$ .

Sol. in warm  $HNO_3 + HF$ . Slowly attacked by hot  $HNO_3$ .

Not attacked by  $KOH + Aq$  or  $NaOH + Aq$ . (Defacqz, C. R. 1901, 132. 34.)

**Tungsten diphosphide,  $WP_2$ .**

Insol. in  $H_2O$  and in most organic solvents; insol. in  $HCl$  and  $HF$ ; sol. in a mixture of  $HF$  and  $HNO_3$  in the cold, and in aqua regia on warming. (Defacqz, C. R. 1900, 130. 916.)

**Tungsten phosphide,  $W_2P_2$ .**

Not attacked by any acid, not even by aqua regia (Wöhler and Wright, A. 79. 244.)

$W_2P_2$ . (Wöhler and Wright.)

**Tungsten diselenide,  $WSe_2$ .**

(Uelsmann.)

**Tungsten triselenide,  $WSe_3$ .**

Easily sol. in alkali sulphides or selenides +  $Aq$ . (Uelsmann, Jahrb. f. Ch. 1860. 92.)

**Tungsten silicide.**

Sol. in  $HF$

Only very sl. sol. in other acids (Warren, C. N. 1898, 78. 319.)

$WSi_2$ . Not attacked by ordinary acids and scarcely by warm aqua regia, but violently attacked by  $HNO_3 + HF$ . Sl. attacked by 10% alkalis +  $Aq$ . (Hönigschmid, M. 1907, 28. 1017.)

Not attacked by dil. or conc.  $HCl$ ,  $HF$ ,  $HNO_3$  or  $H_2SO_4$ , nor by  $NaOH$  or aqua regia.

Attacked by  $HNO_3 + HF$  or by fused alkalis. (Defacqz, C. R. 1907, 144. 850.)

$WSi_2$ . Violently attacked by  $HNO_3 + HF$ . Not attacked by  $HNO_3$ ,  $H_2SO_4$ ,  $HCl$  or  $HF$ . (Friley, Rev. Mét. 1911, 8. 509.)

$W_2Si_2$ . Insol. in acids including  $HF$ ; sol. in a mixture of  $HF$  and  $HNO_3$ ; sol. in fused alkali hydroxides and carbonates. (Vigouroux, C. R. 1898, 127. 394.)

**Tungsten disulphide,  $WS_2$ .**Oxidised by  $HNO_3 + Aq.$  (Berzelius)

Insol. in min acids

Sol. in a mixture of HF and  $HNO_3$  and in fused alkalis and alkali carbonates (Defacqz, C R 1899, 128. 611.)**Tungsten trisulphide,  $WS_3$ .**Somewhat sol in cold, abundantly in hot  $H_2O$ , but separated out by the addition of salts, especially  $NH_4Cl$  or acids. Sol. in alkali sulphides, and hydrosulphides + Aq. Sol. in caustic alkalis, and alkali carbonates + Aq. Slowly sol. in  $NH_4OH + Aq$  in the cold.**Tungstic acid,  $H_2WO_4$ .**Insol. in  $H_2O$  Sol. in HF Insol in tungstates + Aq.44.7%  $H_2WO_4$  is sol. in 50% HF + Aq at 25°.55.8%  $H_2WO_4$  is sol. in 50% HF + Aq at 50°.100 g sat.  $H_2WO_4 + HCl + Aq$  contain 0.68 g.  $H_2WO_4$  at 80°9.8%  $H_2WO_4$  is sol in sat alcoholic HCl at 75°.

Insol in alcoholic solutions of HBr and HI (Rosenheim, Chem Soc 1911, 100. (2) 402.)

Freshly pptd tungstic acid dissolves in  $H_2O_2$  (Kellner, Dissert 1909.)Insol in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 830) $H_4WO_6$  Precipitate Sl sol. in  $H_2O$  and aqueous solutions of the tungstates. Sol in 250-300 pts  $H_2O$ . When freshly pptd, sol. in alkali hydrates or carbonates + Aq. (Anthony, J. pr. 8. 6)**Metatungstic acid,  $H_2W_2O_{11} + 9H_2O$ .**Sol in  $H_2O$ . Solution may be boiled and evaporated to a syrupy consistency, when it suddenly gelatinises and ordinary tungstic acid is precipitated.Sol in  $H_2O$ . When heated to 50°, it becomes insol. in  $H_2O$ . (Soboleff, Z. anorg. 1896, 12. 28.)**Solubility in  $H_2O$  at t°.**

t°	100 ccm $H_2O$ dissolve g of the cryst. acid	Sp gr of the solution
0	41.46	1.6025
22	88.57	2.5239
43.5	111.87	3.6503

(Soboleff.)

Sp. gr. of solution of metatungstic acid at 17.5° containing:

2.79	12.68	27.61	43.75% $WO_3$ .
1.0257	1.1275	1.3274	1.6343

(Scheibler, J. pr. 83. 273.)

Sp. gr. of aqueous solution calculated by M = Mendeleeff, and G = (Gerlach (Z. anal. 27. 300), containing.

	5	10	15	20	25% $WO_3$ .
M	1.047	1.098	1.153	1.214	1.285
G	1.0469	1.0980	1.1544	1.2172	1.2873

0	83.456
7.8	88.389
18.2	99.66
24.3	110.76

(Soboleff, Z. anorg. 1896, 12. 32.)

*Colloidal* Sol. in  $H_2O$  Not precipitated by acids or alcohol. Can be evaporated to dryness and heated to 200°, and still remains sol. in  $H_2O$  Sol. in  $\frac{1}{2}$  pt. of  $H_2O$ 

Sp. gr of aqueous solution containing:

	5	20	50	66.5	79.8% $WO_3$ .
	1.0475	1.2168	1.8001	2.596	3.243

(Graham, Chem. Soc. 17. 318.)

Perhaps paratungstic acid,  $H_{10}W_{12}O_{41}$ . (Klein, Bull Soc (2) 36. 547)**Tungstates.**Few normal tungstates are sol in  $H_2O$ , even some of the K and  $NH_4$  salts are very sl sol. Most of the metatungstates, however, are easily sol in  $H_2O$ Tungstates insol in  $H_2O$  are usually insol in dil. acids.**Aluminum tungstate,  $Al_2(WO_4)_3 + 8H_2O$ .**Precipitate. Insol. in  $H_2O$  and  $Na_2WO_4 + Aq.$  Sol. in  $(NH_4)_2Al_2(SO_4)_4 + Aq.$   $NaOH + Aq.$   $NH_4OH + Aq.$ Easily sol. in  $H_3PO_4$ ,  $H_2C_2O_4$ , and  $H_2C_2O_4 + Aq.$  (Lotz, A. 83. 65.)Sol. in 1500 pts.  $H_2O$  at 15°. (Lefort, C. R. 87. 748.) $Al_2O_3 + 4WO_3 + 9H_2O$ . Sol. in 400 pts  $H_2O$  at 15°. (Lefort, C. R. 87. 748.) $Al_2O_3 + 5WO_3 + 6H_2O$ . Sol. in  $H_2O$ , from which it is pptd by alcohol. (Lefort.)Formula according to Lefort is  $Al_2O_3 + 3WO_3 + 3H_2O + 2WO_3$ 

See also Aluminicotungstic acid.

**Aluminum paratungstate,  $5Al_2O_3 + 36WO_3 + 46H_2O = Al_2O_3 + 7WO_3 + 9H_2O$  (?).**

Easily sol in an alum solution. (Lotz, A. 83. 65.)

**Aluminum ammonium tungstate,  $3(NH_4)_2O + Al_2O_3 + 9WO_3 + 4H_2O$ .**Sol. in conc  $HNO_3$  and in conc. HCl (Balke and Smith, J. Am. Chem. Soc. 1903, 25. 1230.)

**Aluminum ammonium antimony tungstate.**

See *Aluminicoantimoniotungstate, ammonium*.

**Aluminum antimony tungstate.**

See *Aluminicoantimoniotungstic acid*.

**Aluminum zinc tungstate,  $Al_2O_3$ ,  $ZnO$ ,  $9WO_3$ ,  $+20H_2O$ .**

Very sol. in  $H_2O$  (Dapiels, J. Am. Chem. Soc. 1908, 30, 1850)

$2Al_2O_3$ ,  $3ZnO$ ,  $18WO_3$ ,  $+16H_2O$ . Sol. in much  $H_2O$

Sol. in very dil. mineral acids or in acetic acid. (Daniels.)

**Ammonium tungstate,  $(NH_4)_2WO_4$ .**

Known only in solution

$(NH_4)_2WO_4 + 3H_2O = 2(NH_4)_2O$ ,  $3WO_3$ ,  $+3H_2O$ . Sol. in  $H_2O$  with decomp. Decomp. on air with evolution of  $NH_3$  and formation of *paratungstate*. Sol. in  $NH_4OH$  + Aq (Marignac, A. ch. (3) 69, 23.)

$(NH_4)_2WO_4 + 5H_2O = 2(NH_4)_2O$ ,  $5WO_3$ ,  $+5H_2O$ . Sol. at ordinary temp. in 26-29 pts  $H_2O$  with partial decomposition. (Marignac.)

$+2\frac{1}{2}H_2O$ ,  $+3H_2O$ ,  $+4H_2O$ ,  $+4\frac{1}{2}H_2O$ , and  $+5H_2O$ . (Pmagel, Dissert, 1904.)

$(NH_4)_2WO_4 + 8H_2O = 3(NH_4)_2O$ ,  $8WO_3$ ,  $+8H_2O$ . Sol. in  $H_2O$ . (Marignac.)

*Colloidal*  $(NH_4)_2O$ ,  $6WO_3$ ,  $+4$  or  $6H_2O$ . Miscible with water in nearly all proportions (Taylor, J. Am. Chem. Soc. 1902, 24, 632.)

**Ammonium metatungstate,  $(NH_4)_2W_6O_{21}$ .**

$+6H_2O$ . (Marignac, A. ch. (4) 3, 74.)

$+8H_2O$ . Efflorescent. Very sol. in  $H_2O$

1 pt. dissolves at  $15^\circ$  in 0.84 pt.  $H_2O$ . (Lotz.)

1 pt. dissolves at ordinary temp. in 0.35 pt.  $H_2O$ . (Riche.)

Solubility increases rapidly with the temperature

Saturated solution at  $40^\circ$  is solid on cooling.

Sl. sol. in ordinary, insol. in absolute alcohol (Lotz.) Insol. in ether (Riche.)

$[(NH_4)_2W_6O_{21} + 5H_2O$  of Marguerite.]

$(NH_4)_6W_{12}O_{41} + 17H_2O = 3(NH_4)_2O$ ,  $16WO_3$ ,  $+17H_2O$ . Very efflorescent. Decomp. by dissolving in pure  $H_2O$ . (Marignac, A. ch. (4) 3, 75.)

**Ammonium paratungstate,  $(NH_4)_{10}W_{12}O_{41} = 5(NH_4)_2O$ ,  $12WO_3$ .**

(Marignac, A. ch. (3) 69, 25)

According to Lotz (A. 91, 49) and Scheibler (J. pr. 80, 208), formula is  $(NH_4)_8W_8O_{34} = 3(NH_4)_2O$ ,  $7WO_3$

$+5H_2O$ . (Scheibler, J. pr. 43, 232)

$+11H_2O$ . Sol. in 25-28 pts. cold  $H_2O$ . (Anthon)

Sol. in 26.1 pts.  $H_2O$  at  $10.7^\circ$ , and 5.8 pts at  $100^\circ$  (Lotz.)

Sol. in 33.3 pts. cold  $H_2O$ , and 9.6 pts at  $100^\circ$ . (Riche.)

Sol. in 22-38 pts  $H_2O$  at  $15-18^\circ$  The solution gradually decomposes, with the formation of a more soluble salt. (Marignac)

Not much more sol. in  $NH_4OH$  + Aq than in  $H_2O$  Insol. in alcohol (Anthon)

Sol. in  $H_2O_2$  (Kellner, Dissert, 1909.)

**Ammonium bismuth tungstate.**

See *Bismuthicotungstate, ammonium*.

**Ammonium cadmium paratungstate,**

$3(NH_4)_2O$ ,  $12CdO$ ,  $35WO_3$ ,  $+35H_2O$ .

Ppt. Sol. in  $H_2O$  acidulated with  $HNO_3$ . (Lotz, A. 91, 49.)

**Ammonium cerium tungstate.**

See *Cericotungstate, ammonium*.

**Ammonium cobaltous tungstate,  $8(NH_4)_2O$ ,**

$2CoO$ ,  $15WO_3$ ,  $+3H_2O$

(Carnot, C. R. 109, 147.)

**Ammonium hydroxylamine tungstate,**

$NH_4OWO_2NH_4$ .

Sol. in  $H_2O$ . (Hofmann, Z. anorg. 1898, 16, 465)

**Ammonium iron (ferric) tungstate,  $5(NH_4)_2O$ ,**

$Fe_2O_3$ ,  $5WO_3$ ,  $+5H_2O$

Sol. in  $H_2O$ . (Borek.)

**Ammonium lanthanum tungstate.**

See *Lanthanicotungstate, ammonium*.

**Ammonium magnesium paratungstate,**

$2(NH_4)_2O$ ,  $3MgO$ ,  $12WO_3$ ,  $+24H_2O$ .

Very slightly sol. in  $H_2O$ . (Marignac, A. ch. (3) 69, 58)

$(NH_4)_2O$ ,  $2MgO$ ,  $7WO_3$ ,  $+10H_2O$ . Very sl. sol. in  $H_2O$ ; sol. in  $H_2O$  acidulated with  $HNO_3$  (Lotz.)

**Ammonium mercuric tungstate,  $(NH_4)_2WO_4$ ,**

$HgWO_4$ ,  $+H_2O$ .

Insol. in  $H_2O$ . Decomp. by acids or alkalies (Anthon)

**Ammonium neodymium tungstate.**

See *Neodymicotungstate, ammonium*.

**Ammonium nickel tungstate.**

See *Nickelicotungstate, ammonium*.

**Ammonium potassium paratungstate,**

$5K(NH_4)_2O$ ,  $12WO_3$ ,  $+11H_2O$ .

Sol. in boiling  $H_2O$ , sl. sol. in cold  $H_2O$ . (Hallopeau, C. R. 1896, 123, 180)

**Ammonium potassium sodium paratungstate,**

$5(K, Na, NH_4)_2O$ ,  $12WO_3$ ,  $+13H_2O$ , where  $K : Na : NH_4 = 3 : 3 : 4$ .

$10(K, Na, NH_4)_2O$ ,  $24WO_3$ ,  $+26H_2O$ , where  $K : Na : NH_4 = 3 : 3 : 14$ . (Laurent.)

**Ammonium sodium paratungstate**,  $4(\text{NH}_4)_2\text{O}$ ,  $\text{Na}_2\text{O}$ ,  $12\text{WO}_3 + 5\text{H}_2\text{O}$ .

Can be crystallised from  $\text{H}_2\text{O}$  without decomp. (Lotz, A. 91. 57.)

+  $14\text{H}_2\text{O}$ . Sol. in warm  $\text{H}_2\text{O}$ . (Hallopeau, C. R. 1896, 123. 181.)

$(\text{NH}_4)_2\text{O}$ ,  $4\text{Na}_2\text{O}$ ,  $12\text{WO}_3 + 25\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ . (Hallopeau, C. R. 1895, 120. 1344.)

$5\text{Na}_2\text{O}$ ,  $15(\text{NH}_4)_2\text{O}$ ,  $45\text{WO}_3 + 48\text{H}_2\text{O}$ . (Marignac, A. ch. (3) 69. 53.)

$2\text{Na}_2\text{O}$ ,  $3(\text{NH}_4)_2\text{O}$ ,  $12\text{WO}_3 + 15\text{H}_2\text{O}$ . (Marignac)

$3(\text{NH}_4)_2\text{O}$ ,  $2\text{Na}_2\text{O}$ ,  $12\text{WO}_3 + 15\text{H}_2\text{O}$ .  $3(\text{NH}_4)_2\text{O}$ ,  $3\text{Na}_2\text{O}$ ,  $16\text{WO}_3 + 22\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  without decomp. (Hallopeau, C. R. 1896, 123. 181.)

$3\text{Na}_2\text{O}$ ,  $4(\text{NH}_4)_2\text{O}$ ,  $16\text{WO}_3 + 18\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 7. 236.)

Is  $2\text{Na}_2\text{O}$ ,  $3(\text{NH}_4)_2\text{O}$ ,  $12\text{WO}_3 + 13\text{H}_2\text{O}$ , according to Knorre (B. 19. 823)

Very sol. in hot  $\text{H}_2\text{O}$  (Knorre, B. 1886, 19. 823.)

$(\text{NH}_4)_2\text{O}$ ,  $3\text{Na}_2\text{O}$ ,  $16\text{WO}_3 + 38\text{H}_2\text{O}$ . (Wyrouboff, Bull. Soc. Min. 1892, 15. 85.)

$6(\text{NH}_4)_2\text{O}$ ,  $2\text{Na}_2\text{O}$ ,  $20\text{WO}_3 + 24\text{H}_2\text{O}$ . Can be cryst. from boiling  $\text{H}_2\text{O}$ . (Baragiola, Dissert. 1902.)

$4\text{Na}_2\text{O}$ ,  $16(\text{NH}_4)_2\text{O}$ ,  $50\text{WO}_3 + 50\text{H}_2\text{O}$ . Sl. sol. in cold  $\text{H}_2\text{O}$  (Gibbs, Proc. Am. Acad. 15. 12.)

**Ammonium zinc paratungstate**,  $(\text{NH}_4)_2\text{O}$ ,  $2\text{ZnO}$ ,  $7\text{WO}_3 + 13\text{H}_2\text{O}$ .

Sl. sol. in boiling  $\text{H}_2\text{O}$ , but more easily on addition of oxalic, tartaric, phosphoric, or dil. nitric acids, or of ammonium tungstate. (Lotz, A. 91. 49.)

**Ammonium zirconium tungstate**. See Zirconotungstate, ammonium.

**Ammonium metatungstate nitrate**. See Nitrate metatungstate, ammonium.

**Ammonium tungstate vanadate**. See Vanadiotungstate, ammonium.

**Antimony tungstate**,  $\text{Sb}_2\text{O}_3$ ,  $5\text{WO}_3 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  without decomp. (Lefort)  $\text{Sb}_2\text{O}_3$ ,  $6\text{WO}_3 + 8\text{H}_2\text{O}$ . Ppt. See also Antimonotungstic acid.

**Barium tungstate**,  $\text{BaWO}_4$ .

Anhydrous. Insol. in  $\text{H}_2\text{O}$ . Decomp. by boiling  $\text{HNO}_3 + \text{Aq.}$  (Geuther and Forsberg, A. 120. 270.)

+  $1\frac{1}{2}\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  or boiling  $\text{H}_3\text{PO}_4 + \text{Aq.}$  Sol. in boiling, less sol. in cold  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq.}$  (Anthon.)

+  $2\frac{1}{2}\text{H}_2\text{O}$ . Insol. precipitate (Scheibler.) Pptd.  $\text{BaWO}_4$  is attacked by dil. acids. More sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq.}$  than in  $\text{H}_2\text{O}$ . (Smith and Bradbury, B. 24. 2390.)

**Barium ditungstate**,  $\text{Ba}_2\text{W}_2\text{O}_{11} + \text{H}_2\text{O}$  (?).

Nearly insol. in  $\text{H}_2\text{O}$ . 100 ccm.  $\text{H}_2\text{O}$  dissolve about 0.05 g. at  $15^\circ$ . (Lefort, A. ch. (5) 15. 325.)

**Barium tungstate**,  $\text{BaW}_2\text{O}_{10} + 4\text{H}_2\text{O}$  (?).

Sol. in about 300 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . Decomp. by boiling  $\text{H}_2\text{O}$  into an insol. salt. (Lefort, C. R. 68. 798.)

+  $6\text{H}_2\text{O}$  (Scheibler.)

**Barium metatungstate**,  $\text{BaW}_2\text{O}_{11} + 9\text{H}_2\text{O}$ .

Efflorescent. Quite sol. in hot  $\text{H}_2\text{O}$ . Partly decomp. by cold  $\text{H}_2\text{O}$  into  $\text{BaW}_2\text{O}_{10}$  and  $\text{WO}_3$ , which recombine on heating. (Scheibler, J. pr. 80. 204.)

**Barium tungstate**,  $\text{BaW}_2\text{O}_{11} + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq.}$  (Zettnow.)  $\text{BaW}_2\text{O}_{11}$ . Barium bronze. (Hallopeau, A. ch. 1900, (7) 19. 121.)

**Barium paratungstate**,  $\text{Ba}_3\text{W}_{12}\text{O}_{41} + 14\text{H}_2\text{O}$ , or  $\text{Ba}_2\text{W}_2\text{O}_{11} + 8\text{H}_2\text{O}$ .

Insol. in cold  $\text{H}_2\text{O}$ ; when freshly pptd. is sl. sol. in  $\text{HNO}_3 + \text{Aq.}$  (Lotz, A. 91. 60.) Sol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Wackenroder.)

+  $27\text{H}_2\text{O} = \text{Ba}_3\text{W}_{12}\text{O}_{41} + 16\text{H}_2\text{O}$ . Insol. in cold, sl. sol. in hot  $\text{H}_2\text{O}$  (Knorre, B. 13. 327.)

**Barium tungstate**,  $\text{BaW}_2\text{O}_{11} + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq.}$  (Zettnow.)  $\text{BaW}_2\text{O}_{11}$ . Barium bronze. (Hallopeau, A. ch. 1900, (7) 19. 121.)

**Barium paratungstate**,  $\text{Ba}_3\text{W}_{12}\text{O}_{41} + 14\text{H}_2\text{O}$ , or  $\text{Ba}_2\text{W}_2\text{O}_{11} + 8\text{H}_2\text{O}$ .

Insol. in cold  $\text{H}_2\text{O}$ ; when freshly pptd. is sl. sol. in  $\text{HNO}_3 + \text{Aq.}$  (Lotz, A. 91. 60.) Sol. in  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Wackenroder.)

+  $27\text{H}_2\text{O} = \text{Ba}_3\text{W}_{12}\text{O}_{41} + 16\text{H}_2\text{O}$ . Insol. in cold, sl. sol. in hot  $\text{H}_2\text{O}$  (Knorre, B. 13. 327.)

**Barium potassium tungstate tungsten oxide**,  $\text{BaW}_2\text{O}_{11}$ ,  $5\text{K}_2\text{W}_2\text{O}_{11}$ .

(Engels, Z. anorg. 1903, 37. 136.)

**Barium silver metatungstate**. (Scheibler.)

**Barium sodium paratungstate**,  $2\text{BaO}$ ,  $3\text{Na}_2\text{O}$ ,  $12\text{WO}_3 + 24\text{H}_2\text{O}$ . (Marignac), or  $\text{BaO}$ ,  $2\text{Na}_2\text{O}$ ,  $7\text{WO}_3 + 14\text{H}_2\text{O}$  (Scheibler).

Insol. in  $\text{H}_2\text{O}$

**Barium sodium tungstate tungsten oxide**,  $2\text{BaW}_2\text{O}_{11}$ ,  $3\text{Na}_2\text{W}_2\text{O}_{11}$ .

$\text{BaW}_2\text{O}_{11}$ ,  $5\text{Na}_2\text{W}_2\text{O}_{11}$  (Engels, Z. anorg. 1903, 37. 131.)

**Bismuth tungstate**,  $\text{Bi}_2\text{O}_3$ ,  $6\text{WO}_3 + 8\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$  with decomp. Pptd. by alcohol from aqueous solution. (Lefort, C. R. 87. 748.)

**Cadmium tungstate**,  $\text{CdWO}_4$ .

Anhydrous +  $\text{H}_2\text{O}$ . Sol. in about 2000 pts.  $\text{H}_2\text{O}$  (Lefort.)

+  $2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in hot phosphoric or oxalic acids, or in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Anthon, J. pr. 9. 341.)

Sol. in  $\text{KCN} + \text{Aq.}$  (Smith and Bradbury, B. 24. 2390.)

**Cadmium ditungstate,  $\text{CdW}_2\text{O}_7 + 3\text{H}_2\text{O}$  (?)**

Sol. in about 500 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Lefort, A. ch (5) 15. 346.)

**Cadmium tritungstate,  $\text{CdW}_3\text{O}_{10} + 4\text{H}_2\text{O}$  (?) (Lefort.)****Cadmium metatungstate,  $\text{CdO}, 4\text{WO}_3 + 10\text{H}_2\text{O}$ .**

Not efflorescent (Scheibler, J pr 83. 273)  
Somewhat less sol in  $\text{H}_2\text{O}$  than the Mn salt.  
(Wyruboff, Bull. Soc. Min 1892, 15. 84)

**Cadmium paratungstate,  $\text{Cd}_2\text{W}_7\text{O}_{24} + 16\text{H}_2\text{O}$ .**

Ppt. (Gonzalez.)  
Insol. in  $\text{H}_2\text{O}$  Sol in  $\text{NH}_4\text{OH} + \text{Aq}$ , and hot  $\text{H}_3\text{PO}_4$ ,  $\text{H}_2\text{C}_2\text{O}_4$ , or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$

**Cadmium sodium paratungstate,  $2\text{CdO}, \text{Na}_2\text{O}, 7\text{WO}_3 + 18\text{H}_2\text{O}$ .**

Difficultly sol in cold  $\text{H}_2\text{O}$ . (Knorre, B. 19. 824.)

**Calcium tungstate,  $\text{CaWO}_4$ .**

Insol. in  $\text{H}_2\text{O}$  or dil. acids Sol in about 500 pts.  $\text{H}_2\text{O}$ . (Lefort)

Decomp. by  $\text{KOH} + \text{Aq}$  (Anthon)  
When freshly pptd, sol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Wackenroder)

Sol in  $\text{Mg}$ , and  $\text{NH}_4$  salts, also  $\text{Na}_2\text{WO}_4 + \text{Aq}$  (Sonstadt, C. N 11. 97.)  
Min. *Scheelite*. Decomp by  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq}$ , with separation of  $\text{WO}_3$ .

**Calcium ditungstate,  $\text{CaW}_2\text{O}_7 + 3\text{H}_2\text{O}$  (?)**

Sol. in 30 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Lefort, A. ch (5) 15. 328.)

**Calcium tritungstate,  $\text{CaW}_3\text{O}_{10} + 6\text{H}_2\text{O}$  (?)**

Sol. in cold  $\text{H}_2\text{O}$ . (Lefort.)

**Calcium metatungstate,  $\text{CaW}_4\text{O}_{13} + 10\text{H}_2\text{O}$ .**

Easily sol in  $\text{H}_2\text{O}$  (Scheibler)

**Calcium paratungstate,  $\text{Ca}_2\text{W}_7\text{O}_{24} + 18\text{H}_2\text{O}$  (or  $\text{Ca}_5\text{W}_{15}\text{O}_{41} + 30\text{H}_2\text{O}$ ).**

Much more sol. than Si or Ba salt (Knorre B. 18. 328.)

Easily sol. in  $\text{H}_2\text{O}$ . (Knorre, B 1885, 18. 326)

**Calcium potassium tungstate tungsten oxide,  $\text{CaW}_4\text{O}_{13}, 5\text{K}_2\text{W}_4\text{O}_{13}$ .**

(Engels, Z. anorg. 1903, 37. 149)

**Calcium sodium paratungstate,  $2\text{CaO}, 3\text{Na}_2\text{O}, 12\text{WO}_3 + 3\text{H}_2\text{O}$ .**

(Gonzalez, J. pr. (2) 36. 44)

**Calcium sodium tungstate tungsten oxide,  $\text{CaW}_4\text{O}_{13}, 5\text{Na}_2\text{W}_4\text{O}_{13}$ .**

Engels, Z. anorg. 1903, 37. 145.)

**Cerium tungstate,  $\text{Ce}_2(\text{WO}_4)_3 + \text{H}_2\text{O}$ .**

Precipitate (Cossa and Zecchino, Gazz. ch. it 10. 225)

**Cerium metatungstate,  $\text{Ce}_2\text{O}_3, 12\text{WO}_3 + 30\text{H}_2\text{O}$ .**

Permanent. Sol. in  $\text{H}_2\text{O}$ . (Scheibler)

**Cerium sodium tungstate,  $\text{Ce}_2\text{Na}_8(\text{WO}_4)_7$ .**

Insol. in  $\text{H}_2\text{O}$ . Slowly sol in dil. acids, easily in  $\text{HCl} + \text{Aq}$  (Högbom, Bull. Soc. (2) 42. 2)

$\text{Ce}_2(\text{WO}_4)_3, 3\text{Na}_2\text{WO}_4$ . (Didier, C. R. 102. 823)

**Cerium tungstate chloride,  $3\text{Ce}_2(\text{WO}_4)_3, 2\text{CeCl}_3$ .**

(Didier, C. R. 102. 823.)

**Chromic tungstate, basic,  $\text{Cr}_2\text{O}_3, 2\text{WO}_3 + 5\text{H}_2\text{O}$ .**

Sol in 400 pts  $\text{H}_2\text{O}$  at  $15^\circ$ . (Lefort, C. R. 87. 748.)

**Chromic tungstate,  $\text{Cr}_2(\text{WO}_4)_3 + 7$ , and  $13\text{H}_2\text{O}$ .**

Sol in  $\text{CaCl}_2 + \text{Aq}$ , and in phosphoric, oxalic, or tartaric acids +  $\text{Aq}$  (Lotz) +  $3\text{H}_2\text{O}$  (Lefort, C. R. 87. 748)

$\text{Cr}_2\text{O}_3, 4\text{WO}_3 + 6\text{H}_2\text{O}$  Sol in about 50 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  (Lefort)

$\text{Cr}_2\text{O}_3, 5\text{WO}_3$  Not attacked by aqua regia (Smith and Oberholtzer, Z. anorg 5. 63.)

**Chromic paratungstate,  $\text{Cr}_2\text{W}_7\text{O}_{24} + 9\text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  or  $\text{NH}_4$  paratungstate +  $\text{Aq}$ ; sol in  $\text{CrCl}_3 + \text{Aq}$  (Lotz.)

**Cobaltous tungstate,  $\text{CoWO}_4$ .**

Anhydrous. Insol in  $\text{H}_2\text{O}$  and acids. +  $2\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  and cold  $\text{HNO}_3 + \text{Aq}$ . Sl. sol. in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ . Completely sol. in warm  $\text{H}_3\text{PO}_4$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Anthon, J pr 9. 344)

Sol in about 500 pts.  $\text{H}_2\text{O}$ . (Lefort.)

**Cobaltous ditungstate,  $\text{CoW}_2\text{O}_7$  (?)**

+  $3\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$  Sl. sol. in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$  Completely sol. in  $\text{H}_3\text{PO}_4$ ,  $\text{HC}_2\text{H}_3\text{O}_2$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . (Anthon.)

+  $5\text{H}_2\text{O}$ . Sol in about 100 pts  $\text{H}_2\text{O}$ . (Lefort)

+  $8\text{H}_2\text{O}$  (?) (Lefort)

**Cobaltous tritungstate,  $\text{CoW}_3\text{O}_{10} + 4\text{H}_2\text{O}$  (?)**

Sol in  $\text{H}_2\text{O}$  (Lefort, C. R. 88. 798)

**Cobaltous metatungstate,  $\text{CoW}_4\text{O}_{13} + 9\text{H}_2\text{O}$ .**

Sol in  $\text{H}_2\text{O}$ . (Scheibler, J pr. 83. 317.)

**Cobaltous paratungstate,  $\text{Co}_2\text{W}_7\text{O}_{24} + 25\text{H}_2\text{O}$ .**

(Gonzalez, J. pr. (2) 36. 44)

Cobaltous sodium paratungstate,  $2\text{CoO}$ ,  $3\text{Na}_2\text{O}$ ,  $12\text{WO}_3 + 3\text{H}_2\text{O}$ .

(Gonzalez.)

Cupric tungstate,  $\text{CuWO}_4$ .

+  $2\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  Sol. in  $\text{H}_3\text{PO}_4$ ,  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . Insol. in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ . (Anthon.)

100 cc.  $\text{H}_2\text{O}$  at  $15^\circ$  dissolve 0.1 g. (Lefort)

Cupric ditungstate,  $\text{CuW}_2\text{O}_7$  (?).

+  $4\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  and  $\text{HNO}_3$ . Sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . (Anthon, J. pr. 9. 346.)

+  $5\text{H}_2\text{O}$  Sol. in about 300 pts.  $\text{H}_2\text{O}$  (Lefort)

Cupric metatungstate,  $\text{CuW}_6\text{O}_{13} + 11\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Scheibler)

Cupric paratungstate,  $\text{Cu}_3\text{W}_7\text{O}_{21} + 19\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  (Knorre, B. 19. 826.)

Cuprocupric tungstate,  $\text{Cu}_3\text{WO}_4$ ,  $2\text{CuWO}_4$ .

Insol. in  $\text{H}_2\text{O}$  (Zettnow, Pogg. 130. 255.)

Cupric sodium paratungstate,

$\text{Cu}_3\text{Na}_3(\text{W}_7\text{O}_{21})_2 + 32\text{H}_2\text{O}$ .

Ppt (Knorre, B. 19. 826.)

$\text{CuO}$ ,  $4\text{Na}_2\text{O}$ ,  $12\text{WO}_3 + 32\text{H}_2\text{O}$ . Ppt. (Gonzalez, J. pr. (2) 38. 52.)

Cupric tungstate ammonia,  $\text{CuWO}_4$ ,  $2\text{NH}_3 + \text{H}_2\text{O}$ .

(Schiff, A. 128. 39)

$\text{CuWO}_4$ ,  $4\text{NH}_3$  Gives off  $\text{NH}_3$  at ord temp Sol. in  $\text{H}_2\text{O}$  Sol. in dil  $\text{NH}_4\text{OH} + \text{Aq}$ . (Briggs, Chem Soc. 1904. 85. 676)

$\text{CuO}$ ,  $4\text{WO}_3$ ,  $6\text{NH}_3 + 8\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  Nearly insol. in dil  $\text{NH}_4\text{OH} + \text{Aq}$  (Briggs, Chem. Soc. 1904. 85. 676.)

Didymium tungstate,  $\text{Dy}_2(\text{WO}_4)_3$ .

Precipitate. (Frerichs and Smith, A. 191. 355)

Didymium metatungstate.

Sol. in  $\text{H}_2\text{O}$ . (Scheibler)

Didymium sodium tungstate,  $\text{DyNa}_3(\text{WO}_4)_3$ .

Acid Sol. in  $\text{H}_2\text{O}$ . Slowly sol. in dil. acids Sol. in conc  $\text{HCl} + \text{Aq}$

$\text{DyNa}_3(\text{WO}_4)_3$ . As above. (Högbom, Bull. Soc. (2) 42. 2.)

Erbium sodium tungstate,  $\text{Na}_3\text{Er}_2(\text{WO}_4)_6$ .

Insol. in  $\text{H}_2\text{O}$ . (Högbom.)

Glucinum metatungstate.

Very sol. in  $\text{H}_2\text{O}$ .

Indium tungstate,  $\text{In}_2(\text{WO}_4)_3 + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . Decomp. by acids. (Renz, Dissert. 1902.)

Iron (ferrous) tungstate,  $\text{FeWO}_4$ .

Min. *Ferberite*, *Resmite*

+  $3\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$  Sol. in cold  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ , or  $\text{HNO}_3 + \text{Aq}$ . Decomp. by boiling acids with separation of  $\text{WO}_3$  Sol. in boiling  $\text{H}_3\text{PO}_4 + \text{Aq}$  or warm  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ . (Anthon, J. pr. 9. 343)

+  $\text{rH}_2\text{O}$  Very unstable (Lefort, A. ch. (5) 15. 314.)

Iron (ferrous) ditungstate,  $\text{FeW}_2\text{O}_7$  (?).

Insol. in  $\text{H}_2\text{O}$  Sol. in hot  $\text{H}_3\text{PO}_4 + \text{Aq}$  or  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$  Decomp. by dil  $\text{HCl} + \text{Aq}$  or by  $\text{KOH} + \text{Aq}$  (Ebelmen, C. R. 17. 1198)

+  $\text{rH}_2\text{O}$  Very unstable. (Lefort.)

Iron (ferrous) tritungstate,  $\text{FeW}_3\text{O}_{10} + 4\text{H}_2\text{O}$  (?).

Ppt. Decomp. by cold, more rapidly by hot  $\text{H}_2\text{O}$  (Lefort)

Iron (ferrous) metatungstate.

Sol. in  $\text{H}_2\text{O}$ . (Scheibler, J. pr. 83. 315)

Iron (ferric) tungstate, basic,  $\text{Fe}_2\text{O}_3$ ,  $2\text{WO}_3 + 4\text{H}_2\text{O}$ .

Sol. in about 50 pts  $\text{H}_2\text{O}$ . (Lefort.)

$2\text{Fe}_2\text{O}_3$ ,  $3\text{WO}_3 + 6\text{H}_2\text{O}$  Sol. in about 300 pts  $\text{H}_2\text{O}$  at  $15^\circ$ . (Lefort)

Iron (ferric) tritungstate (?),  $\text{Fe}_2\text{O}_3$ ,  $4\text{WO}_3 + 4\text{H}_2\text{O} = \text{Fe}_2\text{O}_3$ ,  $3\text{WO}_3 + \text{WO}_3$ ,  $4\text{H}_2\text{O}$  (?).

Sol. in  $\text{H}_2\text{O}$  without decomp (Lefort.)

Iron (ferric) metatungstate.

Sol. in  $\text{H}_2\text{O}$ . (Scheibler, J. pr. 83. 273.)

Iron (ferrous) manganous tungstate,  $7\text{FeWO}_4$ ,  $\text{MnWO}_4$ .

(Geuther and Forsberg, A. 120. 277.)

$4\text{FeWO}_4$ ,  $\text{MnWO}_4$ . (G. and F.)

$3\text{FeWO}_4$ ,  $\text{MnWO}_4$ . Partially sol. in conc.

$\text{HCl} + \text{Aq}$ . (G. and F.)

$3\text{FeWO}_4$ ,  $2\text{MnWO}_4$  (G. and F.)

$\text{FeWO}_4$ ,  $\text{MnWO}_4$ . (Zettnow, Pogg. 130. 250.)

$\text{FeWO}_4$ ,  $2\text{MnWO}_4$ . (G. and F.)

$\text{FeWO}_4$ ,  $7\text{MnWO}_4$ . (G. and F.)

$x\text{FeWO}_4$ ,  $y\text{MnWO}_4$ . Min. *Wolftramite*. Sol. in  $\text{HCl} + \text{Aq}$ , and boiling  $\text{H}_3\text{PO}_4 + \text{Aq}$ .

Lanthanum tungstate,  $\text{La}_2(\text{WO}_4)_3$ .

Precipitate

Lanthanum metatungstate.

Sol. in  $\text{H}_2\text{O}$  (Scheibler.)

Lanthanum silver tungstate.

See Lanthanocotungstate, silver.

Lanthanum sodium tungstate,  $\text{Na}_3\text{La}_2(\text{WO}_4)_7$ .

Insol. in  $\text{H}_2\text{O}$ . Slowly sol. in dil. acids.

Sol. in  $\text{HCl} + \text{Aq}$

$\text{La}_2\text{Na}_3(\text{WO}_4)_6$  As above. (Högbom, Bull. Soc. (2) 42. 2.)

**Lead tungstate,  $PbWO_4$ .**

Insol in  $H_2O$  or cold  $HNO_3 + Aq$ . Sol. in  $KOH + Aq$ . Decomp. by hot  $HNO_3 + Aq$  (Anthon, J. pr. 9. 342)

Sol. in about 4000 pts.  $H_2O$  (Lefort)  
Min *Scheele's*, *Stolz's*. Sol. in  $KOH + Aq$ ; decomp. by  $HNO_3$ .

Absolutely insol. in  $NH_4NO_3 + Aq$  (Smith and Bradbury, B. 24. 2930.)

**Lead ditungstate,  $PbW_2O_7 + 2H_2O$  (?).**

\* Sol. in about 80 pts.  $H_2O$  at  $15^\circ$ . (Lefort)

**Lead tritungstate,  $PbW_3O_{10} + 2H_2O$  (?).**

\* Ppt. (Lefort)

**Lead metatungstate,  $PbW_4O_{13} + 5H_2O$ .**

Sl. sol. in cold, more in hot  $H_2O$ . Sol. in hot  $HNO_3 + Aq$  (Scheibler, J. pr. 83. 318)

**Lead paratungstate,  $Pb_2W_7O_{24}$ .**

Insol. in  $H_2O$ , dil.  $HNO_3 + Aq$ ,  $(NH_4)_2WO_4 + Aq$ , or  $Pb(NO_3)_2 + Aq$ . Sol. in  $NaOH + Aq$  or boiling  $H_3PO_4 + Aq$ . (Lotz, A. 91. 49)

**Lead sodium paratungstate,  $PbO, 4Na_2O, 12WO_3 + 28H_2O$ .**

(Gonzalez)

**Lithium tungstate,  $Li_2WO_4$ .**

Rather easily sol. in  $H_2O$  (Gmelin.)

**Lithium metatungstate,  $Li_2W_4O_{13}$ .**

Insol. in  $H_2O$  (Knorre, J. pr. (2) 27. 94.)  
 $+ xH_2O$ . Syrup. (Scheibler.)

**Lithium paratungstate,  $Li_{10}W_{13}O_{41} + 33H_2O$  (or  $Li_6W_7O_{34} + 19H_2O$ ).**

According to Scheibler, more sol. than the paratungstates of the other alkali metals

**Lithium tungstate tungsten oxide,  $Li_2W_6O_{18}$ .**

*Lithium bronze*. Insol. in  $H_2O$ .

**Lithium potassium tungstate tungsten oxide,  $Li_2W_6O_{18}, 3K_2W_6O_{12}$ .**

*Lithium potassium bronze*. Insol. in  $H_2O$ . (Feit, B. 21. 135.)

**Lithium sodium tungstate,  $Li_2WO_4 + 3H_2O, 3(Na_2WO_4 + 3H_2O)$ .**

(Traube, N. Jahrb. Miner, 1894, I. 190.)

**Magnesium tungstate,  $MgWO_4$ .**

*Anhydrous*. Insol. in  $H_2O$ . Gradually decomp. by boiling conc.  $HNO_3 + Aq$ . (Geuther and Forsberg, A. 120. 272)

$+ 3H_2O$ . Very sol. in  $H_2O$ ; nearly insol. in alcohol. (Lefort, A. ch. (5) 15. 329)

$+ 7H_2O$ . Slowly sol. in cold, very easily in hot  $H_2O$ . (Ullik, W. A. B. 56. 2. 152.)

**Magnesium ditungstate,  $MgW_2O_7 + 8H_2O$  (?).**

Sol. in about 100 pts.  $H_2O$  (Lefort)

**Magnesium tritungstate,  $MgW_3O_{10} + 4H_2O$  (?).**

Easily sol. in  $H_2O$  with gradual decomp. (Lefort)

**Magnesium metatungstate,  $MgW_4O_{13} + 8H_2O$ .**

Sol. in  $H_2O$ . (Scheibler)

**Magnesium paratungstate,  $Mg_2W_7O_{24} + 24H_2O$ .**

Very difficultly sol. in cold, somewhat sol. in hot  $H_2O$  (Knorre, B. 19. 825)

**Magnesium potassium tungstate,  $MgWO_4, K_2WO_4$ .**

$+ 2H_2O$ . Very sl. sol. in  $H_2O$ . (Ullik)  
 $+ 6H_2O$ . Precipitate

**Magnesium potassium paratungstate,  $5(\frac{1}{3}K_2O, \frac{1}{3}MgO), 12WO_3 + 24H_2O$ .**

Insol. in cold, sol. in hot  $H_2O$ . (Hallopeau, C. R. 1898, 127. 621.)

**Magnesium sodium paratungstate,  $3MgO, 3Na_2O, 14WO_3 + 33H_2O$ .**

Nearly insol. in  $H_2O$ . (Knorre, B. 19. 825)

**Manganous tungstate,  $MnWO_4$ .**

Min *Hübnerite*. Partially sol. in  $HCl + Aq$   
 $+ 2H_2O$ . Insol. in  $H_2O$ ; sol. in warm  $H_3PO_4$  and  $H_2C_2O_4 + Aq$ , sl. sol. in  $HC_2H_3O_2 + Aq$ . Insol. in cold  $HCl + Aq$ . (Anthon.)  
 $+ H_2O$ . Sol. in about 2500 pts.  $H_2O$  at  $15^\circ$  (Lefort)

**Manganous ditungstate,  $MnW_2O_7 + 3H_2O$  (?).**

Sol. in about 450 pts.  $H_2O$  at  $15^\circ$  (Lefort, A. ch. (5) 15. 333)

**Manganous tritungstate,  $MnW_3O_{10} + 5H_2O$  (?).**

Decomp. by  $H_2O$  into  $MnW_2O_7$  and  $MnW_4O_{13}$  (Lefort, A. ch. (5) 17. 480.)

**Manganous metatungstate,  $MnW_4O_{13} + 10H_2O$ .**

Very sol. in  $H_2O$ . (Wyrouboff, Bull. Soc. Min. 1892, 15. 82)

**Manganous paratungstate,  $5MnO, 12WO_3 + 34H_2O$ .**

(Gonzalez, J. pr. (2) 36. 44)

$Mn_2W_7O_{24} + 11H_2O$ . When recently pptd., sol. in a small amt. of  $H_2O$  acidulated with  $HNO_3$ . (Lotz.)

**Manganous potassium tungstate,  $2MnO, 3K_2O, 12WO_3 + 16H_2O$ .**

Completely insol. in  $H_2O$ . (Hallopeau, Bull. Soc. 1898, (3) 19. 955.)

**Manganous sodium paratungstate**,  $3\text{Na}_2\text{O}$ ,  $3\text{MnO}$ ,  $14\text{WO}_3 + 36\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (Knorre, B 19. 826.)

**Manganic sodium tungstate.**

See Permanganotungstate, sodium.

**Mercurous tungstate**,  $\text{Hg}_2\text{WO}_4$

Insol in  $\text{H}_2\text{O}$  (Anthon)

Impossible to obtain pure, as it is decomp. into—

$2\text{Hg}_2\text{O}$ ,  $3\text{WO}_3 + 8\text{H}_2\text{O}$  Sol. in 100 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Lefort)

**Mercurous metatungstate**,  $\text{Hg}_2\text{W}_2\text{O}_{13} + 25\text{H}_2\text{O}$ .

Ppt (Scheibler, J pr 83. 319.)

**Mercuric tungstate**,  $\text{HgWO}_4$

Sl sol in  $\text{H}_2\text{O}$  and very unstable. (Lefort, A. ch. (5) 15. 356.)

$3\text{HgO}$ ,  $2\text{WO}_3$ . Insol. in  $\text{H}_2\text{O}$ . (Anthon.)

$2\text{HgO}$ ,  $3\text{WO}_3$ . Insol. in  $\text{H}_2\text{O}$  (Anthon)

$3\text{HgO}$ ,  $5\text{WO}_3 + 5\text{H}_2\text{O}$  Sol in about 250 pts  $\text{H}_2\text{O}$  at  $15^\circ$  (Lefort)

$2\text{HgO}$ ,  $5\text{WO}_3 + 7\text{H}_2\text{O}$  Decomp by hot or cold  $\text{H}_2\text{O}$ . (Lefort, C R 88. 798.)

**Mercuric tritungstate**,  $\text{HgW}_3\text{O}_{10} + 7\text{H}_2\text{O}$  (?).

Sol in about 120 pts  $\text{H}_2\text{O}$  at  $15^\circ$ . (Lefort, A ch (5) 15. 360)

**Molybdenum tungstate.**

Easily sol. in  $\text{H}_2\text{O}$ . Insol in  $\text{NH}_4\text{Cl} + \text{Aq}$  or in alcohol of 0.87 sp. gr (Berzelius)

**Neodymium tungstate**,  $\text{Nd}_2(\text{WO}_4)_3$

Very sl. sol. in  $\text{H}_2\text{O}$ . 1 pt. is sol. in 52630 pts.  $\text{H}_2\text{O}$  at  $22^\circ$ , 59580 pts at  $65^\circ$ ; 68040 pts at  $98^\circ$ . (Hutchcock, J Am Chem Soc. 1895, 17. 532)

**Nickel tungstate**,  $\text{NiWO}_4$ .

$+3\text{H}_2\text{O}$  Sol in about 1000 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ . (Lefort)

$+6\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$  or  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ . Sol in boiling  $\text{H}_3\text{PO}_4 + \text{Aq}$ ,  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ , or in warm  $\text{NH}_4\text{OH} + \text{Aq}$ . (Anthon)

**Nickel ditungstate**,  $\text{NiW}_2\text{O}_7 + 5\text{H}_2\text{O}$  (?).

Sol in about 250 pts.  $\text{H}_2\text{O}$  (Lefort)

**Nickel tritungstate**,  $\text{NiW}_3\text{O}_{10} + 4\text{H}_2\text{O}$  (?).

Sol in  $\text{H}_2\text{O}$ . Pptd. by alcohol Decomp. by cold or warm  $\text{H}_2\text{O}$  after above pptn. (Lefort)

**Nickel metatungstate**,  $\text{NiW}_4\text{O}_{13} + 8\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Scheibler, J pr. 83. 273.)

**Nickel paratungstate**,  $\text{Ni}_2\text{W}_2\text{O}_{11} + 14\text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$  Sl sol in  $\text{H}_2\text{C}_2\text{O}_4 + \text{Aq}$ . Completely sl sol in warm  $\text{H}_3\text{PO}_4$  or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Anthon.)

**Potassium tungstate**,  $\text{K}_2\text{WO}_4$ .

*Anhydrous.* Rather deliquescent. Easily sol in  $\text{H}_2\text{O}$ .

$+ \text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$  Insol in alcohol

$+ 2\text{H}_2\text{O}$  Very sol. in  $\text{H}_2\text{O}$  with absorption of heat.

1 pt. dissolves in 1.94 pts cold, and 0.66 pt. boiling  $\text{H}_2\text{O}$  Alcohol does not mix with conc. aq. solution, but slowly separates out the salt from it. Acids, even  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$ ,  $\text{H}_3\text{PO}_4$  or  $\text{H}_2\text{C}_2\text{O}_4$ , separate out  $\text{WO}_3$  from solution. (Riche, A. ch (3) 60. 45)

**Potassium ditungstate**,  $\text{K}_2\text{W}_2\text{O}_7 + 2\text{H}_2\text{O}$ .

Sol in about 8 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , but on heating is converted into—

$+ 8\text{H}_2\text{O}$  100 pts.  $\text{H}_2\text{O}$  dissolve only 2-3 pts. at  $15^\circ$ . (Lefort, A. ch. (5) 9. 102)

**Potassium tritungstate**,  $\text{K}_2\text{W}_3\text{O}_{10} + 2\text{H}_2\text{O}$ .

Sol. in 5-6 pts.  $\text{H}_2\text{O}$  at  $15^\circ$  Can be recryst. from hot  $\text{H}_2\text{O}$ . (Lefort, A. ch (5) 9. 105)

**Potassium metatungstate**,  $\text{K}_2\text{W}_4\text{O}_{13} + 5\text{H}_2\text{O}$ .

Not efflorescent. Easily sol in  $\text{H}_2\text{O}$ . (Marignac.)

$(\text{K}_4\text{W}_6\text{O}_{17} + 8\text{H}_2\text{O}$  of Margueritte)

$+ 8\text{H}_2\text{O}$  Extremely efflorescent (Scheibler)

**Potassium octatungstate**,  $\text{K}_2\text{W}_8\text{O}_{28}$ .

Insol. in  $\text{H}_2\text{O}$ . (Knorre, J pr. (2) 27. 49)

**Potassium tungstate**,  $\text{K}_2\text{W}_{10}\text{O}_{34} + 9\text{H}_2\text{O} = 4\text{K}_2\text{O}$ ,  $10\text{WO}_3 + 9\text{H}_2\text{O}$ .

Properties resemble the paratungstate. (Gibbs, Proc Am Acad. 18. 11)

$+ 8\text{H}_2\text{O} = \text{K}_4\text{W}_8\text{O}_{28} + 4\text{H}_2\text{O}$  Sol in 15 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , but decomposed by heating into  $\text{K}_2\text{W}_2\text{O}_7$  and  $\text{K}_2\text{W}_6\text{O}_{18}$  (Lefort, A. ch. (5) 9. 104.)

$\text{K}_{10}\text{W}_{12}\text{O}_{47}$  Very difficulty sol. in cold, appreciably sol in hot  $\text{H}_2\text{O}$ , probably with decomposition (Knorre.)

**Potassium paratungstate**,  $\text{K}_{10}\text{W}_{12}\text{O}_{47} + 11\text{H}_2\text{O}$  (or  $\text{K}_4\text{W}_7\text{O}_{24} + 6\text{H}_2\text{O}$ , according to Lotz and Scheibler)

Much more sol in hot than cold  $\text{H}_2\text{O}$ . (Anthon)

Sol in 100 pts  $\text{H}_2\text{O}$  at  $15^\circ$ , in 8.5 pts at  $100^\circ$  (Anthon)

Sol in 46.5 pts. cold, and 15.15 pts boiling  $\text{H}_2\text{O}$ . (Riche)

By shaking the crystals several days at  $20^\circ$ , 1 pt dissolves in 71 pts  $\text{H}_2\text{O}$  If the salt is treated with boiling water, more goes into solution the longer it is boiled, until after several days' boiling 1 pt of the salt dissolved in 5.52 pts  $\text{H}_2\text{O}$  at  $18^\circ$ . Kept in a closed flask, this solution contained after 26 days 1 pt of salt to 11.9 pts  $\text{H}_2\text{O}$ ; after 153 days, 1 pt of salt to 15.6 pts  $\text{H}_2\text{O}$ ; after 334 days, 1 pt of salt to 15.6 pts  $\text{H}_2\text{O}$  Insol in alcohol (Marignac)

$+ 8\text{H}_2\text{O}$ .

**Potassium sodium tungstate**,  $K_2WO_6$ ,  $2Na_2WO_4 + 14H_2O$ .

Easily sol. in hot and cold  $H_2O$  (Ullk, W. A. B. 58, 2, 150.)  
Deliquescent. Sol in 1 pt. cold, and  $\frac{1}{2}$  pt. hot  $H_2O$ . (Anthon.)

**Potassium sodium paratungstate**,  $Na_2O$ ,  $4K_2O$ ,  $12WO_3 + 15H_2O$ .

Sol in  $H_2O$  (Marignac.)  
 $\frac{8}{11}Na_2O$ ,  $\frac{3}{11}K_2O$ ,  $12WO_3 + 25H_2O$ . Sol in  $H_2O$ . (Marignac.)

**Potassium strontium tungstate tungsten oxide**,  $5K_2W_6O_{13}$ ,  $SrW_6O_{12}$ .  
(Engels, Z. anorg. 1903, 37, 143.)

**Potassium uranous tungstate.**

See Uranosotungstate, potassium.

**Potassium zirconium tungstate.**

See Zirconotungstate, potassium.

**Potassium tungstate tungsten oxide**,  $K_2WO_4$ ,  $W_2O_6$ .

*Potassium tungsten bronze.* (Scheibler, J. pr. 83 321.)

Formula is  $K_3W_6O_{13}$ . Not attacked by acids, and only very sl. by alkalis (Knorre, J. pr. (2) 27, 49.)

$K_2WO_4$ ,  $4WO_3$ . Not attacked by acids, even HF, or by alkalis + Aq. Insol in alcohol. (Zettnow, Pogg, 130, 262.)  
Does not exist (Knorre.)

**Potassium sodium tungstate tungsten oxide**,  $5K_2W_6O_{13} + 2Na_4W_6O_{18}$ .

*Potassium sodium tungsten bronze* Properties as potassium bronze.

$3K_2W_6O_{13}$ ,  $2Na_4W_6O_{18}$ . As above (Knorre, J. pr. (2) 27, 49.)

**Praseodymium tungstate**,  $Pr_2(WO_4)_3$ .

Very sl. sol. in  $H_2O$ .

Insol. in  $H_2O$  at  $20^\circ$ ; at  $75^\circ$ , 1 pt. is sol. in 23,800 pts.  $H_2O$  (Hitchcock, J. Am. Chem. Soc. 1895, 17, 529.)

**Rubidium metatungstate**,  $Rb_2O$ ,  $4WO_3 + 8H_2O$ .

Sol in about 10 pts. cold  $H_2O$ .

Moderately sol. in warm  $H_2O$ . (Wyruboff, Bull. Soc. Min. 1892, 15, 69.)

**Rubidium pentatungstate**,  $Rb_5W_5O_{16}$ .

Almost insol. in hot  $H_2O$ . When finely powdered, it is sol. in alkali carbonates + Aq (Schaeffer, Z. anorg. 1904, 38, 163.)

**Rubidium octotungstate**,  $Rb_8W_8O_{22}$ .

Insol. in  $H_2O$ , acids, and alkalis (Schaeffer, Z. anorg. 1904, 38, 103.)

**Rubidium paratungstate**,  $5Rb_2O$ ,  $12WO_3 + 18H_2O$ .

Very sl. sol. in  $H_2O$  (Schaeffer, Z. anorg. 1904, 38, 173.)

**Samarium metatungstate**,  $Sm_2O_3$ ,  $12WO_3 + 35H_2O$ .

Easily sol. in  $H_2O$ . (Cleve.)

**Samarium sodium tungstate**,  $Na_2Sm_4(WO_4)_6$ .

Insol. in  $H_2O$ . Slowly sol. in dil. acids, easily in conc. HCl + Aq. (Högbom, Bull. Soc. (2) 42, 2.)

**Silver (argentous) tungstate**,  $Ag_2O$ ,  $2WO_3$ .

$HNO_3$  + Aq separates  $WO_3$ . KOH + Aq dissolves out  $WO_3$  and separates  $Ag_2O$  (Wöhler and Rautenberg, A. 114, 120.)

Does not exist. (Muthmann, B. 20, 983.)

**Silver tungstate**,  $Ag_2WO_4$ .

Sol in about 2000 pts  $H_2O$  at  $15^\circ$ . Easily decomp. by NaCl + Aq or  $HNO_3$  + Aq (Lefort.)

$Ag_2W_2O_7$ . Insol. in  $H_2O$ . Nearly insol. in  $HCl$ ,  $H_2O_2$  or  $H_3PO_4$  + Aq. More sol. in KOH,  $NH_4OH$  + Aq, or  $H_2C_2O_4$  + Aq. (Anthon, J. pr. 9, 347.)

+  $H_2O$ . Sol in about 5000 pts  $H_2O$  at  $15^\circ$  (Lefort.)

**Silver metatungstate**,  $Ag_2W_6O_{13} + 3H_2O$ .

Sl. sol. in  $H_2O$ . (Scheibler, J. pr. 83, 318.)

Nearly insol. in  $H_2O$ . (Rosenheim, Z. anorg. 1911, 69, 250.)

**Silver paratungstate**,  $Ag_{10}W_{12}O_{41} + 8H_2O$ .

(Gonzalez, J. pr. (2) 38, 44.)

**Silver tungstate ammonia**,  $Ag_3WO_4$ ,  $4NH_3$ .

Sol in  $H_2O$  with rapid decomp (Widmann, Bull. Soc. (2) 20, 64.)

**Sodium tungstate**,  $Na_2WO_4 + 2H_2O$ .

Sol. in 4 pts. cold, and 2 pts. boiling  $H_2O$ . (Vauquelin and Hecht.)

Sol in 1 l pts. cold, and 0.5 pt. boiling  $H_2O$ . (Anthon.)

Sol. in 2.44 pts.  $H_2O$  at  $0^\circ$ , 1.81 pts. at  $15^\circ$ ; 0.81 pt. at  $100^\circ$ . (Riche.)

Solubility in  $H_2O$  at  $t^\circ$ .

$t^\circ$	% $Na_2WO_4$	Mols. $H_2O$ to 1 mol $Na_2WO_4$	Mols of anhydrous salt to 100 mols $H_2O$

(Funk, B. 1900, 33. 3701.)

**Sodium ditungstate,  $\text{Na}_2\text{W}_2\text{O}_7$ .**

Sol. in  $\text{H}_2\text{O}$  by heating several hours to  $130^\circ$ – $150^\circ$  (Knorre, J. pr (2) 27. 80.)  
+  $6\text{H}_2\text{O}$ . Sol. in 13 pts  $\text{H}_2\text{O}$  at  $15^\circ$ . (Lefort, C R. 88. 798.)

**Sodium tritungstate,  $\text{Na}_2\text{W}_3\text{O}_{13} + 4\text{H}_2\text{O}$ .**

Sol in 1 pt  $\text{H}_2\text{O}$ . Decomp. on standing into sol *tetratingstate* and insol *ditungstate* (Lefort, C R. 88. 798.)

Neither this nor the other *tritungstates* of Lefort exist, according to Knorre (J. pr. (2) 27. 49.)

**Sodium metatungstate,  $\text{Na}_2\text{W}_6\text{O}_{21}$ .**

Anhydrous. Insol in  $\text{H}_2\text{O}$   
+  $10\text{H}_2\text{O}$ . Sol. at  $13^\circ$  in 0.935 pt.  $\text{H}_2\text{O}$  to form a solution of 3.02 sp. gr. (Scheibler.)  
Sol. at  $19^\circ$  in 0.195 pt.  $\text{H}_2\text{O}$ . (Forcher.)  
Precipitated by alcohol.

**Sodium pentatungstate,  $\text{Na}_2\text{W}_5\text{O}_{18}$ .**

Sl. sol. in  $\text{H}_2\text{O}$  by heating 3 hours at  $150^\circ$ . (Knorre, J. pr. (2) 27. 49.)

**Sodium octotungstate,  $\text{Na}_2\text{W}_8\text{O}_{24}$ .**

Insol in  $\text{H}_2\text{O}$ . Very difficultly attacked by acids and alkalis. (Knorre)  
+  $12\text{H}_2\text{O}$ . Easily sol. in cold  $\text{H}_2\text{O}$ , and can be recryst. without decomp. (Ulrik, W. A. B. 56, 2. 157.)

$3\text{Na}_2\text{O}$ ,  $8\text{WO}_3 + 17\text{H}_2\text{O}$ . Very efflorescent. Very sol. in hot  $\text{H}_2\text{O}$ . (Wells, J. Am. Chem. Soc. 1907, 29. 112.)

**Sodium tungstate,  $\text{Na}_2\text{W}_2\text{O}_7$  (?)**

+  $16\text{H}_2\text{O}$  (?). (Magnac, A. ch. (3) 69. 51.)

+  $21\text{H}_2\text{O}$  (?). Much more sol. and much more rapidly than the paratungstate (Magnac.)

$\text{Na}_2\text{W}_2\text{O}_{11} + 7\text{H}_2\text{O}$  (?). Mixture of  $\text{Na}_2\text{W}_4\text{O}_{13}$  and  $\text{Na}_2\text{WO}_4$ . (Knorre, J. pr. (2) 27. 49.)

$\text{Na}_2\text{W}_3\text{O}_{17} + 11\text{H}_2\text{O}$ . Efflorescent. Sol. in  $\text{H}_2\text{O}$  (Magnac.)

100 pts  $\text{H}_2\text{O}$  dissolve 16 pts at  $15^\circ$  (Lefort, A. ch (5) 9. 97.)

Formula is  $4\text{Na}_2\text{O}$ ,  $10\text{WO}_3 + 23\text{H}_2\text{O}$ , according to Gibbs (Proc. Am. Acad. 16. 5.)

**Sodium paratungstate**,  $\text{Na}_{10}\text{W}_{12}\text{O}_{41} + 21\text{H}_2\text{O}$ .  
 $+ 25\text{H}_2\text{O}$ .  
 $+ 28\text{H}_2\text{O} = 3\text{Na}_2\text{W}_7\text{O}_{24} + 16\text{H}_2\text{O}$ , according to Lotz and Scheibler.

Sol. in 8 pts cold  $\text{H}_2\text{O}$  (Anthon), in 12 6 pts at 22° (Forehor)

Sol. in about 12 pts.  $\text{H}_2\text{O}$  (Marignac)  
 The aqueous solution saturated at 35-40° contained to 1 pt. of the salt, after

1	12	77	227	410 days,
at 18°	18°	18°	16°	20°
9.25	11.26	10.92	11.90	11.74 pts. $\text{H}_2\text{O}$ .

The solution saturated by very long boiling, after a part of the salt had crystallised out, contained, after:

1	2	12 days,
0.68	0.91	2.59 pts. $\text{H}_2\text{O}$ to 1 pt. salt,
72	222	405 days,
6.88	9.75	8.80 pts. $\text{H}_2\text{O}$ to 1 pt. salt.

(Marignac.)

Decomp by boiling with  $\text{H}_2\text{O}$  (Knorre, B. 18. 2362.)

**Sodium strontium paratungstate**,  $\text{Na}_2\text{O}$ ,  $4\text{SrO}$ ,  $12\text{W}_7\text{O}_{24} + 29\text{H}_2\text{O}$   
 (Gonzalez, J. pr (2) 36. 44.)

**Sodium strontium tungstate tungsten oxide**,  $5\text{Na}_2\text{W}_7\text{O}_{24}$ ,  $\text{SrW}_6\text{O}_{12}$ .  
 $12\text{Na}_2\text{W}_7\text{O}_{24}$ ,  $\text{SrW}_6\text{O}_{12}$  (Engels, Z anorg 1903, 37. 138.)

**Sodium thorium tungstate**,  $\text{Na}_4\text{Th}(\text{WO}_4)_4$ .  
 Insol in  $\text{H}_2\text{O}$ . Slowly sol in dil. acids, easily in conc.  $\text{HCl} + \text{Aq}$  (Högbom, Bull Soc. (2) 42. 2.)

**Sodium ytterbium tungstate**,  $\text{Yb}_2\text{O}_3$ ,  $9\text{Na}_2\text{O}$ ,  $12\text{WO}_3$ .  
 Insol. in  $\text{H}_2\text{O}$ . (Cleve, Z. anorg 1902, 32. 154.)  
 $2\text{Yb}_2\text{O}_3$ ,  $4\text{Na}_2\text{O}$ ,  $7\text{WO}_3$ . Ppt. (Cleve)

**Sodium yttrium tungstate**,  $\text{Na}_4\text{Y}_2(\text{WO}_4)_7$ .  
 Insol in  $\text{H}_2\text{O}$ , and very slowly attacked by dil. acids. (Högbom, Bull. Soc (2) 42. 2.)

**Sodium zinc paratungstate**,  $\text{Na}_2\text{O}$ ,  $2\text{ZnO}$ ,  $7\text{WO}_3 + 15\text{H}_2\text{O}$ .  
 Difficultly sol. in cold, more sol in hot  $\text{H}_2\text{O}$ . (Knorre, B. 19. 823)  
 $+ 21\text{H}_2\text{O}$ . (Knorre.)

**Sodium tungstate tungsten oxide**,  $\text{Na}_2\text{WO}_4$ ,  $\text{W}_2\text{O}_6$ .

*Yellow tungsten bronze*. Gradually de-hydrates on air. Not decomp by any acid, even aqua regia, except  $\text{HF}$ , or by alkalis. (Wöhler, Pogg 2. 350)

Correct formula is  $\text{Na}_2\text{W}_6\text{O}_{18}$ , according to Phillip (B. 15. 499)

Sol in ammoniacal silver solution with separation of Ag. Easily sol. in boiling alkaline potassium ferricyanide + Aq (Phillip, B. 12. 2234.)

$\text{Na}_2\text{WO}_4$ ,  $2\text{W}_2\text{O}_5$ . *Blue tungsten bronze*. Not attacked by acids or alkalis (Scheibler.) Correct formula is  $\text{Na}_2\text{W}_6\text{O}_{18}$ , according to Phillip (B. 15. 506)

Sol. in ammoniacal silver solution with separation of Ag

$\text{Na}_4\text{W}_6\text{O}_{18}$  Properties as above. (Phillip, B. 15. 499.)

$\text{Na}_2\text{W}_2\text{O}_5$  Properties as above (Phillip.)

**Strontium tungstate**,  $\text{SrWO}_4$ .

Precipitate (Schultze.)  
 Sol in about 700 pts  $\text{H}_2\text{O}$ . (Lefort)

**Strontium ditungstate**,  $\text{SrW}_2\text{O}_7 + 3\text{H}_2\text{O}$  (?).  
 100 cem  $\text{H}_2\text{O}$  dissolve 0.35 g at 15°. (Lefort, A. ch. (5) 15. 326.)

**Strontium tritungstate**,  $\text{SrW}_3\text{O}_{10} + 5\text{H}_2\text{O}$  (?).  
 Sol. in  $\text{H}_2\text{O}$  with decomp. into  $\text{SrW}_2\text{O}_7$  and  $\text{SrW}_4\text{O}_{12}$  (Lefort, A. ch. (5) 17. 477)

**Strontium metatungstate**,  $\text{SrW}_4\text{O}_{13} + 8\text{H}_2\text{O}$ .  
 Solubility as calcium metatungstate. (Scheibler.)  
 Extraordinarily sol. in  $\text{H}_2\text{O}$  (Wyruboff, Bull Soc Min 1892, 15. 63)

**Strontium paratungstate**,  $\text{Sr}_2\text{W}_7\text{O}_{24} + 16\text{H}_2\text{O}$ , or  $\text{Sr}_2\text{W}_{12}\text{O}_{41} + 27\text{H}_2\text{O}$ .  
 Insol in cold, sl. sol in hot  $\text{H}_2\text{O}$ . (Knorre, B. 18. 327)

**Thallous tungstate**,  $\text{Tl}_2\text{WO}_4$ .  
 Very sl. sol in  $\text{H}_2\text{O}$  Sol in hot  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . (Flemming, J B 1868. 250.)

**Thallous metatungstate**,  $\text{Tl}_2\text{W}_4\text{O}_{13} + 3\text{H}_2\text{O}$ .  
 Nearly insol. in  $\text{H}_2\text{O}$  (Rosenheim, Z. anorg 1911, 69. 251.)

**Thallous paratungstate**,  $5\text{Tl}_2\text{O}$ ,  $12\text{WO}_3$ .  
 Insol in  $\text{H}_2\text{O}$ .  
 Sol. in  $\text{Na}_2\text{CO}_3 + \text{Aq}$  and  $\text{KOH} + \text{Aq}$ . decomposed by mineral acids (Schaeffer, Z anorg 1904, 38. 171)

**Thallous hydrogen tungstate**,  $\text{TlHWO}_4$ .  
 Insol in  $\text{H}_2\text{O}$ . Difficultly sol. in  $\text{NH}_4\text{OH} + \text{Aq}$ . Easily sol. in boiling alkali carbonates or hydrates + Aq. (Oetlinger, J. B. 1864. 254.)

**Thorium tungstate**.

Precipitate (Berzelius)  
 Insol. in  $\text{H}_2\text{O}$ .

**Tin (stannous) tungstate**,  $\text{SnWO}_4 + 6\text{H}_2\text{O}$ .  
 Insol in  $\text{H}_2\text{O}$  Sol in oxalic acid and in  $\text{KOH} + \text{Aq}$  Slowly sol. in hot  $\text{H}_3\text{PO}_4 + \text{Aq}$ . (Anthon, J. pr. 9. 341.)

**Tin (stannic) tungstate**,  $9\text{SnO}_2, 13\text{WO}_3$ .

Insol. in ammonium tungstate + Aq. Sol. in tin salts + Aq, also in phosphoric, oxalic, or tartaric acids + Aq (Lotz, A. 91. 49.)

**Tungsten tungstate**,  $\text{WO}_3, \text{WO}_3 = \text{W}_2\text{O}_6$ .

See Tungsten oxide,  $\text{W}_2\text{O}_6$

**Uranous tungstate**,  $\text{UO}_2, 3\text{WO}_3 + 6\text{H}_2\text{O}$ .

Decomp. by  $\text{NaOH}$  + Aq or  $\text{HNO}_3$  + Aq. Sol. in  $\text{HCl}$  + Aq, but not in  $\text{H}_2\text{SO}_4$ . (Rammelsberg)

**Uranyl tungstate**,  $\text{UO}_2, \text{WO}_3 + 2\text{H}_2\text{O}$ .

Sol. in about 100 pts.  $\text{H}_2\text{O}$ . (Lefort, C. R. 87. 748)

$\text{UO}_2, 3\text{WO}_3 + 5\text{H}_2\text{O}$  (?) Sol. in about 200 pts.  $\text{H}_2\text{O}$  (Lefort)

**Vanadium tungstate**.

Sl. sol. in  $\text{H}_2\text{O}$ .

**Ytterbium tungstate basic**,  $(\text{YbO})_2\text{WO}_4$ .

Ppt. (Cleve, Z. anorg. 1902, 32. 153.)

**Ytterbium metatungstate**,  $\text{Yb}_2\text{O}_3, 12\text{WO}_3 + 35\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Cleve.)

**Yttrium tungstate**,  $\text{Y}_2(\text{WO}_4)_3 + 6\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ , but more sol. in  $\text{Na}_2\text{WO}_4$  + Aq (Berlin)

**Zinc tungstate**,  $\text{ZnWO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Geuther and Foisberg, A. 120. 270)

+  $\text{H}_2\text{O}$  Sol. in 500 pts.  $\text{H}_2\text{O}$ .

**Zinc ditungstate**,  $\text{ZnW}_2\text{O}_7 + 3\text{H}_2\text{O}$  (?)

Sol. in 10 pts.  $\text{H}_2\text{O}$  at  $15^\circ$ , but solution soon decomposes. (Lefort.)

**Zinc tritungstate**,  $\text{ZnW}_3\text{O}_{10} + 5\text{H}_2\text{O}$ .

Insol. in boiling  $\text{H}_2\text{O}$ . Sol. in  $\text{ZnSO}_4$  + Aq, or  $\text{Na}_4\text{W}_3\text{O}_{17}$  + Aq (Gibbs)

**Zinc metatungstate**,  $\text{ZnW}_2\text{O}_7 + 10\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  Loses crystal  $\text{H}_2\text{O}$  by ignition, and becomes insol. in  $\text{H}_2\text{O}$  (Scheibler, J. pr. 83. 273.)

+  $8\text{H}_2\text{O}$  More sol. in  $\text{H}_2\text{O}$  than magnesium comp. (Wyrouboff, Bull. Soc. Min. 1892, 15. 72)

**Zinc tungstate**,  $\text{Zn}_2\text{W}_2\text{O}_{14} + 18\text{H}_2\text{O} = 4\text{ZnO}, 10\text{WO}_3 + 18\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  Sol. in excess of zinc sulphate or of sodium tungstate + Aq. (Gibbs, Proc. Am. Acad. 15. 14.)

+  $29\text{H}_2\text{O}$ . (Gibbs)

**Zinc paratungstate**,  $5\text{ZnO}, 12\text{WO}_3 + 37\text{H}_2\text{O}$ .

(Gonzalez, J. pr. (2) 36. 44.)

**Zinc tungstate**,  $\text{Zn}_2\text{W}_{22}\text{O}_{75} + 66\text{H}_2\text{O} = 9\text{ZnO}, 22\text{WO}_3 + 66\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$ . (Gibbs.)

**Zinc tungstate ammonia**,  $\text{ZnWO}_4, 4\text{NH}_3 + 3\text{H}_2\text{O}$ .

Decomp. in the air (Briggs, Chem. Soc. 1904, 85. 677)

**Pertungstic acid**

See Pertungstic acid.

**Tungstoarsenic acid**.

See Arseniotungstic acid.

**Tungstoboric acid**.

See Borotungstic acid.

**Tungstocyanhydric acid**,  $\text{H}_4\text{W}(\text{CN})_8 + 6\text{H}_2\text{O}$ .

Hydrosopic.

Sol. in  $\text{H}_2\text{O}$  and abs. alcohol Insol. in ether, benzene etc. (Olsson, Z. anorg. 1914, 88. 71)

**Ammonium tungstocyanide**,  $(\text{NH}_4)_4\text{W}(\text{CN})_8$ .

Easily sol. in  $\text{H}_2\text{O}$  Aqueous solution decomp. slowly

Insol. in organic solvents (Olsson, Z. anorg. 1914, 88. 62)

**Cadmium tungstocyanide**,  $\text{Cd}_2\text{W}(\text{CN})_8 + 8\text{H}_2\text{O}$ .

Nearly insol. in  $\text{H}_2\text{O}$ . Sl. sol. in dil.  $\text{HCl}$ . Sol. in conc.  $\text{NH}_4\text{OH}$  + Aq Insol. in organic solvents (Olsson, Z. anorg. 1914, 88. 68.)

**Cæsium tungstocyanide**,  $\text{Cs}_4\text{W}(\text{CN})_8$ .

Easily sol. in  $\text{H}_2\text{O}$  forming stable solutions Insol. in alcohol and other organic solvents (Olsson)

**Calcium tungstocyanide**,  $\text{Ca}_2\text{W}(\text{CN})_8 + 8\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Aqueous solution decomp. slowly

Insol. in organic solvents. (Olsson.)

**Lead tungstocyanide**,  $\text{Pb}_2\text{W}(\text{CN})_8 + 4\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  Solution decomp. after short time

Insol. in organic solvents. (Olsson.)

**Magnesium tungstocyanide**,  $\text{Mg}_2\text{W}(\text{CN})_8 + 6\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$  Aqueous solution decomp. on heating

Insol. in organic solvents (Olsson.)

**Manganous tungstocyanide**,  $\text{Mn}_2\text{W}(\text{CN})_8 + 8\text{H}_2\text{O}$ .

Insol. in  $\text{H}_2\text{O}$  and in acids

Insol. in organic solvents. (Olsson.)

**Potassium tungstocyanide**,  $K_4W(CN)_8 + 2H_2O$ .

Easily sol in  $H_2O$  from which it can be cryst. 10 ccm  $H_2O$  dissolve 13-14 g salt at 18°.

Insol in alcohol, ether and other organic solvents. (Olsson.)

**Rubidium tungstocyanide**,  $Rb_4W(CN)_8 + 8H_2O$ .

Easily sol in  $H_2O$ . Can be cryst from  $H_2O$ . Insol in alcohol and other organic solvents. (Olsson.)

**Silver tungstocyanide**,  $Ag_4W(CN)_8$ .

Insol in  $H_2O$ .

Insol in acids. Decomp by dil HCl

Sol. in hot conc.  $NH_4OH + Aq$ .

Insol. in organic solvents. (Olsson.)

**Sodium tungstocyanide**,  $Na_4W(CN)_8 + 2\frac{1}{2}H_2O$ .

Hydroscopic.

Easily sol. in  $H_2O$ .

Insol. in organic solvents. (Olsson.)

**Strontium tungstocyanide**,  $Sr_4W(CN)_8 + 8H_2O + 9H_2O$ .

Easily sol. in  $H_2O$ . Aqueous solution decomp. on standing

Insol in organic solvents. (Olsson.)

**Thallium tungstocyanide**,  $Tl_4W(CN)_8$ .

Difficultly sol in cold  $H_2O$ , more sol in hot  $H_2O$

Insol in organic solvents (Olsson.)

**Zinc tungstocyanide**,  $Zn_2W(CN)_8 + 4H_2O$ .

Insol in  $H_2O$ , and acids

Sol. in conc.  $NH_4OH + Aq$ . (Olsson.)

**Metatungstolodic acid**.

**Ammonium metatungstolodate**,  $2(NH_4)_2O, 2Li_2O, 4WO_3 + 12H_2O$ .

Very sl sol in  $H_2O$ . (Chrétien, A. ch. 1898, (7) 15. 431)

**Potassium tungstolodate**,  $K_2H_2WIO_6$ .

(Blomstrand, J. pr. (2) 40. 327.)

$2K_2O, 2Li_2O, 4WO_3 + 8H_2O$ .

5.13 g. are sol in 1 l.  $H_2O$  at 15°; 8.25 g. at 100°. (Chrétien, A. ch. 1898, (7) 15. 431.)

**Tungstoperiodic acid**.

**Ammonium sodium tungstoperiodate**,  $2(NH_4)_2O, Na_2O, Li_2O, 2WO_3 + 16H_2O$ .

Ppt. (Rosenheim, A. 1899, 308. 64)

**Barium tungstoperiodate**,  $5BaO, Li_2O, 12WO_3 + 12H_2O$ .

Ppt. (Rosenheim.)

**Potassium tungstoperiodate**,  $5K_2O, Li_2O, 12WO_3 + 8H_2O$ .

Sol in  $H_2O$ . (Rosenheim.)

**Sodium tungstoperiodate**,  $3Na_2O, Li_2O, 2WO_3 + 4H_2O$ .

Ppt  $5Na_2O, Li_2O, 12WO_3 + 16H_2O$  Sol. in  $H_2O$  (Rosenheim)

**Strontium tungstoperiodate**,  $5SrO, Li_2O, 12WO_3 + 28H_2O$ .

Sol. in  $H_2O$ . (Rosenheim)

**Tungstophosphoric acid**,

See Phosphotungstic acid.

**Tungstosilicic acid**,

See Silicotungstic acid.

**Tungstotungstic acid**.

**Lithium tungstotungstate**,  $Li_2O, WO_3 + WO_3, 3WO_3$ .

Insol. in boiling  $H_2O$  and conc. HCl. (Hallopeau, C. R. 1898, 127. 514)

**Potassium tungstotungstate**,  $K_2O, WO_3 + WO_3, 3WO_3$ .

Insol. in hot  $H_2O$ , and conc. HCl (Hallopeau, Bull. Soc. 1899, (3) 21. 267.)

**Tungstous acid**.

**Sodium tungstite**,  $Na_2W_2O_6$ .

See Tungstate tungsten oxide, sodium.

**Tungstovanadic acid**.

See Vanadiotungstic acid.

**Tungstyl dibromide**,  $WO_3Br_2$ .

Not decomp by cold  $H_2O$ . (Roscoe.)

**Tungstyl tetrabromide**,  $WOBr_4$ .

Extremely deliquescent. Decomposes at once in moist air or with  $H_2O$ .

**Tungstyl dichloride**,  $WO_2Cl_2$ .

Not decomp. by cold, and but slowly by boiling  $H_2O$ . Sol in alkalis and ammonia.

**Tungstyl tetrachloride**,  $WOCl_4$ .

Easily decomp. by  $H_2O$  or moist air.

Very sol in  $CS_2$  and  $S_2Cl_2$ . Sl. sol. in benzene. (Smith, J. Am. Chem. Soc. 1899, 21. 1008)

**Tungstyl tetrafluoride**,  $WOF_4$ .

Sol in  $H_2O$  with decomp. Very hydroscopic.

Insol. in carbon tetrachloride.

Sl. sol in carbon bisulphide, dry benzene and ether.

Easily sol in chloroform and absolute alcohol (Ruff, Z. anorg. 1907, 52. 265)

**Tungstyl tetrafluoride ammonia**,  $2\text{WOF}_4 \cdot \text{NH}_3$ .

Sol in  $\text{H}_2\text{O}$  with decomp.  
Insol in liquid  $\text{NH}_3$ . (Ruff, Z. anorg 1907, 52. 266.)

**Ultramarine blue**,  $2\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_8 \cdot \text{Na}_2\text{S}_2$  (?)

Not attacked by solutions of alkalis or  $\text{NH}_4\text{OH} + \text{Aq}$ . Decomp by acids or acid salts + Aq. Decomp by alum + Aq.

**Ultramarine green**,  $\text{Na}_3\text{Al}_3\text{Si}_3\text{O}_8 \cdot \text{Na}_2\text{S}$  (?)

Decomp by mineral acids. Not attacked by alkalis. Decomp by alum + Aq.

**Ultramarine white**,  $2\text{Na}_2\text{Al}_2\text{Si}_2\text{O}_8 \cdot \text{Na}_2\text{S}$  (?)

**Uranic acid**,  $\text{H}_2\text{UO}_4$ .

Insol in  $\text{H}_2\text{O}$ . Sol in acids. Very sol in cold dil.  $\text{HNO}_3 + \text{Aq}$ . Sl. sol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$ . Insol in  $\text{KOH}$ ,  $\text{NaOH}$ , or  $\text{NH}_4\text{OH} + \text{Aq}$ . Easily sol in  $(\text{NH}_4)_2\text{CO}_3$ ,  $\text{KHCO}_3$ , and  $\text{NaHCO}_3 + \text{Aq}$ ; less in  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Ebelmen.)

Easily sol. in malic and tartaric acids to form complex compds (Itzig, B. 1901, 34. 3822.)

$\text{H}_4\text{UO}_5$ . Insol. in  $\text{H}_2\text{O}$ ; sol in acids. (Ebelmen.)

#### Uranates.

Insol in  $\text{H}_2\text{O}$ ; sol in acids.

#### Ammonium uranate.

Sl. sol. in pure  $\text{H}_2\text{O}$ ; insol. in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{OH}$ .

Sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$  (Peligot, A. ch. (3) 5. 11.)

$(\text{NH}_4)_2\text{O}$ ,  $4\text{UO}_3 + 7\text{H}_2\text{O}$ . (Grubler, Dissert, 1908.)

$(\text{NH}_4)_2\text{O}$ ,  $6\text{UO}_3 + 10\text{H}_2\text{O}$ . Insol in cold and hot  $\text{H}_2\text{O}$  and alkalies + Aq. Very sol in  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and acetic acid + Aq (Zehenter, M. 1900, 21. 235.)

#### Barium uranate, $\text{BaUO}_4$ .

Insol in  $\text{H}_2\text{O}$ . Sol in dil. acids.

$\text{BaU}_2\text{O}_7$ . As above (Ditte, C. R. 95. 988)

$\text{BaU}_2\text{O}_{10} + 4\frac{1}{2}\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ ,  $\text{KOH} + \text{Aq}$ , and alcohol.

Easily sol. in cold dil.  $\text{HCl}$  or  $\text{HNO}_3$  and in hot acetic acid (Zehenter, M. 1904, 25. 200.)

$\text{Ba}_2\text{U}_2\text{O}_{17} + 8\text{H}_2\text{O}$ . Nearly insol. in hot or cold  $\text{H}_2\text{O}$ ,  $\text{KOH} + \text{Aq}$ , and alcohol.

Easily sol. in cold dil.  $\text{HCl}$  or  $\text{HNO}_3$  and in hot acetic acid. (Zehenter.)

$\text{Ba}_2\text{U}_2\text{O}_{25} + 11\text{H}_2\text{O}$ . Same properties as  $\text{BaU}_2\text{O}_{10}$ . (Zehenter.)

**Bismuth uranate**,  $\text{Bi}_2\text{O}_3 \cdot \text{UO}_3 + \text{H}_2\text{O}$ .

Min. *Uranosphagrite*.

**Calcium uranate**,  $\text{CaUO}_4$ .

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids (Ditte, C. R. 95. 988)

$\text{CaU}_2\text{O}_7$ . Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids. (Ditte)

**Cobalt uranate**.

Insol. in  $\text{H}_2\text{O}$ , sol. in  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ . (Persoz, J. pr. 3. 216)

Sol. in  $\text{HNO}_3 + \text{Aq}$ , insol. in  $\text{KNO}_3 + \text{Aq}$ . (Ebelmen, A. ch. (3) 5. 222.)

**Cupric uranate**,  $\text{CuU}_2\text{O}_7$ .

Insol. in  $\text{H}_2\text{O}$  (Debray, A. ch. (3) 61. 451.)

**Lead uranate**,  $\text{PbUO}_4$ .

If ignited, very difficultly sol. in  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$  (Wertheim, J. pr. 25. 228)

Insol. in  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 + \text{Aq}$ . (Persoz) 3PbO,  $2\text{UO}_3$ . Sol. in dil.  $\text{HNO}_3 + \text{Aq}$ . (Ditte, A. ch. (6) 1. 338.)

$\text{Pb}_2\text{U}_2\text{O}_{10}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ .

Insol. in  $\text{KOH} + \text{Aq}$ ,  $\text{NH}_4\text{OH}$  and cold acetic acid. Sol. in hot acetic acid. (Zehenter, M. 1904, 25. 215.)

$\text{Pb}_2\text{U}_2\text{O}_{10} + 4\text{H}_2\text{O}$ . Insol. in hot or cold  $\text{H}_2\text{O}$ . Sol. in  $\text{HNO}_3$ . Insol. in  $\text{KOH} + \text{Aq}$ ,  $\text{NH}_4\text{OH}$ , alcohol and ether. Sl. sol. in cold, more easily sol. in hot acetic acid. (Zehenter.)

**Lithium uranate**,  $\text{Li}_2\text{UO}_4$ .

Insol. in  $\text{H}_2\text{O}$ , but decomp. thereby. Sol. in dil. acids

**Magnesium uranate**,  $\text{MgUO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . Nearly insol. in cold  $\text{HCl} + \text{Aq}$ . Slowly sol. in  $\text{HCl} + \text{Aq}$  on warming,

and more rapidly by addition of a little  $\text{HNO}_3 + \text{Aq}$ . (Ditte)

$\text{MgU}_2\text{O}_7$ . Ppt. (Berzelius.)

**Neodymium uranate**,  $\text{Nd}_2(\text{UO}_2)_3 + 18\text{H}_2\text{O}$ .

Ppt (Orloff, Ch. Z. 1907, 31. 1119.)

**Potassium uranate**,  $\text{K}_2\text{UO}_4$  (?)

Insol. in  $\text{H}_2\text{O}$ ; sol. in dil. acids, etc., exactly as  $\text{Na}_2\text{UO}_4$ . (Ditte)

$\text{K}_2\text{U}_2\text{O}_7 + 6\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. acids, even acetic acid (Zimmermann, B. 14. 440.)

Insol. in  $\text{K}_2\text{CO}_3 + \text{Aq}$ , but easily sol. in alkali hydrogen carbonates + Aq. Sol. in  $\text{HCl} + \text{Aq}$ . (Ebelmen, A. ch. (3) 5. 220.)

$\text{K}_2\text{O}$ ,  $4\text{UO}_3 + 5\text{H}_2\text{O}$ . (Zehenter, M. 1900, 21. 235.)

$\text{K}_2\text{O}$ ,  $6\text{UO}_3 + 6\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$  (Drenckmann, Zeit. ges. Nat. 17. 113.)

$+ 10\text{H}_2\text{O}$ . Nearly insol. in cold and hot  $\text{H}_2\text{O}$ . Easily sol. in hot acetic acid, dil.  $\text{H}_2\text{SO}_4$ ,  $\text{HCl}$  and  $\text{HNO}_3$ . Insol. in  $\text{KOH} + \text{Aq}$ , alcohol and ether ((Zehenter, M. 1900, 21. 235.)

**Potassium hydroxylamine-uranate,**

Sl. sol. in  $\text{H}_2\text{O}$ , insol. in alcohol (Hofmann, A. 1899, 307. 318)

**Rubidium uranate,  $\text{RbUO}_4$** 

Insol. in  $\text{H}_2\text{O}$  (Ditte, A. ch. (6) 1. 338)

**Silver uranate,  $\text{Ag}_2\text{UO}_4$** 

Insol. in  $\text{H}_2\text{O}$  Easily sol. in acids. (Albeggoff, A. 233. 117.)

**Sodium uranate,  $\text{Na}_2\text{UO}_4$  (?)**

Insol. in  $\text{H}_2\text{O}$ , sol. in dil. acids. Sol. in alkali carbonates + Aq. (Ditte.)

$\text{Na}_2\text{U}_2\text{O}_7 + 6\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . Sol. in dil. acids. (Stolba, Z. anal. 3. 74.)

$\text{Na}_2\text{O}$ ,  $3\text{UO}_3$ . Insol. in  $\text{H}_2\text{O}$  Easily sol. in very dil. acids. (Drenckmann.)

$\text{Na}_2\text{O}$ ,  $5\text{UO}_3 + 5\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ , alcohol,  $\text{NH}_4\text{OH}$ ,  $\text{KOH}$  + Aq. Sol. in  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$ . Sl. sol. even on boiling in conc. acetic acid. (Zehenter, M. 1900, 21. 235.)

**Sodium hydroxylamine uranate,**

Sol. in  $\text{H}_2\text{O}$  (Hofmann, A. 1899, 307. 319)  
 $\text{UO}_4(\text{NH}_2\text{ONa})_2 + 6\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$  (Hofmann)

**Strontium uranate,  $\text{SrUO}_4$** 

Insol. in  $\text{H}_2\text{O}$  Sol. in dil. acids.

$\text{SrU}_2\text{O}_7$  As above. (Ditte, C. R. 95. 988)

Very sl. sol. in  $\text{H}_2\text{O}$ . Sol. in all acids especially oxalic.

+  $\text{H}_2\text{O}$  Very sl. sol. in  $\text{H}_2\text{O}$  Sol. in all acids especially oxalic. (J. C. C. 1896, II. 512)

**Thallous uranate.**

Ppt. (Bolton, Am. Chemist, 1872, 2. 456.)

**Zinc uranate.**

Insol. in  $\text{H}_2\text{O}$ ; sol. in  $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2$  + Aq (Persoz, J. pr. 3. 216) Sol. in  $\text{HNO}_3$  + Aq, insol. in  $\text{KNO}_3$ , and  $\text{NH}_4\text{NO}_3$  + Aq (Ebelmen, A. ch. (3) 5. 221)

**Peruranic acid.**

See Peruranic acid.

**Uranium, U.**

Not attacked by  $\text{H}_2\text{O}$  Slowly decomp. by cold dil.  $\text{H}_2\text{SO}_4$  + Aq, rapidly on warming. Easily sol. in dil. or conc.  $\text{HCl}$  + Aq. Fused U is slightly attacked by conc. or fuming  $\text{HNO}_3$ , or conc.  $\text{H}_2\text{SO}_4$ . Amorphous U, however, is easily attacked thereby. Not attacked by acetic acid,  $\text{KOH}$ ,  $\text{NaOH}$ , or  $\text{NH}_4\text{OH}$  + Aq. (Zimmermann, B. 16. 849)

When finely divided, it is decomp. by  $\text{H}_2\text{O}$  slowly at ordinary temps. and rapidly at  $100^\circ$ . (Moissan, C. R. 1896, 122. 1091.)

**Uranium antimonide,  $\text{U}_3\text{Sb}_2$** 

Violently attacked by conc.  $\text{HNO}_3$  (Cobani, C. R. 1903, 137. 383)

**Uranium arsenide,  $\text{U}_3\text{As}_2$** 

Violently attacked by conc.  $\text{HNO}_3$  (Cobani, C. R. 1903, 137. 383)

**Uranium boride,  $\text{UB}_2$** 

Sol. in  $\text{HNO}_3$  and HF. Decomp. by fused alkalis (Wedekind, B. 1913, 46. 1204.)

**Uranium tribromide,  $\text{UBr}_3$** 

Very hygroscopic. Sol. in  $\text{H}_2\text{O}$  with hissing (Albeggoff, A. 233. 117)

**Uranium tetrabromide,  $\text{UBr}_4$** 

Anhydrous. Very deliquescent. Sol. in  $\text{H}_2\text{O}$  with hissing (Hermann)

Insol. in alcohol. (v. Unruh, Dissert, 1909.)

Sol. in acetone (Eidmann, C. C. 1899, II. 1014); methyl acetate (Naumann, B. 1909, 42. 3790); ethyl acetate. (Naumann, B. 1904, 37. 3601)

+  $8\text{H}_2\text{O}$  Very deliquescent, and sol. in  $\text{H}_2\text{O}$  (Rammelsberg)

**Uranium carbide,  $\text{UC}_2$** 

(Ruff and Hemzelmann, Z. anorg. 1911, 71. 72)

Attacked slowly by  $\text{H}_2\text{O}$ . Slowly attacked by cold dil.  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$  or  $\text{HNO}_3$  + Aq. Conc. acids, except  $\text{HNO}_3$ , react sl. in the cold, violently on heating. (Moissan, Bull. Soc. 1897, (3) 17. 12)

Sol. in fused  $\text{KNO}_3$  and  $\text{KClO}_3$ ; sol. in dil. acids in the cold and in conc. acids on heating; decomp. by  $\text{H}_2\text{O}$ . (Moissan, C. R. 1896, 122. 276.)

**Uranium trichloride,  $\text{UCl}_3$** 

Very sol. in  $\text{H}_2\text{O}$  (Peligot)

Very unstable (Zimmermann)

Very hygroscopic Sol. in  $\text{H}_2\text{O}$  with decomp. Sol. in conc.  $\text{HCl}$  and solution is much more stable than aqueous one (Rosenheim and Loebel, Z. anorg. 1908, 57. 234)

**Uranium tetrachloride,  $\text{UCl}_4$** 

Anhydrous Extremely deliquescent

Sol. in  $\text{H}_2\text{O}$  with evolution of heat Decomp. on boiling Sol. in  $\text{NH}_4\text{Cl}$  + Aq without decomp.

$\text{HCl}$  increases its solubility in  $\text{H}_2\text{O}$  (Alof, Dissert 1901.)

Sol. in alcohol, acetone, acetic ether, benzene ether Insol. in ether,  $\text{CHCl}_3$  and  $\text{C}_6\text{H}_6$  (Loebel)

Sol. in ethyl acetate (Naumann, B. 1904, 37. 3601.)

**Uranium pentachloride,  $\text{UCl}_5$** 

Deliquescent Sol. in  $\text{H}_2\text{O}$  with evolution of heat and decomposition. (Roscoe, B. 7. 1131)

Sol. in acetic acid, acetic ether, benzaldehyde, glycerine, benzyl alcohol (trace), nitrobenzene (trace), xylidine and p-toluidine (on warming)

Insol. in aniline, ligroin, pyridine, quinoline, thioethyl ether, thioamyl ether and  $\text{CS}_2$  (Pimmer, Dissert. 1904.)

Sol in abs alcohol Insol in ether,  $\text{C}_6\text{H}_6$ , nitrobenzene, ethylene bromide. Sl sol in  $\text{CCl}_4$  and  $\text{CHCl}_3$  Sol in benzoic ether, acetone and trichloroacetic acid. Best solvents are ethyl acetate and benzoinital. Sol in many organic compounds containing oxygen. (Loebel, Dissert. 1907.)

**Uranium difluoride,  $\text{UF}_2 + 2\text{H}_2\text{O}$ .**

Ppt (Giolitti and Agamennone, C. C. 1905, I 1130)

**Uranium tetrafluoride,  $\text{UF}_4$ .**

Insol in  $\text{H}_2\text{O}$  Very sl sol in dil. acids Sol in hot conc  $\text{H}_2\text{SO}_4$ , and slowly in warm conc  $\text{HNO}_3 + \text{Aq}$  (Bolton, J. B. 1866. 209.)

**Uranium hexafluoride,  $\text{UF}_6$ .**

Very sol in  $\text{H}_2\text{O}$  (Ditte, A. ch (6) 1. 339)

Fumes in the air

Very hygroscopic; sol. in  $\text{H}_2\text{O}$  (Ruff, B 1909, 42. 495)

Very hygroscopic. Sol. in  $\text{H}_2\text{O}$  Nearly insol. in  $\text{CS}_2$  Insol. in paraffine oil Sol in symmetrical tetrachloroethane (best solvent),  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , and nitrobenzene (v Unruh, Dissert. 1909.)

Decomp. by  $\text{H}_2\text{O}$ , alcohol and ether Nearly insol in  $\text{CS}_2$

Sol in  $\text{CHCl}_3$ ,  $\text{CCl}_4$ , nitrobenzene and  $\text{C}_2\text{H}_5\text{Cl}$ . (Ruff, Z. anorg 1911, 72. 81.)

**Uranium hydrogen fluoride,  $\text{UF}_3 \cdot \text{SHF}$  (?).**

Sol in  $\text{H}_2\text{O}$ . (Ditte)

Is  $\text{UO}_2\text{F}_2 \cdot \text{HF} + \text{H}_2\text{O}$  (Smithells)

**Uranous hydroxide,  $\text{UO}_2 \cdot x\text{H}_2\text{O}$ .**

Easily sol in dil. acids

Insol in alkali hydrates and carbonates + Aq (Berzelius)

Sol. in alkali carbonates + Aq (Rammelsberg.)

$\text{U}(\text{OH})_4$  Sol in dil acids (Aloy, Bull. Soc 1899, (3) 21. 613)

**Uranouranic hydroxide,  $\text{U}_2\text{O}_5 \cdot 6\text{H}_2\text{O}$  (?).**

Easily sol in acids

Decomp by  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ , which dis-solves out  $\text{UO}_2$ . (Berzelius)

**Uranic hydroxide.**

See Uranic acid.

**Uranium tetraiodide,  $\text{UI}_4$**

Sol. in  $\text{H}_2\text{O}$ . (Günchard, C. R. 1907, 145. 921.)

**Uranium iodide.**

Sol in ethyl acetate.. (Naumann, B. 1904 37. 3601.)

**Uranium nitride,  $\text{U}_3\text{N}_4$ .**

(Colani, C. R. 1903, 137. 383.)

**Uranium suboxide,  $\text{UO}$  (?).**

(Guyard, Bull. Soc. (2) 1. 89)

Does not exist. (Zimmermann, A. 213. 301.)

$\text{UO}_2$  (?) Ppt. Decomp. by  $\text{H}_2\text{O}$  and in the air (Peligot)

**Uranium dioxide (Uranous oxide),  $\text{UO}_2$ .**

Insol. in dil.  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

Sol. in conc  $\text{H}_2\text{SO}_4$ , and easily in  $\text{HNO}_3 + \text{Aq}$ . (Peligot.)

Insol. in  $\text{NH}_4\text{Cl} + \text{Aq}$  (Rose.)

Only sl. sol. in  $\text{H}_2\text{SO}_4$ , but a considerable amount is converted into the sulphate which is nearly insol in  $\text{H}_2\text{SO}_4$

Slowly sol in  $\text{HCl}$ , the amount dissolved in a given time varying widely with the method of preparation of the oxide. (Colani, C. R. 1912, 155. 1251.)

Sl. more sol. in  $\text{HNO}_3$  than in aqua regia. (Raynaud, Bull. Soc 1912, (4) 11. 802.)

Very sol. in conc  $\text{HNO}_3$ ; less sol in dil.  $\text{HNO}_3$ . 1 gram is sol in 3100 grams  $\text{HCl}$  (1.17) at  $17^\circ$ ; 4650 grams  $\text{HBr}$  (1.52) at  $17^\circ$ ; 2200 grams  $\text{H}_2\text{SO}_4$  (1.79) at  $17^\circ$ ; 12,000 grams acetic acid at  $19^\circ$  (Raynaud, C. R. 1911, 163. 1481.)

Sl attacked by liquid  $\text{NH}_3$ . (Gois, Am. Ch. J. 1898, 20. 830)

Min. *Uraninite*. Easily sol. in warm  $\text{HNO}_3 + \text{Aq}$  Not attacked by  $\text{HCl} + \text{Aq}$

**Uranium trioxide (Uranic oxide),  $\text{UO}_3$ .**

Sol in  $\text{HNO}_3 + \text{Aq}$ . (Peligot.)

Insol. in boiling K tartarate + Aq. (Kahlenberg and Hülyer, Am. Ch. J. 1894, 16. 102.)

Sol. in oleic acid. (Gibbons, Arch. Pharm. 1883, 221. 621)

See Uranic acid.

**Uranium tetroxide,  $\text{UO}_4$ .**

Decomp. by  $\text{HCl} + \text{Aq}$  (Fairley, Chem. Soc. 31. 133.)

+  $2\text{H}_2\text{O}$ . Very hygroscopic (Zimmermann)

+  $3\text{H}_2\text{O}$

**Uranium pentoxide,  $\text{U}_2\text{O}_5$ .**

Sol. in acids. (Peligot.)

Mixture of  $\text{UO}_2$  and  $\text{U}_2\text{O}_5$  (Rammelsberg, Pogg. 59. 5.)

Mixture of  $\text{UO}_2$  and  $\text{U}_2\text{O}_5$  (Zimmermann, A. 232. 273.)

**Uranouranic oxide,  $\text{U}_2\text{O}_5$ .**

Green *uranium oxide*. Very slowly and slightly sol in dil.  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq}$ , more easily when conc. Completely sol in boiling  $\text{H}_2\text{SO}_4$  Easily sol in  $\text{HNO}_3 + \text{Aq}$ .

**Uranous oxychloride,  $\text{UO}_2, \text{UCl}_4 + \text{H}_2\text{O}$ .**

Moderately sol in  $\text{H}_2\text{O}$ . (Aloy, Dissert 1901.)

$2\text{UO}_2, \text{UCl}_4 + \text{H}_2\text{O}$  Very sol. in  $\text{H}_2\text{O}$  and alcohol (Orloff, C. C 1903, II 481.)

$+13\text{H}_2\text{O}$  Very sol in  $\text{H}_2\text{O}$  and alcohol (Orloff.)

$4\text{UO}_2, \text{UCl}_4$ . Very sol. in  $\text{H}_2\text{O}$  and alcohol. (Orloff.)

$5\text{UO}_2, \text{UCl}_4 + 10\text{H}_2\text{O}$  Insol in  $\text{H}_2\text{O}$ . (Aloy, Dissert, 1901.)

**Uranous oxyfluoride,  $\text{UOF}_2 + 2\text{H}_2\text{O}$ .**

(Giolitta and Agamennone, C C 1905, I 1130.)

**Uranous oxysulphide,  $\text{U}_2\text{O}_3\text{S}_4 = \text{UO}_2, 2\text{US}_2$ .**

Slightly attacked by dil. easily by conc  $\text{HCl} + \text{Aq}$ . Sol in cold  $\text{HNO}_3 + \text{Aq}$  (Hermann, J B 1861. 258)

**Uranic oxy-compounds.**

See Uranyl compounds.

**Uranium phosphide,  $\text{U}_2\text{P}_3$ .**

Violently attacked by conc.  $\text{HNO}_3$ . (Colani, C. R. 1903, 137. 383)

$\text{U}_2\text{P}_3$ . Slowly attacked by  $\text{H}_2\text{O}$ , not by dil.  $\text{HCl} + \text{Aq}$ . More easily attacked by conc  $\text{HCl} + \text{Aq}$ . Quickly decomp. by boiling conc  $\text{HNO}_3$  and  $\text{HNO}_3 + \text{HCl}$ . (Colani, A. ch 1907, (8) 12. 59)

**Uranium selenide,  $\text{USe}_2$ .**

Spontaneously inflammable. Sol. in fuming  $\text{HNO}_3$ . (Colani, C. R. 1903, 137. 383)

$\text{USe}_2$ . As  $\text{US}_2$ . (Colani, C C. 1903, II 707.)

$\text{U}_2\text{Se}_3$  (Colani.)

**Uranium disilicide,  $\text{USi}_2$ .**

Sol in cold or hot conc  $\text{HF}$ , insol. in  $\text{HCl}$ ,  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$  and aqua regia. (Defacqz, C. R. 1908, 147. 1051)

**Uranium monosulphide,  $\text{US}$ .**

(Alibegoff, A. 233. 117)

**Uranium sesquisulphide,  $\text{U}_2\text{S}_3$ .**

Not attacked by  $\text{HCl}$  or dil.  $\text{HNO}_3 + \text{Aq}$ . Oxidised by fuming  $\text{H}_2\text{SO}_4$  or aqua regia. (Alibegoff, A. 233. 117.)

**Uranium disulphide,  $\text{US}_2$ .**

Insol. in cold or boiling dil.  $\text{HCl} + \text{Aq}$ . Sol. in cold conc.  $\text{HCl} + \text{Aq}$ . Decomp. by  $\text{HNO}_3 + \text{Aq}$ . (Hermann, J. B. 1861. 258.)

**Uranium telluride,  $\text{U}_2\text{Te}_3$ .**

Violently attacked by conc.  $\text{HNO}_3$ . (Colani, C. R. 1903, 137. 383.)

**Uranosotungstic acid.**

Potassium uranosotungstate,  $9\text{K}_2\text{O}, 6\text{UO}_2, 8\text{WO}_3 + 34\text{H}_2\text{O}$

Insol in  $\text{H}_2\text{O}$  and in  $\text{HCl}$  (Gibbs, Am. Ch J. 1895, 17. 175)

Sodium uranosotungstate,  $12\text{Na}_2\text{O}, 6\text{UO}_2, 8\text{WO}_3 + 25\text{H}_2\text{O}$ .

Insol. in cold  $\text{H}_2\text{O}$  (Gibbs.)

**Uranyl bromide,  $\text{UO}_2\text{Br}_2$ .**

Sol in  $\text{H}_2\text{O}$  (de Coninck, C C 1903, I. 693)

Sol in ether (v. Unruh, Dissert. 1909)

$+7\text{H}_2\text{O}$ . Deliquescent. Sol in  $\text{H}_2\text{O}$

**Uranyl bromide ammonia,  $\text{UO}_2\text{Br}_2, 2\text{NH}_3$ .**

(v Unruh, Dissert 1909.)

$\text{UO}_2\text{Br}_2, 3\text{NH}_3$ . (v Unruh)

$\text{UO}_2\text{Br}_2, 4\text{NH}_3$ . (v Unruh.)

**Uranyl chloride,  $\text{UO}_2\text{Cl}_2$ .**

Anhydrous. Very deliquescent. Sol. in  $\text{H}_2\text{O}$ , alcohol, and ether.

Very sol in  $\text{H}_2\text{O}$ .

Sp. gr. of  $\text{UO}_2\text{Cl}_2 + \text{Aq}$  at  $t^\circ$

$t^\circ$	% $\text{UO}_2\text{Cl}_2$	Sp. gr.
14.6	1	1.0056
16.3	2	1.0112
13.7	3	1.0161
13.1	4	1.0215
14.2	5	1.0260
15.2	6	1.0313
14.3	7	1.0366
14.5	8	1.0418
15.0	9	1.0469
14.8	10	1.0517

(de Coninck, A. ch. 1904, (8) 3. 500)

Sol. in conc  $\text{HCl}$ , conc  $\text{HNO}_3$  and in selenic acid.

Decomp by  $\text{H}_2\text{SO}_4$ . (de Coninck, A. ch 1904, (8) 3. 504.)

Sol. in methyl acetate (Naumann, B 1909, 42. 3790), acetone. (Naumann, B 1904, 37. 4328)

$+ \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , alcohol, and ether  $+ 3\text{H}_2\text{O}$ . Deliquescent.

Very sol. in  $\text{H}_2\text{O}$  1 pt. is sol. in 0.134 pts.  $\text{H}_2\text{O}$  at  $18^\circ$  and solution, which is saturated, contains 76.2%  $\text{UO}_2\text{Cl}_2$  or 88.2%  $\text{UO}_2\text{Cl}_2 + 3\text{H}_2\text{O}$ . Sp. gr of solution = 2.740 The solubility increases with rise in temp.

Sol. in alcohol and in ether. (Mylus and Dietz, B. 1901, 34. 2775)

**Uranyl hydrogen chloride,  $\text{UO}_2\text{Cl}_2, \text{HCl} + 2\text{H}_2\text{O}$ .**

Cryst at  $-10^\circ$  from sat. solution of  $\text{UO}_2\text{Cl}_2$  in  $\text{HCl} + \text{Aq}$ .

Fumes in the air (Aloy, Bull. Soc. 1901, (3) 25. 154.)

**Uranyl chloride ammonia**,  $\text{UO}_2(\text{NH}_4\text{Cl})_2$ .

Decomp. by  $\text{H}_2\text{O}$ . (Regelsberger, A. 227. 119.)

$\text{UO}_2(\text{NH}_4\text{NH}_2\text{Cl})\text{NH}_4\text{Cl}$ . Decomp. by  $\text{H}_2\text{O}$ . (Regelsberger.)

$\text{UO}_2(\text{NH}_4\text{NH}_2\text{Cl})_2$ . Decomp. by  $\text{H}_2\text{O}$ . (Regelsberger.)

**Uranyl fluoride**,  $\text{UO}_2\text{F}_2$ .

Very sol. in  $\text{H}_2\text{O}$ . (Smithells, Chem. Soc. 43. 125.)

Insol. in  $\text{H}_2\text{O}$  or dil. acids. Very sl. sol. in  $\text{HF} + \text{Aq}$ . Sol. in  $\text{H}_2\text{SO}_4 + \text{aqua regia}$ . (Ditte, A. ch. (6) 1. 339.)

Insol. in ether and amyl alcohol. (v. Unruh, Dissert. 1909.)

$\text{UOF}_4$ . Very sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 91. 115.)

True composition is  $\text{UO}_2\text{F}_2$ . (Smithells.)

**Uranyl hydrogen fluoride**,  $\text{UO}_2\text{F}_2 \cdot \text{HF} + \text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Smithells, Chem. Soc. 43. 131.)

**Uranyl fluoride ammonia**,  $\text{UO}_2\text{F}_2 \cdot 2\text{NH}_3$ .

(v. Unruh, Dissert. 1909.)

$\text{UO}_2\text{F}_2 \cdot 3\text{NH}_3$ . (v. Unruh.)

$\text{UO}_2\text{F}_2 \cdot 4\text{NH}_3$ . (v. Unruh.)

**Uranyl iodide**,  $\text{UO}_2\text{I}_2$ .

Ppt. Deliquescent (Aloy, A. ch. 1910, (7) 24. 417.)

Deliquescent

Sol. in alcohol, ether and benzene. (Aloy, Dissert. 1901.)

Sol. in acetone (Eidmann, C. C. 1899, II 1014; Naumann, B. 1904, 37. 4328), methyl acetate. (Naumann, B. 1909, 42. 3790.)

**Uranyl iodide ammonia**,  $\text{UO}_2\text{I}_2 \cdot 2\text{NH}_3$ .

(Aloy, Dissert. 1901.)

$\text{UO}_2\text{I}_2 \cdot 3\text{NH}_3$ . (Aloy.)

$\text{UO}_2\text{I}_2 \cdot 4\text{NH}_3$ . (Aloy.)

**Uranyl selenide**,  $\text{UO}_2\text{Se}$ .

Very slowly decomp. by  $\text{H}_2\text{O}$

Easily sol. in cold  $\text{HCl}$ . Violently attacked by cold  $\text{HNO}_3$ . Not attacked by dil. alkalis. (Mubauer, Z. anorg. 1904, 42. 450.)

**Uranyl sulphide**,  $\text{UO}_2\text{S}$ .

Sl. sol. in pure  $\text{H}_2\text{O}$ . Sol. in dil., insol. in absolute alcohol. Sol. in conc.  $\text{HCl} + \text{Aq}$ , also in dil. acids. Decomp. by caustic alkalis  $+ \text{Aq}$ . Partly sol. in  $(\text{NH}_4)_2\text{S} + \text{Aq}$ .

**Metavanadic acid**,  $\text{HVO}_3$ .

Insol. in  $\text{H}_2\text{O}$ , sol. in acids and alkalis.

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

$+ \frac{1}{2}\text{H}_2\text{O}$ .

See **Vanadium pentoxide**.

**Pyrovanadic acid**,  $\text{H}_4\text{V}_2\text{O}_7$ .

Insol. in  $\text{H}_2\text{O}$ . Sol. in acids and alkalis.

**Vanadates**.

The alkali, Ba, and Pb metavanadates are sl. sol. in  $\text{H}_2\text{O}$ , the others are more easily sol. Insol. in alcohol.

**Aluminum metavanadate**.

Very sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Aluminum divanadate**.

Very sl. sol. in  $\text{H}_2\text{O}$ . (Berzelius.)

**Ammonium metavanadate**,  $(\text{NH}_4)\text{VO}_3$ .

(a) Very slowly and sparingly sol. in cold  $\text{H}_2\text{O}$ . Easily sol. in hot  $\text{H}_2\text{O}$ . (Berzelius.)

Easily sol. in  $\text{H}_2\text{O}$  at about  $70^\circ$ . Very sl. sol. at above and below that temperature (Guyard, Bull. Soc. (2) 25. 355.)

10 g. dissolve in 1 litre cold, and 63 g. in 1 litre hot  $\text{H}_2\text{O}$  with partial decomp. (Ditte, C. R. 102. 918.)

Solubility in  $\text{H}_2\text{O}$  at  $t^\circ$ .

$t^\circ$	Solubility, mol. per litre
18	0.03715
25	0.05189
35	0.08980
45	0.13406
55	0.17041
70	0.25994

(Meyer, Z. Elektrochem. 1909, 15. 266.)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $t^\circ$

$\text{NH}_4\text{OH} + \text{Aq}$	$t^\circ$	Solubility, mol. per litre
0.0677-N	18	0.04783
0.2452-N		0.06798
0.5872-N		0.1029
0.0677-N	25	0.06026
0.2452-N		0.07303
0.5872-N		0.1080

(Meyer, Z. Elektrochem. 1909, 15. 268.)

Extremely sl. sol. in sat.  $\text{NH}_4\text{Cl} + \text{Aq}$ . (v. Hauer.)

Insol. in sat.  $\text{NH}_4\text{Cl} + \text{Aq}$ .

Solubility in salts + Aq at t°.		
Salt solution	t°	Solubility, mol. per litre
0.05-N $\text{NH}_4\text{Cl}$ + Aq	18	0.01419
	25	0.02246
	35	0.04445
	45	0.07575

	25	0.02364
0.1-N $\text{NH}_4\text{NO}_3$ + Aq	18	0.00497
	25	0.01050

(Meyer, Z Elektrochem, 1909, 15. 267.)

Insol. in alcohol. (v. Hauer)

(b) Sol in cold  $\text{H}_2\text{O}$ , from which it is pptd by alcohol (Berzelius)

**Ammonium divanadate**,  $(\text{NH}_4)_2\text{V}_2\text{O}_{11} + 4\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ , from which it is precipitated by sat  $\text{NH}_4\text{Cl}$  + Aq or alcohol. (v. Hauer, W. A. B. 21. 337.)

Correct formula is  $(\text{NH}_4)_2\text{V}_2\text{O}_{10} + 2\text{H}_2\text{O}$ , according to Rammelsberg (B. A. B. 1883. 3.) +  $3\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 102. 918.)

**Ammonium trivanadate**,  $(\text{NH}_4)_3\text{V}_3\text{O}_{16}$ .

Anhydrous. Nearly insol. in hot or cold  $\text{H}_2\text{O}$ . (Norblad, B. 8. 126.)

15 g dissolve in 1 litre of boiling  $\text{H}_2\text{O}$ . (Ditte, C. R. 102. 918.)

+  $5\text{H}_2\text{O}$ . Very sl sol. in  $\text{H}_2\text{O}$ . (Ditte.) +  $6\text{H}_2\text{O}$  (?). Very sol. in  $\text{H}_2\text{O}$ . (v. Hauer, W. A. B. 39. 455.)

Could not be obtained (Norblad; also Rammelsberg, B. A. B. 1883. 3.)

**Ammonium vanadate**,  $(\text{NH}_4)_3\text{V}_3\text{O}_{15} + 2\text{H}_2\text{O}$ .

Correct formula of v. Hauer's divanadate, according to Rammelsberg (B. A. B. 1883. 3.) Sl. sol. in  $\text{H}_2\text{O}$

**Ammonium sesquivanadate**,  $(\text{NH}_4)_4\text{V}_6\text{O}_{17} + 4$  or  $6\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 102. 918.)

**Ammonium pentavanadate**,  $(\text{NH}_4)_5\text{V}_5\text{O}_{27} + 10\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. A. B. 1883. 3.)

**Ammonium hydroxylamine vanadate**,  $\text{VO}_2\text{N}_2\text{H}_4$ .

Rapidly decomp by  $\text{H}_2\text{O}$  (Hofmann and Kohlschütter, Z. anorg 1898, 16. 472.)

$\text{HVO}_3, 3\text{NH}_3\text{O}, 2\text{NH}_3 = \text{VO}_2\text{N}_2\text{H}_4$ . Rapidly decomp by  $\text{H}_2\text{O}$  (Hofmann and Kohlschütter)

**Ammonium potassium vanadate**,  $\text{K}_2\text{V}_4\text{O}_{11}, (\text{NH}_4)_2\text{V}_2\text{O}_{11} + 9\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1844.)

**Ammonium sodium vanadate**,  $\text{Na}_2\text{V}_4\text{O}_{11}, (\text{NH}_4)_2\text{V}_2\text{O}_{11} + 15\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1841.)

**Ammonium uranyl vanadate**,  $(\text{NH}_4)_2\text{O}, 2\text{UO}_2, \text{V}_2\text{O}_5 + \text{H}_2\text{O}$ .

Insol in  $\text{H}_2\text{O}$ ,  $\text{NH}_4\text{OH}$  + Aq, or dil.  $\text{HCl}$  + Aq (Carnot, C. R. 104. 1850.)

**Barium metavanadate**,  $\text{Ba}(\text{VO}_3)_2 + \text{H}_2\text{O}$ .

Somewhat sol in  $\text{H}_2\text{O}$  before ignition Sol in conc  $\text{H}_2\text{SO}_4$  (Berzelius)

**Barium pyrovanadate**,  $\text{Ba}_2\text{V}_2\text{O}_7$ .

Somewhat sol. in  $\text{H}_2\text{O}$ . (Roscoe.)

**Barium vanadate**,  $\text{Ba}_2\text{V}_6\text{O}_{17} + 14\text{H}_2\text{O}$ .

(Ditte, C. R. 104. 1705.)

$\text{Ba}_2\text{V}_{10}\text{O}_{36} + 19\text{H}_2\text{O}$ . 1 pt. is sol. in 5200 pts  $\text{H}_2\text{O}$  at 20-25°. Much more sol. in hot, but decomp by boiling  $\text{H}_2\text{O}$ . (v. Hauer, W. A. B. 21. 344.)

Sol in about 5000 pts.  $\text{H}_2\text{O}$  (Manasse, C. C. 1886. 773.)

$\text{Ba}_4\text{V}_{10}\text{O}_{36} + 2\text{H}_2\text{O}$ . (Norblad.)

**Bismuth vanadate**,  $\text{Bi}_2(\text{VO}_4)_3$ .

Min *Pücherite* Sol. in  $\text{HCl}$  + Aq with evolution of Cl

**Cadmium vanadate**,  $\text{Cd}(\text{VO}_3)_2$ .

(Ditte, C. R. 102. 918.)

$\text{CdV}_2\text{O}_{13} + 24\text{H}_2\text{O}$  Sl. sol in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1705.)

**Cadmium potassium vanadate**,  $\text{CdK}_2\text{V}_4\text{O}_{17} + 9\text{H}_2\text{O}$ .

(Radau, A. 251. 148.)

$\text{Cd}_2\text{V}_{10}\text{O}_{36}, \text{K}_6\text{V}_{10}\text{O}_{36} + 27\text{H}_2\text{O}$  1000 pts.  $\text{H}_2\text{O}$  dissolve 5.4 pts. at 18°. (Radau.)

**Cadmium vanadate bromide**,  $3\text{Cd}_3(\text{VO}_4)_2, \text{CdBr}_2$ .

Very sol. in dil. acids. (de Schulten, Bull. Soc. 1900, (3) 23. 160.)

**Cadmium vanadate chloride**,  $3\text{Cd}_3(\text{VO}_4)_2, \text{CdCl}_2$ .

Very sol. in dil. acids. (de Schulten, Bull. Soc. 1900, (3) 23. 159.)

**Cæsium metavanadate**,  $\text{CsVO}_3$ .

(Chabré, A. ch. 1902, (7) 26. 228.)

**Calcium metavanadate**,  $\text{Ca}(\text{VO}_3)_2 + 4\text{H}_2\text{O}$ .

Much more sol. than  $\text{Sr}(\text{VO}_3)_2$ , and solution is not precipitated by alcohol (Berzelius.)

+  $3\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}_2$ , insol in alcohol (Scheuer, Z anorg 1898, 16. 304)

**Calcium pyrovanadate**,  $\text{Ca}_2\text{V}_2\text{O}_7 + 5\text{H}_2\text{O}$ 

Precipitate.

+  $2\text{H}_2\text{O}$  Very sol. in dil acids. (Ditte C R. 104. 1705)

+  $2\frac{1}{2}\text{H}_2\text{O}$ . (Roscoe)

**Calcium divanadate**,  $\text{CaV}_2\text{O}_{11} + 9\text{H}_2\text{O}$ .

Easily sol in  $\text{H}_2\text{O}$ . (v Hauer.)

When fused is nearly insol in  $\text{H}_2\text{O}$ . (v Hauer.)

+  $6\text{H}_2\text{O}$ . (Manasse, A. 240. 23.)

**Calcium trivanadate**,  $\text{CaV}_3\text{O}_{17} + 12\text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$ . (Ditte, C R. 104. 1705)

**Calcium vanadate**,  $\text{Ca}_3\text{V}_3\text{O}_{21} + 15\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Manasse, A. 204. 23.)

$\text{Ca}_3\text{V}_3\text{O}_{21} + 7\text{H}_2\text{O}$  (?). Sl. sol in  $\text{H}_2\text{O}$ . Probably a mixture. (Manasse, A. 240. 23.)

$\text{Ca}_3\text{V}_3\text{O}_{21} + 26\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (Manasse, A. 240. 23)

**Calcium copper vanadate**,  $(\text{Ca}, \text{Cu})_4\text{V}_2\text{O}_9 + \text{H}_2\text{O}$ .

Min. *Volborthite* Sol. in  $\text{HNO}_3 + \text{Aq}$

**Calcium potassium vanadate**,  $\text{CaK}_2\text{V}_{20}\text{O}_{66} + 22\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Manasse, A. 240. 23.)

**Calcium vanadate chloride**,  $\text{Ca}_3(\text{VO}_4)_2, \text{CaCl}_2$ .

(Hautefeuille, C. R. 77. 896)

**Chromium vanadate**,  $\text{Cr}_2\text{VO}_4$ .

Absolutely insol in  $\text{H}_2\text{O}$  containing  $\text{NH}_4\text{C}_2\text{H}_3\text{O}_2$  and  $\text{HC}_2\text{H}_3\text{O}_2$  (Carnot, C. R. 104. 1850)

**Cobaltous metavanadate**,  $\text{Co}(\text{VO}_3)_2 + 3\text{H}_2\text{O}$ .

Easily sol in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1705)

**Cobaltous potassium vanadate**,  $\text{CoKV}_2\text{O}_{14} + 8\text{H}_2\text{O}$ 

1000 pts  $\text{H}_2\text{O}$  dissolve 4.8 pts. of this salt. (Radau, A. 251. 140.)

$\text{Co}_2\text{K}_2\text{V}_2\text{O}_{20} + 2\frac{1}{2}\text{H}_2\text{O}$ . (Radau.)

**Cupric metavanadate**.

Sol in  $\text{H}_2\text{O}$ . (Berzelius.)

**Cupric pyrovanadate**,  $\text{Cu}_2\text{V}_2\text{O}_7 + 3\text{H}_2\text{O}$ .

Sol. in hot  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1705.) Could not be obtained. (Radau, A. 251. 150.)

**Cupric lead vanadate**,  $5(\text{Cu}, \text{Pb})\text{O}, \text{V}_2\text{O}_5 + 2\text{H}_2\text{O}$ .

Min *Mottramite*,  $3\text{CuO}, \text{V}_2\text{O}_5, 3(3\text{PbO}, \text{V}_2\text{O}_5), 6\text{CuO}_2\text{H}_2 + 12\text{H}_2\text{O}$ . Min. *Psilacanthite*.

**Cupric potassium vanadate**,  $\text{CuKV}_2\text{O}_{14} + 17\text{H}_2\text{O}$ .

Moderately sol. in warm  $\text{H}_2\text{O}$ . 100 pts.  $\text{H}_2\text{O}$  dissolve 11.1 pts. at  $18^\circ$ . (Radau, A. 251. 151.)

**Didymium vanadate**,  $\text{Di}_2(\text{VO}_4)_2$ .

Precipitate (Cleve.)

$\text{Di}_2\text{V}_{10}\text{O}_{30} + 28\text{H}_2\text{O}$ . Precipitate. (Cleve, Bull. Soc. (2) 43. 365.)

**Glucinum metavanadate** (?).

Difficultly sol. in  $\text{H}_2\text{O}$  (Berzelius.)

**Glucinum divanadate** (?).

Difficultly sol. in  $\text{H}_2\text{O}$ . (Berzelius)

**Indium metavanadate**,  $\text{In}(\text{VO}_3)_2 + 2\text{H}_2\text{O}$ .

Ppt., (Renz, Dissert. 1902.)

**Iron (ferrous) metavanadate**.

Ppt. Sol. in  $\text{HCl} + \text{Aq}$ . (Berzelius)

**Iron (ferrie) metavanadate**.

Somewhat sol in  $\text{H}_2\text{O}$ . (Berzelius)

**Lead metavanadate**,  $\text{Pb}(\text{VO}_3)_2$ .

Sl sol in  $\text{H}_2\text{O}$ . Easily sol in warm dil.  $\text{HNO}_3 + \text{Aq}$ . Not completely decomp. by  $\text{H}_2\text{SO}_4$  or by boiling with  $\text{K}_2\text{CO}_3 + \text{Aq}$ . (Berzelius)

Min. *Dechemite* Easily sol. in dil.  $\text{HNO}_3 + \text{Aq}$ , and decomp. by  $\text{HCl} + \text{Aq}$ .

**Lead pyrovanadate, basic**,  $2\text{Pb}_2\text{V}_2\text{O}_7, \text{PbO}$ .

Insol. in boiling  $\text{H}_2\text{O}$  or  $\text{HC}_2\text{H}_3\text{O}_2$ . Decomp. by  $\text{HNO}_3 + \text{Aq}$  with separation of  $\text{V}_2\text{O}_5$ , which dissolves on warming. (Roscoe)

**Lead pyrovanadate**,  $\text{Pb}_2\text{V}_2\text{O}_7$ .

Sol. in warm dil.  $\text{HNO}_3 + \text{Aq}$ . (Ditte, C. R. 104. 1705.)

Min *Descloizite*. Sol in cold dil.  $\text{HNO}_3 + \text{Aq}$ .

**Lead divanadate**,  $\text{PbV}_4\text{O}_{11}$ .

(Ditte, C. R. 104. 1705)

**Lead orthovanadate**,  $\text{Pb}_2(\text{VO}_4)_2$ .

Insol. in  $\text{H}_2\text{O}$ . (Roscoe, A. suppl. 8. 109.)

**Lead zinc orthovanadate**,  $4\text{Pb}_2(\text{VO}_4)_2,$ 

$3\text{Zn}_2(\text{VO}_4)_2$

Min *Eusynchate* Easily sol. in  $\text{HNO}_3 + \text{Aq}$ .

**Lead zinc vanadate**,  $(\text{Pb}, \text{Zn})_2\text{V}_2\text{O}_7 + \text{H}_2\text{O}$ .

Min. *Desclauszite*. Sol in excess of  $\text{HNO}_3 + \text{Aq}$ .

**Lead vanadate chloride**,  $3\text{Pb}_2(\text{VO}_3)_2, \text{PbCl}_2$ .

Min. *Vanadinite*. Easily sol in  $\text{HNO}_3 + \text{Aq}$ .

**Lithium vanadate, basic**,  $\text{Li}_4\text{V}_2\text{O}_7 + 6\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1168.)  
 $\text{Li}_2\text{V}_2\text{O}_7 + \text{H}_2\text{O}$ , and  $14\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$  (Ditte.)

**Lithium metavanadate**,  $\text{LiVO}_3$ .

Easily sol. in  $\text{H}_2\text{O}$ . (Berzelius)  
 $+2\text{H}_2\text{O}$  Quite easily sol in  $\text{H}_2\text{O}$ . (Rammelsberg, B. A. B. 1883. 3.)

**Lithium divanadate**,  $\text{Li}_2\text{V}_2\text{O}_{11} + 9\text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$ . (Norblad)  
Correct formula is  $\text{Li}_2\text{V}_2\text{O}_{11} + 12\text{H}_2\text{O}$  (Rammelsberg.)  
 $+8$ , or  $12\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1168)

**Lithium orthovanadate**,  $\text{Li}_2\text{VO}_4$ .

Insol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. A. B. 1883. 3)

**Lithium pyrovanadate**,  $\text{Li}_4\text{V}_2\text{O}_7 + 4\text{H}_2\text{O}$ .

Very sol. in  $\text{H}_2\text{O}$ . (Rammelsberg, B. 16. 1676.)  
 $+3\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1168.)

**Lithium vanadate**,  $\text{Li}_4\text{V}_2\text{O}_{14} + 7\text{H}_2\text{O}$ .

Difficultly sol in  $\text{H}_2\text{O}$  (Rammelsberg.)  
 $+12\text{H}_2\text{O}$ . Very efflorescent. Correct formula for v. Hauer's divanadate. (Rammelsberg.)

$\text{Li}_4\text{V}_2\text{O}_{17} + 16\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1168.)

$+15\text{H}_2\text{O}$  (Rammelsberg)

$+11\text{H}_2\text{O}$ . (R.)

$+3\text{H}_2\text{O}$  (R.)

$\text{Li}_4\text{V}_2\text{O}_{13} + 15\text{H}_2\text{O}$  Not very easily sol. in

$\text{H}_2\text{O}$  (Rammelsberg)

$\text{Li}_2\text{V}_2\text{O}_{23} + 12\text{H}_2\text{O}$  Moderately sol. in  $\text{H}_2\text{O}$

(Rammelsberg.)

$\text{Li}_{10}\text{V}_{12}\text{O}_{36} + 30\text{H}_2\text{O}$ . Efflorescent. Very

sol. in  $\text{H}_2\text{O}$  (Rammelsberg.)

**Magnesium metavanadate**,  $\text{Mg}(\text{VO}_3)_2$ .

Very easily sol. in  $\text{H}_2\text{O}$ . (Berzelius)  
 $+6\text{H}_2\text{O}$ . Very sol in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1705.)

**Magnesium divanadate**,  $\text{MgV}_2\text{O}_{11} + 8\text{H}_2\text{O}$ .

Difficultly sol. in  $\text{H}_2\text{O}$ , but much more sol. than barium divanadate. (v. Hauer)

$+9\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1705.)

**Magnesium trivanadate**,  $\text{Mg}_3\text{V}_3\text{O}_{17} + 4\frac{1}{2}\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$  (Mansse, A. 240. 23.)

**Magnesium vanadate**,  $\text{Mg}_2\text{V}_{10}\text{O}_{28} + 28\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Sugira and Baker, Chem. Soc. 35. 715)

**Manganous metavanadate**,  $\text{Mn}(\text{VO}_3)_2 + 4\text{H}_2\text{O}$ .

Very sl. sol. in cold, somewhat more sol. in hot  $\text{H}_2\text{O}$ . Easily sol in dil. acids. (Radau, A. 251. 125.)

Sl. sol. in  $\text{H}_2\text{O}_2$ , insol in alcohol (Scheuer, Z. anorg. 1898, 16. 304)

**Manganous pyrovanadate**,  $\text{Mn}_2\text{V}_2\text{O}_7$ .

Sl. sol. in hot dil.  $\text{HNO}_3 + \text{Aq}$  (Ditte, C. R. 96. 1048.)

**Manganous potassium vanadate**,  $\text{MnKV}_2\text{O}_{14} + 8\text{H}_2\text{O}$ .

100 pts.  $\text{H}_2\text{O}$  dissolve 17 pts. salt at  $18^\circ$ .

Easily sol. in acids (Radau, A. 251. 129)

$3\text{Mn}_2\text{V}_2\text{O}_{11} + \text{K}_2\text{V}_2\text{O}_7 + 54\text{H}_2\text{O}$ . (Radau.)

$7\text{Mn}(\text{VO}_3)_2 + 2\text{KVO}_3 + 25\text{H}_2\text{O}$  (Radau)

$11\text{Mn}(\text{VO}_3)_2 + 2\text{KVO}_3 + 48\text{H}_2\text{O}$  (Radau.)

**Mercuric vanadate**.

Sl. sol in  $\text{H}_2\text{O}$ .

**Nickel vanadate**,  $\text{Ni}(\text{VO}_3)_2$ .

Sol in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1705.)

**Nickel orthovanadate**,  $\text{Ni}_2(\text{VO}_4)_3$ .

Insol in  $\text{H}_2\text{O}$ , sol. in  $\text{HNO}_3 + \text{Aq}$  (Ditte, C. R. 96. 1049.)

**Nickel divanadate**,  $\text{NiV}_2\text{O}_{11} + 3\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (Ditte, C. R. 104. 1705.)

**Nickel potassium vanadate**,  $5\text{Ni}(\text{VO}_3)_2$ ,

$2\text{KVO}_3 + 25\text{H}_2\text{O}$ .

$\text{Ni}_2\text{K}_2\text{V}_{10}\text{O}_{28} + 17\text{H}_2\text{O}$ . Very sl. sol. in hot  $\text{H}_2\text{O}$ .

$\text{NiKV}_2\text{O}_{14} + 8\text{H}_2\text{O}$

$2\text{Ni}_2\text{V}_{10}\text{O}_{36} + \text{K}_2\text{V}_{10}\text{O}_{28} + 69\text{H}_2\text{O}$ . 1000 pts.

$\text{H}_2\text{O}$  dissolve 1.7 pts. of salt at  $17.5^\circ$  (Radau,

A. 251. 137.)

**Potassium vanadate, basic**,  $\text{K}_2\text{V}_2\text{O}_7 + 20\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$  (Ditte, C. R. 104. 902)

**Potassium metavanadate**,  $\text{KVO}_3$ .

*Anhydrous*. Slowly sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Insol. in alcohol. (Berzelius)

Completely sol. in a little cold  $\text{H}_2\text{O}$  (Norblad)

$+ \text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Rammelsberg)

$+1\frac{1}{2}\text{H}_2\text{O}$  (Ditte.)

$+1\frac{1}{2}\text{H}_2\text{O}$ . (Ditte.)

$+2\text{H}_2\text{O}$ . (Ditte.)

$+3\text{H}_2\text{O}$ . (Ditte, C. R. 104. 902.)

$+7\text{H}_2\text{O}$ . (Rammelsberg.)

**Potassium divanadate,  $K_2V_2O_{11} + 4H_2O$ .**

Sol. in cold or lukewarm  $H_2O$ . Decomp. by hot  $H_2O$ . (Rammelsberg)  
 +  $3H_2O$  (Berzelius.)  
 +  $3\frac{1}{2}H_2O$ . Sol. in warm  $H_2O$ . (Norblad)  
 + 8 or  $10H_2O$  (Ditte, C. R. 104. 902)  
 +  $6H_2O$ . (Ephraim, Z. anorg. 1903, 35. 76.)

**Potassium trivanadate,  $K_3V_3O_{18}$ .**

*Anhydrous*. Nearly insol. in  $H_2O$ . (Norblad)  
 +  $6H_2O$  Insol. in cold or hot  $H_2O$  (Norblad)  
 + 1, and  $5H_2O$ . (Ditte, C. R. 104. 902.)

**Potassium orthovanadate,  $K_1VO_4 + 4\frac{1}{2}$  or  $6H_2O$ .**

Deliquescent. Sol. in  $H_2O$  (Ditte, C. R. 104. 902.)  
 Decomp. by  $H_2O$  into  $K_4V_2O_7$  and  $KOH$ . (Rammelsberg, B. A. B. 1883. 3.)

**Potassium pyrovanadate,  $K_4V_2O_7 + 3H_2O$ .**

Deliquescent Easily sol. in  $H_2O$  Insol. in alcohol (Norblad)  
 +  $4H_2O$ . (Ditte, C. R. 104. 902)

**Potassium vanadate,  $K_3V_3O_{14} + 5H_2O$ .**

100 pts.  $H_2O$  dissolve 19.2 pts at  $17.5^\circ$  (Radau, A. 251. 120.)  
 +  $4\frac{1}{2}H_2O$ . (Radau)  
 $K_4V_2O_7 + 2H_2O$ . Slowly sol. in  $H_2O$  (Rammelsberg.)  
 +  $6H_2O$ . (Ditte, C. R. 104. 902.)  
 +  $7H_2O$ . (Friedheim, B. 23. 1526)  
 $K_4V_{10}O_{27} + 12H_2O$  Very sol. in  $H_2O$ . (Manasse, A. 240. 42)  
 $K_{10}V_5O_{23} + 7H_2O$ . Sol. in  $H_2O$ . (Rammelsberg.)  
 $K_2V_2O_7 + 1\frac{1}{2}H_2O$ . Very al. sol. in  $H_2O$  (Ephraim, Z. anorg. 1903, 35. 75.)  
 $K_4V_{10}O_{27}$  (Ephraim, Z. anorg. 1903, 35. 78)

**Potassium sodium vanadate,  $2(K_2O, 3V_2O_5), 3(2Na_2O, 3V_2O_5) + 30H_2O$ .**

(Friedheim, Z. anorg. 1894, 5. 442)  
 $2K_2O, 3V_2O_5, 4(2Na_2O, 3V_2O_5) + 35H_2O$   
 Efflorescent. (Friedheim, Z. anorg. 1894, 5. 441)

**Potassium strontium vanadate,  $K_2Sr_2V_4O_{20} + 20H_2O$ .**

Sol. in  $H_2O$ . (Manasse, A. 240. 23)  
 $K_2Sr_2V_4O_{20} + 30H_2O$  As above (Manasse)  
 $K_2Sr_2V_4O_{20} + 18H_2O$ . As above. (Manasse)

**Potassium zinc vanadate,  $KZnV_4O_{14} + 8H_2O$ .**

1000 pts  $H_2O$  dissolve 4.1 pts of the salt (Radau, A. 251. 145)  
 $2K_4V_{10}O_{27} + 3ZnV_4O_{14} + 90H_2O$  (Radau)

**Potassium vanadate cyanide,  $K_4V_2O_7, 4KCN + 14H_2O$ .**

Easily decomp.  
 Insol. in alcohol (Petersen, Z. anorg. 1904, 38. 343.)

**Samarium vanadate,  $Sm_2O_3, 5V_2O_5 + 28H_2O$ .**

(Cleve.)  
 +  $24H_2O$  (Cleve)

**Samarium orthovanadate.**

Precipitate

**Silver metavanadate,  $AgVO_3$ .**

Sol. in  $HNO_3$  or dil.  $NH_4OH + Aq$ . (Berzelius)  
 Insol. in liquid  $NH_3$ . (Gore, Am. Ch. J. 1898, 20. 829.)

**Silver orthovanadate,  $Ag_3VO_4$ .**

Ppt. Easily sol. in  $HNO_3$  or  $NH_4OH + Aq$ . (Roscoe, Proc. Roy. Soc. 18. 316.)

**Silver pyrovanadate,  $Ag_4V_2O_7$ .**

Ppt. (Roscoe.)  
 Sol. in  $NH_4OH + Aq$ . (Ditte, C. R. 104. 1705)

**Silver vanadate,  $Ag_3V_4O_{14}$ .**

Sol. in 21,414 pts  $H_2O$  at  $14^\circ$ , and 13,617 pts. at  $100^\circ$  (Carnelley, A. 166. 155.)

**Silver vanadate ammonia,  $6AgVO_3, 4NH_3 + 8H_2O$ .**

(Ditte, C. R. 104. 1705)

**Sodium vanadate, basic,  $Na_4V_2O_7 + 26$  or  $30H_2O$ .**

Very sol. in  $H_2O$ . (Ditte)

**Sodium metavanadate,  $NaVO_3$ .**

*Anhydrous*. Slowly sol. in cold, very easily in hot  $H_2O$ . (Norblad)

100 g.  $H_2O$  dissolve at:

25°	40°	60°	75°
21.10	26.23	32.97	38.83 g. $NaVO_3$ .

(McAdam and Pierle, J. Am. Chem. Soc. 1912, 34. 606.)

+  $2H_2O$ . Easily sol. in  $H_2O$ .

100 g.  $H_2O$  dissolve at:

25°	40°	60°
15.23	29.93	68.36 g. $NaVO_3$ .

At  $75^\circ$  a value was obtained which showed that the solid phase had changed into the less sol. modification. (McAdam and Pierle, J. Am. Chem. Soc. 1912, 34. 607.)

+  $\frac{1}{2}H_2O$  (Ditte, C. R. 104. 1061)

+ 3, 4, and  $5H_2O$  (Ditte.)

**Sodium divanadate,  $Na_2V_2O_{11}$ .**

*Anhydrous* Sl. sol. even in warm  $H_2O$ , but easily sol. on addition of acids.

+9H<sub>2</sub>O Easily sol in cold H<sub>2</sub>O. Insol in alcohol. (Norblad.)  
 +5H<sub>2</sub>O (Ditte, C. R. 104. 1061.)  
 Not obtained by Rammelsberg (B. A. B. 1883. 3.)

**Sodium trivanadate**, Na<sub>3</sub>V<sub>3</sub>O<sub>10</sub> + 9H<sub>2</sub>O.

Insol. in cold or hot H<sub>2</sub>O. (Norblad.)  
 Composition is Na<sub>3</sub>V<sub>10</sub>O<sub>43</sub> + 24H<sub>2</sub>O. (Rammelsberg.)  
 +3H<sub>2</sub>O (Ditte, C. R. 104. 1061.)

**Sodium orthovanadate**, Na<sub>3</sub>VO<sub>4</sub> + 16H<sub>2</sub>O.

Easily sol in H<sub>2</sub>O, but decomp into Na<sub>2</sub>V<sub>2</sub>O<sub>7</sub> and KOH. Precipitated by an excess of alcohol. (Roscoe, A. suppl. 8. 102.)  
 +7H<sub>2</sub>O. (Hall, Chem. Soc. 51. 96.)  
 +10, and 12H<sub>2</sub>O. Less sol. in dil. NaOH + Aq than in H<sub>2</sub>O. (Baker, A. 229. 286.)

**Sodium pyrovanadate**, Na<sub>4</sub>V<sub>2</sub>O<sub>7</sub> + 18H<sub>2</sub>O.

Easily sol. in H<sub>2</sub>O. Insol. in alcohol. (Norblad.)  
 Sol. in alcohol. (Ditte, C. R. 104. 1061.)  
 +8H<sub>2</sub>O. (Ditte.)

**Sodium sesquivanadate**, Na<sub>5</sub>V<sub>3</sub>O<sub>11</sub>.

Anhydrous. Insol. in H<sub>2</sub>O or NH<sub>4</sub>OH + Aq (Rammelsberg.)  
 +10H<sub>2</sub>O (Norblad.)  
 +16H<sub>2</sub>O Efflorescent. (Rammelsberg.)  
 +18H<sub>2</sub>O (Ditte)

**Sodium pentavanadate**, Na<sub>5</sub>V<sub>10</sub>O<sub>37</sub> + 3½H<sub>2</sub>O.

Scarcely sol. in H<sub>2</sub>O (Rammelsberg)

**Sodium vanadate**, Na<sub>3</sub>V<sub>2</sub>O<sub>7</sub> + 6H<sub>2</sub>O.

Difficultly sol. in cold H<sub>2</sub>O. (Carnelley, A. 166. 155.)  
 +2H<sub>2</sub>O (Carnelley.)  
 Na<sub>3</sub>V<sub>10</sub>O<sub>41</sub> + 24H<sub>2</sub>O Correct formula for Norblad's trivanadate. (Rammelsberg.)  
 Na<sub>3</sub>O, 4V<sub>2</sub>O<sub>5</sub> + 7½H<sub>2</sub>O. (Baragola, Dissert. 1902.)  
 +8½H<sub>2</sub>O. (Baragola.)  
 3Na<sub>2</sub>O, 5V<sub>2</sub>O<sub>5</sub> + 22H<sub>2</sub>O. (Prandtl and Lustig, Z. anorg. 1907. 53. 405.)  
 4Na<sub>2</sub>O, 7V<sub>2</sub>O<sub>5</sub> + 33H<sub>2</sub>O. (Friedheim, Z. anorg. 1894. 5. 443.)  
 5Na<sub>2</sub>O, 8V<sub>2</sub>O<sub>5</sub> + 30H<sub>2</sub>O. Sol. in H<sub>2</sub>O (Friedheim, Z. anorg. 1894. 5. 441.)

**Sodium vanadate fluoride**, 2Na<sub>3</sub>VO<sub>4</sub>, NaF + 19H<sub>2</sub>O.

Sol. in H<sub>2</sub>O (Rammelsberg, W. Ann. 20. 928.)

**Strontium metavanadate**, Sr(VO<sub>3</sub>)<sub>2</sub> + 4H<sub>2</sub>O.

Difficultly sol. in cold H<sub>2</sub>O. (Norblad.)

**Strontium divanadate**, SrV<sub>2</sub>O<sub>11</sub> + 9H<sub>2</sub>O.

Sl. sol. in H<sub>2</sub>O, but much more sol. than barium divanadate. (v. Hauer.)

Sol in H<sub>2</sub>O<sub>2</sub> + Aq. free from H<sub>2</sub>SO<sub>4</sub>. Insol in alcohol. (Scheuer, Z. anorg. 1898. 16. 303.)

**Strontium trivanadate**, SrV<sub>3</sub>O<sub>16</sub> + 14H<sub>2</sub>O.

Sol in H<sub>2</sub>O, but decomposes slowly on boiling. Easily sol in hot H<sub>2</sub>O acidified with HC<sub>2</sub>H<sub>3</sub>O<sub>2</sub>, and crystallizes therefrom without decomp. (v. Hauer, J. pr. 76. 156.)

**Strontium tetraivanadate**, SrV<sub>4</sub>O<sub>21</sub> + 11H<sub>2</sub>O.

Sol in hot H<sub>2</sub>O with partial decomposition. (Manasse, A. 240. 34)

**Strontium vanadate**, Sr<sub>2</sub>V<sub>2</sub>O<sub>23</sub> + 14H<sub>2</sub>O.

Sol. in H<sub>2</sub>O. (Manasse, A. 240. 23.)  
 Sr<sub>2</sub>V<sub>14</sub>O<sub>51</sub> + 30H<sub>2</sub>O. Sol. in H<sub>2</sub>O. (Norblad)

**Thallous metavanadate**, TlVO<sub>3</sub>.

Sol. in 11,534 pts. H<sub>2</sub>O at 11°, and 4756 pts. at 100°. (Carnelley.)

**Thallous orthovanadate**, Tl<sub>2</sub>VO<sub>4</sub>.

Sl. sol in H<sub>2</sub>O. Sol. in 999 pts. H<sub>2</sub>O at 15°, and 574 p.s. at 100° (Carnelley, Chem. Soc. (2) 11. 323.)

**Thallous pyrovanadate**, Tl<sub>2</sub>V<sub>2</sub>O<sub>7</sub>.

Sol in 4996 pts. H<sub>2</sub>O at 14°, and 3840 pts. H<sub>2</sub>O at 100° (Carnelley)

**Thallous vanadate**, Tl<sub>2</sub>V<sub>2</sub>O<sub>23</sub>.

Sol in 3406 pts. H<sub>2</sub>O at 14°, and 533 pts. at 100° (Carnelley.)  
 Tl<sub>2</sub>V<sub>10</sub>O<sub>31</sub>. Sol. in 9372 pts. H<sub>2</sub>O at 11°, and 3366 pts. at 100°. (Carnelley)  
 Tl<sub>2</sub>V<sub>14</sub>O<sub>41</sub> Ppt. (Carnelley)

**Thorium vanadate**, Th<sub>2</sub>O<sub>12</sub>(VO)<sub>4</sub>, 16V<sub>2</sub>O<sub>5</sub> + 24H<sub>2</sub>O (?).

Sol. in H<sub>2</sub>O (Cleve.)  
 ThO<sub>2</sub>, V<sub>2</sub>O<sub>5</sub> + 6H<sub>2</sub>O. Sol. in acids. (Voick, Z. anorg. 1894. 6. 167.)

**Uranyl vanadate**, 2UO<sub>3</sub>, V<sub>2</sub>O<sub>5</sub>, (UO<sub>3</sub>)<sub>2</sub>V<sub>2</sub>O<sub>7</sub>.

Insol in H<sub>2</sub>O. (Carnot, C. R. 104. 1850.)

**Vanadium vanadate**, 2VO<sub>3</sub>, V<sub>2</sub>O<sub>5</sub> = V<sub>4</sub>O<sub>9</sub>.

Insol in H<sub>2</sub>O. Sol in dil H<sub>2</sub>SO<sub>4</sub> or HNO<sub>3</sub> + Aq (Rammelsberg.)  
 Slowly oxidised by HNO<sub>3</sub> + Aq. Slowly sol in NH<sub>4</sub>OH + Aq. Easily sol. in HCl + Aq (Ditte, C. R. 101. 1487.)  
 +2½H<sub>2</sub>O. (Brierley.)  
 2VO<sub>3</sub>, 2V<sub>2</sub>O<sub>5</sub> + 8H<sub>2</sub>O. Insol in H<sub>2</sub>O. (Brierley, Chem. Soc. 49. 31)

**Ytterbium vanadate**, 3Yb<sub>2</sub>O<sub>3</sub>, 5V<sub>2</sub>O<sub>5</sub> + 3H<sub>2</sub>O.

Yb<sub>2</sub>O<sub>3</sub>, 15V<sub>2</sub>O<sub>4</sub>. Ppt. (Cleve, Z. anorg. 1902. 32. 150.)

**Yttrium vanadate.**

Precipitate. (Berzelius.)

**Zinc vanadate**,  $\text{Zn}(\text{VO}_3)_2 \cdot 2\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 104. 1705.)

**Zinc pyrovanadate**,  $\text{Zn}_2\text{V}_2\text{O}_7$ .

Appreciably sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 96. 1048.)

**Pervanadic acid**.

See Pervanadic acid.

**Vanadicotungstic acid**.

**Ammonium vanadicotungstate**,

$3(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 8\text{WO}_3 \cdot 10\text{H}_2\text{O}$ .

Very sol in  $\text{H}_2\text{O}$

Insol in organic solvents. (E. F. Smith, J. Am. Chem. Soc. 1903, 25. 1227.)

**Vanadicovanadic acid**.

**Ammonium vanadicovanadate**,  $(\text{NH}_4)_2\text{O} \cdot 2\text{VO}_3 \cdot 4\text{V}_2\text{O}_5 \cdot 8\text{H}_2\text{O}$ .

Sl. sol. in cold and warm  $\text{H}_2\text{O}$  (Gibbs, Am. Ch. J. 7. 209.)

$(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 2\text{V}_2\text{O}_5 \cdot 14\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Brierley, Chem. Soc. 49. 30.)

$3(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 4\text{V}_2\text{O}_5 \cdot 6\text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$  (Brierley.)

**Potassium** —,  $2\text{K}_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot \text{V}_2\text{O}_5 \cdot 6\text{H}_2\text{O}$

Sol. in hot  $\text{H}_2\text{O}$ . (Brierley, Chem. Soc. 49. 30.)

$5\text{K}_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 4\text{V}_2\text{O}_5 \cdot \text{H}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$  (Brierley.)

$\text{K}_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 8\text{V}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$   
Sol. in conc  $\text{H}_2\text{SO}_4$  (Prandtl, B. 1905, 38. 660.)

**Sodium** —,  $2\text{Na}_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot \text{V}_2\text{O}_5 \cdot 13\text{H}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ . Insol. in conc solutions of salts, especially acetate. (Brierley, Chem. Soc. 49. 30.)

$2\text{Na}_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 5\text{V}_2\text{O}_5$ . Insol. in  $\text{H}_2\text{O}$ . Sol. in conc  $\text{H}_2\text{SO}_4$ . Not attacked by boiling with conc  $\text{HNO}_3$ . Slowly attacked by hot dil.  $\text{NH}_4\text{OH} + \text{Aq.}$  (Prandtl, B. 1905, 38. 669.)

**Vanadioarsenic acid**.

See Arseniovanadic acid.

**Vanadioiodic acid**.

See Iodovanadic acid.

**Vanadiomolybdic acid**,  $8\text{MoO}_3 \cdot \text{V}_2\text{O}_5 \cdot 5\text{H}_2\text{O}$ .

Very sl. sol. in  $\text{H}_2\text{O}$ , and sl. sol. in boiling  $\text{HNO}_3 + \text{Aq.}$  (Ditte, C. R. 102. 757)

Could not be obtained. (Friedheim, B. 24. 1173)

**Ammonium vanadiomolybdate**,

$(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 2\text{MoO}_3 \cdot 4\text{H}_2\text{O}$ .

Nearly insol. in  $\text{H}_2\text{O}$ . (Friedheim and Castendyck, B. 1900, 33. 1615.)

$(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 2\text{MoO}_3 \cdot 8\text{H}_2\text{O}$ . Nearly

insol. in  $\text{H}_2\text{O}$ . (Friedheim and Castendyck.)  
 $2(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 3\text{MoO}_3 \cdot 6\text{H}_2\text{O}$ . (Euler-Chelpin, Dissert, 1895.)

$(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 3\text{MoO}_3 \cdot 17\text{H}_2\text{O}$ . (Euler-Chelpin)

$2(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 4\text{MoO}_3 \cdot 7\text{H}_2\text{O}$  and  $+8\text{H}_2\text{O}$  (Euler-Chelpin.)

$3(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 4\text{MoO}_3 \cdot 7\text{H}_2\text{O}$ . (Milch, Dissert Berlin, 1887.)

$+9\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 102. 1019.)

$+11\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . Correct composition of above compounds is =

$(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 2(\text{NH}_4)_2\text{O} \cdot 2\text{MoO}_3 \cdot 11\text{H}_2\text{O}$ . (Friedheim, B. 24. 1173.)

Moderately sol. in  $\text{H}_2\text{O}$  and can be recryst. therefrom (Euler-Chelpin, Dissert, 1895.)

$2(\text{NH}_4)_2\text{O} \cdot 3\text{V}_2\text{O}_5 \cdot 4\text{MoO}_3 \cdot 11\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . (Friedheim and Castendyck, B. 1900, 33. 1615.)

$2(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 5\text{MoO}_3$ . Nearly insol. in cold  $\text{H}_2\text{O}$ . (Euler-Chelpin, Dissert, 1895.)

$+8\text{H}_2\text{O}$ . Nearly insol. in  $\text{H}_2\text{O}$ . (Friedheim and Castendyck, B. 1900, 33. 1615.)

$3(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 5\text{MoO}_3 \cdot 8\frac{1}{2}\text{H}_2\text{O}$ . Very easily sol. in  $\text{H}_2\text{O}$ . (Laebert, Dissert, 1891.)

$4(\text{NH}_4)_2\text{O} \cdot 12\text{V}_2\text{O}_5 \cdot 5\text{MoO}_3 \cdot 24\text{H}_2\text{O}$ . Practically insol. in  $\text{H}_2\text{O}$  (Friedheim and Castendyck, B. 1900, 33. 1615.)

$2(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 6\text{MoO}_3 \cdot 5\text{H}_2\text{O}$ . Sol. in a large amount of  $\text{H}_2\text{O}$ . (Gibbs, Am. Ch. J. 5. 361.)

$+6\text{H}_2\text{O}$ . Rather sl. sol. in  $\text{H}_2\text{O}$ . Easily sol. in acids. (Laebert, Dissert, 1891.)

Composition is double the above formula, or—

$4(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 12\text{MoO}_3 \cdot 12\text{H}_2\text{O}$ . Rather difficultly sol. in  $\text{H}_2\text{O}$  Composition is  $(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 3(\text{NH}_4)_2\text{O} \cdot 4\text{MoO}_3$ . (Friedheim.)

$3(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 6\text{MoO}_3 \cdot 7\text{H}_2\text{O}$ . (Isenburg, Dissert, 1901.)

$5(\text{NH}_4)_2\text{O} \cdot 4\text{V}_2\text{O}_5 \cdot 6\text{MoO}_3 \cdot 12\text{H}_2\text{O}$  and  $+14\text{H}_2\text{O}$ . (Euler-Chelpin, Dissert, 1895.)

$5(\text{NH}_4)_2\text{O} \cdot 3\text{V}_2\text{O}_5 \cdot 7\text{MoO}_3 \cdot 13\text{H}_2\text{O}$  and  $+16\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  and can be recryst. therefrom. (Toggenburg, Dissert, 1902.)

$5(\text{NH}_4)_2\text{O} \cdot 3\text{V}_2\text{O}_5 \cdot 8\text{MoO}_3 \cdot 14\text{H}_2\text{O}$ . (Stamm, Dissert, 1905.)

$5(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 12\text{MoO}_3 \cdot 10\text{H}_2\text{O}$ . Quite easily sol. in  $\text{H}_2\text{O}$ . Composition is  $(\text{NH}_4)_2\text{O} \cdot 2\text{V}_2\text{O}_5 \cdot 4(\text{NH}_4)_2\text{O} \cdot 3\text{MoO}_3 \cdot 10\text{H}_2\text{O}$ .

$6(\text{NH}_4)_2\text{O} \cdot 3\text{V}_2\text{O}_5 \cdot 12\text{MoO}_3 \cdot 21\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . Composition is  $(\text{NH}_4)_2\text{O} \cdot 3\text{V}_2\text{O}_5 \cdot 5(\text{NH}_4)_2\text{O} \cdot 12\text{MoO}_3$  (F.)

$8(\text{NH}_4)_2\text{O} \cdot 4\text{V}_2\text{O}_5 \cdot 13\text{MoO}_3 \cdot 21\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$  (Isenburg, Dissert, 1901.)

$8(\text{NH}_4)_2\text{O} \cdot \text{V}_2\text{O}_5 \cdot 18\text{MoO}_3 \cdot 15\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . (Gibbs.) Could not be obtained. (Friedheim.)

$10(\text{NH}_4)_2\text{O} \cdot 3\text{V}_2\text{O}_5 \cdot 24\text{MoO}_3 \cdot 10\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ . (Milch.) Could not be obtained. (Friedheim.)

**Ammonium barium vanadiomolybdate,**  
 $5(\text{NH}_4)_2\text{O}, 15\text{BaO}, 6\text{V}_2\text{O}_5, 36\text{MoO}_3.$

(Milch.)

$(\text{NH}_4)_2\text{O}, \text{BaO}, \text{V}_2\text{O}_5, \text{MoO}_3 + 6\text{H}_2\text{O}$   
 (Euler-Chelpin, Dissert, 1895.)

$3(\text{NH}_4)_2\text{O}, \text{BaO}, 3\text{V}_2\text{O}_5, 5\text{MoO}_3 + 9\text{H}_2\text{O}.$   
 Sl sol. in cold and hot  $\text{H}_2\text{O}$  (Euler-Chelpin.)

**Ammonium potassium —,**  $(\text{NH}_4)_2\text{O}, 3\text{K}_2\text{O},$   
 $2\text{V}_2\text{O}_5, 4\text{MoO}_3 + 5\text{H}_2\text{O}.$

Decomp by  $\text{H}_2\text{O}$ . (Euler-Chelpin.)

$(\text{NH}_4)_2\text{O}, 3\text{K}_2\text{O}, 3\text{V}_2\text{O}_5, 5\text{MoO}_3 + 9\text{H}_2\text{O}$   
 (Euler-Chelpin.)

$\frac{1}{2}(\text{NH}_4)_2\text{O}, 3\frac{1}{2}\text{K}_2\text{O}, 3\text{V}_2\text{O}_5, 5\text{MoO}_3 +$   
 $16\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$  (Jacoby, Dissert. 1900.)

**Ammonium sodium —,**  $(\text{NH}_4)_2\text{O}, \text{Na}_2\text{O},$   
 $2\text{V}_2\text{O}_5, 6\text{MoO}_3 + 12\text{H}_2\text{O}.$

(Euler-Chelpin, Dissert, 1895.)

**Barium —,**  $\text{BaO}, \text{V}_2\text{O}_5, \text{MoO}_3 + 7\text{H}_2\text{O}.$   
 (Euler-Chelpin.)

**Barium —,**  $3\text{BaO}, 2\text{V}_2\text{O}_5, 6\text{MoO}_3.$

(Milch.)

$+ 8\text{H}_2\text{O}$  (Euler-Chelpin.)

$5\text{BaO}, 4\text{V}_2\text{O}_5, 6\text{MoO}_3 + 28\text{H}_2\text{O}.$  Sol in  
 hot  $\text{H}_2\text{O}$  (Euler-Chelpin.)  
 $3\text{BaO}, \text{V}_2\text{O}_5, 8\text{MoO}_3 + 2\text{BaO}, \text{H}_2\text{O}, \text{V}_2\text{O}_5,$   
 $8\text{MoO}_3 + 28\text{H}_2\text{O}$  Sol in hot  $\text{H}_2\text{O}$  (Gibbs,  
 Am. Ch. J. 5. 361.)

$7\text{BaO}, 3\text{V}_2\text{O}_5, 18\text{MoO}_3 + 16\text{H}_2\text{O} = \text{BaO},$   
 $3\text{V}_2\text{O}_5 + 6(\text{BaO}, 3\text{MoO}_3) + 16\text{H}_2\text{O}.$  Sl. sol  
 in  $\text{H}_2\text{O}$   
 $+ 36\text{H}_2\text{O}$  and  $+ 48\text{H}_2\text{O}.$  (Liebert, Dis-  
 sert. 1891.)

**Potassium —,**  $\text{K}_2\text{O}, \text{V}_2\text{O}_5, 3\text{MoO}_3 + 15\text{H}_2\text{O}.$   
 Nearly insol in cold  $\text{H}_2\text{O}$ . (Euler-Chelpin,  
 Dissert, 1895.)

$3\text{K}_2\text{O}, 2\text{V}_2\text{O}_5, 4\text{MoO}_3 + 8\text{H}_2\text{O} = \text{K}_2\text{O}, 2\text{V}_2\text{O}_5$   
 $+ 2(\text{K}_2\text{O}, 2\text{MoO}_3) + 8\text{H}_2\text{O}$

Very sol. in  $\text{H}_2\text{O}$ . (Friedheim.)

$+ 7\text{H}_2\text{O}.$  Easily sol in cold  $\text{H}_2\text{O}$ . (Euler-  
 Chelpin.)

$+ 9\text{H}_2\text{O}.$  Easily sol in cold  $\text{H}_2\text{O}$  (Euler-  
 Chelpin.)

$2\text{K}_2\text{O}, 2\text{V}_2\text{O}_5, 5\text{MoO}_3 + 10\text{H}_2\text{O}.$  Nearly  
 insol. in cold, very sl sol in hot  $\text{H}_2\text{O}$  (Euler-  
 Chelpin.)

$3\text{K}_2\text{O}, \text{V}_2\text{O}_5, 6\text{MoO}_3 + 5\text{H}_2\text{O}.$  (Euler-Chel-  
 pin.)

$2\text{K}_2\text{O}, \text{V}_2\text{O}_5, 6\text{MoO}_3 + 6\text{H}_2\text{O}.$  Very sl sol.  
 in cold, easily sol in hot  $\text{H}_2\text{O}$ . (Liebert.)

$4\text{K}_2\text{O}, 2\text{V}_2\text{O}_5, 12\text{MoO}_3 + 12\text{H}_2\text{O} = \text{K}_2\text{O},$   
 $2\text{V}_2\text{O}_5 + 3(\text{K}_2\text{O}, 4\text{MoO}_3) + 12\text{H}_2\text{O}.$  Sl. sol.  
 in  $\text{H}_2\text{O}$ . (Friedheim.)

$5\text{K}_2\text{O}, 2\text{V}_2\text{O}_5, 12\text{MoO}_3 + 12\text{H}_2\text{O} = \text{K}_2\text{O},$   
 $2\text{V}_2\text{O}_5 + 4(\text{K}_2\text{O}, 3\text{MoO}_3) + 12\text{H}_2\text{O}.$  Rather sl  
 sol. in  $\text{H}_2\text{O}$ . (Friedheim.)

Sl. sol. in 'cold'; easily sol. in hot  $\text{H}_2\text{O}$ .  
 (Liebert, Dissert, 1891.)

$3\text{K}_2\text{O}, \text{V}_2\text{O}_5, 12\text{MoO}_3 + 15\text{H}_2\text{O}.$  (Liebert.)

**Potassium sodium vanadiomolybdate,  $\text{K}_2\text{O},$**   
 $4\text{Na}_2\text{O}, 2\text{V}_2\text{O}_5, 12\text{MoO}_3 + 18\text{H}_2\text{O}.$

(Euler-Chelpin. Dissert 1895.)

**Sodium —,**  $2\text{Na}_2\text{O}, \text{V}_2\text{O}_5, 6\text{MoO}_3 + 16\text{H}_2\text{O}.$   
 (Euler-Chelpin, Dissert, 1895.)

**Vanadiophosphoric acid.**

See Phosphovanadic acid.

**Vanadiouselenious acid,  $3\text{V}_2\text{O}_5, 4\text{SeO}_2 +$**   
 $4\text{H}_2\text{O}.$

$+ 6\text{H}_2\text{O}.$  Difficultly sol. in  $\text{H}_2\text{O}$ . Can be  
 cryst. from  $\text{H}_2\text{O}$ .

$+ 10\text{H}_2\text{O}.$  Difficultly sol. in  $\text{H}_2\text{O}$ . Can be  
 cryst from  $\text{H}_2\text{O}$  (Prandtl, B. 1905, 38,  
 1307.)

**Ammonium vanadiouselenite,**

$4(\text{NH}_4)_2\text{O}, 6\text{V}_2\text{O}_5, 5\text{SeO}_2 + 13\text{H}_2\text{O}.$

Sl sol. in  $\text{H}_2\text{O}$  Decomp by boiling  $\text{H}_2\text{O}.$   
 $3(\text{NH}_4)_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{SeO}_2 + 2\text{H}_2\text{O}.$  Ppt  
 (Prandtl, B. 1905, 38. 1309.)

$(\text{NH}_4)\text{H}_2\text{V}_2\text{O}_7, 12\text{SeO}_2 + 2\text{H}_2\text{O}$  Ppt.  
 $+ 4\text{H}_2\text{O}.$  Ppt (Prandtl, Z anorg 1911,  
 73. 231.)

**Ammonium silver —,**  $2\frac{1}{2}(\text{NH}_4)_2\text{O}, 1\frac{1}{2}\text{Ag}_2\text{O},$   
 $6\text{V}_2\text{O}_5, 5\text{SeO}_2 + 12\text{H}_2\text{O}, + 16\text{H}_2\text{O}$  and  
 $+ 22\text{H}_2\text{O}.$

(Prandtl, Z. anorg 1907, 53. 402.)

**Lithium —,**  $4\text{Li}_2\text{O}, 6\text{V}_2\text{O}_5, 5\text{SeO}_2 + 30\text{H}_2\text{O}.$   
 Very sol. in  $\text{H}_2\text{O}$  (Prandtl.)

**Potassium —,**  $4\text{K}_2\text{O}, 6\text{V}_2\text{O}_5, 5\text{SeO}_2 +$   
 $13\text{H}_2\text{O}.$

$3\text{K}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{SeO}_2.$  (Prandtl, B 1905,  
 38. 1309.)

**Sodium —,**  $4\text{Na}_2\text{O}, 6\text{V}_2\text{O}_5, 5\text{SeO}_2 + 20\text{H}_2\text{O}.$   
 Verv. sol in  $\text{H}_2\text{O}$ . (Prandtl, Z. anorg  
 1907, 53. 403.)

**Vanadiousulphuric acid,  $\text{V}_2\text{O}_5, 3\text{SO}_3 + 3\text{H}_2\text{O}.$**

Deliquescent Sol in  $\text{H}_2\text{O}$ , but is decomp.  
 by boiling (Ditte, C. R. 102. 757.)

See Sulphate, vanadium.

**Vanadiousulphurous acid.**

**Ammonium vanadiousulphite,**

$3(\text{V}_2\text{O}_5, \text{SO}_3), (\text{NH}_4)_2\text{O}, \text{SO}_2 + 4\text{H}_2\text{O}.$

(Gain, C. R. 1907, 144. 1158.)

**Cæsium —,**  $(\text{V}_2\text{O}_5, \text{SO}_2), 3(\text{Cs}_2\text{O}, \text{SO}_2) +$   
 $8\text{H}_2\text{O}.$

(Gain.)

**Lithium —,**  $(\text{V}_2\text{O}_5, \text{SO}_2), 5(\text{Li}_2\text{O}, \text{SO}_2) +$   
 $8\text{H}_2\text{O}.$

(Gain.)

**Potassium vanadosulphate**,  $3\text{SO}_2(\text{V}_2\text{O}_5)$ ,  $\text{SO}_2(\text{K}_2\text{O})+5\text{H}_2\text{O}$ .

(Gain.)

**Rubidium** —,  $(\text{V}_2\text{O}_5, \text{SO}_2)$ ,  $2(\text{Rb}_2\text{O}, \text{SO}_2)+2\text{H}_2\text{O}$ .

(Gain.)

**Sodium** —,  $5(\text{V}_2\text{O}_5, \text{SO}_2)$ ,  $(\text{Na}_2\text{O}, \text{SO}_2)+2\text{H}_2\text{O}$ .

(Gain.)

**Thallium** —,  $3(\text{V}_2\text{O}_5, \text{SO}_2)$ ,  $(\text{Tl}_2\text{O}, \text{SO}_2)+8\text{H}_2\text{O}$ .

(Gain.)

**Vanadiotungstic acid**,  $6\text{H}_2\text{O}$ ,  $\text{V}_2\text{O}_5$ ,  $10\text{WO}_3+16\text{H}_2\text{O}$ .

Very sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$  (Gibbs, Am. Ch. J. 5. 361)

$6\text{H}_2\text{O}$ ,  $\text{V}_2\text{O}_5$ ,  $16\text{WO}_3+30\text{H}_2\text{O}$  Readily sol. in  $\text{H}_2\text{O}$  (Gibbs.)

$17\text{H}_2\text{O}$ ,  $4\text{V}_2\text{O}_5$ ,  $16\text{WO}_3+24\text{H}_2\text{O}$  Sl. sol in cold, easily in hot  $\text{H}_2\text{O}$ . (Rosenheim, A. 251. 228)

**Aluminum sodium vanadiotungstate**,  $7\text{Al}_2\text{O}_3$ ,  $27\text{Na}_2\text{O}$ ,  $36\text{V}_2\text{O}_5$ ,  $144\text{WO}_3+504\text{H}_2\text{O}=3(\text{Al}_2\text{O}_3, 9\text{Na}_2\text{O}, 48\text{WO}_3)$ ,  $4(\text{Al}_2\text{O}_3, 9\text{V}_2\text{O}_5)+504\text{H}_2\text{O}$

Sol in  $\text{H}_2\text{O}$  (Rothenbach, B. 23. 3055.)

**Ammonium** —,  $(\text{NH}_4)_2\text{O}$ ,  $3\text{V}_2\text{O}_5$ ,  $\text{WO}_3+6\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ . (Rammelsberg, B. 1. 158)

$2(\text{NH}_4)_2\text{O}$ ,  $\text{V}_2\text{O}_5$ ,  $4\text{WO}_3+4\text{H}_2\text{O}$  (Friedheim and Löwy, Z. anorg. 1894. 6. 24.)

$4(\text{NH}_4)_2\text{O}$ ,  $2\text{H}_2\text{O}$ ,  $\text{V}_2\text{O}_5$ ,  $5\text{WO}_3+11\text{H}_2\text{O}$  Sol in  $\text{H}_2\text{O}$ . (Gibbs Am. Ch. J. 5. 361)

$2(\text{NH}_4)_2\text{O}$ ,  $\text{V}_2\text{O}_5$ ,  $5\text{WO}_3+10\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (Ditte, C. R. 402. 1019)

$31(\text{NH}_4)_2\text{O}$ ,  $14\text{V}_2\text{O}_5$ ,  $60\text{WO}_3+58\text{H}_2\text{O}=5(5(\text{NH}_4)_2\text{O}, 12\text{WO}_3)$ ,  $2[3(\text{NH}_4)_2\text{O}, 7\text{V}_2\text{O}_5]$ .

Sol in  $\text{H}_2\text{O}$ . (Rothenbach, B. 23. 3051.)

$7(\text{NH}_4)_2\text{O}$ ,  $4\text{V}_2\text{O}_5$ ,  $14\text{WO}_3+16\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ . (Rosenheim, A. 251. 197.)

$8(\text{NH}_4)_2\text{O}$ ,  $4\text{V}_2\text{O}_5$ ,  $16\text{WO}_3$ ,  $9\text{H}_2\text{O}+4\text{H}_2\text{O}$ . Efflorescent. Very sol. in  $\text{H}_2\text{O}$ . (Rosenheim, A. 251. 216)

**Barium** —,  $19\text{BaO}$ ,  $10\text{V}_2\text{O}_5$ ,  $36\text{WO}_3+94\text{H}_2\text{O}=3(5\text{BaO}, 12\text{WO}_3)$ ,  $2(2\text{BaO}, 5\text{V}_2\text{O}_5)+94\text{H}_2\text{O}$ .

Sl. sol. in  $\text{H}_2\text{O}$ . (Rothenbach, B. 23. 3052.)

$8\text{BaO}$ ,  $4\text{V}_2\text{O}_5$ ,  $16\text{WO}_3$ ,  $9\text{H}_2\text{O}+44\text{H}_2\text{O}$ . Efflorescent. Not very sol. in  $\text{H}_2\text{O}$ . (Rosenheim, A. 251. 218.)

$23\text{BaO}$ ,  $12\text{WO}_3$ ,  $3\text{V}_2\text{O}_5+$

$63\text{BaO}$ ,  $3\text{V}_2\text{O}_5$ ,  $12\text{WO}_3+34\text{H}_2\text{O}$ . Not easily sol. in  $\text{H}_2\text{O}$ . (Friedheim and Löwy, Z. anorg. 1894. 6. 18)

$4\text{BaO}$ ,  $4\text{V}_2\text{O}_5$ ,  $12\text{WO}_3+4\text{H}_2\text{O}$ . Less sol.

than preceding salt. Decomp. by boiling or by mineral acids (Rosenheim)

Composition is  $4\text{BaO}$ ,  $12\text{WO}_3$ ,  $3\text{V}_2\text{O}_5+30\text{H}_2\text{O}$ . (Friedheim)

**Calcium vanadiotungstate**,  $2\text{CaO}$ ,  $\text{V}_2\text{O}_5$ ,  $2\text{WO}_3+12\text{H}_2\text{O}$ .

(Friedheim and Löwy, Z. anorg. 1894. 6. 20.)

**Magnesium sodium** —,  $\text{MgO}$ ,  $6\text{Na}_2\text{O}$ ,  $3\text{V}_2\text{O}_5$ ,  $12\text{WO}_3+42\text{H}_2\text{O}=5\text{Na}_2\text{O}$ ,  $12\text{WO}_3+\text{MgO}$ ,  $\text{Na}_2\text{O}$ ,  $3\text{V}_2\text{O}_5+42\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$  (Rothenbach, B. 23. 3054.)

**Potassium** —,  $4\text{K}_2\text{O}$ ,  $3\text{V}_2\text{O}_5$ ,  $12\text{WO}_3+30\text{H}_2\text{O}$ .

Sol. in  $\text{H}_2\text{O}$ .

Composition is potassium metatungstate vanadate,  $3(\text{K}_2\text{O}, 4\text{WO}_3)+\text{K}_2\text{O}$ ,  $3\text{V}_2\text{O}_5+30\text{H}_2\text{O}$  (Friedheim, B. 23. 1515.)

$8\text{K}_2\text{O}$ ,  $4\text{V}_2\text{O}_5$ ,  $16\text{WO}_3$ ,  $9\text{H}_2\text{O}+24\text{H}_2\text{O}$  Very efflorescent. Easily sol in  $\text{H}_2\text{O}$ . (Rosenheim, A. 251. 214.)

Formula is  $6\text{K}_2\text{O}$ ,  $12\text{WO}_3$ ,  $3\text{V}_2\text{O}_5+24\text{H}_2\text{O}$ , which as a double salt,  $5\text{K}_2\text{O}$ ,  $12\text{WO}_3+\text{K}_2\text{O}$ ,  $3\text{V}_2\text{O}_5$  (Friedheim, B. 23. 1505.)

**Potassium sodium** —,  $(5\text{Na}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3+22\text{H}_2\text{O})$ ,  $4(5\text{K}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3+22\text{H}_2\text{O})$  or  $\text{Na}_2\text{O}$ ,  $4\text{K}_2\text{O}$ ,  $3\text{V}_2\text{O}_5$ ,  $6\text{WO}_3+22\text{H}_2\text{O}$

(Friedheim and Löwy, Z. anorg. 1894. 6. 22.)

$4(5\text{Na}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3+24\text{H}_2\text{O})$ ,  $3(5\text{K}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3+24\text{H}_2\text{O})$  (Friedheim and Löwy)

$5(5\text{Na}_2\text{O}, 3\text{V}_2\text{O}_5, 6\text{WO}_3+24\text{H}_2\text{O})$ ,  $5\text{K}_2\text{O}$ ,  $3\text{V}_2\text{O}_5$ ,  $6\text{WO}_3+24\text{H}_2\text{O}$  (Friedheim and Löwy.)

**Silver** —,  $8\text{Ag}_2\text{O}$ ,  $4\text{V}_2\text{O}_5$ ,  $16\text{WO}_3$ ,  $9\text{H}_2\text{O}$ .

Somewhat sol in cold  $\text{H}_2\text{O}$ , more easily upon addition of little  $\text{HNO}_3$ . Decomp. by warm  $\text{H}_2\text{O}$  (Rosenheim, A. 251. 224.)

$3\text{Ag}_2\text{O}$ ,  $2\text{V}_2\text{O}_5$ ,  $6\text{WO}_3+3\text{H}_2\text{O}$  Nearly insol in cold  $\text{H}_2\text{O}$ . Decomp by addition of  $\text{HNO}_3$  or upon warming (Rosenheim.)

**Sodium** —,  $5\text{Na}_2\text{O}$ ,  $3\text{V}_2\text{O}_5$ ,  $6\text{WO}_3+36\text{H}_2\text{O}$ .

Sol in  $\text{H}_2\text{O}$ .

Composition is  $3(\text{Na}_2\text{O}, 2\text{WO}_3)+2(\text{Na}_2\text{O}, 3\text{V}_2\text{O}_5)+36\text{H}_2\text{O}$ . (Friedheim, B. 23. 1527)

$+38\text{H}_2\text{O}$ . Sol in 125 pts.  $\text{H}_2\text{O}$  at  $13.8^\circ$ . (Friedheim and Löwy.)

$2\text{Na}_2\text{O}$ ,  $2\text{V}_2\text{O}_5$ ,  $3\text{WO}_3+20\text{H}_2\text{O}$ . Very sol. in  $\text{H}_2\text{O}$ .

Composition is  $\text{Na}_2\text{O}$ ,  $3\text{WO}_3+\text{Na}_2\text{O}$ ,  $2\text{V}_2\text{O}_5+20\text{H}_2\text{O}$ , double salt of sodium tritungstate and divanadate. (Friedheim, B. 23. 1523.)

$4\text{Na}_2\text{O}$ ,  $3\text{V}_2\text{O}_5$ ,  $12\text{WO}_3+38\text{H}_2\text{O}=3(\text{Na}_2\text{O}, 4\text{WO}_3)+\text{Na}_2\text{O}$ ,  $3\text{V}_2\text{O}_5+38\text{H}_2\text{O}$  Sol. in  $\text{H}_2\text{O}$ . (Rothenbach, B. 23. 3050.)

$8\text{Na}_2\text{O}$ ,  $4\text{V}_2\text{O}_5$ ,  $16\text{WO}_3$ ,  $9\text{H}_2\text{O}+48\text{H}_2\text{O}$ .

Efflorescent. Easily sol. in  $H_2O$ . (Rosenheim, A 251. 210.)

Formula is  $6Na_2O, 12WO_3, 3V_2O_5 + 42H_2O$ , and is a double salt of sodium paratungstate,  $5Na_2O, 12WO_3$ , and sodium trivanadate,  $Na_2O, 3V_2O_5$ . (Friedheim, B 23. 1505.)

$7Na_2O, V_2O_5, 12WO_3 + 29H_2O$ . Easily sol in  $H_2O$ . (Friedheim and Löwy, Z anorg. 1894, 8. 15.)

$8Na_2O, V_2O_5, 14WO_3 + 60H_2O$  and  $+66H_2O$  (Friedheim and Löwy.)

Strontium vanadiotungstate,  $19SrO, 36WO_3, 10V_2O_5 + 122H_2O = 3(58SrO, 12WO_3, 2(2SrO, 5V_2O_5) + 122H_2O$ .

Sol. in  $H_2O$ . (Rothenbach, B. 23. 3053.)

Vanadious acid.

See Hypovanadic acid.

Vanadovanadicomolybdic acid.

Ammonium vanadovanadicomolybdate,  $11(NH_4)_2O, 4V_2O_5, VO_3, 28MoO_3 + 48H_2O$ .

Sl. sol in cold, sol. in hot  $H_2O$  without decomp. (Gibbs, Am. Ch. J 5. 391)

Barium —,  $14BaO, 2V_2O_5, 3VO_3, 30MoO_3 + 48H_2O$ .

Precipitate. Very sl. sol in cold, decomp by hot  $H_2O$  (Gibbs)

Vanadovanadicotungstic acid.

Ammonium vanadovanadicotungstate,  $6(NH_4)_2O, 2V_2O_5, 3VO_3, 12WO_3 + 12H_2O$ .

Sol. in  $H_2O$ . (Gibbs, Am. Ch. J. 5. 391.)

Silver —,  $6Ag_2O, 2V_2O_5, 3VO_3, 12WO_3 + 8H_2O$ .

Precipitate. Very sl. sol. in cold, sol in much warm  $H_2O$ . (Gibbs.)

Sodium —,  $6Na_2O, 2V_2O_5, 3VO_3, 12WO_3$ .

Very sol in  $H_2O$ . (Gibbs)

Vanadium, V.

Insol. in  $H_2O$ , HCl, dil.  $H_2SO_4 + Aq$ , and cold conc.  $H_2SO_4$ . Sol. in hot conc.  $H_2SO_4$ . Slowly sol. in HF + Aq. Easily sol. in dil or conc.  $HNO_3 + Aq$ . Not attacked by hot or cold NaOH or KOH + Aq. (Roscoe, A. suppl. 7. 85.)

Does not alter in the air; not acted upon by HCl and very slowly by  $H_2SO_4$ . (Moissan, C. R. 1896, 122. 1299.)

Vanadium boride, VB.

Sol in HF and  $HNO_3$ . Decomp. by fused alkalis. (Wedekind, B. 1913, 46. 1203.)

Vanadium tribromide, VBr<sub>3</sub>.

Very deliquescent; quickly decomposes (Roscoe, A. suppl. 8. 99)

$+6H_2O$ . Sol in  $H_2O$  with decomp. (Loeke and Edwards, Am Ch J 1898, 20. 600.)

Sol. in  $H_2O$ , alcohol and ether. Insol in HBr. (Piccini, Z. anorg. 1899, 19. 398)

Vanadium carbide, VC.

Insol. in HCl and  $H_2SO_4$ .

Sol in  $HNO_3$  in the cold, and in fused  $KNO_3$  and  $KClO_3$ . (Moissan, C. R. 1896, 122. 1300)

Vanadium dichloride, VCl<sub>2</sub>.

Very deliquescent. Sol. in  $H_2O$ , alcohol, and ether. (Roscoe, A. suppl. 7. 79)

Vanadium trichloride, VCl<sub>3</sub>.

Deliquescent. Sol. in  $H_2O$ , absolute alcohol, and ether

$+6H_2O$ . Sol in  $H_2O$ , sl. sol. in conc. HCl + Aq.

Sol. in alcohol and ether. (Piccini, Z. anorg. 1899, 19. 395.)

Vanadium tetrachloride, VCl<sub>4</sub>.

Sol. with decomp. in  $H_2O$ , alcohol, and ether. (Roscoe)

Sol in  $H_2O$  with decomp.

Sol in fuming HCl with decomp

Sol. in anhydrous  $CHCl_3$  or glacial acetic acid apparently without chemical change (Koppell, Z. anorg. 1905, 45. 346.)

Vanadium difluoride, VF<sub>2</sub>.

Sol. in HF with evolution of  $H_2$  and formation of VF<sub>3</sub>. (Manchot, A. 1907, 357. 135)

Vanadium trifluoride, VF<sub>3</sub>.

Nearly insol. in  $H_2O$  and organic solvents. (Ruff, B 1911, 44. 2544.)

$+3H_2O$ . Efflorescent. Easily sol. in cold, extremely sol. in hot  $H_2O$  with decomp. Can be recryst. from HF + Aq. Insol. in strong alcohol. (Petersen, J. pr (2) 40. 48.)

Vanadium tetrafluoride, VF<sub>4</sub>.

Very hygroscopic.

Easily sol. in  $H_2O$

Difficultly sol. in  $SO_2Cl_2$  and  $SiCl_4$

Sol. in  $POCl_3$  with evolution of gas.

Sol. in acetone and acetic acid.

Difficultly sol. in alcohol and  $CHCl_3$ . (Ruff, B. 1911, 44. 2545)

Vanadium pentafluoride, VF<sub>5</sub>.

Easily sol in  $H_2O$ .

Easily sol. in alcohol,  $CHCl_3$ , acetone, and ligroin. Insol. in  $CS_2$ . Decomp. toluene and ether. (Ruff, B. 1911, 44. 2549.)

Vanadium trifluoride with MF.

See Fluovanadate, M.

**Vanadium hydride,**

Stable Does not react with boiling  $H_2O$ .  
Not attacked by boiling  $HCl$ , but oxidized  
by hot  $H_2SO_4$ .  
Sol in boiling  $HNO_3$ . (Muthmann, A.  
1907, 355. 88.)

**Vanadium dihydroxide,  $VO, xH_2O$ .**

Insol in  $KOH$  or  $NaOH + Aq$   
 $V(OH)_3$ . Sol. in  $HCl$  (Locke and Ed-  
wards, Am. Ch. J. 1898, 20. 598.)

**Vanadium trihydroxide,  $V_2O_3, xH_2O$ .**

Easily sol. in all acids. (Petersen, J. pr  
(2) 40. 49.)

**Vanadium tetrahydroxide (Hypovanadic hydroxide),  $V_2O_3(OH)_4 + 6H_2O$ .**

Easily sol. in acids or alkalis. (Crow,  
Chem Soc 30. 453)

**Vanadium triiodide,  $VI_3 + 6H_2O$ .**

Very hygroscopic, sol in  $H_2O$ . Only sl  
sol. in cold conc  $HI + Aq$   
Sol in alcohol (Picman, Z. anorg 1899,  
19. 399)

**Vanadium nitride,  $V_2N$ .**

Insol. in  $H_2O$ ,  $HCl$ , and  $KOH + Aq$  Sol  
in  $HNO_3 + H_2SO_4$ .

Decomp by fusing with  $KOH$ . (Muth-  
mann, A. 1907, 355. 93.)

Insol. in liquid  $NH_3$ . (Gore, Am. Ch. J  
1898, 20. 830)

$VN$ . (Roscoe, A. suppl. 6. 114.)

$VN_2$ . Not attacked by cold  $HNO_3 + Aq$   
(Uhrlaub, Pogg. 103. 134)

**Vanadium dioxide,  $VO$ .**

Insol. in  $H_2O$ ; easily sol in dil. acids  
(Roscoe, A. suppl. 6. 95.)

**Vanadium trioxide,  $V_2O_3$ .**

Oxidized in  $H_2O$  in contact with air and  
then dissolves. Insol. in acids, except  $HNO_3$ ,  
and in alkalis +  $Aq$  (Roscoe, A. suppl. 6.  
99)

Easily sol. in  $HF$  (Petersen, J. pr (2) 40.  
48)

**Vanadium tetroxide,  $VO_2$ .**

Sol in acids and alkalis +  $Aq$ .

**Vanadium pentoxide,  $V_2O_5$ .**

Sol. in about 2000 pts.  $H_2O$  (Berzelius.)  
Sol in acids, alkali hydrates, and carbon-  
ates +  $Aq$  Insol. in absolute, very sl. sol.  
in dil. alcohol.

Insol. in glacial  $HC_2H_3O_4$

Sol in conc.  $KF + Aq$ . (Ditte, C. R. 105.  
1087)

Sol. in  $H_2O_2 + Aq$  and alkali oxalates +  
 $Aq$ . (Haberstadt, Z. anal. 22. 1)

Three modifications.—(a) Forms hydrates

with 2, and  $5H_2O$ : Sol in  $H_2O$ . 1 l of sat.  
solution contains 8 g.  $V_2O_5$ .

( $\beta$ )  $V_2O_5, 2H_2O$ . Very sl sol in  $H_2O$  1 l.  
of sat. solution contains 0.5 g.  $V_2O_5$ .

( $\gamma$ )  $V_2O_5, 5H_2O$  Less sol in  $H_2O$  than  
 $\beta$  1 l.  $H_2O$  contains 0.05 g.  $V_2O_5$  when sat-  
urated (Ditte, C. R. 101. 698.)

See Vanadic acid.

**Vanadium oxide,  $V_2O_5 = 2VO_3, V_2O_5$ .**

See Vanadate, vanadium.

$V_2O_5, V_2O_5 + \frac{2}{3}H_2O$ . (Brierley, Chem  
Soc 49. 30.)

See also Vanadiovanadic acid.

$V_2O_5, 2V_2O_5 + 8H_2O$ .

See Vanadate, vanadium.

**Vanadium pentoxide with MF.**

See Fluoxyvanadate, M.

**Vanadium oxy compounds.**

See Vanadyl compounds.

**Vanadium silicide,  $V_2Si$ .**

Insol. in  $H_2O$ .

Not attacked by  $HCl$ ,  $HNO_3$  or  $H_2SO_4$ .  
Readily attacked by  $HF$

Not attacked by  $KOH + Aq$ ,  $NaOH + Aq$   
or  $NH_4OH$ . Decomp by fused  $KOH$ .

Insol in alcohol, ether and benzene.  
(Moissan, C. R. 1902, 135. 496)

$VSi_3$  Sol. in  $HF$ ; insol. in acids and al-  
kalis.

Decomp by fused  $KOH$ . (Moissan, C. R.  
1902, 135. 78)

**Vanadium disulphide,  $V_2S_3$ .**

Insol in boiling dil or conc.  $HCl$ , dil  
 $H_2SO_4 + Aq$ , or cold conc  $H_2SO_4$ . Easily  
sol. in hot dil or conc.  $HNO_3 + Aq$ , or in  
boiling conc.  $H_2SO_4$ . Insol in alkalis +  $Aq$ .  
Sl sol in  $KSH + Aq$ ; sol. in  $NH_4SH + Aq$ .  
(Kay, Chem Soc. 37. 728.)

**Vanadium trisulphide,  $V_2S_5$ .**

Insol. in cold  $HCl$  or dil.  $H_2SO_4 + Aq$ . Very  
sl. sol. in hot  $HCl$  or dil.  $H_2SO_4 + Aq$ . More  
sol. in  $HNO_3 + Aq$  or conc.  $H_2SO_4$ . Sl. sol  
in  $NaOH$  or  $NH_4OH + Aq$ . Easily sol in  
 $(NH_4)_2S$  or  $NH_4SH + Aq$ , also in  $K_2S + Aq$   
(Kay, Chem Soc 37. 728.)

**Vanadium pentasulphide,  $V_2S_5$ .**

Sl. attacked by hot conc.  $HCl$  or hot dil.  
 $H_2SO_4 + Aq$ ; sol. in hot conc.  $H_2SO_4$ . Sol. in  
hot dil.  $HNO_3 + Aq$ . Sl. sol. in  $NH_4OH + Aq$ ,  
but easily dissolved by  $NaOH + Aq$ . Sl. sol  
in  $Na_2S + Aq$  Sol. in  $NH_4SH + Aq$  (Kay.)

**Vanadium sulphochloride sulphur chloride,  
 $4VSCl_3, S_2Cl_2$ .**

Decomp. in the air. (Koppel, Z. anorg  
1905, 45. 357.)

**Vanadous acid.****Ammonium vanadite, basic,  $2(\text{NH}_4)_2\text{O}$ ,  $\text{V}_2\text{O}_4$ .**

Sl sol in cold, easily in hot  $\text{H}_2\text{O}$ . (Ditte, C. R. 102. 1310.)

**Ammonium vanadite,  $(\text{NH}_4)_2\text{V}_2\text{O}_6 + 3\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ . (Crow, Chem. Soc. 30. 460.)  
 $+x\text{H}_2\text{O}$ . Sol in  $\text{H}_2\text{O}$ .  
 Insol in alcohol, ether and ammonia (Koppel, Z anorg 1903, 36. 297.)  
 $+3\text{H}_2\text{O}$  Easily sol. in  $\text{H}_2\text{O}$ . (Mawrow, Z. anorg. 1907, 55. 150.)

**Barium vanadite,  $\text{BaV}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Ppt (Koppel, Z anorg. 1903, 36. 300.)  
 $+5\text{H}_2\text{O}$ . Precipitate Easily sol in  $\text{HNO}_3$ , or  $\text{HCl} + \text{Aq}$ . (Crow, Chem Soc. 30. 460.)

**Lead vanadite,  $\text{PbV}_2\text{O}_6$ .**

Ppt. (Crow.)

**Potassium vanadite,  $\text{K}_2\text{V}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Sol in  $\text{H}_2\text{O}$ .  
 Insol in alcohol, ether and ammonia (Koppel, Z. anorg 1903, 36. 300.)  
 $+7\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . Insol. in cold, sol. in hot  $\text{KOH} + \text{Aq}$  Insol. in alcohol. (Crow.)  
 $+ \text{H}_2\text{O}$  (Ditte, C. R. 102. 1310.)

**Silver vanadite,  $\text{Ag}_2\text{V}_2\text{O}_6$ .**

Ppt. (Crow)

**Sodium vanadite,  $\text{Na}_2\text{V}_2\text{O}_6 + 4\text{H}_2\text{O}$ .**

Sol. in  $\text{H}_2\text{O}$ .  
 Insol in alcohol, ether and ammonia. (Koppel, Z. anorg. 1903, 36. 299.)  
 $+7\text{H}_2\text{O}$ . Easily sol. in  $\text{H}_2\text{O}$ . (Crow, Chem. Soc. 30. 459.)

**Vanadosotungstic acid.****Ammonium vanadosotungstate,  $5(\text{NH}_4)_2\text{O}$ ,  $2\text{V}_2\text{O}_5$ ,  $14\text{WO}_3 + 13\text{H}_2\text{O}$ .**

Very sol in  $\text{H}_2\text{O}$  (E. F. Smith, J Am. Chem. Soc. 1903, 25. 1228)

**Vanadous acid.**

See Hypovanadic acid.

**Vanadovanadic acid.**

See Vanadicovanadic acid.

**Vanadyl bromide,  $\text{VOBr}$ .**

Very sl sol. in  $\text{H}_2\text{O}$ , acetic anhydride, ethyl acetate, and acetone.  
 Insol. in alcohol, ether, acetic acid,  $\text{CHCl}_3$ , toluene and  $\text{CCl}_4$ . (Ruff, B. 1911, 44. 2537.)

**Vanadyl dibromide,  $\text{VOBr}_2$ .**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Roscoe)

**Vanadyl tribromide,  $\text{VOBr}_3$ .**

Very deliquescent, and quickly decomposes in moist air Sol in  $\text{H}_2\text{O}$ . (Roscoe.)

**Vanadyl bromide,  $\text{V}_2\text{O}_5\text{Br}_2$ ,  $2\text{HBr} + 7\text{H}_2\text{O}$ .**

Very deliquescent (Ditte, C. R. 102. 1310.)

**Vanadyl semichloride,  $\text{V}_2\text{O}_5\text{Cl}$ .**

Insol in  $\text{H}_2\text{O}$ . Easily sol in  $\text{HNO}_3 + \text{Aq}$ . (Roscoe, A. suppl 6. 114.)

**Vanadyl monochloride,  $\text{VOCl}$ .**

Insol. in  $\text{H}_2\text{O}$ . Easily sol in  $\text{HNO}_3 + \text{Aq}$ . (Roscoe.)

**Vanadyl dichloride,  $\text{VOCl}_2$ .**

Deliquescent Slowly decomp. by  $\text{H}_2\text{O}$ . Easily sol. in  $\text{HNO}_3 + \text{Aq}$  (Roscoe)

**Vanadyl trichloride,  $\text{VOCl}_3$ .**

Deliquescent. Sol. in  $\text{H}_2\text{O}$  and alcohol with decomp. (Bedson, A 180. 235.)  
 Sol in ether with combination.

**Divanadyl chloride,  $\text{V}_2\text{O}_5\text{Cl}_2 + 5\text{H}_2\text{O}$ .**

Deliquescent, and sol in  $\text{H}_2\text{O}$ , fuming  $\text{HCl}$ , or alcohol (Crow, Chem. Soc. 30. 457.)

**Vanadyl chloride,  $\text{V}_2\text{O}_5\text{Cl}_2 + 4\text{H}_2\text{O}$ .**

Very deliquescent (Ditte, C. R. 102. 1310)

**Vanadyl platinum chloride.**

See Chloroplatinate, vanadyl.

**Vanadyl trichloride ammonia,  $\text{VOCl}_3, x\text{NH}_3$ .**

Decomp by  $\text{H}_2\text{O}$ . (Roscoe)

**Vanadyl difluoride,  $\text{VOF}_2$ .**

Insol in  $\text{H}_2\text{O}$ . Insol. in alcohol, ether,  $\text{CHCl}_3$ . Sl. sol. in acetone. (Ruff, B. 1911, 44. 2546.)

**Vanadyl trifluoride,  $\text{VOF}_3$ .**

Very hygroscopic Easily sol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{POCl}_3$  with evolution of gas. Difficultly sol. in  $\text{PCl}_3$  and  $\text{AsCl}_3$ . Sol. in hot  $\text{CHCl}_3$  and acetic anhydride. (Ruff, B. 1911, 44. 2547)

**Vanadyl fluoride with MF.**

See Fluoxyvanadate, and Fluoxhypovanadate, M.

**Vanadyl iodide,  $\text{V}_2\text{O}_5\text{I}_2, 3\text{HI} + 10\text{H}_2\text{O}$ .**

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ . (Ditte, C. R. 102. 1310.)

$\text{V}_2\text{O}_5\text{I}_2, 2\text{HI} + 8\text{H}_2\text{O}$  As above

**Vanadyl sulphide,  $\text{VOS}$  (?).**

(a) Insol. in  $\text{H}_2\text{O}$ , alkalis, alkali sulphides +  $\text{Aq}$ . Sol. in acids, except nitric acid and aqua regia. (Berzelius)

(b) Sol. in alkalis, alkali carbonates, and sulphides + Aq. Insol. in acids. (Berzelius.)

### Water, H<sub>2</sub>O.

Water is the most universal solvent. It absorbs all gases, usually with an increase of volume, seldom, as in the case of NH<sub>3</sub>, with a diminution of volume. It dissolves almost all solids in greater or less quantity, and mixes with or dissolves considerable amounts of many liquids.

Miscible with alcohol. Sol. in 36 pts. ether. Sol. in 30-33 vols. ethyl acetate. (Beckér.)

Sol. in 5 vols. iodhydrin

Sl. sol. in most of the fatty oils

### Solubility in organic solvents at t°.

Solvent	t°	g H <sub>2</sub> O in 100 g of the solution
Benzene	+3	0 030
	23	0 060

(Groschuff, Z. Elektrochem, 1911, 17, 350.)

### White precipitate, fusible.

See Mercuridiammonium chloride.

### White precipitate, infusible.

See Mercuris chloramide.

### Xanthochromium bromide,

Sol. in H<sub>2</sub>O. Resembles the chloride (Christensen, J. pr. (2) 24, 74.)

### Carbonate, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>CO<sub>3</sub>.

Easily sol. in H<sub>2</sub>O. (Christensen.)

### Xanthochromium chloride,

More sol. in H<sub>2</sub>O than the roseo, but less than the purpleo salt.

Solution decomp. by light or boiling. Decomp. by dil. acids. Sol. in NaOH + Aq and in NH<sub>4</sub>OH + Aq (sp. gr. 0.91). Insol. in alcohol (Christensen, J. pr. (2) 24, 74.)

### chloroplatinate, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>PtCl<sub>6</sub>.

Insol. in pure H<sub>2</sub>O, but sol. when warmed with H<sub>2</sub>O containing HCl, with formation of a new double salt. (Christensen)

### mercuric chloride, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>Cl<sub>2</sub>, 2HgCl<sub>2</sub>.

Precipitate. Decomp. by long contact with H<sub>2</sub>O (Christensen.)

### chromate, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>CrO<sub>4</sub>.

Difficultly sol. in H<sub>2</sub>O. (Christensen)

### dichromate, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub>.

Difficultly sol. in H<sub>2</sub>O (Christensen.)

### dithionate, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>S<sub>2</sub>O<sub>8</sub>.

Insol. in cold H<sub>2</sub>O. (Christensen)

### hydroxide, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>(OH)<sub>2</sub>.

Known only in solution. (Christensen.)

### iodide, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>I<sub>2</sub>.

Quite difficultly sol. in H<sub>2</sub>O. (Christensen.)

### nitrate, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub>.

Sol. in about 150 pts H<sub>2</sub>O. (Christensen.)

### sulphate, Cr(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> + H<sub>2</sub>O.

Sol. in H<sub>2</sub>O and (NH<sub>4</sub>)<sub>2</sub>SO<sub>4</sub> + Aq (Christensen.)

### Xanthocobaltic bromide,

Easily sol. in cold H<sub>2</sub>O. (Werner and Miolati, Gazz. ch. it 23, 2, 140)

### bromonitrate, Co(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>(NO<sub>2</sub>)Br.

Sl. sol. in cold, more easily in hot H<sub>2</sub>O. (Gibbs)

### chloride, Co(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>Cl<sub>2</sub>.

Sl. sol. in cold H<sub>2</sub>O, and decomp. by boiling therewith. Insol. in HCl + Aq and alkali chlorides + Aq. Easily decomp. by boiling with acids, even dilute (Gibbs and Genth)

Sol. in 50 pts cold H<sub>2</sub>O. (Joigensen, Z. anorg. 5, 172.)

### mercuric chloride, Co(NO<sub>2</sub>)(NH<sub>4</sub>)<sub>2</sub>Cl<sub>2</sub>, 2HgCl<sub>2</sub> + H<sub>2</sub>O.

Insol. in cold, sl. sol. in hot H<sub>2</sub>O without decomp. More sol. in acidified H<sub>2</sub>O. (Gibbs and Genth)

**Xanthocobaltic chloraurate,**

Can be easily crystallised out of hot  $\text{H}_2\text{O}$  (Gibbs and Genth, *Sill Am J* (2) **24**, 90.)

— chloronitrate,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2(\text{NO}_2)_2\text{Cl}$ .  
Sl. sol in cold, more easily in hot  $\text{H}_2\text{O}$ .

— chloronitrate gold chloride,  
 $\text{Co}(\text{NO}_2)(\text{NH}_3)_2(\text{NO}_2)_2\text{Cl}$ ,  $\text{AuCl}_3$ .

— chloronitrate platinic chloride,  
 $2\text{Co}(\text{NO}_2)(\text{NH}_3)_2(\text{NO}_2)_2\text{Cl}$ ,  $\text{PtCl}_4$ .

— chloroplatinate,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2\text{Cl}_3$ ,  
 $\text{PtCl}_4 + \text{H}_2\text{O}$ .

Scarcely sol. in hot or cold  $\text{H}_2\text{O}$ . Can be recryst. from dil.  $\text{HNO}_3 + \text{Aq}$ . Sol. in hot dil.  $\text{HCl} + \text{Aq}$ . (Gibbs and Genth, *Sill Am. J* (2) **24**, 91.)

— chromate,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2\text{CrO}_4 + \text{H}_2\text{O}$   
Very sl. sol. in cold, and but slightly sol. in hot  $\text{H}_2\text{O}$ . (Gibbs)

— dichromate,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2\text{Cr}_2\text{O}_7$ .  
Easily sol. in hot  $\text{H}_2\text{O}$

— ferrocyanide,  $[\text{Co}(\text{NO}_2)(\text{NH}_3)_2\text{Fe}(\text{CN})_6] + 7\text{H}_2\text{O}$ .  
Nearly insol in cold, decomp. by warm  $\text{H}_2\text{O}$  +  $6\text{H}_2\text{O}$ . (Braun, A. **132**, 47.)

— iodide,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2\text{I}_3$ .  
Sol. in  $\text{H}_2\text{O}$ . (Gibbs.)

— iodosulphate,  
 $[\text{Co}(\text{NO}_2)(\text{NH}_3)_2]_2(\text{SO}_4)_2\text{I}_2$   
Sol. in  $\text{H}_2\text{O}$

— periodosulphate,  
 $[\text{Co}(\text{NO}_2)(\text{NH}_3)_2]_2(\text{SO}_4)_2\text{I}_4$ .  
Easily decomp. by hot  $\text{H}_2\text{O}$

— nitrate,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2(\text{NO}_3)_2$ .  
Sl. sol. in cold, moderately sol. in hot  $\text{H}_2\text{O}$ . Decomp. by boiling. Much less sol. than  $\text{NH}_4\text{Cl}$  or  $(\text{NH}_4)_2\text{SO}_4$  in cold  $\text{H}_2\text{O}$ . Insol. in  $\text{HNO}_3$ . (Gibbs and Genth.)

— nitrite,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2(\text{NO})_2 + 2\text{H}_2\text{O}$ .  
Sol. in  $\text{H}_2\text{O}$ . (Gibbs)

— cobaltic nitrite,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2(\text{NO}_2)_2 + 2\text{H}_2\text{O}$ .  
Sl. sol. in  $\text{H}_2\text{O}$ . (Gibbs, *Proc Am. Acad.* **11**, 8.)  
Is nitratopurpureocobaltic cobaltic nitrite,

$[\text{Co}(\text{NO}_2)(\text{NH}_3)_2]_2[\text{Co}(\text{NO}_2)_2]_2 + 2\text{H}_2\text{O}$  (Jørgensen, *Z. anorg.* **5**, 175.)

$[\text{Co}(\text{NO}_2)(\text{NH}_3)_2]_2[\text{Co}(\text{NO}_2)_2]_2$ . Not so difficultly sol. as the luteo salt. (Jørgensen.)

**Xanthocobaltic tetramine cobaltic nitrite,**  
 $\text{Co}_2(\text{NO}_2)_2(\text{NH}_3)_{12}[\text{Co}_2(\text{NH}_3)_4(\text{NO}_2)_8]_2$ .

Can be recryst. from hot  $\text{H}_2\text{O}$ . (Gibbs, *Proc. Am Acad.* **11**, 8.)

$= (\text{NO}_2)_2\text{Co}(\text{NH}_3)_4[(\text{NO}_2)_2(\text{NH}_3)_2\text{Co}(\text{NO}_2)_2]_2$ .  
Xanthocobaltic diamine cobaltic nitrite.  
Very sl. sol. in cold  $\text{H}_2\text{O}$  (Jørgensen, *Z anorg.* **5**, 180.)

— oxalate,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2\text{C}_2\text{O}_4$ .

Nearly insol. in cold, sl. sol. in hot  $\text{H}_2\text{O}$

— sulphate,  $\text{Co}(\text{NO}_2)(\text{NH}_3)_2\text{SO}_4$ .

Moderately sol. in hot, much less in cold  $\text{H}_2\text{O}$ . Sol. without decomp. in  $\text{H}_2\text{SO}_4 + \text{Aq}$ . (Gibbs and Genth)

Sol. in 25 pts hot  $\text{H}_2\text{O}$  acidified with  $\text{HC}_2\text{H}_3\text{O}_2$  (Jørgensen, *Z. anorg.* **5**, 172)  
 $4\text{Co}(\text{NO}_2)(\text{NH}_3)_2\text{SO}_4, 3\text{H}_2\text{SO}_4$ . Decomp. by  $\text{H}_2\text{O}$ , not by absolute alcohol (Jørgensen.)

**Xanthorhodium bromide,**

Moderately sol. in  $\text{H}_2\text{O}$ . (Jørgensen, *J pr* (2) **34**, 394)

— chloride,  $(\text{NO}_2)\text{Rh}(\text{NH}_3)_2\text{Cl}_3$ .

Much more sol. in  $\text{H}_2\text{O}$  than the nitrate

— chloroplatinate,  $(\text{NO}_2)\text{Rh}(\text{NH}_3)_2\text{PtCl}_3$ .  
Ppt. Extremely sl. sol. in cold  $\text{H}_2\text{O}$

— dithionate,  $(\text{NO}_2)\text{Rh}(\text{NH}_3)_2\text{S}_2\text{O}_6 + \text{H}_2\text{O}$ .  
Nearly insol. in  $\text{H}_2\text{O}$ .

— fluosilicate,  $(\text{NO}_2)\text{Rh}(\text{NH}_3)_2\text{SiF}_6$ .  
Ppt.

— hydroxide,  $(\text{NO}_2)\text{Rh}(\text{NH}_3)_2(\text{OH})_2$ .

— nitrate,  $(\text{NO}_2)\text{Rh}(\text{NH}_3)_2(\text{NO}_3)_2$ .

Moderately sol. in cold, easily in hot  $\text{H}_2\text{O}$ . Insol. in alcohol. Less sol. in conc.  $\text{NH}_4\text{OH} + \text{Aq}$  than in  $\text{H}_2\text{O}$

Insol. in dil.  $\text{HNO}_3 + \text{Aq}$ ; sol. in  $\text{HNO}_3 + \text{Aq}$  of 1.4 sp. gr.

— oxalate,  $(\text{NO}_2)\text{Rh}(\text{NH}_3)_2\text{C}_2\text{O}_4$ .

Nearly insol. in cold  $\text{H}_2\text{O}$ . Very sl. sol. in warm  $\text{H}_2\text{O}$ . Easily sol. in dil.  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq}$ .

— sulphate,  $(\text{NO}_2)\text{Rh}(\text{NH}_3)_2\text{SO}_4$ .

Slowly sol. in cold, quite easily in hot  $\text{H}_2\text{O}$   
 $4(\text{NO}_2)\text{Rh}(\text{NH}_3)_2\text{SO}_4, 3\text{H}_2\text{SO}_4$ . Sl. sol. in cold, easily in hot  $\text{H}_2\text{O}$ . Can be recrystallized from dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$ .

**Xenon, Xe.**Absorption by  $H_2O$  at  $t^\circ$ .

$t^\circ$	Absorption coefficient
0	0 2189

(Antropoff, Roy. Soc. Proc. 1910, **83**, A, 480.)**Ytterbium, Yb.****Ytterbium bromide,  $YbBr_2 \cdot 8H_2O$ .**Very sol. in  $H_2O$  Hydroscopic. (Cleve, Z. anorg. 1902, **32**, 135.)**Ytterbium chloride,  $YbCl_3 \cdot 6H_2O$ .**Very sol. in  $H_2O$ . (Cleve, Z. anorg 1902, **32**, 134.)Mpt. 150-155°. Anhydrous salt is sol in  $H_2O$  and in alcohol. (Matignon, A ch 1906, (8) 8. 442.)**Ytterbium oxide,  $Yb_2O_3$ .**

Slowly attacked by cold or warm acids, but easily sol at 100°

**Ytterbium oxychloride,  $YbOCl$ .**Ppt. (Cleve, Z. anorg. 1902, **32**, 135.)**Yttrium, Y**Decomposes  $H_2O$ . (Cleve, Bull. Soc. (2) **21**, 344.) Decomp.  $H_2O$  slightly at ord. temp., more rapidly by boiling. Easily sol. in dil acids, even acetic acid. Slightly acted upon by conc.  $H_2SO_4$ . Decomposes hot  $KOH$  + Aq and cold  $NH_4Cl$  + Aq. Not attacked by  $NH_4OH$  + Aq (Popp, A **131**, 179.)

Popp's yttrium contained erbium

**Yttrium bromide,  $YBr_3$ .**Sol in  $H_2O$  with evolution of heat (Duboin, C. R. **107**, 243.)+  $9H_2O$ . Deliquescent. Easily sol in  $H_2O$  and alcohol. Insol. in ether. (Cleve)**Yttrium carbide,  $YC_2$ .**Decomp by  $H_2O$  and by dil acids; very slowly attacked by conc. acids. (Moissan, C. R. **1896**, **122**, 575.)Decomp by  $H_2O$  and dil. acids. (Pettersson, B. **1895**, **28**, 2421.)**Yttrium chloride,  $YCl_3$ .**Anhydrous. Sol. in  $H_2O$  with evolution of heat. (Cleve.)+  $6H_2O$ . Deliquescent. Very sol in  $H_2O$ . Sl. sol. in alcohol. Insol. in ether. (Cleve.) Mpt. 156-160°; sol. in alcohol.

60.1 grams anhydrous salt are sol. in 100 grams of abs. alcohol at 15°.

6.5 grams are sol in 100 grams pyridine. (Matignon, A ch. 1906, (8) 8. 437.)

**Yttrium fluoride,  $YF_3 \cdot \frac{1}{2}H_2O$ .**

Nearly insol. in dil. acids (Cleve.)

**Yttrium hydroxide,  $Y_2O_3$ ,  $6H_2O$  or  $Y_2O_3H_2O + 3H_2O$ .**Insol in  $H_2O$ .Insol in  $KOH$  or  $NaOH$  + Aq. Easily sol. in acids. Sol. in alkali carbonates + Aq. When freshly pptd., easily sol. in  $NH_4Cl$  + Aq**Yttrium iodide,  $YI_3$ .**Very deliquescent. Easily sol. in  $H_2O$  and alcohol

Sl. sol. in ether (Cleve)

**Yttrium oxide,  $Y_2O_3$ .**Insol. in  $H_2O$  Sl. sol. in cold  $HCl$ ,  $HNO_3$ , or dil  $H_2SO_4$  + Aq, but gradually completely sol. on warming. Insol. in  $NH_4OH$  and sl sol in  $KOH$  + Aq Sol. in  $HCl$ ,  $H_2O_2$  + Aq Somewhat sol in  $K_2CO_3$  + Aq**Yttrium peroxide,  $Y_2O_5$ .**(Cleve, Bull. Soc. (2) **43**, 53.)**Yttrium oxychloride,  $Y_2O_2Cl_2$ .**Insol in  $H_2O$ . (Popp.)**Yttrium sulphide,  $Y_2S_3$ .**Not prepared in pure state. Impure is insol. in  $H_2O$ , and partially decomp. thereby. Easily sol in acids with decomp (Popp.)**Zinc, Zn.**Not attacked by pure cold  $H_2O$ . Slowly oxidised by boiling  $H_2O$  Pure  $H_2O$  free from  $O$  dissolved nothing from 2500 sq. mm. Zn Presence of air containing  $CO_2$  caused a solution of 3.5 mg. Zn, which maximum was reached in 2 days Air without  $CO_2$  also caused a slight action (Snyders, B. **11**, 936.)100 ccm distilled  $H_2O$  dissolved 14 mg Zn from 11.8 sq cm in one week, during which air free from  $CO_2$  was passed through the liquid, and 19 mg. when air containing  $CO_2$  was used. (Wagner, Dngl. **221**, 260.)Filtered rain water was found to contain 20 mg. Zn per l (Burg, Isis, **1873**, 119.)Very pure  $H_2O$ , when conducted through a great length of galvanized iron pipe, contained 1.7 pts. Zn to 100,000 pts  $H_2O$ . (Davies, J. Soc. Chem. Ind. **1899**, **18**, 102.)Action of  $H_2O$  on Zn in galvanized pipes is caused by electrolysis (Smetham, C. N. **1879**, **39**, 236.)All kinds of  $H_2O$  attack Zn, rain water the leastIn distilled  $H_2O$  exposed to air Zn is abun-

dantly coated with  $\text{ZnCO}_3 \cdot 2\text{ZnO} + 3\text{H}_2\text{O}$ . By allowing 32 g Zn to stand in 270 cc. distilled  $\text{H}_2\text{O}$  in a flask loosely stoppered with filter paper, 12 pts. Zn to 100,000 pts  $\text{H}_2\text{O}$  was found in solution in 1-2 days (Smith, J. Soc Chem Ind 1904, 23, 475.)

Sol in all acids. Very slowly sol in dil HCl or  $\text{H}_2\text{SO}_4 + \text{Aq}$  in glass vessels if Zn is pure. According to Jacquelin, 24 hours were necessary to dissolve 6 g. pure zinc. When fused at the lowest possible temperature, it is much more slowly sol than when heated to a red heat. In both cases it is much more rapidly dissolved if cooled quickly. (Bolley, A. 95, 294, Rammelsberg.)

Dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  dissolves given % zinc in the same length of time (B=according to Bolley, R=according to Rammelsberg)

	Slowly cooled		Rapidly cooled	
	B	R	B	R
Cast at the melting point	42.5	74.1	13.0	0.9
Cast at a red heat	100.0	69.4	85.5	9.5

50 ccm.  $\text{H}_2\text{SO}_4 + \text{Aq}$  dissolved in 2 hours the following amts from 1 sq. cm Zn at t°.

t°	Strength of acid	Grms dissolved
20	$\text{H}_2\text{SO}_4$	0.000
130	"	0.075
150	"	0.232
20	$\text{H}_2\text{SO}_4 + \text{H}_2\text{O}$	0.002
130	"	0.142
150	"	0.345

100	"	3.16

(Calvert and Johnson, Chem Soc. 19, 437.)

C P. zinc is more quickly sol. in dil acids in vacuo than under normal pressure, the ratio being about 1:6.5. The rate of solubility increases slowly with rise of temp from 0° to 98°, when it amounts to about 4 times that at 0°, but from 98°-100° the increase is thirteenfold. Thus, as an average of 6 experiments, dil.  $\text{H}_2\text{SO}_4 + \text{Aq}$  (1:20) dissolves in 30 minutes 2.1 mg. Zn at 0°; 4.9 mg. at 20°; 7.4 mg. at 60°; 9.3 mg. at 98°; but 122.1 mg. at 100°. If, however, the acid was prevented from boiling by increasing the pressure, the sudden increase between 98° and 100° does not take place.

The rate of solubility in dil  $\text{H}_2\text{SO}_4 + \text{Aq}$  (1:20) is also increased 175 times by the addition of  $\text{CrO}_3$  and 306 times by the addition of  $\text{H}_2\text{O}_2$ . The above phenomena are explained by assuming the formation of a condensed hydrogen atmosphere around the metal, which prevents the further action of the acid. (Weeren, B. 24, 1785.)

Not attacked by  $\text{HNO}_3 + \text{Aq}$  of 1.512 to 1.419 sp. gr. at a temp of -18° or less, but violently attacked if temp is raised.  $\text{HNO}_3 + \text{Aq}$  of 1.419-1.401 sp. gr. does not attack Zn at temp of a freezing mixture, but violently at 0°. More dil  $\text{HNO}_3 + \text{Aq}$  attacks Zn even at -20°. (Millon, A. ch. (3) 6, 99.)

Sol. in  $\text{H}_2\text{CO}_3 + \text{Aq}$ . (Berzelius.)

Solubility of Zn in acids is very much affected by the presence of small quantities of various metallic salts. Small amts. of  $\text{PtCl}_4 + \text{Aq}$  accelerated the action of  $\text{H}_2\text{SO}_4 + \text{Aq}$  149 times, and  $\text{As}_2\text{O}_3$  123 times.  $\text{HgCl}_2$  has a strong retarding action owing to pptn of Hg on the Zn.

The rate of solution of Zn in acids and the effect of changes in concentration and temperature and of the presence of inorganic salts and organic substances on this rate has been studied. 26 Tables are given. (Ericson-Aurén, Z. anorg. 1901, 27, 209-253.)

Speed of solution in  $\text{H}_2\text{SO}_4$  and in HCl (Centnerszwei, Z. phys. Ch. 1914, 87, 692.)

Various saline solutions have a strong solvent power in presence of  $\text{PtCl}_4$ , i.e. KCl, NaCl,  $\text{Na}_2\text{SO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{MgSO}_4 + \text{Aq}$ .  $\text{PtCl}_4$  also causes Zn to decompose distilled  $\text{H}_2\text{O}$ .  $\text{CuSO}_4$  has a similar but less energetic effect.

In all the above cases the disengagement of hydrogen is slower in the dark than in the light. (Millon, C. R. 21, 37.)

According to Baieswill (C. R. 21, 292) the above reactions are all caused by galvanic action due to pptd metal, and a piece of Pt in contact with the Zn causes the same action as the  $\text{PtCl}_4$  in solution.

\* Easily sol. in alkalis + Aq, even  $\text{NH}_4\text{OH} + \text{Aq}$ , especially when the Zn is in contact with Fe. Sol. in NaCl + Aq with pptn of ZnO. (Siersch, J. B. 1867, 257.)

Sol. in sat alkali and alkali-earth chlorides + Aq. (Post, 1872.)

Sol. in  $\text{NH}_4$  salts + Aq. (Lorm, J. B. 1865, 124.)

Sol in sat  $\text{Na}_2\text{SO}_4$ ,  $\text{K}_2\text{SO}_4$ ,  $\text{MgSO}_4$ ,  $\text{NaNO}_3$ ,  $\text{KNO}_3$ ,  $\text{Ba(NO}_3)_2$ ,  $\text{CaCl}_2$ ,  $\text{MgCl}_2$ , and  $\text{NH}_4\text{NO}_3 + \text{Aq}$ . Chlorides and sulphates (especially  $\text{Na}_2\text{SO}_4$  and  $\text{MgCl}_2$ ) have strongest action,  $\text{MgSO}_4$  and nitrates the least. The action was greatly increased by heat. (Snyders, B. 11, 936.)

Sol. in boiling  $\text{NH}_4\text{Cl} + \text{Aq}$ . Sol. in neutral  $\text{FeCl}_3 + \text{Aq}$  with pptn. of Fe, especially easily at 100°. (Capitaine, C. R. 9, 737.)

Sol. in  $\text{NiSO}_4 + \text{Aq}$  with pptn of NiO. (Tupputu.)

Sol. in conc hot  $\text{ZnCl}_2 + \text{Aq}$ , but Zn oxy-

chloride is pptd on diluting. (Ordway, Am J. Sci (2) 23. 222.)

Sol. in  $\text{GISO}_4 + \text{Aq.}$  (Debray)

Solubility of Zn in dilute solutions of salts. 100 cem. of solutions of the given salts were allowed to act one week on 11.8 sq cm. Zn while a current of air with or without  $\text{CO}_2$  was passed through the solution

Salt	G salt in 100 cem solution	Mg. Zn dissolved without $\text{CO}_2$	Mg. Zn dissolved with $\text{CO}_2$
NaCl or KCl	0.5	7	38
$\text{NH}_4\text{Cl}$	1.0	51	36
$\text{MgCl}_2$	0.83	18	54
$\text{K}_2\text{SO}_4$	1.0	30	53
$\text{KNO}_3$	1.0	9	37
$\text{Na}_2\text{CO}_3$	1.0	13	
$\text{NaOH}$	0.923	60	
$\text{CaO}_2\text{H}_2$	Sat	3	

(Wagner, Dingl. 221. 260.)

Action of dil. salt solutions (1%) on Zn. The following amts. of Zn in mg. were dissolved from 2500 sq mm Zn in 14 days by 400 cem. 1% solution of the given salts:

Salt	Mg Zn	Salt	Mg. Zn
NaCl	11.2	$\text{NaNO}_3$	6
KCl	14.8	$\text{Ba(NO}_3)_2$	8
$\text{CaCl}_2$	15.2	$\text{NH}_4\text{Cl}$	24.0
$\text{MgCl}_2$	17.2	$(\text{NH}_4)_2\text{SO}_4$	31.6
$\text{BaCl}_2$	13.2	$\text{NH}_4\text{NO}_3$	26.0
$\text{K}_2\text{SO}_4$	12.0	$\text{NaHCO}_3$	0
$\text{MgSO}_4$	8.8	$\text{K}_2\text{CO}_3$	0
$\text{KNO}_3$	6.8	$\text{Na}_2\text{CO}_3$	0

Sl. attacked by  $\text{H}_2\text{O}$  at  $80^\circ$ , by hot conc.  $\text{NH}_4\text{OH}$ ; attacked by  $\text{H}_3\text{PO}_4$  or  $\text{NaCl} + \text{Aq.}$  very al. attacked by  $\text{NaNO}_3 + \text{Aq.}$  or  $\text{KNO}_3 + \text{Aq.}$  at  $100^\circ$ . (Smith, J. Soc. Chem Ind. 1904, 23. 476.)

$\frac{1}{2}$  cem. oleic acid dissolves 0.0240 g. Zn in 6 days. (Gates, J. phys. Chem 1911, 15. 143.)

Attacked by cane sugar + Aq. at  $115^\circ$  (Klein and Berg, C. R. 102. 1170.)

#### Zinc amide, $\text{Zn(NH}_2)_2$ .

Decomp. by  $\text{H}_2\text{O}$  and alcohol. Insol. in ether (Frankland, Phil Mag (4) 15. 149)

#### Zinc antimonide, $\text{ZnSb}_2$ .

Does not decomp boiling  $\text{H}_2\text{O}$  except slightly. Not attacked by dil. mineral acids, but decomp by conc.  $\text{HCl}$  or  $\text{HNO}_3 + \text{Aq.}$  (Cooke, Proc Am Acad. 5. 348)

$\text{ZnSb}_2$  Decomp.  $\text{H}_2\text{O}$  rapidly at  $100^\circ$

Violently decomp. by dil  $\text{HCl}$  or  $\text{H}_2\text{SO}_4 + \text{Aq.}$  also by  $\text{HNO}_3 + \text{Aq.}$  Completely sol. in  $\text{HCl} + \text{Aq.}$  mixed with a little  $\text{HNO}_3$  (Cooke)

#### Zinc azoimide, basic, $\text{Zn(OH)N}_3$ .

Very al. sol. in  $\text{H}_2\text{O}$ . Decomp. by hot  $\text{H}_2\text{O}$ . (Curtius, J. pr. 1898, (2) 58. 293)

#### Zinc azoimide ammonia, $\text{ZnN}_6 \cdot 2\text{NH}_3$ .

Insol. in  $\text{H}_2\text{O}$ ; but gradually decomp. thereby. (Dennis, J. Am. Chem. Soc. 1907 29. 20.)

#### Zinc bromide, $\text{ZnBr}_2$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$ .

Sat.  $\text{ZnBr}_2 + \text{Aq}$  contains at:

$-20^\circ$   $+4^\circ$   $22^\circ$   $97^\circ$   
66.3 68.8 77.5 83.6%  $\text{ZnBr}_2$

$107^\circ$   $170^\circ$   $210^\circ$   $375^\circ$  (mpt.)  
83.8 85.0 89.3 100%  $\text{ZnBr}_2$

(Ftard, A. ch. 1894, (7) 2. 541.)

#### Solubility in $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:

$35^\circ$   $40^\circ$   $60^\circ$   $80^\circ$   $100^\circ$   
85.45 85.53 86.08 86.57 87.05 g.  $\text{ZnBr}_2$   
(Dietz, Z. anorg. 1899, 20. 250.)

See also below under hydrated salts

Sp. gr. of  $\text{ZnBr}_2 + \text{Aq}$  at  $19.5^\circ$  containing

(Kremers, calculated by Gerlach, Z. anal. 8. 285)

Sol in conc  $\text{HCl}$  or  $\text{HC}_2\text{H}_3\text{O}_2 + \text{Aq.}$  also in  $\text{NH}_4\text{OH} + \text{Aq.}$

Sol in  $\text{AlBr}_3$ . (Isbekow, Z anorg 1913. 84. 27)

Very sl. sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830)

Sol in alcohol and ether. (Berthelot, J. Pharm 14. 610)

Sol in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Insol. in ethyl acetate. (Naumann, B 1910, 43. 314.)

More sol. in anhydrous ether than in abs alcohol. Insol in  $\text{CS}_2$ . (Hampe, Ch. Z. 1887, 11. 846.)

Sol in quinoline (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Mol. weight determined in pyridine. (Werner, Z. anorg. 1897, 15. 22.)

+  $\text{H}_2\text{O}$ . (Lescœur, A. ch. 1894, (7) 2. 78.)

+  $2\text{H}_2\text{O}$ . Very hygroscopic

Solubility in  $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:

-8° 0° 13° 25° 30° 37° (mpt.)  
79.06 79.55 80.76 82.46 84.08 86.20 g.  $\text{ZnBr}_2$ .  
(Dietz, Z. anorg. 1899, 20. 250.)

+  $3\text{H}_2\text{O}$  Solubility in  $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:

-15° -10° -5° (mpt.)  
77.13 78.45 80.64 g.  $\text{ZnBr}_2$   
(Dietz, Z. anorg. 1899, 20. 250.)

Zinc bromide ammonia,  $\text{ZnBr}_2 \cdot 2\text{NH}_3$ .

Decomp. by  $\text{H}_2\text{O}$ . Sl. sol. in cold, more easily in warm  $\text{NH}_4\text{OH} + \text{Aq}$ . (Rammelsberg, Pogg. 55. 240.)

+  $\frac{1}{2}\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  with separation of  $\text{ZnO}$ . (André C. R. 96. 703.)

+  $\text{H}_2\text{O}$  Above salt of Rammelsberg's has this composition. (André.)

$3\text{ZnBr}_2 \cdot 8\text{NH}_3 + 2\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (André.)

$3\text{ZnBr}_2 \cdot 10\text{NH}_3 + \text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (André.)

$2\text{ZnBr}_2 \cdot 10\text{NH}_3$  Efflorescent. Decomp. by  $\text{H}_2\text{O}$ . (André.)

Zinc bromide cupric oxide,  $\text{ZnBr}_2 \cdot 3\text{CuO} + 2\text{H}_2\text{O}$ .

+  $4\text{H}_2\text{O}$  (Mailhe, C. R. 1901, 133. 227.)

Zinc bromide hydrazine,  $\text{ZnBr}_2 \cdot 2\text{N}_2\text{H}_4$ .

Decomp. by  $\text{H}_2\text{O}$ .

Sol in  $\text{NH}_4\text{OH} + \text{Aq}$  (Franzen, Z. anorg. 1908, 60. 277.)

Zinc chloride,  $\text{ZnCl}_2$ .

Very deliquescent, and sol. in  $\text{H}_2\text{O}$

Sol in 0.333 pt  $\text{H}_2\text{O}$  at 18.75° Abl.)

$\text{ZnCl}_2 + \text{Aq}$  sat. at 12.5° contains 78.5%  $\text{ZnCl}_2$  (Hassenfratz, A. ch. 28. 291.)

Solubility in  $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:

15° 20° 41° 60° 100°  
79.12 81.19 82.21 83.51 86.01 g.  $\text{ZnCl}_2$ .  
(Dietz, Z. anorg. 1899, 20. 245.)

$\text{ZnCl}_2 + \text{Aq}$  containing 1 pt  $\text{ZnCl}_2$  in 1.8205 pts.  $\text{H}_2\text{O}$  at 18° has sp. gr. = 1.3666. (Hit-  
torf, Z. phys. Ch. 1902, 39. 628.)

Solubility in  $\text{H}_2\text{O}$  at t°.

Sp. gr.	1.297	1.423	1.728	

(Long, W. Ann. 1880, 11. 38.)

Sp. gr. of  $\text{ZnCl}_2 + \text{Aq}$  at room temp. containing:

15 334	23 487	33 752%	$\text{ZnCl}_2$ .
1 1459	1 2288	1 3431	

(Wagner, W. Ann. 1883, 18. 267)

Sp. gr. of  $\text{ZnCl}_2 + \text{Aq}$  at 25°.

Concentration of $\text{ZnCl}_2 + \text{Aq}$	Sp. gr.
1—normal	1 0590
1/2—"	1 0302
1/3—"	1 0152
1/4—"	1 0077

(Wagner, Z. phys. Ch. 1890, 5. 40.)

Sp. gr. of  $\text{ZnCl}_2 + \text{Aq}$

1/2 $\text{ZnCl}_2$ g. in 1000 g. of solution	Sp. gr. 16°/16°
0	1 000000
0 5994	1 000560
2 3163	1 002163
5 0406	1 004708
9 8988	1 009243
19 4914	1 018228

(Dyken, Z. phys. Ch. 1897, 24. 108.)

Insol. in  $\text{SbCl}_3$  (Klemensiewicz, C. C. 1908, II 1850)

Insol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830.)

Easily sol. in hot absolute alcohol, and ether. Sol. in 1 pt. strong alcohol at 12.5° (Wenzel)

Sol in 0.35 pt absolute alcohol. (Graham)

Sol in butyl (Wurtz), and hexyl (Bouis) alcohol at ord. temp., but decomp. on heating

Very sol in acetic ether with evolution of heat. (Cann, C. R. 102. 363)

Easily sol in acetone. (Krug and M'Elroy, J. Anal. Ch. 6. 184.)

1 g.  $\text{ZnCl}_2$  is sol in 2.3 g acetone at 18°.

Sp. gr. of sat solution 18°/4° = 1.14 (Naumann, B. 1904, 37. 4338.)

Sol in acetone and in methylal (Eidmann, C. C. 1899, II 1014)

Sol. in methyl acetate. (Naumann, B. 1909, 42. 3790.)

Sol. in hot benzonitrile, also in other aromatic nitriles.

Sol. in methyl sulphide and in ethyl sulphide. Very sol. in piperidine. (Werner, Z. anorg. 1897, 15. 7.)

Sol. in benzylalcohol, furfural, methylpropylketone, acetophenone, ethyl monochloracetate, ethyl cyanacetate, ethyl acetoacetate, ethyl benzoate, ethyl oxalate, amyl nitrite, pyridine, piperidine, and quinoline.

Insol. in salicylic aldehyde, ethyl nitrate, and nitrobenzene. (Lincoln, J. phys. Chem. 1899, 3. 460)

Sol. in quinoline (Beckmann and Gabel, Z. anorg. 1906, 51. 236.)

Sol. in 2 pts. glycerine at ord temp. (Clever, Bull. Soc. 1872, (2) 18. 372)

100 g. glycerol dissolve 50 g.  $\text{ZnCl}_2$  at 15.5°. (Ossendowski, Pharm. J. 1907, 79. 575.)

Insol in  $\text{CS}_2$ . (Arctowski, Z. anorg. 1894, 6. 257)

Sol. in urethane. (Castoro, Z. anorg. 1899, 20. 61)

Mol weight determined in piperidine; pyridine and methyl sulphide. (Werner, Z. anorg. 1897, 15. 18.)

+ $\text{H}_2\text{O}$ . Very deliquescent. Contains 1 1/2  $\text{H}_2\text{O}$  (Engel, C. R. 102. 1111.)

Solubility in  $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:

0°	11°	27° (mpt)
74 33	78 25	84 61 g. $\text{ZnCl}_2$ .

(Dietz, Z. anorg. 1899, 20. 245.)

+1 1/2  $\text{H}_2\text{O}$ .

Solubility in  $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:

0°	10°	20°	26° (mpt)
67 45	73 65	80 08	83 43 g. $\text{ZnCl}_2$ .

(Dietz, Z. anorg. 1899, 20. 245.)

+2 $\text{H}_2\text{O}$ . Sat. aq. solution contains at.

-20°	-14°	-10°	-4°	-1°
54 7	55 4	56 5	57.4	57.9% salt,

+5°	9°	15°	33°	49°
59 1	60 2	62 0	66 8	68 3% salt.

(Etard, A. ch. 1894, (7) 2. 536.)

Solubility in  $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:

0°	10°	19° (mpt)
67 56	73.70	79 07 g. $\text{ZnCl}_2$ .

(Dietz, Z. anorg. 1899, 20. 245)

+2 1/2  $\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:

0°	8°	13° (mpt.)
67.42	71 96	75 14 g. $\text{ZnCl}_2$ .

(Dietz, Z. anorg. 1899, 20. 245.)

+3 $\text{H}_2\text{O}$ . Sol in 12.5 pts.  $\text{H}_2\text{O}$  at 0°.

(Engel)

Solubility in  $\text{H}_2\text{O}$

100 g. of the sat. solution contain at:

-5°	0°	+7° (mpt.)
64 5	67 58	71.57 g. $\text{ZnCl}_2$ .

(Dietz, Z. anorg. 1899, 20. 245.)

Zinc hydrogen chloride,  $2\text{ZnCl}_2, \text{HCl} + 2\text{H}_2\text{O}$ .

Deliquescent. (Engel, C. R. 102. 1068)

$\text{ZnCl}_2, \text{HCl} + 2\text{H}_2\text{O}$ . (Engel)

Zinc hydrazine chloride,  $\text{ZnCl}_2, \text{N}_2\text{H}_4, \text{HCl}$ .

Very hygroscopic

Sol in  $\text{H}_2\text{O}$ . (Curtius, J. pr. 1894, (2) 50. 338.)

$\text{ZnCl}_2 \cdot 2(\text{N}_2\text{H}_4, \text{HCl})$  Hydroscopic; very sol. in  $\text{H}_2\text{O}$ .

Sol. in hot alcohol and  $\text{NH}_4\text{OH} + \text{Aq.}$  (Curtius, J. pr: 1894, (2) 50. 338.)

**Zinc chloride ammonia,  $\text{ZnCl}_2 \cdot 5\text{NH}_3 + \text{H}_2\text{O}$ .**

Easily sol. in little, but decomp. by much  $\text{H}_2\text{O}$ . Still more sol. in  $\text{ZnCl}_2 + \text{Aq}$  with decomp. (Divers, C. N. 18. 13)

$\text{ZnCl}_2 \cdot 4\text{NH}_3 + \text{H}_2\text{O}$ . (Kane.)

$\text{ZnCl}_2 \cdot 2\text{NH}_3$ . Not completely sol. in  $\text{H}_2\text{O}$ , can be recryst. from hot  $\text{NH}_4\text{Cl} + \text{Aq.}$  (Ritt-  
hansen, J. pr. 60. 473.)

Insol. in  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{OH} + \text{Aq.}$  (Thomas, B. 20. 743.)

$+ \frac{1}{2}\text{H}_2\text{O}$   
 $+ \frac{1}{2}\text{H}_2\text{O}$   
 $+ \frac{1}{2}\text{H}_2\text{O}$   
 $+ \text{H}_2\text{O}$  } Decomp. by  $\text{H}_2\text{O}$ .

(André, C. R. 1882, 94. 904.)

$\text{ZnCl}_2 \cdot \text{NH}_3$ . • Decomp. by  $\text{H}_2\text{O}$ . (Kane, A. ch. 72. 290)

**Zinc chloride cupric oxide,  $\text{ZnCl}_2 \cdot 3\text{CuO} + 4\text{H}_2\text{O}$ .**

(Malhe, C. R. 1901 134. 226)

**Zinc chloride hydrazine,  $\text{ZnCl}_2 \cdot 2\text{N}_2\text{H}_4$ .**

Ppt (Franzen, Z. anorg. 1908, 60. 275.)

$\text{ZnCl}_2 \cdot 2\text{N}_2\text{H}_4$  Insol. in  $\text{H}_2\text{O}$ .

Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Curtius, J. pr. 1894, (2) 50. 345)

**Zinc chloride hydroxylamine,  $\text{ZnCl}_2 \cdot 2\text{NH}_2\text{OH}$ .**

Sl. sol. in cold, somewhat more in warm  $\text{H}_2\text{O}$ . Very sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  Very sl. sol. in alcohol and other organic solvents. (Crismer, Bull. Soc. (3) 3. 116.)

1 pt. is dissolved in 100 pts. aq. solution sat. at  $20^\circ$ . (Antonoff, C. C. 1906, II. 810)

**Zinc fluoride,  $\text{ZnF}_2$ .**

Sl. sol. in cold, more easily in hot  $\text{H}_2\text{O}$ . Insol. in 95% alcohol. Sol. in boiling  $\text{HNO}_3$ ,  $\text{HCl}$ , or  $\text{H}_2\text{SO}_4$ . (Poulenc, C. R. 116. 581.)

Contrary to older statements,  $\text{ZnF}_2$  is quite sol. in  $\text{H}_2\text{O}$ . (Kohlrausch, Z. phys. Ch. 1903, 44. 213.)

Insol. in liquid  $\text{NH}_3$ . (Gore, Am. Ch. J. 1898, 20. 830.)

Insol. in methyl acetate (Naumann, B. 1909, 42. 3790)

$+ 4\text{H}_2\text{O}$  Difficultly sol. in  $\text{H}_2\text{O}$  Somewhat more sol. in  $\text{H}_2\text{O}$  containing  $\text{HF}$ ,  $\text{HCl}$ , or  $\text{HNO}_3$ . Easily sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Berzelius, Pogg. 1. 26.)

1 l.  $\text{H}_2\text{O}$  dissolves 16 g. at  $18^\circ$ . (Dietz)

**Zinc hydrogen fluoride.**

Known only in solution.

**Zinc zirconium fluoride.**

See Fluozirconate, zinc.

**Zinc hydrophosphide,  $\text{Zn}_3\text{H}_2\text{P}_2$ .**

Decomp. by cold  $\text{H}_2\text{O}$  and by dil  $\text{HCl} + \text{Aq.}$  (Drechsel and Finkelstein, B. 1871, 4. 353)

**Zinc hydroxide,  $\text{ZnO} \cdot \text{H}_2\text{O}$ .**

Insol. in  $\text{H}_2\text{O}$  Sol. in acids Sol. in  $\text{KOH}$ ,  $\text{NaOH}$ ,  $\text{NH}_4\text{OH}$ , or  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq.}$

1 l.  $\text{H}_2\text{O}$  dissolve 0.01 g.  $\text{ZnO} \cdot \text{H}_2\text{O}$  at  $25^\circ$ . (Bodlander, Z. phys. Ch. 1898, 27. 66)

Solubility in  $\text{H}_2\text{O}$  is calculated to be  $2.6 \times 10^{-4}$  g. moles. per l. (Herz, Z. anorg. 1900, 23. 227)

1 l.  $\text{H}_2\text{O}$  dissolves 0.0042 g.  $\text{ZnO} \cdot \text{H}_2\text{O}$  at  $18^\circ$ . (Dupre and Bialas, Z. angew. Ch. 1903, 16. 55)

See also Zinc oxide.

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  at  $25^\circ$ .

$\text{ZnO} \cdot \text{H}_2\text{O}$ used	$\text{NH}_3$ norm	G $\text{ZnO}$ per l.
prepared from $\text{ZnSO}_4$	1 287	7 28

$\text{NH}(\text{CH}_3)_2$	"

(Herz, Z. anorg. 1902, 30. 280.)

Solubility in  $\text{NH}_4\text{OH} + \text{Aq}$  increases with increasing concentration of  $\text{NH}_4\text{OH}$ . (Euler, B. 1903, 36. 3401.)

2 pts.  $\text{ZnO} \cdot \text{H}_2\text{O}$  dissolve in 5 pts.  $\text{KOH} + \text{Aq.}$  (sp. gr = 1.3) (Bonnet.)

Solubility of  $\text{ZnO}_2\text{H}_2$  in  $\text{NaOH} + \text{Aq}$ 

* G. Na in 20 ccm	G. Zn in 20 ccm
0 1012	0 0040
0 1978	0.0150
0.4278	0.0442
0 6670	0.1771
0 9660	0.9630
1.4951	0 2481
2 9901	0 3700

When zinc hydroxide is treated with alkali, more dissolves at first than corresponds with the true equilibrium under the prevailing conditions, for such solutions spontaneously deposit more or less zinc hydroxide according to the concentration (Rubenbauer, Z. anorg 1902, 30. 333)

Solubility of  $\text{ZnO}_2\text{H}_2$  in  $\text{NaOH} + \text{Aq}$  at  $25^\circ$ .

G mol per l.	
Na	Zn
0 2636	0 00311
0 3871	0 0057
0 5414	0 0129
0 9280	0 0425

(Wood, Chem. Soc. 1910, 97. 881.)

Freshly pptd  $\text{ZnO}_2\text{H}_2$  is easily sol. in  $\text{KOH} + \text{Aq}$ , but it gradually goes over into a stable form which is difficultly sol. in  $\text{KOH} + \text{Aq}$ . (Herz, Z. anorg 1901, 28. 474)

Freshly pptd  $\text{ZnO}_2\text{H}_2$  is sol. in dil. salt solutions (1 %) as follows. The given ams in mg (calculated as Zn) were dissolved per l. at  $t^\circ$ .

Salt	Mg Zn	$t^\circ$
$\text{NaCl}$	51	18
$\text{KCl}$	43	20
$\text{CaCl}_2$	57 5	16
$\text{MgCl}_2$	65	16
$\text{BaCl}_2$	38	18
$\text{K}_2\text{SO}_4$	37 5	20

 (Kremers, calculated by Gerlach, Z. anal. 8. 285)

Sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ .

Moderately sol. in liquid  $\text{NH}_3$ . (Franklin, Am. Ch. J. 1898, 20. 830)

Sol. in alcohol.

100 pts. glycerine dissolve 40 pts at ord. temp. (Klever, Bull. Sdc. 1872, (2) 18. 372.)

100 g. glycerol dissolve 40 g.  $\text{ZnI}_2$  at  $15.5^\circ$ . (Ossendowski, Pharm. J. 1907, 79. 575.)

More sol. in anhydrous ether than in abs. alcohol. Insol. in  $\text{CS}_2$ . (Hampe, Ch. Z. 1887, 11. 846.)

Sol. in methyl acetate (Naumann, B. 1909, 42. 3790); acetone. (Eidmann, C. C. 1899, II 1014, Naumann, B. 1904, 37. 4328)

Sol. in quinoline. (Beckmann and Gabel, Z. anorg 1906, 51. 236)

Mol weight determined in methyl sulphate (Werner, Z. anorg 1897, 15. 25.)

$+2\text{H}_2\text{O}$ . Solubility in  $\text{H}_2\text{O}$ .

100 g. of the sat. solution contain at:  
 $-10^\circ$   $-5^\circ$   $0^\circ$   $+10^\circ$   $22^\circ$   $27^\circ$  (mpt.)  
 80 50 80.77 81.16 82.06 83.12 89.52 g.  $\text{ZnI}_2$ .  
 (Dietz, Z. anorg. 1899, 20. 251)

$+4\text{H}_2\text{O}$  (Lubarski, Z. anorg 1898, 18. 387.)

Zinc tetraiodide,  $\text{ZnI}_4$ .

Known only in aqueous solution. (Baup, Repert. 14. 412.)

Sol. in fenchone (Rimini and Ohvari, C. C. 1907, II. 241.)

**Zinc iodide ammonia,  $\text{ZnI}_2 \cdot 4\text{NH}_3$** 

Decomp by cold  $\text{H}_2\text{O}$ . Easily sol in acids and  $\text{NH}_4\text{OH} + \text{Aq.}$  (Rafnsmelsberg, Pogg 48, 152.)

$\text{ZnI}_2 \cdot 5\text{NH}_3$ . Decomp. by cold  $\text{H}_2\text{O}$ . Sol in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Rammelsberg.)

$3\text{ZnI}_2 \cdot 5\text{NH}_3 + 3\text{H}_2\text{O}$ . (Tassily, C R. 1896, 122, 324.)

**Zinc iodide hydrazine,  $\text{ZnI}_2 \cdot 2\text{N}_2\text{H}_4$** 

Decomp. by  $\text{H}_2\text{O}$ .

Sol. in  $\text{NH}_4\text{OH} + \text{Aq.}$  (Franzen, Z anorg. 1908, 60, 277.)

**Zinc nitride,  $\text{Zn}_3\text{N}_2$** 

Decomp by  $\text{H}_2\text{O}$  with the greatest violence (Fränkland, Phil Mag (4) 15, 149.)

Easily decomp by  $\text{H}_2\text{O}$  when finely powdered (Rosell, C R 1895, 121, 942.)

Sol in  $\text{HCl}$  (Fischer, B. 1910, 43, 1468.)

**Zinc oxide,  $\text{ZnO}$** 

Insol. in  $\text{H}_2\text{O}$ . Some preparations of  $\text{ZnO}$  are sl. sol in  $\text{H}_2\text{O}$ , never, however, in less than 1 million pts  $\text{H}_2\text{O}$ . (Bineau, C R 41, 510.)

Calculated from electrical conductivity of  $\text{ZnO} + \text{Aq}$  1 pt  $\text{ZnO}$  is sol. in 286,000 pts.  $\text{H}_2\text{O}$  at  $18^\circ$ . (Dupre and Bialas, Zeit. angew. Ch 1903, 16, 55.)

See also Zinc hydroxide.

Easily sol in acids, even after ignition. Easily sol in acids, even  $\text{H}_2\text{SO}_4$ , or  $\text{H}_2\text{CO}_3 + \text{Aq.}$

Solubility of  $\text{ZnO}$  in  $\text{CrO}_3 + \text{Aq}$  at  $25^\circ$

1 l. of the solution contains.

93.3	41.5	...	..

(Grbger Z. anorg 1911, 70, 136.)

When moist is easily sol in  $\text{KOH}$ ,  $\text{NaOH}$ , and  $\text{NH}_4\text{OH} + \text{Aq.}$  but only sl sol therein after ignition. Partially reprecipitated from solution in  $\text{NH}_4\text{OH} + \text{Aq}$  by dilution with  $\text{H}_2\text{O}$ .

Anhydrous  $\text{ZnO}$  is insol in dil., but sol. in conc. alkali hydrates +  $\text{Aq.}$  but the hydroxide is easily sol., even in dil. alkalis +  $\text{Aq.}$  (Fremy, A. ch. (3) 23, 390.)

Very sl. sol. in  $\text{NH}_4\text{OH} + \text{Aq}$  After igni-

tion its solubility is greatly increased by traces of  $\text{K}$  and  $\text{NH}_4$  salts. Phosphates have the strongest action, then, in the following order: arsenates, chlorides, sulphites, nitrates, acetates, carbonates, tartrates, citrates, and sulphates. Succinates and benzoates increase the solubility in  $\text{NH}_4\text{OH} + \text{Aq.}$  only when it is very dil., borates, iodides, chlorates, arsenites, gallates, and oxalates do not increase the solubility (Schundler)

$\text{ZnO}$  is sol in  $\text{NH}_4\text{OH} + \text{Aq.}$  only in presence of  $\text{NH}_4$  salts (Brandhorst, Zeit. angew. Ch 1904, 17, 513.)

Solubility in  $\text{KOH}$ ,  $\text{NaOH}$ , and  $\text{NH}_4\text{OH} + \text{Aq.}$

An excess over 4 mols  $\text{KOH}$  to 1 mol  $\text{ZnO}$  is necessary for solution, but that excess may be neutralised after solution, until only 4 mols are left, without pptn. of  $\text{ZnO}$ . Solution is pptd by addition of 12 vols  $\text{H}_2\text{O}$ .  $\text{KOH} + \text{Aq}$  containing 16.5 g.  $\text{KOH}$  to a litre  $\text{H}_2\text{O}$  is the weakest solution which will dissolve  $\text{ZnO}$ . Three times as much alkali are necessary for solution at  $50^\circ$  as at  $16-17^\circ$ . Less excess of  $\text{NaOH}$  than of  $\text{KOH}$  is necessary. 3 mols  $\text{NH}_4\text{OH}$  will dissolve 1 mol.  $\text{ZnO}$ , and the temp and dilution are in this case of little influence. (Prescott)

100 cc of 20%  $\text{NaOH} + \text{Aq}$  dissolve in many hours at most 2.97 g. ignited  $\text{ZnO}$ . Pptd  $\text{ZnO}$  is more quickly dissolved but the action becomes very slow after 100 cc of the solution contain 3.87 g. of  $\text{Zn}$ . (Forster and Günther, Z. Elektrochem 1900, 6, 301.)

Solubility of ignited  $\text{ZnO}$  in  $\text{NaOH} + \text{Aq}$  gradually decreases. (Kunscheit, Z anorg. 1904, 41, 343.)

Sol. in hot  $\text{NH}_4\text{Cl} + \text{Aq}$ , either when moist or dry.

Somewhat less sol. in  $\text{NH}_4\text{NO}_3 + \text{Aq.}$

Somewhat sol in water glass +  $\text{Aq.}$  (Ordway.)

Slowly sol in cold, easily in hot  $\text{NaCl} + \text{Aq.}$  (Siersch, J B 1887, 255.)

Solubility of  $\text{ZnO}$  in  $\text{ZnCl}_2 + \text{Aq}$  at room temp.

G $\text{ZnCl}_2$ per 100 g. $\text{H}_2\text{O}$	G $\text{ZnO}$ per 100 g. $\text{H}_2\text{O}$
8.22	0.0137
23.24	0.138
45.95	0.497
51.50	0.604
56.90	0.723
62.85	0.884
96.00	1.792
124.70	3.213
144.80	2.640
203.00	1.590

The solubility curve has a maximum at a point corresponding to about 125 g.  $\text{ZnCl}_2$  per 100 g.  $\text{H}_2\text{O}$ . On the first branch of the curve the solid phase in equilibrium with the solution is  $\text{ZnCl}_2 \cdot 4\text{ZnO} \cdot 6\text{H}_2\text{O}$ ; on the second branch it is  $\text{ZnCl}_2 \cdot \text{ZnO} \cdot 1.5\text{H}_2\text{O}$ .

(Dnot, C R 1910, 150, 1427.)

Sol. in boiling  $\text{Fe}(\text{NO}_3)_3$  and  $\text{Pb}(\text{NO}_3)_2$  + Aq with pptn of oxides. Not attacked by  $\text{Co}(\text{NO}_3)_2$ ,  $\text{Ni}(\text{NO}_3)_2$ , and  $\text{Ce}(\text{NO}_3)_3$  + Aq. (Persoz.)

Sol in boiling  $\text{KCN}$  + Aq

Insol. in boiling K tartarate + Aq (Kahlenberg and Hülyer, *Am. Ch. J.* 1894, 16, 101.)

Insol in liquid  $\text{NH}_3$ . (Franklin, *Am Ch J.* 1898, 20, 830.)

Tartaric acid somewhat hinders the pptn. of  $\text{ZnO}_2\text{H}_2$

Insol. in methyl acetate. (Naumann, B. 1909, 42, 3790.)

Insol in acetone. (Naumann, B. 1904, 37, 4329, Eidmann, C. C. 1899, II 1014.)

Sol in methyl amine, but insol. in amyl amine + Aq. (Wartz.)

1 l solution containing 174.4 g. sugar and 14.1 g.  $\text{CaO}$  dissolves 0.24 g.  $\text{ZnO}$ .

(Bodenbender, J. B. 1866, 600) ;  
Min. *Zincite*. Sol in acids

### Zinc peroxide.

1 pt. sol. in 45,000 pts  $\text{H}_2\text{O}$ .

Very sol. in acids. (Foregger and Philipp, J. Soc. Chem. Ind. 1906, 26, 300.)

$\text{ZnO}_2$  (?) Ppt Decomp. by acids with evolution of  $\text{H}_2\text{O}_2$ . (Haass, B. 17, 2249.)

$\text{ZnO}$ ,  $\text{H}_2\text{O}$ ,  $\text{H}_2\text{O}_2$  (de Forcrand, A. ch. 1902, (7) 27, 58.)

$3\text{ZnO}$ ,  $2\text{H}_2\text{O}_2$ . (de Forcrand)

$3\text{ZnO}$ ,  $\text{H}_2\text{O}$ ,  $2\text{H}_2\text{O}_2$ . (de Forcrand.)

$4\text{ZnO}$ ,  $\text{H}_2\text{O}$ ,  $3\text{H}_2\text{O}_2$ . (de Forcrand)

$\text{ZnO}_2$ ,  $\text{ZnO}_2\text{H}_2$  Insol. in  $\text{NH}_4\text{OH}$  + Aq. (Kouriloff, A. ch. (6) 23, 431.)

$3\text{ZnO}_2$ ,  $\text{Zn}(\text{OH})_2$ . Sol. in  $\text{NaOH}$  + Aq with evolution of  $\text{O}$  (Ejman, C. C. 1906, I 1628.)

$\text{Zn}_2\text{O}_7$ ,  $3\text{ZnO}$  +  $4\text{H}_2\text{O}$ . Completely sol. in dil  $\text{H}_2\text{SO}_4$  (de Forcrand.)

$10\text{ZnO}$ ,  $4\text{ZnO}$  +  $5\text{H}_2\text{O}$  Ppt (Teletow, C. C. 1911, I. 1799)

### Zinc oxybromide, $\text{ZnBr}_2$ , $\text{ZnO}$ + $13\text{H}_2\text{O}$ .

$\text{ZnBr}_2$ ,  $4\text{ZnO}$  + 10, 13, and  $19\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  into—

$\text{ZnBr}_2$ ,  $6\text{ZnO}$  +  $35\text{H}_2\text{O}$ . (André)

$\text{ZnBr}_2$ ,  $5\text{ZnO}$  +  $6\text{H}_2\text{O}$  (André.)

All oxybromides are sol in  $\text{KOH}$  and  $\text{NH}_4\text{OH}$  + Aq. (André, C. R. 96, 703.)

### Zinc oxybromide ammonia, $\text{ZnBr}_2$ , $3\text{ZnO}$ , $2\text{NH}_3$ + $5\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (André, C. R. 96, 703)

### Zinc oxychloride, $\text{ZnO}$ , $3\text{ZnCl}_2$ + $\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ .

Very sol in dil. acids. (Ephraim, Z. anorg. 1908, 59, 87.)

+  $4\text{H}_2\text{O}$ . Sl sol in  $\text{H}_2\text{O}$ ; more sol. in  $\text{ZnCl}_2$  + Aq.

Easily sol. in acids, or  $\text{NH}_4\text{OH}$ , or  $\text{KOH}$  + Aq. (Schindler, *Mag. Pharm* 36, 45.)

+  $5\text{H}_2\text{O}$  and  $8\text{H}_2\text{O}$ . (André, A. ch. (6) 3, 94.)

$\text{ZnO}$ ,  $\text{ZnCl}_2$  +  $1\frac{1}{2}\text{H}_2\text{O}$ . (Driest, C. R. 1910, 150, 1427.)

$3\text{ZnO}$ ,  $\text{ZnCl}_2$  +  $2\text{H}_2\text{O}$ . Sl. sol. in  $\text{H}_2\text{O}$ , more easily sol. in  $\text{ZnCl}_2$  + Aq. Easily sol. in acids and in  $\text{NH}_4\text{OH}$  or  $\text{KOH}$  + Aq. (Schindler, *Mag. Pharm* 36, 45.)

+  $3\text{H}_2\text{O}$  (Werner, B. 1907, 40, 4443.)

+  $5\text{H}_2\text{O}$  (Mailhe, A. ch. 1902, (7) 27, 367.)

$3\text{ZnO}$ ,  $2\text{ZnCl}_2$  +  $11\text{H}_2\text{O}$ . (André, C. R. 1888, 106, 854)

$4\text{ZnO}$ ,  $\text{ZnCl}_2$  +  $6\text{H}_2\text{O}$  (André, C. R. 1888, 106, 854)

+  $11\text{H}_2\text{O}$ . (André, A. ch. (6) 8, 94.)

$5\text{ZnO}$ ,  $\text{ZnCl}_2$  +  $6\text{H}_2\text{O}$  (Perrot, *Bull. Soc.* 1895, (3) 13, 976)

+  $8\text{H}_2\text{O}$  (André, C. R. 1882, 94, 1524.)

$5\text{ZnO}$ ,  $2\text{ZnCl}_2$  +  $26\text{H}_2\text{O}$  Sol. in  $\text{KOH}$  or  $\text{NH}_4\text{OH}$  + Aq. Decomp. by  $\text{H}_2\text{O}$  into—

$6\text{ZnO}$ ,  $\text{ZnCl}_2$  +  $26\text{H}_2\text{O}$ . Sol. in  $\text{KOH}$  or  $\text{NH}_4\text{OH}$  + Aq. Decomp. by  $\text{H}_2\text{O}$  into—

$6\text{ZnO}$ ,  $\text{ZnCl}_2$  +  $6\text{H}_2\text{O}$ . Insol. in  $\text{H}_2\text{O}$ . (Kane, A. ch. 72, 296.)

$8\text{ZnO}$ ,  $\text{ZnCl}_2$  +  $10\text{H}_2\text{O}$ . (Mailhe, A. ch. 1902, (7) 27, 367)

$9\text{ZnO}$ ,  $\text{ZnCl}_2$  +  $3\text{H}_2\text{O}$  Insol. in  $\text{H}_2\text{O}$ . Less sol in  $\text{NH}_4\text{OH}$  + Aq than  $\text{ZnCl}_2$ ,  $3\text{ZnO}$  +  $2\text{H}_2\text{O}$ , but easily sol. in +  $14\text{H}_2\text{O}$ .

$9\text{ZnO}$ ,  $2\text{ZnCl}_2$  +  $12\text{H}_2\text{O}$  Insol. in hot or cold  $\text{H}_2\text{O}$ . (Habermann, M. 5, 432.)

### Zinc oxychloride ammonia, $6\text{ZnCl}_2$ , $\text{ZnO}$ , $12\text{NH}_3$ + $4\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  and boiling alcohol. (André, A. ch. (6) 3, 90.)

$\text{ZnCl}_2$ ,  $3\text{ZnO}$ ,  $2\text{NH}_3$  +  $5\text{H}_2\text{O}$  Decomp. by  $\text{H}_2\text{O}$ . (André.)

$\text{ZnCl}_2$ ,  $2\text{ZnO}$ ,  $2\text{NH}_3$  +  $3\text{H}_2\text{O}$  (André.)

$6\text{ZnCl}_2$ ,  $3\text{ZnO}$ ,  $10\text{NH}_3$  +  $13\text{H}_2\text{O}$ . (André.)

$4\text{ZnCl}_2$ ,  $\text{ZnO}$ ,  $8\text{NH}_3$  +  $2\text{H}_2\text{O}$ . (André.)

### Zinc oxydioxide, $\text{ZnI}_2$ , $3\text{ZnO}$ + $2\text{H}_2\text{O}$ .

Insol in cold. sl. sol in boiling  $\text{H}_2\text{O}$  (Müller, J. pr. 26, 441)

$\text{ZnI}_2$ ,  $9\text{ZnO}$  +  $24\text{H}_2\text{O}$ . Insol. in cold  $\text{H}_2\text{O}$ .

$\text{ZnI}_2$ ,  $5\text{ZnO}$  +  $11\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  (Tassully, C. R. 1896, 122, 324)

### Zinc oxyphosphide, $\text{ZnP}_2\text{O}$ .

(Renault, A. ch. (4) 9, 182.)

Probably is a mixture of zinc phosphate and phosphorus. (Vigier, *Bull. Soc.* 1861, 5.)

### Zinc oxysulphide, $\text{ZnO}$ , $\text{ZnS}$ .

Sol. in  $\text{HCl}$  + Aq (Arfvedson, *Pogg.* 1, 59.)

$4\text{ZnS}$ ,  $\text{ZnO}$ . Not decomp. by boiling  $\text{HCl}$  +  $\text{H}_2\text{O}$  + Aq (Kersten, *Schw. J.* 67, 186.)

Min. *Volante* Sol in  $\text{HCl}$  + Aq.

### Zinc phosphide, $\text{ZnP}$ .

Less easily attacked by  $\text{HCl}$  + Aq than  $\text{Zn}_3\text{P}_2$ .

$\text{ZnP}_2$ . Not attacked by hot  $\text{HCl}$  + Aq. (Hvoslef, A. 100, 99)

$\text{ZnP}$ . Insol. in dil  $\text{HCl}$  + Aq. (Renault.)

$\text{Zn}_3\text{P}_2$ . Insol in  $\text{H}_2\text{O}$ . Sol. in dil  $\text{HCl}$ ,  $\text{H}_2\text{SO}_4$ , or  $\text{HNO}_3$ +Aq, with evolution of  $\text{PH}_3$ . (Renault, A. ch. (4) 9. 162.)

$\text{Zn}_3\text{P}_4$ . Insol. in  $\text{HCl}$ +Aq (Renault)

### Zinc selenide, $\text{ZnSe}$ .

Cold dil  $\text{HNO}_3$ +Aq dissolves out Zn, and Se separates out, which dissolves on warming as  $\text{H}_2\text{SeO}_3$ . (Berzelius.)

+ $\text{zH}_2\text{O}$ . Insol in  $\text{H}_2\text{O}$ . (Berzelius.)

### Zinc sulphide, $\text{ZnS}$ .

Anhydrous. Insol in  $\text{H}_2\text{O}$ . Sol in  $\text{HCl}$ +Aq, insol. in  $\text{H}_2\text{C}_2\text{H}_3\text{O}_2$ +Aq (Ebelmen, A. ch. (3) 25. 97.)

Sol. in  $\text{H}_2\text{S}$ +Aq under pressure in a sealed tube. (Sonarmon, A. ch. (3) 32. 168.)

Min. *Blende*, *Sphalerite*. Sl. attacked by acids, expecting aqua regia

1 l.  $\text{H}_2\text{O}$  dissolves  $6.65 \times 10^{-6}$  mols. zinc blende at  $18^\circ$

1 l.  $\text{H}_2\text{O}$  dissolves  $6.63 \times 10^{-4}$  mols. artificial cryst.  $\text{ZnS}$  at  $18^\circ$ . (Wiegel, Z. phys. Ch. 1907, 58. 294.)

Sol. in an alkaline solution of  $\text{NaClO}$  (Sadtler, Trans. Am. Electrochem. Soc. 1902, 1. 142.)

Insol. in liquid  $\text{NH}_3$  (Franklin, Am. Ch. J. 1898, 20. 830.)

+ $\frac{1}{2}$ ,  $\frac{2}{3}$ , or  $\frac{1}{2}\text{H}_2\text{O}$

Pptd.  $\text{ZnS}$ .

1 l.  $\text{H}_2\text{O}$  dissolves  $70.60 \times 10^{-4}$  mols. pptd  $\text{ZnS}$  at  $18^\circ$ . (Wiegel, Z. phys. Ch. 1907, 58. 294.)

Insol. in alkali hydrates, carbonates, and sulphides+Aq. Insol in  $\text{NH}_4\text{OH}$ ,  $\text{HCl}$ , or  $(\text{NH}_4)_2\text{CO}_3$ +Aq. Easily sol. in very dil.  $\text{HCl}$  and  $\text{HNO}_3$ +Aq, but  $\text{H}_2\text{S}$  ppts.  $\text{ZnS}$  in presence of very dil.  $\text{HCl}$ +Aq, or  $\text{H}_2\text{SO}_4$ +Aq. (Eliot and Storer.)

More easily sol. in  $\text{HNO}_3$ +Aq than in  $\text{HCl}$ +Aq (Fresenius.)

Only sl. sol. in acetic acid. (Wackenroder.)

When still moist is sol. in  $\text{H}_2\text{SO}_4$ +Aq.

Insol. in  $\text{NH}_4\text{Cl}$  or  $\text{NH}_4\text{NO}_3$ +Aq

$\text{K}_2\text{S}$ +Aq when added to  $\text{ZnSO}_4$ +Aq produces a ppt. in presence of 10,000 pts  $\text{H}_2\text{O}$ , and a slight opalescence with 20,000 pts. (Lassaigne.)

Slowly sol. in conc  $\text{KCN}$ +Aq. (Halm, J. B. 1870. 1008.)

Sl. sol. in  $\text{Na}_2\text{S}$ +Aq; sol. in  $\text{NaSH}$ +Aq (Becker, Sil. Am. J. (3) 83. 199.)

### Zinc pentasulphide, $\text{ZnS}_5$ .

Sol. in acids, with separation of S (Schiff, A. 115. 74.)

### Zinc sulphosilicide, $\text{ZnSiS}$ .

Decomp. by acids and by alkalis. (Fraenkel, Metall. 1909, 6. 683.)

### Zinc telluride, $\text{ZnTe}$ .

Decomp. by acids. Sol. in  $\text{Bi}_2$ +Aq. (Fabre, C. R. 105. 277.)

### Zincic acid.

Zinc hydroxide shows weak acid properties, and forms the following salts.

**Ammonium zincate**,  $3\text{ZnO} \cdot 4\text{NH}_3 + 12\text{H}_2\text{O} = 3\text{ZnO} \cdot 2(\text{NH}_4)_2\text{O} + 10\text{H}_2\text{O}$ .

Decomp. by much  $\text{H}_2\text{O}$

**Barium zincate**,  $\text{BaH}_2\text{Zn}_2\text{O}_4 + 7\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Bertrand, C. R. 115. 939.)

**Calcium zincate**,  $\text{CaH}_2\text{Zn}_2\text{O}_4 + 4\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . Sol. in  $\text{NH}_4\text{OH}$ +Aq. (Bertrand, C. R. 115. 939.)

**Cobaltous zincate**,  $x\text{CoO} \cdot y\text{ZnO}$ .

*Rinman's green*. Sol. in acids  $\text{H}_2\text{CO}_3$ +Aq dissolves out  $\text{ZnO}$  (Corney.)

**Potassium zincate**,  $\text{ZnO} \cdot \text{K}_2\text{O}$ .

Easily sol. in  $\text{H}_2\text{O}$ , but decomp. by boiling. (Laux, A. 9. 183.)

$2\text{ZnO} \cdot \text{K}_2\text{O}$ . Decomp. immediately by cold  $\text{H}_2\text{O}$  (Fremy, C. R. 15. 1106.)

**Sodic zincate**,  $\text{Na}_2\text{O} \cdot 2\text{ZnO} + 3\text{H}_2\text{O}$ , or  $2\text{NaHZnO}_2 + 7\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$  or alcohol (Corney and Jackson, Am. Ch. J. 11. 145.) + $7\text{H}_2\text{O}$ . (Förster and Günther, Z. Elektrochem., 1899, 6. 301.)

$2\text{Na}_2\text{O} \cdot 3\text{ZnO} + 18\text{H}_2\text{O}$  or  $\text{Zn}_3\text{O}_2\text{Na}_4\text{H}_2 + 17\text{H}_2\text{O}$ . Decomp. by  $\text{H}_2\text{O}$  or alcohol. Insol. in ether. (Corney and Jackson.)

**Strontium zincate**,  $\text{SrH}_2\text{Zn}_2\text{O}_4 + 7\text{H}_2\text{O}$ .

Decomp. by  $\text{H}_2\text{O}$ . (Bertrand.)

### Zirconic acid.

See Zirconium hydroxide.

**Barium zirconate**,  $\text{BaZrO}_3$ .

Insol. in acids. (Ouvrard, C. R. 113. 80.)

**Calcium zirconate**,  $\text{CaZrO}_3$ .

Insol. in acids. (Ouvrard, C. R. 113. 80.)

**Calcium zirconate**, acid.

Insol. in  $\text{H}_2\text{O}$  or  $\text{HCl}$ +Aq. (Hiordthal, A. 137. 237.)

**Calcium potassium zirconate**,  $(\text{Ca}, \text{K})\text{LaO}_3$  (small quantity of  $\text{CaO}$  substituted by  $\text{K}_2\text{O}$ ).

Sol. in  $\text{HCl}$ . (Venable, J. Am. Chem. Soc. 1896, 18. 444.)

**Cupric zirconate**.

(Berthier, A. ch. 59. 195.)

**Lithium zirconate,  $\text{Li}_2\text{ZrO}_3$** 

Easily attacked by acids (Ouvrard, C. R. 112. 1444.)

**Magnesium zirconate.**

Insol in  $\text{H}_2\text{O}$  or  $\text{HCl} + \text{Aq}$ . (Hiordthal, C. R. 61. 215.)

**Potassium zirconate.**

Decomp by  $\text{HCl} + \text{Aq}$ . (Knop, A. 159. 44)

**Sodium zirconate,  $\text{Na}_2\text{ZrO}_3$** 

Decomp by  $\text{H}_2\text{O}$   
 $\text{Na}_4\text{ZrO}_4$  Decomp. by  $\text{HCl} + \text{Aq}$ , and is dissolved by subsequent addition of  $\text{H}_2\text{O}$   
 $\text{Na}_2\text{O}$ ,  $8\text{ZrO}_2 + 12\text{H}_2\text{O}$ . (Hiordthal)

**Strontium zirconate,  $\text{SrZrO}_3$** 

As  $\text{CaZrO}_3$  (Ouvrard.)

**Zirconium,  $\text{Zr}$ .**

*Crystallized.* Attacked by conc  $\text{HCl} + \text{Aq}$  above  $50^\circ$ , but very slowly even at  $100^\circ$ ; rapidly by hot aqua regia. Sol. in cold conc.  $\text{HF} + \text{Aq}$ . (Troost, C. R. 61. 109.)

Very violently attacked by a mixture of  $\text{HNO}_3$  and  $\text{HF}$ . (Berzelius, Pogg. 4. 117.)

*Amorphous.* Slowly attacked by boiling aqua regia,  $\text{H}_2\text{SO}_4$ , or conc.  $\text{HCl} + \text{Aq}$ . (Berzelius.)

Easily sol. in  $\text{HF}$  or  $\text{HNO}_3 + \text{HF}$

**Zirconium bromide,  $\text{ZrBr}_4$** 

Very hygroscopic. Violently decomp. by  $\text{H}_2\text{O}$  to form oxybromide (Mellus, Zeit. Cli (2) 6. 296.)

Sl sol. in organic solvents (Matthews, J. Am. Chem. Soc. 1898, 20. 840)

**Zirconium bromide ammonia,  $\text{ZrBr}_4 \cdot 4\text{NH}_3$** 

Ppt Insol in organic solvents. (Matthews, J. Am. Chem. Soc. 1898, 20. 840.)

$\text{ZrBr}_4 \cdot 10\text{NH}_3$ . Very hygroscopic.  
 Decomp by  $\text{H}_2\text{O}$  (Stähler, B. 1905, 38. 2612)

**Zirconium carbide,  $\text{ZrC}$** 

Insol. in  $\text{H}_2\text{O}$  and  $\text{NH}_4\text{OH} + \text{Aq}$  and  $\text{HCl}$  Aq even when heated. Sol. in  $\text{HNO}_3$ ,  $\text{H}_2\text{SO}_4$  and fused alkali nitrates, chlorates, or hydroxides. (Moissan, C. R. 1896, 122. 653.)

**Zirconium chloride,  $\text{ZrCl}_4$** 

Sol in  $\text{H}_2\text{O}$  with evolution of much heat to form  $\text{ZrOCl}_2$ . Sol in alcohol (Hinsberg, A. 239. 253.)

Very unstable.

Probably substances so described in the literature by Nylander and others were oxychlorides. (Venable, J. Am. Chem. Soc. 1894, 16. 471.)

Sol. in ether. (Matthews, J. Am. Chem. Soc. 1898, 20. 821.)

**Zirconium chloride ammonia,  $\text{ZrCl}_4 \cdot 2\text{NH}_3$** 

Fumes in the air. Decomp. by  $\text{H}_2\text{O}$ . (Matthews, J. Am. Chem. Soc. 1898, 20. 821.)  
 $\text{ZrCl}_4 \cdot 3\text{NH}_3$ . (Stähler, B. 1905, 38. 2611.)  
 $\text{ZrCl}_4 \cdot 4\text{NH}_3$ . Decomp. by  $\text{H}_2\text{O}$ . (Paykull)

Unstable. Decomp. by  $\text{H}_2\text{O}$  (Matthews, J. Am. Chem. Soc. 1898, 20. 821)

$\text{ZrCl}_4 \cdot 8\text{NH}_3$ . Stable in the air. Decomp. by  $\text{H}_2\text{O}$ . Insol. in ether. (Matthews, J. Am. Chem. Soc. 1898, 20. 821.)

Very hygroscopic. Decomp. by  $\text{H}_2\text{O}$ . (Stähler, B. 1905, 38. 2611.)

**Zirconium fluoride,  $\text{ZrF}_4$** 

*Anhydrous.* Insol in  $\text{H}_2\text{O}$  and acids. (Deville, A. ch. (3) 49. 84.)

Only sl. sol. in  $\text{H}_2\text{O}$ .

1388 g. dissolve in 100 cc  $\text{H}_2\text{O}$  without hydrolysis. On warming the solution, zirconium hydrate begins to ppt. out at about  $50^\circ$ . (Wolter, Ch. Z. 1908, 32. 606.)

+  $3\text{H}_2\text{O}$ . Sol. in  $\text{H}_2\text{O}$ , but solution decomposes on diluting, with pptn of an insol. basic salt. Sol. in dil.  $\text{HF} + \text{Aq}$ . (Berzelius.)

**Zirconium fluoride ammonia,  $5\text{ZrF}_4 \cdot 2\text{NH}_3$** 

(Wolter, Ch. Z. 1908, 32. 607.)

**Zirconium hydride,  $\text{ZrH}_3$** 

Not attacked by acids. (Winkler, B. 24. 873)

**Zirconium hydroxide,  $\text{Zr}(\text{OH})_4$** 

Insol. in  $\text{H}_2\text{O}$  or alcohol. Sol in 5000 pts.  $\text{H}_2\text{O}$ . (Mellus.)

Sol. in acids, even oxalic or tartaric acid, when precipitated cold. If precipitated hot, it is slowly dissolved upon heating with conc. acids.

Sol. in dil or conc. min acids except  $\text{HI}$ . Readily sol. in oxalic, only sl sol. in acetic acid.

Much less sol when pptd. from hot solution than when pptd. from cold solution (Venable, J. Am. Chem. Soc. 1898, 20. 274)

Sl. sol. in  $(\text{NH}_4)_2\text{CO}_3 + \text{Aq}$ . Insol. in  $\text{K}_2\text{CO}_3$  and  $\text{Na}_2\text{CO}_3 + \text{Aq}$ . Insol. in  $\text{NaOH}$ ,  $\text{KOH}$ , and  $\text{NH}_4\text{OH} + \text{Aq}$ .

Sol in  $(\text{NH}_4)_2\text{C}_2\text{H}_3\text{O}_6 + \text{NH}_4\text{OH} + \text{Aq}$ . Insol in  $\text{NH}_4$  salts +  $\text{Aq}$ .

**Zirconium iodide,  $\text{ZrI}_4$** 

Fumes in the air.

Sol in  $\text{H}_2\text{O}$  and acids with violent reaction.

Decomp by alcohol. Sol in abs. ether. Sl sol. in benzene and  $\text{CS}_2$ . (Stähler, B. 1904, 37. 1137)

Insol in  $\text{H}_2\text{O}$ ,  $\text{HNO}_3$ ,  $\text{HCl}$ , aqua regia, and  $\text{CS}_2$ .

Sol. in  $\text{H}_2\text{SO}_4$  with decomp; unchanged by boiling  $\text{H}_2\text{O}$ . (Dennis, J. Am. Chem. Soc. 1896, 18. 678.)

Zirconium iodide ammonia,  $ZrI_4 \cdot 6NH_3$ ,  
 $ZrI_4 \cdot 7NH_3$ ;  $ZrI_4 \cdot 8NH_3$ ;  $ZrI_4 \cdot 10NH_3$ .

All above compds are hygroscopic and lose  $NH_3$  in the air (Stahler, B. 1905, 38. 2615).

### Zirconium nitride.

Scarcely attacked by acids, aqua regia, and caustic alkalis. Slowly decomp. by long contact with  $H_2O$ . (Mallett, Sil. Am. J. (2) 28. 346.)

$Zr_2N_3$ . Decomp. when heated in the air; sol in  $HF$ , insol. in other min. acids. (Matthews, J. Am. Chem. Soc. 1898, 20. 844.)

$Zr_3N_8$ . Decomp. when heated in the air. Sol. in  $HF$ , insol. in other min. acids. (Matthews, J. Am. Chem. Soc. 1898, 20. 844.)

### Zirconium oxide, $ZrO_2$ .

When ignited, is insol. in all acids except  $HF$  and  $H_2SO_4$ . Sl. sol. in  $HF$ ; sol. in  $H_2SO_4$  only when very finely powdered and heated with a mixture of 2 pts.  $H_2SO_4$  and 1 pt.  $H_2O$  until the  $H_2SO_4$  volatilises. (Berzelius.)

### Zirconium peroxide, $ZrO_3$ .

(Cleve, Bull. Soc. (2) 43. 53), or  $Zr_2O_5$ , according to Bailey (Chem. Soc. 49. 150).

Not attacked by cold dil.  $H_2SO_4$  + Aq. (Bailey.)

### Zirconium silicon oxide.

Min. Zircon. See Silicate, zirconium.

### Zirconium oxy-compounds.

See Zirconyl compounds.

### Zirconium phosphide, $ZrP_3$ .

Insol. in dil. or conc. acids and alkalis

Sl. sol. in aqua regia. (Gewecke, A. 1908, 361. 85.)

### Zirconium silicide, $ZrSi_2$ .

Sol in  $HF$ , insol. in other min. acids

Not acted upon by 10%  $KOH$  + Aq or  $NaOH$  + Aq

Decomp. by fusion with  $KOH$ . (Honigsmid, C. R. 1906, 143. 225)

### Zirconium sulphide.

Insol. in  $H_2O$ . Sol in  $HF$ ; slowly sol in aqua regia. Insol. in  $HNO_3$ ,  $HCl$ ,  $H_2SO_4$ , or  $KOH$  + Aq. (Berzelius.)

Insol. in dil. acids. Sol in conc.  $HNO_3$  + Aq (perhaps an oxysulphide). (Fremy.)

### Zirconomolybdic acid.

Ammonium zirconomolybdate,

$2(NH_4)_2O \cdot ZrO_2 \cdot 12MoO_3 \cdot 10H_2O$ .

Sol. in  $H_2O$  (Pechard, C. R. 1893, 117. 790.)

Potassium zirconomolybdate,  
 $2K_2O \cdot ZrO_2 \cdot 12MoO_3 \cdot 18H_2O$

Sol. in  $H_2O$  (Pechard)

### Zirconotungstic acid.

Ammonium zirconodecatungstate,

$3(NH_4)_2O \cdot ZrO_2 \cdot 10WO_3 \cdot 13H_2O$

Very sol. in  $H_2O$ .

Efflorescent (Hallopeau, Bull. Soc. 1898, (3) 15. 921)

$3(NH_4)_2O \cdot H_2O \cdot ZrO_2 \cdot 10WO_3 \cdot 13H_2O$ .

Sol. in  $H_2O$ , unstable; effloresces in the air. (Hallopeau.)

Potassium zirconotungstate,  $4K_2O \cdot ZrO_2 \cdot WO_3 \cdot 20H_2O$ .

Sol. in hot  $H_2O$ . (Hallopeau.)

$4K_2O \cdot ZrO_2 \cdot 10WO_3 \cdot 15H_2O$  More sol. in hot than in cold  $H_2O$

Sol. in fused alkali carbonates. (Hallopeau)

Potassium dizirconodecatungstate,

$4K_2O \cdot 2ZrO_2 \cdot 10WO_3 \cdot 20H_2O$ .

More sol. in hot than in cold  $H_2O$

Sol. in fused alkali carbonates (Hallopeau.)

Zirconyl bromide,  $ZrOBr_2 \cdot 3H_2O$ .

Deliquescent. Decomp. in moist air.

Very sol. in  $H_2O$  (Venable, J. Am. Chem. Soc. 1898, 20. 324)

+  $7H_2O$  Sol. in  $H_2O$ . (Melliss.)

+  $8H_2O$ . Deliquescent. Decomp. in moist air. Very sol. in  $H_2O$  (Venable, J. Am. Chem. Soc. 1898, 20. 324)

+  $13H_2O$ . Deliquescent. Decomp. in moist air

Very sol. in  $H_2O$ . (Venable.)

+  $14H_2O$  Deliquescent Decomp. in moist air. (Venable.)

Very sol. in  $H_2O$ . (Venable.)

•  $ZrBr(OH)_2 \cdot H_2O$ , and +  $2H_2O$  Deliquescent, and decomp. in moist air. (Venable.)

Zirconyl chloride,  $ZrOCl_2$ .

Sol. in  $H_2O$ , insol. in  $HCl$ . (Venable, J. Am. Chem. Soc. 1894, 16. 475.)

+  $2H_2O$ . (Chauvenet, C. R. 1912, 154. 822.)

+  $3H_2O$ . Sol. in  $H_2O$ . (Venable.)

+  $3.5H_2O$ . (Chauvenet, C. R. 1912, 154. 822.)

+  $6H_2O$  (Chauvenet.)

Sol. in  $H_2O$

Insol. in  $HCl$  (Venable.)

+  $4\frac{1}{2}H_2O$ ,  $6\frac{1}{2}H_2O$ , and  $8H_2O$

Efflorescent Easily sol. in  $H_2O$  and alcohol Very sol. in conc.  $HCl$  + Aq. (Berzelius)

+  $8H_2O$ . Sol. in  $H_2O$ . (Venable, J. Am. Chem. Soc. 1898, 20. 321)

Effloresces in the air.

Sol. in  $H_2O$ . Less sol. in  $HCl$  + Aq. and nearly insol. in conc.  $HCl$  (Chauvenet, C. R. 1912, **154**, 822.)

$Zr_2OCl_2$ . Sol. in  $H_2O$  and alcohol. (Endemann, J. pr (2) **11**, 219.)

Not decomp. by  $H_2O$

Sol. in dil  $HCl$ . (Chauvenet, C. R. 1912, **154**, 1236.)

+  $H_2O$ . (Chauvenet, C. R. 1912, **154**, 1236.)

+  $3H_2O$ . Decomp. by  $H_2O$ . Sol. in dil  $HCl$  (Chauvenet)

$8ZrO_3 \cdot 7HCl$ . Sol. in  $H_2O$ . (E.)

$Zr_2OCl_2$ . (Troost and Hautefeuille, C. R. **73**, 563.)

$Zr_2OCl_2 = ZrCl_4 \cdot 2ZrO_2$ . Insol. in  $H_2O$  (Hermann.)

**Zirconyl iodide**,  $ZrOI_2 \cdot 8H_2O$ .

Very sol. in  $H_2O$  and alcohol.

Very hygroscopic. (Stähler, B. 1904, **37**, 1138.)

$ZrI(OH)_2 \cdot 3H_2O$ . Easily sol. in  $H_2O$ . (Hinsberg, A **239**, 253.)

Ppt. Sol. in  $HI$  + Aq. (Venable, J Am Chem Soc 1898, **20**, 328.)

**Zirconyl sulphide** (?)

Decomp. by  $HNO_3$  with separation of S. (Fiemy, A. ch (3) **38**, 326.)
